B. Style and Usage. As with other familiar abbreviations of Latin phrases—such as *etc.*, *et al.*, and *i.e.* (and despite the way they appear in this sentence)—*e.g.* is not italicized <serve with a favorite fruit, e.g., peaches or apricots>. And like the others, it is best confined to lists, parenthetical matter, and citations rather than in text, where some substitute such as *for example* is more natural <it goes well with fruit, such as peaches or apricots>.

C. With *etc.* Using the abbreviation *etc.* after an enumeration following *e.g.* is superfluous because one expects nothing more than a representative sample of possibilities. But *etc.* might be required after *i.e.* (L. *id est* "that is") to show the incompleteness of the list.

D. Clear Reference. One should clearly indicate what the signal refers to: "Out-of-pocket losses include medical expenses, lost earnings, and the cost of any labor required to do things that the plaintiff can no longer do himself (e.g., a housekeeper)." But "things that the plaintiff can no longer do himself" are not exemplified by *a housekeeper*. (Or does the writer mean *housekeeping* or *be a housekeeper*?) In any event, wherever readers encounter an *e.g.*, they rightly expect a sampling of appropriate items—not an ambiguous or all-inclusive listing. In the given example, it might be: *e.g., keep house, drive a car, tend the garden*. See **i.e.**

***egality** is the anglicized form of the French *égalité* (= equality). The *OED* pronounces the **GALLICISM** obsolete, and so it should be, in deference to *equality*. E.g.:

- "Is this a sign of greater *egality* [read *equality*], inverted snobbery, or simple confusion?" Robert Harris, "The Way We Were," *Sunday Times* (London), 22 July 1990, Books §, at 8-1.
- "But one of the wealthier families, acting out of a sense of *egality* [read *equality*] and good fellowship, would insist that all members of the class be included in their children's guest lists." Charlton Heston, "Heston on Heston," *Chicago Trib.*, 3 Sept. 1995, Sunday Mag. §, at 13.
- "Thus Marx lives on, masquerading as social justice, *egality* [read *equality*] and fairness—all the while punishing people for being productive and successful." Editorial, "Wealth Distribution Bias," *Saratoga Herald-Trib.*, 5 July 2000, at A12.

***egis**. See **aegis**.

egotism; egoism; egocentrism; egocentricity; egomania. *Egotism* = an exaggerated sense of self-importance; self-praise; arrogance. *Egoism* is a philosophical term meaning "a doctrine that self-betterment is the guiding method of existence, or that self-interest is the primary motive in all one's

actions." The use of *egoism* in the sense "selfishness" is a **SLIPSHOD EXTENSION**—e.g.:

- "Minnesotans esteem honest intellectual pursuit, practiced without *egoism* [read *egotism*] or puffery." *Star Trib.* (Minneapolis), 22 June 2002, at A20.
- "Unlike his peers—Lawrence J. Ellison of Oracle, Steven P. Jobs of Apple Computer or Bill Gates of Microsoft—he is not only not a technologist, he is also not known for overt *egoism* [read *egotism*], or for ruffling feathers." Matt Richtel, "A Cheerleader, for a Company in a Midlife Funk," *N.Y. Times*, 23 June 2002, § 3, at 1. (Notice how the four negatives in one sentence fatigue the reader, and the unparallel construction deepens the mire.)
- "Finally, we'd look for a healthy combination of humility (to prevent obstructive *egoism* [read *egotism*]), intelligence and creativity." Editorial, "Help Wanted: Supervisor," *Roanoke Times*, 8 Oct. 2002, at A12.

The other three words are closely related. *Egocentrism* and *egocentricity* are synonymous, with perhaps a slight degree of difference. *Egocentrism* = the quality of being self-centered and selfish; looking only to one's own feelings and needs. *Egocentricity* = the quality of being egocentric, individualistic, or self-centered. *Egomania* is extreme *egocentrism*.

LANGUAGE-CHANGE INDEX
egoism misused for *egotism*: Stage 2

egregious /i-**gree**-jəs/ formerly meant "outstanding," but has been specialized in a pejorative sense so that it now means "outstandingly bad." E.g.:

- "Without their coaches' guidance, thousands of children will walk away from major-league ballparks and Little League fields believing that gifted athletes can get away with *egregious* behavior." Adrienne T. Washington, "Orioles Strike Out by Supporting Alomar," *Wash. Times*, 4 Oct. 1996, at C2.
- "I should be a most *egregious* host to expose my guests to the tender mercies of the servants in the Pope's Little House." Chelsea Quinn Yarbro, *Communion Blood* 75 (1999) (the Pope's Little House being the starting point of an inquisitorial condemnation).
- "The subject fires up people on all sides of liability disputes: the ones who've been harmed; the budget hawks; and the lawmakers who scuffle year after year over special relief bills to get cash for victims of *egregious* acts that left people injured for life." Steve Patterson, "Golf Course Owner Fuming Over Cost to Fix Bulldozer Damage Caused by State," *St. Augustine Record* (Fla.), 26 Aug. 2015, News §.

egregious in the sense "very bad": Stage 5

egress. See **ingress**.

eisegesis. See **exegesis**.

either. **A. Pronunciation.** The preferred pronunciation is /**ee**-~~th~~ər/, not /**i**-~~th~~ər/. This has long been so. A 19th-century linguist criticized the *eye* pronunciation, calling the *ee* pronunciation "better-supported and more analogical." William Dwight Whitney,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Language and the Study of Language 43 (5th ed. 1874). Still, /ɪ-thər/ is the dominant pronunciation in BrE, and it remains common (though arguably pretentious) in AmE. Cf. **neither** (A).

B. Number of Elements. Most properly, *either* . . . or can frame only two alternatives, and no more: “Now Mr. Arafat has failed for a year to keep the promise without which he never would have seen *either* the White House, its lawn, Mr. Clinton *or* Mr. Rabin [omit *either*].” A.M. Rosenthal, “Yasir Arafat’s Promise,” *Wall Street J.*, 9 Sept. 1994, at A15.

It is understandable that writers would want to be able to say *any of the following* in fewer than seven syllables—and those who like *either* for this purpose may succeed in the long run. But the better practice, for the time being, is to rely on the disjunctive *or* for a list of many—not *either* . . . or. Cf. **neither**.

LANGUAGE-CHANGE INDEX

either . . . or with more than two items: Stage 3

C. Faulty Parallelism with *either* . . . or. This is a common problem: “New Hampshire Right to Life sends its newsletter to about 10,000 abortion opponents that Mrs. Hagan said *either contributed money or time* [read *contributed either money or time*] to the cause.” Gustav Niebuhr, “G.O.P. Race Jumps to Where Fundamentalists Are Few and Far Between,” *N.Y. Times*, 19 Feb. 1996, at A9. See PARALLELISM.

D. Singular or Plural. As the subject of a clause, *either* takes a singular verb—e.g.:

- “The law [is] . . . supposed to be ‘family friendly,’ but we suggest you keep the kids away from Mom or Dad next April when *either* of them *are* [read *is*] bouncing off the walls with the complex instructions for filing claims.” “Getting Taxes on Track,” *Wall Street J.*, 2 Oct. 1997, at A22.
- “Reimer did not say whether *either* of them *is* a job candidate.” “McKinney Stripped of Army Title in Sex Case,” *Sun-Sentinel* (Ft. Lauderdale), 10 Oct. 1997, at A5.

Nouns framed by *either* . . . or take a singular verb when the noun closest to the verb is singular, but a plural verb when that noun is plural—e.g.:

- “What happens when grown children continue to pull on mom’s apron strings or play on her ‘mom guilt’ for longer than *either they or she needs*?” Ruth Walsh, “Magazine’s ‘Mover and Shaper’ to Speak,” *St. Petersburg Times*, 5 Jan. 1994, at D2.
- “He gives every sign of not stopping until *either he or they are* thoroughly defeated.” Marianne Means, “Investigators Waiting in the Wings,” *Rocky Mountain News* (Denver), 3 Nov. 1996, at A81.

LANGUAGE-CHANGE INDEX

either . . . or construction followed by a verb not agreeing with second member: Stage 3

E. Not . . . *either*. This phrasing should typically be a *neither* . . . *nor* construction—e.g.: “They are cynical shams that *do not require either* the council *or* the mayor to abide the weak processes they establish.” “Flouting the Public’s Will,” *Times-Picayune* (New Orleans), 15 Mar. 1996, at B6. (A possible revision: *They are cynical shams that require neither the council nor the mayor even to abide the weak processes they establish.*)

F. *Either or both*. This phrase denotes the meaning generally assigned to *and/or*. Generally speaking, though, neither phrase finds a place in good writing. E.g.: “*Either or both* [read *Both*] parties may expect increasing voter disinterest if they accept newly elected members running as members of the other party.” Letter of Charles P. Hughes, “Whatta Deal?” *Chattanooga Times*, 13 Apr. 1995, at A6. (On the use of *disinterest* in that sentence, see **disinterest**.) See **and/or**.

G. Meaning “each of two” or “both.” *Either* in this sense <houses on either side of the street> is less common than *each* (or *both*). But it is perfectly idiomatic—e.g.: “The framed lists—there is one on *either* side of the chapel—are rolls of all the Dominican sisters from the Springfield Roman Catholic diocese.” Steven Speare, “Sisters in Spirit,” *State J.-Register* (Springfield, Ill.), 28 Nov. 1997, at A7.

For more on *either* . . . or, see CORRELATIVE CONJUNCTIONS & PARALLELISM.

ejaculate. Though one of Henry James’s favorites, this verb can no longer be used in sober writing as a synonym for “exclaim.” Today it inevitably carries sexual overtones, even when the exclamatory meaning is the primary one. E.g.: “An enormous kerfuffle erupted nearby, followed by a shriek of maniacal laughter. ‘Crumbs!’ *ejaculated* [read *exclaimed*] William. ‘What was that?’” David Aaronovitch, “Violet Voter Finds Just the Job for William,” *Independent*, 9 Oct. 1997, at 6.

ejectee. See -EE.

eke out, a PHRASAL VERB, has traditionally meant “to supplement with great effort or bit by bit; to add to (something); to make (something) go further or last longer.” Today, this traditional usage is rare, but it still sometimes appears—e.g.:

- “John Andre, their martyred co-conspirator, received a memorial in the Poets Corner of Westminster Abbey—something of an irony since he *eked out* his income by writing doggerel and was unpopular with his fellow officers who patronized him as an opportunist!” Robert Taylor, “Benedict Arnold Lost Gamble on Warfare,” *Commercial Appeal* (Memphis), 2 Sept. 1990, at G4.
- “The deal promises to be the first in a series of part current, part advance refundings as the fiscally strapped state . . . *ekes out* as much debt service savings as possible.” Martin Z. Braun, “N.J. Eyes \$450M GO Refunding,” *Bond Buyer*, 16 Oct. 2002, at 1.
- “Look up, look down, to attic and basement, for usable space, as we do on Page 5. Look at a handful of clever ideas about where else to *eke out* space, on Pages 4 and 8.” “In Our Houses, Something Real,” *Wash. Post*, 16 Oct. 2002, at T2.

Instead, the phrase is most commonly used nowadays in the sense “to succeed in obtaining or sustaining (a thing) with great difficulty”—e.g.:

- “In Tokyo, stocks *eked out* small gains by the end of Friday’s session after a three-day winning streak.” “Stocks Languish in Flat Session,” *S.F. Examiner*, 27 Sept. 1996, at B1.
- “Dick Chrysler . . . *eked out* a narrow victory in 1994.” Matthew Rees, “The Mini-Clintons,” *Weekly Standard*, 14 Oct. 1996, at 8.

Although this usage began by SLIPSHOD EXTENSION, it is now firmly entrenched as standard.

Unfortunately, by still further extension, sportswriters have come to use *eke* without its inseparable companion *out*, as if it meant something like *squeak*—e.g.: “Actually, you surely noticed that Northwestern *eked* [read *squeaked?* *fought?*] back into the Top 25 to take the last rung on the strength of whipping the mighty Ohio U. Bobcats.” Larry Guest, “Why Are the Pollsters Against Northwestern?” *Orlando Sentinel*, 25 Sept. 1996, at D1.

LANGUAGE-CHANGE INDEX

1. *eke out* in the sense “to get by with great difficulty”: Stage 5
2. *eke* misused for *squeak* or *fight*: Stage 3

-EL. See DIMINUTIVES (C).

elaborate, vb., may be either transitive <to elaborate a point> or (more commonly) intransitive <to elaborate on a point>. Although both *to elaborate* and *to elaborate on* may mean “to work out in detail,” the former suggests “to produce by labor,” and the latter suggests “to explain at greater length.” Knowing this nuance allows you to choose the apter phrasing.

elapse once had two uses, as a noun and as a verb. Today, however, the noun is an ARCHAISM—*lapse* being the noun corresponding to the verb *elapse*. E.g.:

- “Thus, only those emigrating permanently will escape the charge and only then after the *elapse* [read *lapse*] of three years and in relation to non-UK assets.” Donald Elkin, “Finance & the Family (Expatriates),” *Fin. Times*, 14 July 1990, at vi.
- “But the *elapse* [read *lapse*] of 21 years had weakened much of the evidence, and the district attorney refused to prosecute the case.” Kevin Johnson, “Cold Cases: The Heat’s on Now,” *USA Today*, 19 Sept. 1995, at A3.
- “Many of the faces repeat with an *elapse* [read a *lapse*] of years, turning giggly, sparrowlike girls in middy blouses into graceful young women or pensive boys into jocular young adults.” Carolyn Jack, “Prints from Glass Plates Depict Life of River Town,” *Plain Dealer* (Cleveland), 29 Mar. 2002, at E1.

LANGUAGE-CHANGE INDEX

elapse used for *lapse*: Stage 1

elder; eldest. These are variants of *older* and *oldest*, with restricted uses such as *elder statesman*, *elder in the church* (or *church elder*), or *elder brother* (or *sister*). If *older* or *oldest* works in context, it’s probably the better choice.

elderly. This adjective began as a EUPHEMISM for *aged* or *old*, but even *elderly* has now acquired negative connotations. Perhaps *senior*, the newest euphemism, will one day have to be replaced as our youth-dominated popular culture continually denigrates anything associated with old people.

As an adjective, *elderly* has traditionally been applied most often to people <an elderly aunt>, but it may apply to other living things <an elderly dog> or, rarely, something personified <an elderly ship>.

As a noun, *the elderly* has undergone pejoration and is now generally disused in favor of *senior citizens*. Deciding at what age people become *the elderly* must be left to your own good judgment. That’s one advantage of *senior citizen*: American culture has loosely established that you become a senior citizen at 60 to 65. There’s no quarrel about that range as being the standard; at 65, only the facts can then be disputed, as some people embark on a post-30 quest to misrepresent their age.

eldritch (= weird, eerie) is sometimes misspelled **eldrich*—e.g.: “June is the month of the summer solstice, and of Midsummer’s Eve—when, according to *eldrich* [read *eldritch*] lore, witches, fairies, spirits of the dead and supernatural folk of all sorts are abroad and active.” Jim Wise, “Midsummer Past Is Brought Home on a Whiff of Magnolia,” *Herald-Sun* (Durham, N.C.), 19 June 2000, at B1.

LANGUAGE-CHANGE INDEX

eldritch misspelled **eldrich*: Stage 1

Current ratio: 30:1

-**elect** is uniformly hyphenated as a combining form—hence *president-elect*, *chair-elect*, etc. See POSTPOSITIVE ADJECTIVES. See also **bride-to-be**.

elector = (1) esp. in BrE, a legally qualified voter; or (2) in AmE, a member of the electoral college chosen by the states to elect the president and vice president. Sense 1 appears occasionally in AmE, especially in older works—e.g.: “The first view to be taken of this part of the government relates to the qualifications of the *electors* and the elected.” *The Federalist* No. 52, at 325 (James Madison) (Clinton Rossiter ed., 1961). Sense 2 is more usual in modern AmE—e.g.: “The President held office for four years and then had to be given—or denied—a second term by *electors* picked by the people.” Fred Rodell, *Nine Men* 44 (1955).

electoral (= of, relating to, or involving electors) is so spelled. But **electorial* is a common misspelling—e.g.:

- “Their analyses of Liberal bills on *electorial* [read *electoral*] redistribution, settling Pearson airport contracts, and Yukon Indian settlements were thorough.” Douglas Fisher, “Media Prejudice Traps Reformers,” *Toronto Sun*, 22 July 1994, at 11.
- “Both camps agreed that today’s Supreme Court hearing will be the defining moment in a five-week battle over who is the winner of Florida’s 25 *electorial* [read *electoral*] votes, which either candidate would need to reach the 270 *electorial* [read *electoral*] votes required to win the White House.” William Douglas, “Supreme Court to Hear Arguments Today That Could Finally Settle Battle for White House,” *Newsday* (N.Y.), 11 Dec. 2000, at A4. (The

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

both . . . agree construction is redundant in that sentence: see **both** (C).

- “The proliferation of these marriage-definition ballot measures in a quarter of the states during the same election cycle shows how easily journeyman political organizers, whether conservative or liberal, can manipulate the *electorial* [read *electoral*] debate with hot-button issues,” said Executive Director Edwin Bender.” Julie Carr Smyth, “Funds Flowed to Ohio for Gay-Marriage Vote,” *Plain Dealer* (Cleveland), 25 Jan. 2006, at B2.

The word is preferably pronounced /i-**lek**-tə-rəl/, not /ee-**lek-tor**-əl/.

LANGUAGE-CHANGE INDEX
electoral misspelled **electorial*: Stage 1
Current ratio: 5,203:1

electric; electrical; electronic. *Electric* = (1) of, relating to, or operated by electricity <electric train> <electric chair>; or (2) thrilling; emotionally charged <a musician’s electric performance>. *Electrical* overlaps with sense 1 of *electric*—that is, it commonly means “concerned with electricity” <electrical engineering> <electrical outlet>. The choice between the two seems to be governed largely by euphony: although *electric* is more usual, *electrical* occurs in a few SET PHRASES beginning with vowels.

Electronic = (1) of, relating to, or involving electrons; or (2) of, relating to, or involving the branch of physics known as electronics, or to systems or devices developed through this science. Sense 2 is far more common—e.g.: “Toyota treats a blueprint for a change on an engineer’s desk (or its *electronic* equivalent) the way it would an unfinished component.” Alex Taylor III, “How Toyota Defies Gravity,” *Fortune*, 8 Dec. 1997, at 100.

eleemosynary /el-ə-**mos**-ə-ner-ee/, related etymologically to the word *alms*, is a FORMAL WORD for *charitable*. E.g.:

- “It requires an effort considerably more sustained than the bursts of *eleemosynary* fervor witnessed at holiday time.” Clyde Haberman, “Giving Thanks at St. Bartholomew’s,” *N.Y. Times*, 22 Nov. 1995, at B7.
- “In fact, Roper is an *eleemosynary* institution, and the Medical Society of South Carolina acts only in the capacity of trustees, not owners.” “Tradition Powerful,” *Post & Courier* (Charleston, S.C.), 10 Aug. 1996, at A14.

elegance; elegancy. A distinction has emerged. *Elegance* is the quality or state of being elegant. *Elegancy* is a thing that is thought to be elegant. Concededly, though, the history of these words is a messy one. Since 1750, *elegance* has eclipsed *elegancy* in frequency of occurrence.

Current ratio: 180:1

ELEGANT VARIATION. See **INELEGANT VARIATION.**

elegy; eulogy. An *elegy* is a mournful song or poem, whereas a *eulogy* is a funeral oration or, by extension, a laudatory speech. Writers occasionally misuse *elegy* for *eulogy*—e.g.:

- “Speaking in precise, well-crafted paragraphs, Poland’s most popular political figure delivered an

extemporaneous *elegy* [read *eulogy*] to the movement that had spawned him.” Adam Karatnycky, “The Age of Solidarity: Testing Poland’s Patience,” *New Republic*, 11 June 1990, at 20, 21.

- “Thirteen bright student orators delivered formal *elegies* [read *eulogies*] to education and shared personal stories of fear, striving and laughter.” Dan Carpenter, “Parting Words,” *Indianapolis Star*, 11 June 1995, at A1.
- “After the players were introduced, Knight gave a moving *elegy* [read *eulogy*] for his old coach and friend.” “Just One Minute: College Basketball,” *Indianapolis Star*, 1 Feb. 2010, at B1.

LANGUAGE-CHANGE INDEX
elegy misused for *eulogy*: Stage 1

elemental; elementary. *Elemental* is the more specific term, meaning (1) “of, relating to, or involving the elements of something; essential” <an elemental component of the machine>; or (2) “of, relating to, or involving a force of nature, or something like it” <elemental rage>. E.g.: “From the ringing words of his first inaugural—‘the only thing we have to fear is fear itself’—Roosevelt’s presidency was about taking charge and *elemental* fairness.” David Warsh, “Hollywood vs. History Books,” *Boston Globe*, 24 Dec. 1995, at 69.

Elementary means “introductory; simple; fundamental.” E.g.: “Ms. Handler [noted] that the company’s real goal was to realize Mr. Hillis’s dream of building computers that could ‘learn’ and perform more than *elementary* reasoning.” David E. Sanger, “A Computer Full of Surprises,” *N.Y. Times*, 8 May 1987, at D1.

elephantine (= slow, heavy, and awkward, like an elephant) is pronounced /el-i-**fan**-tin/, /el-i-**fan**-teen/, or /el-i-**fan**-ttn/—always with the accent on the third syllable, not the first or last. See ANIMAL ADJECTIVES.

elf. Pl. *elves*. See PLURALS (C).

elfin; elfish; elvish. The distinction is slight. *Elfin* = (1) of, relating to, or resembling an elf; or (2) having the magical qualities of an elf. *Elfish* = having the mischievous, prankish qualities of an elf. *Elvish* is a NEEDLESS VARIANT of *elfin*, but it’s also a language in J.R.R. Tolkien’s *Rings* trilogy (a capitalized proper noun in this sense).

elicit. See **illicit & solicit** (A).

eligible may be equally well construed with either *for* or *to* (an office). *Eligible for* is more common today—e.g.: “Vicki Johnson, formerly of Parkway Place, whose history as a good tenant made her and her two children *eligible for* relocation, summed up our sentiments exactly.” “Scattered-Site Housing,” *Courier-J.* (Louisville), 3 Oct. 1996, at A10.

But *eligible to*, though archaic-sounding today, has unimpeachable credentials—e.g.:

- “No person except a natural born citizen . . . shall be *eligible to* the office of president.” U.S. Const. art. II, § 1.
- “No judge of any court . . . shall during the term for which he is elected or appointed, be *eligible to* the legislature.” Tex. Const. art. III, § 19.

Current ratio (*eligible for the* vs. *eligible to the*): 11:1

eliminate, strictly speaking, means to get rid of something that already exists <we downsized to eliminate several layers of bureaucracy that had built up>. The verb should not be misused for *prevent* or *avoid*; that is, it shouldn't refer to something that doesn't yet exist. E.g.:

- “Two readers who experienced debilitating crashes with Power Mac 8500 systems were able to *eliminate* [read *prevent*] crashes by moving DRAM DIMMs away from the vicinity of the cache.” Ric Ford, “Coming Clean: Apple Has a New Set of PCI Updates,” *MacWEEK*, 4 Dec. 1995, at 52.
- “You will save wear and tear on your back and *eliminate* [read *prevent*] future back problems with this simple precaution.” “Quality [read *High-Quality*] Tools Will Make Garden Work Easier,” *State J.-Register* (Springfield, Ill.), 27 Dec. 2002, Mag. §, at A11. (For more on the use of *quality* here, see **quality**.)

LANGUAGE-CHANGE INDEX
eliminate misused for *prevent*: Stage 2

-ELLE; -ELLA. See DIMINUTIVES (D).

ELLIPSES. See PUNCTUATION (F) & QUOTATIONS (E).

elliptic; elliptical. There is much overlap. The adjective *elliptic* most strongly corresponds to the noun *ellipse*, the geometric term—e.g.: “Mars is fourth from the sun, having an *elliptic* orbit ranging from 129 to 156 million miles distant from it, compared to our average 93 million miles.” Mina Walther, “Far from Humble, There May Be No Place Like Home: Earth,” *Sarasota Herald-Trib.*, 8 Sept. 1996, at F6.

The adjective *elliptical* traditionally corresponds most strongly to *ellipsis*, the grammatical and rhetorical term for an omission—e.g.: “‘Goodbye South, Goodbye’ tells its difficult-to-follow story in a fractured *elliptical* style that mirrors the characters’ rootless, jumpy lives.” Stephen Holden, “Wheeling and Dealing in Taiwan’s Backwaters,” *N.Y. Times*, 1 Oct. 1996, at C13. See **-IC**.

The four-syllable *elliptical* occurs more than twice as often in print as *elliptic*, and the DIFFERENTIATION suggested above may not hold firm—given the rise in the 1990s of “ellipticals” as training equipment (also known as “elliptical machines”). These machines have the user’s feet travel in an ellipse. What may happen in the long term is that *elliptic* will be the scientific term answering to *ellipse* and that *elliptical* will be the popular term for all senses.

elocute, meaning “to speak in a grand, affected manner,” is a usually facetious BACK-FORMATION from *elocution*—e.g.: “Simon Russell Beale plays Oswald, the afflicted Alving son. He’s an actor who *elocutes* so well that talk no longer reveals character but effectively conceals it.” Vincent Canby, “A Crowd Under the National’s Umbrella,” *N.Y. Times*, 12 June 1994, § 2, at 5.

elocution; locution; allocution. *Elocution* = style in speaking; the art of speaking persuasively. *Locution* = a word or phrase. *Allocution* = (1) a formal address; (2) a judge’s formal address asking a criminal defendant to speak in mitigation of the sentence to be imposed; or (3) loosely, a criminal defendant’s speech in mitigation of the sentence to be imposed.

elope. The *OED* and many other dictionaries define this term as if it had historically been a sexist one in law: “**a. Law.** Of a wife: To run away from her husband in the company of a paramour. **b.** In popular language also (and more frequently) said of a woman running away from home with a lover for the purpose of being married” (*OED*). These definitions suggest that only women can elope, but even legal writers have long made men as well as women elopers—e.g.:

- “If evidence was admitted to show that House had armed himself, and was hunting for Steadman, under the impression that the latter had *eloped* with his wife, and was secret-ing himself in that vicinity, it is difficult to see upon what principle his threats in that connection were excluded.” *Alexander v. United States*, 138 U.S. 353, 356 (1891).
- “James Campbell had *eloped* with the wife of one Ludlow.” *Adger v. Ackerman*, 115 F. 124, 130 (8th Cir. 1902).

Today the word does not ordinarily apply exclusively to women. It may, of course, as here: “After an idyllic childhood, Anderson impulsively *eloped* at 18 and endured a wedding night that she called ‘one of the great disasters in the history of sex on this planet.’” Dana Kennedy, “The Anderson Tapes,” *Entertainment Weekly*, 27 Oct. 1995, at 82. But more typically the word applies to the couple—e.g.: “He and his bride-to-be decided to *elope* to Canada.” Marty Meitus, “Apples of Our Eye,” *Rocky Mountain News* (Denver), 9 Oct. 1996, at D3.

***else but; *else than**. Instead of either of these ungainly phrases, use a simple *but* or the more idiomatic *other than*—e.g.: “This has nothing to do with some supposed slacker mentality that strikes 20-some-things deaf and dumb to anything *else but* [read *but* or *other than*] the boob tube.” Helen Ubinas, “What?! This Place Doesn’t Have Cable?!” *Hartford Courant*, 1 Aug. 1997, at E1.

else’s. Possessive constructions such as *anyone else’s* and *everyone else’s* are preferred to the obsolete constructions **anyone’s else* and **everyone’s else*. Although *whose else* is technically correct, modern usage prefers *who else’s* by analogy to the forms made with *anyone* and *everyone*. *Who else’s* has predominated over *whose else* in AmE since the 1960s and in BrE since the 1990s. See POSSESSIVES (I).

Current ratio (*anyone else’s* vs. **anyone’s else*): 168:1
Current ratio (*who else’s* vs. *whose else*): 2:1

***else than**. See ***else but**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

elude. See **allude** (B).

elusive; *elusory; illusory; *illusive; allusive. *Elusive* (rather than **elusory*) is the usual adjective related to *elude*; *illusory* (rather than **illusive*) is the usual adjective related to *illusion*. In short, **elusory* and **illusive* are NEEDLESS VARIANTS.

More than that, however, the multiple forms can lead to confusion between them. Most commonly, **illusive* is misused for *elusive*—e.g.:

- “This unlikely pair manages to outflank the stolid legal bureaucracy, chase down an *illusive* [read *elusive*] serial killer and still find time to savor Gotham’s more exotic attractions.” “Crime in the Big Apple,” *St. Louis Post-Dispatch*, 14 June 1992, *Everyday Mag.* §, at C5.
- “One firm . . . specializes in helping students enrolled in prep schools, colleges or universities find the often-*illusive* [read *elusive*] student discount fares offered by most major U.S. airlines.” James T. Yenckel, “Discount Fares for Students on the Wing,” *Wash. Post*, 27 Mar. 1994, at E1.
- “Pats found the *illusive* [read *elusive*] third goal with just six minutes left on the clock.” Jessica Farry, “Pats Wallop Three Goals Past Rovers,” *Sligo Champion* (Ireland), 28 July 2015, *Sport* §, at 38.

Allusive (= containing an allusion or characterized by use of allusion) is also occasionally misused where *elusive* is the intended meaning—e.g.: “Toyota brought Scion, its small car intended to catch the eye of *allusive* [read *elusive*] Gen Y.” Jay Binneweg, “A Whimper, Not a Bang,” *Santa Fe New Mexican*, 11 Jan. 2003, at E1.

LANGUAGE-CHANGE INDEX

1. **illusive* misused for *elusive*: Stage 1
Current ratio (*elusive concept* vs. **illusive concept*): 24:1
2. *allusive* misused for *elusive*: Stage 1

***elvish.** See **elfin**.

EM-; IM-. See **EN-.**

e-mail; E-mail; email. Since the 1990s, *e-mail* has remained the prevalent form in print sources. The letter *e*—short for *electronic*—is sometimes capitalized, but the trend is to make it lowercase. The unhyphenated *email* is unsightly, but it might prevail in the end. In print sources, *e-mail* is almost twice as common as *email*. Ultimately, the hyphen may well disappear—since that is what midword hyphens tend to do—but for the time being it is more than holding its own. (The same is true of *e-commerce* and other forms prefixed by *e-*.)

Some bootless objections remain. A few writers have objected to *e-mail* as a shortened form of *e-mail message* <send me an e-mail>—and also to using it as a COUNT NOUN <I had three e-mails>. Both of these uses are now standard. Others have questioned whether *e-mail* should function as a verb <please e-mail me with the answer>, but that question has long since been answered affirmatively.

LANGUAGE-CHANGE INDEX

- e-mail* for *e-mail*: Stage 4
Current ratio (*e-mail* vs. *email*): 2:1

e-mail list; Listserv. An *e-mail list* is a subscription service through which participants discuss topics relevant to the forum through e-mails. *Listserv* is software that runs *e-mail lists*. Although it is common to see *listserv* used to refer to *e-mail lists* generically, that use should be avoided—e.g.: “For about three years I subscribed to an Internet ‘*listserv*’ [read *e-mail list*] that gave charter enthusiasts across America an opportunity to chat.” Marion Brady, “Charter Schools: Incubators of Innovation?” *Orlando Sentinel*, 13 Nov. 2002, at A17. *Listserv* is a registered trademark of L-Soft International, Inc. and should always be capitalized. There is no *-e* on the end of the name because the software was originally written to run on university IBM mainframe computers, whose filenames were limited to eight characters. And so, for example, the name of a list set up to discuss the works of Shakespeare is *Shaksparr*.

emanate (= to flow forth, issue, originate from) has diverse uses. Sometimes the word refers to something physical—e.g.: “Inside, the hardwood floors gleamed and delicious aromas *emanated* from the kitchen.” Jamie Marshall, “Charm on the Farm,” *Town & Country Monthly*, Sept. 1996, at 49. At other times, though, the movement is figurative—e.g.: “All the more ironic was the fact that this fatuous rhetoric *emanated* from Chicago, of all places.” “Educators or Lobbyists?” *Wash. Times*, 1 Sept. 1996, at B2.

***embarcation.** See **embarkation**.

embargo. Pl. *embargoes*—not **embargos*. See PLURALS (D). For more on the word, see **boycott**.

Current ratio: 8:1

embarkation; *embarcation; *embarkment. *Embarkation* = (1) the act of going on board a means of transportation; or (2) the act of starting a mission or enterprise. The second and third forms have been NEEDLESS VARIANTS since the 18th century.

Current ratio (in order of headwords): 64:2:1

embarrass. See SPELLING (A).

embarrassedly. See -EDLY.

***embassador.** See **ambassador**.

embassy; legation. Often assumed to be synonymous in diplomatic contexts, these words should be distinguished. An *embassy* is under an ambassador, and a *legation* is under a minister, envoy, *chargé d'affaires*, or other diplomatic agent not having the titular rank of ambassador.

embattled, adj. This word has traditionally meant “ready for battle,” usually in reference to an aggressor whose troops and weapons are ready for fighting. Only since the mid-20th century has the word taken on a sense similar to *beleaguered* (perhaps through sound association with *battered*) and been applied instead to the victim of aggression. Today this derived sense threatens to vanquish the original sense (which might, sadly, be said to be “embattled”)—e.g.:

- “The House overwhelmingly agreed to abolish the *embattled* Immigration and Naturalization Service on Thursday and create two new agencies to handle enforcement and immigration services.” “National Briefs,” *Charleston Gaz.*, 26 Apr. 2002, at A7.
- “This year, NetWorld faces two hurdles: the date and the fact that it serves the *embattled* telecommunications industry.” Caroline Wilbert & Russell Grantham, “The Approach of Sept. 11,” *Atlanta J.-Const.*, 4 Aug. 2002, at C1.
- “But it may be hard for the SEC and its *embattled* head, Harvey Pitt, to ignore the evidence Congress has unearthed.” Samantha Levine et al., “The Trickle-down Dow,” *U.S. News & World Rep.*, 5 Aug. 2002, at 17.

embezzle; misappropriate; steal. *Embezzle* (= to fraudulently convert personal property that one has been entrusted with) is now always used in reference to fiduciaries. *Misappropriate* means “to take for oneself wrongfully” and may be used of anyone—fiduciary or not. *Steal*, like *misappropriate*, is a broader term than *embezzle*; it has the same meaning as *misappropriate*, but much stronger negative connotations. See **defalcate (A) & appropriate (A)**.

emblazon; *emblaze; *imblaze. The first is the standard spelling. The second and third are NEEDLESS VARIANTS. See EN-.

Current ratio (in order of headwords): 763:83:1

embryo. Pl. *embryos*, not **embryoes*. See PLURALS (D).

Current ratio: 8,143:1

EM-DASHES. See PUNCTUATION (G).

emend. See **amend**.

emery board (= a file used as a manicuring implement) is sometimes misspelled **emory board*, as if it had some connection with the Georgia university—e.g.: “With the egg suspended on straws inside the tube of paper taped to a platform of *emory* [read *emery*] boards, Farnhof dropped the device onto a target.” Lisa Teachey, “Fun: Learning the Formula for Rice Science Olympiad,” *Houston Chron.*, 27 Jan. 1997, at A13. *Emery* is the anglicized version of the French word *émeri* (ultimately of Greek derivation), denoting a coarse, granular mineral used for grinding or polishing.

LANGUAGE-CHANGE INDEX

emery board misspelled **emory board*: Stage 1

Current ratio: 57:1

emigrant; émigré. There is a latent DIFFERENTIATION between these words. An *emigrant* is someone who leaves a country to settle in another. *Émigré* has the same sense, but applies especially to one in political exile. The first acute accent is often omitted (*emigré*) in AmE. As for frequency of occurrence in English-language contexts, *emigrant* has greatly predominated over *émigré*.

emigrate. See **immigrate**.

émigré. See **emigrant**.

eminent. See **imminent**.

eminently (= notably, conspicuously) is frequently used, in mild HYPERBOLE, to mean “very” <eminently qualified>. For some common misuses, see **imminent & infinitely (A)**.

Emmy (= the statuette given as a television award) forms the plural *Emmys*—not **Emmies*. See PLURALS (E).

Current ratio: 27:1

emote. See BACK-FORMATIONS.

emotional; emotive. Although both words can mean “of, relating to, or involving emotion or the emotions,” *emotional* is the usual term in this sense. Otherwise, the two are differentiated. *Emotional* = affected by emotion; showing strong emotion <the victims were highly emotional about the incident even several years later>. *Eotive* = arousing emotion <emotive words>.

***empale.** See **impale**.

empanel; impanel. *Empanel* (= to put on a panel; esp., to swear [a jury] to try an issue or case) is now the preferred spelling in both AmE and BrE. E.g.: “It isn’t clear how long final questioning will last or when a jury can be *empaneled* for opening statements.” “102 Make the Cut for Simpson Jury Pool,” *Times-Picayune* (New Orleans), 10 Oct. 1996, at A2. *Impanel*, though once the predominant form, might now be regarded as a NEEDLESS VARIANT. Yet it occurs just about as frequently.

Current ratio: 1:1

empathic; empathetic. *Empathic* (= of, relating to, displaying, or eliciting empathy) has long been the usual form. But *empathetic* is frequently encountered, doubtless because of the close analogy to *sympathetic*—e.g.:

- “Five years ago, Harvard psychologist Carol Gilligan published ‘Meeting at the Crossroads,’ a luminously *empathetic* study of adolescents at an all-girls private school in Cleveland.” Susie Linfield, “Desperately Seeking Perfection,” *L.A. Times*, 7 Sept. 1997, Book Rev. §, at 8.
- “In the end, it probably takes someone with Zellweger’s *empathetic* openness to isolate the most unifying aspect of the ‘Rubies’ controversy.” Bob Strauss, “The Unsinkable Renee Zellweger,” *Boston Globe*, 29 Mar. 1998, at N9.

For now, the term *empathic* is standard in print sources. But a terminological shift may be at work.

Current ratio: 1.4:1

empathy; sympathy. *Empathy* is the ability to imagine oneself in another person’s position and to experience all the sensations connected with it. *Sympathy* is compassion for or commiseration with another.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

emphatic; ***emphatical**. Since about 1820, *emphatic* has been the standard term—eclipsing the previously popular **emphatical*. See -IC.

Current ratio: 98:1

empirical; **empiric**, adj. *Empirical* is the word generally used, and *empiric* might easily be labeled a NEEDLESS VARIANT. But medical writers, surprisingly enough, often use *empiric*—e.g.:

- “We recognize that there was more *empiric* therapy used in nonclinic patients by the primary care physicians without recourse to bronchoscopy.” R. Andrew McIvor et al., “An Effectiveness Community-Based Clinical Trial of Respirgard II [etc.],” 110 *Chest*, July 1996, at 141.
- “*Empiric* treatment with cefotaxime and dexamethasone was begun.” J.D. Colmenero et al., “Complications with *Brucella Melitensis* Infection,” 75 *Medicine*, July 1996, at 195.

Still, medical writers use *empirical therapy* and *empirical treatment* about as often as they put *empiric* in those phrases, and it would doubtless be a good thing if their usage mirrored general usage.

Current ratio: 72:1

employ is a FORMAL WORD for *use*—and is inferior whenever *use* might suffice.

employe(e). Although *employé*, the French form, might logically be thought to be better as a generic term, *employée* (which in French denotes the feminine gender) is so widespread—minus the accent mark—that it is not likely to be uprooted. Although *The Wall Street Journal* and *U.S. News and World Report* were longtime holdouts for *employe*, the form *employee* is standard. See **independent contractor**.

Current ratio (*employees* vs. *employes*): 169:1

emporium (= a large shop) predominantly made the plural *emporiums* in all varieties of English from about 1830. Around 1940, BrE predominantly adopted the Latinate *emporia*, and within a decade World English followed suit. But by 1960, the homegrown plural *emporiums* once again firmly established itself in AmE. So today it's *emporiums* in AmE and *emporia* in much of the rest of the world. See **PLURALS** (B).

Current ratio (World English): 1.2:1

empower; ***impower**. The second is an obsolete spelling that rapidly declined after about 1780. For the popular use of *empower*, see **VOGUE WORDS**. See also **EN-**.

Current ratio: 503:1

emulable, not **emulatable*, is the traditional form of the adjective meaning “capable of being emulated.” E.g.: “All I’m asking is that we take a look at the examples of behavior exhibited by Columbus and ask ourselves if they are justifiable and *emulatable* [read *emulable*].” Scott Lafee, “Take That Columbus!” *San Diego Union-Trib.*, 6 Oct. 1991, at D1 (misusing the word as if it meant “worthy of emulation”). The form **emulatable* has been on the rise since about 1960. See **-ATABLE**.

LANGUAGE-CHANGE INDEX

**emulatable* for *emulable*: Stage 4

Current ratio (*emulable* vs. **emulatable*): 1:1

emulate. *Emulate* = to strive to equal or rival; to copy or imitate with the object of equaling. A person may emulate another person, but not a habit or a style. The word is frequently misused for *adopt*—e.g.:

- “Culture research is now being published in the leading organizational journals, but (ironically) only by *emulating* [read *adopting*] the same positivist research model that culture researchers originally deplored.” Daniel R. Denison, “What Is the Difference Between Organizational Culture and Organizational Climate?” 21 *Academy Mgmt. Rev.* 619, 644 (1996).
- “For his second directing job (after 1994’s black-comic ‘Killing Zoe’), Avary *emulates* [read *adopts*] a novelist’s style, retracing narrative steps to depict multiple points of view.” Bob Ross, “Love Is in the Air,” *Tampa Trib.*, 11 Oct. 2002, Friday Extra §, at 25.

For a word with which *emulate* is occasionally confused, see **immolate**.

LANGUAGE-CHANGE INDEX

emulate misused for *adopt*: Stage 1

-EN. See **DIMINUTIVES** (E).

EN-; IN-. No consistent rule exists for determining which form of the prefix to use before a given word. But it’s fair to say that the French form *en-* is more a living prefix than *in-*. That is, *en-* has won most of the battles in which it contended against *in-*.

The following lists show the preferred form at left and the variant on the right. Of course, when the root word begins with a *-b-*, *-m-*, or *-p-*, the prefixes typically become *em-* and *im-*.

Preferred Form	Variant Form
embalm	*imbalm
embark	*imbark
embed	*imbed
embitter	*imbitter
embody	*imbody
embolden	*imbolden
embosom	*imbosom
embower	*imbower
embrown	*imbrown
empower	*impower
encage	*incage
encapsulate	*incapsulate
encase	*incase
enclasp	*inclasp
enclose	*inclose
enclosure	*inclosure
encrust	*incrust
encryption	*incryption
encumber	*incumber
encumbrance	*incumbrance
endow	*indow
endowment	*indowment
endue	*indue
enfold	*infold
engraft	*ingraft
engulf	*ingulf
enlace	*inlace
enmesh	*inmesh
ensheath	*insheath
enshrine	*inshrine
ensnare	*insnare

ensoul	*insoul
ensphere	*insphere
ensue	*insue
enthrall	*inthrall
enthrone	*inthrone
entice	*intice
entitle	*intitle
entomb	*intomb
entreat	*intreat
entrench	*intrench
entrust	*intrust
entwine	*intwine
entwist	*intwist
enwind	*inwind
enwrap	*inwrap
enwreathe	*inwreathe
imbrue	*embrue
impale	*empale
impoverish	*empoverish
inflame	*enflame
ingrain	*engrain
inquire	*enquire
inquiry	*enquiry
inure	*enure

Especially troublesome to writers are word pairs with varying prefixes according to inflection: *enjoin* but *injunction*, *encrust* but *incrustation*, etc.

enamel, vb., makes *enameled* and *enameling* in AmE, *enamelled* and *enamelling* in BrE. See SPELLING (B).

enamor; enamour. The first is AmE, the second BrE. Though each spelling can be found in both varieties, *enamor* has made greater inroads into BrE than *enamour* has into AmE. World English is tending toward the AmE spelling. See -OR; -OUR.

enamored takes the preposition *of*, not *with* or *by*—e.g.:

- “There are also the areas we are becoming *enamored with* [read *enamored of*]: for example, health insurance, security companies.” “South Africa Invites U.S. Biz Back,” *Crain’s Detroit Bus.*, 30 Sept. 1996, at 45.
- “Hines loves the home. He’s *enamored of* Aspen and the Rocky Mountains.” Steve Raabe, “High Gear,” *Denver Post*, 13 Oct. 1996, at 14.

LANGUAGE-CHANGE INDEX

**enamored with* for *enamored of*: Stage 4

Current ratio (*enamored of* vs. *with* vs. *by*): 11:6:1

encase; *incase. The first is the standard spelling. See EN-.

enclave (= a small, distinct area or district where an insular group of people live), a 19th-century French loanword, long received the anglicized pronunciation /*en*-klayv/. In recent years, however, a gallicized pronunciation /*on*-klayv/ has become commonplace in AmE. See GALLICISMS.

enclose; *inclose. The former spelling is now preferred in all senses. E.g.: “While parents are off

shopping, children ages 3 to 8 can play in the *glasses-enclosed* [read *glass-enclosed* or *glasses, enclosed*] child-care center.” Gregory J. Gilligan, “Kids Quarters,” *Richmond Times-Dispatch*, 26 July 1993, Bus. §, at 1. See EN-.

Current ratio: 9:1

***enclosed please find; *please find enclosed; *enclosed herewith; *enclosed herein.** These phrases—common in commercial and legal correspondence since the mid-19th century—are archaic deadwood for *here are*, *enclosed is*, *I’ve enclosed*, or the like. Interestingly, business-writing texts have consistently condemned the phrases since the late 19th century:

- “[*Please find enclosed*:] A more ridiculous use of words, it seems to me, there could not be.” Richard Grant White, *Every-Day English* 492 (1880).
- “*Inclosed herewith please find*. *Inclosed* and *herewith* mean the same thing. How foolish to tell your reader twice exactly where the check is, and then to suggest that he look around to see if he can find it anywhere. Say, ‘We are inclosing our check for \$25.50.’” Wallace E. Bartholomew & Floyd Hurlbut, *The Business Man’s English* 153 (1924). (If that sentence had been written recently, *inclose* would have been *enclose*.)
- “*Please Find Enclosed*. This worn-out formula is not in good use in letters, either business or personal.” Maurice H. Weseen, *Crowell’s Dictionary of English Grammar* 470 (1928).
- “When you read a letter that sounds as if it were a compendium of pat expressions from some musty old letter book of the goose-quill period, do you feel that you are communing with the writer’s mind? On the contrary, if you have a discerning mind, you know that you are merely getting a reflex from one who lacks taste and good mental digestion. . . . [W]hen you compose letters, beware these bromides: . . . *inclosed please find*.” H. Cramp, *Letter Writing: Business and Social* 22–23 (1930).
- “Business words and expressions borrowed from an earlier generation can make your writing sound artificial and pedantic. Every letter will read like a form letter, and you will sound bored or, even worse, boring. Thinking up substitute phrases is easy if you put your mind to it. Consider some of these revisions: . . . *Enclosed please find* [becomes] *I am enclosing*.” Maryann V. Piotrowski, *Effective Business Writing* 53 (1989).

Current ratio (*enclosed is the* vs.

**enclosed please find*): 16:1

enclosure; *inclosure. The first spelling is standard in all senses. See EN-.

encomium (= warm praise) forms the plural *encomiums* or *encomia*. The native-English plural has been predominant since the 18th century and is still standard—e.g.:

- “Even worse is Ms. Noonan’s sunny valentine to Ronald Reagan, which is less an essay than a toastmaster’s collection of *encomiums*.” Michiko Kakutani, “Looking to Presidents for Signs of Character,” *N.Y. Times*, 9 Apr. 1996, at C18.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “It was a night of film clips, *encomiums* and inside jokes.” Burl Stiff, “His Mission: To Live Up to Night in His Honor,” *San Diego Union-Trib.*, 29 Sept. 1996, at D4.
- “The eulogies and *encomiums* have centred exclusively upon the departing Tom Watson.” Oliver Brown, “Thomson Endorsement Inspires Scott to Purge His Open Nightmares,” *Sunday Telegraph*, 19 July 2015, Sport §, at 3.

See PLURALS (B).

Current ratio: 4:1

encounter, vb., = (1) to come across; meet with <she had never encountered the word>; (2) to confront (an adversary); engage in conflict with <he finally encountered his nemesis at the entrance to the factory>; or (3) to run into (a difficulty or complication) <we’ve never encountered that problem>. Although sense 1 is occasionally criticized, it dates from the 14th century and has an unimpeachable lineage.

encrust; incrust. *Encrust* is the standard spelling; **incrust* is a rare variant. See EN-.

Current ratio: 4:1

encrustation. See **incrustation**.

encryption (= the act of encoding or enciphering) is so spelled—not **encryption* or **incryption*.

encumbrance; *incumbrance; *cumbrance. The preferred spelling of this word, meaning “a claim or liability that is attached to property and that may lessen its value,” is *encumbrance* in both AmE and BrE. **Cumbrance* is a NEEDLESS VARIANT. See EN-.

Current ratio (in order of headwords): 146:44:1

encyclopedia; *encyclopaedia. The *-ae-* was predominantly shortened to *-e-* in AmE by 1905 and in BrE by 1970. **Encyclopaedia* is an archaic spelling throughout the English-speaking world. See AE.

Current ratio: 5:1

EN-DASHES. See PUNCTUATION (H).

endear, v.t., is properly a reflexive verb. President John F. Kennedy endeared himself to the press. Wingers endear themselves to the people they’d like to manipulate. But in the following sentence, *endear* is used incorrectly as a regular transitive verb—as a near-synonym of *charm*—instead of as a reflexive: “Roberts, whose Columbo-like, disheveled personality has endeared [read *endeared him to* or *charmed*] reporters for decades—he once set his desk on fire with a cigarette—is likely to help morale.” Larry Reibstein, “It’s Back to the Future,” *Newsweek*, 18 Apr. 1994, at 41.

LANGUAGE-CHANGE INDEX
endear misused for *charm*: Stage 1

endeavor, vb., is a FORMAL WORD for *attempt* or *try*—either of which is preferable in everyday contexts. But *endeavor* suggests more of a challenge and more of a sustained effort—e.g.:

- “If you are trying to prove that your ancestor arrived in Texas before the closing days of the Republic in the 1840s or if you are *endeavoring* to learn how, when and where your foreign-born Texas ancestors were naturalized, the

voter registration lists will reveal these facts.” Lloyd Bockstruck, “Confederate Lists Can Aid Genealogists,” *Dallas Morning News*, 31 Aug. 1996, at C11.

- “A quartet of representatives *endeavoring* to bring commercial air cargo business to the Inland Port will market the Moreno Valley-area airport at the International Air Cargo Forum and Exposition 2002 in Hong Kong, Sept. 17–20.” Darla Martin Tucker, “March Hopes to Drum Up Cargo Carriers in China,” *Bus. Press/California*, 16 Sept. 2002, at 1.

Much the same is true of *endeavor*, n., which means “an undertaking; earnest effort.” E.g.: “From that standpoint, [the march] has the makings of a worthy *endeavor*—one designed to promote pride in Latinos, a diverse group of ethnicities, as well as push political awareness.” “A March for Civil Rights,” *Press-Enterprise* (Riverside, Cal.), 9 Oct. 1996, at A14.

ended, p.pl.; **ending**, pr.pl. In phrases such as *the year ending 31 December 1997*, some fiscal writers have pedantically insisted that *ending* should be *ended* if the year has already passed. The present participle, it is argued, should be used for future periods <the week ending 7 March 2026>, but not past ones. In those circumstances, the argument runs, the past participle is more accurate <the week ended 14 September 1996>.

But the correlative term *beginning* is used in analogous senses <the week beginning 12 January 1992>, and there is no valid objection to *ending*, whether the reference is to a future or past period.

endemic. See **epidemic**.

end(ing), n. *End*, not *ending*, corresponds most idiomatically to the noun *beginning*. E.g.: “The turnover of the Sinai is a beginning, not an *ending* [read *end*].” In print sources since 1700, the phrase *beginning and end* has consistently appeared more frequently than *beginning and ending*—today by an almost 3-to-1 ratio. See PARALLELISM.

endive. The traditional pronunciation is /**en**-div/. The Frenchified /**on**-deev/ is an affectation.

ENDNOTES. See FOOTNOTES (B).

endorse; indorse. The usual spelling is *endorse*, and that is the only acceptable spelling when the word is used figuratively to mean “to express approval of publicly; to support.” E.g.: “The IRS, of course, doesn’t sanction or *endorse* specific investments.” Karen Cheney, “Don’t Be Taken In by the Phony Investing Pitches,” *Money*, Mar. 1997, at A1. For more on the meaning of *endorse*, see **approve** (B).

In legal discussions relating to checks and other negotiable instruments, *indorse* predominates in AmE. But popularly, *endorse* is the more frequent spelling in all contexts—and most checks have “Endorse here” printed on the back. **Endorse on the back* is a REDUNDANCY: *en-* means “on” and the root *dors-* means “back.”

endorsee. See -EE.

endow; ***indow**. The first is the standard spelling. The second is a variant spelling. See EN-.

Current ratio: 68:1

end product is usually a REDUNDANCY for *product*.

end result, a REDUNDANCY for *result*, rose to prominence over the course of the 20th century. Safire called it “redundant, tautological and unnecessarily repetitive, not to mention prolix and wordy.” William Safire, “Peace-ese,” *N.Y. Times*, 17 Nov. 1991, § 6, at 22. The only exception occurs when the writer needs to refer to *intermediate results* as well as *end results*. Cf. **final outcome**.

endue; ***indue**. Both mean (1) “to provide with a quality or trait”; or (2) “to put on (a piece of clothing)” (*AHD*). Although neither form is common, the spelling *endue* predominates. **Indue* is a NEEDLESS VARIANT. See EN-.

Current ratio: 2:1

energy-saving, adj., is so hyphenated. See PHRASAL ADJECTIVES.

enervate; **innervate**. *Enervate* (/en-ər-vayt/) means “to drain the vigor out of”—e.g.: “It is a great and *enervating* mistake for young writers not to see all the hazards that stand between them and successful communication.” Gorham Munson, *The Written Word* 32 (rev. ed. 1949). Probably because the word sounds a bit like *energize*, it is sometimes used where that word would convey the intended meaning—e.g.:

- “Gutsy performances by ‘Deep Impact’ in 29 territories and a three-day weekend in parts of Europe gave exhibitors some cheer last week, but not enough to *enervate* [read *energize*] overall business that was characterized as flat in France, quiet in the U.K. and indifferent in Spain.” Don Groves, “‘Godzilla’ Storms Malaysian B.O.,” *Variety*, 14 June 1998, Film §, at 14.
- “The intent of cliché makers is to color up and *enervate* [read *innervate* or *enliven*] language so as to make it easier to comprehend. Alarming, it does not always work that way.” Edward S. Spector, “Seeking Some Closure on Those Tired Clichés,” *Buffalo News*, 4 May 2001, at B18.

Innervate (/i-nər-vayt/) means “to supply with energy” or “to supply (a muscle) with nerves.” It is most often found in medical writing—e.g.: “The doctor severs a few of the nerves that *innervate* the vocal muscles so they don’t keep the cords slammed shut.” Dr. Paul Donohue, “Surgery May Be Solution for Vocal Muscles,” *Grand Rapids Press*, 30 Mar. 2007, at C7.

LANGUAGE-CHANGE INDEX
enervate misused for *energize*: Stage 1

***enflame**. See **inflamm**.

enforce; ***inforce**. **A. Spelling**. The latter is an archaic spelling whose only vestige appears in *reinforce*. See EN-.

Current ratio: 325:1

B. “Enforcing” a Contract. Lawyers continually speak of *enforcing* contracts, but this term is not apt unless one is seeking specific performance. Usually, the law merely specifies a remedy for breach of contract—damages—and does not compel performance.

enforceable; ***enforcible**. Since the mid-19th century, *enforceable* has been the preferred spelling in both AmE and BrE. E.g.: “A contract is *enforcible* [read *enforceable*] even though it does not specify the type of deed to be given.” Robert Kratovil, *Real Estate Law* 83 (1946). Cf. **forcible**.

LANGUAGE-CHANGE INDEX
enforceable misspelled **enforcible*: Stage 1
Current ratio: 238:1

England. See **Great Britain**.

English, vb. This useful verb, dating from the 14th century and meaning either “to render in English” or “to translate into English,” occurs frequently in linguistic texts but often surprises those unfamiliar with such texts—e.g.: “A number of words that only a few years ago were still thought of as lifted from the Latin have now become so completely *Englished* that they take the *-er* ending instead of *-or*.” Edward N. Teall, *Putting Words to Work* 99 (1940). Of course, *anglicize* is the more common and less jarring alternative.

engraft; ***ingraft**. Since the 1790s, the standard spelling has been *engraft*. See EN-.

Current ratio: 6:1

engrave > **engraved** > **engraved**. The past-participial form **engraven* is an ARCHAISM—e.g.:

- “Despite the computerisation and increased sophistication of the Treasury model, it still seems to have *engraven* [read *engraved*] in its heart: ‘Improvement means disaster.’” Samuel Brittan, “A New Look at Productivity,” *Fin. Times*, 25 Feb. 1982, § I, at 21.
- “While at this place we had the opportunity and pleasure of examining some remarkably fine toned portraits from the brush of H. Bundy, a backwoods Vermont artist, and, unless we much mistake, his name will yet be *engraven* [read *engraved*] high on the pinnacle of fame.” Lauren B. Hewes, “Horace Bundy: Itinerant Portraitist,” *Mag. Antiques*, Oct. 1994, at 486.
- “My own role was to accompany him now and then to the village cenotaph, no doubt to see if the names *engraven* [read *engraved*] thereon had changed.” Paul West, “My Father Weightless: Reflections on the Gravity of War,” *Harper’s Bazaar*, Dec. 2002, at 67.

See IRREGULAR VERBS (B).

The adjectival use of *engraved* predominates—e.g.: “An *engraved* silver urn, one of his old prizes, held a dozen felt-tipped pens, one of which he now took in hand.” Arthur Miller, “The Bare Manuscript,” *New Yorker*, 16 Dec. 2002, at 82, 91.

Current ratio (*had engraven* vs. **had engraven*): 12:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

enhance (= to heighten, intensify, or improve) should refer to a quality or condition, not to people. So while you can enhance people's education or experience or even salaries, you can't really enhance people themselves. But some writers fall into error—e.g.: "If all workers do what they are supposed to do together, . . . everyone will be *enhanced from* [read *improved by*] working together." Sheila Storm, "Knowlton Focuses on Details," *Successful Bus.*, 27 Sept. 1993, at 1.

Similarly, because *enhance* has long had positive connotations, it is a mistake to use it in reference to something bad, such as injuries—e.g.: "Papiano says that the intubation *enhanced* [read *aggravated*] the injury." William Nack, "From Fame to Shame," *Sports Illustrated*, 19 Apr. 1993, at 70. Unfortunately, lawyers have developed what they call the *enhanced-injury doctrine*, which allows an injury victim to seek damages from a deep-pocket company even if the company didn't directly cause the injury; under that rule, a person seriously injured by a drunk driver in a car crash could sue not only the driver but also the car manufacturer for not making the victim's car safe enough for such a crash. The use of *enhance*, though not a good choice, is understandable: to a plaintiff's lawyer who stands to gain a percentage of any recovery, an injury can be "enhanced" if the potential damages are greater. By this logic, though, an excruciating death would be the most "enhanced" situation. This is pure torture to the English language.

enigma. Pl. *enigmas*—preferably not **enigmata*. See PLURALS (B).

Current ratio: 99:1

enjambment (= in poetry, the continuation of a line, couplet, or verse from one to the next without a noticeable pause) is the standard spelling—e.g.: "Traditional forms are reanimated through syncopated rhythms and line *enjambment*." Rita Dove, "Poet's Choice," *Wash. Post*, 2 Sept. 2001, at T12. **Enjambement* is a variant spelling common in the late 19th century but now archaic.

***enjeopard**. See **jeopardize**.

enjoiner; injunction; enjoinder. The words of the Fowler brothers are as apt today as they were when first written:

As rejoin rejoinder, so enjoin enjoinder. The word is not given in the [first edition of the *OED*], from which it seems likely that Dickens ["Merely nodding his head as an *enjoinder* to be careful."] invented it, consciously or unconsciously. The only objection to such a word is that its having had to wait so long, in spite of its obviousness, before being made is a strong argument against the necessity of it. We may regret that *injunction* holds the field, having a much less English appearance; but it does; and in language the old-established that can still do the work is not to be turned out for the new-fangled that might do it a shade better, but must first get itself known and accepted.

H.W. Fowler & F.G. Fowler, *The King's English* 53 (3d ed. 1931).

The *OED* contains two illustrative examples of *enjoinder*, but *injunction* still generally "holds the field" in both positive and negative senses of *enjoin*.

Yet *enjoinder* has become more common than it was in the Fowlers' day in the sense "a command, esp. one that prohibits." E.g.: "Never go to bed mad. For generations, wise old long-marrieds have offered this advice to spating couples—an *enjoinder* endorsed by many of their modern professional congeners, marriage counselors." Michael Segell, "Make Love and War," *Esquire*, Aug. 1997, at 128.

Enjoinderment, missing from *W2* and labeled archaic in *W3*, is recorded in the *OED* from the 17th century in the sense "the action of enjoining." Today this word is fairly common in legal contexts <the court's enjoinderment of their picketing was fully warranted>. It has been fairly steadily used in print sources from the early 19th century to the present day.

enjoy myself. See **I enjoyed myself**.

***enlargen**, which is recorded in neither the *OED* nor *W3*, is a NEEDLESS VARIANT of *enlarge*, vb. It has appeared sporadically since the early 19th century and remains surprisingly common—e.g.:

- "A reddened spot appears on the skin, *enlargens* [read *enlarges*], and becomes raised, like a pimple." Amy J. Vellucci, "Rash of Lake Itch Complaints May Be Just the Beginning," *N.H. Sunday News*, 10 July 1994, at A1.
- "Four years later, the U.S. Army Corps of Engineers, while *enlargening* [read *enlarging*] the Intracoastal Waterway, dumped dredge material at the island's northeastern corner." Tao Woolfe, "Glancing Back," *Sun-Sentinel* (Ft. Lauderdale), 22 Mar. 1996, Palm Beach Plus §, at 3.
- "He started stealing his wife's birth control pills in an attempt to *enlargen* [*enlarge*] his breasts, had plastic surgery on his face and underwent his own procedures to remove body hair." Dave Wedge, "Deadly Docs," *Boston Herald*, 23 July 2000, at 1.

LANGUAGE-CHANGE INDEX

**enlargen* for the verb *enlarge*: Stage 1

Current ratio (*enlarge* vs. **enlargen*): 6,573:1

enliven; liven; liven up. *Enliven* has long been considered preferable to *liven*, but *liven up* is a common PHRASAL VERB in informal contexts and is the only idiomatic choice in an intransitive construction—e.g.:

- "After a couple of dull weeks, things *liven up* a bit Saturday." Michael C. Lewis & Joe Baird, "Kiwi Bowl Game Just Might Share Fate of the Dodo," *Salt Lake Trib.*, 16 Oct. 1996, at D2.
- "To *liven* the board *up* for the 6-year-old, the engineering students painted it bright yellow and added pink bows to the fanciful lion-shaped paper clip at the top." Sandra Barbier, "Tulane Students Design Desk for Paralyzed Kindergarten," *Times-Picayune* (New Orleans), 24 Mar. 1997, at B1.
- "Voight *livens up* the proceedings with a performance that out-hams even the porcine star of 'Babe.'" Russell Evansen, "Voight Puts Slithery 'Anaconda' over the Top," *Wis. State J.*, 16 Apr. 1997, at C3.

But except in that CASUALISM, *liven* alone is really just a NEEDLESS VARIANT of *enliven*—e.g.: "The

Rockets essentially gutted their team to bring in forward Charles Barkley, whose presence should *liven* [read *enliven*] and inspire the Rockets to make one more run at an NBA title." George Diaz, "Rockets Coming of Age," *Orlando Sentinel*, 1 Nov. 1996, at G21.

LANGUAGE-CHANGE INDEX
liven up meaning "to enliven": Stage 5

en masse. Pronounced /en mas/ or /ahn mas/.

enology (= the knowledge or study of wines and wine-making), a word introduced in the early 19th century, is predominantly so spelled in AmE—*oenology* in BrE. Oddly, however, *oenophile* (= a lover of wines) is the standard spelling in both AmE and BrE. Whoever decided this point of AmE usage must have been tipping unduly.

Current ratio (*enology* vs. *oenology* in World English): 2:1

enormity; enormousness. The historical DIFFERENTIATION between these words should not be muddled. *Enormousness* = hugeness, vastness. *Enormity* = outrageousness, ghastliness, hideousness. For example, Alan Dershowitz once said that Noam Chomsky "trivializes the *enormity* of the Chinese massacre [at Tiananmen Square on 4 June 1989]." Letter of Alan Dershowitz, "Left's Response to Beijing Massacre," *L.A. Times*, 13 July 1989, § 2, at 6. But President George Bush was less fastidious when referring to a different event: on 10 July 1989, he said he was buoyed and cheered by "the *enormity* of this moment," a historic challenge to reform the Polish economy.

The following examples typify the careful writer's usage—e.g.:

- "The last question invites comparison of the mere misfortunes of the defendant with the *enormity* of the killing." Thomas Raup, "Today's Death Penalties," *Baltimore Sun*, 21 July 1996, at F1.
- "A limited encounter with the Devil, his clansmen now try to explain, even as they realize the *enormity* of his sin." William Safire, "Be Nobody's Puppet," *N.Y. Times*, 5 Sept. 1996, at A23.
- "And the Orwellianly named Truth and Reconciliation Commission continues to hold hearings that air grim stories of what apartheid regimes did—albeit with rather less energy to air the equally grim stories of past *enormities* by the now-in-power African National Congress." Ross Mackenzie, "Overseas Items That Should Be Campaign Topics, but Oddly Aren't," *Richmond Times-Dispatch*, 26 Sept. 1996, at A15.

The *OED* notes that "recent examples [of *enormity* for *enormousness*] might perh. be found, but the use is now regarded as incorrect." Its evidence certainly shows a historical trend to make the word mean "monstrous wickedness," but the secondary meaning never really disappeared—e.g.:

- "To appreciate the befuddling *enormity* [read *vastness*] of these Olympics you need to wrestle with the following.

In Atlanta this weekend there are 42,000 volunteer workers, 30,000 police and soldiers, 15,000 media personnel and 10,788 athletes." Paul Hayward, "Business Opens for Olympics," *Daily Telegraph*, 20 July 1996, at 30.

- "A biographical sketch prepared by the university shows the *enormity* [read *magnitude*] of his energy and output." Martha Jackson, "Portraits of an Artist," *Charleston Daily Mail*, 5 Sept. 1996, at D1.
- "Titanic's numbers raised Fox's confidence in the *enormity* [read *enormousness*] of the women's market." David Ansen, "The Court of King Jim," *Newsweek*, 13 Apr. 1998, at 70.
- "The *enormity* [read *enormousness*] of Mr. Gore's triumph allows him to move more quickly to patch up relations with Mr. Bradley's backers." Richard L. Berke, "A Sweep by Gore Assures [read *Ensures*] Nomination," *N.Y. Times*, 8 Mar. 2000, at A1, A16. (For more on *assure* and *ensure*, see **assure**.)

Some sentences teeter on an ambiguity: is the word used correctly (and something horrific is afoot) or incorrectly (so that sheer size is at issue)? E.g.: "Americans are well aware of the *enormity* of the long-term-care problem that is facing the country." Karen McNally Bensing, "Insurance Can Defray Cost of Long-Term Care," *Plain Dealer* (Cleveland), 21 July 1996, at F6. How you read that sentence depends on your political inclinations: either something sinister is at work or else a big problem looms. The ambiguity might be considered splendid; yet it might also lead one to conclude that this is a SKUNKED TERM.

Again, is the writer of the following sentence partisan? And if so, is the writer a Republican or a Democrat? "Pick a superlative, any superlative. Chances are it doesn't come close to portraying the *enormity* of the Republican victory Tuesday." "Big Win," *Amarillo Globe-Times*, 10 Nov. 1994, at A4.

LANGUAGE-CHANGE INDEX
enormity misused for *immensity*: Stage 4

enough, adj.; sufficient. Although *enough* modifies either count nouns <enough books> or mass nouns <enough stamina>, *sufficient* should modify only mass nouns <sufficient oxygen>. (See COUNT NOUNS AND MASS NOUNS.) And while the usage problem can be solved by making it *sufficient numbers of*, the single word *enough* does the job better—e.g.: "The Pacific Maritime Assn., which represents shipping lines and terminal operators, claims the union has been deliberately slowing the work pace by failing to dispatch *sufficient numbers of* [read *enough*] skilled workers to job sites." Nancy Cleeland & David Streitfeld, "Logjam at Ports Continues as Sides Blame Each Other," *L.A. Times*, 17 Oct. 2002, Bus. §, pt. 3, at 2.

There are, of course, exceptions to the general rule: *sufficient* (or more often *insufficient*) *funds* is a common phrase. But the following examples misuse *sufficient* for *enough* or *adequate*:

- "President Rosemary Brester reports she's encountering substantial problems finding *sufficient* [read *enough*]

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

people to meet her expanding order book.” Steve Wilhelm, “Boeing Buildup Drains Work Force,” *Puget Sound Bus. J.*, 26 July 1996, at 1.

- “The architectural firm did not provide *sufficient* [read *adequate*] specifications to lay the Masonite properly.” Daniel P. Jones, “Town OK’s \$50,000 to Fix Warped High School Stage,” *Hartford Courant*, 7 Oct. 2002, at B5.
- “That would have been the ‘easy answer,’ said Jack Grobe, head of the committee in charge of deciding . . . when First-Energy has made *sufficient* [read *enough*] changes to the plant’s management so it can be trusted to operate safely.” John Funk, “NRC Praises Davis-Besse for Handling of New Issue,” *Plain Dealer* (Cleveland), 17 Oct. 2002, at C4.

For more on *sufficient*, see **adequate (A)**.

LANGUAGE-CHANGE INDEX
sufficient used with a count noun: Stage 3

enough, adv.; **sufficiently**. The same rule of thumb that applies to the adjectives applies to the adverbs as well—though because of the strictures of grammar, errors with this pair are less likely to occur.

***enounce**. See **announce**.

enplane. See **AIRLINESE**.

***enquire**. See **inquire**.

enquiry. See **inquiry (B)**.

enroll; **enrol**. *Enroll* is the standard spelling in AmE, *enrol* in BrE.

enrollee. See **-EE**.

enrollment; **enrolment**. This word is spelled *-ll-* in AmE and *-l-* in BrE.

en route; ***enroute**. The standard form is *en route*. In modern print sources (mostly American), the closed-up **enroute* appears occasionally; although the *OED* suggests that this one-word version is exclusively North American (the earliest example being 1967), it occurs also in BrE.

The phrase is pronounced /en root/ or /on root/. Avoid /in/. Although /rowt/ is accepted for the word *route* by itself, in this phrase the pronunciation should invariably be /root/. For more, see **route**.

Current ratio: 17:1

ensue; ***insue**. The first is the standard spelling.

Current ratio: 2,347:1

***ensurance**. See **insurance (A)**.

ensure; **insure**. See **assure**.

***enswathe** is a NEEDLESS VARIANT of *swathe*, vb. See **swathe**.

Current ratio (*to swathe* vs. **to enswathe*): 65:1

enter. **A. For enter into**. Idiomatically speaking, one *enters into a contract* with another; one does not merely **enter a contract*. E.g.: “At the time the contract is *entered* [read *entered into*], the agreed-upon

payment must be a reasonable forecast of just compensation for the harm that would be caused by a breach.” Even so, *to enter into a contract with* is usually prolix for *to contract with*.

LANGUAGE-CHANGE INDEX

**enter a contract* for *enter into a contract*: Stage 1

B. The Phrase enter in. Although to the modern ear this phrase is a REDUNDANCY, it occurs frequently in poems, in hymns, and especially in the Bible (KJV). It does not belong in mundane passages.

enterprise is often misspelled **enterprize*—e.g.: “The study is part of an effort to figure out what to do with programs like the *enterprize* [read *enterprise*] zones.” Aldo Svaldi, “Bidders Seek Chance to Guide State’s Hand,” *Denver Bus. J.*, 23 Aug. 1996, at A4. The spelling *H.M.S. Enterprize* can be seen in the opening credits of the *Star Trek* series *Enterprise*. There, the spelling reflects the correct name of an 18th-century ship.

LANGUAGE-CHANGE INDEX

enterprise misspelled **enterprize*: Stage 1

Current ratio: 238:1

enthrall; **enthral**; ***inthrall**; ***inthrall**. The spelling *enthrall* is standard in AmE, *enthral* in BrE. The *in-*spellings are to be avoided. See **EN-**.

***enthuse**, vb., is a widely criticized BACK-FORMATION avoided by writers and speakers who care about their language. The verb can be either transitive or intransitive. As a transitive verb, it was originally confined to passive-voice uses <I am enthused by the game>, but by the mid-1990s the word had taken on active uses <she enthused me about the game>. E.g.:

- Transitive: “They *enthused* [read *inspired*] student volunteers with their ideas.” “The First Glint of a New Japan,” *Economist*, 24 July 1993, at 33.
- Transitive: “After discovering that the bags were no longer being imported into the U.S., I tracked down the company in Denmark, and, well, he *enthuses* [read *gushes*], ‘here we are!’” Lynell George, “Once Feared Lost, This Relationship Is in the Bag Again,” *L.A. Times*, 15 Oct. 2002, Calendar §, pt. 5, at 12.
- Intransitive: “Avon Editor in Chief Bob Mecoy *enthuses* [read *raves* or *rhapsodizes*] about the graphic-novel form.” Peter Plagens, “Drawing on the Dark Side,” *Newsweek*, 5 Sept. 1994, at 70.

Although the adjective **enthused* is virtually always inferior to *enthusiastic*, it is increasingly common—e.g.:

- “Wall Street was *enthused* [read *enthusiastic*], bidding up CBS stock \$50 in one day to \$313.” Larry Reibstein, “Barry Diller’s Greatest Hit?” *Newsweek*, 11 July 1994, at 46.
- “With reviews like that, Detroit is so *enthused* [read *enthusiastic*] about its prospects that it is positioning the new class of compacts as the centerpiece of an old-fashioned, ’50s- and ’60s-style all-out autumn advertising blitz.” Janice Castro, “Small Cars, High Hopes,” *Time*, 12 Sept. 1994, at 58.
- “The coming project he sounds most *enthused* [read *enthusiastic*] about is ‘The Foreigner,’ an English-language

drama to be directed by Martin Campbell.” Julie Makinen, “East Meets West,” *Chicago Trib.*, 26 Aug. 2015, Arts & Entertainment §, at 4.

LANGUAGE-CHANGE INDEX

1. **enthuse* for *gush*: Stage 2
 2. **enthused* for *enthusiastic*: Stage 3
- Current ratio (*highly enthusiastic* vs. **highly enthused*): 20:1

entice; ***intice**. The latter is an obsolete spelling of *entice* (= to lure, attract). **Inticement* is also obsolete for the corresponding noun *enticement*. Both *i-* spellings are therefore NEEDLESS VARIANTS, but they occasionally appear in modern sources—e.g.:

- “The decline of the International Motor Sports Association, among other diversions, has *inticed* [read *enticed*] the biggest names in road racing to SCCA Trans-Am racing.” Jeff Olson, “Trans-Am Stars to Be Out in Full Force at Grand Prix,” *Des Moines Register*, 2 July 1994, Sports §, at 1.
- “Hindu fringe groups have accused missionaries of using money and other means to convert poor and illiterate Indians. Christian groups deny using such *inticements* [read *enticements*], which *is* [read *are*] illegal in Indian law.” *St. Louis Post-Dispatch*, 24 Jan. 1999, at B7. (On the misuse of *is* for *are* in that sentence, see REMOTE RELATIVES.)

Current ratio: 413:1

entire is accented on the second syllable: /en-**tīr**/, not /**en**-tīr/. On this word as a noncomparable adjective, see ADJECTIVES (B).

entitle; **title**, v.t. The word *entitle* has two meanings: (1) “to provide with a right or title to something” <entitled to a discount>; and (2) “to give a title to” <a book entitled *Woe Unto You, Lawyers!*>. Sense 1 is more common. And sense 2, in the best usage, is confined to the past-participial adjective (as in the illustration with the book title).

As a transitive verb, *title* is preferred over *entitle*. Hence *What are you going to title your article?*, not **What are you going to entitle your article?*

The *Associated Press Stylebook* and several other newspaper guides reserve *entitled* to mean having a right to do or have something. But sense 2 actually predates sense 1, and both senses are well established.

entomology; **etymology**. *Entomology* is the study of insects. *Etymology* is the study of word origins or, more usually, the derivation of a given word. The two words are occasionally confounded—e.g.:

- “Fly fishermen must also study *the etymology of insects* [read *entomology*], what *they* [read *insects*] look like, how they move, so they can mimic them.” Marianne Costantinou, “Reel-Life Story with a Cast of Thousands,” *S.F. Examiner*, 31 May 1999, at A12. (Besides the usage error, this buggy sentence also contains a latent REDUNDANCY [*entomology of insects*] and an ambiguity [*they* with two possible antecedents].)

- “To begin, one should go to the *root entomology* [read *etymology*] of the words.” Michael Storey, “Otus the Head Cat,” *Ark. Democrat-Gaz.*, 14 Oct. 2000, at E3. (*Root etymology* is redundant.)

See ETYMOLOGY.

Entomology is sometimes, in its spelling, confusingly influenced by the spelling of *etymology*—e.g.: “It is no accident that Musil was trained as an engineer, that Ernst Jünger and Nabokov should be serious *entymologists* [read *entomologists*], that Broch and Canetti are writers schooled in the exact and mathematical sciences.” George Steiner, *In Bluebeard’s Castle* 130 (1971).

LANGUAGE-CHANGE INDEX

1. *etymology* misused for *entomology*: Stage 1
2. *entomology* misused for *etymology*: Stage 1
3. *entomology* misspelled **entymology*: Stage 1

entrance; **entry**; **entranceway**; **entryway**. Both *entrance* and *entry* may refer to the act of entering. In reference to structures, *entrance* connotes a single opening, such as a door, while *entranceway*, *entryway*, and *entry* suggest a longer means of access, such as a corridor or vestibule.

entrust, not ***intrust**, is now the usual and preferred spelling. See EN-.

Current ratio: 7:1

enumerable; **innumerable**. Though close in pronunciation, these words have opposite meanings. *Enumerable* = countable; capable of being listed. *Innumerable* = unable to be counted. The words should be pronounced distinctly so that listeners won’t misunderstand.

In writing, the most common error with these words is to misuse *enumerable* for *innumerable*—e.g.:

- “From 9 to 5, Hornbuckle runs Community Preschool in Newport Beach, where piles of paperwork, incessant telephone calls and *enumerable* [read *innumerable*] split-second decisions conspire to challenge her characteristic composure.” Zan Dubin, “Mommies’ Dearest Wishes,” *L.A. Times*, 9 May 1991, OC Live §, at 3.
- “[The Constitution] is about 15 pages in size and much of the language is brief and concise. It cannot be expected to cover the *enumerable* [read *innumerable*] experiences of human existence over the many years.” Bernard H. Siegan, “Judging Thomas,” *San Diego Union-Trib.*, 22 Sept. 1991, at C1.
- “In one of his *enumerable* [read *innumerable*] and lackluster comeback attempts, he had a new comic book and a comic book store in Santa Rosa.” Marc D. Allan, “Swing, Dive with Bands from Chicago and Berkeley,” *Indianapolis Star*, 21 Feb. 1996, at E5.

Both terms are sometimes misspelled **innumerable*. Most frequently the term misspelled is *innumerable*—e.g.: “He had to rescue *innumerable* [read *innumerable*] wounded soldiers on Omaha Beach

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

while under constant fire.” Greg Seigle, “Saving the Wounded,” *Wash. Times*, 6 June 1994, at E10.

The word *number* is redundant when used with either term. See REDUNDANCY.

ENUMERATIONS. A. First(ly), second(ly), third(ly); one, two, three. The best method of enumerating items is the straightforward *first*, *second*, and *third*. The forms *firstly*, *secondly*, and *thirdly* sound stuffy and have an unnecessary syllable, and *one*, *two*, and *three* sound especially informal. E.g.: “This leaves but two possible effects of the service mark’s continued use: *One* [read *First*], no one will know what CONAN means. *Two* [read *Second*], those who are familiar with the plaintiff’s property will continue to associate CONAN WITH THE BARBARIAN.” *Conan Props. v. Conan Pizza*, 752 F.2d 145, 156 (5th Cir. 1985) (Clark, J., dissenting). See **firstly**.

B. Comma Before the Last Element. The question whether to use the serial comma—or, as it’s sometimes called, the “Harvard” comma or “Oxford” comma—is more vehemently argued than any other punctuation issue. Fashions in public-school textbooks and journalists’ manuals come and go, but only one method is ironclad in avoiding unnecessary ambiguities: inserting a comma before the final element. Hence *a, b, and c* rather than *a, b and c*. Problems arise, for example, with elements containing two or more items, as *a and b, c and d, e and f, and g and h*. The last two elements are muddled if the comma is omitted.

Consider this sentence, an example of how using the serial comma can prevent a syntactical train wreck: “Like almost any modern player, most of the \$80 models play DVDs, music CDs, video CDs, MP3 music disks you’ve created on your computer and so on.” On your computer and what? The classic example of ambiguity is the apocryphal book dedication, “To my parents, Ayn Rand and God.”

This sort of thing creeps into print more often than journalists might expect—e.g.: “The university’s chemistry, biology, physics and marine and environmental-science departments, which are now scattered around campus, will be housed in the center with its 73 laboratories.” Chris Moran, “USD Given \$10 Million for Science, Tech Center,” *San Diego Union-Trib.*, 14 June 2002, at B2. Still, the trend among journalists is to omit the serial comma. Hence the rule as stated by a leading authority in punctuation: “Three or more elements in a series are separated by commas. When the last two elements (words, phrases, or clauses) in a series are joined by a conjunction, a comma comes before the conjunction—unless you’re a journalist.” Karen Elizabeth Gordon, *The New Well-Tempered Sentence* 46 (rev. ed. 1993). See PUNCTUATION (D).

C. Within a Single Sentence. To keep the sentence short, enumerate items with parenthetical numbers: (1), (2), (3), etc. Of course, if the sentence becomes overlong anyway, you’re better off dividing it up.

D. And Before the Last Element. See **and** (c).

E. Bullets. See PUNCTUATION (B).

enunciate /i-nən-see-ayt/. Ironically, the word is sometimes mispronounced /shee/ in the third syllable. For the sense, see **announce**.

enunciation. See PRONUNCIATION (F).

***enure.** See **inure**.

envelop is the verb (“to wrap or cover”), *envelope* the noun (“wrapper, covering”). The verb is pronounced /en-vel-əp/; the noun is pronounced either /en-və-lohp/ or /on-və-lohp/.

enviable; envious. That which is *enviable* arouses envy or is at least worthy of it. A person who is *envious* feels or is struck by envy. *Envious* usually takes the preposition *of* <envious of her sister’s success>, but historically has also taken *against* or *at*. See **jealousy**.

The pair is in the unenviable position of being susceptible to WORD-SWAPPING—e.g.:

- “Mr. Strauss’s financial disclosure statement . . . details what is already widely known: the 72-year-old lawyer is a power broker of abundant wealth and *envious* [read *enviable*] political and corporate connections.” Stephen Labaton, “Strauss to Forgo \$4 Million in Pay to Take Moscow Post,” *N.Y. Times*, 13 July 1991, at 3.
- “Northwestern has an *envious* [read *enviable*] record in producing outstanding performers.” “Kup’s Column,” *Chicago Sun-Times*, 17 Sept. 1997, at 70.
- “Teleglobe, with its trans-oceanic and satellite links, is in the *envious* [read *enviable*] position of being able to bridge U.S. Internet content with an information-hungry world.” Barrie McKenna, “D.C.’s Internet Success Runs Deep,” *Globe & Mail* (Toronto), 27 Dec. 1999, at B7.

LANGUAGE-CHANGE INDEX

envious misused for *enviable*: Stage 1
Current ratio (*enviable reputation* vs.
**envious reputation*): 91:1

envision; envisage. Although *envisage* is more than a century older—having been used since the early 19th century—*envision* is now much more common in AmE. Today, *envisage* is a literary word in AmE, but the ordinary word in BrE. Not until the mid-1970s, however, did *envision* supplant *envisage* as the more usual term in AmE.

Both words mean “to visualize,” but there is perhaps an incipient DIFFERENTIATION underway—one that should be encouraged. As suggested by *W11*, *envision* means “to picture to oneself” <I don’t envision winning the tournament>, while *envisage* means “to contemplate or view in a certain way” <she envisages the building as being in a state of severe decline>.

In fact, though, American speakers and writers tend to use *envision* in both ways, to the exclusion of *envisage*—e.g.:

- “Wilk said she could even *envision* someone turning the house into a bed-and-breakfast with a horror theme.” “Killer Deal: ‘The Silence of the Lambs’ House Up for Sale,” *Daily Telegram* (Adrian, Mich.), 20 Aug. 2015, at B5.
- “Champions of the coming age of autonomous vehicles *envision* a time when car accidents do indeed become

a regrettable horror of the past, in the same league as smallpox and bloodletting.” Kristine Owrn, “What Will Insurers Do Without Drivers?,” *Edmonton J.*, 22 Aug. 2015, at C8.

- “Weiss *envisions* it as a Wall of Fame, with scores of artists.” David Menconi, “UNC’s Own Rock and Roll Hall of Fame,” *News & Observer* (Raleigh), 22 Aug. 2015, Entertainment §.

Still, *envisage* is hardly unknown in AmE—e.g.: “President Clinton’s advisers . . . earnestly hope that the fragile arrangement *envisaged* in the Dayton peace plan will somehow hang together.” Mike O’Connor, “Stray Cable from Bosnia Creates Stir in Capital,” *N.Y. Times*, 10 Oct. 1996, at 29.

***en vogue**. See **in vogue**.

envoi; **envoy**. For the sense “a postscript to a poem or essay,” both spellings are used. Major American dictionaries are divided on the point—some listing *envoi* first and others *envoy* first. In that sense, though, *envoi* is the more usual spelling by a 6-to-1 ratio in print sources.

That development makes for useful DIFFERENTIATION because *envoy* is now used almost exclusively in diplomatic contexts. Both words are preferably pronounced /**en**-voi/, not /**on**-voi/.

envy. See **jealousy & enviable**.

***eolian**. See **aeolian**.

eon (= an indefinitely big era) is the standard spelling in AmE and BrE alike. **Aeon* is an obsolescent variant. See **AE**.

epaulette; **epaulet**. In the 1780s, English borrowed this word from French, in which the word is spelled *epaulette*. Through 1880, that was the predominant spelling in English as well, but from 1900 or so the feminine suffix was frequently dropped: *epaulet* vied with *epaulette* for about a century, during which time most American dictionaries gave priority to *epaulet*. Today, however, *epaulette* remains the more frequent spelling in AmE and BrE alike. *Epaulette* is accented on the last syllable, *epaulet* on the first.

Current ratio (*epaulette* vs. *epaulet*): 1.5:1

épée (= a fencing sword, narrow with a sharp point) is normally so spelled, with its two accents, and pronounced either /**e**-pay/ or /**ep**-ay/. See **DIACRITICAL MARKS**.

epenthetic (= of, relating to, or consisting of the insertion of a superfluous syllable or sound into the middle of a word) is the standard adjective—**epenthetical* being a NEEDLESS VARIANT. Several mispronunciations contain *epenthetic* schwas, such as /**ath**-ə-leet/ for what should be a two-syllable *athlete* and /**reel**-ə-tər/

for what should be a two-syllable *realtor*. See **athlete & realtor**. See also **PRONUNCIATION (B)**.

Current ratio: 668:1

epexegetis. See **exegesis**.

epic, adj.; ***epical**. See **epochal (A)**.

epicenter (BrE *epicentre*). This is a scientific term meaning “the point on the surface of the earth just above the underground focal point of an earthquake.” It shouldn’t be used thoughtlessly as a synonym for *center*—e.g.:

- “Jan-Wolter Wabeke, 52, has been at the *epicenter* [read *center*] of the debate over the Netherlands’ social legislation both at home and abroad.” Christopher Dickey & Friso Endt, “Playing by Dutch Rules,” *Newsweek Int’l*, 4 June 2001, at 18.
- “Ramsey, who is elusive about his home life, is the only one of the five who lives in public housing, which was at the *epicenter* [read *center*] of the summer’s gang warfare.” Alex Kotlowitz, “Proving Ground,” *Chicago Trib.*, 10 June 2001, Mag. §, at 12.
- “Clearly, urban areas are at the *epicenter* [read *center*] of welfare reform.” Bruce Katz & Katherine Allen, “Cities Matter,” *Brookings Rev.*, 1 July 2001, at 30.

One of William Safire’s correspondents, a geophysicist named Joseph D. Sides, attributes this type of misuse to “spurious erudition on the part of writers combined with scientific illiteracy on the part of copy editors.” (As quoted in Safire, “On Language,” *N.Y. Times*, 6 May 2001, § 6, at 22.) But maybe these types of misuse are just metaphorical descriptions of focal points of unstable and potentially destructive environments.

LANGUAGE-CHANGE INDEX
epicenter misused for *center*: Stage 1

epicure. See **gourmet**.

epicurean. So spelled—preferably not **epicurian*. E.g.:

- “If people know how to taste [chocolate] properly, they may view it like that other great *epicurian* [read *epicurean*] matchmaker.” Jay Cridlin, “Can Cocoa Bring People Together?” *St. Petersburg Times*, 6 June 2008, at 51.
- “Asian cuisine is nothing if not adventurous, and the Munchers were ready to push the *epicurian* [read *epicurean*] envelope.” Peter Genovese, “Currying Flavor,” *Star-Ledger* (Newark), 13 June 2008, Today §, at 61.

The same recipe spoils other cognates of *epicure* as well—e.g.: “One would end up no doubt oscillating madly between *epicurianism* [read *epicureanism*] and stoicism.” Joseph Brodsky, *On Grief and Reason* 331 (1995).

LANGUAGE-CHANGE INDEX
epicurean misspelled **epicurian*: Stage 1
Current ratio: 151:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

epidemic; endemic. A disease is an *epidemic* when it breaks out and rages in a community, only to subside afterward. A disease is an *endemic* when it constantly exists within a certain population or region. The latter term, which also applies to plants, is comparatively rare.

The words are sometimes used as adjectives. *Epidemic* = extremely prevalent; widespread. *Endemic* = native to a particular region or group. Cf. **pandemic**.

epigram; epigraph. Because these similar-sounding terms are similar in meaning, they are therefore often subject to WORD-SWAPPING. *Epigram* = (1) a short, witty poem; or (2) a concise, pointed, and usu. clever saying. (Cf. **apothegm**.) *Epigraph* = (1) an inscription, esp. on a building or statue; or (2) a thematic quotation at the beginning of a book, chapter, etc. So although an *epigram* can constitute an *epigraph*, the reverse does not hold true.

epilogue (= a parting word at the end of a written or spoken presentation) is so spelled—not **epilog*. Cf. **analogue, catalog(ue) & dialogue**. For a comment on the potential decline of the *-ue* form, see -AGOG(Ue).

Episcopal Church; *Episcopalian Church. Strictly, one refers to the *Episcopal Church* and to an *Episcopal minister*. The word *Episcopalian* is most commonly a noun, as in *I'm an Episcopalian*. Yet many writers have started using *Episcopalian* as an adjective—e.g.:

- “The Liberal Catholic Church . . . is independent of the Roman Catholic and *Episcopalian* [read *Episcopal*] Church.” Luisa Yanez, “Church Dissolves Cultural Barriers,” *Sun-Sentinel* (Ft. Lauderdale), 30 May 1988, at B3. (Note the CONCORD problem here.)
- “Chauncey, descended from clergymen (his father was an *Episcopalian* [read *Episcopal*] minister, his ancestors Puritans), went to church, and afterward he added to the day’s diary entry,” Nicholas Lemann, “The Structure of Success in America,” *Atlantic Monthly*, Aug. 1995, at 41, 42.

LANGUAGE-CHANGE INDEX

**Episcopalian Church* for *Episcopal Church*: Stage 1
Current ratio (*Episcopal Church* vs.
**Episcopalian Church*): 64:1

epistolary (= of, relating to, or based on letters) is sometimes wrongly made **epistolatory*—e.g.:

- “Both were hypochondriacs—an important *epistolatory* [read *epistolary*] bond—Jefferson suffering from headaches, Madison from bowel trouble.” Paul Johnson, “Founding Fathers,” *Daily Telegraph*, 23 Apr. 1995, at 9.
- “The author has transformed the historical Pacienza into the protagonist of her remarkably interesting novel *The Secret Book of Grazia Dei Rossi*, an *epistolatory* [read *epistolary*] tale of an Italian Jewish proto-feminist torn between duty and love.” Sharon Gibson, “Love, Duty Drive Renaissance Novel,” *Houston Chron.*, 21 Sept. 1997, Zest §, at 27.

A cognate of *epistle* (letter), the word is pronounced /i-**pis**-tə-ler-ee/.

LANGUAGE-CHANGE INDEX

**epistolatory* for *epistolary*: Stage 1
Current ratio (*epistolary* vs. **epistolatory*): 155:1

epitaph. See **epithet (B)**.

epithet. A. Meanings. *Epithet* = (1) an esp. apt description or label, whether the quality denoted is favorable or unfavorable; or (2) a slur or an abusive term. Sense 2 is quickly driving out sense 1.

LANGUAGE-CHANGE INDEX

epithet for *slur* or *term of abuse*: Stage 5

B. And epitaph. *Epitaph* (= a gravestone inscription) is sometimes misused for *epithet* in the sense of “a derogatory name.” Today the blooper is irksomely common—e.g.:

- “Santiago, of the 3400 block of Lituania, beat the mailman with a pool cue and shouted racial *epitaphs* [read *epithets*], Burnett said.” “2 Convicted in Racial Attack on Postman,” *Chicago Sun-Times*, 12 Mar. 1994, at 38.
- “Then like a tornado he withdrew again to the inside dorm balcony, screaming profane *epitaphs* [read *epithets*] at the cringing Andrew.” George T. Eidson Jr., “Notes from the Inside,” *Orlando Sentinel*, 10 Sept. 1995, Florida §, at 7.
- “He is a man taken to belittling his staff and his wife, using racial *epitaphs* [read *epithets*] when speaking with men he knows to be bigots and bragging of extramarital affairs.” Stephen Watson, “A *Masterful* [read *Masterly*] Saga of LBJ’s Senate Years,” *Buffalo News*, 12 May 2002, at F5. (See **masterful**.)

In Canada, this error has provoked the ire of a letter-writer: “Art Hanger, the Calgary Reform MP, last week accused Liberal Mary Clancy of ‘hurling epitaphs’ when she attacked Reform immigration policy. [¶] Clancy replied mockingly that ‘marble epitaphs’ are rather too heavy to hurl, and chided Hanger for his misuse of language. [¶] Actually, they’re both wrong—but who expects politicians to understand English? [¶] An epitaph is not a headstone: it’s a funeral oration or a memorial inscription written on a tomb.” Sydney Sharpe, “Calgary Schools Benefit from Companies’ Castoffs,” *Calgary Herald*, 22 Jan. 1995, at A2.

LANGUAGE-CHANGE INDEX

epitaph misused for *epithet*: Stage 1
Current ratio (*contemptuous epithet* vs.
**contemptuous epitaph*): 45:1

C. And expletive. These words overlap somewhat, since a shouted *epithet* is also an *expletive* in the sense of “an exclamation, esp. a profane or scatological exclamation.” But *expletive* is also a term in grammar, referring to a word that serves no real purpose in a sentence but merely fills a syntactic space (most commonly *it* or *there*, as in *it is raining* or *there is something we need to talk about*). See EXPLETIVES.

epitome /i-**pit**-ə-mee or ee-**pit**-ə-mee/ = (1) an ideal representation of a class of things; or (2) a summary, abstract. E.g. (sense 1): “In short, he is the *epitome* of all that many liberals find evil in the boardrooms of America.” Ted Bunker, “No Place for Liberals at This CEO’s Table,” *Boston Herald*, 7 Oct. 1996, at 26.

The word does not mean “pinnacle” or “climax”—e.g.:

- “ESPN reached the *epitome* [read *pinnacle* or *zenith*] of boredom during its marathon coverage of the NFL draft.”

Bruce Jenkins, "They're Everywhere," *S.F. Chron.*, 27 Apr. 1996, at D2.

- "Jordan's masterstroke was choosing Liam Neeson, whose penchant for deeply emotional yet disturbingly complex men reached its *epitome* [read *pinnacle* or *zenith*] in *Schindler's List*." Bruce Kirkland, "Michael Collins a Powerful, Tragic Portrait," *Toronto Sun*, 11 Oct. 1996, at 77.
- "Strained pranks and smutty jokes reach their *epitome* [read *pinnacle* or, more appropriately here, *low point*] in the show's big inspiration: having a dog fall in love with Harris's leg." Tom Shales, "Primal-Time Programming," *Wash. Post*, 19 Sept. 1999, at G1.

LANGUAGE-CHANGE INDEX

epitome misused for *pinnacle*: Stage 1

Current ratio (*reach the pinnacle* vs.

**reach the epitome*): 46:1

epoch (/ep-ək/) = (1) a date of an occurrence that starts things going under new conditions; or (2) a period of history. Some stylists object to sense 2 as an example of SLIPSHOD EXTENSION—an unnecessary word since *era* fills the role nicely. But the extension occurred in the 17th century, and good writers today use the word in that sense—e.g.: "Scientists at the Smithsonian Institution . . . have challenged . . . the notion that our early ancestors were prodded into existence in response to abrupt environmental changes during the Pliocene *epoch*." Curt Suplee, "Team Challenges Theory Linking Climate Change, Evolutionary Surge," *Wash. Post*, 28 Nov. 1997, at A4.

In the taxonomy of geological time, an epoch is a division of a period, which in turn is a division of an era. For example, today we are in the Holocene Epoch of the Quaternary Period of the Cenozoic Era.

epochal. **A. And *epic***, adj.; **epical*. *Epochal* (/ep-əkəl/) = marking an epoch, or a new period in chronology. The word should not be used lightly. "Five devastating *epochal* floods have visited the valley since the establishment of the commission." (Only if the writer intended to convey that five epochs had passed since the establishment of the commission—an unlikely meaning—would *epochal* have been correct.)

Epic = (1) of, relating to, or involving an epic (i.e., a long heroic narrative); or (2) surpassing what is ordinary or usual. **Epical* is a NEEDLESS VARIANT.

Current ratio (*epic poem* vs. **epical poem*): 615:1

B. And *epoch-making*. The phrase *epoch-making*—a near-equivalent of *epochal*—is sometimes mistakenly written **epic-making*. E.g.: "We are at the end of only the second decade of the revolutions in micro-electronics and telecommunications, and the lesson of other *epic-making* [read *epoch-making*] innovations, such as electricity, is that productivity gains . . . will likely continue." Peter Morici, "Export Our Way to Prosperity," *Foreign Policy*, 22 Dec. 1995, at 3.

LANGUAGE-CHANGE INDEX

**epic-making* for *epoch-making*: Stage 1

eponym; eponymous. *Eponym* (= a person, place, or thing that gives its name to someone or something else) is sometimes misused to denote the bearer of the borrowed name—e.g.: "Nouns derived from proper names of people or places, such as sandwich, are called *eponyms* [read *namesakes*]." Howard Wolinsky, "Click Here: Our Favorite Places on the Net," *Chicago Sun-Times*, 24 Oct. 2006, Financial §, at 54.

Likewise, the adjective *eponymous* (= characteristic of a person, place, or thing that gives its name to someone or something else) is traditionally used with the source of the name—e.g.: "Made from gamay grapes grown in the *eponymous* region of France, Beaujolais Nouveau is a red wine produced very quickly through a process known as carbonic maceration." Allison Knab, "A Little Beau Peek," *Chicago Trib.*, 15 Nov. 2006, at 34.

But today, *eponymous* is commonly (and sloppily) used with the derived name rather than the eponym itself—e.g.: "His *eponymous* London restaurant earned three stars in the latest Michelin guide, so achievement of that goal rests on his New York venture." Jennifer Leuzzi, "Gordon Ramsay Lands in New York," *N.Y. Sun*, 15 Nov. 2006, Food & Drink §, at 11. (A possible revision: *His London restaurant, which bears the owner's name, earned three stars . . .*) Sticking with the traditional usage would clear up ambiguities such as this example from the same source: "Other Warhols on offer at Christie's include 'Sixteen Jackies' (estimate upon request), and his *eponymous* four-panel portrait of the novelist Judith Green (estimate \$2 million–\$3 million)." João Rivas, "Another Record Week?" *N.Y. Sun*, 13 Nov. 2006, Arts & Letters §, at 13. Is that portrait named after Green or Warhol? Or is the reader to take *eponymous* literally and conclude that Green was named after the portrait?

LANGUAGE-CHANGE INDEX

eponym for *namesake*: Stage 2

equable. See **equitable**.

equal, n. & adj. See **coequal**.

equal, vb., makes *equaled* and *equaling* in AmE, *equalled* and *equalling* in BrE. See SPELLING (B).

equal if not better. This phrase works if the thing being compared has already been mentioned and doesn't need further mention in a sentence—e.g.: "The Pac-10 has *equal, if not better*, drawing power, but as a shaper of college athletics, its best days have passed." Percy Allen, "Pac-10 Plays Waiting Game as Stakes Rise," *Seattle Times*, 28 Aug. 1996, at F13 (comparing the Pac-10 with the Big Eight athletic conference, mentioned in the previous paragraph). But if the point of comparison is yet to be made and a *than*-phrase follows *better*, the construction is illogical because you cannot say that something is *equal than* something

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

else. You have to make it *equal to* in order to parallel *better than*—e.g.:

- “Under Columbia’s tutelage, the quality of care is *equal, if not better than*, [read *equal to, if not better than, the quality of care*] before.” Frank Cerne, “Corporate Takeover? Healthcare Consolidation Could Improve Financial Stability,” *Hospitals & Health Networks*, 20 Mar. 1995, at 44.
- “We should make their salaries *equal (if not better than)* [read *equal to (if not better than)*] those of the administrators.” Gwen Diaz, “A 10-Point Parent Proposal,” *Ledger* (Lakeland, Fla.), 17 Oct. 1995, at B6.
- “Humphreys in his pomp for Ireland was at least the *equal if not better than* his nemesis Ronan O’Gara.” Tony Ward, “Sexton Is Now a Man Under Severe Pressure,” *Belfast Telegraph*, 12 May 2015, Sport §, at 49. (Here, *equal*, preceded by *the*, functions as a noun, making the construction even more illogical by creating a false parallel with the adjective *better*. A possible revision: *Humphreys’s pomp for Ireland at least equaled—if not surpassed—that of his nemesis, Ronan O’Gara.*)

See ILOGIC (B). Cf. CANNIBALISM & PARALLELISM.

Of course, the mistake is far less frequent than the correct phrasing in edited English—e.g.: “Harrington says the Red Sox must have a stadium that is *equal to, if not better than*, the new ones in Cleveland, Baltimore and Toronto.” Will McDonough, “Harrington Expounds on Ballpark, Figures,” *Boston Globe*, 6 Mar. 1996, at 61.

If *equal* and *better* are used as verbs, of course, no prepositions are needed. The usage becomes less tricky—e.g.: “Banks’ investment performance has at least *equaled if not bettered* that of their non-bank competitors.” “You Don’t Have to Be Big,” *ABA Banking J.*, Nov. 1988, at 57.

LANGUAGE-CHANGE INDEX

**equal if not better than for equal to if not better than*: Stage 4

Current ratio (*equal to if not better than vs. *equal if not better than*): 2:1

equally as. The particle in this phrase is almost always unnecessary and faulty—e.g.:

- “The sauce would work *equally as* [read *equally*] well on chicken, fish, onions, or any food that’s good cooked on the grill or in the broiler.” Patricia Mack, “No Cooking Tonight,” *Record* (N.J.), 25 Sept. 1996, at F1.
- “Senior Darnell Morgan (5-9, 171) leads the way with 466 yards. Chapman plays defense *equally as* [read *equally*] well.” “Game Day,” *L.A. Times*, 12 Oct. 1996, at C15.
- “While the hosts of late-night talk shows set the tone and the guests pull in the viewers, the bands are *equally as* [read *equally*] important.” Leo Pusateri, “Developing Value Culture Means New Ideas,” *Bus. First* (Buffalo), 19 Jan. 1998, at 27.

The variant phrase *as equally* is just as (i.e., equally) poor—e.g.:

- “Johnson, who had 37 points in the victory over MTSU, was *as equally* [read *equally*] unstoppable in the opening half.” Phil Stukenborg, “Tigers Tandem Gets 55 to Beat Blazers,” *Commercial Appeal* (Memphis), 18 Dec. 1997, at D1.
- “Grayhawk placed both of its courses on the top 25 list, but the clubhouse is *as equally* [read *equally*] impressive.” “Public Courses: The Top 25,” *Ariz. Republic*, 9 Jan. 1998, at 10.

Not every use, though, is incorrect: if the words *equally as* simply appear together but are really parts of other constructions, all may be well <I love you equally as a nephew and as a friend>.

LANGUAGE-CHANGE INDEX

equally as for equally: Stage 2

Current ratio (*equally important vs. *equally as important*): 29:1

***equal to none** is a confusion of two other idioms, namely, *second to none* and *equal to the best*—e.g.:

- “Charles Mosley . . . [was] strangely described by the publisher as possessing a knowledge of the subject and attention to detail ‘*equal to none*.’” Hugh Massingberd, “Proving the Jeremiahs Wrong,” *Spectator*, 28 Aug. 1999, at 34. (The whole sentence would have to be rewritten, of course, if the phrase were changed to *second to none*—which would no longer be strange.)
- “She had a head for business *equal to none* [read *second to none*] and never let her pursuit of Euterpe . . . get in the way of the practical agenda.” Hilary Masters, “Harriet Munro: The Untold Story,” *Va. Q. Rev.*, 1 Oct. 2001, at 680.

LANGUAGE-CHANGE INDEX

**equal to none for second to none*: Stage 2

Current ratio (*second to none vs. *equal to none*): 122:1

equanimity (= evenness of mind, esp. under pressure) often appears in the redundant phrase **equanimity of mind*—e.g.:

- “After compiling these other successes, she entered the next bar exam with *equanimity of mind* [read *equanimity*], and passed.” Vivian Dempsey, “A State of Mind for a Second Try,” *Recorder* (S.F.), 24 Nov. 1992, at 7.
- “A mature person of mellow temperament, retaining *an equanimity of mind* [read *equanimity*] under all circumstances, with a complete understanding not only of himself or herself but of his or her relations, is a person of true character.” Fan Xing, “The Chinese Cultural System,” *SAM Advanced Mgmt. J.*, Jan. 1995, at 14, 18.

The pronunciation is /ee-kwə-**nim**-ə-tee/ or /e-/.

equilibrium. Few dictionaries record a plural form. Although *W11* and *AHD* give precedence to *equilibriums* over *equilibria*, the latter remains much more common in print sources. A survey of writers in the early 2000s found that writers under 45 were more likely to prefer *equilibriums*, which has remained little used but stable.

Current ratio (*equilibria vs. equilibriums*): 25:1

equine. See ANIMAL ADJECTIVES.

equinoctial; ***equinoxial.** The former has been standard since the early 18th century. The latter is a NEED-LESS VARIANT.

Current ratio: 59:1

equitable; equable. *Equitable* (/ek-wi-tə-bəl/), deriving from *equity*, has associations of justice and fairness, or that which can be sustained in a court of equity. To nonlawyers it generally means “fair,”

whereas to lawyers it may also mean “fair” but just as often means “in equity” <equitable jurisdiction> <equitable remedies>. *Equable* (/ɛk-wə-bəl/) = even; tranquil; level.

Each word is sometimes misused for the other—e.g.:

- “Certainly Henman’s realistic approach and his *equitable* [read *equable*] temperament make him better equipped than most to overcome what has basically been a sudden lack of confidence.” John Parsons, “Henman Hoping to End His Slump,” *Daily Telegraph*, 18 Feb. 1998, at 39.
- “The objectives include . . . [establishing] an *equable* [read *equitable*] allocation of district capital funds for facility construction.” Eva Jo Goins, “Board Sets Objectives for Fixing Schools,” *Santa Fe New Mexican*, 18 Oct. 2000, at P1.

LANGUAGE-CHANGE INDEX

equable misused for *equitable*: Stage 1
Current ratio (*equitable distribution* vs.
**equable distribution*): 63:1

equivalence; equivalency. In most contexts, *equivalency* is a NEEDLESS VARIANT of *equivalence*. But the *-cy* form is standard in the term *high-school equivalency exam*. See *-CE*.

equivalent. A. Prepositions with. As an adjective, *equivalent* preferably takes the preposition *to*, not *with*—e.g.: “The \$20 million is more than any other NFL coach will receive and approximately *equivalent with* [read *equivalent to*] the \$3 million a year that Pat Riley and John Calipari earn in the NBA.” “Sports Digest: Jets,” *Baltimore Sun*, 8 Feb. 1997, at C2. As a noun, it almost always takes the preposition *of* <this Australian wine is an equivalent of a good, robust Burgundy>.

LANGUAGE-CHANGE INDEX

**equivalent with* for *equivalent to*: Stage 1
Current ratio (*equivalent to* vs.
**equivalent with*): 112:1

B. A Malapropism: *equivocal with. Misusing *equivocal* for *equivalent* is a surprising MALAPROPIISM, committed here by the chair of a college biology department: “Though physical sexual identity is not *equivocal with* [read *equivalent to*] sexual orientation, the point I am trying to make is that not all things are as black and white as some homophobes might like them to be.” Joseph Adam Pearson, “Homophobia a Useless Passion That Destroys Lives on Both Sides,” *Ariz. Republic*, 28 Sept. 1994, at B6.

LANGUAGE-CHANGE INDEX

equivocal misused for *equivalent*: Stage 1

equivocal. See **unequivocal**.

equivoque (= [1] an ambiguous term; or [2] a punning word) is the standard spelling. **Equivoke* is a variant. The word is pronounced /ɛk-wə-vohk/.

Current ratio: 8:1

-ER. A. And -or. These agent-noun suffixes can be especially vexatious. Many words that were once considered Latin borrowings have become so thoroughly naturalized that they take *-er* instead of *-or* (e.g., *adviser*, *prohibiter*, *promoter*, *propeller*). But not *impositor* (which does not refer to someone who *imposts*). The historical tendency has been to make the Latinate *-or* the correlative of *-ee* (especially in legal writing), hence *donee/donor*, *indemnitee/indemnitor*, *obligee/obligor*, *offeree/offerer*, *transferee/transferor*, *vendee/vendor*. See *-EE*.

Attempts to confine *-er* to words of Anglo-Saxon origin and *-or* to those of Latin origin are fruitless because so many exceptions exist on both sides of the aisle. Nevertheless, Latinate words tend to take *-or*, though there are many exceptions—a few of which appear below in the *-er* column:

<i>-er</i>	<i>-or</i>
adapter	abductor
conjurer	collector
corrupter	distributor
digester	impostor
dispenser	infiltrator
endorser	investor
eraser	manipulator
idolater	offeror
profferer	persecutor
promoter	purveyor
requester	surveyor

B. And -re. Words borrowed from French generally arrived in English with the *-re* spelling. Most such words have gradually made the transition to *-er*. A few words may be spelled only *-re*, such as *acre*, *chancre*, *massacre*, and *mediocre*, because of the preceding *-c-*. Still others—the great majority—have variant spellings, the *-er* ending usually being more common in AmE and the *-re* ending in BrE. The following words have this distinction: *caliber*, *-re*; *center*, *-re*; *goiter*, *-re*; *liter*, *-re*; *louver*, *-re*; *luster*, *-re*; *meager*, *-re*; *meter*, *-re*; *miter*, *-re*; *niter*, *-re*; *reconnoiter*, *-re*; *scepter*, *-re*; *sepulcher*, *-re*; *somber*, *-re*; *specter*, *-re*; *theater*, *-re*. Likewise *maneuver*, *manoeuvre*. An odd exception is *accoutre* (both AmE and BrE)—the putative AmE spelling **accouter* never having caught on.

Occasionally, heated debates break out over how to spell such words. In the late 1970s and early 1980s, the Government Printing Office was accused of upsetting the balance of trade by recommending *liter* over *litre*. The pro-*litre* forces argued that other nations would be more likely to import American goods if those goods bore the *litre* spelling. But when the GPO conducted a worldwide survey, it found that more people spell it *liter* than *litre*. (That was true in World English beginning about 1900.) And so *liter* it remained in official American publications. See Lee Lescaze, “The Style Board: Telling Government Where to Put Its Hyphens,” *Wash. Post*, 18 Oct. 1980, at A3.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Some American companies have started using the *-re* spellings to distinguish themselves and perhaps to try to bring some cachet to their projects. Many major cities, for example, have downtown buildings called *Such-and-Such Centre*. Next door might be the *Such-and-Such Theatre*. People who go into such centers and theaters should be on their best behavior—no, make that *behaviour*.

C. And -est. See COMPARATIVES AND SUPERLATIVES.

era (= a period in history known for a particular event or for specific characteristics) is legitimately pronounced either /**eer**-ə/ or /**air**-ə/—the former being traditional.

eradicable. So formed—not **eradicatable*. See -ABLE (D) & -ATABLE.

ERGATIVE VERBS. A. Generally. In the mid-20th century, grammarians devised the term *ergative* (“working”) to describe a verb that can be used (1) in the active voice with a normal subject (actor) and object (the thing acted on) <I broke the window>; (2) in the PASSIVE VOICE, with the recipient of the verb’s action as the subject of the sentence (and most often the actor’s becoming the object of a *by*-phrase <the window was broken by me>; or (3) in what one textbook called “the third way,” as an intransitive verb (without a direct object) <the window broke>. Ergative verbs show remarkable versatility. For example, you might say that *he is running the machine* or *the machine is running*, *she spun the top* or *the top spun*, *the crew decided to split the rail* or *the rail splits at that point*.

Not all verbs can be ergative: you couldn’t, for instance, change *I cleaned the window* to **The window cleaned*. And verbs that are ergative with some nouns are not ergative with others, so you couldn’t change *I broke a bad habit* into **A bad habit broke*.

The unfamiliar term *ergative* isn’t especially helpful to most people trying to understand these verbs and the idiomatic way they function. But in general, ergative verbs tend to communicate a change of state <Geller bent the spoon> <the spoon bent>, and we may think of that change as “working.” The change may also be a change of position instead of a change of state <spin the bottle> <the bottle spins>, or it may be a change of movement <may I drive your car?> <your car drives nicely>. It may also be a change brought about by cooking <steam the rice> <the rice is steaming>, an activity that seems conducive to ergative verbs.

B. Uses. Because the ergative verb eliminates the actor altogether, sentences that use it suggest some action that takes place spontaneously. Why? It may be because of a rule <hunting season starts in November> or a natural process <when the leaves drop> that makes the actor irrelevant. It may be a device to hide the actor <the rumor spread quickly throughout the office> or even to create mystery <the door slammed shut behind them>.

C. Misuses. Sometimes writers ill-advisedly give transitive verbs intransitive uses as if the verbs were ergative—e.g.: “Even the Infamous Could Redeem Were Jesus Here, Book Says,” *Austin Am.-Statesman*, 30 July 1994, at A20. This headline writer showed enough sophistication to use the SUBJUNCTIVE *were* (for a condition contrary to fact) but confused the passive *to be redeemed* with the active *to redeem*. Likewise, in STANDARD ENGLISH the verb *pique* is transitive only—hence possibly passive—but the writer of the following sentence tried to make it ergative (perhaps to avoid the passive voice): “Anderson was impressed with Weiskopf’s attitude. And when others also called to sing the praises of Loch Lomond, Anderson’s interest *piqued* [read *was piqued*].” Bill Huffman, “Course of ‘Compelling’ Beauty,” *Ariz. Republic*, 29 Sept. 1994, at D6. (This misuse of *pique* might also result from confusion with *peak*. See **PIQUE**.)

Ergative verbs take some getting used to, so new coinages are likely to sound as jarring as nouns suddenly made into verbs <grow the business> (see FUNCTIONAL SHIFT). They can give prose a voguish, trendy tone <that jacket wears nicely on you> or else a tone of COMMERCIALESE <the books shipped yesterday> <sorry, your flight canceled>.

ergatocracy. See GOVERNMENTAL FORMS.

ergo [L. “therefore”] is a slightly archaic equivalent of *therefore* or *hence*. Its traditional use is in logic, where it introduces the conclusion to a syllogism. But outside logic, *ergo* tends toward light irony, while *therefore* and *hence* tend toward seriousness. Today *ergo* often has a tongue-in-cheek effect—e.g.:

- “Too much or too powerful baking powder can give your cake an artificial high, which cannot be maintained after it comes out of the oven. *Ergo*, you might want to cut back on the amount called for.” Gail Perrin, “The Q & A Corner,” *Boston Globe*, 8 Oct. 1997, at E3.
- “Greek physicians such as Galen (130–201 A.D.) believed . . . that treatment of disease and injury was based on keeping each humor in proper equilibrium. *Ergo*, fevers, allegedly caused by an excess of blood, were treated by bleeding.” Thomas V. DiBacco, “Burn Treatment: Way Cool!” *Wash. Post*, 4 Nov. 1997, at Z10.
- “Oslo was only the last among several sensible European cities . . . to withdraw their bids to host the 2022 Winter Games in the face of public resistance and IOC arrogance. *Ergo* Beijing, again. Neither cost nor public opinion *matter* [read *matters*] in what has become the natural territory of the modern Olympic Games.” John Barber, “Toronto, Please Don’t Make an Olympic Bid for 2024,” *Toronto Star*, 26 Aug. 2015, at A13. (On the *neither . . . nor* problem of grammatical number, see **NEITHER . . . NOR** (A).)

The word is pronounced /**air**-goh/ in Latin, but /**ər**-goh/ in English.

eristic, adj.; ***eristical**. *Eristic* has always been the predominant and therefore standard form of this word, which means “of, relating to, or involving controversy or disputation.” See -IC.

erodible; ***erodable**; ***erosible**. The standard form—almost ten times as common in print as the other forms combined—is *erodible*. See *-ABLE* (A).

Current ratio: 566:84:1

erotica (= print or photographic materials intended to appeal to prurient interests) is a plural form, and it is appropriately used in the plural when clearly referring to more than one object—e.g.: “A set of Roman erotic frescoes *were* [read *was*] unveiled in Pompeii yesterday. . . . The discovery of the *erotica*, some of which *are* humorous or bawdy, has led to a theory that the baths also contained a lupanar, or brothel.” Bruce Johnston, “Erotic Pompeii Frescoes Unveiled,” *Daily Telegraph*, 15 Nov. 2001, at 20. But that convention is far from universally observed in World English, as a parallel example shows: “A collection of 800 figures decorates the walls both inside and out. The *erotica* is especially energetic and provocative. Then again, living in the middle of nowhere 1000 years ago, there must have been plenty of time for yoga and much, much more.” Brian Johnston, “India’s Ancient Erotica Site,” *Southland Times* (N.Z.), 12 Dec. 2001, Travel §, at 17.

In fact, today *erotica* is almost always used as a singular noun, in reference to the genre itself—e.g.:

- “The future Lord Cobbold, sometimes nicknamed the Blue Baron, . . . has been criticised by those who do not believe that *erotica* is a suitable way to make a living for an Eton-educated blueblood.” Hamida Ghafour, “Blue Baron Launches Red-Blooded Sex Book,” *Daily Telegraph*, 26 Nov. 2001, at 7.
- “Brief explanatory titles note [that] this early century *erotica* was shown mostly in the waiting rooms of French brothels as a sort of appetizer, and that ‘uncles’ often brought teenage nephews to such fare after mass on Sundays ‘to start their initiation into manhood.’” Todd McCarthy, “The Good Old Naughty Days,” *Variety*, 10–16 June 2002, at 31.
- “The Justice Department must convince the Supreme Court that same policy should cover the explicit *erotica* that *permeates* various Web sites.” Editorial, “Public Libraries Are No Place for Porn,” *Indianapolis Star*, 29 July 2002, at A16.

eroticism; ***erotism**. The latter has been a NEEDLESS VARIANT since it first emerged in the late 19th century. Cf. **autoeroticism**.

Current ratio: 22:1

err. Traditionalists rhyme this word with *fur*; others tend to make it rhyme with *bear*. Each side is likely to think the other errs.

Pronunciation authorities have long preferred /ɚr/ over /air/. Among the overwhelming number are these: Richard Soule & Loomis J. Campbell, *Pronouncing Handbook of Words Often Mispronounced* 30 (1873); E.B. Warman, *Warman’s Practical Orthoepy and Critique* 196 (1887); John H. Bechtel, *Hand-Book*

of Pronunciation and Phonetic Analysis 50 (1900); Thorleif Larsen & Francis C. Walker, *Pronunciation: A Practical Guide to American Standards* 68 (1930); Charles B. Anderson, *A Guide to Good Pronunciation* 51 (1931); Daniel Jones, *An English Pronouncing Dictionary* 148 (7th ed. 1946); Estelle B. Hunter, *A Short-Cut to Correct Pronunciation* 26 (1946); Morriss H. Needleman, *A Manual of Pronunciation* 111 (1949); Ruth Gleeson & James Colvin, *Words Often Misspelled and Mispronounced* 75 (1963).

A few authorities have gone beyond just listing /ɚr/ and have discussed the issue—e.g.:

- “*Err*. Rhymes with *her*. In spite of *error* and *errant*, don’t say ‘We have *aired* and strayed from thy ways like lost sheep.’ Let the thought of *detering* deter you from a mispronunciation of *erring*.” Alfred H. Holt, *You Don’t Say!* 57 (1937).
- “*Err* must be pronounced to rime with *were*, not with *ware* The imperfect tense *erred* rimes with *herd*, and the present participle *erring* rimes with *purring*” John Baker Opdycke, *Don’t Say It* 303 (1943). (On his spelling of *rhyme*, see **rhyme**.)
- “Some argue that *err* is etymologically connected to the words *error* and *errant*, and so should be pronounced similarly. This does not cut the mustard, because to draw such a parallel now, after UR has been the only recognized pronunciation since time immemorial, is pedantic and sophistical, a feeble attempt to find a legitimate reason for a mistake AIR did not appear in a dictionary until the 1960s, and despite its rapid rise to popularity, most current authorities still prefer UR.” Charles Harrington Elster, *There Is No Zoo in Zoology* 51 (1988).

At least one language commentator did an about-face in the mid-20th century. In 1931, Frank Colby said: “Properly pronounced, *err* rhymes with *fur*, *her*, *purr*.” *Your Speech and How to Improve It* 114 (1931). By 1950, he had changed his mind: “It must be that dictionary makers are under oath not to listen to people talk. Why else would the dictionaries, without exception, refuse to recognize the Standard American pronunciation *ehr* for *err*? They insist on ‘urr,’ to rhyme with *burr*. . . . The truth is that *err* and *erring* are so closely associated with *error* (both are from the Latin *errare*, ‘to err’), that *ehr* and *EHR*-ing are the natural and most logical pronunciations. They most assuredly prevail at all levels of American speech.” Frank O. Colby, *The American Pronouncing Dictionary of Troublesome Words* 147 (1950).

The ranks of the traditionalists are shrinking, and the counterintuitive nature of the old pronunciation (given the sound of *error* and *errant*) seems to have doomed it. But those who care about our linguistic heritage and use the language with flair avoid the snare of /air/ and boldly say /ɚr/.

LANGUAGE-CHANGE INDEX
err pronounced /air/: Stage 4

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

errant; arrant. *Errant* = (1) traveling; itinerant <knight errant>; or (2) fallible, straying from what is proper. Sense 2 overwhelmingly predominates—e.g.:

- “On other holes, strategically placed bunkers keep *errant* shots from going too far astray.” Chris Dortch, “Challenges Fly Wild at New Eagle Bluff Course,” *Chattanooga Times*, 26 Oct. 1995, at C6.
- “He’s been sent to the Italian coast by a wealthy San Francisco industrialist to bring back the man’s *errant*, decadent son, Philippe (Maurice Ronet).” Stephen Hunter, “Scorese Rescues Evil Chiller from Kinder, Gentler Time,” *Fla. Times-Union*, 4 Oct. 1996, at D3.

Generally used in reference to people or their actions, *errant* is not synonymous with *erroneous*—e.g.: “He piles so many *errant* [read *erroneous*] conclusions atop skewed observations atop false premises that you hardly know where to start.” Gregory Stanford, “‘Color Bar’ Will Die Once Talent Matters More than Race,” *Milwaukee J. Sentinel*, 4 Aug. 1996, Crossroads §, at 3.

Arrant began as an alteration of *errant* and originally had the same sense (“wandering”), but now usually appears as a term of contempt, as in *arrant knave* or *arrant nonsense*. It has two meanings: (1) “utter; extreme”; and (2) “egregious; outstandingly bad.” Often those two senses seem to converge—e.g.: “Because of the majority’s *arrant* abuse of the filibuster, 60 Senate votes will be required this morning to move the issue.” “Down to the Wire on Ethics,” *Boston Globe*, 30 Sept. 1994, at 18.

Sometimes *errant* is misused for *arrant* where there is no sense of wandering or straying—e.g.: “Applying this logic, my living room may be considered an uplands gateway to the uplands. Such *errant* [read *arrant*] nonsense could be extended ad infinitum.” Marvin Petal, “Oxnard Needs PVP Plant,” *Ventura County Star*, 26 Sept. 2002, at B7. *Arrant nonsense* has been a SET PHRASE since the mid-18th century.

LANGUAGE-CHANGE INDEX

2. *errant* misused for *arrant*: Stage 2

Current ratio (*arrant nonsense* vs.

**errant nonsense*): 9:1

3. *arrant* misused in what should be *knight errant*:

Stage 1

Current ratio (*knight errant* vs. **knight arrant*): 666:1

errata. Like *addenda* and *corrigenda*, the plural form *errata* (= errors; corrections to be made) should be used only when listing more than one item. E.g.: “It is important to clarify some of its abundant *errata*.” Letter of Mark A. Caldwell, “Flat Wrong,” *Chattanooga Times*, 29 July 1995, at A4. See PLURALS (B).

If there is only one mistake, the singular *erratum* is called for—e.g.: “Professor Esmond Wright, doyen of British Americanists and former holder of the chair of modern history at Glasgow University, insists his ‘embarrassing *erratum*’ was totally unintentional.” Rob Brown, “Apology as History Repeats Itself,” *Scotland on Sunday*, 16 June 1996, at 3. The English plural *erratum*s is not used. See **corrigendum**.

The pronunciation is /i-rah-tə/ or /i-ray-tə/—not /i-rat-ə/.

erroneous is sometimes erroneously spelled **erronious*.

Current ratio: 1,361:1

ersatz (= serving as an artificial and inferior substitute), a 19th-century German loanword, is pronounced either /air-sahts/ or /air-zahts/.

erstwhile; quondam; whilom; sometime. Each of these terms means “onetime, former, at a former time,” and those simpler alternatives are almost always better. By far the most common in AmE and BrE is *erstwhile* (/ərst-w[h]ɪl/), which is called a “literary” word in the *OED*. The least common are *quondam* (/kwɒn-dəm/) and, even rarer, *whilom* (/hwɪ-ləm/). (See **quondam** & **ARCHAISMS**.) The word *sometime*, an invitation to a MISCUE, is often misused as if it meant “occasional, from time to time.” See **sometime** (B).

We need one of these words in the language—probably *erstwhile*—because *former* and *onetime* do not always suffice. Our embarrassment of riches, with four synonyms for one sense, is exceeded only by most writers’ embarrassment at having to use any one of them in addressing a less-than-learned audience. Following are examples of each, from the least common to the most:

- “Gerald Asher, the *whilom* wine merchant and distinguished wine writer, was in town recently to talk about . . . Chardonnay clones.” Frank J. Prial, “Wine Talk,” *N.Y. Times*, 25 Apr. 1990, at C11.
- “Remember Bernie? He was the *quondam* CIA hireling from Miami who attained notoriety as one of the Water-gate burglars.” Harry Rosenfeld, “Money Continues to Talk in Politics,” *Times Union* (Albany), 4 Sept. 1994, at B5. (*Quondam* is much more common in BrE than in AmE.)
- “This is Playmate of the Year, 1972, *sometime* lover of Hefner and wife of former right-hand man Victor Lownes.” Anton Antonowicz, “22 Years Older and She’s Still Every Playboy’s Dream,” *Daily Mirror*, 29 Sept. 1994, Features §, at 1.
- “Not so bad if you don’t mind being served by an *erstwhile* barista who’s now required to know just as much about chorizo and goat cheese as macchiatos and frappuccinos.” “It’s More than Average, Joe,” *Sun-Sentinel* (Ft. Lauderdale), 20 Aug. 2015, at A1.

For more on *onetime* (as opposed to *one-time*), see **one-time**.

eruption; irruption. *Eruption* = the act or process of bursting or breaking out <a volcanic eruption>. *Irruption* = the act or process of rushing or breaking in; violent entry or invasion <an irruption of water through a breach in the dam and into the spillway>. *Irruption* also carries the specialized sense of “an abrupt increase in the local population of an animal”—e.g.: “Ornithologists call these erratic southern movements ‘invasions’ or ‘irruptions’ and refer to these species as ‘irruptive migrants.’” Scott Shalaway, “The Wild Side,” *Gaz. & Daily Mail* (Charleston, W. Va.), 16 Feb. 1996, at D1.

escalate is pronounced /es-kə-layt/, not /es-kyə-layt/. See **CLASS DISTINCTIONS**.

escape. As an intransitive verb, with *from* or *out of*, *escape* means “to gain one’s liberty by fleeing; to get free from detention or control” <he escaped from prison>. As a transitive verb, with a direct object, it means either (1) “to succeed in avoiding (something unwelcome)” <they escaped suspicion>, or (2) “to elude (observation, search, etc.)” <its significance had previously escaped me>.

The word is pronounced /es-**kayp**/—not /ek-**skayp**/. See PRONUNCIATION (B).

escapee (= someone who escapes) should more logically be *escaper* or *escapist*. (See -EE.) But the life of our language has not followed logic. In all varieties of English, writers now choose *escapee* much more often than *escaper*. That’s too bad: *escapee* uses the passive -*ee* suffix to denote an activity that usually involves great ingenuity and exertion—more, say, than *attendee*.

Escapist suggests Houdini, i.e., someone who makes a living putting on “escapes” from difficult predicaments (also known as an *escapologist*). *Escapist* also has irrelevant figurative uses, as in *escapist fiction* (i.e., as the adjective corresponding to *escapism*).

One writer defines *escapee* as “one who has been caught after escaping, or while preparing to escape.” Paul Tempest, *Lag’s Lexicon* 75 (1950). Perhaps that is how a *lag* (= a convict sentenced to penal servitude) understands the term. But most writers and speakers would find nothing amiss in saying, “The *escapees* were never caught,” and would object only to their not being caught.

LANGUAGE-CHANGE INDEX
escapee for “one who escapes”: Stage 5

eschew, v.t.; **eschewal**, n. The second syllable of both words is pronounced just as the word *chew* is pronounced: /es-**choo**/. Many seem to think that the *esch-* sequence is pronounced /esh/. It is not. The /esh/ sound makes the word resemble a sneeze.

esophageal, the adjective corresponding to the noun *esophagus* /i-**sof**-ə-gəs/, is a word typically pronounced only by doctors. And most American doctors say /i-**sof**-ə-**jee**-əl/; but the traditional pronunciation (reflected, for example, in *W2*) is /e-**soh**-**faj**-ee-əl/.

esophagus (= the tube through which food and drink pass from the pharynx to the stomach) has been the standard AmE spelling since about 1915. *Oesophagus*, the traditional spelling dating back to the 18th century, has long been standard in BrE, but since 1980 *esophagus* has continually threatened to overtake it in frequency within British print sources. In World English, *esophagus* predominates.

Current ratio: 4:1

esoterics is, strictly speaking, incorrect for *esoterica*, and most dictionaries do not yet recognize it. But it

predominated in published texts throughout the 19th century and is now almost as common in AmE as *esoterica*. In some plainspoken contexts, *esoterics* sounds natural where *esoterica* would seem precious—e.g.: “The same easy strength is there, and the same earthy approach to the *esoterics* of law.” Fred Rodell, *Nine Men* 331 (1955). Both forms should be considered plural. Cf. **erótica**.

Current ratio (*esoterica* vs. *esoterics*): 3:1

especial; special. The line is muddy to nonexistent. One might defensibly read the historical evidence to suggest that traditionally, *especial* (= distinctive, significant, peculiar) is the opposite of *ordinary* <the public press is entitled to peculiar indulgence and has *especial* rights and privileges>—and that *special* (= specific, particular) is the opposite of *general* <this community has special concerns>. Increasingly, though, *special* is driving out *especial* in all senses—and has steadily been doing so since the mid-19th century.

Especial is so rarely used in AmE today—even in learned journals—that some might term it obsolete. But it does occasionally appear, most often when modifying a noun whose corresponding adjective would naturally take the adverb *especially*. That is, a writer who might otherwise refer to something that is *especially powerful* would refer to its *especial power*—e.g.: “I found myself wishing the NSO had packed a show-stopper—an American work of *especial* power and virtuosity.” Tim Page, “NSO Visits the Cradle of Classical,” *Wash. Post*, 26 Oct. 1997, at G1. The phrase *special power* might have connoted something like a superhuman or otherworldly power—surely not the intended sense. On the whole, though, *especial* might confidently be categorized as an ARCHAISM.

especially (= much more than usual; to a particularly high degree) is pronounced /e-**spesh**-ə-lee/—not /ek-/. See ***most especially**.

espresso (= a specially prepared coffee through which steam is forced under high pressure) is so spelled—not **expresso*. But writers frequently use the erroneous form—e.g.:

- “I selected a chocolate box with caramel and *espresso* [read *espresso*] cream.” Dora Ann Reaves, “Fantasy Comes True,” *Post & Courier* (Charleston, S.C.), 10 Oct. 1996, Summerville §, at 2.
- “It is the color of chocolate truffles, the *espresso* [read *espresso*] that gets you through the morning and the dirt in your flower garden. Brown.” Jackie White, “Shades of Brown,” *Tulsa World*, 10 Dec. 2002, at D6.

For the proper and common mispronunciations, see PRONUNCIATION (B).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Esq., in AmE, typically signifies that the person whose name it follows is a lawyer. The mild honorific is used nowadays with the names of men and women alike; it is incorrect, however, if it appears with any other title, such as *Mr.* or *Ms.* In BrE, of course, *esquire* is used of any man thought to have the status of a gentleman.

One law review has devoted several pages to an article on whether women attorneys should use *esquire*. Richard B. Eaton, "An Historical View of the Term *Esquire* as Used by Modern Women Attorneys," 80 *W. Va. L. Rev.* 209 (1978). As to the title and purpose of that article, however, it is worth noting that "*Esq.* is . . . not used on oneself, e.g. neither on a card (which bears *Mr.*) nor on a stamped-and-addressed envelope enclosed for a reply." Alan S.C. Ross, "U and Non-U: An Essay in Sociological Linguistics," in *Noblesse Oblige* (Nancy Mitford ed., 1956). But somehow, the idea has gotten out that *Esq.* is something you put after your own name—e.g.: "These [lawyers] assembled here are not ordinary litigators. Instead of appending a mere 'Esq.' after their names, they are 'Factl'—Fellows of the American College of Trial Lawyers." David Margolick, "At the Bar," *N.Y. Times*, 10 Mar. 1989, at 23. In fact, it is quite non-U for a lawyer to put *Esq.* on cards, stationery, and self-addressed envelopes. See CLASS DISTINCTIONS.

The real question, therefore, is not whether women should append *Esq.* to their own names but whether others should append it to women attorneys' names. The answer: if you're going to use *Esq.* with attorneys' names, do it for both sexes. If precisionists are bothered by this practice, they should pretend that *Esq.*, when used after a woman's name, stands for *esquires* (recorded in the *OED* from 1596). See SEXISM (D).

-ESQUE. This suffix—meaning "like, resembling"—almost always creates a solid word, as in *romanesque*, *Rubenesque*, *statuesque*. E.g.: "One could almost see the *Clintonesque* curling and biting of the lip for dramatic effect." "New Democrats and New Laborites," *Omaha World-Herald*, 20 Nov. 1997, at 28. Of course, given the suffix's meaning, it's wrong to add *-like* to the end of such a word—e.g.: "A man painted in white stands on a pedestal striking various *statuesque-like* [read *statue-like* or *statuesque*] poses." Alan Byrd, "Will the Real Key West Please Stand Up?" *Orlando Bus. J.*, 23 May 1997, at 1.

-ESS. See SEXISM (D).

essay, v.t. See **essay**.

-EST. For antique verb forms such as *goest* and *sayest*, see ARCHAISMS (B). For superlative adjectives such as *strongest* and *finest*, see COMPARATIVES AND SUPERLATIVES.

estate agent. See **realtor**.

***esthetic.** See **aesthetic**.

estimable; estimatable. These terms have undergone DIFFERENTIATION. *Estimable* once meant "capable of

being estimated," but now exclusively bears the meaning "meriting high esteem; deserving respect; admirable." E.g.:

- "The *estimable* Janet McTeer takes on Elizabeth, a role that is to actresses what the triple axel is to female skaters." Lyn Gardner, "Vivat! Vivat Regina!" *Guardian*, 25 Oct. 1995, at T15.
- "And the *estimable* Dr. Snyder surely understands that he has enjoyed good press. I've practically put him on Rushmore." John Brummett, "Updating the Conventional Wisdom," *Ark. Democrat-Gaz.*, 3 Oct. 1996, at B7.

Estimatable, the less common term, means "capable of being estimated." E.g.:

- "They prefer programs that offer a projected rate of return for an *estimatable* degree of risk." Arthur R. Carlson, "How to Find and Work with Outside Investors," *Oil & Gas J.*, 27 Oct. 1986, at 56.
- "John Eisele of Deloitte & Touche said accounting rules require a company to set aside reserves when losses are 'probable and *estimatable*.'" David Phelps & Tony Kennedy, "Citi Equity Group Placed in Involuntary Bankruptcy," *Star Trib.* (Minneapolis), 19 May 1994, at D1.
- "Mr. Kelly said a judgment or a settlement would have to be 'likely and *estimatable*' to take a reserve for any litigation." Matt Ackerman, "BNY Mellon CEO: Cycle's Still Building," *Am. Banker*, 23 June 2008, at 1.

See -ATABLE.

Oddly, *inestimable* (= [1] priceless; [2] incalculable) has not undergone the DIFFERENTIATION of *estimable*.

estimate, n.; **estimation**. A distinction should be observed. *Estimate* = an approximate calculation or judgment. *Estimation* = (1) the process of approximately calculating or judging; or (2) judgment of worth.

estivate (*/es-tə-vayt/*), v.i., from L. *aestas* "summer," is the opposite of *hibernate* (= to sleep through the winter). It usually moderates to something like "to spend a lazy summer"—e.g.:

- "Of course as you get older, your taste for roaring around France one night per town fades considerably, and you lean toward one spot where you *estivate* indefinitely." Henry Mitchell, "Reveries from the Chateau Circuit," *Wash. Post*, 18 July 1986, at D2.
- "Wining, dining and *estivating* with such clients, Feigen comports himself as their social equal." Grace Glueck, "Old Masters, New Tycoons," *N.Y. Times*, 29 Nov. 1987, § 6, at 2.
- "I live in Summerland, California, where the Ojai crowd and other world travelers come for respite to *estivate* and walk the shores in Zen meditation." Letter of T.R. Napton, "A View from Paradise," *Fortune*, 30 Sept. 1996, at 20.

In zoology, the word bears a technical sense correlative to *hibernate*—e.g.: "As the weather heats up this month, they should retreat to their burrows to *estivate*, the summer equivalent of hibernation." Gail Wesson, "Rodent-Buster Gets Call in Squirrel Crisis," *Press-Enterprise* (Riverside, Cal.), 14 July 1996, at B3.

**Aestivate* is a variant spelling. See AE.

estrogen (= a female hormone produced in the ovaries) is predominantly so spelled both in AmE and in World English. In BrE, **oestrogen* predominated

in the mid-20th century, but since the mid-1970s the simplified spelling without the digraph has become predominant even there. Cf. **estrus**.

Current ratio: 8:1

estrous cycle (= the reproductive cycle of female mammals) is so spelled—not **estrus cycle*. For a similar difference in spelling between adjective and noun, see *mucous membrane* under **mucus**. See also **estrus**.

Current ratio: 5:1

estrus (= the periodic sexual excitability of a female placental mammal) has been predominantly so spelled in AmE since the 1930s and in World English since the 1960s. In BrE, the spelling *oestrus* (or, with a digraph, *æstrus*) has been consistently preferred since the 18th century. See **estrous cycle**. Cf. **estrogen**.

Current ratio: 2:1

-ET. See DIMINUTIVES (F).

et al. A. Generally. *Et al.* is the abbreviated form of the Latin phrase *et alii* (= and others), which is used only in reference to people, whereas *etc.* is used in reference to things. Since *alii* is abbreviated, it always takes a period. But American writers commonly mispunctuate it **et al.*, **et. al.*, or **et. al.*—all wrong.

B. Style and Usage. As with other familiar abbreviations of Latin phrases such as *etc.*, *i.e.*, and *e.g.* (and despite their appearance here), *et al.* is not italicized <Jefferson, Madison, et al.>. And like the others, *et al.* is best confined to lists, parenthetical matter, and citations. Avoid it in text, where a substitute such as *and (the) others* is more natural <as conceived by Jefferson, Madison, and the others>.

C. With Possessives. *Et al.* does not fit comfortably alongside possessives: “Clifford T. Honicker’s chilling account of Louis Slotin’s, S. Allan Kline’s *et al.* encounter with the Nuclear Age is as horrific as it is emblematic.” Letter of Glenn Alcalay, *N.Y. Times*, 10 Dec. 1989, § 6, at 14. (Read: *Clifford T. Honicker’s chilling account of Louis Slotin’s, S. Allan Kline’s, and others’ encounter* . . .)

D. For etc. For the misuse of *etc.* for *et al.*, see **etc. (c)**.

etc. A. Generally. More than 400 years ago, John Florio wrote: “The heaviest thing that is, is one *Etcetera*.” It is heaviest because it implies a number too extensive to mention. Following are some of the most sensible words ever written on *etc.*:

Every writer should be on his guard against the excessive use of *etc.* Instead of finishing a thought completely, it is easy to end with an *etc.*, throwing the burden of finishing the thought upon the reader. If the thought is adequately expressed, *etc.* is not needed. If the thought is not adequately expressed, *etc.* will not take the place of that which has not been said. The use of *etc.* tends to become a slovenly

habit, the corrective for which is to refrain from using *etc.* except in the driest and most documentary kind of writing.

George P. Krapp, *A Comprehensive Guide to Good English* 229 (1927).

Writers should generally try to be as specific as possible rather than make use of this term. Still, it would be foolish to prohibit *etc.* outright because often one simply *cannot* practicably list all that should be listed in a given context. Hence, rather than convey to the reader that a list is seemingly complete when it is not, the writer might justifiably use *etc.* (always the abbreviation). In text, a substitute such as *and others* is usually a better choice.

B. *And etc. This is an ignorant REDUNDANCY, *et* being the Latin *and*. The error may be partly a hold-over from the now-obsolete abbreviation of the phrase using an ampersand and -c: *&c.* That form should rest in peace.

C. For et al. The term *etc.* should be reserved for things, not for people; *et al.* serves when people are being mentioned. But liberal ideologues might think the following usage quite appropriate: “The presidential heavyweight hopefuls—Dole, Sen. Phil Gramm, ex-Tennessee Gov. Lamar Alexander, *etc.* [read *et al.*]—were present and accounted for at the GOP Midwest leadership conference in Green Bay over the weekend.” “Lake Jump,” *Chicago Trib.*, 22 May 1995, § 1, at 12. See **et al.**

LANGUAGE-CHANGE INDEX
etc. misused for *et al.*: Stage 3

D. Misspelled and Mispronounced. When spelled out, the Latin words should be separate <et cetera>. When pronounced, the term should not be shortened to three syllables—so /et **set**-ə-rə/, not /et **set**-rə/. The abbreviation is surprisingly often misspelled **ect.*, perhaps because the -t- in the first syllable of *etc.* is often mispronounced as a -k- or -x- (as if it were *ex cetera*). See PRONUNCIATION (B).

E. Punctuating. Punctuate around this phrase just as if the words *and others* were substituted in its place. For example, don’t put a comma after *etc.* if it’s the tail end of a subject <side dishes of carrots, potatoes, broccoli, *etc.* are also available>. *The Chicago Manual of Style* sits on the fence about this point, recommending the extra-comma approach but allowing the no-comma approach. But because it’s more logical—and consistent with other phrases in a series—the more fastidious approach is to omit the comma.

F. Style and Usage. As with other familiar abbreviations of Latin phrases such as *et al.*, *i.e.*, and *e.g.* (and despite their appearance here), *etc.* is not italicized <lions, tigers, bears, *etc.*>. And like the others, *etc.* is best confined to lists and parenthetical matter. Avoid it in text, where some substitute such as *and the like* is far more natural <lions, tigers, bears, and other wild animals>.

G. Repeating. It's possible to repeat *etc.* to denote a great multiplicity—e.g.: “For every tone of voice, there is a corresponding literary style. So many tones of voice—hearty, earnest, pensive, shrill, rebuking, strident, whispering, *etc., etc.*, so many styles are there. When you ask yourself in advance of writing something, what style shall be adopted, you are really asking, in what tone shall this piece be written.” Gorham Munson, *The Written Word* 72 (rev. ed. 1949). In *The English Governess at the Siamese Court* (1870), Anna Leonowens quoted the King of Siam as saying *et cetera* twice; it became thrice in the musical *The King and I* (1951) for comic effect.

H. Using with e.g. or i.e. See **e.g.**

-ETH. See ARCHAISMS (B).

ethical, like *grammatical* and *legal*, carries a double meaning: “conforming to ethics” and “relating to ethics.” Here the meaning is not entirely clear (though the latter is probably the sense): “Her independence from the White House was uncertain as she faced a tough decision over the future of the F.B.I., which was in turmoil over the *ethical* problems of its director, William S. Sessions.” David Johnston, “Oddly, Reno’s Profile Rises from the Ashes of Disaster,” *N.Y. Times*, 1 May 1993, at 1.

ethicist; *ethician. **Ethician* is more than two centuries older (dating from the early 17th century) and is therefore given precedence in most dictionaries. But *ethicist* overwhelmingly predominates in modern usage—being about 150 times as common in print—so **ethician* is now a NEEDLESS VARIANT. E.g.: “George Annas, a Boston University medical *ethicist*, opposes the legislation and predicted it will never pass in Massachusetts.” Liz Kowalczyk, “Curren Case Shows Need for Regulations,” *Patriot Ledger* (Quincy, Mass.), 24 Aug. 1996, at 1. The matter was settled even more soundly when Randy Cohen’s popular column, “The Ethicist,” was established in *The New York Times Magazine* in February 1999.

LANGUAGE-CHANGE INDEX

ethicist for one who specializes in ethics: Stage 5

Current ratio (*ethicist* vs. **ethician*): 148:1

ethics. A. And ethos. Although the distinction escapes many writers, it is plain. *Ethics* = the field of moral science. Bentham defined *ethics* as “the art of directing men’s actions to the production of the greatest possible quantity of happiness, on the part of those whose interest is in view.” Jeremy Bentham, *An Introduction to the Principles of Morals and Legislation* 310 (1823; repr. 1948). The singular form *ethic* means “a set of moral principles.”

Ethos /*ee*-thahs or *ee*-thohs/ = the characteristic spirit and beliefs of a community, people, or group. E.g.: “Part of the appeal of Zisquit’s work is its juxtaposition of a minimalist approach to poetic language . . . with an *ethos* and sense of place that is filled with echoes and refiguration of the Old Testament and the ancient world.” R.D. Pohl, “A Minimalist Whose Work

Embraces the Ancient World,” *Buffalo News*, 7 Dec. 1997, at G5. See **ethos**.

The term *ethos* sometimes appears where *atmosphere* would be more appropriate—e.g.: “But he has his place in athletics history as one of the four members of the British team which ran to a marvellous victory in the 4 x 400 metres relay in the highly-charged *ethos* [read *atmosphere*] of the Berlin Olympics of 1936.” “Godfrey Brown” (obit.), *Times* (London), 7 Feb. 1995, Features §. Despite Jesse Owens’s great feats in 1936—performed while Hitler watched—an event such as the Olympics is too fleeting to give rise to an *ethos*.

B. And morals. H.W. Fowler concisely states a distinction: “*ethics* is the science of morals, and *morals* are the practice of ethics” (*FMEUI* at 152). Although such a distinction might be observed in Philosophy 101, the terms overlap in common usage, both bearing the sense “principles or habits regarding right and wrong.” Cf. **morale**.

ethos (= a set of ideas and moral attitudes that typify a particular group) is preferably pronounced /*ee*-thahs/, though /*ee*-thohs/ is commonly heard. Cf. **bathos**.

etiology. Outside the field of medicine (and arguably within it), *etiology* is unnecessary and pompous for *cause*. E.g.: “The author traveled to Sinedu’s home in Addis Ababa, seeking insights into her life and the *etiology* [read *cause*] of her bloody act.” Peggy Deans Earle, “Behind a Bloody Crime at Harvard,” *Virginian Pilot & Ledger Star* (Norfolk), 29 Oct. 1997, at E4. This use apparently stems from medical JARGON—e.g.: “Many HMOs would have you believe that looking at the *etiology* of [health] problems is nonessential.” Joyce Thieman, “Lack of Choice Hurting Mental Health Patients,” *Cincinnati Bus. Courier*, 24 Oct. 1997, at 34.

Aetiology is a common BrE variant. **Aitiology* is a variant spelling to be avoided.

Current ratio (*etiology* vs. *aetiology* vs. **aitiology*):
7,107:1,451:1

-ETTE. See DIMINUTIVES (F) & SEXISM (D).

etymology. See **entomology**.

ETYMOLOGY. A. English Etymology Generally. Etymology is the study of word derivations. Understanding etymology often leads to a greater appreciation of linguistic nuances. For example, knowing the history of words such as the following can open up vistas:

- *abominable*, L. *ab-* “off, away from” + *ominarie* “to prophesy, forebode”—hence “being an evil omen.”
- *exorbitant*, L. *ex-* “out of, away from” + *orbita* “wheel track”—hence “off track” or “out of line.”
- *inoculate*, L. *in-* “into” + *oculus* “eye (i.e., ‘bud,’ as in eye of a potato)” —hence to graft a bud from one plant to another, where it will continue to grow. The sense of implanting germs to produce immunity from a disease dates from the early 18th century.
- *symposium*, Gk. *syn-* “together” + *posis* “a drink.” The term was extended from “a drinking party” to “a convivial meeting for intellectual stimulation,” and then was

extended further to “a collection of articles published together on a given topic.”

Learning the classical roots and prefixes of English words—as by studying Donald M. Ayer’s *English Words from Latin and Greek Elements* (Thomas D. Worthen ed., 2d ed. 1986)—will certainly repay the effort.

But while the study can help considerably, making a fetish of it can lead to many linguistic fallacies. For many words, modern usage is pretty well divorced from etymology. For example, in distinguishing *assiduous* from *sedulous*, it doesn’t particularly help to say that *assiduous* is “sitting to” a thing and that *sedulous* is “without trickery.” It would be more helpful to note that although the words are close synonyms, *assiduous* is much more common (by a 6-to-1 ratio in print). And although the etymology of *assiduous* suggests greater intensity, the rarity of *sedulous* betokens a special intensity.

Another fallacy arises when pedants object inflexibly to HYBRIDS or MORPHOLOGICAL DEFORMITIES. Some, for example, insist that *homophobe*, in Greek, would refer to a self-hater. But in English, of course, *homo* is simply a SLANG shortening of *homosexual*, and *homophobe*—though at variance with classical word formation—is perfectly understandable to any reasonable speaker of AmE. The etymological “error” is no error at all. See **homophobe**.

So learn all you can about etymology, but temper that knowledge with other types of linguistic facts. Then you’ll be in a position to choose words prudently. And you’ll be better equipped to answer questions such as these: Must *alternatives* be limited to two? Must a *decimation* involve the destruction of only 10% of a group of things? Is the better spelling *lachrymose* or **lacrimose*? Must a *magistrate* be the supreme judge in a given jurisdiction? Which spelling is right: *idiosyncrasy* or **idiosyncracy*? Does *inflammable* mean that something will ignite, or won’t? For views on those questions, see the appropriate entries.

B. Native vs. Classical Elements. The English language has undoubtedly benefited from its diverse sources. This diversity springs mostly from the English Renaissance, when writers decided to supplement what they considered a meager vocabulary by importing words.

They borrowed freely from foreign languages—mostly Latin, French, and Greek—when adding to the English word-stock. William Caxton, who introduced printing into England in 1477, is credited in the *OED* with the first use of *abjure*, *admiration*, *apparition*, *calumnious*, *capacity*, *desperate*, *factor*, *ingenious*, *inhuman*, *nuptial*, *seduce*, and *sumptuous*, among many other words. It might be hard for modern readers to imagine a time when those words seemed foreign or absurd. But many of Caxton’s other

borrowings haven’t fared so well: for example, *excidion* (= a rooting out), *exercite* (= army), *magistration* (= a command). Another early word-borrower, Thomas Elyot, wrote in the early 16th century. Like Caxton, Elyot had his word-coining successes (*animate*, *attraction*, *education*, *excrement*, *exterior*, *frugality*, *irritate*, *persist*) and his failures (*allective*, *applicate*, *assentatour*). In that respect, these writers are typical of the age.

Some coinages from that period seem to have arisen not from any felt need but from a particular writer’s penchant for the far-fetched. Our historical dictionaries are brimming with strange and ridiculous formations, such as *celeripedian* (= a swift footman) and *latrocination* (= highway robbery). Many such terms, which appeared only once or twice in the recorded history of the language, were coined by fervent neologists who had little or no sense of linguistic necessity. See **NEOLOGISMS**.

The result of all this word-coining, though, is that English now has many sets of words formed from analogous etymological elements. Many of these words, having coexisted in English for many centuries, retain the same basic meanings:

Greek	Latin/French	Anglo-Saxon
enchiridion	manual	handbook
hypogean	subterranean	underground
prolegomenon	prologue	foreword
prophecy	predict	foretell
sarcophagous	carnivorous	meat-eating

But others have undergone DIFFERENTIATION to varying degrees:

Greek	Latin/French	Anglo-Saxon
—	postpartum	afterbirth
prodrome	precursor	forerunner
prognosis	prescience	foreknowledge
sympathy	compassion	fellow feeling
thesis	position	placement

Those listings show that the Greek derivatives tend to be the most arcane, the Latin a little less so, and the Anglo-Saxon not at all. But this tendency has many exceptions. The Anglo-Saxon *gainsay* is certainly less common today than the Latin *contradict*, and the Anglo-Saxon *hapless* is out of luck in competition with the Latinate *unfortunate*. And the Greek is much more common than the Latin in the following pairs: *anonymous* (Gk.) and *innominate* (L.); *hypodermic* (Gk.) and *subcutaneous* (L.); *anthology* (Gk.) and *florilegium* (L.).

All in all, though, the generalization about Greek derivatives—when they have synonyms from Latin or Anglo-Saxon—holds true. Many Greek terms lie at the periphery of the English language—e.g.:

- analphabetic* (= illiterate [L.], unlettered [A.S.])
- anamnesis* (= reminiscence [L.])
- chirography* (= handwriting [A.S.])
- exlex* (= outlaw [A.S.])
- peritomy* (= circumcision [L.])

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

They therefore serve writers inclined toward SESQUIPEDALITY, but they seem laughable to those inclined toward PLAIN LANGUAGE.

In specialized writing, a knowledge of classical languages is especially helpful: Latin in law, for example, or Greek and Latin both in medicine. But regardless of your career path, it's useful to enhance your awareness of Greek and Latin word roots. You'll gain a greater sensitivity to the English language and its origins and nuances.

C. Etymological Awareness. Through wide reading and a conscious sensitivity to words and their origins, good writers become aware of etymological associations that may escape others. Ignorance of etymologies can easily lead writers astray, as when a journalist gave the label *holocaust* (Gk. "burnt whole") to a flood. Following are sentences in which writers wandered into etymological bogs:

- "The right to exclude or to expel aliens in war or in peace is an inherent and *inalienable* right of every independent nation." (The root *alien-* causes problems when we say that a country has an *inalienable* right to exclude *aliens*.)
- "What we are concerned with here is the automobile and its *peripatetic* [= able to walk up and down, not just *itinerant*] character."
- "This is a result which, if at all possible *consonant* [lit., "sounding together"] with *sound* judicial policy, should be avoided."

In the first and third specimens, an incongruous repetition of the root sense occurs; in the second, the writer has insensitively abstracted and broadened a word still ineluctably tied to its root sense. Cf. SOUND OF PROSE & VERBAL AWARENESS.

D. Folk Etymology. Popular notions of etymology are often quite colorful—and quite wrong. Indeed, word origins are a common subject of conversation in English-speaking countries. But such discussions ought to be well grounded because linguistic resources are widely available to serve as guides.

That wasn't always so, and folk etymology has left its mark on the language. Take a few common examples. *Pea* is a false singular of *pease*, which was mistakenly taken as a plural. Likewise, *a newt* is a historical error for *an ewt*, *an adder* for *a nadder*, and *an apron* for *a napron*. *Titmouse* now makes the plural *titmice* even though the word has no real connection with *mouse* or *mice*. *Primrose* and *rosemary* were earlier *primerole* and *romarin*, neither of which has anything to do with roses, but they were respelled precisely on that mistaken assumption.

Historical examples may be interesting, but modern examples are still repairable. To cite but one example, many well-educated people believe that *posh* means "port outward, starboard home," and that the word refers to the most desirable positions in an ocean liner. In fact, though, professional etymologists haven't ascertained that etymology—indeed, they've pretty much rejected it. So under *posh*, most dictionaries say "origin unknown." Although the popular notion

would make it a colorful term, the facts unfortunately get in the way of a good story.

In fact, etymologists are immediately suspicious of any proffered word origin that involves an acronym. But that doesn't stop the stories from being told like the urban legends they usually are. No, *tip* does not mean "to insure promptness." (And in any event, *tep* would have been the better spelling if the word were an acronym, since *ensure* would be correct in this context, not *insure*. See **assure**.) In fact, the word goes back to the Middle English *tippe*, and from there probably further back to the Low German, but the precise origin isn't known. That's the kind of answer that can spawn silly ahistorical theories.

A typical example of folk etymology occurs in the following sentence, in which the writer apparently wants the base word *mean* to bear its ordinary English sense in the word *demean*: "By ridiculing the idea of vampires ('Vampires haunt Russian psyche,' 14 November), you *demean* yourself (literally, deprive yourself—and us—of meaning) and hold out a less-than-supporting hand to the northern Russians whose plight you depict." Letter of M.J. Platts, "They Say Vampires, We Have Phobias," *Independent*, 18 Nov. 1992, at 22. In fact, though, *demean* doesn't mean "to deprive of meaning"; rather, its sense is "to lower in quality or position."

For other examples of folk etymology treated in this book, see **coleslaw**, **helpmate**, **hiccup**, **parti-colored**, **rescission (A)** & **Welsh rabbit**. For a good study on the subject, see Hugh Rawson, *Devious Derivations* (1994). For a useful historical work, see A. Smythe Palmer, *The Folk and Their Word-Lore* (1904).

E. Bibliography on English Etymology. Those wishing to look further into etymology should consult the books listed in the Select Bibliography at the end of this book.

Euclidean (= of, relating to, or devised by Euclid, the Greek mathematician who lived about 300 B.C.) is the standard spelling. **Euclidian* is a variant. Cf. **Mephistophelean** & **Shakespearean**.

Current ratio: 13:1

eulogy takes *a*, not *an*—and has done so since the mid-19th century. (See **a (A)**.) For the misuse of *elegy* for *eulogy*, see **elegy**.

EUPHEMISMS are supposedly soft or unobjectionable terms used in place of harsh or objectionable ones. The purpose is to soften; the means is usually indirection—saying one thing and meaning another. To discerning readers, of course, some euphemisms may seem unnecessarily mealy-mouthed—even silly.

We euphemize if we refer to someone not as *drunk*, but as *inebriated* or *intoxicated*; not as a *drug addict*, but (much more vaguely) as *impaired*; not as having *died*, but as having *passed away*; not as *mentally retarded*, but as *exceptional* or *special*; not as *disabled*, but as *differently abled* or even *challenged*; not as *malingering*, but as *suffering from a factitious disorder*.

In some contexts, to be sure, you might prefer a euphemism. If plain talk is going to provoke unnecessary controversy—if talk about *illegitimate children* or *sodomy* will divert attention from your point by offending people—then use an established euphemism.

Indeed, the phrase *illegitimate children* exemplifies the need sometimes to throw over old forms of expression. One legal publisher's system of indexing legal topics went from *Bastards* in the 1960s to *Illegitimate Children* in the 1970s to *Children Out-of-Wedlock* in the 1980s. Some writers use *nonmarital children* to convey the idea. The point is that we shouldn't scar innocent people with ugly epithets.

Other euphemisms, however, are roundabout and clumsy. Some writers use *rodent operative* or *extermination engineer* in place of *rat-catcher*. We see *pregnancy termination* rather than *abortion*; *sexually ambidextrous* rather than *bisexual*; *armed reconnaissance* rather than *search-and-destroy mission*; *permanent layoff* rather than *firing*. For every unpleasant or socially awkward subject, euphemisms are usually available.

Sometimes, though, euphemisms appear for words that might otherwise seem innocuous. In the workplace, for example, the terms *employee* and *worker* may be thought to have unpleasant associations with the division between management and labor. So in the 1990s, some companies promoted the terms *partner*, *teammate*, *crew member*, and the like to avoid what might be perceived as putting people down. As organizations become “flattened,” traditional titles (such as *senior executive vice president*) and even generic terms (such as *manager*) fall by the wayside. Likewise, the lower spheres are upgraded as *secretaries* become *assistants* or even *administrative assistants*.

Still other euphemisms denote things that have historically caused serious discomfort. In law, *unnatural offense* (or *crime*) *against nature* is not uncommon in place of *sodomy*. Indeed, Arthur Leff gives *abominable and detestable crime against nature* as a “rather enthusiastic euphemism . . . found in many 19th-century (and some current) statutes, referring to a not fully specified range of sexual crimes.” Arthur A. Leff, “The Leff Dictionary of Law,” 94 *Yale L.J.* 1855, 1866 (1985).

Euphemisms are often subtle. *Incident* appears in place of *accident* in a U.S. statute limiting total liability to \$200 million for a single “nuclear incident,” presumably because *incident* is vaguer and sounds less alarming. Today *revenue enhancement* (= tax increase) and *investment* (= increased government spending) are commonly used by American politicians reluctant to call things by their more understandable names.

In the mock-heroic style that was popular in the 19th century, euphemisms were quite common. Among some writers, the style persisted well into the

20th century. In the following sentence, for example, a judge uses an elaborate euphemism for the hymen: “[The statute] further says to the libertine, who would rob a virtuous maiden, under the age of 18 years, of *the priceless and crowning jewel of maidenhood*, that he does so at his peril.” *Bishop v. Liston*, 199 N.W. 825, 827 (Neb. 1924). Perhaps the judge didn't mean to be so literal as to think of the hymen, but the phrasing certainly suggests it.

Again, some subjects cry out for euphemisms or circumlocutions. Explicitness or directness would be undesirable to almost everyone here: “Five balloons containing marijuana were properly admitted [into evidence] since they derived from a source independent from an allegedly unconstitutional *digital rectal search* of the inmate, namely, from the *tip* of a reliable informant.” *United States v. Caldwell*, 750 F.2d 341 syl. (5th Cir. 1984). Still, the final phrase could advantageously be changed because *tip* verges on losing its metaphorical quality in that particular context.

All in all, though, one can hardly disagree with the assessment that euphemisms are irrational and quaintly uncandid: “They are only intelligible when both parties are in on the secret, and their silly innocence masks a guilty complicity, which is why they almost invariably wear a knowing, naughty-postcard smirk. At the close of the taboo-breaking century, they ought to have become comically redundant.” Neil Powell, “How to Put It Properly,” *TLS*, 3 Sept. 1993, at 32. Even so, they thrive as much today as ever. Cf. DYSPHEMISM. See CLASS DISTINCTIONS.

In the end, too, they leave a linguistic garbage-heap in their wake. Once a euphemism becomes standard, it loses its euphemistic quality: “This is the usual destiny of euphemisms; in order to avoid the real name of what is thought indecent or improper people use some innocent word. But when that becomes habitual in this sense it becomes just as objectionable as the word it has ousted and now is rejected in its turn.” Otto Jespersen, *Growth and Structure of the English Language* 230 (9th ed. 1952). Hence the vocabulary regarding unpleasant things remains in constant flux.

The only solution would be for people to be less squeamish in their use of language. And that's not likely to happen—not in AmE, at any rate—without a cultural upheaval.

Among the better treatments of the subject are John Ayto, *Euphemisms* (1993); Keith Allan & Kate Burridge, *Euphemism and Dysphemism* (1991); Judith S. Neaman & Carole G. Silver, *Kind Words: A Thesaurus of Euphemisms* (2d ed. 1990); R.W. Holder, *A Dictionary of American and British Euphemisms* (1987); D.J. Enright, *Fair of Speech: The Uses of Euphemism* (1985); Hugh Rawson, *A Dictionary of Euphemisms and Other Doubletalk* (1981).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

euphemistic is sometimes subject to WORD-SWAPPING with *euphonious* (= involving a pleasant combination of sounds)—e.g.:

- “With many plans, you can either buy a high option or low option (*euphoniously* [read *euphemistically*] termed ‘standard option’), depending on your view of your needs and your budget.” Victor Cohn, “Asking Pertinent Questions About HMOs,” *Wash. Post*, 3 Nov. 1987, Health §, at 16.
- “That date quickly became what is now *euphoniously* [read *euphemistically*] called a ‘meaningful relationship.’” Dick Rosenberg, “Date That Ended Grandly,” *Jerusalem Post*, 5 Aug. 1994, at 2.
- “In the *euphonious* [read *euphemistic*] language of pilots, the model made an uncontrolled landing, or, as an NAL spokesman said, ‘The trial objectives were not achieved during flight.’” Winn L. Rosch, “High-Speed Planes May Take Off Soon,” *Plain Dealer* (Cleveland), 18 July 2002, at C2.

For a similar error, see **euphuism**.

LANGUAGE-CHANGE INDEX

euphonious misused for *euphemistic*: Stage 1

euphonium (= a brass instrument similar to a baritone horn, being somewhat smaller than a tuba) forms the plural *euphoniums*, not *euphonia*. In music circles, the plural form *euphoniums* is commonplace, but some writers use the pretentious Latin plural—e.g.: “The performance edition used on this occasion did call for two Wagner tubas, a.k.a. *euphonia* [read *euphoniums*], or baritone horns, and they added to the general richness and resonance of sound.” Donald Dierks, “Symphony Does Right by Talmi, Bruckner,” *San Diego Union-Trib.*, 1 Dec. 1990, at E11. See PLURALS (B).

The word *euphonia*, though not recorded in most dictionaries, refers to a kind of bird found in North and South America (the plural being either *euphonia*s or *euphonia*)—e.g.: “Rare hummingbirds, honeycreepers and singing *euphonia* . . . are endangered and seen only sporadically in Florida during annual migrations.” Julie Kay, “Jewels of the Sky,” *Miami Herald*, 30 Sept. 1995, at B2.

LANGUAGE-CHANGE INDEX

euphonia used for *euphoniums*: Stage 1

EUPHONY. See SOUND OF PROSE.

euphuism (/yoo-fyoo-iz-əm/) derives from John Lyly’s play entitled *Euphuës* (1578), in which the characters speak in an affected, highly ornate style. The term now denotes a convoluted, embellished prose style. But it’s sometimes misused for *euphemism*—e.g.:

- “Twice, in 1987 and 1991, under duress to win at a more brisk clip, Brewer bought extra time by overhauling his staff—a time-honored *euphuism* [read *ruse*] for transferring blame.” Jim Bailey, “Parker Doesn’t See Red over Coaching Ups, Downs,” *Ark. Democrat-Gaz.*, 16 July 1994, at C5. (Because the writer refers to a nonverbal evasion, *euphemism* wouldn’t be a good replacement. See DOUBLE BOBBLES.)
- “Blowing smoke is an *euphuism* [read a *euphemism*] when associated with a person’s braggadocio, but it is virtual reality

when second-hand tobacco fumes float around in the workplace.” Robert A. Brown, “Second-Hand Smoke in the Workplace,” *Heating, Piping, Air Conditioning*, Mar. 1995, at 36.

- “Like many old Southerners, Rucker prefers gentlemanly *euphuisms* [read *euphemisms*] to mask life’s brutal confrontations.” Jim Schlosser, “Raising a Rail Ruckus,” *News & Record* (Greensboro), 14 Apr. 1996, at E1.

A close synonym is *gongorism* (/gəhng-gə-riz-əm/), after the style of the Spanish poet Luis de Góngora y Argote (1561–1627). This word is only for those who dabble in SESQUIPEDALITY.

Unlike its corresponding noun, the adjective *euphuistic* is rarely misused. Here it appears correctly:

- “The virtuoso style mimics the sexual display, becoming a *euphuistic* romp through all the elaborate rhetorical tropes available to 16th-century prose—from alliteration, antithesis and anaphora to zeugma and chiasmus.” Maureen Quilligan, “Glistening Torsos,” *N.Y. Times*, 25 May 1986, § 7, at 16.
- “For some, the result is, in a word of Hardwick’s Elizabethan time, *euphuistic*: elegant but given to symmetry, antithesis, alliteration, and other stylistic devices.” Hugh Aldersey-Williams, “History Lesson,” *Architectural Record*, Mar. 1996, at 92.

For a similar error, see **euphemistic**.

LANGUAGE-CHANGE INDEX

euphuism misused for *euphemism*: Stage 1

eurhythmic (= the practice of moving the body to rhythms, esp. those of music, as a method of teaching or interpretation), a term dating from the 1920s, is traditionally so spelled. It takes a singular verb <eurhythmic is helpful in reinforcing language acquisition>. Although the standard spelling of the word (ironically) has no internal *rhythm*—because the Greek term on which it is based is *eurythmos*—there is a variant spelling **eurhythmic*s (a spelling that surged to predominance in the late 1980s, alas). E.g.: “The workshop she attended Thursday focused on *eurhythmic*s [read *eurythmic*s]—using body movements to interpret music.” Kendra Martinez, “Music Teachers Use Bodies at BSU Workshop,” *Idaho Statesman*, 25 July 1997, at B2. (Cf. **rhythmic**.) The rock band popular in the 1980s got the name right: *Eurythmics*.

Eurythmy (developed by Rudolf Steiner and Marie von Silvers, also in the 1920s) is primarily about the movement as therapy, and may or may not involve music. It is likewise spelled with one *h* even though it is all about *rhythm*. Cf. **rhythmic**.

Current ratio (*eurythmic*s vs. **eurhythmic*s): 1:2

euthanasia. **A. And mercy killing**. These synonyms are widespread, the former perhaps being more connotatively neutral. *Mercy killing* usually applies to people exclusively, while *euthanasia* applies equally to animals.

B. And physician-assisted suicide. In *euthanasia*, the doctor may take an active role in the death, as by administering a fatal dose of a drug. In *physician-assisted suicide* (sometimes shortened to *assisted suicide*), the doctor supplies the means of death, but the patient takes the decisive step.

euthanize; ***euthanatize**. These terms, meaning “to subject to euthanasia,” are used most commonly in reference to pets. If we must have such a word, the longer version might seem the better candidate because it is properly formed, strictly speaking, and is older, dating in the *OED* from 1873. But in modern writing, *euthanize* greatly predominates and has become standard—e.g.:

- “Because the dog’s vaccinations were not current, it was *euthanized*.” “Central Mass. Digest,” *Telegram & Gaz.* (Worcester), 14 Sept. 1996, at A2.
- “Often, Rust said, shelter workers would be forced to *euthanize* injured or sick animals if a volunteer veterinarian couldn’t be reached.” Curtis Killman, “Animal Shelter to Contract with Private Veterinarian,” *Tulsa World*, 14 Sept. 1996, at A9.
- “After witnessing a significant decline in his condition over the past few weeks, zoo officials decided to humanely *euthanize* him Tuesday morning.” “Denver Zoo Mourns Death of Lion Rajah,” *Denver Post*, 26 Aug. 2015, at A2. (On the split infinitive in this example, see *SPLIT INFINITIVES*.)

See *-IZE*.

Current ratio: 54:1

evacuable. So formed—not **evacuatable*. See *-ABLE* (D) & *-ATABLE*.

Current ratio: 7:1

evacuee. See *-EE* & *refugee*.

evadable. So spelled—not **evadible*. See *-ABLE* (A).

Current ratio: 13:1

evaluative. So formed—not **evaluatable*. See *-ABLE* (D) & *-ATABLE*.

Current ratio: 80:1

evangelical; **evangelistic**. Today the older term *evangelical* (fr. ca. 1531) is so closely tied with fundamentalist, proselytizing Christians that it should not be applied more generally. *Evangelistic* (fr. ca. 1845), though also redolent of Christian associations, may be used more broadly to mean “militantly zealous.”

evasion; **evasiveness**. *Evasion* (= [1] the deliberate avoidance of doing what one should, or [2] an instance of deliberately not answering a question or not talking about something) is always an act. *Evasiveness* (= the tendency not to answer questions directly or not to talk about things that need to be discussed) is always a quality.

even, adv., gives rise to syntactic problems similar to those arising from *only*. It should be placed directly before the word it modifies. Note, for example, the difference in meaning between *this summer is even hotter and wetter* and *this summer is hotter and even wetter*. See *only*.

evening. What period of a day is *evening*? According to most dictionaries, it is the later part of the day through

the early part of the night or (not much more specifically) the period between sunset and bedtime or darkness. In many places, *evening* begins when the workday is over, around 5:00 PM. But in some regional dialects, *evening* can mean the entire time after 12:00 noon until dark.

event. The AmE phrase is usually *in the event that* [+ clause]—an equivalent of *if* <in the event that they fail>. The British generally write *in the event of* [+ noun phrase] (usually a ZOMBIE NOUN)—as Americans often do <in the event of failure>. Either phrase is typically inferior to *if*.

In BrE, *in the event* also means “in (the) result” or “in the end,” a usage likely to result in a MISCUE for American readers—e.g.: “*In the event*, the Miami communiqué will be notably less Washington-centered than when it was first drafted.” “High Hopes in Miami,” *Economist*, 10 Dec. 1994, at 15.

eventuality is a needless pomposity for several everyday words, each of which is more specific: *event*, *possibility*, *outcome*, *contingency*, *consequences*, or *result*. E.g.:

- “Mindful of the fact that their chief executive will one day have to replace his battered old Mercedes with a new one, [the board has] made provision for that expensive *eventuality* [read *event* or *outcome*].” John Naughton, “In This Week’s Supermarket Sweep, the Prize Is £621,000 a Year,” *Guardian*, 25 Aug. 1996, at 2.
- “This is the way the world ends—with humans evolving into billions of electronic navel-gazers? Without navels, even? Ironically, the film cumulatively argues against such an *eventuality* [read *an outcome* or a *possibility*].” Arthur Salm, “Aaack! to the Future,” *San Diego Union-Trib.*, 13 Sept. 1996, at E11.

The phrase **in the eventuality* is especially pretentious. E.g.: “Some speculate that building so close to the base—against the Air Force’s recommendations—would threaten the base *in the eventuality of* [read *in the event of* or *if there are*] future military closures.” Sybil Fix, “Air Crash Rift Widens over Mall,” *Post & Courier* (Charleston, S.C.), 6 Aug. 1995, at A1. See *event*.

eventuate is “an elaborate journalistic word that can usually be replaced by a simpler word to advantage.” George P. Krapp, *A Comprehensive Guide to Good English* 231 (1927). E.g.:

- “According to [John] McEuen, the new album is based on the thought-provoking premise that Nashville and country music had never *eventuated* [read *happened* or *developed*].” Jack Hurst, “King of the Ode,” *Chicago Trib.*, 7 Sept. 1995, at B10.
- “The expected public resentment of Clinton—which Mari Will said would give Dole an easy time of it in the primaries—has not *eventuated* [read *occurred* or *materialized*].” Garry Wills, “Dole Is Part of Republican Collapse,” *Times Union* (Albany), 13 Sept. 1996, at A14.

ever. **A. Superfluous**. For phrases in which *ever* is superfluous, see **rarely ever* & **seldom ever*.

B. Ever for every. Clipping *every* to *ever* is typical of DIALECT—e.g.:

- “Shaquille O’Neal needs a breather *ever* [read *every*] once in a while.” Michael Murphy, “Look Out Below,” *Houston Chron.*, 7 Nov. 2000, Sports §, at 1.
- “Reading a book and then *ever* [read *every*] so often glancing out the window is a magnificent experience and when combined with an occasional nap it is pure heaven.” John Douglas, “Joy of Train Travel Not Fully Appreciated,” *Grand Rapids Press*, 19 Dec. 2001, at A19.

In dialectal speech, *everybody* becomes **everbody*. So too in some writing, though one suspects that it’s often a typographical error: “*Everbody* [read *Everybody*] knows what prolonged exposure to transponder rays does to a man.” Linwood Barclay, “New Series ‘Highway 407 Patrol’ Takes Its Toll,” *Toronto Star*, 17 Dec. 2001, at E1.

LANGUAGE-CHANGE INDEX

1. *ever* misused for *every*: Stage 1
2. **everbody* for *everybody*: Stage 1

Everglades, a place name thought to have been coined in 1823 from *glyde* or *glaed*, meaning “opening in the forest,” predominantly takes a singular verb—e.g.:

- “The *Everglades is* in the early stages of a repair job that has become a major industry.” Kevin Spear, “High-Stakes Fight Looms in ‘Glades,” *Orlando Sentinel*, 26 Dec. 2001, at A1.
- “The *Everglades is* a great place for canoeists and kayakers.” Mark Chapman, “Beauty and the Beasts,” *Boston Herald*, 21 Feb. 2002, at 44.
- “With so little else happening in the Legislature this year of redistricting, the *Everglades is* a priority.” “Money for the ‘Glades,” *Palm Beach Post*, 4 Mar. 2002, at A16.

But some writers ill-advisedly make it plural—e.g.:

- “The *Everglades are* [read *is*] nearly topped off.” Neil Santaniello, “Lake Outlook,” *Sun-Sentinel* (Ft. Lauderdale), 19 July 2001, at A1.
- “Though the *Everglades are* [read *is*] unique, *they remain* [read *it remains*] a mystery.” Randy Schultz, “A Watershed for Rescuing Everglades,” *Palm Beach Post*, 19 Aug. 2001, at E1.
- “Widely viewed as useless swamp 50 years ago, the *Everglades are* [read *is*] now the focus of the largest ecosystem-restoration effort ever.” Phyllis McIntosh, “Reviving the Everglades,” *Nat’l Parks*, 1 Jan. 2002, at 30.

Likewise, the city of Port Everglades takes a singular verb—e.g.: “Port Everglades *is* working on a security plan.” Steven Thomma et al., “Six Months After Terrors Struck the United States, Americans Are . . .,” *Miami Herald*, 10 Mar. 2002, at 1.

LANGUAGE-CHANGE INDEX

- **Everglades are* for *Everglades is*: Stage 3
- Current ratio (*The Everglades is* vs. **The Everglades are*): 3:1

ever since. This is the standard phrase. **Every since* is DIALECT—e.g.: “Her mother . . . took her to Jazzercise classes in Los Alamos and she’s been a devotee *every since* [read *ever since*]—except for her high-school years when taking Jazzercise ‘wasn’t cool.” John Knoll,

“Popular Dance Class Returns to Pojoaque,” *Santa Fe New Mexican*, 31 July 2002, Pojoaque §, at 4.

LANGUAGE-CHANGE INDEX

- **every since* for *ever since*: Stage 1
- Current ratio (*ever since* vs. **every since*): 280:1

ever so often. See **every so often.**

every. A. Meaning “all.” With an abstract noun—as opposed to a COUNT NOUN—the word *all* is more apt than *every*. E.g.: “Now both the law enforcement community and, apparently, the judiciary, are going to the opposite extreme by giving the Freeman *every leniency they can* [read *all the leniency they can*].” “Make the Freeman Obey the Law,” *Times Union* (Albany), 12 Aug. 1996, at A6.

B. Meaning “complete” or “utmost.” To say that you have *every confidence* in something isn’t logical, but it’s now an established CASUALISM—e.g.:

- “I have *every confidence* [or *am quite confident*] that our own attorneys . . . are perfectly capable of researching the applicable statutes and case law on this issue.” Letter of Henry A. Pulkowski Jr., “Moon Director Questions ACLU in Lawsuit,” *Pitt. Post-Gaz.*, 2 June 1994, at W2.
- “At yet another level, they are being told that you have *every confidence in* [or *are quite confident of*] their physical recovery.” Lou Makarowski, “Hurt Athletes Need Support in Recovering,” *Houston Chron.*, 29 Sept. 1996, at 21.

C. Each and every. See **each and every.**

everybody. See **everyone (A), (C) & PRONOUNS (D).**

everybody else’s. See **else’s & POSSESSIVES (I).**

everybody . . . they. See **everyone (A), CONCORD (B), PRONOUNS (D) & SEXISM (B).**

every day, adv.; everyday, adj. One tries to accomplish something *every day*; but an *everyday* feat would hardly be worth accomplishing. The two are often confused—e.g.:

- “But what of the phrase ‘per stirpes,’ symbolic here of the hundreds of Latin and law French words still used *everyday* [read *every day*] by fully modernized American lawyers whose penchant for foreign languages probably extends no further?” Richard Weisberg, *When Lawyers Write* 99 (1987).
- “We are confronted *everyday* [read *every day*] with having to decide exactly what they cover.” Ronald Wardhaugh, *Proper English: Myths and Misunderstandings About Language* 21 (1999).

LANGUAGE-CHANGE INDEX

1. *everyday* misused for the two-word adverbial phrase *every day*: Stage 2
- Current ratio (*happens every day* vs. **happens everyday*): 10:1
2. *every day* for the adjective *everyday*: Stage 1
- Current ratio (*everyday experience* vs. **every day experience*): 55:1

everyone. A. Singular or Plural? Today it is standard BrE to use *everyone* and *everybody* with a singular verb but a plural pronoun—e.g.:

- “Almost *everybody* now seems to be a ‘victim’ of something—of society or *their* own weaknesses.” Susan Crossland, “The Aftershock of Anger,” *Sunday Times* (London), 22 Oct. 1989, at B2.
- “The compilation of the *OED* made it possible for *everyone* to have before *them* the historical shape and configuration of the language.” R.W. Burchfield, *Unlocking the English Language* 169 (1989).
- “*Everyone* in the ground that day couldn’t take *their* eyes off it.” Keith Duggan, “If Tyrone Overturn Logic It Will Be Harte’s Greatest Achievement,” *Irish Times*, 22 Aug. 2015, Sport §, at 12.

Here’s a statement of the BrE view: “Jane Austen wrote ‘every body’ as two words and considered the phrase as singular; we now write one word, ‘everybody,’ and consider it as plural, equivalent to ‘all people.’ Hence the entry in the *Dictionary* under ‘agreement’ gives ‘Everybody knows this, don’t they?’ as an example of notional concord, obviously rightly: we would not accept ‘Everybody knows this, doesn’t he or she?’” Paul Dean, “More Grammatical than Thou,” *TLS*, 22 Apr. 1994, at 8.

But many Americans continue to think of this usage as slipshod, *everybody* requiring a singular. After all, they reason, nobody—not even Paul Dean—would say *everybody know* instead of *everybody knows*. An early usage critic remarked insightfully (while disapproving): “The use of this word is made difficult by the lack of a singular pronoun of dual sex Nevertheless, this is no warrant for the conjunction of *every* and *them*.” Richard Grant White, *Every-Day English* 420–21 (1884). A goodly number of Americans now take the same stand, thereby making a happy solution elusive.

So although *every student . . . they* would pass unnoticed in the British press, it still gets a *sic* from *Newsweek*: “The question is, how do we change education to give every student what they [sic] need to compete in a more complex . . . world?” Joe Klein, “Michigan’s Tuna Surprise,” *Newsweek*, 6 Sept. 1993, at 21 (quoting Beverly Walkow, executive director of the Michigan Education Association). See CONCORD (B), PRONOUNS (C)–(D) & SEXISM (B).

B. And *every one*. This sentence should make the distinction evident: “*Every one* of the employees attended the company picnic, and *everyone* had a good time.” If you’re unsure about whether the single word *everyone* is right, mentally substitute the synonymous *everybody* to see whether the sentence still makes sense; if it does, *everyone* is the correct form.

C. And *everybody*. Because the terms are interchangeable, euphony governs the choice in any given context. In practice, *everyone* appears in print about twice as often as *everybody*, which is probably more common in speech. Cf. **anyone** (B).

everyone else’s. See **else’s** & POSSESSIVES (I).

***everyone . . . not,** in place of *not everyone*, is just as illogical as **all . . . not*. E.g.: “But if richness needs gifts with which *everyone* is *not endowed* [read *not everyone is endowed*], simplicity by no means comes by nature.” W. Somerset Maugham, “Lucidity, Simplicity, Euphony,” in *The Summing Up* 321, 322 (1938). (Otherwise, the sense is that no one is endowed with gifts.) See ILLOGIC (B). Cf. **all** (B).

LANGUAGE-CHANGE INDEX

**everyone . . . not* for *not everyone*: Stage 2

Current ratio (*not everyone* is vs.

**everyone is not*): 6:1

everyone . . . they. See **everyone** (A), CONCORD (B), PRONOUNS (D) & SEXISM (B).

every other. A. Illogical Use. In sentences involving a comparison, *every other* is sometimes used illogically in place of *all others*; that is, **more than every other member collectively* is inferior to *more than all other members collectively*. When the sense is of taking things collectively, the plural is needed. Otherwise, the literal sense suggests undoing a dismemberment (especially in the second and third examples below, because the reference is to people)—e.g.:

- “More people fish, camp and hunt than just about *every other outdoor pursuit* [read *all other outdoor pursuits*] put together.” Tom Stienstra, “Expert Advice: Sportsmen’s Expo Worth It,” *S.F. Examiner*, 5 Mar. 1995, at D9.
- “Amis got more attention in the States than any other literary novelist this year. It was more attention, you could argue, than *every other serious novelist* [read *all other serious novelists*] put together.” David Streitfeld, “Book Report,” *Wash. Post*, 30 July 1995, Book World §, at 15.
- “For recent readings by such literary stars as A.S. Byatt, Jamaica Kincaid, Graham Swift and Robert Coover, Comstock probably traveled farther than *every other member* [read *all other members*] of the audience put together.” David Streitfeld, “One for the Books: Missouri Bibliophile Rolland Comstock Goes to Great Lengths to Indulge His Passion,” *Wash. Post*, 19 Aug. 1996, at B1. (With apologies to Mr. Streitfeld for citing two in a row.)

See ILLOGIC (B).

A similar problem often arises with the phrasing *every other . . . except*—e.g.:

- “Wake [Forest] has beaten *every other ACC opponent* [read *every ACC opponent*] (except Florida State) at least twice since ’83.” Larry Keech, “‘Noles Rarin’ to Go Against Pack,” *News & Record* (Greensboro), 19 Sept. 1996, at C3.
- “Cuba has paid compensation to *every other country with claims there except the United States* [read *every country with claims there except the United States*].” James Rosen, “Tougher Embargo of Cuba Lamented,” *Sacramento Bee*, 24 Feb. 1997, at A4.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

For those sentences to make any sense, Wake Forest must be one of its own opponents, and Cuba must be a country with claims in Cuba.

LANGUAGE-CHANGE INDEX

every other misused for *all other*: Stage 3

B. Ambiguous Use. The phrase *every other* can give rise to an ambiguity: when you say *every other person you see*, does that mean all the people you see or half the people you see (every second person)? When there is a remote possibility of misunderstanding, or even of a MISCUE, the best practice is to rewrite—e.g.:

- “When I was a junior—even my first semester as a senior—I swore I wouldn’t fall prey to the evils that seemed to hit *every other person* [read *everybody* or *half the students*] [during] their last semester of high school.” Julia O’Malley, “Sliding into a Senior Slump,” *Anchorage Daily News*, 8 Mar. 1996, at E1. (On the use of *every . . . person . . . their*, see **everyone** (A).)
- “If a user visits *Yahoo!*, the screen will be the same as it is for *every other person who reaches* [read *everybody else who reaches*] the site.” Bob Cook, “Thunderstone Rolling Out,” *Crain’s Cleveland Bus.*, 3 June 1996, at 7.
- “Just as remarkable is the vivid sense she provides of *every other person* [read *everybody else*] in the room, from Miguel struggling to hold her up to her cheerful midwife and nonchalant doctor.” Robert Hurwitz, “More than Ever, ‘Family Secrets’ Worth Sharing,” *S.F. Examiner*, 3 Oct. 1996, at C5.

***everyplace**; ***anyplace**; **someplace**. These forms are considered vulgarisms for *everywhere*, etc. An exception occurs when the words are separated (*every place*, *any place*, *some place*) to mean “each (any, some) location.” See **someplace** & ***noplace**.

every so often; **ever so often**. The first, by far the more common idiom since the early 1900s, means “occasionally” <we go to Lockhart for barbecue every so often>. The second—a quaint phrasing in the manner of *ever so grateful*—means “with great frequency” <you’re extremely thoughtful to call me ever so often>. On the dialectal use of *ever so often*, see **ever** (B).

every time. Two words. But many writers try to solidify the phrase—e.g.:

- “Then this past Saturday night against Fresno State, Cooper had the Tiger faithful perched on the edge of their seats *everytime* [read *every time*] he touched the ball.” Hunt Archbold, “Lizard Slithers His Way into AU Playing Picture,” *Montgomery Advertiser*, 11 Sept. 1996, at C1.
- “*Everytime* [read *Every time*] you cross the street, you take a risk.” Steff Gelston, “Don’t Let Fear of the Financial Unknown Be Harmful,” *Boston Herald*, 13 Oct. 1996, at 43.
- “He may have been one of the most celebrated talents in football’s greatest team, but *everytime* [read *every time*] he watches a re-run of the Golden Years video that was produced in their honour, he blushes a little.” Michael Clifford, “Shooting Stars,” *Irish Daily Mail*, 18 Aug. 2015, at 53.

LANGUAGE-CHANGE INDEX

**everytime* for *every time*: Stage 1

Current ratio (*every time* vs. **everytime*): 163:1

evidence. **A. And testimony**. These words overlap but are not always interchangeable. *Testimony* is a species of *evidence*; it refers only to evidence received through the medium of witnesses. *Evidence*, the broader term, includes all means by which a fact in issue is established or disproved; hence *evidence* may include documents and tangible objects. The word *evidence* has also long been used in the sense “the law of evidence,” generally dealing with what is and is not admissible at trial.

B. And proof. Strictly speaking, the two words are not synonymous. Unlike *evidence*, the word *proof* applies to the effect of the evidence, not to the way in which truth is established.

C. As a Count Noun. *Evidence* is not generally taken to be a count noun; hence the plural form is unusual at best. E.g.: “Yet in spite of all these *evidences* of judicial humility in these areas, it would be an error to assume that the judiciary had lost self-confidence altogether as a result of its chastening experience in the 1930’s.” Robert G. McCloskey, *The American Supreme Court* 190 (1960). See COUNT NOUNS AND MASS NOUNS.

evidence, v.t.; **evince**. These words, favorites of lawyers, are often inferior to *show* or *express* or *indicate*. Properly, to *evidence* something is to serve as proof of its truth, existence, or occurrence. Justifiable uses of this verb are typically in the PASSIVE VOICE—e.g.: “The highway environs southbound are fairly litter-free. The inescapable conclusion, *evidenced* by the clutter of takeout coffee containers, is that sloppy folk on their way to work in the morning drain their cups, roll down the windows of their vehicles and heave out the empty containers.” Peter M. Knapp, “Slobs Littering Route 3 Ought to Clean Up Their Act,” *Patriot Ledger* (Quincy, Mass.), 28 Sept. 1996, at 19. And when these folks get to work, many of them start speaking and writing.

In other situations, a different verb would be preferable—e.g.:

- “A puppy was hit three days ago by a motorist who slowed down and then continued without *evidencing* [read *showing*] any further concern.” Letter of Frances J. Jessup, “A Plea to Enforce Speed Limits,” *Columbian* (Vancouver, Wash.), 18 July 1996, at B6.
- “The cakes are much in demand, as *evidenced* [read *demonstrated*] by the crowds at several local Asian markets last weekend.” Gail Tirone Finley, “Mooncakes Ready for Big Chinese Fest,” *Houston Chron.*, 26 Sept. 1996, City §, at 1.
- “Plus, *evidenced* by his popularity in NBA-sanctioned propaganda, Kemp could be on the verge of major marketing breakthroughs.” Elliott Almond, “Sonic Training Camp—Kemp Won’t Report, Cites Frustration,” *Seattle Times*, 1 Oct. 1996, at C1. (Read: *And as his popularity in NBA-sanctioned propaganda shows, Kemp could be on the verge of major marketing breakthroughs*. In the original sentence, the absence of *as* before *evidenced* makes the sentence ungrammatical; also, coupling the informal *plus* with the formal *evidenced* is jarring.)

Evince properly means “to show, exhibit, make manifest,” but has been objected to as “a bad word

and unnecessary . . . a favourite with callow journalists” (*U&A* at 113). In fact, the word can usually be replaced to good advantage—e.g.:

- “Amazingly, we *evince more anger at* [read *get angrier over*] Bob Dole’s simple mention of a clinically proven fact (i.e., that smoking isn’t always addictive) about a legal but unhealthy product than we do *at* [read *over*] Mr. Clinton’s confession to violating the drug laws (without, of course, ever taking a deep breath.)” John Kolbe, “Lost: Our Moral Outrage,” *Cincinnati Enquirer*, 25 July 1996, at A15.
- “Bad as things were, though, the crowd seemed quite content with the situation—which itself is testament to the kind of charisma Pearl Jam *evinces* [read *displays*] in concert.” J.D. Considine, “Bad Gets Lost in a Crowd,” *Baltimore Sun*, 26 Sept. 1996, at E1.
- “They suspended him for three more games for failing to *evince* [read *show*] enough contrition.” Mark Bradley, “Falcons’ Chaos Leaves George the Scapegoat,” *Atlanta J.-Const.*, 1 Oct. 1996, at F1.

Sometimes, as H.W. Fowler noted, *evince* is misused for *evoke*, *get*, *receive*, or some other everyday term—e.g.: “Plans for NATO enlargement still receive majority support from the German public and elites. But a heightened German role, or the absorption of costs for an extension east, *evinces* [read *gets or receives*] less support.” Daniel Nelson, “Germany Faces Dilemma,” *Defense News*, 8 July 1996, at 21.

evidentially for *evidently* is a pretentious error—one that would not occur if the user weren’t trying to inflate the term. E.g.: “‘Just tossing out that he [Jerry Jones] could hire anybody to coach this team to win the Super Bowl bothered me. It bothered my ego. I put together a team that won two Super Bowls. *Evidentially* [read *Evidently*], he doesn’t appreciate that.’” Gary Myers, “Johnson Has Little to Sweat While Chilling in Florida’s Sun,” *Austin Am.-Statesman*, 27 July 1995, at C8 (quoting Jimmy Johnson, the football coach).

Although this error might seem analogous to using *partially* for *partly*, the word *evidentially* (the adverb corresponding to the adjective *evidential* and the noun *evidence*) has a technical legal sense that makes it an erroneous alternative to *evidently*—not a valid parallel to an existing term, as is the case with *partially*.

LANGUAGE-CHANGE INDEX
evidentially misused for *evidently*: Stage 1

evidentiary; evidential. What is the adjective corresponding to the noun *evidence*? In AmE, it’s *evidentiary*—but in BrE it’s predominantly *evidential*. For a possible technical DIFFERENTIATION, see *Garner’s Dictionary of Legal Usage* 336 (3d ed. 2011).

Evidentiary is sometimes misspelled **evidentiary*—e.g.:

- “Allen contends he has solid evidence but had hoped not to present it until an *evidentiary* [read *evidentiary*] hearing.” Mike Manzo, “Attorney Asks Judge to Reopen Drug Case,” *Union Leader* (Manchester, N.H.), 31 Aug. 1994, at 5.

- “In the wake of the Bernardo conviction, Rosen’s talk of an appeal has centred [on] trial judge Mr. Justice Patrick LeSage’s comments to the jury prior to their deliberations and his rulings on *evidentiary* [read *evidentiary*] issues.” Scott Burnside & Alan Cairns, “It’s Over . . . or Is It?” *Toronto Sun*, 9 Sept. 1995, at 22.

LANGUAGE-CHANGE INDEX
evidentiary misspelled **evidentiary*: Stage 1
Current ratio: 1,563:1

evidently. The pronunciation /*ev-i-dənt-lee*/ is preferred over /*ev-i-dent-lee*/—the latter evidently occurring only in AmE. But when the word is said with emphasis, the accent naturally shifts to the penultimate syllable.

evince. See **evidence**, v.t.

evoke; invoke. The difference between these words is fairly subtle—and therefore is sometimes lost on even the most careful of writers. *Evoke* = (1) to call to mind or produce (memories, emotions, etc.) <the photographs evoked feelings of disgust>; or (2) to elicit or draw forth <the commencement address evoked laughter and applause>. *Invoke* = (1) to call on (a higher power) for blessing, guidance, or support <Homer invoked the Muse in each of his epics>; (2) to cite as an authority <the newspaper’s reply invoked the First Amendment>; (3) to solicit; entreat <the rebels invoked the aid of the U.S. military>; (4) to summon by incantation; conjure <the wizard invoked a host of evil spirits>; or (5) to put into effect; implement <after the bombing, the governor invoked tighter security measures>.

The words’ etymologies provide a useful way to remember their basic senses. *Evoke* is derived from the Latin *evocare*, meaning “to call out”; *invoke* is derived from the Latin *invocare*, meaning “to call on.” Both words are used properly in this sentence: “The senator’s speech, which invoked the names of statesmen ranging from Thomas Jefferson to Martin Luther King, evoked both hoorays and boos.”

The most common mistake in using these words is substituting *evoke* for sense 1 or 2 of *invoke*. This error occurs especially in the phrase *evoke the name of*, but also in other phrases—e.g.:

- Sense 1: “Then Heard *evoked* [read *invoked*] the name of God in his next untruth wherein he accused the Zulu demonstrators of attempting to ‘storm the ANC headquarters.’” Letter of Jerry McGlothlin, “South African Zulus,” *L.A. Times*, 7 Apr. 1994, at B6.
- Sense 1: “At the Sunday worship of the Re-imagining conference, a liturgy *evoked* [read *invoked*] ‘Creator God Sophia.’” Larry Witham, “Bishop Calls for Calm on ‘Sophia’ Issue,” *Wash. Times*, 11 June 1994, at A5.
- Sense 1: “The leader of Turkey’s Islamic party opened his first news conference as prime minister by *evoking* [read *invoking*] God’s blessing.” “Turkey’s Islamic Leader Eyes Moderate Course,” *Record* (N.J.), 30 June 1996, at A17.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

- Sense 2: “As his fellow Democratic candidates have done across the country, Mr. Yates *evoked* [read *invoked*] the name of the Republican Speaker of the House, Newt Gingrich, to hang around his opponent’s neck like a millstone.” Don Terry, “Illinois Lawmaker Proves a Tough Target for G.O.P.,” *N.Y. Times*, 24 Oct. 1996, at A10.

LANGUAGE-CHANGE INDEX
evolve misused for *invoke*: Stage 2

evolute, as a noun, bears a highly technical meaning in mathematics (denoting a type of curvature); and as an adjective, it bears a fairly technical meaning in botany (“turned back; unfolded”).

But some writers have tried to make it a verb, as a BACK-FORMATION from *evolution*, thereby concocting a NEEDLESS VARIANT for *evolve*—e.g.:

- “Throughout, there is also a renewed emphasis on legs through above-the-knee skirts, Bermuda shorts and pants that fit second-skin tight. Shoulders, though still emphasized, are *evoluting* [read *evolving*].” Patricia McColl, “Messages from Milan,” *N.Y. Times*, 6 Oct. 1985, § 6, at 77.
- “Young, the head of Cigna HealthCare of Mid-America, says this country is *evoluting to* [read *evolving into*] ‘an integrated care management system focused on providing high-quality care.’” A.A. Soto, “HMOs Are So Large, They Have to Be Regulated,” *St. Louis Post-Dispatch*, 17 Oct. 1998, Editorial §, at 3.

LANGUAGE-CHANGE INDEX
evolute for *evolve*: Stage 1

Current ratio (*evolving* vs. **evoluting*): 3,768:1

EX-, when meaning “former,” should always be hyphenated: “A bitter *exemployee* [read *ex-employee*] can do great harm . . . [W]hen people feel they have been fired ‘fairly’ . . . they will be reluctant to bad-mouth their *excompany* [read *ex-company*].” Mark H. McCormack, *What They Don’t Teach You at Harvard Business School* 199 (1984).

A problem arises when using the prefix with a noun phrase. Is an *ex-brain surgeon* a former brain surgeon, one formerly having a brain, or a specialist in head-autopsies? Although a nitpicker might argue for either of the last two, most reasonable readers will understand that *ex-* applies to the entire phrase, not just to the attributive. By far the better approach is to use *former* rather than to prefix the first word of a phrase. Otherwise, where should the prefix go in the following examples?

- “Others say that *ex-corporate middle managers* [read *former corporate middle managers*] are prone to reproducing the world they knew.” Kirk Johnson, “Franchise Shops Draw Downsized Managers,” *Commercial Appeal* (Memphis), 26 June 1994, at C3.
- “The company, owned by two London marketing men who live in Dorset, and run by Mr. Paul Simmons, an *ex-corporate financier* [read *a former corporate financier*], produces 850 tons of lime annually.” “Quarry Firm Buried by Bureaucracy,” *Daily Telegraph*, 15 Aug. 1994, at 7.

For an illogical use of this prefix, see ***ex-felon**.

Some copyeditors have learned to use an en-dash when a hyphenated combining form (such as *ex-*)

combines with a compound having a space: *ex-brain surgeon*, and the like. The compounds tend to read somewhat better this way. (See PUNCTUATION (H).) Still, it’s always best to look for a solution that won’t make the reader do a double take.

ex, n., is a CASUALISM in the sense “a former spouse or lover.” The plural of *ex* is *exes*, and the possessive is *ex’s*—but be aware that many readers will find these forms odd-looking.

exacerbate (= to make worse) seems to be following the course of its traditional synonym, *aggravate*. That is, writers sometimes use it as a fancy substitute for *irritate*, perhaps influenced by *exasperate*—e.g.: “Louis Lyons, former curator of the Nieman Foundation at Harvard, and James Boylan, editor of the Columbia Journalism Review, are *exacerbated* [read *irritated*] by *you know*—which both say they hear too often over radio and TV.” Newsweek Editors, “Up Tight About Hang-Ups,” in *Coming to Terms with Language: An Anthology* 68, 69 (Raymond D. Liedlich ed., 1973).

Meanwhile, the word *exasperate* (traditionally “to irritate thoroughly” but archaically “to make harsher”) is often confounded with *exacerbate*. Yet the DIFFERENTIATION between the words has been complete for many generations. Using *exasperate* in its obsolete sense is now poor usage—e.g.:

- “In most cases, players want to do the right thing. And in 99.9 percent of each of those cases, you can find so-called ‘friends’ who *exasperate* [read *exacerbate*] the problem.” George Robinson, “Pacman Needs to Get New Friends,” *Leaf-Chron*. (Clarksville, Tenn.), 19 June 2007, at C1.
- “The meetings come as growth has packed Tecumseh South Elementary beyond its capacity with anticipated growth expected to *exasperate* [read *exacerbate*] the problem.” Barbara Hollingsworth, “Boundary Talks Continue,” *Topeka Capital-J.*, 15 Jan. 2008, Local §, at 2.
- “Of course our government would insist that they run any such projects, which would further *exasperate* [read *exacerbate*] the problem.” Letter of Jim McClain, “Crisis Requires Visionary Leader,” *Daily Record* (Morristown, N.J.), 22 May 2008, at 2.

LANGUAGE-CHANGE INDEX

1. *exacerbate* misused for *irritate*: Stage 1
2. *exasperate* misused for *exacerbate*: Stage 1

exact same. This expression, which sprang into currency after 1950, is a lazy truncation of *exactly the same*. Although *the exact same* is acceptable in informal speech, it’s not an expression for polished prose—e.g.:

- “There is not one briefcase, however. There are several; they’re *the exact same* [read *exactly the same*] shade of pale aqua, and they all get swapped by characters skulking in and out of various dressing cubicles.” David Richards, “All Roads Lead to Mother in a Game of Spy Versus Spy,” *N.Y. Times*, 5 Dec. 1994, at C11.
- “He buys her the same clothes Madeleine wore, takes her to a beauty salon to have her hair and makeup done just like Madeleine’s, even puts her in *the exact same* [read *the same* or *identical*] high heels.” Joanna Connors,

“Vertigooooooooo,” *Plain Dealer* (Cleveland), 6 Dec. 1996, Friday §, at 5.

- “Whenever the goofer says something wrong, take the next available occasion to say the *exact same* [read *same*] thing yourself.” Mary Newton Brudner, *The Grammar Lady* 60 (2000).

And because *exactly the same* is a phrase of pinpoint precision, to qualify the idea by saying **almost the exact same* is doubly bad—e.g.:

- “Yes, No. 4 Alabama (10–0) and No. 6 Auburn (9–0–1) play *almost the exact same* [read *almost the same* or *the same*] brand of football.” J.A. Alande, “It’s Showdown Time for Alabama, Auburn,” *Wash. Post*, 19 Nov. 1994, at H6.
- “In a characteristically un-didactic history lesson, Thomas preceded the 1913 ‘Rite’ with two works of *almost the exact same* [read *almost the same*] age: Webern’s Six Pieces for Orchestra, Op. 6 (1909) and the Adagio from Mahler’s uncompleted 10th Symphony (1910).” Joshua Kosman, “‘Rite’ Not Quite Right,” *S.F. Chron.*, 27 Sept. 1996, at C1.

For a similar example involving *exact*, see **just exactly**.

LANGUAGE-CHANGE INDEX

the exact same for *exactly the same*: Stage 2
Current ratio (*exactly the same* vs. *the exact same*): 6:1

exalt; exult. To *exult* is to rejoice exceedingly. To *exalt* is to raise in rank, to place in a high position, or to extol.

Exalt is rather frequently misspelled **exhalt* or **exhault*—e.g.:

- “The serjeant might perform military duties rather less *exhalted* [read *exalted*] than those of a knight.” Alan Harding, *A Social History of English Law* 32 (1966).
- “God would . . . make him an instrument to *exhalt* [read *exalt*] His mightiness and reach out to others.” Mark Wan-grin, “Ordained a Running Back as a Lad, Priest Holmes Has Never Wavered from His Calling,” *Austin Am.-Statesman*, 10 Sept. 1994, at C1.

These errors seem to result from confusion with words such as *exhale*, *exhort*, and (even more strongly) *exhaust*. In the last two words, the *-h-* isn’t pronounced, and the vowel in the second syllable of *exhaust* is generally sounded just as it is in *exalt*.

LANGUAGE-CHANGE INDEX

exalt misspelled **exhalt* or **exhault*: Stage 1
Current ratio: 3,999:5:1

example; exemplar; *exemplum; exemplification.

Example, of course, is the general term. *Exemplar* = an ideal or typical example. E.g.: “The artist [Carl von Marr], regarded as his era’s foremost *exemplar* of German academic realism, was born to German immigrants in Milwaukee in 1858 and died in Munich in 1936.” James Auer, “West Bend Gallery Buys Massive Oil,” *Milwaukee J. Sentinel*, 30 Nov. 1995, at 8. The Latin **exemplum* is usually a NEEDLESS VARIANT of *example*—e.g.:

- “From Caesar’s murder on, however, he is an *exemplum* [read *example*] both in compelling minor detail and in his sure awareness of the historic scale of the events he is helping to shape.” Alistair Macaulay, “Julius Caesar—Theatre,” *Fin. Times*, 6 July 1994, at 23.
- “Most of the town, and especially Byron, stand in awe of Maars, who is an *exemplum* [read *example*] of the community’s most cherished values—generosity, tolerance, self-reliance and unflinching determination.” David W. Madden, “A Farm Boy Returns as a Man,” *S.F. Chron.*, 13 Aug. 1995, Sunday Rev. §, at 10.
- “The author finds his *exemplum* [read *example*] in an episode revealing the personal sensitivity, to injured blacks, of one of his children.” Benjamin DeMott, “Put on a Happy Face: Masking the Differences Between Blacks and Whites,” *Harper’s Mag.*, Sept. 1995, at 31.

In the specialized literary sense “a moralizing tale or parable; an illustrative story” (*OED*), *exemplum* is justifiably used—e.g.: “Here is an *exemplum vérité* that the Franciscan nuns at Nativity grade school in Washington told my brothers when they were preparing to take their First Communion: ‘There was a wicked little boy in the grip of the Devil. When he went to Communion, he did not swallow the Host, but deliberately concealed it in the corner of his mouth. He went to his hideout with his gang, put the Host on the ground and hammered a nail through it. The Host spurted blood. The boys ran back and confessed . . .’” Maureen Dowd, “‘The Moral of the Story Is . . .’” *N.Y. Times*, 24 Dec. 1995, § 4, at 9.

Exemplification = (1) the act or process of serving as an example <by way of exemplification>; (2) a case in point; an illustration <that exemplification is rather far-fetched>; or (3) (in law) an attested copy of a document with an official seal. In sense 2, the word is usually just a lofty synonym of *example*—e.g.: “A single episode may be noted as a fair *exemplification* [read *example*] of this.” Herbert S. Gorman, “Hopeless in Chandrapore,” *N.Y. Times*, 6 Oct. 1996, § 7, at 38.

LANGUAGE-CHANGE INDEX

exemplification misused for *example*: Stage 1

example where, long thought to be stylistically inferior to *example in which*, is now the predominant phrasing in AmE and BrE alike. Some editors mourn this linguistic fact. But it’s a fact. See **where**.

exasperate. See **exacerbate**.

ex cathedra; ex officio; *ex officiis. *Ex cathedra* = (1) adv., from the chair or throne; with authority; (2) adj., authoritative. Following is a literal adverbial use: “A doctrine concerning faith or morals can be declared infallible by an ecumenical council of the church, consisting of all the bishops and the pope, or by the pope alone speaking officially from the papal throne (*ex cathedra*).” Dave Condren, “Pope’s Stance on Women Fuels Debate,” *Buffalo News*, 1 Dec. 1995,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

at B1. Increasingly today, *ex cathedra* has connotations of a peremptory attitude—e.g.: “The Attorney General’s letter asserts *ex cathedra* and without citation of a single authority that . . .” Peter Shane & Harold Bruff, *The Law of Presidential Power* 205 (1988). The phrase is pronounced /eks kə-**thee**-drə/ or occasionally /eks **kath**-ə-drə/.

Ex officio (= by virtue of one’s office) may likewise be both adjective and adverb <the chairman is an ex officio member of all standing committees> <the chairman became a member ex officio>. A widespread misconception has it that by definition, an ex officio member of a deliberative body may not vote. That isn’t necessarily so; nothing forbids a body from allowing an ex officio member to vote. But it is a common parliamentary practice. *Ex officio* should be neither hyphenated nor spelled as one word. The phrase is pronounced /eks ə-**fish**-ee-oh/ or (rarely) /eks ə-**fik**-ee-oh/. **Ex officii* is a NEEDLESS VARIANT.

Current ratio (*ex officio* vs. **ex officii*): 514:1

exceed. A. In the Phrase *exceed more than. This phrase is a common REDUNDANCY—e.g.:

- “The county attorney of Charles County, Md., said its losses *exceed more than* [read *exceed*] \$1.3 million from derivatives trades.” “Derivatives Put in Role of Fall Guy,” *Ark. Democrat-Gaz.*, 10 Oct. 1994, at D1.
- “Volchkov will only begin to get his salary, which cannot *exceed more than* [read *exceed*] \$875,000 a year under the NHL’s cap, if he makes the club this season.” Rachel Alexander, “First-Round Selection Volchkov Signs Contract,” *Wash. Post*, 21 Sept. 1996, at H9.
- “What’s considered affordable by experts is fluid, but it is typically defined as housing costs that do not *exceed more than* [read *exceed*] 30 percent of an individual’s monthly income.” Kirsten Crow, “City’s Need for Housing Grows,” *Corpus Christi Caller-Times*, 2 Aug. 2015, at A1.

LANGUAGE-CHANGE INDEX

**exceed more than* for *exceed*: Stage 1

Current ratio (*exceed* 10 vs.

**exceed more than* 10): 169:1

B. And accede. See **accede**.

exceedingly. A. And exceeding, adv. *Exceedingly* (= extraordinarily) is often used as a mild hyperbole roughly equivalent to *quite* or *very*. It doesn’t usually present any problems, but it does have an old-fashioned by-form, *exceeding* <exceeding kind>. Instead of this ARCHAISM, use *exceedingly*—e.g.:

- “The Jets have also rushed the ball *exceeding* [read *exceedingly*] well this season.” Terry Price, “Jets,” *Hartford Courant*, 3 Nov. 1991, at C11.
- “Abramson notes the firm has done *exceeding* [read *exceedingly*] well in marketing energy to other utilities.” Wes Kendall, “Fran Jeffries Performance,” *Courier-J.* (Louisville), 22 Dec. 1991, at E1.

B. And excessively. An antiquarian book dealer sends out a catalogue in which seven of the books are described as “excessively rare.” He means *exceedingly*. While *excessively* imparts the idea of undesirable surplus, *exceedingly* takes the quality stated to its zenith.

excel. So spelled—not **excell*. Cf. **dispel**, **expel** & **extol**.

Current ratio: 90:1

excellence; excellency. The DIFFERENTIATION between these terms is essentially complete. *Excellence* = the quality of being excellent. *Excellency* has been so narrowed in meaning that it functions today almost exclusively as a title for a high dignity in government or the church <Would you like another, Your Excellency?>. This narrowing in sense had largely been accomplished by 1900.

except, prep. & conj. A. As Preposition and Conjunction. When *except* begins a phrase (with no finite verb) rather than a clause, it is a simple preposition not followed by the relative pronoun *that* <all people except farmers owning more than 500 acres> <no one must leave the room except with permission>. But when *except* as a conjunction introduces a clause (with a finite verb), it should be followed by *that* <all vice presidents are to receive a 10% bonus in compensation, except that no bonus on previous bonuses is allowed>.

If a pronoun follows a prepositional *except*, the pronoun should be in the objective case, not the nominative—e.g.: “Everyone has been accounted for except *he* [read *him*].” If a pronoun follows a conjunctive *except* and serves as the subject of the clause’s verb, it should be in the nominative case—e.g.: “He’s generally easygoing, except that *he* doesn’t tolerate laziness.” See PRONOUNS (A), (B).

B. Excepting. Except in the phrase *not excepting*, this word should not be used as a substitute for *except for* or *aside from*—e.g.:

- “But rarely in the post World War II era, *excepting* [read *aside from* or *with the exceptions of*] the Netherlands during the ’70s and England’s championship team of 1966, do the outsiders make it past the semifinals.” Javier Solano, “History Favors the Latin Teams,” *Orlando Sentinel*, 15 June 1994, at D10. (The interruptive phrase in that sentence might be improved a little by enclosing it in em-dashes. See PUNCTUATION (G). But it needs more work than that: *the Netherlands* aren’t an exception to *the post-World War II era*. The parts of the sentence are misassembled.)
- “That means they may spend all their time trying to figure out who else can command close to her top price of \$350 (*excepting* [read *aside from*] the Las Vegas shows).” Robert Hilburn, “Streisand Tour Ends,” *L.A. Times*, 26 July 1994, at F1.
- “But he remains unbeaten in 10 global championship sprint finals over the past seven years, *excepting* [read *not including*] the false start that ruled him out of the 100m final at the 2011 World Championships in Daegu.” Martha Kelner, “Cheater Beater Bolt,” *Daily Mail*, 24 Aug. 2015, Sport §, at 78.

It’s true that *excepting* is one word, not two, and that it might be considered an acceptable dangling modifier (or “disguised conjunction”). (See DANGLERS (E).) But many knowledgeable readers will disapprove of it as a dangler. And in any event, it’s less natural-sounding than the edited versions—which add one more word but no extra syllables.

except, vb., = (1) to exclude; omit <present company excepted>; or (2) = to object; take exception <I except to that statement>. Sometimes, in one of the grossest errors that a published writer can commit (or a copy-editor miss), *except* is misused for *accept*—e.g.:

- “Why would these industries offer government officials gifts, unless it is to influence decisions in their behalf? Why do we need a full-fledged investigation? They either *excepted* [read *accepted*] the gifts or they didn’t!” “Officials Reap Profits of Their Influence,” *Rocky Mountain News* (Denver), 7 Sept. 1994, at A38.
- “On Monday, the phone starts ringing with heart-breaking stories about a father and son or daughter who just wanted to get in on a good hunt and *excepted* [read *accepted*] an invitation from a host they thought they could trust.” Steve Bowman, “Dove Hunting Season Aims to Start with a Bang,” *Ark. Democrat-Gaz.*, 29 Aug. 1996, at C8.

LANGUAGE-CHANGE INDEX
except misused for *accept*: Stage 1
 Current ratio (*well accepted* vs.
**well excepted*): 1,438:1

excepting. See **except (B)**.

exceptional. **A. And *exceptionable***. *Exceptional* = out of the ordinary; uncommon; rare; superior. *Exceptionable* = open to exception; objectionable. E.g.: “It is the same ideological insularity that found nothing terribly *exceptionable*—until the firestorm—with the racial spoils system advocated by Lani Guinier.” Charles Krauthammer, “Abortion Is Legal, Not Moral,” *Cincinnati Enquirer*, 13 Feb. 1995, at A10.

Exceptionable, of course, is the much rarer term. And about 20% of the time it appears in print, it’s misused for *exceptional*—e.g.:

- “Feemster, who died in a 1963 airplane accident, was a pushy Sammy Glick type much disliked by the *Journal*’s editorial staff, but his *exceptionable* [read *exceptional*] business skill and hustle persuaded skeptical advertisers to support a newspaper that had no home town, no photographs, no sports, and a gray, unchanging front page.” David Graulich, “Worldly Power: The Making of the *Wall Street Journal*,” *Wash. Monthly*, Jan. 1987, at 58.
- “Meanwhile, Hamed has appealed to the British press for a better understanding of his *exceptionable* [read *exceptional*] talent following his remarkable victory over Steve Robinson.” Steve Bunce, “Murray’s Title Spur,” *Daily Telegraph*, 13 Oct. 1995, at 34.
- “Indian food holds up remarkably well on a buffet table and Khyber Pass’s table is *exceptionable* [read *exceptional*]—especially at the bargain price of \$8.95 during the week (it is \$9.95 on weekends and \$5.95 for lunch).” Jean Marie Brownson, “Khyber Pass Takes Indian Cuisine to New Heights,” *Chicago Trib.*, 17 Apr. 1996, Good Eating §, at 2.

LANGUAGE-CHANGE INDEX
exceptionable misused for *exceptional*: Stage 1
 Current ratio (*exceptional circumstances* vs.
**exceptionable circumstances*): 1,073:1

B. Meaning “physically or mentally handicapped”
 The problem with using the word as a EUPHEMISM in this way is that it can result in ambiguity: *exceptional* can mean either “having above-average intelligence” (i.e., gifted) or “having below-average intelligence” (i.e., retarded). In passages such as the following, *exceptional* is symptomatic of DOUBLESPEAK: “The Resource Directory also lists state and federal agencies that can assist parents with *exceptional* children.” Patricia Galbreath, “Hints for the Disabled,” *Dallas Morning News*, 1 Aug. 1997, at C10.

LANGUAGE-CHANGE INDEX
exceptional as doublespeak for *handicapped*: Stage 3

exception proves the rule, the. This phrase is the popular rendering of what was originally a legal maxim, “The exception proves (or confirms) the rule in the cases not excepted” (*exceptio probat regulam in casibus non exceptis*). Originally, *exception* in this maxim meant “the action of excepting”—not, as is commonly supposed, “that which is excepted”—so the true sense of the maxim was that by specifying the cases excepted, one strengthens the hold of the rule over all cases not excepted.

At least two spurious explanations of *the exception proves the rule* exist. One is that because a rule does not hold in all instances (i.e., has exceptions), the rule must be valid. This misunderstanding of the phrase commonly manifests itself in the discourse of those who wish to argue that every rule must have exceptions. A more sophisticated, but equally false, explanation of the phrase is that *prove* here retains its Elizabethan sense (derived from the Latin) “to test,” so that the sense of the phrase is that an exception to a rule “tests” the validity of the rule. This erroneous explanation appears, of all places, in Tom Burnam, *A Dictionary of Misinformation* 79 (1975).

By the way, the *FMEU1* entry on this phrase is perhaps the only one in which the great H.W. Fowler is all but incomprehensible.

excess. See **access**, n. (A).

***excess verbiage**. See **verbiage**.

EXCLAMATION POINTS. See **PUNCTUATION (I)**.

excludable; *excludible; *exclusible. The standard form is *excludable*. See **-ABLE (A)**. Cf. **includible**.

exculpate; exonerate. Whereas the former has the primary sense “to free from blame or accusation,” the latter means literally “to free from a burden,” and only by extension is it synonymous with the former. See **exonerate**.

exculpatory; *exculpative. The latter is a NEEDLESS VARIANT. Cf. **culpable & inculpatory**.

Current ratio: 547:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

excuse, n. See **alibi**.

excuse me; pardon me. Traditionally, *excuse me* was used for minor offenses such as bumping into someone; *pardon me* was reserved for more serious situations requiring a more explicit apology. Today, the terms are interchangeable, *excuse me* being slightly less formal. *Sorry* is even less so.

When the word *me* receives the stress, either *pardon me* or *excuse me* is used either as a mild challenge of someone else or as a polite waving off of someone else's apology. When the first word is stressed in either phrase and an interrogative inflection is given, the sense is typically "What did you say?"

executor (= someone who is appointed in a will to administer a deceased person's estate) is the standard spelling. **Executer* is an obsolete variant. The word is pronounced with the accent on the second syllable: /ɪg-zək-yə-tər/. See **trustee** (B).

Current ratio (*executor* vs. **executer*): 109:1

executrix. See **SEXISM** (D).

exegesis; epexegetis; eisegetis. *Exegesis* (/eks-ə-jee-sis/), the usual term, means "explanation or exposition (as of a word or sentence)." The other two are rare. *Epexegetis* = the addition of a word or words to convey more clearly the meaning implied, or the specific sense intended, in a preceding word or sentence (*OED*). *Eisegetis* (/ɪ-sə-jee-sis/) = the interpretation of a word or passage by reading into it one's own ideas (*OED*). But surely *reading into*—or some like phrase—is clearer.

Each of these terms forms the plural by changing the final syllable to *-es*; hence *exegesese*, *epexegesese*, and *eisegesese*.

exemplar. See **example**.

exemplary has two almost contradictory connotations: *exemplary damages* (better known as *punitive damages*) make an example out of a wrongdoer, whereas *exemplary behavior* is model behavior. *Exemplary* is sometimes misunderstood as meaning "severe" in phrases such as *exemplary punishment*. The meaning is always that the accompanying noun should set an example for others' behavior.

exemplification; *exemplum. See **example**.

exempli gratia. See **e.g.**

exert. See **assert**.

exeunt (/ɛk-see-ənt/) [L. "they leave"], an Elizabethan stage direction, means that two or more actors leave the stage. (The corresponding singular in Latin is *exit* "he or she leaves.") The phrase *exeunt omnes* means that all leave. Most people first see it in a Shakespeare play. And they often seem at once confused by it and tempted to use it—e.g.:

- "In the small American delegation, no one takes a Sweet Swan of Avon Cup. Robert Downey Jr. is hardly employed as Rivers, though he *exeunts* [read *exits*] terrifically,

gasping in interrupted sex." David Elliott, "Drunk on Violence," *San Diego Union-Trib.*, 18 Jan. 1996, Entertainment §, at 4.

- "*Exeunt* [read *Exit*] first Yankee (as Shakespeare might have directed this scene) never to be seen in this very select society again." Perry Young, "The Honorable Red-neck," *Chapel Hill Herald*, 17 Aug. 1996, at 4.

Of course, Shakespeare would never have used the word for a single player.

One reason people mistakenly use *exeunt* for one person may be that, in Elizabethan texts, it sometimes appears as if one person leaves the stage. Although *Exeunt executioners* is clear at the beginning of Act 4, Scene 1 in *King John*, *Exeunt* alone—at the end of that scene—isn't. Hubert delivers a line to Arthur, and the direction *Exeunt* immediately appears. A reader who didn't understand what Hubert said, that Arthur was to stick close by, might think that only Hubert left the stage at that point. But then Arthur isn't in the next scene (he must have left!). Alas, readers don't tend to keep stage directions as much in mind as they do dialogue.

LANGUAGE-CHANGE INDEX
exeunt misused for *exit*: Stage 1

***ex-felon** is an illogical expression—except, perhaps, in reference to a pardoned offender—because a convicted offender does not lose the status of felon merely by serving out a criminal sentence. Once a felon, always a felon. But *ex-convict* is quite all right, *convict* now being viewed as a close synonym of *prisoner*. The phrase **ex-felon* was little used until the early 1960s.

LANGUAGE-CHANGE INDEX

**ex-felon* in the sense "a felon who has completed a sentence": Stage 3

***exhalt; *exhault.** Each is a misspelling of *exalt*. See **exalt**.

exhaustible. So spelled—not **exhaustable*. See **-ABLE** (A).

Current ratio: 299:1

exhibit a tendency is wordy for *tend*. The verbose phrase occurs sometimes in the singular, sometimes in the plural—e.g.:

- "Patients with the disorder *exhibit tendencies* [read *tend*] to attack their therapists or others who are trying to help them, McEvoy said." Warren Hastings, "Court Bars Discipline of Psychologist," *Union Leader* (Manchester, N.H.), 21 Mar. 1992, at 6.
- "Ruzimatov (now also deputy artistic director of the Kirov) still *exhibits the tendency to flaring nostrils and tiresome rodomontade* [read *tends to flare nostrils and engage in tiresome rodomontade*]." Sophie Constanti, "Kirov Ballet: London Coliseum," *Independent*, 12 July 1995, Reviews §, at 12.
- "With some, who *exhibit a tendency to* [read *tend toward*] risky behaviors, the questions get thornier and the lines more blurred." Craig Schneider & Ernie Suggs, "A Closer Look: Organ Transplant Policies," *Atlanta J.-Const.*, 5 Apr. 2015, at A1.

In the second example quoted, the suggested revision concededly uses as many words as the original, but the

result achieves a more logical PARALLELISM by aligning the infinitives (*to flare* and *(to) engage*) rather than the nouns (*nostrils* and *rodomontade*). See BURIED VERBS.

exhilarate is so spelled—not **exhilarate*. Remember its etymological connection with *hilarious*.

Current ratio: 71:1

***exhorbitant**. See **exorbitant**.

exigency; ***exigence**. The form ending in *-cy* is standard; the other is a NEEDLESS VARIANT.

Current ratio: 4:1

exigent; ***exigeant**. The first is the standard term meaning “requiring immediate action.” **Exigeant* is a NEEDLESS VARIANT.

Current ratio: 14:1

existence—often misspelled **existance*—is commonly misused for *inception*, especially in the phrase **since its existence*. E.g.:

- “‘It was an evenly matched series. They just had a little more pitching depth than us,’ said player/coach Jeff Thompson, a former Pitt catcher who has served that role for Canonsburg since its *existence* [read *beginnings*].” David Assad, “Canonsburg Hopes Pitching Can Lead It to a Championship,” *Pitt. Post-Gaz.*, 11 June 1995, at W11.
- “Riyadh-based The Arab Investment Company (TAIC) has moved from a modest beginning to the pinnacle of its glory in 20 years since its *existence* [read *inception*].” Furqan Ahmed, “TAIC Moves On in Field of Investments,” *Moneyclips*, 10 Aug. 1995.

LANGUAGE-CHANGE INDEX

**since its existence* for *since its inception*: Stage 1

Current ratio (*since its inception* vs.

**since its existence*): 70:1

exit has been an acceptable verb since the early 17th century <they exited from the building about 3:00 AM>. Those who object to it on grounds that one does not “entrance” a building have a misplaced prejudice.

But when used transitively, as opposed to intransitively with the preposition *from*, the verb typifies police talk—e.g.:

- “As traffic came to a standstill in both directions, these men *exited* their vehicles and became involved in a brief foot pursuit.” Letter of Master Police Officer Robert W. Mathieson, “*Virginian-Pilot* (Norfolk), 26 July 1996, at 7.
- “He then turned his car around again, *exited* the vehicle and revealed a knife.” Gary Mays, “Joliet Man Charged with Robbing Women of Diamond Rings,” *Chicago Trib.*, 29 Aug. 1996, at D5.

exodus means “a mass departure or emigration.” Hence the common phrase **mass exodus* is a REDUNDANCY, perhaps a venial one influenced by *mass migration*—e.g.: “On the streets, buses lined the curb, waiting for the *mass exodus* [read *exodus*] of fans after

the game.” Kevin Mayhood, “Loyal Indians Fans Soak Up Playoff Atmosphere,” *Columbus Dispatch*, 4 Oct. 1995, at B2. As a corollary to that point, one person’s leaving does not make an *exodus*—e.g.: “Jones’ *exodus* [read *exit*] has sparked a discussion among university staffers and the deaf community over what went wrong with the training program.” Lynn O’Shaughnessy, “Student Concern Helped to Oust Leader at CSUN Center for Deaf,” *L.A. Times*, 27 Oct. 1985, § 2, at 8.

LANGUAGE-CHANGE INDEX

**mass exodus* for *exodus*: Stage 3

ex officio. See **ex cathedra**.

exonerate, in the sense “to free from responsibility or blame,” takes a person as an object. E.g.:

- “The Rev. James McCloskey, who worked for three years to *exonerate* Baker, said Baker, 41, was ‘in a state of shock and disbelief’ after learning of his new trial.” “New Trial Ordered for Man in Prison Nearly 24 Years,” *Des Moines Register*, 28 Aug. 1997, at 6.
- “‘Young Sam’ is 50 and has spent much of his life trying to *exonerate* his father.” James Bradshaw, “Sheppard’s Attorneys Barred from Testifying,” *Columbus Dispatch*, 18 Nov. 1997, at C3.

The term is sometimes misused in either of two ways. First, it’s sometimes applied to a thing as opposed to a person, in the sense “to rule out (something) as a cause”—e.g.: “The cruise control and the electronic fuel injection system were *exonerated* [read *ruled out as causes*] when a National Highway Traffic Safety Administration study concluded in 1989 that there was no defect.” Helen Kahn, “Jury Clears 300ZX of Sudden Acceleration,” *Automotive News*, 1 Oct. 1990, at 39. Second, it’s sometimes misused for *condone* (= to overlook or disregard [an offense])—e.g.: “Included is a shocking segment in which Florida State football players essentially *exonerate* [read *condone*] Phillips’ conduct.” Milton Kent, “After Ratings Famine, Browns Have a Feast Against Steelers,” *Baltimore Sun*, 30 Nov. 1995, at D2. Cf. **exculpate**.

exoticism; *exotism. The latter is a NEEDLESS VARIANT.
Current ratio: 165:1

expandable; *expansible; *expandible. The first is the standard term. The second and third are NEEDLESS VARIANTS. See *-ABLE* (A).

Current ratio (in order of headwords): 227:16:1

expatriate; expatriate; *expatriot. *Expatriate* (/ek-spay-shee-ayt/) means (1) “to wander”; or (2) “to discourse on (a subject) at length.” *Expatriate* (/eks-pay-tree-ayt/) means (1) “to leave one’s home country to live elsewhere”; or (2) “to banish; exile.”

Expatriate (/eks-pay-tree-it/) is also a noun meaning “a person who lives permanently in a foreign land.” It is sometimes mistakenly spelled **expatriot*, a form based on a misunderstanding of the root word. In fact, *expatriate* (L. *ex-* “out of” + *patrie* “native land”) is a fairly neutral word, but the mistaken form **expatriot* appears to attach some opprobrium—e.g.:

- “And Georgia *expatriots* [read *expatriates*] sometimes bring up burgers and hot dogs from the Varsity, a vintage ’50s drive-in near Georgia Tech in Atlanta.” Laura Outerbridge, “Home Is Where the Tastebuds Are,” *Wash. Times*, 3 Apr. 1995, at C10.
- “Saudi Arabia has a population of 17 million people, a third of them *expatriots* [read *expatriates*].” “Saudi King Hands Power to Half-Brother,” *Austin Am.-Statesman*, 2 Jan. 1996, at A1.
- “As they sat around San Diego’s Balboa Park, discussing the issue, the *expatriots* [read *expatriates*] realized that a large number of their town’s population of 3,500 lived in and around San Diego County.” Alfredo Corchado, “Importing Changes,” *Dallas Morning News*, 23 Sept. 1996, at A1.

LANGUAGE-CHANGE INDEX
expatriate misspelled **expatriot*: Stage 1
Current ratio: 332:1

expect is informal or colloquial for *think* or *suppose*, as here: “I *expect* that it will take three weeks,” instead of “I think it will take three weeks.” Most properly, *expect* means “to look forward to and rely on.” See **anticipate**.

expectancy; expectation. Despite an overlap in actual use, the DIFFERENTIATION is clear-cut. *Expectancy* = that which is anticipated or forecast; something expected <a life expectancy of 70 years>. *Expectation* = the act or state of anticipating the occurrence of something <an expectation of high profits>. The most common error is to misuse *expectation* for *expectancy*—e.g.: “The impairment must adversely affect life *expectation* [read *expectancy*] and not just the quality of life.” “Cash in the Magnificent 70s,” *Fin. Times*, 19 July 1997, at 21.

LANGUAGE-CHANGE INDEX
expectation misused for *expectancy*: Stage 1

expectorate is a genteelism for *spit*, convenient for the writer fond of INELEGANT VARIATION, as in the first and second examples below—e.g.:

- “Carrey . . . spits so copiously that he covers himself and two other characters with dripping mucus. Of course, it wouldn’t be an Ace Ventura movie if he only *expectorated* [read *spat*]. First he has to snort long and loudly, in order to gather his mucus supply, which he seems to be drawing not only from the sinus area but from every inner bodily crevice.” Roger Ebert, “Call of the Vile,” *Chicago Sun-Times*, 10 Nov. 1995, at 43. (For more on the past tense of *spit*, see **spit**.)
- “Brad Ausmus, the Padres’ leadoff man, adjusted his batting helmet and *spit* [read *spat*]. Catcher Dan Wilson *expectorated* [read *then spat*] between the bars of his mask and rifled the ball back to the mound.” David Casstevens, “Why, He’s the Spitting Image of . . .” *Ariz. Republic*, 1 Mar. 1996, at C1.
- “Last Friday night in Toronto, Alomar, called out on a third strike and then ejected from the game, *expectorated* [read *spat*] in the face of umpire John Hirschbeck.” Woody Paige, “Umps Deserve the Right Call,” *Denver Post*, 2 Oct. 1996, at D1.

Sometimes, though, it can be used for good comical effect—e.g.: “Well, there is the rule against spitting in public places, which has been *expectorated* from the governmental maw on the grounds that it was widely violated and might ruin spring training if applied vigorously to ballplayers.” “Getting Rid of Ridiculous Rules,” *Tampa Trib.*, 30 June 1996, at 2.

expediency. A. And *expedience. *Expediency* is usual; **expedience* is a NEEDLESS VARIANT.

Current ratio: 11:1

B. And expedition. *Expediency* (= consideration of what is politically convenient) is sometimes confounded with *expedition* (= promptness, haste). (The corresponding adjectives *expedient* and *expeditious* are likewise misused. See **expeditions**.) Mark Olshaker completed his book on the Unabomber 13 days after the capture of the suspect (later convicted), Theodore Kaczynski. But because the book’s coauthor was a former FBI agent, Olshaker had to submit the book to the FBI for a standard but prolonged review. On

the subject of the delay in publishing caused by the FBI's review of the book, Olshaker was quoted: "If this is the F.B.I.'s idea of *expediency* [read *expedition*], then I can see why it took them 18 years to catch the Unabomber." Doreen Carvajal, "The Long Unabom Manhunt Becomes a Paperback Sprint," *N.Y. Times*, 2 May 1996, at A1.

LANGUAGE-CHANGE INDEX
expediency misused for *expedition*: Stage 1

expedient. See **expeditious.**

***expediential.** See **expeditious.**

expedite. See SPELLING (A).

expedition. See **expediency (B).**

expeditious; expedient, adj.; ***expediential.** *Expeditious* = quickly accomplished, prompt <an expeditious decision>. *Expedient* = (1) desirable, advantageous <a surprisingly expedient device for controlling a difficult problem>; or (2) based on self-interest <the regent's decision was politically expedient>. **Expediential* is a NEEDLESS VARIANT.

Expedient as a synonym for *expeditious* has long been considered obsolete. Oddly, though, it persists where *expeditious* would be better, probably in part because of the sound of *speed* in the middle of *expedient*. In the following examples, notice that *expedient* (= self-interested) suggests something rather different from *expeditious* (= prompt):

- "Ask them if they got what they ordered. Did the builder respond to their problems in an *expedient* [read *expeditious*] fashion? Were the repairs satisfactory?" Sharon L. Warzocha, "'Walk-Through' Is Buyer's Last, but Vital, Step," *L.A. Times*, 12 May 1991, at K1.
- "Clearly the government will have to act as *expeditiously* [read *expeditiously*] as possible to deliver on housing and jobs for blacks living in substandard conditions in the townships and squatters' camps." "A Peaceful Election Bodes Well for New Era," *Dallas Morning News*, 4 May 1994, at A32.
- "The people who work there are the friendliest and most *expedient* [read *expeditious*] humans in the world." Shannon Bryan, "Getting Outside in Augusta," *Portland Press Herald*, 20 Aug. 2015, at A1.

LANGUAGE-CHANGE INDEX
expedient misused for *expeditious*: Stage 1

expel. So spelled—not **expell*. Cf. **dispel**, **excel** & **extol**.

Current ratio: 163:1

expend is a FORMAL WORD that often seems less appropriate than *spend*—e.g.:

- "It also provided procedures to document the threat and do something about it before businesses *expended* [read *spent*] time and money expanding and relocating." "Controlling Pollution," *Knoxville News-Sentinel*, 21 Mar. 1996, at A14.

- "Cosmic bowling is not the first time Brunswick has *expended* [read *spent*] time and energy giving bowling a face lift." David Young, "Brunswick Pins Down a Strategy," *Chicago Trib.*, 28 May 1996, at N1.
- "Accelerators and government chest-thumping about entrepreneurship *expend* [read *spend* or, in this case, perhaps *waste*] scarce tax dollars on public relations, notably fancy websites and social-media campaigns, to remind taxpayers how their money is being put to magnificent use in 'innovation hubs.'" Neil Seeman, "'Accidental' Entrepreneurs," *Globe & Mail* (Toronto), 22 Aug. 2015, at B5.

expense, v.t. In general use, this is an overblown substitute for *spend* and ought to be avoided. In accounting, though, it is a handy bit of JARGON, distinguishing a business operating cost whose benefit is immediate rather than long-range from a capital purchase whose benefit will continue over several years. E.g.:

- "If these products go into production, revenues could go off the chart because, unlike Hollywood, characters and concepts were *expensed* at the time of their creation and not amortized over time." Stephen Pounds, "Big Entertainment's Big Plans," *Palm Beach Post*, 30 June 1996, at E1.
- "Goodwill is an intangible or artificial asset that can be written off or *expensed* over a number of years." David Shook, "High Court Ruling on Thrifts May Cost Taxpayers \$20 Billion," *Patriot Ledger* (Quincy, Mass.), 2 July 1996, at 30.
- "The company has now *expensed* \$625 million to cover the cost of the Ignition Compensation Fund, which has found 124 deaths caused by the defect." Greg Gardner, "Color GM Greener, UAW More Hopeful," *Detroit Free Press*, 24 July 2015, at A1.

The word in this sense should be confined to accounting contexts—not used as an overblown synonym for *spend*. Cf. ***inexpense**.

expensive. Because the word means "high-priced," the phrase **expensive prices* is a REDUNDANCY—e.g.:

- "Some travelers report *expensive prices* [read *high prices*] in larger cities like Split and Zagreb where hotel rooms are booked by United Nations and NATO officials and journalists." Jim Simon, "Rebounding in War's Wake," *Austin Am.-Statesman*, 23 June 1996, at F6.
- "We settled for a reserve chardonnay at the *too expensive price* [read *unduly high price*] of \$6.50 a glass." M.F. Onderdonk, "Winery Is Delicious Setting for a Meal at Williamsburg Tavern," *Virginian-Pilot* (Norfolk), 6 Oct. 1996, at F1.
- "Unsurprisingly, Manhattan soars with the *most expensive prices* [read *highest prices*] in the city." Amber Jamieson, "Realty Soar Points," *N.Y. Post*, 16 Aug. 2015, News §, at 2.

***experimentalize** is a NEEDLESS VARIANT of *experiment on* or *experiment with*—e.g.: "The sometimes desperate attempt to *experimentalize* [read *experiment with*] social topics resulted in laboratory experiments that were sometimes rather poor caricatures of the social phenomena to be investigated." George

Mandler, "The Situation of Psychology," *Am. J. Psychology*, 22 Mar. 1996, at 1.

LANGUAGE-CHANGE INDEX

**experimentalize* for *experiment on* or *experiment with*: Stage 1

Current ratio (*experiment with* vs. **experimentalize*): 1,186:1

expertise (= special knowledge or skill in a particular subject, esp. when learned by training or long experience) is preferably pronounced /*ek-spər-teez*/—not /-tees/.

expiration; expiry. *Expiration* is the usual word for "termination" in all types of World English. *Expiry* is a chiefly BrE variant.

explain. See **explicate**.

explanatorily. See SENTENCE ADVERBS.

explicative. See **epithet (c)**.

EXPLETIVES. In general usage, *expletives* are understood to be curse words or exclamations. This sense was fortified in AmE during the Watergate hearings in the early 1970s, when coarse language was replaced with *expletive deleted* in transcripts of the White House tapes. In grammar, however, an *expletive* is a word having no special meaning but standing (usually at the beginning of a clause) for a delayed subject. The two most common expletives are *it* and *there* at the beginnings of clauses or sentences. See **it & there is**.

explicable (= able to be easily explained and understood) is pronounced either /*ek-spli-kə-bəl*/ or (less traditionally) /*ek-splik-ə-bəl*/. See PRONUNCIATION (c). Cf. **inexplicable**.

explicate; explain. The terms are synonymous, but are used in different contexts. *Explain* is the ordinary term. *Explicate* (lit., "to open up pleats; to unfold") is more learned and connotes formal, orderly presentation or justification, often of a text. Oddly, the adjectives *explicable* (/*ek-spli-kə-bəl*/) and *inexplicable* occur more frequently in print than the verb *explicate*.

***explodable.** See **explosible**.

exploitative; *exploitive; *exploitatory. The second and third forms are NEEDLESS VARIANTS. The adjective follows the noun; so *exploitation* yields *exploitative*, whereas *prevention* yields *preventive*. See **preventive**.

Current ratio (in order of headwords): 5,007:767:1

explosible; *explodable. *Explosible* has been the standard adjective since the mid-19th century.

Current ratio: 3:1

exponential. This word is not synonymous with *rapid*. Growth is *exponential* when the rate of growth increases over time. But a savings account with compound interest could be viewed as growing exponentially in a sense: the percentage growth of the balance over the original principal goes up every year, and at

an ever-increasing rate. If the rate is 5% at simple interest, though, the balance will not increase rapidly. Yet writers frequently use *exponential* and *exponentially* as hyperbolic equivalents of *rapid* and *rapidly*—e.g.:

- "The *exponential* growth of spam also has spawned a number of software programs designed specifically to rid your inbox of junk mail." David Einstein, "There's No Sure Way to Eliminate Spam from Your Mailbox," *S.F. Chron.*, 13 Dec. 2001, at B4. (Note the REDUNDANCY in that sentence: all computer programs are software, and vice versa, so *software programs* is ill-advised.)
- "That seemingly premature pronouncement bodes an *exponential* increase in costs." "We Must Pay for Ridgway Case," *Seattle Post-Intelligencer*, 14 Dec. 2001, at B4.
- "Since 1999, when many mainstream consumers began shopping on the Internet, Web retailers have often seen *exponential* gains in sales." Chris Reidy, "Slump Seen in Holiday Sales," *Boston Globe*, 21 Dec. 2001, at C1.

exposé should have the acute accent on the final letter to prevent confusion with the verb *expose*. E.g.: "Investigative reports, following in the tradition of the muckrakers, are always looking for an *expose* [read *exposé*]." See DIACRITICAL MARKS & GARNER'S LAW.

ex post facto is slightly pompous but fairly common when used for *after the fact*. The phrase does have legitimate uses in the sense "retroactive" <ex post facto laws>. **Ex post* for *ex post facto* is an odd ellipsis without literary legitimacy—e.g.: "As a rule, therefore, courts will not engage in *ex post inquiries* [read *ex post facto inquiries*] regarding the substantive fairness of contract terms." Maureen B. Callahan, Note, "Post-Employment Restraint Agreements," 52 *U. Chi. L. Rev.* 703, 704 (1985). Yet another strange shortening omits the *ex*—e.g.: "Finally, her charge that after rejecting his overtures she then was discriminated against in her lower-level state job seems a *post facto* [read *an ex post facto* or *an after-the-fact*] concoction by her lawyers." Albert R. Hunt, "Politics & People: Jones v. Clinton," *Wall Street J.*, 29 May 1997, at A19.

The phrase was formerly spelled **ex postfacto* on occasion, but this spelling is archaic. Some writers hyphenate the term when it functions as a PHRASAL ADJECTIVE <ex-post-facto reasoning>, but the hyphens are unnecessary in this SET PHRASE.

In law, *ex post facto* and *retroactive* are distinguishable. Based on the historical usage of *ex post facto law*, the U.S. Supreme Court interprets the constitutional ban on them as applying specifically to crimes and punishments, not to civil statutes. That is, a person may not be convicted of an act that was not illegal when it was done. Nor may a person be sentenced to a harsher punishment than that which applied when the act was done. In some circumstances, though, a civil statute may apply retroactively.

LANGUAGE-CHANGE INDEX

1. **ex post* for *ex post facto*: Stage 1
2. **post facto* for *ex post facto*: Stage 1

expound; propound. *Expound* = to explain. *Propound* = to set forth; to put forward for consideration.

Both are best used transitively. In the best usage, one *expounds* an idea or doctrine—rather than *expounding* on it. Likewise, one *propounds* questions to a jury.

express, adj.; **expressed**. Both words are antonyms of *implied*, but as different parts of speech. As an adjective meaning “specific, definite, clear,” the word should be *express*—e.g.:

- “She helped to write the Illinois Constitution, which includes an equal-rights clause and an *expressed* [read *express*] right of privacy.” Steve Neal, “Netsch Could Be Toughest Edgar Rival,” *Chicago Sun-Times*, 23 Mar. 1993, at 21.
- “The court found that although Criado was an at-will employee, ITT had created an *expressed* [read *express*] limitation on its right to fire any employee who followed the code of conduct.” Lisa Jenner, “Employment-at-Will Liability,” *HR Focus*, Mar. 1994, at 11.
- “The agency has an *expressed* [read *express*] duty under the act to protect the public health.” “EPA’s New Mandates Won’t Come Cheaply,” *Ariz. Republic*, 23 June 2015, at A12.

Express, then, is closely allied with *explicit*; *implied*, as the antonym, is closely allied with *implicit*. See **implied & implicit**.

As a verb, *expressed* is a past-tense or past-participial form of the verb *express*—e.g.: “Not only did he say good things, but he also said the right things and *expressed* the right concerns.” “Valvano’s Toughest Challenge,” *St. Louis Post-Dispatch*, 29 Jan. 1989, at F3.

 **an expressed provision*): 227:1

expressible. So spelled—not **expressable*. See -ABLE (A).

Current ratio: 98:1

***expresso**. See **espresso**.

expropriate. See **appropriate (B)**.

expungement; expunction. The word *expungement*, unrecorded in many dictionaries, might be thought a NEEDLESS VARIANT. But because it is about four times as common in print as *expunction*, and has been since the mid-1960s, it ought to be considered standard—e.g.:

- “Any person required to register may be relieved of this duty upon the granting of a petition of *expungement* by the court upon demonstration of appropriate behavior.” Daniel Feldman, “Does This Register?” *Newsday* (N.Y.), 21 Aug. 1994, at A40.
- “They also note that during the two decades between the conviction and the *expungement*, the file was open to the general public, which means countless copies could have been disseminated legally.” Chris Ison, “Prescott Says St. Paul Police Cost Him His Job,” *Star Trib.* (Minneapolis), 24 Aug. 1994, at B4.

- “*Expungement* is a way to erase a criminal scar.” Stephen Hudak, “Wiping Slate Clean of a Criminal Past,” *Plain Dealer* (Cleveland), 3 Sept. 1996, at B1.
- “The motion, which seeks *expungement* of his record and restoration of his privileges, said Mr. Nichols refused to stand during the counting of prisoners because he was not being furnished with whole wheat bread.” Arnold Hamilton, “Prosecutors’ Interview with FBI Scientist in Bombing Case Postponed,” *Dallas Morning News*, 13 Sept. 1996, at A28.

exquisite. A. Pronunciation. The word is better pronounced with the first syllable accented (/ek-skwi-zit/); in AmE, however, stressing the second (/ek-skwi-zit/) is acceptable.

LANGUAGE-CHANGE INDEX
exquisite pronounced /ek-skwi-zit/ rather than
 /ek-skwi-zit/: Stage 5

B. Use. Although there is historical justification for using *exquisite* (= acute) in reference to pain, modern readers are likely to find this use macabre at best, for they generally understand the word as meaning “keenly discriminating” <exquisite taste> or “especially beautiful” <an exquisite vase>. For many readers, the obsolescent sense is merely a MISCUE—e.g.: “Steve R., a sign painter, suffered such *exquisite* [read *excruciating*] pain in his ankle that he could barely walk.” Louise Continelli, “Learning to Control Chronic Pain,” *Buffalo News*, 6 Sept. 1994, Lifestyles §, at 1.

***extacy**. See **ecstasy**.

extant (= still existing) is preferably pronounced /eks-tant/, not /ek-stant/—but the latter pronunciation is at least acceptable in AmE.

extemporaneous; extempore, adj.; ***extemporary**; ***extemporal**. The first is the usual form in AmE, the second in BrE (closing up, in English, the Latin phrase *ex tempore*). The others are NEEDLESS VARIANTS.

extemporaneously; extempore, adv. In AmE, the latter is the Latin-lover’s (or Anglophile’s) NEEDLESS VARIANT of the former. Like the adjective, the adverb *extempore* is usual in BrE.

extempore, adj.; ***extemporary**. See **extemporaneous**.

extemporize. See **temporize (B)**.

extendable; extendible; extensible. Though dictionaries are split between *extendable* and *extendible*, the -able spelling is much more natural-looking and much more common. It ought to be preferred. *Extensible*, surprisingly enough, has been the most common of these three adjectives since about 1800. It is especially common in metaphorical uses <extensible markup> and technical ones <extensible membranes>. See -ABLE (A).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

extension. So spelled—not **extention*. For a similar misspelling (**dissention* for *dissension*), see **dissent**, n.

Current ratio (*extension* vs. **extention*): 997:1

extenuate (= to lessen the seriousness of [something bad] by partial excuse) should be used only of the fault that is minimized, not of the person who committed it. The *OED* cites improper uses (so labeled) such as “The pursuer’s steward . . . *extenuated* himself calmly enough,” in which the word is used as if it meant “to extenuate the guilt of; to plead partial excuses for” (*OED*).

extenuating circumstance (= a fact or situation that makes one’s actions seem more understandable and less blameworthy) is sometimes confused with *attenuating circumstance* (= an intervening event, including the passage of time, that weakens the connection between two other events). Both are usually legal phrases.

The first phrase is far more common than the second. In American legal contexts, an *extenuating circumstance* may reduce the severity of punishment. By extension, it denotes any situation that ameliorates some negative outcome that one expects or fears—e.g.: “Citing *extenuating circumstances*, officials said two players who do not technically meet Little League requirements as Harlem residents can play anyway.” Stephanie Saul & Joshua Robin, “Harlem Squad Gets OK to Play,” *Chicago Trib.*, 16 Aug. 2002, Sports §, at 1.

In European courts, *attenuating circumstance* is used in the same sense that *extenuating circumstance* is used in U.S. courts—e.g.: “According to precedents from the Nuremberg war crimes trial, a defense of following orders from higher authorities can be considered an *attenuating circumstance* for crimes committed in wartime.” Edward Cody, “French Court Asked to Sentence ‘Torturer’ Barbie to Life in Prison,” *Wash. Post*, 1 July 1987, at C1.

But in U.S. law, *attenuating circumstance* is used only when the prosecution is trying to get evidence admitted despite its connection with “tainted” evidence—material obtained by unconstitutional means. If the connection is direct, the second piece of evidence is suppressed. But if the connection is *attenuated* (weak or weakened), the second piece of evidence is admissible—e.g.: “In this case there were no *attenuating circumstances* to cure the lingering infirmity of the warrantless residential arrest.” “Police Version of Events Disbelieved; Arrest in Home Is Deemed Unlawful,” *N.Y.L.J.*, 28 May 1996, at 25.

Because the terms sound similar, writers occasionally use *attenuating* where *extenuating* is the intended word. And here the problem seems even worse, *attenuating* being misused for *aggravating*: “The *attenuating* [read *aggravating*] *circumstances* that contributed to this staggering number of executions don’t help soften the shocking fact that we’re tops in our country and that we surpass, on a per capita basis, two nations that are notorious for their

disregard for human life.” Raoul Carubelli, “Notorious Number,” *Daily Oklahoman*, 2 Jan. 2002, at A6. See **DOUBLE BOBBLES**.

LANGUAGE-CHANGE INDEX

attenuate misused for *aggravate*: Stage 1

external. See **extraneous**.

extinguishment; extinction. Both words are nouns corresponding to the verb *extinguish*. *Extinguishment* usually refers to the process <extinguishment of the fire> and *extinction* to the resultant state <extinction of a species>. In financial contexts, it is common to refer to the *extinguishment of debt*.

extol (= to praise highly) is so spelled—e.g.: “Now [Justin] Raimondo runs a Web site called antiwar.com, in which he *extols* the good old days of the America First Movement.” Ronald Radosh, “The Red and the Brown,” *Boston Globe*, 13 Oct. 2002, at D1. The word is sometimes misspelled **extoll*. Cf. **dispel**, **excel** & **expel**.

Occasionally the word is misused as if to mean “condemn highly”—e.g.:

- “Unfortunately, the American Academy of Pediatrics (AAP) is publishing a new book in December, *Guide to Your Child’s Sleep*, that *extols* [read *warns about*] the dangers of the family bed. Fortunately, I know better, but I grieve for the new parents who will be sorely confused by this nonsense.” Peggy O’Mara, “It’s None of Their Business,” *Mothering*, 1 Nov. 1999, at 6.
- “The lyric *extols* [read *decries*] some of the evils in the world, but [Scott] Krippayne adds that what he thinks probably grieves God most is if we ‘grow numb to injustice.’” Deborah Evans Price, “Higher Ground,” *Billboard*, 19 May 2001, at 51.
- “She says hello to everyone she passes, *extols* [read *condemns*] the evils of development to those who will listen and marvels over the great blue herons and egrets as if she’s seeing them for the first time.” Kimi Yoshino, “Victory Lap of Sorts for Supporters of Bolsa Chica Wetlands Restoration,” *L.A. Times*, 19 Nov. 2001, Cal. §, pt. 2, at 4.

The word is pronounced /ik-**stohl**/.

LANGUAGE-CHANGE INDEX

extol misused for *condemn* or *decry*: Stage 1

***extorsive.** See **extortionate**.

***extorter.** See **extortionist**.

extortion; bribery. These terms are sometimes confounded. *Extortion* = (1) the corrupt obtaining of something of value by illegal means, such as force or coercion; or (2) the offense committed by a public official who illegally obtains something of value by using his or her office. *Bribery* = the giving or promising of something of value to an officer in return for corrupt behavior. If the briber takes the initiative, it is bribery; if the bribee takes the initiative, it is extortion.

extortionate; *extortionary; *extortive; *extorsive. *Extortionate* (= [1] given to or characterized by extortion; or [2] [of prices] exorbitant) has been the

standard term since the late 18th century. The others are NEEDLESS VARIANTS. E.g.:

- “Phanor Arizabaleta, considered No. 5 in the [Cali] syndicate, was convicted and sentenced for *extorsive* [read *extortionate*] kidnapping Tuesday by a regional judge in Cali, the chief prosecutor’s office said.” “Datelines,” *Deseret News* (Salt Lake City), 16 Apr. 1997, at A4.
- “The alleged misconduct includes mismanagement of funds, *extortive* [read *extortionate*] conduct and abuse of power.” Richard Marosi, “Police Officer Files Whistle-Blower Lawsuit Against the LAPD,” *L.A. Times*, 9 Oct. 2002 (Home ed.), Cal. Metro §, pt. 2, at 3.
- “But last Saturday, the first day the museum was open to the public, attendees paid an *extortory* [read *extortionate*] fee for an experience that, for many, was probably not all that different from their first sexual encounter—lots of buildup, and just like that, it’s over.” Kevin Canfield, “That Empty Feeling After New York’s MoSex,” *Hartford Courant*, 10 Oct. 2002, at D1.

Current ratio (in order of headwords): 718:22:14:1

extortionist; *extortioner; *extorter. From 1750 until the 1960s, **extortioner* was standard and held the field. In 1968, *extortionist* surpassed it in AmE (in frequency of use in print sources, that is), and in 1990 the same thing happened in BrE. *Extortionist* is now standard. The others await their ransoms.

Current ratio (in order of headwords): 19:12:1

EXTRA- (= lying outside the province or scope of) is a prefix that, during the 20th century, has formed hundreds of new adjectives—mostly for learned or literary purposes. The prefix has been adopted by many writers to form NEOLOGISMS not yet found in unabridged dictionaries. These writers usually do no harm and, in fact, occasionally coin useful words. Following are four representative examples of 20th-century neologisms using this prefix—which, by the way, usually takes no hyphen:

- “This means that he studies telepathy, clairvoyance and other *extrasensory* phenomena, although, he explains, ‘I don’t have any parapsychological powers.’” Lynne Ames, “About Westchester,” *N.Y. Times*, 4 Apr. 1982, § 11, at 2.
- “In a 1966 HBR article, Felix Kaufman implored general managers to think beyond their own organizational boundaries to the possibilities of *extracorporate* systems.” James I. Cash Jr. & Benn R. Konsynski, “IS Redraws Competitive Boundaries,” *Harv. Bus. Rev.*, Mar.–Apr. 1985, at 134.
- “And ‘Surfiction,’ in *Fever*, fashions a collage from a professor’s *extratextual* meanderings and a post-structuralist dissection of a work by Charles Chestnut.” Sven Birkets, Book Rev., *New Republic*, 13 July 1992, at 42.
- “Someday, some enterprising historian will have to do an investigation into the *extramusical* reasons that we were sold a bill of goods on a small group of then-young players around Isaac Stern—Zubin Mehta, Daniel Barenboim, Pinchas Zukerman and so on—and were somehow convinced they were the best and the brightest.” Tim Page, “Mostly Mozart Is Its Own Best Argument,” *Newsday* (N.Y.), 5 Aug. 1994, at B17.

extract. See **extricate**.

extradite = (1) to surrender or deliver (a fugitive) to another jurisdiction; or (2) to obtain the surrender of (a fugitive) from another jurisdiction (*Black’s Law Dictionary* 704 [10th ed. 2014]). Embarrassingly enough, the word is often wrongly thought to be related to *indict*. In fact, though, the roots are entirely different: *extradite* derives from L. *ex-* “from” and *traditio* “the act of handing over,” whereas *indict* derives from the Anglo-French *enditer* “to write down.” See **indict**.

But instances of the mistaken **extradict* and **extradiction* are legion—e.g.:

- “Prosecutors argued that . . . he had jumped bail after a 1984 Federal mail-fraud conviction and disappeared for nine years until being found and *extradicted* [read *extradited*] from Europe last year. . . . She said he lived in Africa and Europe until being found in Amsterdam and *extradicted* [read *extradited*] to the United States in February 1993.” Robert D. McFadden, “Big Spender Is Charged with Fraud on Welfare,” *N.Y. Times*, 7 Oct. 1994, at B1.
- “He was *extradicted* [read *extradited*] from Ohio in May 1995 after being sentenced to death for the stomping and beating death of an elderly Toledo man.” Carol Demare, “Defendant Tells Jury He’s Already on Death Row,” *Times Union* (Albany), 27 Sept. 1996, at B4.
- “EU arrest warrants, introduced in 2004, have been used with increasing regularity in a variety of cases and allow for quick *extradition* [read *extradition*] of suspects to their home countries.” Toby Helm & Jamie Doward, “Megan Case Sparks Row as Police Warn Cameron on Europe-Wide Crime Fight,” *Observer*, 30 Sept. 2012, Home News §, at 3.

LANGUAGE-CHANGE INDEX

**extradict* for *extradite*: Stage 1

Current ratio (*extradited* vs. **extradicted*): 225:1

extraneous; extrinsic; external. These words are closely related. *Extraneous* = (1) not essential or inherent <she used her discretion in adding some extraneous ingredients>; (2) not relevant <he talked at length about extraneous issues>; or (3) coming from outside <extraneous matter>.

Extrinsic, which shares senses 1 and 3 of *extraneous*, primarily means “not inherent”; it is the usual antonym of *intrinsic* (= belonging to the essential nature of something). E.g.: “[In] American culture, in [de Tocqueville’s] view, . . . artistic standards would be determined not by the *intrinsic* quality of the art but by the *extrinsic* size of the audience.” Robert Brustein, “The Decline of High Culture,” *New Republic*, 3 Nov. 1997, at 29.

External means simply “outer, exterior.” It’s the usual antonym of *internal*—e.g.: “Just as controversy embroiled its birth, the state of Israel is again racked by *internal* divisions and *external* dilemmas with its 50th anniversary fast approaching.” Storer H. Rowley, “Anniversary Prompts Soul-Searching,” *Chicago Trib.*, 29 Nov. 1997, at 4.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

extraordinary is preferably pronounced with five syllables (/ek-**stror**-di-ner-ee/), not six (/ek-strə-**or**-diner-ee/). See PRONUNCIATION (B).

extreme unction. See **last rites**.

extricate; extract. One *extracts* (= draws forth) something from a person or a thing. One *extricates* (= removes) a person (or, rarely, a thing) from a tangled encumbrance or situation.

extrinsic. See **extraneous**.

extrovert (= one whose interests are outwardly directed for the most part, often tending toward social activities) is now accepted as the standard spelling. **Extravert*, though modeled directly on the German loanword, has been nothing but a variant in English since the mid-1920s.

This is unfortunate in a way, because *extrovert* is a MORPHOLOGICAL DEFORMITY, the *-o-* having come from a misguided attempt at paralleling *introvert*. (See **introvert**.) The Latin prefixes are *intro-* and *extra-*. But it's now too late: the forms are set in English.

exuberant. A. And exorbitant. *Exuberant* = (1) having extremely high spirits; gushingly enthusiastic; or (2) flamboyant; overelaborate. *Exorbitant* = exceeding a reasonable or appropriate amount. Although some dictionaries record an extra sense for *exuberant* (also “extreme” or “very great”), when the adjective refers to a monetary amount the correct word is *exorbitant*—e.g.:

- “Navarro . . . warns that some less-experienced Santeros have lost sight of the religion’s significance and placed more emphasis on charging *exuberant* [read *exorbitant*] fees for their services.” Ralph R. Ortega, “Followers Seek Respect for Santeria,” *Asbury Park Press* (Neptune, N.J.), 20 Apr. 1997, at AA1.
- “Empty stands translate to fans saying we are not going to pay *exuberant* [read *exorbitant*] prices to watch whiny high-priced, watered-down talent.” Gregg Ebbert, “Empty Seats Tell Story of Baseball,” *Morning Call* (Allentown, Pa.), 8 May 1997, at B4.
- “Originally designed by Bernard Lipfert for the Ideal Novelty and Toy Company, these rare composition dolls command an *exuberant* [read *exorbitant*] price on the secondary market.” Denise I. O’Neal, “Youthful Indulgences,” *Chicago Sun-Times*, 16 May 1997, Weekend §, at 3.

B. Misspelled. *Exuberant* is fairly commonly misspelled **exhuberant*—e.g.:

- “The little Church of the Resurrection on the Catherine Canal, with its nine domes and its enamels, mosaics, and gilding in the *exhuberant* [read *exuberant*] Russian seventeenth-century style, strikes one as a curiosity imported from abroad.” Clarence Brown, *Mandelstam* 10 (1973).
- “Unlike Washington Park’s garden on the Downing Street side, famed for its large flower beds and *exhuberant* [read *exuberant*] colors, this garden is meant to be a place of tranquility and serenity.” Joanne Ditmer, “Garden Will Honor Public Parks Donors,” *Denver Post*, 5 Oct. 1996, at E1.

LANGUAGE-CHANGE INDEX
exuberant misspelled **exhuberant*: Stage 1
Current ratio: 449:1

exult makes the noun *exultation*. But there are two NEEDLESS VARIANTS: **exultance* and **exultancy*. E.g.:

- “There is a quality of complete technical proficiency, every movement controlled and finished, and an *exultance* [read *exultation*] in dance for its own sake—even before it is harnessed to the service of choreography.” Mary Clarke, “The Gift of Graft,” *Guardian*, 3 Mar. 1994, Features §, at 7.
- “There is no place like it, no place with an atom of its glory, pride, and *exultancy* [read *exultation*].” Alexander Wolff, “Last Spring, the Newly Unretired Michael Jordan Lit Up Manhattan,” *Sports Illustrated*, 13 Nov. 1995, at 108.

For the difference between *exult* and *exalt*, see **exalt**.

eyeing; *eying. The first is the preferred spelling.

eye of the storm. This allusion refers to the center of a tropical storm, which is remarkable for its calm winds and blue skies. Writers usually employ the phrase accurately to denote serenity in the midst of chaos—e.g.: “In *Eye of Storm*, [Tony] Dungy Calmly Sails to Victory.” Headline, *Baltimore Sun*, 5 Feb. 2007, Sports §, at D1.

But often, the sense is just the opposite, denoting a state of chaos at the center of a raging controversy—e.g.: “Fast forward to the 2000 presidential election, with Harris in the *eye of the storm* [read *center of the controversy*—vilified as a witch, praised as a hero, both of which were undeserved.” Thomas Tryon, “Katherine Harris’ Own Party Had a Key Role in Her Swift Descent,” *Sarasota Herald-Trib.*, 12 Nov. 2006, at F1.

LANGUAGE-CHANGE INDEX
eye of the storm misused to mean “center of controversy”: Stage 1

eyes peeled. The phrase is so spelled, though some erroneously make it **eyes pealed*—e.g.:

- “The mug can be lifted to the mouth, a necessity during the Super Bowl, when all eyes are *pealed* [read *peeled* or, better yet, *fixed*] on the television and not watching where soup may be dripping.” Jo Northrop, “Filling Mugs with Meals,” *Wash. Post*, 26 Jan. 1983, at E10. (*Fixed* is the better choice because the CLICHÉ [*eyes peeled*] means “watchful,” not “focused.”)
- “Fans should keep their eyes *pealed* [read *peeled*] for a sneaky glimpse of an American billionaire disguised beneath a Stetson.” Mat Kendrick, “Five Ways to Beat the Finalday Monotony,” *Birmingham Mail* (U.K.), 9 May 2015, Sport §, at 78.
- “They will keep your eyes *pealed* [read *peeled* or, better, *glued*] to the sky as they perform their formation flying routine.” “Radio Control Flying Circus to Land at Butler County Airport,” *Cincinnati Enquirer*, 2 July 2015, at S6.

LANGUAGE-CHANGE INDEX
**eyes pealed* for *eyes peeled*: Stage 1
Current ratio (*eyes peeled* vs. **eyes pealed*): 72:1

eyewitness is spelled as one word, not two. Avoid **eyeball witness*—e.g.: “*Eyeball witnesses* [read *Eye-witnesses*] can estimate the speed of a car in an accident or the value of the family home or other owned real estate. For the most part, however, the law confines people to testimony about what they actually

saw or heard.” Martin Paskind, “Courts Get New Rules on Expert Testimony,” *Albuquerque J.*, 19 Jan. 1998, at 10.

Sometimes, of course, the folksy phrase can be humorous—e.g.: “A number of readers wrote to assure me that horned toads when threatened can indeed shoot blood from their eyes. The trick was seen by *eyeball witnesses*—early Spanish explorers to modern scientists.” Kent Biffle, “Hunting the Toad?” *Dallas Morning News*, 29 Apr. 2001, Texas & SW §, at A45.

LANGUAGE-CHANGE INDEX
 **eyeball witness* for *eyewitness*: Stage 1
 Current ratio (*eyewitness* vs.
 **eyeball witness*): 4,009:1

eyrie (= [1] the nest of a predatory bird, esp. one built on a crag or precipice, [2] the brood within such a nest, or [3] by extension, a human habitation, whether hovel or fortress, in a high place) has long been the

standard spelling in all varieties of English. In the 18th century, the spelling was **aery*, or sometimes **eyry*. In the 19th and 20th centuries, *aerie* became fairly common, especially in AmE. Although *eyrie* has predominated almost universally since about 1850 in English-language print sources, American lexicographers have tended to list the main headword at *aerie*. But so does the OED, which notes that “the spelling *eyrie* seems to have been introduced by [Henry] Spelman” in a glossary of 1664 “to support his notion of its derivation from egg.” Yet because no etymology for this word is certain—*W11* suggests a relation to the Vulgar Latin *agrum* “nest”—the lexicographers have avoided the *eyrie* spelling. As the OED remarks under E, this is “now the commonest spelling.” Regardless of the spelling, the word is pronounced either /*air-ee*/ or /*eer-ee*/.

Current ratio (*eyrie* vs. *aerie* vs. **aery* vs. **eyry*): 10:5:3:1

F

façade is pronounced /*fə-sahd*/. Today the cedilla beneath the -c- (*façade*) is usually dropped. See DIA-CRITICAL MARKS.

facet, vb., makes *faceted* and *faceting* in AmE and BrE alike. *Facetted* and *facetting* are secondary variants. See SPELLING (B).

face up to. See PHRASAL VERBS.

facile /*fas-əl*/. Always meaning “easy” in one sense or another, this word may connote either proficiency or shallowness. The writer must achieve clarity through context. Sometimes the word connotes the ease that comes with artistic mastery—e.g.: “Nicolai Dobrev played the jester, a noble baritone with a *facile* instrument.” Keith Powers, “Teatro Lirico Shines in Performance of Dark Verdi Comedy,” *Boston Herald*, 30 Mar. 2002, Arts & Life §, at 26. More often, it connotes triteness or oversimplification—e.g.: “But most mental health experts say closure is no holy grail, only rendered so by people seeking *facile* solutions to complex problems.” Samar Farah, “Lots of People Are Looking for It. But What Exactly Do They Hope to Find?” *Christian Science Monitor*, 28 Mar. 2002, Features §, at 13.

facilitate (= to aid, help, ease) is a FORMAL WORD to be used sparingly because it is often jargonistic. So is the agent noun *facilitator* (= helper; teacher; seminar leader), as the telltale quotation marks in the following examples suggest:

- “Everett Clark, chairman of the Education 2000 Task Force, mentioned the meeting after a presentation to council members from the group’s new *‘facilitator’*,”

Andrea Tannenbaum. The council hired Tannenbaum for \$10,000 through the end of the year to guide the task force.” Elizabeth Hall, “Citizen Task Force, School Board Plan Talks in Bloomfield,” *Hartford Courant*, 29 Oct. 1996, at B1.

- “Poking fun at a system that calls teachers *‘facilitators’* and uses the euphemism ‘extensions’ for homework is just too easy.” Mark Pino, “Celebration’s a Spot for Fun in a Fish-bowl,” *Orlando Sentinel*, 20 Dec. 1996, Osceola §, at 1.
- “The seminar’s two *‘facilitators’*—doctors who are present only to nudge the deliberations in certain directions—ease the students through the various options, trying to get them to understand that it is not enough for a doctor to simply diagnose DKA caused by patient noncompliance.” Jim Atkinson, “So Much to Learn, So Little Time,” *Texas Monthly*, Jan. 1997, at 118.

As H.W. Fowler and others have noted, it’s better to write that an *action* rather than the *actor* is facilitated (*FMEU1* at 164). Hence *The return of refugees must be facilitated by the international community*, not **Refugees must be facilitated in their return by the international community*. Of course, using active voice facilitates framing a better sentence: *The international community must facilitate the return of refugees*. See PASSIVE VOICE.

facilitator. See VOGUE WORDS.

facility. This word is surplusage in phrases such as *jail facility* and *museum facility*—e.g.: “Airports that aren’t well-served by airline clubs or that don’t have major *hotel facilities* [read *hotels*] nearby will put in conference rooms of their own, he predicted.” Carol Smith, “Companies Meet Each Other at the Airport,”

L.A. Times, 20 July 1995, at D5. And sometimes the word is a EUPHEMISM for *building*—e.g.: “The Fort Lauderdale development firm that bought the rest of the mall complex 16 months ago—including the main mall *facility* [read *building*], a nearby strip shopping center and the former Sam’s Wholesale Club building—is studying redevelopment plans.” Catherine Crownover, “‘Demalling’ for Economic Survival,” *Fla. Times-Union*, 28 Oct. 1996, at 10. On the variation between *facility* and *building* in that sentence, see INELEGANT VARIATION.

Not only is *facility* often unnecessary; it has also become virtually meaningless. The word is so abstract that it refers to just about anything, from an Olympic village to a toilet.

facsimile transmission. See **fax**.

fact, adj. See **factual**.

fact, n. **A. Fact of the matter.** This FLOTSAM PHRASE occasionally serves well in speech—to fill up space while the speaker thinks of what to say next—but generally has no justification in writing.

Current ratio (*fact is that* vs. **fact of the matter is that*): 8:1

B. Fact that. It is imprudent to say, as some have, that this phrase should never be used. At times it cannot reasonably be avoided <they ignored the fact that all the elections had been against them>. One writer has suggested that *because* will usually suffice for *the fact that*. Vigilans [Eric Partridge], *Chamber of Horrors* 63 (1952). Yet rarely, if ever, is *because* a good substitute for that phrase (as opposed to the longer phrase *because of the fact that*)—e.g.: “*The fact that* singer-songwriters like Sarah McLachlan and Jewel have managed to break through the homogenized slop that record companies are distributing does not mean that music or women have been liberated.” Letter of Elizabeth Van Rij, “The Gals Take Over,” *Time*, 11 Aug. 1997, at 5.

When *the fact that* can easily be avoided, it should be—e.g.: “Aniston, who still admits a yen for Big Macs and mayo-on-white-bread sandwiches, objects to *the fact that* [read *the way*] ‘Hollywood puts pressure on women to be thin.’” Samantha Miller & Craig Tomashoff, “Jennifer’s Prime Time,” *People*, 11 Aug. 1997, at 98. (See FLOTSAM PHRASES.) But sometimes it’s all but inescapable—e.g.: “He has learned to laugh again at little ironies, such as *the fact that* he, unlike several of his rescuers, did not get poison ivy that day.” Don Colburn, “Robert Griffith Lost One Leg in a Construction Accident on August 17th,” *Wash. Post*, 23 Sept. 1997, at Z12.

C. In actual fact. Apart from being a moderate pomposity for *actually*, this phrase is a REDUNDANCY: all facts are actual, just as they are all true (see (E)). When one is uncertain of the truth of allegations, then there might be “alleged facts,” as opposed to “actual facts.” Aside from that situation, though, shun the phrase in formal prose. Teall’s 1940 ruling still holds:

“Open to challenge in writing supposed to be done with skill and deliberation, the expression [*in actual fact*] is entirely pardonable in ordinary conversation or in familiar writing. It is used to emphasize the reality of the stated fact. The word ‘fact’ has become very weak.” Edward N. Teall, *Putting Words to Work* 277 (1940).

D. In point of fact. This phrase is verbose for *in fact* or *actually*—e.g.: “*In point of fact* [read *In fact*], as Michael Waller notes on today’s Op-ed page, Russian Prime Minister Victor Chernomyrdin specifically warned Vice President Gore in a letter against rushing the process with other countries before ratification by the two most important signatories, Russia and the United States.” “Don’t Rush the Chemical Weapons Treaty,” *Wash. Times*, 4 Mar. 1997, at A20.

E. *True facts. This is a common REDUNDANCY, especially in legal writing—e.g.:

- “Two Sandwich teachers accused of showing a sexually explicit foreign film to a class of seventh-graders say they have done nothing wrong and are being fired from their jobs without the *true facts* [read *facts* or *truth*] of the incident being revealed.” Tom Farmer, “2 Teachers Who Showed Racy Movie Crying Foul,” *Boston Herald*, 20 Nov. 1997, at 18.
- “But it’s a *true fact* [read *fact*] that my maternal grandmother was sent to her grave by the egg salad at a Methodist church picnic.” C.W. Gusewelle, “Don’t Try to Snuff Out Stuffing,” *Kansas City Star*, 25 Nov. 1997, at B2.
- “Has he forgotten that Japanese schoolchildren are still not being taught the *true facts* [read *truth*] of what happened in the Far East during that dreadful period in history?” Campbell Thomson, “Japan Must Stop the Airbrushing of History If Progress Is to Be Made,” *Herald* (Glasgow), 7 July 2015, at 15.

Writers debase the word when they qualify *facts* with an adjective like *true* or *incorrect*. We ought to be able to rely on the facts being facts, instead of having to wonder whether the writer failed to describe what kind of facts they are. Cf. (c) above.

LANGUAGE-CHANGE INDEX

**true facts for facts*: Stage 2

Current ratio (*the facts* vs. **the true facts*): 136:1

factional; factious; fractious. These words are confusingly similar. *Factional* = of, relating to, or involving a faction or factions. E.g.: “*Factional* fighting has dragged the people of Somalia’s capital back to the darkest days of the civil war in 1992.” Greg Barrow, “300 Killed in Somalia’s Week of War,” *Guardian*, 20 Dec. 1996, at 12. *Factious* = given to faction; acting for partisan purposes. E.g.: “Louisiana Democrats are *factious* as well. Their division is largely along racial lines.” Jack Wardlaw, “GOP Renewal,” *Times-Picayune* (New Orleans), 18 Aug. 1996, at B7. *Fractious* = refractory, unruly, fretful, peevish. E.g.: “Perhaps . . . [Jewish and Christian] cultures and traditions are not really that far apart. After all, we all get frayed and *fractious* at Christmas.” “Let Children Sing Carols and Light the Menorah,” *Independent*, 20 Dec. 1996, at 17.

factitious; fictitious. Both have the basic sense “artificial.” *Factitious* = (1) produced artificially by human

intervention; not natural; or (2) produced by contrivance; sham. Sense 1 tends to be confined to technical contexts—e.g.: “*Factitious* panniculitis, caused by self-injury, constitutes a real prospect when the patient appears to have undue secondary gain from the ailment.” Henry Schneiderman, “Young Woman with Spots on Shins,” *Consultant*, July 1996, at 1501. Sense 2 appears in nonspecialized writing—e.g.: “At first I thought the comment was *factitious*, but the anger and emotion on his face indicated otherwise.” Jim Monaghan, “Last Man Standing’ Campaign Tactic Is Killing Colorado Politics,” *Denver Post*, 2 Nov. 1996, at B7.

Fictitious = imaginary; not real. For the difference between *fictitious* and its two close allies, *fictional* and *fictive*, see **fictional**.

factitious disorder. For this phrase as a euphemism for *malingering*, see **EUPHEMISMS**.

factlet. See **factoid (B)**.

fact of the matter. See **fact (A)**.

factoid. A. Contradictory Senses. *Factoid* = (1) an assertion that, although widely accepted as factual, is not or may not be true; or (2) an isolated, usu. surprising fact; an interesting bit of trivia. Sense 1 dates from the early 1970s. A decade later, sense 2 arose with the launch of *USA Today*. Some people object to this sense because the *-oid* suffix generally denotes a resemblance to something but not the thing itself (e.g., a humanoid isn’t human; an asteroid isn’t a star; an ovoid is shaped like—but isn’t—an egg; etc.).

Norman Mailer seems to have coined the term in his 1973 biography *Marilyn* to mean “a fact that has no existence before appearing in a magazine, newspaper, or other mass-media outlet.” It was this original sense that the speaker here quoted had in mind: “Washington at the moment is full of *factoids*, unsubstantiated statements repeated often enough that they take on the color of facts,” said Malcolm Wallop, a Wyoming Republican.” Susan F. Rasky, “Decision on Tower as Elusive as Facts,” *N.Y. Times*, 13 Feb. 1989, at B6.

But in the early 1980s the term was appropriated by *USA Today* for the kind of easy-to-digest news element that is the hallmark of that paper and later media such as *CNN Headline News*. The transformation in the public’s perception of the word *factoid* was almost instantaneous, as this quotation—made a week after *USA Today* began publishing—attests:

To read *USA Today* is to subject oneself to information overload. In charts, boxes, graphs, lists, roundups, maps, it subjects the reader to a bombardment of facts. That most of them are of absolutely no moment is not the point; *USA Today* understands that Americans love information, statistics, trivia—that they mistake data for knowledge, gossip for news—and it offers all in abundance. Reading it

is a numbing, exhausting experience, so relentless is the onslaught of *factoids*.

Jonathan Yardley, “A Paper for a U.S.A. on the Go,” *Wash Post.*, 20 Sept. 1982, at C1.

Today sense 2 is nearly universal and must be accepted as standard—e.g.:

- “It’s filled with interesting *factoids*: ‘Beadin’ a Path to Buffalo’ is covered with 75,000 glass beads; the ‘Penny for Your Thoughts’ used 20,300 pennies; and ‘Chia Buffalo’ drinks more water than a live buffalo ever would.” Paula Voell, “Just Buffalo,” *Buffalo News*, 21 Nov. 2000, at D1 (referring to various works of art).
- “*Factoid*: The number of tourists visiting metro Orlando rose 31 percent during the past five years.” Richard Verrier, “Orlando Folks Run Nebraska Museum,” *Orlando Sentinel*, 11 Dec. 2000, at 8.
- “*Factoid*: One part per million equates to one second in 11 1/2 days. One part per billion equates to one second in 32 years. And one part per trillion is the same as one second in 32,000 years.” *San Diego Union-Trib.*, 13 Dec. 2000, at F2.

LANGUAGE-CHANGE INDEX

factoid in reference to an interesting fact: Stage 5

B. And factlet. The loss of *factoid* in sense 1 is unfortunate in another way, too: there is already a perfectly good term for a piece of trivia—*factlet*. While it is etymologically more correct (since *-let* is a diminutive suffix), it is far rarer today than *factoid*. But it does still appear, even (as the first example shows) in the source of *factoid*’s sense 2—e.g.:

- “All assessments of Gore’s future seem to include the obligatory *factlet* that since Martin Van Buren, no sitting vice president other than George Bush has been directly elected president.” Walter Shapiro, “Gore vs. Bradley: Get Ready to Rumble,” *USA Today*, 9 June 1999, at A2.
- “The home page of the campaign’s Web site, www.whatwouldjesusdrive.org, features a portrait of a prayerful Jesus with a caption that changes each time a visitor logs on with a new *factlet* about our wasteful driving habits.” Tom Brazaitis, “Can Any Car Be Anointed a Holy Roller?” *Plain Dealer* (Cleveland), 17 Nov. 2002, at H3. (Does the visitor have to supply a *factlet* in order to log on, or does the website show a random *factlet* when the visitor logs on? See **MISCUES (B)**.)

Current ratio (*factoids* vs. *factlets*): 123:1

factor, n., traditionally means “an agent or cause that contributes to a particular result.” By **SLIPSHOD EXTENSION**, it has taken on the sense “a thing to be considered; an event or occurrence.” It’s often a symptom of verbosity—e.g.: “The index rates suppliers according to factors including [read by *their*] flexibility and their importance to the business.” John Riley, “Top Suppliers Score Low in TIF User Poll,” *Computer Weekly*, 20 May 1999.

factotum (= [1] a general servant with myriad duties, or [2] a jack-of-all-trades) forms the plural *factotums*,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

not **factota*. (See PLURALS (B).) But some writers use the Latin plural as an affectation—e.g.:

- “The presence of the *factota* [read *factotums*] of the new world order on Egyptian soil will be seen as approval . . . of Cairo’s indiscriminate war against its own Islamic extremists.” “Sharm School,” *New Republic*, 1 Apr. 1996, at 8.
- “All of [read *All*] the attempts were made by *factota* [read *factotums*] who didn’t reveal they were working on a book for Sommers.” Alex Beam, “Atlantic Piece Takes Swipe at Harvard Prof,” *Boston Globe*, 19 May 2000, at D1.

The word is pronounced /fak-**toh**-təm/.

LANGUAGE-CHANGE INDEX

**factota* for *factotums*: Stage 1

Current ratio (*factotums* vs. **factota*): 19:1

fact that. See **fact (B)**.

factual; fact, adj. In phrases such as *fact(ual) question*, the longer form is preferable. The phrase *fact question* can be slightly jarring; more important, it can mislead readers. In the following sentence, for instance, the use of *factual* would have circumvented the reader’s thinking either that *fact* is a noun or that *existence of fact* is an unhyphenated PHRASAL ADJECTIVE: “The court held that . . . the *existence of fact issues* [read *existence of factual issues*] made summary judgment inappropriate.” “Individual Rights,” *Conn. Law Trib.*, 23 Aug. 1993, at L9.

The sentences that follow illustrate the better usage:

- “The referee will hear the case, make *factual findings* and, depending on the outcome, recommend discipline.” Jim Ross, “Former Judge Faces Bar Charges,” *St. Petersburg Times*, 30 Dec. 1994, Citrus Times §, at 1.
- “High courts seldom second-guess lower courts on *factual findings*, Foley said.” Susan Essoyan & Bettina Boxall, “Gay Marriages on Hold While Ruling Is Appealed,” *L.A. Times*, 5 Dec. 1996, at A3.

Notably, *factual* has two meanings: (1) “of or involving facts” <factual issue>; and (2) “true” <a factual depiction>. Sense 1 is the one that appears in phrases such as *factual finding* and *factual question*. Sense 2 appears in phrases such as *factual account* and *factual narrative*—e.g.: “All in all, ‘The Woman Behind the Myth’ offers a good *factual* account of Evita’s life—but no great insight.” “A&E’s ‘Evita’ Combines Woman with Myth,” *Charleston Gaz.*, 19 Dec. 1996, at D8.

faecal. See **fecal**.

faerie = (1) fairyland; or (2) a fairy. Sense 1 is archaic, sense 2 unnecessary except as a fancy spelling. Because the word isn’t generally needed, the variant spelling **faery* (to be avoided) merits only the barest mention.

faint, vb.; **feint**, vb. Both verbs are pronounced /faynt/. To *faint* is to lose consciousness suddenly after experiencing a temporary decrease of blood to the brain <he faints at the sight of blood>. To *feint* is to make a movement signaling one action before taking another <the boxer feinted with his left and then struck with his right>.

fair. A. And fare. Properly an adjective or noun, *fair* is sometimes misused for the verb *fare* (= [1] to experience good or bad fortune or treatment; or [2] to happen or turn out)—e.g.:

- “While [Tim] Couch didn’t *fair* [read *fare*] too badly at Cleveland’s recent mini-camp, the most impressive rookie was running back Madre Hill.” Alex Marvez, “Enshrining Elway Will Have to Wait,” *Rocky Mountain News* (Denver), 2 May 1999, at C24.
- “Is there any surprise NASA would *fair* [read *fare*] poorly?” Dave Weldon, “Flaws in NASA Poll,” *Orlando Sentinel*, 16 Mar. 2002, at A25.
- “The Illini won six of their last eight games, defeated two NCAA Tournament teams in the process and *faired* [read *faired*] well in the Big Ten tournament.” Patricia Babcock McGraw, “Illini Softball Left Out in the Cold Again,” *Daily Herald* (Chicago), 18 May 2002, Sports §, at 1.

LANGUAGE-CHANGE INDEX

fair misused for *fare*: Stage 1

Current ratio (*faired well* vs. **faired well*): 23:1

B. Bid fair. For the past tense of this PHRASAL VERB, see **bid (A)**.

Fairbanksan; Fairbanksian. The first is standard. The second is a variant form for the noun—but it is standard as an adjective <Fairbanksian weather>. See DENIZEN LABELS.

fait accompli (= something accomplished and not now changeable), from French, makes the plural *faits accomplis*. E.g.: “But in the view of the palace, by presenting her demands as *faits accomplis*, Diana was limiting Charles’s room to bargain.” Jerry Adler & Daniel Pedersen, “Diana’s Battle Royal,” *Newsweek*, 11 Mar. 1996, at 20. See PLURALS (B).

The singular and plural forms are pronounced identically: /fayt ə-kom-**plee**/ or /fet ə-kom-**plee**/.

faker; fakir. A *faker* (/fay-kər/) is a fraud. A *fakir* (/fə-**keer**/ or /fay-kər/) is a Muslim or Hindu religious ascetic who is supported by alms. The following example misapplies *fakir* to prophets in Buddhism, Christianity, and other religions. Undoubtedly the writer was sacrificing sense to sound, intending a cynical pun: “All the time and energy humans have wasted on trying to find religious solutions to suffering, then you come along and make Buddha and Jesus and the rest of them look like the *fakirs* they were.” Ursula K. Le Guin, *The Lathe of Heaven* 126 (1971).

falcon. For many years, this word had two standard pronunciations, /fawl-kən/ and /faw-kən/. The latter is older and corresponds with the word’s Old English root, *faucon*. But the former—with the *-l-* vocalized—long dominated.

In the 1960s, the pronunciation /fal-kən/ soared to prominence, probably because the Ford Motor Company used it in all the advertising for its newly developed compact car called the Falcon. (See John Greenway, “Henry Ford and the Pronunciation of ‘Falcon,’” 35 *Am. Speech* 306, 306–07 [1960].) Since the Atlanta Falcons football team was established in

1965, those associated with that team have used the /fal/ pronunciation. And the /fawl/ version has largely fallen into disuse except by some fans of movies such as *The Maltese Falcon* and *Star Wars* (with Han Solo's *Millennium Falcon*).

***falderol**. See **folderol**.

fall through the cracks. The *cracks* in this idiom are the openings between slats, as on a boardwalk. Things can *fall through the cracks*, but nothing can fall *between* them, because that's where the slats are. Yet the idiom is often mangled into the illogical **fall between the cracks*—e.g.:

- “But Mr. Ball argued that the program reaches a segment of the population that normally *falls between* [read *through*] *the cracks*.” Sally Brady & Leslie Koren, “Jail Not Sole Option for Drunkards,” *Wash. Times*, 21 Dec. 1998, at C7.
- “King said her priority is helping students in regular classes, who she said often *fall between* [read *through*] *the cracks*.” “In Brief,” *Wash. Post*, 27 Mar. 2002, at B3.
- “You look at this picture and wonder. How could someone so squared away *fall between* [read *through*] *the cracks*?” Peter Rowe, “Police, Family Search for Answer as Man Vanishes During Routine Walk,” *San Diego Union-Trib.*, 14 July 2002, at E1.

LANGUAGE-CHANGE INDEX

**fall between the cracks* for *fall through the cracks*:

Stage 3

Current ratio (*fall through the cracks* vs.

**fall between the cracks*): 3:1

false, in a phrase such as *false statement*, is potentially ambiguous, since the word may mean either “erroneous, incorrect” or “purposely deceptive.”

On *false* as a noncomparable adjective, see ADJECTIVES (B).

FALSE COMPARISON. See ILLOGIC (B).

falsehood; falseness; falsity. *Falsehood* = (1) an untrue statement; a lie <many falsehoods were uttered during the campaign>; or (2) the act or practice of lying <truth and falsehood became difficult to distinguish>. *Falseness* = (1) the quality of being untrue <the speech carried an air of falseness>; or (2) tendency to lie; deceitfulness <falseness of character>. *Falsity* is synonymous with sense 1 of either word (although more commonly with *falseness*), but it appears too frequently to be labeled a NEEDLESS VARIANT.

fanatic; fanatical. *Fanatic* is either a noun or an adjective; *fanatical* is exclusively an adjective. For purposes of DIFFERENTIATION, it would be best to reserve *fanatic* for its noun sense. In actual usage, however, this distinction isn't always followed—e.g.:

- “The words zealot, assassin and thug all derive from historic *fanatic* [read *fanatical*] movements within, respectively, Judaism, Islam and Hinduism.” Robin Wright,

“The Extremists,” *L.A. Times*, 6 Nov. 1995, at A12. (In that sentence, *historic* should almost certainly be *historically*—that is, movements that have historically been fanatical—unless the sense is *historic movements that have been fanatical*, in which case the original is poorly worded.)

- “Frank Sinatra sang ‘New York, New York’ over the stadium speakers and the most *fanatic* [read *fanatical*] crowd on the continent sang along.” Dan Moffett, “Yankees Capture Series,” *Palm Beach Post*, 27 Oct. 1996, at A1.
- “If the people who are *fanatic* [read *fanatical*] about such things start passing laws and regulations that prevent the rest of us from pursuing our consumer preferences for less chic but also less expensive food, that's quite something else.” William Watson, “The \$2 Tomato,” *Nat'l Post* (Can.), 18 Aug. 2015, at 11.

fandango (= [1] an energetic Spanish-style dance, or [2] a foolish act) forms the plural *fandangos*—not **fandangoes*. See PLURALS (D).

Current ratio: 3:1

***fantasm**. See **phantasm**.

fantasy; *phantasy. The first has been the preferred spelling in both AmE and BrE since the late 19th century.

Current ratio: 20:1

far be it from . . . Because *from* is a preposition, and the next word in the phrase is the object of that preposition, what follows must be in the objective case—e.g.: “Oh, far be it from *we* [read *us*] mere mortals to question a good thing.” “Hello-ooo, Thanks for Giving Us Poolside,” *Peoria J. Star*, 16 Nov. 2001, at A4. See PRONOUNS (B). See also SUBJUNCTIVES.

LANGUAGE-CHANGE INDEX

**far be it from we* for *far be it from us*: Stage 1

***far distance** is a REDUNDANCY. In most contexts, each word implies the other. A more idiomatic phrasing is always available—e.g.:

- “Unlike a methadone clinic where people travel *from far distances* [read *long distances*] for heroin-addiction treatment, the community health clinics would be regular doctors' offices.” Meredith Carlson, “Clinics Will Be Tough Sell with New Britain Council,” *Hartford Courant*, 2 Dec. 1994, at B1.
- “Down on the field, he could see Tampa Bay Coach Jon Gruden snarling as always with his mouth simple to read even from such a *far distance* [read *distance*].” Les Carpenter, “In New Orleans, a Reassuring Voice,” *Wash. Post*, 25 Sept. 2006, at E11.
- “In Morocco, a goatherder gives a hunting rifle to his sons and, while practicing in the hills, one of the boys fires at a tourist bus winding down the road in the *far distance* [read *distance*].” David Ansen, “As the World Burns,” *Newsweek*, 30 Oct. 2006, at 64.

LANGUAGE-CHANGE INDEX

**far distance* for *long distance*: Stage 2

Current ratio (*long distance* vs. **far distance*): 6:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

fare. **A. As a Noun.** Because this word, in one of its senses, means “food,” the phrase **food fare* is a silly REDUNDANCY—e.g.:

- “Other *food fare* [read *fare*] includes jambalaya, oysters on the half shell, fried alligator and sausage, onion mums and Cajun pistols.” Maria Giordano, “Orange Fest Looks ‘A Peeling,’” *Times-Picayune* (New Orleans), 1 Dec. 1994, at F1.
- “It takes little effort to incorporate pears into your holiday and winter *food fare* [read *food* or *fare* or *cooking*].” Bob Longino, “A Pear for All Seasons,” *Atlanta J.-Const.*, 13 Nov. 1997, at H1.
- “Adam Leu said the original idea was to have light *food fare* [read *fare*] for those using the play area.” Jeff Barron, “More than a Restaurant,” *Lancaster Eagle-Gaz.* (Ohio), 26 July 2015, at M2.

B. As a Verb. See **fair (A)**.

LANGUAGE-CHANGE INDEX

**food fare* for *fare*: Stage 1

far-flung; far-fetched. These adjectives are, literally speaking, etymological opposites—*far-flung* literally meaning “flung (i.e., cast) a long distance” and *far-fetched* meaning “fetched (i.e., retrieved) from afar.” Of course, both terms are now used almost exclusively in their figurative senses. *Far-flung* means “wide-spread” or “remote”; *far-fetched* means “improbable” or “strained.”

Some dictionaries make *far-fetched* a single word, without the hyphen. Although that may signal the future of this term, it isn’t now the predominant form in any variety of literary English.

farrago (= a confused or jumbled mixture; hodge-podge) is pronounced /fə-**ray**-go/ or /fə-**rah**-go/ and makes either of two plurals: *farragoes*, *farragos*. Although *-oes* is the traditional plural, it has given way to *-os* in the 1950s in AmE and in the 1960s in BrE. See PLURALS (D).

Current ratio (*farragos* vs. *farragoes*): 2:1

far-reaching. One of our most overburdened adjectival phrases, this otiose METAPHOR should be used cautiously. The phrase should always be hyphenated—e.g.: “In a move with *far-reaching* significance in the battle over American military bases in Japan, the Supreme Court here ruled unanimously today that the central Government has the authority to seize private land so that it can be used by United States forces.” Nicholas D. Kristoff, “Japanese Court Rules Government Can Seize Land for U.S. Bases,” *N.Y. Times*, 29 Aug. 1996, at A17.

farther; further. Both are comparative degrees of *far*. *Further* is much more ubiquitous than *farther* in everyday speech and writing. But the two have undergone some degree of DIFFERENTIATION. In the most punctilious usage, *farther* is thought to refer only to physical distances, *further* only to figurative distances—e.g.:

- “After popping in to say hello to Sue’s dad, we walked *further* [read *farther*] up Main Street to the Maritime

Museum.” Elise Ford, “A Piece of the Rockwell,” *Wash. Post*, 14 Dec. 1994, at C9.

- “Some [people] walk no *farther* than the synagogue on the Sabbath.” Jo Sandin, “Hanukkah Is Time to Ask Questions of Identity,” *Milwaukee J. Sentinel*, 5 Dec. 1996, at 1.
- “[Chad] Johnson has taken the florid displays of flanker ego even *further*, brashly predicting victories, à la his idol Muhammad Ali, and once sending Pepto Bismol to an opposing secondary before a game.” Karl Taro Greenfeld, “It’s Good to Be Chad,” *Sports Illustrated*, 30 Oct. 2006, at 58.
- “That said, moms who’ve been *farther* [read *further*] down the road say, ‘Just wait.’ Just wait for preadolescent angst.” Paula Spencer, “What’s Your Favorite Parenting Stage?” *Parenting*, Nov. 2006, at 76.

In BrE, *further* is typically both physical and figurative, whereas *farther* is generally physical only. But some writers fail to observe the point—e.g.: “In a move [that] goes *farther* [read *further*] than anything the Conservatives have proposed, a Labour government will set up a new, independent watchdog, the General Teaching Council.” Charles Reiss & Howard Smith, “Labour Will Sack the Bad Teachers Says Blair,” *Evening Standard*, 26 July 1994, at 17.

The superlatives—*farthest* and *furthest*—follow the same patterns. *Furthermost* is a fairly rare equivalent of *farthest* (not *furthest*)—e.g.: “The National Park Service administers the monument located about 65 miles northwest of Gillette, in Wyoming’s *furthestmost* [better: *farthest*] corner of Crook County.” Christopher Smith, “Tribes Say Devils Tower Is No Name for a Pious Peak,” *Salt Lake Trib.*, 4 Sept. 1996, at A1. Sometimes it is used where it shouldn’t be—e.g.: “That was the *furthestmost* [read *furthest*] thing from [the company’s] mind.” Eli Setencich, “Co-op Is Reaping Fruits of Generosity,” *Fresno Bee*, 30 Sept. 1996, at B1.

LANGUAGE-CHANGE INDEX

1. *further* for physical distances: Stage 4

Current ratio (*traveled farther* vs. *traveled further* in AmE): 2:1

2. *farther* for figurative distances: Stage 2

Current ratio (*read further* vs. **read farther*): 19:1

fascia (/fash-ee-ə/ or /fash-ə/ or /faysh-/) = (1) a flat strip or band, such as an architectural joint covering or a piece of molding around a doorway; (2) a distinct band of color, esp. in a multicolored spectrum; or (3) a thin layer of tissue that encases or connects muscles, organs, and bones. Pl. *fascias* or *fasciae*. The plural *fasciae* (/fash-i-ee/) is much more frequent in anatomy (sense 3), *fascias* in all other senses. See PLURALS (B).

Current ratio (*fasciae* vs. *fascias*): 5:1

fasciitis. See **plantar fasciitis**.

fast. For the use of this word in opposite senses, see CONTRONYMS. For the NEEDLESS VARIANT **fastly*, see **fastly*.

fasten, like *glisten*, *listen*, and *often*, has a silent *-t-*: /fas-ən/.

**fastly*, an obsolete form, now exists only as a NON-WORD, since *fast* serves as both adverb and adjective.

Even so, writers occasionally perpetrate sentences with phrases such as **the fastly held rule* and **fastly becoming so*. In the first, *firmly* would serve better; in the second, *fast*. Journalists have gone quite far with this unnecessary adverb—e.g.:

- “The new owner said he is keeping the original building, even though it may have been less expensive to build a new one, in order to preserve one of the few remaining ties to the past in the *fastly changing* [read *fast-changing*] northwest suburbs.” Jim Michalski, “Fan Helps Keep Pizza Parlor Alive,” *Chicago Trib.*, 4 July 1989, at D2.
- “And thus, with election time *fastly* [read *fast*] approaching, it may have to pay the consequences of accepting Mao’s forecast.” James Hill, “Taiwan’s Fate Belongs to Beijing,” *Phoenix Gaz.*, 15 Mar. 1996, at B11.
- “But he doubted the Fleming Island hatchery would remain that for long, being a ‘very prime’ piece of real estate, he said, in a *fastly developing* [read *fast-developing*] area.” Christopher Calnan & Gregory Richards, “1,000 Tyson, Humana Jobs Cut,” *Fla. Times-Union*, 6 Dec. 2002, at A1.

Two of these examples involve PHRASAL ADJECTIVES—*fast-changing* and *fast-expanding*—but there is no more need for the *-ly* adverb in those phrases than anywhere else. For other adverbs with a superfluous *-ly*, see ADVERBS (C).

LANGUAGE-CHANGE INDEX

**fastly for fast*: Stage 1

Current ratio (*is fast becoming* vs.

**is fastly becoming*): 859:1

fatal; fateful. Though both are etymologically tied to the noun *fate*, they have undergone DIFFERENTIATION. *Fatal* means “of, relating to, or involving death,” while *fateful* means “producing grave consequences.” The most common mistake is to use *fatal* for *fateful*, but sometimes one would be presumptuous to suggest any change, so close is the call: “Like Henry Kissinger and other modern scholars, Mr. Gelb considers the *fatal* turning point not Munich in 1938, but the failure by France and Britain to oppose German reoccupation of the Rhineland in 1936.” John Lehman, “The ‘Heroic’ Retreat Was Really a Rout,” *Wall Street J.*, 9 Oct. 1989, at A6.

But most times when no immediate death results, *fateful* is the better choice—e.g.:

- “McCarron made a *fatal* [read *fateful*] decision to try and putt out. His ball caught a tuft of kikuya and trickled to 8 feet above the hole—a brutal turn of events.” Brian Murphy, “McCarron’s Loss Mattiace’s Gain,” *S.F. Chron.*, 18 Feb. 2002, at C2 (losing a golf tournament may be brutal, but it’s not the end of the world). (For more on *try and* in this quotation, see **try and**.)
- “To some Republicans, any tax increase would be a *fatal* [read *fateful*] decision for Democrats—a sin so great that voters would rush to McCallum, elect him by a wide margin and send Republican majorities to the Legislature.” Matt Pommer, “A Cigarette Tax Hike Wouldn’t Hurt Dems,” *Capital Times* (Madison), 18 Mar. 2002, at A3.

- “In the United States, if we deny a sports team the chance to trounce its foe absolutely and unequivocally, we call for the head of the official who makes the *fatal* [read *fateful*] decision.” Letter of William O. Beeman, *Providence J-Bull.*, 14 July 2002, at F9.

In some circumstances a writer using *fatal* must be careful not to create an absurdity—e.g.: “Monday’s bombing was the first *fatal* suicide bombing in Israel since Oct. 10, when a 71-year-old woman was killed in an attack in Tel Aviv.” Craig Nelson, “14 Perish After Suicide Bombers Turn Packed Bus into an Inferno,” *Austin Am.-Statesman*, 22 Oct. 2002, at A1. (A possible revision: *Monday’s explosion was the first suicide bombing in Israel that killed any bystander . . .*)

On *fatal* as a noncomparable adjective, see ADJECTIVES (B).

LANGUAGE-CHANGE INDEX

fatal misused for *fateful*: Stage 1

fatalism; determinism; necessitarianism. *Fatalism* = (1) the philosophical view that the future is fixed regardless of human attempts to influence it; or (2) an attitude of submitting oneself to fate. Critics of this view—in either sense—complain that “it encourages ignorance, sloth, and vice.” Thomas Mautner, *A Dictionary of Philosophy* 147 (1996).

Determinism = (1) the view that every fact in the universe is guided by the law of causation—i.e., that every effect derives from its causes; or (2) the idea that people do not exercise free will but are instead the product of their genetic, physical, and psychical conditions. In sense 2—the rarer sense—determinism is a type of fatalism. But sense 1, known also as *necessitarianism* or *causal determinism*, is distinct from *fatalism* because it “still leaves room for the possibility that human action may be causally effective in ensuring that this happens rather than that.” Antony Flew, *A Dictionary of Philosophy* 119 (2d ed. 1984). Although determinists don’t disavow free will, they deny the existence of chance: they concede merely that “our ignorance of the laws or all relevant antecedent conditions makes certain events unexpected and, therefore, apparently happen ‘by chance.’” *The Cambridge Dictionary of Philosophy* 198 (Robert Audi ed., 1995). Cf. **free will**.

fateful. See **fatal**.

Father Christmas. See **Santa Claus**.

father-in-law. Pl. *fathers-in-law*—not **father-in-laws*. See PLURALS (G).

Current ratio: 7:1

fathom (= a six-foot length [1.83 meters] for measuring depth in water) predominantly forms the regular plural *fathoms* in all varieties of World English <five fathoms deep>. Through about 1830, *fathom* predominantly formed its own plural <five fathom deep>, but this usage has sunk.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

fault, at; in fault. See **at fault**.

fauna, a singular word with a collective implication, refers to the animal life in a particular region. Hence *fauna* should take a singular verb, not a plural, and may be referred to as a *fauna*—e.g.: “At the Lascaux cave, lying to the west of this site but which had a similar *fauna* at the time, he said, the images were overwhelmingly of bison and horses, but here bears and rhinos—animals that man did not usually hunt or eat—predominated.” Marlise Simons, “Prehistoric Art Treasure Is Found in French Cave,” *N. Y. Times*, 19 Jan. 1995, at A1, A5.

The word most often appears in the phrase *flora and fauna*, roughly equivalent to “plants and animals,” but writers sometimes mistake *fauna* for the “plants” element—e.g.: “Shortly before approaching the Blue Ridge Parkway, look for a forest area filled with natural growing *fauna* [read *flora*] and fern gardens with awesome hiking trails.” Judy Ausley, “Take to the Hills, Enjoy the Ride,” *Herald* (Rock Hill, S.C.), 11 Oct. 2002, at D1. Cf. **flora**.

LANGUAGE-CHANGE INDEX
fauna misused for *flora*: Stage 1

faux pas [Fr. “false step”] is both the singular and the plural spelling. But the singular is pronounced /foh pah/ or (less good) /foh pah/, and the plural is pronounced /foh pahz/ or (less good) /foh pahz/.

favor; favour. Until the 1840s, *favour* was the standard spelling in AmE and BrE alike. During that decade, *favor* became the predominant spelling in AmE—as did *favorable* and *favorite*. BrE still favors *favour*, *favourable*, and *favourite*. See -OR; -OUR.

fax, n. & vb. This term is now all but universal, in the face of which *facsimile transmission* is an instant ARCHAISM—and a trifle pompous at that. *Fax*, which is now perfectly appropriate even in formal contexts, first appeared in the mid-1970s—e.g.: “In the past two years, *fax* installations have more than doubled from fewer than 50,000 to more than 100,000 units.” “The Office of the Future,” *BusinessWeek*, 30 June 1975, at 48. The verb dates from the mid-1980s—e.g.: “The prints are then *faxed* from the regional centers.” PJH, “Data Detectives Use a New Technique to Match Fingerprints,” *Data Communications*, Feb. 1984, at 56.

The noun plural is *faxes*.

Some writers mistakenly put the word in all capitals, as if it were an acronym. It isn’t. It’s just a clipped form with a slight change in spelling: write *fax*, not *FAX.

LANGUAGE-CHANGE INDEX
fax as n. & vb.: Stage 5

fay. See **fey**.

faze; phase. *Faze* = to disconcert; daunt. *Phase*, vb., = to carry out (a plan, program, etc.) in stages. *Phase* for *faze* is an increasingly common blunder—e.g.:

- “Maybe all Johnson really needs to do is watch how much fun Soriano is having. Nothing seems to *phase* [read *faze*]

this young Yankee.” Bill Madden, “Johnson’s Slump Stumping Yanks,” *Daily News* (N.Y.), 15 May 2002, Sports §, at 56.

- “The activist is *unphased* [read *unfazed*] by the criticism. She comes from a family of feminist revolutionaries.” Fariba Nawa, “US-Grown Feminist’s Pace of Reform Riles Afghan Women,” *Christian Science Monitor*, 31 July 2002, World §, at 7.
- “Her new horse, Emily, has never jumped in an arena like the Farm Show Complex, but Plunkett said her mare won’t be *phased* [read *fazed*] by the big crowd and bright lights.” Rebecca J. Ritzel, “Getting a Jump on the Competition,” *Intelligencer J.* (Lancaster, Pa.), 18 Oct. 2002, at B1.
- “The Bath side were *unphased* [read *unfazed*], emerging comfortable six-wicket victors after the visitors were dismissed for only 138.” “Cricket Munden and Ollis Give Brislington the Perfect Start,” *Bristol Evening Post* (U.K.), 3 Aug. 2015, at 46.

The opposite error (*faze* for *phase*) also occurs, but more rarely—e.g.: “All that while shooting guard Art Mlotkowski, shadowed all over the court by Northport senior Rob Sanicola, was *fazed* [read *phased*] out of the offense.” John Valenti, “Northport Beats Copiague,” *Newsday* (N.Y.), 26 Feb. 1995, at 13.

LANGUAGE-CHANGE INDEX
1. *phase* misused for *faze*: Stage 2
Current ratio (*didn’t faze him* vs. **didn’t phase him*): 8:1
2. *unphased* for *unfazed*: Stage 1
Current ratio (*unfazed by* vs. **unphased by*): 36:1
3. *faze* misused for *phase*: Stage 1
Current ratio (*being phased out* vs. **being fazed out*): 422:1

fearful; fearsome. In a perfect world, there would be strict DIFFERENTIATION here: *fearful* would be confined to the sense “full of fear, afraid”; *fearsome* would be reserved for “causing fear, horrible.” Alas, the world isn’t quite so perfect, and there is considerable overlap.

feasible = (1) capable of being accomplished; (2) capable of being used or handled to good effect; or (3) reasonable, likely. Sense 3 is a classic example of SLIPSHOD EXTENSION. The extended sense is ambiguous. Does someone who says that a cure for cancer is *feasible* mean that a cure can definitely be found (if we work hard enough to find it) or that a cure might one day be found (but not necessarily)?

To avoid this problem, it’s best to reserve *feasible* for senses 1 and 2. When sense 3 is the intended meaning, *possible* or *probable* is the better choice. Cf. **viable**.

The word is sometimes misspelled **feasable*. See -ABLE (A).

feature. The classic book popularly known as “Strunk & White” cautioned against using this word, citing the following example: “A *feature* of the entertainment especially worthy of mention was the singing of Miss A.” William Strunk Jr. & E.B. White, *The Elements of Style* 47 (3d ed. 1979). The authors advise: “Better use the same number of words to tell what Miss A. sang and how she sang it.” This sound advice is disparaged in *MWDEU*, which states:

This advice [in Strunk & White] seems a bit naive; it is distinctly possible that the example is a minor masterpiece of tact. If Miss A. happens to have more friends than talent, it may be better not to tell what she sang and how she sang it. We may have the same politic avoidance of judgment in this example:

A feature of the program was a panel discussion in which visitors from other institutions shared the benefits of their own, related experience—Calvin H. Plimpton, *Amherst College Bulletin*, November 1967

MWDEU at 436.

Of course, this is pure folderol. Almost any passage in need of editing can find an apologist for its original form, but Strunk and White were urging authors to sharpen their ideas. And even without sharpening, the final quotation cited in MWDEU could use a good edit—*During a panel discussion, visitors from other institutions shared the benefits of their experience*—which also trims the sentence from 23 words to 14.

February is still preferably pronounced /feb-roo-air-ee/ or, in BrE, /feb-roo-ə-ree/—preferably not /feb-yoo-air-ee/ or /feb-yə-ree/.

fecal; faecal. Meaning “of, relating to, or consisting of waste from the bowels,” the word *fecal* is so spelled in AmE, *faecal* in BrE. Before 1800, *fecal* was the universal spelling, and in AmE it has persisted. It is also a frequent variant in BrE. Since 1900 or so, World English has tended toward *fecal*.

feces (BrE **faeces**). When it comes to SUBJECT-VERB AGREEMENT, this noun can be tricky. Though plural in form and labeled plural in dictionaries, the word *feces* is often treated as a mass noun and construed with a singular verb—e.g.:

- “In each of those instances, the pool had to be closed after *feces* was found in the water.” Cory Haven, “Things May Be Looking Up for Plymouth Community Pool,” *South Bend Trib.*, 9 July 2002, at D1.
- “Mr. Gorman said studies have shown that goose *feces* contains more than 100 types of bacteria, many of which are resistant to antibiotics.” Linda Saslow, “Canada Geese: It’s Love and Hate,” *N.Y. Times*, 14 July 2002, 14L1 §, at 3.
- “Overcash chose the class over self-study because at MUSC, students also learn the slang terms their future patients will be using. ‘You can’t ask a person how their baby’s *feces* is if they don’t know the word for *feces*.’” Wevonneda Minis, “Speaking the Language,” *Post & Courier* (Charleston, S.C.), 5 Aug. 2002, at D1.

It makes some sense to equate *feces* with *excrement*.

When the stuff appears in discrete pieces, *feces* is used as a count noun and takes a plural verb. E.g.: “Before dogs were domesticated, they ate a much more varied diet, including the bones of their prey. Therefore, their *feces* were much harder and dry.” Jill Bowen, “Problem Anal Glands Need Vet Treatment,” *Roanoke Times*, 21 July 2002, at NRV18.

Some writers, however, use a plural verb for the mass-noun sense, probably on grounds that the word derives from a Latin plural (*faēces*). This usage has been somewhat more common than the singular applications from the late 18th century on, but only just. E.g.:

- “Colton said dog *feces* have [read *has*] been one of the worst sources of coliform bacteria contamination for at least two years.” Lane Lambert, “Quincy May Ban Dogs from Parks,” *Patriot Ledger* (Quincy, Mass.), 23 Apr. 1997, at 1.
- “Barnes said inspectors don’t know how long the pigeon *feces* have [read *has*] been in the water holding tank.” Justo Bautista & Michael Casey, “New Water Problems at Senior Complex,” *Record* (N.J.), 1 July 1997, at A1.
- “Gull *feces* contain [read *contains*] high concentrations of the coliform bacteria.” Tom Held, “Manitowoc Gets Federal Permit to Kill 100 Gulls,” *Milwaukee J. Sentinel*, 9 Aug. 2002, at B3.

See COUNT NOUNS AND MASS NOUNS.

federal. See **national**.

federalism. In U.S. politics, this word is a double-edged sword. It is used by proponents of a strong central government to denote a system in which the national government has broad powers to compel states to conform to policies set by Congress (e.g., the Federalist Party of the Founders), and by opponents of a strong central government to denote a system in which the states are sovereign entities free to set their own policies subject only to strict construction of the U.S. Constitution (e.g., today’s Federalist Society).

Nowadays the word is employed both by the left (e.g., in arguments against Department of Justice opposition of state laws sanctioning the medical use of marijuana) and by the right (e.g., against enforcement of statutory civil-rights actions on behalf of state employees). In polemical contexts (where it most often appears), the word has become fairly hazy and ambiguous.

federation. See **confederation**.

feed > fed > fed. So inflected. **Feeded* is a solecism—e.g.: “It was a friendly family environment that Brown needed and *feeded* [read *fed*] off.” Robin Miller, “Today, Indy Says Goodbye to One of Its Favorite Friends,” *Indianapolis Star*, 10 Mar. 1997, at C1. See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

**feeded* as a past-tense form: Stage 1

Current ratio (*fed* the vs. **feeded* the): 9,542:1

feel. A. For think. *Feel* is a weak and informal substitute for *think*, *believe*, *maintain*, or *submit*. E.g.: “We *feel* [read *believe*] that the plan should be summarized in considerable detail.” When the idea is phrased on an emotional rather than a cognitive level, the resulting sentence seems to minimize the thoughts being

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

reported—e.g.: “She *feels* [read *thinks* or *believes*] that crime prevention must start with helping small children find their way out of poverty and neglect, and that society’s resources should go toward better education and housing, not more jails.” Bob Cohn & Eleanor Clift, “The Contrary Voice of Janet Reno,” *Newsweek*, 11 Oct. 1993, at 30.

B. *Feel bad*; **feel badly*. When someone is sick or unhappy, that person feels *bad*—not *badly*. In this phrase, *feel* is a linking verb, which takes a predicate adjective instead of an adverb. In modern print sources, *feel bad* outnumbers **feel badly* by a 9-to-1 margin. Although most professional writers know this point of usage, a few get it wrong—e.g.:

- “Manager Dusty Baker’s attention was divided. He felt *badly* [read *bad*] for Dunston and was depressed over a ninth-inning rally gone sour.” Nick Peters, “Giants, Dunston Suffer a Blow,” *Sacramento Bee*, 5 Aug. 1996, at D1.
- “He says he felt *badly* [read *bad*] for Jamie Brandon.” Barry Temkin, “Ex-Mr. Basketball Makes His Past Work for His Future,” *Chicago Trib.*, 20 Dec. 1996, Sports §, at 14.
- “Several of the teens said they also felt *badly* [read *bad*] that their problems caused their parents pain.” Patricia Wen, “For Gay Teens, a Place to Call Home,” *Boston Globe*, 22 Oct. 2002, at B1.

Not to excuse these errors, but they may result from the misplaced fear that *feel bad* somehow suggests wickedness or personal evil.

But the same error crops up even with adjectives other than *bad*. Here it’s *miserable*: “Every couple of years, the American Bar Association’s monthly magazine publishes an article detailing how *miserably* [read *miserable*] many lawyers feel.” Judson Hand, “Writer Judson Hand Signs Off from Column,” *Asbury Park Press* (Neptune, N.J.), 27 Nov. 1997, at A33. See ADVERBS (D) & HYPERCORRECTION. Cf. **badly** (A).

LANGUAGE-CHANGE INDEX
**feel badly* for *feel bad*: Stage 2

Current ratio (*feel bad* vs. **feel badly*): 9:1

C. *Feel like*. To avoid using *like* as a conjunction, writers usually need to change this phrase to *feel as if*. E.g.: “But on a combined income of \$60,000, McDonald and his wife Cindy, who have five children, *feel like* [read *feel as if*] they’re just scraping by.” Marc Levinson, “Living on the Edge,” *Newsweek*, 4 Nov. 1991, at 23. See **like** (c).

On the other hand, the familiar CASUALISM expressing a preference is perfectly grammatical <I feel like pizza tonight>. The object of the preposition *like* in this example is the understood gerund *eating* (which functions as a noun), and the object of that gerund is the noun *pizza*. So the expression, while a CASUALISM, is not at all substandard.

feet. See **foot**.

feign; feint. These words, though deriving from the same French verb (*feindre* “to touch or shape”), have undergone DIFFERENTIATION in English. To *feign* is

either to make up or fabricate <she feigned an excuse> or to make a false show of <he feigned illness>. To *feint* is to deliver a pretended blow or attack designed to confuse an opponent momentarily. *Feint* is also, in its older (but still current) sense, used as a noun meaning either a sham or a pretended blow or attack (i.e., the act of *feinting*).

feint. See **faint**.

feldspar (= a crystalline mineral found in igneous rocks) has been the standard spelling since about 1890. **Felspar*, a variant, predominated for most of the 19th century, but shortly before 1900 the etymologically superior spelling—closer to the German loanword *Feldspat*—replaced it.

fellatio (= oral sex performed on a male) is pronounced /fə-**lay**-shee-oh/—not /fə-**lah**-tee-oh/.

***fellow collaborator.** See **collaborator**.

felo-de-se. See **suicide** (A).

female, adj.; feminine; woman(ly); womanlike; womanish; effeminate. These adjectives all share the sense “of, relating to, or involving women.” *Female* is a neutral term usually used to indicate the sex of a person (or an animal or plant), in contrast with *male* <a female cadet> <my female coworkers>. *Feminine* typically refers to what are traditionally considered a woman’s favorable qualities <feminine grace>. *Womanly* often carries these positive connotations as well <womanly intuition>, but it’s also used to distinguish an adult female from a girl <her womanly figure>. (*Woman* is sometimes used attributively where *female* would be more natural <a woman lawyer>.) *Womanlike* (the rarest of these words) is synonymous with *womanly*, though perhaps a bit more neutral <womanlike features>. Finally, *womanish* and *effeminate* are now almost always used in a derogatory way in referring to men who supposedly lack manly qualities <his womanish laugh> <his effeminate gestures>.

In this era of political correctness, the use of any of these terms can be offensive in certain contexts. Cf. **male**. See **SEXISM**.

FEMININE ENDINGS. See **SEXISM** (D).

FEMININE PRONOUNS USED GENERICALLY. See **SEXISM** (B).

femininity; *feminity. Both terms date from the 14th century. But *femininity*, which matches the syllables in *masculinity*, has been standard for so long that the other may rightly be considered a simple misspelling.
Current ratio: 139:1

femur (= thigh bone) makes the Latinate plural *femora* in technical writing but the normal plural *femurs* in everyday contexts. Of course, it is rare to need the plural in everyday contexts. See **PLURALS** (B).

Current ratio (*femora* vs. *femurs*): 1.2:1

feral (= [1] of, relating to, or involving a wild beast; or [2] formerly domesticated but now having become wild) is traditionally pronounced /**feer**-əl/, but /**fer**-əl/ is now common in AmE and BrE alike.

ferment, n. & vb. To *ferment* /fər-**ment**/ something is to cause it to undergo a physical change in composition through enzymatic effervescence, especially as sugar is converted into alcohol (*fermentation*). As a noun, *ferment* /fər-mənt/ denotes (1) a yeast or enzyme that causes fermentation, or (2) a situation of great unrest, trouble, or excitement in a country or region, esp. caused by political change.

ferret, v.i., makes *ferreted* and *ferreting* in both AmE and BrE. See SPELLING (B).

fervent; fervid; perfervid. These adjectives describe three gradations of ardor or zeal (listed also in order of word frequency in print sources). To be *fervent* is either to show warm feelings or to be strongly devoted to something. To be *fervid* is to have those qualities in a stronger degree. And to be *perfervid* is to be fanatically zealous. The prefix *per-* is an intensifier here.

festive; festal. *Festive* = (1) of, relating to, or involving a feast or festival; or (2) joyful, merry <a festive mood>. *Festal*, a rarer word, shares only sense 1 of *festive* and is probably the better word in that sense. Today it is used primarily in connection with religious observances <festal vespers> <festal liturgy>, but not exclusively so—e.g.: “Six Degrees presents a ceremonial tapping of the Paulaner Oktoberfest *Festal* keg by Former Seattle Seahawk Blair Bush, Oct. 12, 7 p.m.” “Food Notes,” *Seattle Post-Intelligencer*, 11 Oct. 2000, at E2.

Festschrift (= a collection of writings forming a volume presented by the authors as a tribute to a [usu. senior] scholar), a German loanword, forms the plurals *Festschriften* and *Festschriften*. The German plural predominates in English-language contexts, just as the German capitalization is retained. For the reasons given at PLURALS (B), it would be understandable if one preferred the anglicized *Festschrifts*.

Current ratio (*Festschriften* vs. *Festschrifts*): 3:1

fetch (= to get and bring to) was once a fully respectable word. It appears, for example, in the King James Version of the Bible: “Fetch me, I pray thee, a little water in a vessel” (1 Kings 17:10). But in AmE (much more than in BrE), the word has undergone depreciation. One linguist who noted this trend in the 1960s posited two possible reasons: “Perhaps the command latent in it is resented as undemocratic. Or maybe its use in training dogs to retrieve has made some people feel that it is an undignified word to apply to human beings.” Bergen Evans, “But What’s a Dictionary For?” in *The Ways of Language* 77, 86 (Raymond J. Pflug ed., 1967). For whatever reason, the word now has

associations of hick talk, perhaps in part because it was commonly used in the 1960s television show *The Beverly Hillbillies*. It also rings of racism, a connotation dating at least from the vaudeville and film career of Lincoln Perry (1902–1985), better known by his stage and screen name of Stepin Fetchit.

Oddly, though, when used in the monetary senses “sell for” and “bring in,” the word carries no negative baggage—e.g.:

- “Miramax unspooled the Philip Glass-scored docu ‘Naqoyqatsi’ with exclu engagements in Gotham and L.A., *fetching* a fulsome \$16,500.” Carl DiOrio, “‘The Ring’ Goes Ka-ching,” *Daily Variety*, 22 Oct. 2002, News §, at 1.
- “If Quintiles shares were *fetching* their all-time high of \$56 plus, Gillings would have had to offer more than \$6.6 billion to acquire the company.” David Ranii, “Is Quintiles Going Up or Down?” *News & Observer* (Raleigh), 22 Oct. 2002, at D1.

Nor is the participial adjective *fetching* (= attractive, alluring) in any way stained by the connotations that its root word carries—e.g.: “She wrapped her unflinching soprano around two of Sondheim’s most *fetching* and wrenching ballads, ‘In Buddy’s Eyes’ and ‘Losing My Mind.’” Peter Marks, “Kennedy Center’s Sondheim Treat to N.Y.,” *Wash. Post*, 23 Oct. 2002, at C1.

Because *fetch* means “to go get and bring back,” the phrase **go fetch* is a REDUNDANCY—e.g.:

- “Next, the hijacker released a third man to *go fetch* [read *fetch*] the two escapees.” Sonni Efron, “Raid Ends Moscow Hostage Drama,” *L.A. Times*, 15 Oct. 1995, at A4.
- “Presley’s manager, Col. Tom Parker, asked Green to *go fetch* [read *fetch*] Elvis at the Little Rock airport.” Timothy Finn, “Music-Lover Suggestions for All 11th-Hour Santas,” *Kansas City Star*, 20 Dec. 1996, at 23.

LANGUAGE-CHANGE INDEX

**go fetch* for *fetch*: Stage 1

fete (= [1] an outdoor gala, or [2] a major celebration) is normally so written, without the traditional circumflex over the first *-e-* (see DIACRITICAL MARKS). The word is pronounced either /fayt/ or /fet/ (the latter being the French pronunciation).

fetid /fēt-id/ (= emitting an offensive odor; stinky) is a FORMAL WORD <brown fetid water at the bottom of the creek>. The pronunciation /fēt-id/ is a nonstandard variant. The obsolescent variant spelling **foetid* has not been predominant in BrE print sources since the late 17th century. It has always been a recessive spelling in World English. The corresponding noun is *fetor* /fēt-ər/ (= stench).

Current ratio (*fetid* vs. **foetid*): 7:1

fetus; *foetus. The first has been the standard spelling in AmE since 1910 and in BrE since 1970. **Foetus* is now but a variant spelling. Pl. *fetuses*. See PLURALS (B).

Current ratio: 6:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

fever. See **temperature (B)**.

feverish; *feverous. The first is standard; the second is a NEEDLESS VARIANT.

Current ratio: 185:1

few. See **couple (B)**.

fewer; less. *Fewer* emphasizes number, and *less* emphasizes degree or quantity. **Fewer number* and **fewest number* are illogical tautologies, since *fewer* means “of smaller number.” E.g.: “The *fewest number* [read *smallest number*] of people use the library between 4:30 and 7:00 PM.” (Or, better, read: *The fewest people use the library between 4:30 and 7:00 PM.*) See **less (A) & (B)**.

**One fewer* isn’t much of an idiomatic possibility, while *one less* is <one less bell to answer>. Probably in an attempt to be refined, the writer here incorrectly avoids using the word *less*: “Texas Tech officials emerged from a second full day before the NCAA Committee on Infractions having to deal with *one fewer* [read *one less*] allegation, Chancellor John Montford said Saturday.” Doug Hensley, “NCAA Drops One Allegation,” *Amarillo Globe-Times*, 26 Apr. 1998, at C1.

LANGUAGE-CHANGE INDEX

1. **fewer* [or *fewest*] *number* for *smaller* [or *smallest*] *number*: Stage 3

Current ratio (*smallest number* vs. **fewest number*): 3:1

2. **one fewer* for *one less*: Stage 3

Current ratio (*one less* vs. **one fewer*): 12:1

***few in number** is a common REDUNDANCY—e.g.: “They were once prized for their tasty bacon, but when new breeds came along that were cheaper to raise and produced more bacon, the Tamworths declined and they are now *few in number* [read *scarce* or *uncommon*].” Ray Moseley, “Duo Fleeing for Their Lives,” *Chicago Trib.*, 16 Jan. 1998, at 6.

fey, adj.; **fay**, n. *Fey* derives from the Old English *fæge* (“doomed to die”) and carries the related sense “in an unusually excited state (like one about to die).” By an old SLIPSHOD EXTENSION, the word came to mean “whimsical, otherworldly, enchanting, eccentric,” perhaps from confusion with *fay* (see below). This shift in meaning was noticed as early as 1950: “Construed to mean ‘elfin’ by most literate people, [*fey*] is defined as ‘fated to die’; its popular meaning has only recently crept into a single dictionary. Confronted with this lag, editors say that the citation slips have not yet shown sufficient evidence to justify the new sense.” Felicia Lamport, “Dictionaries: Our Language Right or Wrong” (1950), in *Words, Words, Words About Dictionaries* 64, 65 (Jack C. Gray ed., 1963). Today the word’s original meaning is all but forgotten. E.g.: “An upsurge of book sales in cyberspace could have dramatic effects on the fortunes of the already *fey* and contradictory world of book publishing.” “Even Before Books,” *Wash. Post*, 4 Aug. 1997, at A18.

Fay (= a fairy or elf) is always a noun—e.g.: “And a key mythological figure is Melusina, a *fay* from an ancient fairy tale who is half-woman, half-serpent.” Norman Weinstein, Book Rev., *Parabola*, 22 Sept. 1995, at 116. One writer mistakenly says that *fay* is an adjective meaning “elfin” or “elflike.” See Kenneth G. Wilson, *The Columbia Guide to Standard American English* 193 (1993). See **elfin**.

Adding to the confusion is the name of King Arthur’s nemesis, Morgan Le Fey. Originally, *fey* referred to the fact that Morgan brought Arthur’s doom by bearing him a son predestined to destroy his father. But as the legend changed and was embellished with time, Morgan became less human and more magical. Today her name is alternatively spelled *Fey* and *Fay*, and she is almost always portrayed as a sorceress: more a fairy than a human.

fez (= a brimless thimble-shaped hat) forms the plural *fezzes*—not **fezes*. See **PLURALS (A)**.

Current ratio: 3:1

fiancé; fiancée. A *fiancé* is male, a *fiancée* female. The better pronunciation is /fee-ahn-say/ (approximating the French). The middlebrow AmE pronunciation is /fee-ahn-say/. (See **CLASS DISTINCTIONS**.) In AmE—unlike BrE—the accents are usually retained. See **DIACRITICAL MARKS**.

Fiancé is sometimes misused for *fiancée*—e.g.:

- “An undercover FBI agent posing as an immigrant looking for a wife was told he could be happily married to an American woman for \$6,000. The agent had an appointment to meet his *fiancé* [read *fiancée*] and get a marriage license yesterday but he broke the date.” Helen Peterson, “L.I. Matri-Money Ring Busted,” *Daily News* (N.Y.), 11 Apr. 1997, at 10.
- “Howard has been dumped by the *fiancé* [read *fiancée*] he adored.” Richard Corliss, “Caution: Male Fraud,” *Time*, 18 Aug. 1997, at 61.

This error may result from an effort to avoid gender-specific endings. But to a traditionalist, this is one context in which a person’s sex makes a difference. Calling a man’s *fiancée* his *fiancé*, or calling a woman’s *fiancé* her *fiancée*, raises a new issue in the reader’s mind: is the writer referring to a same-sex marriage?

LANGUAGE-CHANGE INDEX

fiancée for *fiancé* (and vice versa): Stage 2

fiasco (= a complete failure) forms the plural *fiascos* or (less frequently) *fiascoes*. See **PLURALS (D)**.

Current ratio: 2:1

fiber is the AmE spelling; *fibre* is BrE. See **-ER (B)**.

fibroma (= a benign tumor made up of fibrous tissue) formerly made the classical plural *fibromata*, but the homegrown plural *fibromas* had become predominant in AmE by 1935 and in BrE by the late 1950s. See **PLURALS (B)**.

Current ratio: 12:1

fibula (= the outer of the two bones between a vertebrate’s knee and ankle), perhaps because it appears

mostly in technical contexts, predominantly forms the Latinate plural *fibulae* /fīb-yə-lee/ in AmE and BrE alike—*fibulas* being a variant. Cf. **tibia**. See PLURALS (B).

Current ratio: 8:1

fictional; fictitious; fictive; *fictionary. Although these forms overlap to a great degree, they have undergone some useful DIFFERENTIATION. *Fictional* = of, relating to, or having the characteristics of fiction. E.g.:

- “Despite widespread public criticism of the movie’s [i.e., Oliver Stone’s *JFK*’s] speculative and *fictional* nature, it sparked a furor in 1992 that led to the creation of the records review board.” Mark Wroldstad, “Open to Debate,” *Dallas Morning News*, 19 Nov. 1994, at A31.
- “It’s not hard to understand the retro appeal of a *fictional* hero such as Dirk Pitt.” Valerie Takahama, “When Sea Calls, Author Answers,” *Orange County Register*, 17 Nov. 1996, at F35.

Fictitious = (1) false, counterfeit; or (2) imaginary. Sense 1: “His 1993 Nissan Sentra had a *fictitious* license plate, said Phillip Roland, a spokesman for the Las Vegas Metropolitan Police.” Steve Newborn, “Fugitive Arrested in Vegas,” *Tampa Trib.*, 13 Dec. 1996, Polk §, at 4. Sense 2: “Garrison Keillor, host of radio’s ‘A Prairie Home Companion,’ touts duct tape as the ‘old reliable’ for everything from repairing Lamorghinis to performing heart surgery, in *fictitious* ads by the equally *fictitious* American Duct Tape Council.” “Duct Tape Never Gets a Bad Wrap,” *Chicago Trib.*, 21 Oct. 2002, Tempo §, at 1. See **factitious**.

Fictive = having the capacity of imaginative creation <fictive talent>. Apart from this narrow sense, *fictive* is a NEEDLESS VARIANT of both *fictional* and *fictitious*—e.g.:

- “But when an earthly reality hovers too near a *fictive* [read *fictional*] one, it sends a shadow onto the landscape that can dominate, even supersede the imagination.” Gail Caldwell, “The Munro Doctrine,” *Boston Globe*, 3 Nov. 1996, at D15.
- “When the real rocks are exhibited alongside the *fictive* [read *fictitious* or, better yet, *fake*] ones, it is impossible to tell them apart.” Richard Dorment, “The Arts: Perfection in the Everyday,” *Daily Telegraph*, 13 Nov. 1996, at 21.
- “Its interviewees were drawn largely from the Princeton area, near the *program’s fictive epicenter* [read *fictional program’s setting*]—and, consequently, included a high concentration of frightened listeners.” Robert Nason, “When Earthlings Panic,” *Weekly Standard*, 17 Aug. 2015, at 34 (referring to Orson Welles’s 1938 “War of the Worlds” broadcast). (The italicized phrasing raises at least three issues solved by the rewording. See **epicenter**.)

**Fictionary* is an unusual NEEDLESS VARIANT of *fictional*—e.g.: “A man who will occasionally paint other persons—even *fictionary* [read *fictional*] persons—as worse than they really are may not unnaturally be expected to depict himself as somewhat better than

he is.” Grant M. Overton, *Why Authors Go Wrong and Other Explanations 2* (1919).

LANGUAGE-CHANGE INDEX
fictive misused for *fictitious* or *fictional*: Stage 1

fiddle. It’s often thought that *fiddles* are the instruments of country-and-western musicians, *violins* those of orchestral musicians. In fact, though, many great violinists refer to their *fiddles*, perhaps as a type of DYSPEMISM.

fidget, v.i., makes *fidgeted* and *fidgeting* in both AmE and BrE. See SPELLING (B).

fiduciary, adj. & n.; **fiducial**, adj. For all ordinary purposes, use *fiduciary* as both adjective <fiduciary relationship> and noun <as trustees, they are fiduciaries>. *Fiducial* is mostly confined to physics and mathematics. A *fiducial line* or *point* is one used as a base—as a boiling point is in thermometry. A *fiducial edge* is the thin edge of a ruler or scale against which a line is drawn.

fief; fiefdom. *Fief* (/feef/) is the standard term to refer to a feudal estate. *Fiefdom* has traditionally been classifiable as a NEEDLESS VARIANT, but since the late 20th century it has been very much on the rise in figurative, extended senses <he treats the law library as if it’s his own little fiefdom>.

field. The phrase *the field of* is vague and often unnecessary—e.g.:

- “Lindsey . . . accrued a 3.91 grade point average while studying in *the field of* [delete *in the field of*] communications.” “Carter Gets Pharmacy Degree, Loyd Academic Honors,” *Knoxville News-Sentinel*, 12 July 1994, at B2.
- “For O’Neill and Hajnal, the war solidified their desire to enter *the field of* [delete *the field of*] law enforcement.” Andy Kravetz, “10 Years Ago Today, America and Its Allies Launched an Air Blitz Against Iraq,” *Peoria J. Star*, 17 Jan. 2001, at A1.

Cf. **area**.

field day. See **heyday** (B).

15 minutes of fame (= a brief period of public exposure or recognition) paraphrases a 1968 Andy Warhol comment that “in the future, everyone will be world-famous for 15 minutes.” Writers sometimes mar the allusion by shortening the promised time by 14 minutes and 45 seconds—e.g.:

- “There is more to [Kevin] Conrad than those *15 seconds of fame* [read *15 minutes of fame*].” Fred Pearce, “How to Save the Climate and the Forests Too,” *New Scientist*, 22 Mar. 2008, at 36.
- “Jenny Frydryk worked hard for what could be her *15 seconds of fame* [read *15 minutes of fame*].” Brett Rowland, “15 Minutes of Fame,” *The Reporter* (Fond du Lac, Wis.), 25 Apr. 2008, at A1. (The headline writer got it right.)

Occasionally, *15 seconds* is more literal and appropriate than the original witticism—e.g.: “Between innings, fans were featured on the JumboTron. . . [E]veryone was getting face time. Well, not exactly face. One teenage boy was ready for his *15 seconds of fame* and mooned the in-house camera, his cheeky smile splattered above the scoreboard.” Troy E. Renck, “I’m Just Moonstruck by It All,” *Denver Post*, 20 Apr. 2008, at CC16.

Current ratio (*fifteen minutes of fame* vs.
**fifteen seconds of fame*): 25:1

fifth is pronounced /fɪfθ/. Whether the version without the medial *-f-* (/fɪθ/) is a mispronunciation, a hasty pronunciation, or a casual pronunciation is debatable. But one thing is certain: it’s not as good. See PRONUNCIATION (B).

Fifth Amendment. The idiom is *take the Fifth*, not **plead the Fifth* (a solecism very much on the rise since about 1950)—e.g.:

- “He was advised to keep silent and *plead* [read *take*] the Fifth Amendment.” Kevin Diaz, “\$4 Million Award’s a Start Toward a Clean Slate,” *Star Trib.* (Minneapolis), 22 Oct. 1994, at A1.
- “[P]rosecutor Daniel Saunders announced to the court that he’d been notified by [Bertram] Fields’ then attorney, famed trial maven John Kecker, that Fields planned to *plead the Fifth* [read *take the Fifth*] if called as a witness.” Rachel Abramowitz, “Can We Get a Witness?” *L.A. Times*, 21 Apr. 2008, at E1.

LANGUAGE-CHANGE INDEX

**plead the Fifth* for *take the Fifth*: Stage 3
Current ratio (*took the Fifth* vs. **pleaded the Fifth* vs.
**pled the Fifth*): 10:3:1

figure is pronounced /fɪg-yər/ in AmE and /fɪg-ər/ in BrE.

filet mignon. The plural of this phrase is *filet mignons* (or, more stuffily, *filets mignons*). (See PLURALS (B).) But when the second word is dropped, the plural is *filets*. While AmE uses the spelling *filet* /fi-lay/, BrE spells it *fillet* /fɪl-ət/.

filigree (= ornamentation consisting of a network of gold or silver wires, or other materials similarly intertwined) is sometimes misspelled **fillagree* or **filagree*—e.g.:

- “We’ve grown tired of the *filagree* [read *filigree*] that’s on the window.” Beth Sherman, “Buttoning Up a Collection Display,” *Newsday* (N.Y.), 19 June 1997, at B27.
- “For his fancy dinnerware, he pairs coral-colored Limoges china with gold-*filagree* [read *filigree*] Romanian glassware—‘provenance Pier 1.’” Karen Klages, “Chocolate Tasting, Open-Hearth Cooking Are February’s Key Themes,” *Chicago Trib.*, 2 Feb. 2003, Home & Garden §, at 3.

LANGUAGE-CHANGE INDEX

filigree misspelled **fillagree* or **filagree*: Stage 1
Current ratio (*filigree* vs. **fillagree* vs.
**filagree*): 110:6:1

Filipino. See **Philippine Islands.**

filter, vb.; ***filtrate**, vb. The latter is a NEEDLESS VARIANT—e.g.:

- “We buy sprinkler systems instead and spray expensively *filtrated* [read *filtered*] drinking water all over the garden.” Anna Pavord, “And Hummingbirds Flicker by Tall, White Foxgloves,” *Independent*, 2 Mar. 1996, at 12.
- “And while the town must scrounge for rainwater, just 10 kilometers away, a Petroecuador water pump sends *filtrated* [read *filtered*] water to employees at the local refinery.” Matthew Yeomans, “Fool’s Gold,” *Village Voice*, 4 Feb. 1997, at 46.

Of course, *filtrate* is perfectly proper as a noun meaning “a liquid that has been filtered”—e.g.: “It pumped untreated hog slurry into the system, where a chemical and separation process was to result in clear *filtrate* and biosolids—matter high in nutrients that could be used as garden or crop fertilizer.” Anne Fitzgerald, “Odor Control: Smell of Money,” *Des Moines Register*, 2 Feb. 1997, at 1.

final, adj. See ADJECTIVES (B).

final analysis, in the. See **in the final analysis**.

final destination. See **destination**.

finalize = (1) v.t., to complete; bring to an end; put in final form; or (2) v.i., to conclude. Coined in the mid-19th century, *finalize* flourished as a VOGUE WORD in the late 20th century, a favorite of jargonmongers. For that reason alone, many writers avoid it. But the word’s advantage is that it has the compactness of a single word, as opposed to most of its equivalents: *make final*, *put into final form*, and *bring to an end*. Today few people object to it, and it is all but ubiquitous—e.g.:

- “The show was taped for future broadcast, but theater officials have yet to *finalize* an air date and network contract.” Victoria Dawson, “First Lady of Ford’s,” *Wash. Post*, 22 June 1987, at B1.
- “Charles and Diana will *finalize* their divorce this spring.” Linda Barnard, “Stargazing,” *Toronto Sun*, 18 Dec. 1994, at 87.
- “HUD also contends that the county failed to *finalize* a contract for an administrator to oversee task-force operations.” Mike Bucsko, “Anti-Bias Pact Not Observed, HUD Says,” *Pitt. Post-Gaz.*, 20 Dec. 1996, at A1.

Still, *complete* is a better choice when it will suffice, as in the last example quoted above. See -IZE.

LANGUAGE-CHANGE INDEX

finalize: Stage 5

final outcome; final result; final upshot. Each of these is a common REDUNDANCY, since *outcome*, *result*, and *upshot* are all generally understood as final. It may be, however, that because modern technology—whether in instant replays on television or in computer calculations—allows us to view all sorts of preliminary results, some further qualification is considered desirable. But that's merely an excuse, not a sound rationale. And besides, writers often use the wordy phrases even when they don't mean them—e.g.:

- “The *final outcome* [read *outcome*] was a convincing 90–76 America East victory over the Northeastern Huskies.” Andrew Neff, “Reed’s Six 3-Pointers Help Bears Down Northeastern,” *Bangor Daily News*, 16 Jan. 2003, at C9.
- “They both said the process won’t be as important as the *final result* [read *result*].” Tom Bell, “State Lawmakers Differ on Need for Tax-Reform Panel,” *Portland Press Herald*, 16 Jan. 2003, at B1.

Cf. destination.

Sometimes, however, *final result* or a similar phrase is needed to contrast something with preliminary estimates—e.g.: “Compuware now expects to earn 6 to 7 cents a share for the fiscal third quarter; analysts were expecting a profit of 9 cents a share. . . . Compuware will announce its *final results* for the quarter on Jan. 22.” “Compuware Lowers Earnings Estimate,” *N.Y. Times*, 10 Jan. 2003, at C3. Cf. **end result**.

Like its cousins, *final upshot* is a minor redundancy, since the word *upshot* implies finality—e.g.: “Just what the *final upshot* [read *upshot*] of the postgame outburst will be remains to be seen.” “Rose Shoves Ump Again in Brawl,” *San Diego Union-Trib.*, 16 Aug. 1989, at D2.

LANGUAGE-CHANGE INDEX

1. *final outcome* for *outcome*: Stage 2
2. *final results* for *results* (when not contrasted with preliminary results): Stage 2

FINAL PREPOSITION. See PREPOSITIONS (B).

final result. See **final outcome**.

final upshot. See **final outcome**.

finance is pronounced either /fə-**nan**[t]s/ or /fɪ-**nan**[t]s/. The first is traditionally the better pronunciation.

financeable. So spelled. See -ABLE (E).

financial. See **economic** (B).

financier; financier. *Financier* = someone whose business is lending money. *Financer* = someone who finances a particular undertaking. The DIFFERENTIATION should be encouraged, but not everyone bothers with it—e.g.: “But the bank, which used to be a major *financer* [read *financier*] of Third World projects, finds

itself now a relatively minor factor in dollar terms.” R.C. Longworth, “World Bank Looking to Overlooked Needs,” *Chicago Trib.*, 1 Nov. 1996, Bus. §, at 2.

Many dictionaries, including the *OED* and *W2*, inaccurately list *financer* as obsolete. Others, such as *RH2* and *W3*, simply omit it. But it does appear with some frequency—e.g.:

- “The Saudi Arabian government has come under renewed pressure over its pursuit of terror *financers* in its midst.” David Crawford, “German Terror Inquiry Hits Snag,” *Wall Street J.*, 6 Dec. 2002, at A5.
- “The e-commerce company moved closer to its Austin *financers* and then closed last year as the demand for Internet services plummeted during the dot-com crash.” “Knoxville Entrepreneur Tries New Austin-Based Business,” *Knoxville News-Sentinel*, 9 Dec. 2002, at C1.
- “For years, R.J. Reynolds Co. was the largest private *financer* of tobacco-related research at NCSU.” Catherine Clabby, “NCSU to Map Out Tobacco,” *News & Observer* (Raleigh), 12 Dec. 2002, at A1.

Current ratio: 32:1

fine-toothed comb; fine-tooth comb. The latter spelling has long been more than twice as common as the former. Because *fine-toothed comb* better reflects the literal meaning—a comb with teeth set close together, rather than a comb with fine (very thin) teeth—that spelling might be thought preferable even in figurative senses <she went over the contract with a fine-toothed comb>. See ADJECTIVES (F). But print sources favor *fine-tooth comb*. Cf. **iced tea, skim milk & stained glass**.

LANGUAGE-CHANGE INDEX

fine-tooth comb for *fine-toothed comb*: Stage 5
Current ratio (*tooth* vs. *toothed*): 2:1

finicky is the preferred spelling—not **finnicky*. *Finical* is a pedantic variant that is seldom used today, though it was fairly common till about 1820. Anyone who uses it is likely to be thought of as being, well, finical.

Current ratio (*finicky* vs. *finical* vs. **finnicky*): 175:37:1

finis (= end, conclusion) is a 15th-century Latin loanword that was early anglicized as /fɪn-is/, and English-language dictionaries have long recorded this pronunciation. In the late 20th century, however, many people mistook the word for a GALLICISM of recent vintage and started saying /fee-nee/. Today this nouveau pronunciation threatens to drive out the traditional one.

***fiord.** See **fjord**.

fir. The name of the evergreen tree is occasionally misspelled *fur*, creating an odd mental image—e.g.:

- “One of the most visible signs of the strong winds was the toppling of an almost 80-foot *fur* [read *fir*] tree near a Congress Street home in Fairfield.” Greg Clarkin, “Scrambling

for Power After a One-Two Punch of Storms,” *N.Y. Times*, 22 Jan. 2006, § 14CN, at 11.

- “Eileen Meert plants a canaan *fur* [read *fir*] tree Saturday as Josh Hickman, center, digs a hole and Domien Meert fertilizes the hole at Meert Tree Farm in Festus.” “A Growing Knowledge of Trees,” *St. Louis Post-Dispatch*, 12 Apr. 2006, Bus. §, at A12 (photo caption).

LANGUAGE-CHANGE INDEX

**fur tree* for *fir tree*: Stage 1

Current ratio (*fir tree* vs. **fur tree*): 124:1

fire; terminate; let go; lay off. *Fire* has the sense of dismissing an employee for cause, such as for inadequate performance or moral turpitude. The word implies abruptness and forcibleness and is therefore viewed as being derogatory. A common EUPHEMISM is *terminate*; another is *let go*.

Lay off means “to dismiss (an employee), often temporarily, because of slow business or the seasonal nature of some work, such as agriculture.” Because *fire* is shorter, headline writers are often tempted to substitute it (wrongly) for *lay off* or (BrE) *make redundant*—e.g.: Robert Naylor Jr., “Amtrak to Cut Routes, *Fire* [read *Lay Off*] 5,500 Workers,” *Austin Am.-Statesman*, 15 Dec. 1994, at A13. Although *lay off* is a common euphemism for *fire*, the distinction is a useful one.

firefighter. See SEXISM (C).

firmament. The *firmament* is the sky, the canopy of stars (as people once envisioned it). It was “firm” because it was thought to be a fixed and immutable dome. Today the word is often used in a metaphorical sense to mean the constellation of “stars” (celebrities or key people) in a certain field. But sometimes writers seem misled by the “firm” portion of the word, using *firmament* as if it meant *ground* or *foundation*—e.g.:

- “The pair present an affecting love story against the racial *firmament* [read *climate*] Jack Johnson/Jefferson encountered during his reign that began in 1908 and ended seven years later.” Jeff Rivers, “Films with Punch,” *Sun-Sentinel* (Ft. Lauderdale), 27 Dec. 2001, at E3.
- “Miller-motivated dancers have feet that often seem to revel in light contact with the *firmament* [read *ground*]. They don’t grind into the floor. They caress it.” Terry Morris, “DCDC’s New Work Playful, Quirky,” *Dayton Daily News*, 2 Feb. 2002, at C4.
- “The rules turn out to be liberating, and those placid in-between moments act as the *firmament* [read *foundation*], making Ellie’s wacky, always-going-wrong existence believable.” Manuel Mendoza, “Perfect Timing for ‘Ellie,’” *Dallas Morning News*, 26 Feb. 2002, at C1.

Perhaps the misuse is influenced also by confusion with *terra firma* (= solid ground).

LANGUAGE-CHANGE INDEX

firmament misused for *ground* or *foundation*: Stage 1

first and foremost should not merely displace *first*. The *OED* describes it as a “strengthened” phrase—i.e., an especially emphatic one—and dates it from the 16th century.

***first annual.** This phrase expresses a promoter’s wish, not a fact. An event that is held or occurs once a year is an annual event. But its first occurrence is not annual because it didn’t happen the previous year. The *AP Stylebook* sensibly recommends mentioning that the organizers plan to hold the event annually.

first-come, first-served. As a PHRASAL ADJECTIVE, this term has obligatory hyphens. It sometimes appears with the comma (recommended), and sometimes without, as *first-come-first-served* (also acceptable). When a noun doesn’t appear at the end, and the phrase is simply used as a statement, a comma comes between the two parts, which are unhyphenated: *first come, first served*.

The past-participial *served* is required in this phrase. The first people to come are the first who *are served* (not the ones who *serve*). But some writers erroneously use *serve*—e.g.:

- “The 3,000 to 5,000 division series tickets will be sold on a *first-come, first-serve* [read *first-come, first-served*] basis.” John Shea, “Playoff Ticket Plan Announced,” *S.F. Examiner*, 15 Sept. 2000, at D4.
- “Tickets to 111 different events will be available through the Salt Lake Organizing Committee’s Web site, www.saltlake2002.com, on a *first-come, first-serve* [read *first-come, first-served*] basis.” Lisa Riley Roche, “200,000 Games,” *Deseret News* (Salt Lake City), 4 June 2001, at B4.
- “The five members picked to hear a specific case are selected on a *first-come, first-serve* [read *first-come, first-served*] basis.” Jerry Lauzon, “Lawyer for Athletes Alleges Conflict of Interest,” *Portland Press Herald*, 19 Oct. 2002, at A1.

LANGUAGE-CHANGE INDEX

**first-come, first-serve* for *first-come, first-served*:

Stage 3

Current ratio (*first come first served* vs.

**first come first serve*): 3:1

first edition. This phrase is ambiguous: it means one thing to an author or publisher and quite another to a book collector or antiquarian bookseller. To an author or publisher, *first edition* refers to any printing of the first unrevised version of a book. In this sense, a first edition of H.W. Fowler’s *Dictionary of Modern English Usage* could be any one of the several printings from 1926 to 1965 (when the second edition, as revised by Sir Ernest Gowers, was published). To a book collector or used-book seller, only the first printing (in the first year of publication) is a first edition.

***first iteration.** See *reiterate*.

firstly, secondly, thirdly, etc. are today considered inferior to *first, second, third,* etc. Many stylists prefer *first* over *firstly* even when the remaining signposts are *secondly* and *thirdly*. See ENUMERATIONS (A).

first name. See NAMES (D).

FIRST PERSON. A. Generally. Immature writers use *I* and *me* at every turn. It’s therefore a customary rite

of passage for every grade-school student to write an essay without ever using first person. As a writing exercise, this is useful.

Yet it arguably does much harm as well. Many students come to believe that in writing, there's something inherently wrong with first person. So even later in life, they go to great lengths to avoid it, as by using phrases such as *the present writer*, *the author*, and so on. It leads them to PASSIVE VOICE and to ZOMBIE NOUNS. If you're the actor, the belief runs, omit the actor. It all leads to ABSTRACTITIS.

But graceless circumlocutions serve no real stylistic purpose and are inferior to the straightforward pronouns *I* and *me*. Late in his career as a writer, Jerome Frank confessed that he had long shunned the first-person pronoun, preferring *the writer* to *I* on the assumption that the indirect phrasing signified modesty. With age he became wiser and concluded: "To say *I* removes a false impression of a Jovian aloofness." *Courts on Trial* vii–viii (1950).

Of one common set of self-obscuring devices—*it is suggested that*, *it is proposed that*, and *it is submitted that*—Fred Rodell observed, "Whether the writers really suppose that such constructions clothe them in anonymity so that people cannot guess who is suggesting and who is proposing, I do not know." "Goodbye to Law Reviews—Revisited," 48 *Va. L. Rev.* 279, 280 (1962). We do know, however, that these phrases often make sentences read as if they had been "translated from the German by someone with a rather meager knowledge of English." *Ibid.*

None of this should suggest that every personal opinion should include the word *I*. Most opinions are transparently personal and need no direct mention of the writer—e.g.: "Though Einstein is routinely lionized as a great scientific mind, Newton was the most original thinker that science has ever produced." No moderately sophisticated reader would assume that this statement is anything more than an opinion. And it is much more convincingly stated without inserting the phrase *in my opinion*. See **I personally, myself & SUPERSTITIONS (I)**.

B. Editorial we. "The editorial 'we' . . . is fitted only for expressing corporate policy." Walter Raleigh, *On Writing and Writers* 25 (George Gordon ed., 1926). That judgment remains sound.

It is certainly eccentric to see a solo writer using *we* and *our* when no one else is involved—e.g.: "We do not propose in this little volume to treat of these changes in their chronological sequence—to show, for instance, in what respects the English of Chaucer differs from that of Alfred, the English of Shakespere [*sic*] from that of Chaucer, and the English of the

nineteenth century from that of the sixteenth. Information of this kind must be sought for in regular histories of the English language. *Our* purpose is merely to give some idea of the causes by which the more remarkable changes in the language were brought about." Henry Bradley, *The Making of English* 14 (1904; repr. 1951). The first-person *I* and *My* would surely sit more comfortably in those sentences—and probably would have even in 1904. See **they (B)**.

fisc (= a governmental treasury; exchequer) has been predominantly so spelled in AmE and BrE alike since the 18th century. **Fisk* is a variant spelling. The adjective form is *fiscal*.

Current ratio (*fisc* vs. **fisk*): 4:1

fish; fishes. The Evanses wrote in 1957 that the plural *fish* is of recent vintage and opined that "the life expectancy of a new irregular plural, such as *fish*, is not very long." *DCAU* at 179. But the *OED* cites *fish* as the plural form as long ago as 1300. Today, *fish* is the firmly established plural. *Fishes* appears rarely, at least outside ichthyology. When it does appear, it usually refers to more than one species—e.g.:

- "While two Asian *fishes* have recently made news for their ability to survive in the wilds of America, the U.S. Fish and Wildlife Service said last week it plans to restrict the sale of one of their cousins, a carp used on Southern fish farms to eat disease-carrying snails." David Mercer, "Farmers Fret over Plans to Limit Carp," *Ark. Democrat-Gaz.*, 6 Aug. 2002, at D1.
- "A chapon, right, the first of five *fishes*, gets bouillabaisse under way at L'Epuisette." R.W. Apple Jr., "A Prime Kettle of Fish," *N.Y. Times*, 7 Aug. 2002, at F1 (referring to five species of fish).

Fish does take the regular *-es* ending to form the plural possessive—e.g.: "A Yozuri Crystal Minnow seems to be the *fishes'* preference." David Sikes, "Island Time," *Corpus Christi Caller-Times*, 4 Aug. 2002, at B14. And the plural form *fishes* persists in idioms such as *The Godfather's* "Luca Brasi sleeps with the *fishes*," as well as the biblical allusion "loaves and *fishes*."

***fisk.** See **fisc**.

fission. The standard AmE pronunciation today is either /*fish*-ən/ or /*fizh*-ən/. The second now predominates (probably to parallel the sound of the correlative term *fusion* /*fyoo*-zhən/), even though the first corresponds to analogous words such as *mission*. Cf. **rescission (B)**.

fist bump; fist pump. A *fist bump* is a greeting made by bumping knuckles. A *fist pump* is a celebratory gesture made by holding out a fist with the elbow

cocked and jerking down (or sometimes up or away from the body). Although the terms are sometimes confounded, this writer got both right: “She looked at the stands and saw the Wolf Pack and gave them a *fit pump*. Andrew came over to her and said, ‘Crab legs with all the trimmings.’ Micala smiled and gave her trainer a *fit bump*.” D.K. Barnes, *High Country Dreams* 104 (2005).

fisticuffs (= a fistfight), though singular in sense (a single fistfight being *fisticuffs*), is plural in form. Still, one refers to *fisticuffs*, not **a fisticuffs*—e.g.: “The city’s famously combative District Attorney, Terence Hallinan, who got into a *fisticuffs* [delete *a*] with a trade-union leader at Mr. Davis’s last birthday celebration, said the party-givers’ biggest error might have been to invite a pair of political columnists from The San Francisco Chronicle.” Tim Golden, “Political ‘Party’ Goes So Far, Even San Francisco Is Aghast,” *N.Y. Times*, 10 May 1997, at 1, 15. Often found in the idiom *to trade fisticuffs*, the word carries a quaint tone.

fist pump. See **fist bump**.

fistula (= an abnormal opening into a natural canal or hollow organ) has predominantly formed the plural *fistulas* in AmE since about 1940, but the Latinate plural *fistulae* /**fis**-chə-lee/ has been standard in BrE since the mid-19th century. See PLURALS (B).

Current ratio (*fistulas* vs. *fistulae* in World English): 2:1

fit > **fitted** > **fitted** (traditionally); **fit** > **fit** > **fit** (more modernly in AmE). Just since the mid-20th century, AmE has witnessed a shift in the past tense and past participle from *fitted* to *fit*. Traditionally, *fit* would have been considered incorrect, but it began appearing in journalism and even scholarly writing as early as the 1950s. David S. Berkeley, “The Past Tense of ‘Fit,’” 30 *Am. Speech* 311 (1955).

This CASUALISM now appears even in what is generally considered well-edited American journalism, especially where the *fit* is not a physical attachment but a match—e.g.:

- “This ‘modified Münchhausen syndrome,’ in FBI terminology, occurs in someone who wants to be a hero so badly that he creates emergencies so he can rescue people. Jewell, a police wannabe, *fit* this profile and also had the characteristics of people who use pipe bombs—white single men in their 30s or 40s with a martial bent.” James Collins, “The Strange Saga of Richard Jewell,” *Time*, 11 Nov. 1996, at 60, 62.
- “He [Steven Morrissey] never quite *fit* as a proper rock star.” Ann Powers, “A Conflicted Champion of the Lonely and Losers,” *N.Y. Times*, 28 Nov. 1997, at E1.
- “Collins *fit* the typical profile of a Menimo confidant.” Scott S. Greenberger, “‘Dr. No’ Has Mayor’s Ear,” *Boston Globe*, 8 Apr. 2003, at B1.

And it appears in fine scholarly writing—e.g.: “English land tenure, and the English way of life among landed gentry, *fit* this social order more than was true in the North.” Lawrence M. Friedman, *A History of American Law* 66 (2d ed. 1985).

The traditionally correct past tense still surfaces, especially in BrE, but in AmE it is becoming rarer (and stuffier) year by year—e.g.:

- “The Mermaid [an inn] *fitted* our plans perfectly.” Edmund Antrobus, “Bloody Boo Time!” *Asbury Park Press* (Neptune, N.J.), 27 Oct. 1996, at F1.
- “Nothing else *fitted* the facts.” Colin Edwards, *The Father of Forensics* 239 (2006).

Yet where the *fit* is a physical coupling, *fitted* is the natural choice—e.g.:

- “A most interesting item in my coin collection is a disk that *fitted* the pressure-spray nozzle on our apple-orchard pump some 50 years ago.” John Gould, “Coins of the Heart, a Currency That Keeps,” *Christian Science Monitor*, 27 Dec. 1996, at 21.
- “The 4-year-old colt underwent several procedures and was *fitted* with fiberglass casts.” Mark Blandschun, “Survival Struggle Ends for Champion Barbaro,” *Boston Globe*, 30 Jan. 2007, Sports §, at A1.
- “Don’t rent ski boots. Buy a good midpriced pair If they’re properly *fitted*, you’ll always be comfortable.” Anne Z. Cooke & Steve Haggerty, “Strategies for Best Results on the Slopes,” *St. Petersburg Times*, 30 Jan. 2007, SSP §, at 6.

And the traditional form remains with prefixed derivatives (e.g., *outfitted*, *retrofitted*). Although *fitted* may one day be extinct as a verb form, it will undoubtedly persist as an adjective <fitted sheets>.

Anthony Burgess considered the past *fit* to be one of the prime differentiators between BrE and AmE: “A British reader of American expository prose feels totally at home until he comes to ‘fit’ as a past tense (‘This fit his theory’) and the past participle ‘gotten,’ which has disappeared from Britain (except in dialectal forms, where it often appears as ‘getten’).” Anthony Burgess, *A Mouthful of Air* 280 (1992). See IRREGULAR VERBS. Cf. **knit**.

LANGUAGE-CHANGE INDEX
fit as a past-tense form: Stage 5

fjord; ***fiord**. In modern sources, *fjord*—the preferred spelling—greatly outnumbers **fiord*.

Current ratio: 3:1

flaccid. **A. Pronunciation.** *Flaccid* is preferably pronounced /**flak**-sid/, not /**flas**-id/. All the traditional pronunciation guides have said so—and they’re right. The /ks/ pronunciation is common in words with a *-cc-* preceding an *-i*, *-e*, or *-ee*, such as *accession*, *accident*, *succeed*, and *vaccination*. As one authority explains: “When *cc-* precedes *-e* or *-i*, the first *c-* is pronounced *k-*, the second *s-*, as in *accede*, *accelerate*, *accept*, *accessible*, *flaccid*, *succinct*, etc.” Norman Lewis, *Dictionary of Modern Pronunciation* 76 (1963). The one set of exceptions to that rule involves Italian words and names commonly used in English (the *-cc-* having a /ch/ sound): *cappuccino*, *carpaccio*, *Gucci*, *Puccini*, etc. Cf. **accessory** (B) & **succinct**.

Over a long period, many pronunciation authorities have listed only /**flak**-sid/, not even mentioning /**flas**-id/. See, e.g., John H. Bechtel, *Handbook of Pronunciation and Phonetic Analysis* 53 (1900); Andrew

J. Graham, *The Standard-Phonographic Dictionary* 154 (1908); Josephine Turck Baker, *Correct Standardized Pronunciation* 201 (1919); Charles B. Anderson, *A Guide to Good Pronunciation* 55 (1931); Alfred H. Holt, *You Don't Say!* 62 (1937); *NBC Handbook of Pronunciation* 142 (1940); Morriss H. Needleman, *A Manual of Pronunciation* 126 (1949); John S. Kenyon & Thomas A. Knott, *A Pronouncing Dictionary of American English* 167 (1953); Ruth Gleeson & James Colvin, *Words Most Often Misspelled and Mispronounced* 82 (1963); Daniel Jones, *Everyman's English Pronouncing Dictionary* 192 (A.C. Gimson ed., 14th ed. 1977); Samuel Noory, *Dictionary of Pronunciation* 116 (3d ed. 1979).

Since the 19th century, some authorities have explicitly disparaged the *k*-less pronunciation:

- “Flaccid—flak’sid, not flas’id.” Richard Soule & Loomis J. Campbell, *Pronouncing Handbook of Words Often Mispronounced* 35 (1873). Identical phrasing appears in other books, such as Alfred Ayres, *The Orthoepist* 70 (1881); Julian W. Abernethy, *Correct Pronunciation* 50 (1912); and William Henry P. Phye, *20,000 Words Often Mispronounced* 317 (rev. ed. 1937).
- “*Flac’cid* means having little or no resistance, yielding easily to force or weight or pressure. It rhymes with *back slid*, that is, *flack’sid*. The noun *flaccidity* is pronounced *flak sid’ i t*. Don’t say *flassid* to rhyme with *acid*.” John Baker Opdycke, *Don’t Say It* 343 (1943).
- “*Flaccid* should not rhyme with *placid*. . . . Note that *flaccid* is syllabified *flac-cid*. The *c* ending the first syllable is pronounced *k*; the second *c* is followed by *i* and is therefore pronounced *s*.” Frank O. Colby, *The American Pronouncing Dictionary of Troublesome Words* 158 (1950).
- “Although FLAK-sid-sayers are now in the minority, there’s no denying it’s one heck of a respectable minority. A survey of sources published since the 1960s reveals that an overwhelming number of authorities prefer FLAK-sid.” Charles Harrington Elster, *BBM* at 203–04.

The limp, flabby pronunciation of the word—which some have tried to rationalize as a kind of sensory onomatopoeia (the logic being that *flaccid* denotes what is soft and should therefore have a soft *-c-* in the middle)—started gaining some (grudging) acceptance in the mid-20th century in *W3* (1961) and in other wordbooks—e.g.:

- “*Flaccid* is preferably pronounced /**flak**-sid/, but some people say /**flas**-id/, which is also acceptable.” *Reader’s Digest Success with Words* 240 (1983).
- “The older pronunciation is (flak’sid), but the variant (flas’id) has been recorded in dictionaries since about the middle of the 20th century.” *The American Heritage Book of English Usage* 222 (1996).

It’s recorded in *Webster’s New World Dictionary* (1994), all right, but only as a secondary variant. *W10* (1993) obelizes /**flas**-id/ with the mark “-” (suggesting that it’s “considered by some to be unacceptable”), but then it labels /**flak**-sid/ as being “appreciably less common.” Meanwhile, the second edition of the *OED* (1989) lists

only /**flak**-sid/. *W11* (2003) removed the “-” and, without comment, gave preference to /**flas**-id/.

In short, this word is a kind of SKUNKED TERM: pronounce it in the traditional way, and you’ll take some flak for doing so; pronounce it in the new way, and the cognoscenti will probably infer that you couldn’t spell or say *cognoscenti*, either. See PRONUNCIATION (B).

LANGUAGE-CHANGE INDEX

flaccid pronounced /**flas**-id/ instead of /**flak**-sid/:
Stage 4

B. Misspelling. As a result of the spreading mispronunciation, the misspelling **flacid* (on the analogy of *placid*) has arisen—e.g.:

- “Naomi, Toshiyuki and I unrolled the long, *flacid* [read *flaccid*] canopy while Richard positioned a huge electric fan at the mouth.” Elliot Neal Hester, “The Sky’s the Limit for Central Florida Vacations,” *Boston Herald*, 16 May 1996, at 54.
- “The succulent shellfish practically melted on the tongue, but the tempura coating was oddly *flacid* [read *flaccid*].” Cynthia Kilian, “A Win, Win Situation,” *N.Y. Post*, 12 May 2002, at 55.
- “We few, we unhappy few, grimace through the molasses-on-grits Southern accents, shake our heads at the historical revisionism and snort at the static dullness of this endless, *flacid* [read *flaccid*] adaptation of another historical novel about America’s defining moment.” Roger Moore, “This Civil War Epic Is God-Awful and Generally a Waste,” *Orlando Sentinel*, 21 Feb. 2003, Cal. §, at 20.

LANGUAGE-CHANGE INDEX

fragrant misused for *flagrant*: Stage 1

flail; flay. To *flail* is (1) to beat or thrash (something), or (2) to move in a thrashing motion, esp. to whip one's arms about wildly—e.g.: "He'd start off stiff, his body virtually twitching with nervous energy, and then gradually his arms would start to move, then *flail*, his movements becoming wilder until he seemed to be tearing open." Jonathan Hayes, "Joy Division: More Unknown Pleasures," *N.Y. Observer*, 10 Sept. 2001, Arts & Entertainment §, at 23.

To *flay* is (1) to rip the skin or hide off (something), or (2) to deprive (a person) of property by extortion or exaction—e.g.: "David Faber uses his take-no-prisoners approach to disembowel investment banking firms, expose methods of corporate deceit, *flay* the conspiring accounting firms, and generally lay bare how investor billions are made and lost (mostly lost) through greed and incompetence." Book Rev., "Best Stock Pickers Do Their Own Homework," *Pitt. Post-Gaz.*, 21 July 2002, at E2.

Flay is sometimes misused for *flail*—e.g.:

- "If you really and truly are that outdoorsy, spending many weekends *flaying* [read *flailing*] about in mud, water or over yonder dale, then the versatility of the Explorer is well worth the deficit in ride and handling." David Booth, "Pseudo-ute v. Sport-ute," *Nat'l Post*, 29 Sept. 2000, at E2.
- "He was nicknamed 'the human locomotive' because of his ungainly style—arms *flaying* [read *flailing*], head rolling, and his tongue hanging out." Larry Stewart, "The Irish Track," *L.A. Times*, 21 Dec. 2000, at D2.
- "'Who knows where he is!' Trinidad said, *flaying* [read *flailing*] her arms into the air." Allistair Scrutton, "For Better or Worse," *Sun-Sentinel* (Ft. Lauderdale), 11 Feb. 2001, at A24.

LANGUAGE-CHANGE INDEX

flay misused for *flail*: Stage 1

Current ratio (*flailing his arms* vs. **flaying his arms*): 39:1

flair. See **flare**.

flak; flack. *Flak* (orig. referring to fragments of artillery shells, esp. those used for anti-aircraft guns, built to explode into destructive pieces) = annoying criticism or opposition. *Flack* = a press agent. The most common problem with these words is that *flack* is misused for *flak*—e.g.:

- "*Variety*'s Todd McCarthy says he received a good deal of *flack* [read *flak*] for his negative review." Georgia Brown, "Riviera of No Return," *Village Voice*, 7 June 1994, at 54.
- "The Corps of Engineers has taken a lot of *flack* [read *flak*] for the levee failures." Paul Purpura, "Q&A with the Military Community," *Times-Picayune* (New Orleans), 22 Oct. 2006, Nat'l §, at 10.
- "[W]e never bought Internet, dot-com or telecom stocks for our clients. Although we took a lot of *flack* [read *flak*] in 1998 and 1999 for this stand, . . . we were *proven* [read *proved*] right when the dot-com bubble burst in the early 2000s." Ric Edelman, "The Truth About Money," *Capital* (Annapolis), 17 Dec. 2006, Bus. §, at B2. (See **proved**.)

But the misuses go both ways. Occasionally *flak* ousts *flack* from its rightful place—e.g.:

- "To reporters, they are derisively known as '*flaks*' [read '*flacks*'], whose main duties consist of peddling press releases." Bryan Burrough & John Helyar, *Barbarians at the Gate* 293 (1990).
- "So how does the president feel about the Oscar Mayer wiener song being sung in Spanish? . . . I get transferred to the Media Office and reiterate my desire to talk to a press *flak* [read *flack*]." Melanie Conklin, "Wiener Wish in Spanish Is OK," *Wis. State J.*, 20 May 2006, at A1.
- "Public relations *flaks* [read *flacks*] started pushing 'Back To School 2006' supplies and stories the day before classes let out in June." Lauri Githens, "As Summer Rolls On, Don't Forget to Get Kids Ready for School," *Rochester Democrat & Chron.*, 26 July 2006, at H9.

During the 1960s, the noun *flack* was made into a verb. A person who *flacks* provides publicity. But *flak* has appeared in this context, too—not commonly, but often enough to warrant caution. E.g.: "Monday, I was all over Chicago *flacking* [read *flacking*] my new book *On the Line* (Harcourt Brace, \$21.95), about last year's elections." Larry King, "Zipping by the Rest Stops on the Highway of Life," *USA Today*, 22 Nov. 1993, at D2.

flambeau (= a flaming torch) predominantly forms the plural *flambeaux* in AmE and BrE alike—not *flambeaus*.

Current ratio: 10:1

flamenco = (1) the Spanish music originally played by gypsies and characterized by stomping and clapping; or (2) the dance typically performed to this music. Occasionally writers confuse this word with *flamingo* (the long-necked pink bird)—e.g.:

- "You can hear not only aspects of Mexican folk dance but *flamingo* [read *flamenco*] dancing as well." Paul Cook, "Desenne," *Am. Record Guide*, Sept. 1995, at 134.
- "Other activities of this May Saturday include a *flamingo* [read *flamenco*] dancer and children's activities." Donna Larcen, "Dominick Dunne's Home Among Dozens Open for Touring This Year," *Hartford Courant*, 25 Apr. 1996, at G8.
- "Performers brought in to provide entertainment will include an Asian Lion dancer, a Celtic dance *troup* [read *troupe*], South American dancers and *flamingo* [read *flamenco*] dancers." "Hayes Elementary Hosts International Fest," *Houston Chron.*, 31 Jan. 2001, This Week §, at 10. (On the misuse of *troup* in that sentence, see **troup**.)

LANGUAGE-CHANGE INDEX

flamingo misused for *flamenco*: Stage 1

flamingo. Pl. *flamingos*. From 1820 to 1940, the alternative plural ending *-oes* predominated. See PLURALS (D).

Current ratio: 2:1

flammable; inflammable. The first is now accepted as standard in AmE and BrE alike. Though examples

of its use date back to 1813, in the 1960s and more so later it became widespread as a substitute for *inflammable*, in which some people mistook the prefix *in-* to be negative rather than intensive—e.g.: “[T]heir fireplace is mounted in a black box built out of an *inflammable* [read a *nonflammable* or a *noninflammable*] material made of pressed paper.” Michael Cannell, “A 180-Degrees View of a Hotbed of Housing Design,” *N.Y. Times*, 4 Jan. 2007, at F7. Traditionally, the forms were *inflammable* and *noninflammable*; today they are *flammable* and *nonflammable*. By the early 1970s, purists had lost the fight to retain the older forms. See NEGATIVES (A).

Even staunch descriptivists endorsed the prescriptive shift from *inflammable* to *flammable*—e.g.: “A word is bad if it is ambiguous to such a degree that it leads to misunderstanding. For me, the perfect example of such a word is *inflammable*, if it is applied to substances. As most dictionaries now recognize, *inflammable* can be confused with *non-combustible*, and so lead to accidents.” Archibald A. Hill, “Bad Words, Good Words, Misused Words,” in *Studies in English Linguistics for Randolph Quirk* 250, 252 (1983). Cf. **inflammatory**.

LANGUAGE-CHANGE INDEX

flammable (= combustible): Stage 5

Current ratio (*flammable* vs. *inflammable*): 2:1

flare; flair. *Flare* = a sudden outburst of flame; an unsteady light. *Flair* = (1) outstanding skill or ability in some field; or (2) originality, stylishness. By far the most common confusion occurs when *flare* displaces *flair*—e.g.:

- “Today also is National Handwriting Day in honor of the birth of John Hancock. Hancock had a real *flare* [read *flair*] for writing—especially those insurance policies.” Kathy Borlik, “Worth Waking Up For,” *South Bend Trib.*, 12 Jan. 2002, at A2.
- “Just as disappointing is the failure of [John] Clancy to show the *flare* [read *flair*] he has demonstrated in previous Edinburgh visits with shows such as ‘Americana Absurdum,’ ‘Horse Country’ and ‘Fatboy.’” Mark Fisher, “Midnight Cowboy,” *Variety*, 14–20 Aug. 2006, at 34.
- “[Mark] Cuban would love to see [Sidney] Crosby or one of the sport’s other young guns show some *flare* [read *flair*] and self-promotion on the ice.” Brian Milner, “Marketing of NHL Misses Net,” *Seattle Post-Intelligencer*, 24 Jan. 2007, at D1.

LANGUAGE-CHANGE INDEX

flare misused for *flair*: Stage 1

Current ratio (*natural flair* vs. **natural flare*): 10:1

flatulate, vb. In the 1960s and early 1970s, my grandfather, Texas Supreme Court Justice Meade F. Griffin (1894–1974), liked to tell his family the definition of a perfect host: “When your guest *flatulates*, so do you!” It never occurred to anyone in the family that *flatulate* wasn’t a bona fide word. Yet it wasn’t in the dictionaries, then or for the most part now, because

lexicographers have overlooked both *flatulate* and its cognate noun *flatulation*. They have been much kinder to the synonyms *crepitate* (recorded in the *OED* from 1623—and labeled obsolete) and *crepitation* (recorded, in the sense of liberating enteric airs, from 1822). Despite the paltry evidence given in the *OED* for both of those words, they have always been, as an empirical matter, more common than the words formed by analogy from *flatulence* and *flatulent*.

Flatulate and *flatulation* appear to have been mostly medical terms when they emerged in the 19th century. *Flatulated* was a past-participial adjective meaning “bloated,” and *flatulation* was a fancy synonym for *bloating*—e.g.:

- “Complains now of palpitation (violent), hot flashes, cold feet, dizzy spells, menses irregular, indigestion; *flatulated* [i.e., *bloated*]; bowels irregular.” Reynold W. Wilcox, “Cactus Grandiflorus: A Clinical Study,” *7 Post-graduate* 85, 91 (Feb. 1892).
- “Every . . . recurring *flatulation* and old-fashioned belly-ache, is traced to an inflamed or, in some manner or another, abnormal appendix.” Otto Juettner, “The Slaughter of the Innocents,” *37 Toledo Medical and Surgical Reporter* 5, 6 (Jan. 1911).
- “A year ago he began to be troubled with gas, at first chiefly by night, later also by day; relieved by eructations and *flatulated*, but passing mostly by rectum.” “Case 8063,” *8 Case Records of the Massachusetts General Hospital* 1 (7 Feb. 1922).

Among the earliest traceable uses of *flatulate* as a verb occurred in an unusually poignant passage in an 1883 issue of *Obstetric Gazette*: “What is there more absolutely provoking to the physician than to witness a patient of this character strain and groan and grunt and scream and defecate and micturate and *flatulate* and vomit and moan and lament and strain again, without accomplishing any advancement?” H.V. Sweringen, “Cases from Practice,” *6 Obstetric Gaz.* 169, 170 (Apr. 1883). The word didn’t gain currency in nonmedical usage until the 1960s. Today it is fairly common—e.g.:

- “A student had *flatulated* quite loudly.” David Romanelli, *Yeah Dave’s Guide to Livin’ in the Moment* 156 (2009).
- “The least ‘*flatulating*’ legumes are said to be (in this order) lentils, split peas, adzuki beans, mung beans, black-eyed peas, and anasazi beans.” Crescent Dragonwagon, *Bean by Bean* 7 (2012) (*flatulating* meaning “causing flatulence”).
- “One day when we were out for a ride, I *flatulated* and then said, ‘Excuse me.’ Kristen asked why I said that, and I told her, ‘Because of that noise I made,’ and she responded, ‘I can smell that sound you made!’” Don Brock, “Modesto-Area Dads on Being Dads,” *Modesto Bee*, 14 June 2014.

There is certainly enough linguistic evidence to support the treatment of these words in individual dictionary entries. Hence *flatulate* isn’t at all classifiable as a NONWORD.

flatulence; *flatulency. These words—meaning either (1) “having excessive intestinal gas,” or (2) “pomposity and pretentiousness”—came into use in the late 17th

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

century. The older term, **flatulency*, gave way to *flatulence* by 1760 and is now a NEEDLESS VARIANT. Except for a brief period from 1790 to 1810, *flatulence* has been predominant throughout the English-speaking world. Cf. **borborygmus**.

Current ratio: 26:1

flaunt; flout. Confusion about these terms is so distressingly common that some dictionaries have thrown in the towel and now treat *flaunt* as a synonym of *flout*. But the words are best kept separate.

Flout has always meant “to contravene or disregard; to treat with contempt.” The word almost never causes a problem. Here it’s correctly used: “A record rider turnout, fueled by the mayor’s earlier pledge to end the escort and crack down on cyclists *flouting* traffic laws, poured into the streets on an improvised route.” Chuck Finnie & Rachel Gordon, “Critical Mass Reaches Another Fork in the Road,” *S.F. Examiner*, 3 Aug. 1997, at B1. But the rare mistake of misusing *flout* for *flaunt* does sometimes occur—e.g.:

- “But he had hardly left Read’s doorstep before anguish smote him at thus *flouting* [read *flaunting*] his wealth in the face of Read’s poverty.” Sarah Gertrude Liebson Millin, *The Burning Man* 280 (1952).
- “Mr. Talton was soon joined by almost two dozen other conservative Republicans who filed en masse into the clerk’s office to *flout* [read *flaunt*] their disapproval for their colleague and fellow party member.” Christy Hoppe, “GOP Shows Off Its Own Defection,” *Dallas Morning News*, 25 May 2000, at A33, A35.

Flaunt predominantly means “to show off or parade (something) in an ostentatious manner” <if you’ve got it, flaunt it>. The word is most often used correctly—e.g.:

- “Most vivid among the gaggle of grandchildren are the trashy and very available Dori (Maria Mervis), complete with body-*flaunting* garb; [and others].” Christopher Rawson, “Putting the Fun in Funeral,” *Pitt. Post-Gaz.*, 23 May 1997, at 30.
- “He donates millions to religious and charitable groups, yet *flaunts* his own wealth.” Marc Gunther, “Will Uncle Bud Sell Hollywood?” *Fortune*, 18 Aug. 1997, at 185.

But the word is often incorrectly used for *flout*, perhaps because it is misunderstood as a telescoped version of *flout* and *taunt*—e.g.:

- “In Washington, the White House issued a statement that deplored the Nigerian Government’s ‘*flaunting* [read *flouting*] of even the most basic international norms and universal standards of human rights.’” Howard W. French, “Nigeria Executes Critic of Regime; Nations Protest,” *N.Y. Times*, 11 Nov. 1995, at A1.
- “This isn’t just a problem in the pro and college ranks. . . . Players in recreation leagues and even third-grade soccer tyros have been known to *flaunt* [read *flout*] the rules.” Editorial, “Tell Us How You’d Restore Discipline,” *Cincinnati Enquirer*, 4 Jan. 2007, at C6.
- “We are supposed to be a nation of laws, and being able to cherry-pick which laws to follow is not supposed to be part of the process. If so, each American undoubtedly could find a law to *flaunt* [read *flout*].” Tom Knott, “Illegals for Diversity? The ‘Logic’ Is Ludicrous,” *Wash. Times*, 25 Jan. 2007, Metro §, at B2.

One federal appellate judge who misused *flaunt* for *flout* in a published opinion—only to be *sic’d* and corrected by judges who later quoted him—appealed to W3 and its editors, who, of course, accept as standard any usage that can be documented with any frequency at all. The judge then attempted to justify his error and pledged to persist in it. See William Safire, *I Stand Corrected* 158–59 (1984). Seeking refuge in a nonprescriptive dictionary, however, merely ignores the all-important distinction between formal contexts, in which strict standards of usage must apply, and informal contexts, in which venial faults of grammar or usage may, if we are lucky, go unnoticed (or unmentioned). Judges’ written opinions fall into the first category.

LANGUAGE-CHANGE INDEX
flaunt misused for *flout*: Stage 3
Current ratio (*flouting the rules* vs. **flaunting the rules*): 5:1

flautist. See **flutist**.

flavor; flavour. The first is AmE, the second BrE. The same spellings hold in the derivatives ending in *-ful*, *-less*, *-some*, etc. The AmE spellings were solidly predominant in AmE print sources by 1850. See -OR; -OUR.

flay. See **flail**.

***flection.** See **flexion**.

fledgling; *fledgeling. The first spelling is standard in AmE and BrE alike. The second is a variant spelling. See MUTE E.

Current ratio: 114:1

flee > fled > fled. So inflected. **Fleed* is a solecism—e.g.:

- “Lexington police say Wallace Charles Lanford *fleed* [read *fled*] the prison camp about 8 p.m.” “Man Convicted of Murder Escapes from Davidson Jail,” *News & Record* (Greensboro), 15 Nov. 1995, at BH2.
- “The Worcester Democrat pulled his ticket for the third time and *fleed* [read *fled*] the scene before the Ethics Commission SWAT team could surround him.” Lee Hammel, “Kennedy, Harshbarger Have Experienced Help,” *Telegram & Gaz.* (Worcester), 21 June 1997, at A3.
- “Shortly after, Skelly *fleed* [read *fled*] the island after being suspected of working for the CIA.” Mimi Whitefield, “After Fleeing Fidel, Newsman Ready to Return to Cuba,” *Miami Herald*, 9 June 2015, News §.

See IRREGULAR VERBS.

Readers may occasionally encounter **fleed* as an obsolete past participle not of *flee* but of *flay*—e.g.: “She *fleed* at him, and, to cut a long story short, he owned to having carried off five sack altogether, upon her promising not to persecute him.” Thomas Hardy, *Far from the Madding Crowd* 76 (1905).

LANGUAGE-CHANGE INDEX
**fleed* for *fled*: Stage 1
Current ratio (*he fled* vs. **he fleed*): 5,470:1

fleshly; fleshy. *Fleshly* = (1) bodily, corporeal <the soul’s fleshly counterpart>; (2) carnal, sensual

<fleshy desires>; or (3) worldly, not spiritual <fleshy pleasures>—e.g.: “We cannot fight a *fleshy* appetite by indulging in it.” John Duke, “Addictions Vary, but All Find Help in Program,” *Indianapolis Star*, 27 Jan. 2007, at 2.

Fleshy = (1) resembling flesh <a fleshy pink>; (2) plump <fleshy fingers>; or (3) pulpy, succulent <a fleshy grapefruit>—e.g.: “The scallops . . . were firm, *fleshy*, and bursting with flavor.” Terra Walters, *Capital* (Annapolis), 26 Jan. 2007, Entertainment §, at 2.

Not surprisingly, these terms are susceptible to WORD-SWAPPING—e.g.:

- “Modotti’s technique left her portrait subjects looking so *fleshy* [read *fleshy*] that the prints themselves seem to have skin.” Kenneth Baker, “Southern Exposure,” *S.F. Chron.*, 2 Sept. 2006, at E1.
- “Max Boot . . . does as much as any other writer of recent vintage to bring the *fleshy* [read *fleshy*] reality of warfare back into view.” Paul McLeary, “Why It’s Better to Be Smart than Strong,” *Christian Science Monitor*, 23 Jan. 2007, Features §, at 17.

LANGUAGE-CHANGE INDEX
fleshy misused for *fleshy*: Stage 1

flesh out; flush out. To *flesh out* is to put flesh on bare bones—that is, to move beyond the merest rudiments and to elaborate; to add some nuance and detail. To *flush out* (probably a hunting metaphor) is to bring something into the open light for examination. *Flush out* is sometimes misused for *flesh out*—e.g.: “Both sides say their case was hampered by the disappearance of Anait Zakarian, whom they said they needed to help *flush out* [read *flesh out*] some of the details.” Tina Daunt, “No Release for Victims,” *L.A. Times*, 16 Oct. 1996, at B1.

LANGUAGE-CHANGE INDEX
flush out misused for *flesh out*: Stage 2

fleshy. See **fleshy**.

fleur-de-lis; *fleur-de-lys; *fleur-de-luce. The first has been standard in all varieties of World English since the 18th century. The second and third are variant spellings. The standard plural is *fleurs-de-lis*. Whether singular or plural, the standard pronunciation is /flər-də-lee/.

Current ratio (in order of headwords): 143:59:1

flexible. So spelled—not **flexable*. See -ABLE (A).

flexion; *flection. *Flexion* = (1) the act of bending or flexing; esp., the bending of a joint with flexor muscles; or (2) a bend in something. **Flection* is a NEEDLESS VARIANT that has never been common in any sense. Among American desktop dictionaries, only *W11* and *NOAD* correctly list *flexion* as the main headword for all senses.

Current ratio: 135:1

flied out. See **fly**.

flier; flyer. *Flier* is the standard form in AmE, *flyer* in BrE.

flight attendant. See **stewardess**.

fling > flung > flung. So inflected. **Flinged* is a blunder—e.g.:

- “Ryan would have at least stomped his feet or *flinged* [read *flung*] a clipboard into the air, wouldn’t he?” Bob McManaman, “Where Is Buddy Goat Gruff?” *Ariz. Republic*, 8 Oct. 1995, at E1.
- “Then, he snapped. He had a lackey fetch his diamond-encrusted G-Unit chain, a relic from his time in 50 Cent’s posse. Then Game *flinged* [read *flung*] it out to the 50-yard line, where it fell into the hands of a fan.” Dan Aquilante, “Game for a Fight,” *N.Y. Post*, 7 June 2005, at 48.
- “[T]he sophomore *flinged* [read *flung*] the ball toward the basket and it climbed over the rim as the buzzer sounded.” Robert Burns, “Lincoln Finishes Fourth, Glenwood Sixth at Collinsville,” *State J.-Register* (Springfield, Ill.), 31 Dec. 2005, Sports §, at 9.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX
**flinged* for *flung*: Stage 1
Current ratio (*flung* vs. **flinged*): 5,881:1

flippant; flip, adj. *Flippant* = (1) inappropriately nonserious or disrespectful; pert; or (2) glib, talkative. Sense 2—the older one—has become archaic. *Flip*, a clipped form, is a CASUALISM that is gaining ground on the more traditional word. But as a matter of word frequency, the collocation *flippant remark* appears in modern print sources much more often than *flip remark*.

Current ratio (*flippant remark* vs. *flip remark*): 5:1

***floatation.** See **flotation**.

flock. Although this word has two plurals, *flocks* and *flock*, the first vastly predominates. E.g.: “Longshore has three *flocks* of hens and one flock of toms for people who want 30- to 40-pound birds.” Mike Lafferty, “Turkeys Turn Tail on Cramped Pens,” *Columbus Dispatch*, 24 Nov. 1996, at C1.

floes (= sheets of ice on a body of water [fr. Norw. “flo” = “flat layer”]) should not be confused with *flows*—e.g.:

- “By awarding Pittsburgh’s sole casino license to the North Shore developer, the state’s Gaming board did not put the Penguins on an ice *flow* [read *floe*] and kick them down river.” Gene Collier, “Penguins Will Get What They Want,” *Pitt. Post-Gaz.*, 21 Dec. 2006, at C1.
- “Lengthening and heightening the bridge will allow engineers to place the abutments outside of the normal high water mark, thereby increasing the water flow area and reducing the risk of damage from ice *flows* [read *floes*].” Kevin Miller, “State Panel Supports Replacement of Allagash Waterway Bridge,” *Bangor Daily News*, 5 Jan. 2007, at B8.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “His father used to take him down to the riverfront during the winter months, when the water was still flowing and completely jammed up with ice *flows* [read *floes*].” Mike Jackson, “One Man’s Formula for Success Includes a Life Lesson for All of Us,” *Daily Herald* (Chicago), 11 Jan. 2007, Sports §, at 9.

Of course, when ice actually does flow, as in a melting glacier, that movement is a *flow*—e.g.: “Very deep, beautiful lakes . . . may be the product of something rather ugly. They are a regular feature of ice sheets, but it is only in the last few years that scientists have linked them to the fact that ice *flow* within those sheets appears to be accelerating in response to climate change.” “Greenland Blues,” *New Scientist*, 7 Jan. 2006, at 39.

LANGUAGE-CHANGE INDEX

flows misused for *floes*: Stage 2

Current ratio (*ice floes* vs. **ice flows*): 7:1

flora, like *fauna*, is a singular word with a collective implication. It refers to the plant life in a particular region. The word has two plurals, both rarely used: *floras* and *florae*. The first is standard. See PLURALS (B). Cf. **fauna**.

florilegium (= an anthology) forms the plural *florilegia*—the homegrown **florilegiums* being essentially nonexistent in literary language. The singular is pronounced /flor-i-lee-jee-əm/.

floruit (L. “he or she flourished”) is a learned word meaning “a period during which a person, idea, etc. flourishes.” So rare is the word that it hasn’t achieved its own floruit. Yet it does appear in scholars’ prose—e.g.:

- “We may prefer to read about how things were or seemed to be in the days of our favorite author’s *floruit*, rather than to see them as they are today.” Robert Eisner, “The Lure of Literature,” *N.Y. Times*, 27 Mar. 1994, § 5, at 31.
- “J.M. Edmonds, . . . the ultimate source for most modern versions of Sappho, was so fond of supplementing her fragmentary texts that one disgruntled colleague described him [Edmonds] as ‘the only ancient lyric poet with a twentieth-century *floruit*.’” Peter Green, “Overdue Poetic Justice,” *Wash. Times*, 17 Dec. 1995, at B8.
- “It is generally true, I would judge, that Olympia’s *floruit* as a venue of athletic excellence is reckoned around the sixth to fourth centuries B.C., with the erection of the Temple of Zeus in c. 460 B.C. signaling an apex of Classical decorum.” Nigel Spivey, “Olympia, Olympiads and Olympic Bronze,” *Antiquity*, 1 Dec. 2005, at 956.

The phrase **floruit period* is a REDUNDANCY—e.g.: “The U.S., according to Valladao, is like ancient Rome in its *floruit period* [read *floruit*].” “Hail Mr. President,” *Fin. Times*, 3 Dec. 1996, at 5.

Occasionally the word bears its original Latin sense, often in its abbreviated form (*fl.*)—e.g.:

- “The Greek philosopher Democritus (*floruit* c. 420 B.C.) gets a mention.” “Melancholy Men,” *Sunday Telegraph*, 3 Mar. 1996, Books §, at 14.
- “Euclid . . . *fl.* 300 B.C.; Gr. mathematician: author of a basic work in geometry.” *WNWCD* at 468.

The word is pronounced /flor-yoo-it/.

LANGUAGE-CHANGE INDEX

**floruit period* for *floruit*: Stage 1

flotation; ***floatation**. *Flotation*, the standard spelling, first appeared in the mid-19th century. According to *The Oxford Dictionary of English Etymology* (1966), “the sp. with *flot-* has been adopted to make the word conform to [*flotilla* and *floetsam*], and *rotation*” (p. 364). A more recent work gives a different ETYMOLOGY: “The current spelling appeared . . . probably by influence of French *flottaison*, which was used in technical terms translated into English, such as *ligne de flottaison* line of flotation.” *The Barnhart Dictionary of Etymology* 393 (Robert K. Barnhart ed., 1988). **Floatation* is a variant.

Current ratio: 11:1

FLOTSAM PHRASES just take up space without adding to the meaning of a sentence. So there is usually no reason, when it is clear whose opinion is being expressed, to write *In my opinion* or *It seems to me that*. Other examples are *in terms of*, *on a . . . basis*, *my sense is that*, *in the first instance*, *the fact of the matter*, and *the fact that*. (Admittedly, some of these phrases may be useful in speech.) We have enough written words without these mere space-fillers. See **basis** (A) & **fact** (A), (B).

flounder; **founder**. Both verbs signal failure, but the literal senses—and therefore the images conveyed metaphorically—differ. To *flounder* is to struggle and plunge as if in mud (not, in other words, to fail completely)—e.g.: “Sun Microsystems Inc. yesterday posted its fourth loss in five quarters . . . as the computer market *flounders*.” Chris Gaither, “Sun Posts Loss,” *Boston Globe*, 18 Oct. 2002, at D3. To *founder* is (of a person or animal) to go lame; (of a building) to fall down or give way; (of a horseback rider) to fall to the ground; (of livestock) to become sick from overeating; (of a ship) to fill with water and sink—e.g.: “The show picked up emotional steam in Act 2, when the parallel romances *founder* on the rocks of prejudice and racism.” Harriet Brown, “‘South Pacific’ Takes Audience to Tropical Isle,” *Capital Times* (Madison), 7 Oct. 2002, at D3.

flout. See **flaunt**.

flowed; **flown**. Surprisingly, these words are often confused. *Flowed* is the past tense and past participle of *flow* <the lava flowed to the sea>. *Flown* is the past participle of *fly* <I had just flown to Chicago>. See **fly** & **overflow**.

flows. See **floes**.

fluently; **fluidly**. Both adverbs derive from the same Latin root, *fluere* (= to flow), and both connote grace and elegance. When referring to one’s mastery of a foreign language, *fluently* appears far more often than *fluidly*. The latter word might usefully imply a higher level of mastery than the former—e.g.: “My ability to

speak Khmer *fluently* but not *fluidly* exposed my real identity.” Putsata Reang, “A Search for Home,” *Seattle Times*, 27 July 1999, at E1.

fluid; liquid; gas. Nonscientists often confuse these terms. A *fluid* is any substance that is capable of flowing and that changes shape under pressure; in other words, a fluid is not a solid. Fluids include both liquids and gases. A *liquid* is a fluid that has a fixed volume (such as water or oil). A *gas* is a fluid that can expand indefinitely (such as oxygen or steam). Although these words should be kept distinct in scientific contexts, *fluid* is sometimes used as a loose synonym of *liquid* in nontechnical writing <bodily fluids>.

fluky /floo-kee/ (= [1] uncannily lucky, or [2] constantly changing) has been predominantly so spelled in AmE and BrE alike since the late 19th century. **Flukey* is a variant spelling.

Current ratio: 4:1

fluoride; fluoridation; fluorescent. So spelled. Probably because of one pronunciation of the first syllable (/flohr/), these words are often misspelled with *-ou-* instead of *-uo-* in the first syllable—e.g.:

- “*Flouride* [read *Fluoride*] has been added to the town’s water for the last few years.” Eun Lee Koh, “Manganese Levels Will Be Examined,” *Boston Globe*, 18 Nov. 2001, *Globe West* §, at 1.
- “House Bills 159 and 309 could disrupt the *flouridation* [read *fluoridation*] called for in the November 2000 referendums approved by voters in Salt Lake and Davis counties.” Troy Goodman, “Fluoride Fear Baffles Experts, Spawns Bills,” *Salt Lake Trib.*, 25 Feb. 2002, at C1.
- “A soft *flourescent* [read *fluorescent*] light burns constantly so Lindh’s jailers can always check on him.” Andrew Miga, “Taliban John’s Life Behind Bars,” *Boston Herald*, 24 Mar. 2002, at 1.

In any event, the preferred pronunciations start with /fluur-/.

LANGUAGE-CHANGE INDEX

fluorescent misspelled **flourescent*: Stage 1

flush out. See **flesh out.**

flutist; flautist; fluter. *Flutist* (/floo-tist/), the much older word (dating from the early 17th century), is generally preferred by professional flute players in the United States. It also predominates in modern AmE print sources by a 2-to-1 ratio—and has always been the more prevalent term. The old joke within the profession is that only a second-rate flutist prefers to be called a *flautist* (/flow-tist/ or /flaw-tist/). *Fluter* is an unusual DYSPHEMISM.

But *flautist* predominates in BrE and has done so since about 1880, after British writers began revising the word to make it a GALLICISM.

Current ratio (in World English in order of headwords): 59:35:1

fly > flew > flown. Despite those irregular inflections, in baseball it is standard to say that a player who has hit a *fly ball* (i.e., one hit high into the air) has *flied*—e.g.:

- “After getting a good rip on a 2-and-1 fastball but fouling it off the catcher’s chest protector, Fielder *flied* out to the rightfield warning track.” Rob Parker, “World Series: Yankees vs. Braves,” *Newsday* (N.Y.), 21 Oct. 1996, at A54.
- “Brian McFall led off with a double off third baseman Pope’s glove and took third when John Whittleman *flied* out to right.” Stacy Kaneshiro, “Sharks Squander Opportunities Before Beating Cane Fires, 4–2,” *Honolulu Advertiser*, 20 Oct. 2006, *Sports* §, at D1.
- “With two out and a runner on second in the seventh, Casey missed a chance to extend the Tigers’ lead when he *flied* to right against reliever Tyler Johnson.” Tyler Kepner, “Cardinals Put Tigers on the Brink,” *N.Y. Times*, 27 Oct. 2006, at D1.

Flynn, in like. See **in like Flynn.**

fob off. See **foist (B).**

focus. A. As a Noun. Pl. *focuses* or *foci* (/foh-si/). The plural *foci*—typical in medical and other technical texts—may strike readers as pretentious in ordinary prose. E.g.:

- “A story on teenage smoking had two primary *foci* [more accurately *messages* or *conclusions*], one of which is that white male teens smoke more than black male teens.” “Just Killing Time Now’—Does Anyone Disagree?” *Buffalo News*, 1 Sept. 1996, at M11.
- “[A]t the hotel in which Laure and the narrator stay, the hotelier becomes one of many shifting *foci* for our anti-hero’s obsession . . .” Edie Meidav, “French Lovers on a Road Trip Collide with Beckett’s Novels,” *S.F. Chron.*, 20 Nov. 2007, at E2.

See PLURALS (B). Even so, *foci* is much more common in print sources than the plural *focuses*.

Current ratio (*many foci* vs. *many focuses*): 5:1

B. As a Verb. *Focus* makes *focused* and *focusing* in AmE, *focussed* and *focussing* in BrE. See SPELLING (B).

***foetus.** See **fetus.**

fogy; fogey. This word, a DYSPHEMISM for a more or less elderly person with hidebound ideas, is predominantly spelled *fogy* in AmE, *fogey* in BrE. The ETYMOLOGY of the word is unknown.

foist. A. Preposition with: off vs. on. Traditionally speaking, *foist* takes the preposition *on*—e.g.: “That network has *foisted* innumerable Virtual Celebrities *on* us.” Richard Roeper, “‘The Spot’ Marks a New Batch of Virtual Celebrities,” *Chicago Sun-Times*, 15 Dec. 1996, *Upfront* §, at 2.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

When the phrase is as unidiomatic as **foist with*, a different verb is in order: “An employer *is foisted with* [read *bears the*] responsibility to a third party if his employee commits a tort in the course of his employment.” Stanley Berwin, *The Economist Pocket Lawyer* 231 (1986).

**Foist off on* is awkward and wordy (perhaps influenced by *fob off on*—see (B)). The *OED* quotes Charlotte Brontë as having written **foist off on* but calls the phrase “rare.” It is fairly rare today. It ought to be rarer—e.g.: “We always seem ready to *foist off on* [read *foist on*] young people those things that we don’t wish to do ourselves.” Karen Love, “What’s the Role of Prayer in Public Life?” *Denver Post*, 4 May 1996, at B7.

LANGUAGE-CHANGE INDEX

**foist off on* for *foist on*: Stage 1

Current ratio (*foisted on* vs. **foisted off on*): 24:1

B. And *fob off*. *Foist* shares one sense with *fob off*: “to offer or pass (something) to someone falsely or fraudulently” <lemons foisted on unsuspecting car buyers>. But it should not also take sense 2 of *fob off*: “to trick (someone) with something inferior.” H.W. Fowler summed up the distinction well: “The public can be *fobbed off* with something, or the something can be *fobbed off* on the public; but *foist* has only the second construction” (*FMEU1* at 184). In fact, though, *fob off* is pretty much confined to BrE—e.g.: “Customers are sometimes *fobbed off* with a car [that] does not entirely meet their expectations.” Haig Simonian, “FT Guide to: New Number Plates,” *Fin. Times*, 4 Aug. 1997, at 8.

-FOLD. See **twofold**.

folderol; *falderol. In journalism and other print sources, *folderol*—the preferred spelling—greatly outnumbers **falderol*. The word means either “nonsense” or “a useless trifle.”

Current ratio: 138:1

foliage (= plant leaves collectively) is three syllables /foh-lee-ij/. Like *verbiage*, this word is subject to a syncopated mispronunciation: /foh-lij/. See **verbiage**.

folio. Pl. *folios*. See **PLURALS** (D).

FOLK ETYMOLOGY. See **ETYMOLOGY** (D).

folk(s). This **CASUALISM** has two plurals in **STANDARD ENGLISH**: *folk* <rural folk> and *folks* <folks say>. *Folks* is most commonly synonymous with *relatives*, *relations*, *kinfolks*, or *kinsmen*. Often it takes on a more restricted meaning, referring either to parents <my folks are both in a nursing home> or to one’s immediate family (including siblings) to the exclusion of more distant relatives <Where do all your folks live?>. Context usually supplies some degree of clarity. The term can also refer to people more generally <good evening, folks!> <those folks over there>. Sometimes it is used as the plural of *you* <you folks>. Cf. **y’all**.

follow. See **comply** (B).

following (= after), when used to begin a sentence or clause, often results in a misplaced modifier and a **MIS-CUE**—e.g.: “*Following* [read *After*] lunch, the students came back to the high school and the art students took over.” Sharon Henson Pope, “Teachers Urge Students to Try Art, Creativity,” *St. Louis Post-Dispatch*, 12 Dec. 1994, at 1. The problem, of course, is that some readers might envision a line of hungry students trailing a caterer’s truck.

But even when *following* doesn’t begin the sentence, if it means “after” it can almost always be simplified—e.g.:

- “Javier Colon of Mission Hill and Ramon Peres of Roxbury, both 22, escaped after a ‘routine trip’ to the barber shop building on the grounds *following* [read *after*] breakfast.” Jack Sullivan, “Two Escape Deer Island and Remain at Large,” *Boston Globe*, 1 Jan. 1991, at 23.
- “Mr. Allen also said, in a conversation *following* [read *after*] his speech, that Delta would like to expand . . . when it has the resources.” Lisa Biank Fasig, “Delta’s Allen Defends Local Fare Structure,” *Cincinnati Enquirer*, 16 Nov. 1996, at B16.
- “[Elon] Musk also looks down on holidays, having nearly died from malaria *following* [read *after*] a trip to Brazil and South Africa in 2000.” Jeff Dyer, “Tesla’s Secret Formula,” *Forbes*, 7 Sept. 2015, at 40.

LANGUAGE-CHANGE INDEX

following for *after*: Stage 4

foment, vb., = to incite or rouse <the rebels fomented a revolution>. Although the word was once used as a noun—the *OED* records sparse uses from 1540 to 1892—the corresponding noun has long been *fomentation* (= incitement, instigation). But some writers want to revive *foment* as a noun—e.g.: “In the social *foment* [read *fomentation*] of the 1960s and 1970s, Donahue was a pioneer in discussing both personal and political issues with a largely female audience.” Jane Hall, “At the End of a Long Run, Phil Donahue Looks Back,” *L.A. Times*, 3 May 1996, at F2. Perhaps this poor usage arises from confusion with *ferment* (= agitation). Indeed, *ferment* might be the better edit in the sentence just cited. It certainly seems the better choice in these examples:

- “There hardly could be better circumstances to nurture political *foment* [read *ferment*].” Harry Austin, “Tinder for a Saudi Bomb,” *Chattanooga Times*, 3 July 1996, at A6.
- “A less noble reason is that art has long been the victim of political *foment* [read *ferment*]: The French Revolution and, in particular, the Reign of Terror are appalling cases in point.” Mario Naves, “Middle Age’s Stony Features,” *N.Y. Observer*, 25 Dec. 2006, Culture §, at 18.
- “As this year ends and a new one begins, the role of God among all nations must be acknowledged if there is to be any comprehension of why the world is in such *foment* [read *ferment*] and chaos.” Victoria A. Brownworth, “Faith: Something Worth Fighting For,” *Baltimore Sun*, 31 Dec. 2006, Ideas §, at F7.

Although *fomentation* doesn’t appear frequently, it remains much more common in printed sources than the noun uses of *foment*—e.g.:

- “For decades, extremists on both sides spoiled any hope of Arab acceptance of the Jewish state of Israel with their *fomentation* of hatred and bloodshed.” “Clinton’s Mideast Trip,” *USA Today*, 26 Oct. 1994, at A12.
- “Protest is too often confused by the mainstream with *fomentation* of outright revolution.” Glenn Nelson, “Abdul-Rauf Controversy Showed Hypocrisy of NBA Standards,” *Seattle Times*, 17 Mar. 1996, at D6.

Hence *foment*, as a noun, ought to be considered a NEEDLESS VARIANT.

Foment is invariably transitive. If it doesn’t have an object, choose a different verb—e.g.: “And wherever the expatriates go, instability and civil war *foment* [read *follow*, *fester*, or the like]” “Iraqi Refugee Exodus Another Bush Bonus,” *Palm Springs Post*, 4 Jan. 2007, at A23.

LANGUAGE-CHANGE INDEX

1. *foment* as a noun for *fomentation*: Stage 3
Current ratio (*the fomentation of* vs. **the foment of*): 2:1
2. *foment* for *ferment*: Stage 1
Current ratio (*political ferment* vs. **political foment*): 36:1

fondue (= a dish consisting of melted cheese or other hot liquid into which chunks of food are dipped) is the standard spelling. **Fondu* is a variant.

Current ratio: 9:1

font. Technology has changed the meaning of this term. In the days of hot type, a font was one set of a typeface, in a single size (e.g., 9 point) and style (e.g., bold italic). The advent of phototypesetting allowed characters of different sizes to be made from a single master, as on a filmstrip, and later several styles of the same type family could be carried on the master as well. Computers, of course, can hold many typefaces and many variations of the same family. So today, rather than one size and style of a typeface, *font* most often denotes a whole family of styles that can be printed at almost any size.

fontanelle (= one of several soft spots in a baby’s skull in which bone has not yet formed and hardened) has been the predominant spelling in both AmE and BrE since before 1800. Although some dictionaries (such as *W11*) list the variant spelling **fontanel* as the main headword, it remains but a variant.

Current ratio: 2:1

***food fare**. See **fare (A)**.

foolscap; fool’s cap. *Foolscap* is a size of paper (around 13½ by 17 inches), so called because 17th-century papermakers used a *fool’s cap* as their watermark. A *fool’s cap* is either (1) the hat once worn by court jesters, with three peaks, each tipped with a bell; or (2) the conical hat formerly put on dull pupils or,

notably, on political dissidents in Maoist China. In sense 2, it’s also called a *dunce cap* or *dunce’s cap*.

foot; feet. When you use a number greater than one to denote a distance, use the plural *feet* <a fence ten feet high>, unless the distance is part of a PHRASAL ADJECTIVE <a ten-foot fence>.

foot-and-mouth disease. A. And hoof-and-mouth disease. Although some commentators have erroneously suggested otherwise, *foot-and-mouth disease* has long been the predominant phrase in AmE and BrE alike, as well as the accepted term in veterinary medicine. It is true, however, that *hoof-and-mouth disease* is an Americanism dating from the late 19th century. But this version, despite its stronger claim to logic (since hoofed animals aren’t usually said to have “feet”), never progressed beyond its status as a CASUALISM and a secondary variant. There is also an unrelated childhood condition called “Hand, Foot, and Mouth Disease,” characterized by ulcerated sores in the mouth and rashes on the extremities.

B. Whether to Hyphenate. During the devastating 2001 outbreak of the disease in Europe, five major newspapers and magazines over a two-day period hyphenated the PHRASAL ADJECTIVE, and one didn’t:

- “The Irish Republic yesterday confirmed its first case of *foot-and-mouth disease* in the current outbreak.” John Murray Brown et al., “Foot-and-Mouth in Irish Republic,” *Fin. Times*, 23 Mar. 2001, at 1 (hyphenating in both text and headline).
- “Mr Blair . . . has been concentrating on the *foot and mouth epidemic*.” Keith Harper, “Rail Plans Crippled by Cash Crisis,” *Guardian*, 23 Mar. 2001, at 1.
- “Ministers were forced onto the defensive over their handling of the *foot-and-mouth epidemic* last night.” Philip Webster et al., “Foot and Mouth Epidemic Will Rage Until August,” *Times* (London), 23 Mar. 2001, at 1 (hyphenating throughout the text but not in the headline).
- “The spread of *foot-and-mouth disease* appears to be accelerating.” Marc Champion, “The Grim Reaper: Epidemic Rips into Small U.K. Farmers,” *Wall Street J. Europe*, 23–24 Mar. 2001, at 1.
- “Britain’s *foot-and-mouth epidemic* took an ominous turn Friday.” Tom Buerkle, “Foot-and-Mouth Is ‘Out of Control’ in Britain,” *Int’l Herald Trib.*, 24 Mar. 2001, at 1 (in which the photo caption refers to the *hoof-and-mouth epidemic*).
- “The plague of *foot-and-mouth disease* that has descended on Britain’s farms descended on Conservative Central Office like manna from heaven.” “Pre-Election Fever,” *Economist*, 24 Mar. 2001, at 48.

The *Financial Times* and *The Wall Street Journal Europe* both sensibly hyphenate the phrase in headline and text alike, whereas *The Times* loses nerve and omits the hyphens from its headlines. *The Guardian*, meanwhile, omits hyphens everywhere—even when *foot-and-mouth* appears as a noun phrase, without *disease* or *epidemic* or some other noun following

it—e.g.: “The first case of *foot and mouth* [read, preferably, *foot-and-mouth*] was confirmed yesterday in Co Louth, just south of the border in the [Irish] republic.” Rosie Cowan, “Republic in Shock as Disease Arrives,” *Guardian*, 23 Mar. 2001, at 4.

FOOTNOTES. A. The Good and the Bad. Footnotes are the mark of a scholar. Overabundant, overflowing footnotes are the mark of an insecure scholar—often someone who gets lost in the byways of analysis and who wants to show off. Underinclusive footnotes mark the scholar who (1) wants to write for a popular audience and fears that footnotes will be a turnoff; (2) doesn’t really know the literature in his or her field very well; or (3) doesn’t care to give credit where credit is due.

The difficult thing for any scholarly writer is to achieve a balance. Much depends on the subject matter, the intended audience, and the content of the writing. On the one hand, footnotes are “reminders that scholarship is an intrinsically communal enterprise—building on, revising or replacing the work of predecessors. History as we know it would not exist without source notes. Neither would philosophy, which even at its most original involves a dialogue with thinkers alive and dead.” Kenneth L. Woodward, “In Praise of Footnotes,” *Newsweek*, 9 Sept. 1996, at 75. On the other hand, footnotes can be “the horrid squeakings [that] arise when an author puts a brand new pair of shoes on his brain child. . . . Let all beware of too copious annotation, one of the deadly sins of literature.” Fairfax Downey, “Literary Chiropody,” in *The Modern Writer’s Art* 98 (Theodore J. Gates & Robert E. Galbraith eds., 1936).

Footnotes are generally an excellent place for citations. But discursive footnotes—those that contain substantive discussion—ought generally to be kept to a minimum.

B. Versus Endnotes. Whereas footnotes appear at the foot of the page, endnotes appear at the end of an article, chapter, or book. (Endnotes are often mistakenly called footnotes.) In general, footnotes are easier on the reader than endnotes, which require flipping through pages to locate references. But scholarly journals and books increasingly use endnotes to simplify printing and unclutter pages.

FOR-; FORE-. As you’ll observe in many of the following entries, these prefixes cause a great deal of confusion. You can usually arrive at the correct prefix for any given word by remembering that *fore-* always means “before” <forebears = ancestors>. *For-* may mean either “completely” <forfeit = to lose (something) completely> or “against” <forbear = to refrain (from some action) against one’s inclination>.

for is one of several causal words in the English language, the most prominent others being the subordinating conjunctions *because*, *since*, and *as*. (See **as (A)**.) And because *for* is roughly equivalent to those words, some grammarians have mislabeled it a

subordinating conjunction. But unlike those words, *for* has always been proper at the beginning of an independent clause—e.g.:

- “Perhaps I should feel grateful for the hard work Ms. Smith has put in on my behalf. *For* she certainly has worked very hard indeed.” Brandon Robson, “Shelf Life,” *Independent*, 11 Jan. 1998, at 27.
- “Earlier, Parish had said he was proud and flattered to have his number retired. *For* he always had lived in Bird’s long shadow.” Bill Reynolds, “Green with Pride,” *Providence J.-Bull.*, 19 Jan. 1998, at A1.
- “When placed in a New Zealand market context, the sportiness of the R3 isn’t exactly unique either. *For* sitting in showrooms are a number of similarly focused models.” “Yamaha’s Bantamweight Champ,” *Manawatu Standard* (N.Z.), 28 Aug. 2015, at 21.

The better grammatical view is this: “Because . . . *for* can stand at the beginning of an independent statement or even of a paragraph, it can be classed as a coordinating conjunction.” R.W. Pence & D.W. Emery, *A Grammar of Present-Day English* 124 n.31 (2d ed. 1963).

***fora.** See **forum**.

for all intents and purposes; to all intents and purposes; *for all intensive purposes. The original phrase, dating from the 17th century, is *to all intents and purposes*. The other phrase, with *for* at the outset, is a relative latecomer that cropped up in BrE in the late 19th century and spread to AmE in the mid-20th century. By the 1990s *for* was almost as common as *to* in AmE, whereas *to* retained predominance in BrE. Both forms are used today, *for* being more common in AmE and *to* in BrE—e.g.:

- “Vermeer’s mainly domestic scenes . . . are also, *to all intents and purposes*, priceless.” Nigel Reynolds, “The Drawing Power of Vermeer,” *Daily Telegraph*, 10 June 1996, at 4.
- “It is only when life has, *for all intents and purposes*, already abandoned the patient that Dr. Kevorkian steps in.” Kevin Theis, “Assisted ‘Suicide,’” *Chicago Trib.*, 17 Dec. 1996, at 28.

Either form, though, often qualifies as a FLOTSAM PHRASE.

Because some people mishear the phrase, the MONDEGREEN **for all intensive purposes* has arisen—e.g.:

- “The basic numbers given above will not have changed much—bankers say that imports could be depressed a bit further—and with reserves that are *for all intensive purposes* [read *for all intents and purposes*] negligible there will be a clear payments lump.” Terry Povey, “A Rosier Tint to the Financial Horizon,” *Fin. Times*, 15 Oct. 1984, § III, at v.
- “*For all intensive purposes* [read *For all intents and purposes*], the electrically powered automobile is dead—and they are considered dinosaurs of the past.” Arthus Abrom, “The Forgotten Art of Electric-Powered Automobiles,” in *The Tesla Papers* 89 (David Hatcher Childress ed., 2000).
- “*For all intensive purposes* [read *For all intents and purposes*], the Titans’ Super Bowl dreams ended right there.” Aaron Wilson, “‘Determined’ Mitchell Broke Titan Hearts

with Return,” *Leaf-Chronicle* (Clarksville, Tenn.), 8 Jan. 2001, at C4.

Current ratio (*all intents and purposes* vs. **all intensive purposes*): 191:1

foramen /fə-**ray**-mən/ (= a small opening or perforation, esp. in a bone or plant ovule) predominantly forms the classical plural *foramina*—not **foramens*. See PLURALS (B).

Current ratio: 49:1

for a period of. See **period of**.

forbade; ***forbad**. See **forbid**.

forebear /fohr-**bair**/, v.t.; **forebear** /fohr-**bair**/, n. Though unrelated, these words are confused in every conceivable way. *Forebear*—the verb meaning “to refrain from objecting to; to tolerate”—is inflected *forebear* > *forbore* > *forborne*. But because the inflected forms appear only infrequently, writers sometimes fall into error—e.g.: “A borrower who lives in the home five years after doing the work may have the loan *forebeared* [read *forborne*].” Gary Mayk, “Grants and Loans Available to Buyers,” *Morning Call* (Allentown, Pa.), 28 May 1995, at G1. (See IRREGULAR VERBS.)

Forebear—always a noun—means “ancestor” (usually used in the plural). **Forebearer* is an incorrect form of this noun—e.g.: “Like his *forebearers* [read *forebears*], Joe is community minded and committed to public service.” Marta Adams, “Barrett Has a Commitment to Cheyenne and Wyo.,” *Wyo. Trib.-Eagle* (Cheyenne), 23 July 2002, at A8.

Forebear is occasionally misused for *forebear*—e.g.:

- “You should also be alert for literate members of society in the areas where your *forebears* [read *forebears*] resided.” Lloyd Bockstruck, “Genealogists Owe Debt to South Carolina Record Keeper,” *Dallas Morning News*, 17 Dec. 1994, at C13.
- “The founding fathers of cyberspace . . . , like their *forebears* [read *forebears*], were almost exclusively white, male, middle-aged and privileged.” Peter H. Lewis, “Technology,” *N.Y. Times*, 28 Aug. 1995, at D3.

The opposite error, though less common, also occurs—e.g.:

- “The governor scrupulously *forebore* [read *forbore*] to notice Mark Green in 1986 and could barely conceal his hostility to Robert Abrams in 1992.” Murray Kempton, “Can D’Amato Save Cuomo?” *Newsday* (N.Y.), 26 Oct. 1994, at A16.
- “An agreement was made to *forebear* [read *forbear*] the interest and principal from August 2014 until June 30,

2015.” Stanley Dunlap, “Macon-Bibb Officials Approve Blight Funding Split with a Last-Minute Change,” *Macon Telegraph* (Ga.), 22 July 2015, at 580.

See WORD-SWAPPING.

forbearance. So spelled—not **forebearance*, which is a NONWORD. But some writers blunder—e.g.:

- “But the 1903 National League pennant went to the Pittsburgh Pirates, whose owner, Barney Dreyfuss, greatly appreciated the American League’s *forebearance* [read *forbearance*] in not putting a team in his city.” J. Anthony Lukas, “The Year the World Series Was Canceled,” *N.Y. Times*, 23 Oct. 1994, § 4, at 15.
- “[I]f you don’t pause in the adjoining retail shop and practically fill a suitcase with all sorts of parcels and those familiar red tartan tins of shortcake . . . , you’re showing far more *forebearance* [read *forbearance*] than yours truly.” Joe Crea, “You’re a Loch to Find Castles and Whisky, but a Monster Hunt Will Come Up Empty,” *Plain Dealer* (Cleveland), 25 Feb. 2007, at K6.

LANGUAGE-CHANGE INDEX

**forebearance* for *forbearance*: Stage 1

Current ratio (*forbearance* vs. **forebearance*): 74:1

forbid > **forbade** > **forbidden**. A. Standard Forms.

The past tense is *forbade* (rhyming with *glad*)—e.g.: “[Locke] sharply distinguished the respective spheres of Church and State and *forbade* each from meddling in the other.” Clifford Orwin, “Civility,” 60 *Am. Scholar* 553, 557 (1991). *Forbid* is sometimes wrongly used as a past-tense form—e.g.:

- “Susan has dropped the restraining order that once *forbid* [read *forbade*] him [from making] any contact with her.” Brian Biggane, “Fitzpatrick’s Life Improving, but His Time in Goal Isn’t,” *Palm Beach Post*, 31 Mar. 1995, at C1.
- “He growled at people. He *forbid* [read *forbade*] his broadcasters from referring to the team as the ‘Cubbies.’” Frederick C. Klein, “The Cubs Win? Sometimes Yes, Sometimes No,” *Wall Street J.*, 9 May 1997, at B9.
- “Pythagoras swore off it entirely and *forbid* [read *forbade*] his followers to indulge.” Emily Eakin, “If It’s Funny, You Laugh, but Why?” *N.Y. Times*, 9 Dec. 2000, at A23.

In fact, the slack usage is so common that some dictionaries now list *forbid* as an alternative.

Some writers—no doubt those who pronounce *forbade* correctly—use the variant spelling **forbad*. It was common from about 1660 to 1800. Today it is an ARCHAISM. Avoid it—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The 1967 Age Discrimination in Employment Act . . . *forbad* [read *forbade*] bias based on age.” Judy Foreman, “Workplace Age Bias Rising, but Proving It Can Be a Job,” *Boston Globe*, 31 Jan. 1994, at 25.
- “[Steve] Reina is a member of the Troy Interfaith Group, which held its own National Day of Prayer at Northminster Presbyterian Church after the Christian-only group *forbad* [read *forbade*] non-Christian involvement.” Valerie Olander, “Prayer Day at Center of Council Race,” *Detroit News*, 15 June 2005, at K8.
- “The Constitution *forbad* [read *forbade*] Congress from creating ‘an establishment of religion,’ but this was no mysterious concept known only to deep thinking legal scholars.” Thomas Sowell, “Silly War on Symbols Can Be Prelude to Tragedy,” *Sun-Sentinel* (Ft. Lauderdale), 23 Dec. 2005, at A19.

See IRREGULAR VERBS & **bid** (A).

Meanwhile, the laughable form **forbided* occasionally appears—e.g.: “Gramola told Williams to remove the headphones, originally thinking a PIAA regulation *forbided* [read *forbade*] Williams from taking them into a huddle.” Kevin Freeman, “Williams, Novak to Meet, Hash Out Their Differences,” *Lancaster New Era*, 28 Oct. 1997, at C1.

Finally, *forbade* is often misspelled **forebade*, doubtless through an erroneous sense of ETYMOLOGY. In fact, the *for-* here means “against”; it has nothing to do with *fore-*, meaning “before.” E.g.: “To make matters worse, experts said, PG&E and Edison couldn’t protect themselves from the high prices by entering into long-term contracts because regulations set during deregulation *forebade* [read *forbade*] them.” Mary Fricker, “Experts: Surge in Energy Cost Not Predictable,” *Press Democrat* (Santa Rosa), 18 Jan. 2001, at E1.

B. Preposition with. In formal contexts, *forbid* traditionally takes the preposition *to* or, less formally, *from*. H.W. Fowler stated that *forbid from doing* is unidiomatic (*FMEU1* at 186), but it is increasingly common. In fact, it is probably more common today than *forbid to do*, but both forms appear frequently—e.g.:

- “In exchange, the Government prohibits newspaper vending machines, *forbids* small stores *from selling* papers and gives the union sole right to use the public sidewalks to sell newspapers.” Anthony DePalma, “Despite Gains, Press Freedom in Mexico Is Still Limited,” *N.Y. Times*, 20 Nov. 1994, § 1, at 3.
- “As a condition of bond, judges often *forbid* suspects *from contacting* victims.” Janice Haidet Morse, “Official: Law Has Loopholes,” *Dayton Daily News*, 13 Dec. 1996, at B2.
- “On a 9–0 vote, the court struck down laws in Rhode Island and 10 other states that *forbid* retailers *to advertise* their prices for beer, wine or liquor.” David G. Savage, “Advertisers’ Free-Speech Rights Bolstered,” *L.A. Times*, 14 May 1996, at A1.

- “The rules expressly *forbid* drill sergeants *to have* intimate relationships with their recruits.” Eric Schmitt, “Sex in the Ranks,” *Sacramento Bee*, 24 Nov. 1996, at F1.

Cf. **prohibit**.

forbore; forborne. See **forbear**.

forceable. See **forcible**.

forceps. This is traditionally a singular noun <this forceps isn’t big enough>. But on the mistaken assumption that the word is plural, the word is increasingly joined with a plural verb. The error is old—e.g.: “The *forceps are* [read *is*] compact, *they are* [read *it is*] easy to handle and *have* [read *has*] firm gripping power.” *Surgery, Gynecology and Obstetrics* 662 (F.H. Martin ed., 1915).

The English plural is either *forceps* or *forcepses*. In *The Origin of Species*, Charles Darwin used *forcepses*. The Latin plural is *forcipes* /fɔː-si-peeʒ/, which was fairly common in technical books from 1800 to about 1975.

Since the early 19th century, the BACK-FORMATION **forcep* has occasionally appeared—e.g.:

- “With a considered tug Mr. Shehata soon frees the organ from one of the small holes in the donor’s stomach. He strides swiftly across the theatre, skirting trays of gleaming equipment, with it dangling from a *forcep* [read *forceps*].” “It’s All a Bit More Stressful with a TV Audience,” *Nottingham Evening Post* (U.K.), 25 Nov. 2006, at 12.
- “The resected polyps were retrieved by M-S technique, in which suction, regarded as the leading technique, was taken in combination with channel occlusion, trap, snare, and grasping *forcep* [read *forceps*].” “New Findings Reported from Zhejiang University Describe Advances in Polypectomy,” *Med. Devices & Surgical Tech. Week*, 18 May 2008, at 333.

Cf. **biceps**.

LANGUAGE-CHANGE INDEX

- *forcep* for *forceps* as a singular: Stage 2
Current ratio (*a forceps* vs. **a forcep*): 38:1

forcible; forceable; forceful. Oddly, we have the spellings *enforceable* but *forcible*. (See **enforceable**.) The usual form, *forcible* means “effected by force against resistance”—e.g.:

- “Driving the 4% dip in violent crime through June were drops in homicide, 2%; *forcible* rape, 6%.” Robert Davis, “Random Killings Hit a High,” *USA Today*, 5 Dec. 1994, at A1.
- “Steel insulated or solid core wood doors offer the most resistance to *forcible* entry, provided there are no sidelights.” Linda Syron, “Helpful Ways to Keep Burglars at Bay,” *Toronto Sun*, 15 Dec. 1996, at H10.

Forceable, though it might appear a NEEDLESS VARIANT, carries a passive sense: “capable of being forced” <she tried to coerce him, but he simply wasn’t forceable>.

Because *forcible* properly refers only to physical force, it shouldn’t be used where *forceful* is needed, the latter carrying figurative as well as literal meanings—e.g.: “A Washington Post–ABC News survey of U.S. voters taken Wednesday night confirmed the doubts *forcibly* [read *forcefully*] expressed by a dozen Illinois

voters in a two-hour group interview in this Chicago suburb Monday." David S. Broder & Richard Morin, "Clinton, Bush Score Few Points in Sampling of Nation's Voters," *Houston Chron.*, 20 Mar. 1992, at A3.

forebode misspelled **forbode*: Stage 1
 Current ratio: 44:1

forecast > forecast > forecast. So inflected. **Forecasted* is a solecism that spread during the 20th century and lingers still—e.g.:

- "In July 1996, Cohen *forecasted* [read *forecast*] that the Dow would pass 6000 by Dec. 31, and it did." Richard Wilner, "Goldman Offers 57 Partnerships," *N.Y. Post*, 21 Oct. 1998, at 39.
- "They *forecasted* [read *forecast*] a 14.3% increase in 1998." Shawn Tully, "Stocks May Be Surging Toward an Earnings Chasm," *Fortune Mag.*, 1 Feb. 1999, at 26.
- "Merger speculation and environmental issues aside, many in the industry believe that a *forecasted* [read *forecast*] supply/demand imbalance provides the basis for long-term optimism." Len Boselovic, "Big Coal Taking It on the Chin," *Pitt. Post-Gaz.*, 3 Aug. 2008, at D1.

See **-CAST & IRREGULAR VERBS**.

LANGUAGE-CHANGE INDEX
**forecasted* for past-tense *forecast*: Stage 2
 Current ratio (*forecast that* vs.
**forecasted that*): 9:1

foreclose. **A. Constructions with**. Today, *foreclose* most commonly indicates one or more possibilities <his failure of the exam forecloses the possibility of a promotion>.

In the context of a real-estate foreclosure, the verb is generally intransitive: one *forecloses on* property

or a mortgage. E.g.: "William J. Hedebrand, a man the town took to court in 1984 over a house he built illegally in West Suffield, is now trying to persuade the town not to *foreclose on* his property." Mindy A. Antonio, "Man Offers to Settle Debt He Owes Suffield," *Hartford Courant*, 22 Dec. 1994, at B1.

But the verb was formerly often transitive, so that a sentence like that one would have read, "William J. Hedebrand . . . is now trying to persuade the town not to *foreclose* his property." This usage is infrequent but not unknown—e.g.: "On the following April 10 the Bank instituted an action to *foreclose* its mortgage." Grant Gilmore & Charles L. Black Jr., *The Law of Admiralty* 953 (2d ed. 1975).

Some writers even use **foreclose against*, but *on* is more idiomatic—e.g.: "You can't *foreclose against* [read *on*] my home if you didn't record the mortgage." Robert J. Bruss, "Failure to Record Realty Files Can Be Costly," *Chicago Trib.*, 21 July 1994, at C5.

Foreclose (a person) *from* (an action) is an archaic construction still occasionally used, but the instances are too convoluted to quote. That in itself should serve as adequate warning to avoid it.

B. Misspelled **foreclose*. **Foreclose* is an erroneous form that sometimes appears—e.g.:

- "And both the Norwest Bank and the Federal Land Bank have moved in court to *forclose* [read *foreclose*] on the farm." "Illicit Crop Almost Saved Farm," *N.Y. Times*, 7 Sept. 1988, at A24.
- "Town officials are taking steps to *forclose* [read *foreclose*] on the following property owners . . ." Kim Martineau, "Town Pursues Property of Tax Scofflaws," *Hartford Courant*, 7 Nov. 2002, at B3.

See **FOR-**.

forefathers; founding fathers. Both may denote the founders of the country, but the two shouldn't be combined—e.g.: "What would Washington, Jefferson, Madison and the other *founding forefathers* [read *founding fathers*] say about us today?" Charlie Rea, "The Moral Implications of Tax Cutting," *Roanoke Times*, 30 Jan. 2001, at A11. *Forefathers* is an old-fashioned synonym for *ancestors*; some writers avoid it because of its sexist overtones. (See **SEXISM**.) But *founding fathers* seems unobjectionable and historically accurate in reference to those who participated directly in establishing the U.S. Constitution and the American government. Meanwhile, the term *founders* (often capitalized) is common nowadays; it may denote the founders of anything, such as a town or a corporation.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

foregather; forgather. The latter (meaning “to meet in a group; assemble”) has long been thought to be the standard spelling—as the listings in the *OED* and *W11* attest. In fact, though, in modern print sources, both AmE and BrE, the spelling *foregather* has enjoyed a significant preponderance. (See FOR-.) In any event, though, *gather* usually suffices—e.g.: “On the Greek isle of Skagathos, a gaggle of New Agers *foregather* [read *gather*], booked by Skagathos Holidays to enroll in such courses as Orgasmic Consciousness and Therapy of Fiction Writing.” Nicholas Delbanco, “From D.M. Thomas, a Fine, Funny Novel of the Writing Life,” *Chicago Trib.*, 9 June 1996, Books §, at 9. (On second thought, the quirky word might be appropriate in that particular context.)

forego; forgo. Although a few apologists argue that these words are interchangeable, there’s a distinction worth preserving. True, for over a century (ca. 1800–1900), *forego* was used in all senses. But about 1900 some DIFFERENTIATION emerged—a nuance observed today by fastidious writers. *Forego*, as suggested by the prefix, means “to go before.” *Forgo* means “to do without; pass up voluntarily; waive; renounce.” Cf. **forswear**.

Using *forego* where *forgo* would be better is a persistent problem. Examples of the poor usage are listed—e.g.:

- “That realization not only helped Lavelle’s brother but convinced her to *forego* [read *forgo*] a career as a social worker or psychologist and instead become a teacher.” “Challenged Students Get Special Help,” *L.A. Times*, 11 Apr. 1997, at B2.
- “[T]he beauty of the trees by night, and the rapture of lovers under the stars, these things we shall *forego* [read *forgo*].” Alan Paton, *Cry, the Beloved Country* 72 (2003).
- “But the eye-popping purchase price offered by an investment group called Clipper Equity understandably raises fears that to recoup its investment, Clipper would *forego* [read *forgo*] its subsidies and attempt to raise rents, eventually forcing out many of Starrett’s 14,000 tenants.” “Protecting Affordable Housing,” *N.Y. Times*, 18 Feb. 2007, § 14, at 11.

The opposite mistake—misusing *forgo* for *forego*—is much less common. E.g.:

- “The *forgoing* [read *foregoing*] arguments largely concern comparison of higher taxa.” Theodore H. Bullock, “Comparative Neuroscience Holds Promise for Quiet Revolutions,” *Science*, 3 Aug. 1984, at 473.
- “All of the *forgoing* [read *foregoing*] are contributing factors to [Detroit Rescue Mission Ministries’] current shortfall.” Donald F. DeVos, “Mission Downsizes as Donations Fall Off,” *Detroit News*, 10 Apr. 2002, at S6.

Forwent and *forewent* are the past-tense forms. While *forewent* is hopelessly archaic <they forewent us to the theater>, *forwent* is occasionally useful—e.g.:

- “‘I’m not going to say never to anything,’ said Moulton Patterson, who *forwent* a bid for reelection.” Debra Cano, “Moulton Patterson May Seek Council Seat,” *L.A. Times*, 14 Dec. 1994, at B2.
- “Program director Gregg Roberts suspects the informants who *forwent* their rewards are serving time in prison.”

Trevor Nelson, “Bad Guys Seldom Caught Through Offers of Cash,” *Rocky Mountain News* (Denver), 23 May 1995, at A30.

Forgone and *foregone* are the past-participial forms. *Foregone* is correct in the phrase *foregone conclusion* because the idea is that the conclusion “went before” the question: everybody knew the answer before the question was posed. Naturally, though, blunders arise, even in the writings of those who should know better—e.g.: “[I]t was *forgone* [read *foregone*] that *disinterested* would lose its older sense once *uninterested* lost the sense of ‘having a stake in,’ which we retain only in the fixed phrase *interested party*.” Geoffrey Nunberg, “The Decline of Grammar,” *Atlantic Monthly*, Dec. 1983, at 44. (For more on the usage issue discussed in that sentence, see **disinterest & disinterested**.) Meanwhile, the past participle of *forgo* is *forgone*, without the medial *-e-*: “I would have given a lot for a few columns about what the Flynn years cost Boston in the way of *foregone* [read *forgone*] opportunities.” David Warsh, “In Sight of Milton,” *Boston Globe*, 26 Oct. 1993, at 37. See FOR-.

LANGUAGE-CHANGE INDEX

1. *forego* misused for *forgo*: Stage 4
Current ratio (*forego the opportunity* vs. **forego the opportunity*): 1:1
2. *forgoing* misused for *foregoing*: Stage 1
Current ratio (*the foregoing* vs. **the foregoing*): 101:1

forehead traditionally rhymes with *horrid*, as in the nursery rhyme: “There was a little girl, who had a little curl / Right in the middle of her forehead; / When she was good, she was very, very good, / But when she was bad she was horrid.” But in AmE, the word is commonly (and acceptably) pronounced /**for**-hed/.

foreign language; second language. There are connotative differences. A *foreign language* is learned mostly for the cultural insight it may provide. A *second language* is learned mostly for utilitarian purposes.

In technical usage, a *foreign language* is one you learn so that you can communicate with foreigners; a *second language* is one you learn so that you can communicate with people in the country where you live. People living in the U.S. who speak either English or Spanish may learn the other as a *second language*. But if the same people learned German or Urdu, for example, they would probably learn it as a *foreign language*.

forejudge. There are two words spelled this way. The first is a NEEDLESS VARIANT of *prejudge*. It’s sometimes misspelled *forjudge*. See **prejudge**.

The second, deriving from Middle English *forjuggen* (“to judge outside”), is an unetymologically spelled variant of an ARCHAISM. It should be *forjudge* because it means “to expel or dispossess by judicial decree.” But the *OED* shows that *forejudge*, with an *-e-*, has been used with this legal meaning since the late 16th century. In any event, the term is quite rare in this sense. When the word is needed, *forjudge* is the better spelling. See FOR-.

foreman. A. Generally. In the sense “a person in charge of a group of workers” <the foreman on the docks>, *foreman* dates from the 16th century. But pressure is afoot to find gender-neutral alternatives, and the words *supervisor*, *chief*, and *leader* seem to be the most likely candidates. See **SEXISM** (C).

B. Legal Sense. Of the three choices—*foreman*, *foreperson*, and *presiding juror*—the best is the last. E.g.: “‘We are working diligently,’ the *presiding juror* concluded in the message.” George Flynn, “Turner Jury Eyes Secret Service Probe,” *Houston Chron.*, 11 Oct. 1996, at 33. The word *foreperson*, though one word, is less satisfactory because it uses the *-person* suffix. (See **SEXISM** (C).) Yet that form is, for the time being, ensconced in federal procedural rules and may be difficult to oust.

It’s mildly surprising to see *foreman* and *foreperson* being used together for purposes of **INELEGANT VARIATION**—e.g.: “And since the *foreperson* is the single most influential person on a jury, lawyers will do anything to keep good *foreman* material off.” Robin T. Lakoff, *Talking Power: The Politics of Language in Our Lives* 114–15 (1990). (On the use of *single most* in that sentence, see **single most**.)

Current ratio (*foreman of the jury* vs. *presiding juror*): 2:1

forename. For the meaning of this term, see the discussion at **surname**.

***foresake.** See **forsake**.

foreseeable is occasionally misspelled **forseeable*—e.g.:

- “The rest of the county’s working farmland is up-county, protected, for the *foreseeable* [read *forseeable*] future, by zoning that prohibits dense development.” Frank Ahrens, “The Sun Sets on a Fertile Crescent,” *Wash. Post*, 25 Nov. 1996, at C1.
- “The subprime mortgage market collapse just might give private-equity titan Cerberus a headache for the *foreseeable* [read *forseeable*] future.” Roddy Boyd, “GMAC’s Subprime State May Hurt Creditors,” *N.Y. Post*, 5 Mar. 2007, at 31.

See **FOR-**.

LANGUAGE-CHANGE INDEX
foreseeable misspelled **forseeable*: Stage 1
Current ratio: 150:1

foreshorten (= to shorten lines for rendering three-dimensional perspective in two dimensions) dates from the Renaissance and is best left in the field of art—e.g.: “Even Titian does not *foreshorten* his boughs rightly.” John Ruskin, *The Works of John Ruskin* 71 (1887). Otherwise, it adds nothing but a syllable to *shorten*—“But scrawled within [the genome] are clues about our future, which can be downright terrifying. Rather than expand our sense of possibilities, they *foreshorten* [read *shorten*] them. . . . From our genes,

we learn how we may die.” Jennifer Senior, “Chronicle of a Death Foretold,” *N.Y. Times*, 11 May 2008, Book Rev. §, at 28.

forestall; forestal(l)ment. Although the predominant verb is *forestall* in AmE and BrE alike, the standard noun is *forestallment* in AmE but *forestalment* in BrE.
Current ratio (*forestall* vs. **forestal*): 42:1

forever. One word. The *OED* suggests a distinction—the solid *forever* meaning “incessantly” <she’s forever twirling her hair> and the two-word **for ever* meaning “for all future time” <we’ll be together for ever>. But the solidified version has become standard in both AmE and BrE, and the two-word version is best described as archaic.

forewent. See **forego**.

foreword (= a book’s introduction, esp. one written by someone other than the author) is often misspelled like its homophone, *forward*—e.g.:

- “In his *forward* [read *foreword*] to Delgado’s book, Andrew Hacker defends the storytelling movement.” Jeffrey Rosen, “The Bloods and the Crits,” *New Republic*, 9 Dec. 1996, at 27.
- “In his *forward* [read *foreword*] to the book, Alexander Woollcott describes him as ‘the most notable city editor of his time,’ endlessly fascinated by ‘the changeless and ever-changing Baghdad which is the territory of his staff.’” “Mythic City Editor Is Brought Back to Life,” *N.Y. Times*, 18 Oct. 1999, at C18.
- “In the *forward* [read *foreword*] to his book, [José] Cisneros writes that the first Spanish horses were responsible for bringing civilization to our continent and that he considers it his mission to ‘follow their hoofprints along and across the land’” Gary Cartwright, “Pasó por Aquí,” *Texas Monthly*, Dec. 2006, at 182.

See **FOR-**. Cf. **preface**.

formality; formalism. These words are quite distinct. *Formality* denotes (1) conformity to rules or customs; (2) strict precision in manners; or (3) an obligatory step in a process. *Formalism*, by contrast, denotes strict adherence to traditional or prescribed forms, especially without regard to substantive import. The

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

word is generally pejorative—e.g.: “[Cinematographer Wally] Pfister and director Christopher Nolan used an unfettered camera to help them defy the stuffy *formalism* associated with period pieces and suggest contemporary parallels to their tale of Victorian-era illusions.” Sheigh Crabtree, “A Year of Some Dark Movie Magic,” *L.A. Times*, 18 Feb. 2007, Sunday Cal. §, at E6. *Formalism* also refers to various schools of thought or style, as in mathematics, art, architecture, and literature.

The corresponding adjective, *formalistic*, carries perhaps even more strongly negative connotations than *formalism*—e.g.:

- “Her colleague Rose Rosengard Subotnik blames Schoenberg for the whole notion of contemporary music as an unpopular, *formalistic*, not to say academic, pursuit, removed from society and powerless to change it.” David Schiff, “Schoenberg, Alive (Gasp!) and Well,” *N.Y. Times*, 16 Jan. 1994, § 2, at 25.
- “He accuses the courts of a *formalistic*, almost ritualistic, application of rules.” Earl E. Shamwell Jr., “In Pursuit of Justice,” *Conn. Law Trib.*, 1 Apr. 1996, at 43.
- “Current law affords the able-bodied a right that is denied to some disabled people, namely the right to kill themselves, . . . based on a *formalistic* moral distinction, between killing yourself and someone else killing you on your behalf, that is meaningless in practical terms.” Andrew Coyne, “If Euthanasia Is a Right, Why Not for All?,” *Nat'l Post (Can.)*, 18 Oct. 2014, at A4.

For other words susceptible to confusion with *formalistic*, see **formulaic**.

formally. See **formerly**.

FORMAL WORDS are those occupying an elevated level of diction. The English language has several levels of diction, and it frequently has synonyms existing on the different levels. So *residence* is formal, *house* is the ordinary word, and *digs* (or *pad* or *crib*) is **SLANG**. Likewise, *proceed* is formal, *go* is ordinary, and *head on over* is slang.

In written AmE, the unfortunate tendency has long been to reach for the formal word that is widely known. So writers steer away from **SESQUIPEDALITY** but choose pomposities that everyone recognizes. That's what leads people to write (or occasionally say) *be of assistance* instead of *help*, *attire* instead of *clothes*, *inebriated* instead of *drunk*. Early in the 19th century, the novelist James Fenimore Cooper worried that “the love of turgid expressions is gaining ground, and ought to be corrected.” “On Language,” in *The American Democrat* 117–24 (1838) (repr. in *A Language for Writers* 110, 113 [James R. Gaskin & Jack Suberman eds., 1966]). For stylists, that worry is perpetual, as each generation becomes enamored of its own brands of linguistic inflation: **DOUBLESPEAK**, **OFFICIALESE**, and the like.

The problem with formal words is that they are symptomatic of those stylistic disturbances. One way or another, they lead to stuffiness—the great fault in modern writing: “For most people . . . in most situations, in the writing of everyday serious expository prose, it is the Stuffy voice that gets in the way. The

reason it gets in the way, I submit, is that the writer is scared. If this is an age of anxiety, one way we react to our anxiety is to withdraw into omniscient and multi-syllabic detachment where nobody can get us.” Walker Gibson, *Tough, Sweet & Stuffy* 107 (1966).

In the left-hand column below are some of the chief symptoms—not in every context, of course, but whenever the terms in the right-hand column would do:

Formal Word	Ordinary Word

request, vb.	ask
retain	keep
secure	get
subsequently	later, afterward
subsequent to	after
sufficient	enough
summon	send for, call
terminate	end
utilize	use

format, v.t., makes *formatted* and *formatting* in both AmE and BrE. See SPELLING (B).

formative; formidable. *Formative* (= of, relating to, or involving development) is unrelated to *formidable* (= inspiring fear or awe; hard to overcome). Yet the second word is occasionally misused for the first in the phrase *formative years*—e.g.:

- “Do you really think a day-care center can do a better job of loving and caring for your children in their *formidable* [read *formative*] years?” Edward V. Golden, “U.S. Shouldn’t Subsidize Child-Care Responsibilities,” *Times Union* (Albany), 29 Jan. 1998, at A10.
- “Duncan’s Spurs career, still in its *formidable* [read *formative*] years, is rich in background already.” Brent Zwerneman, “Silver, Black Suit Duncan,” *San Antonio Express-News*, 10 July 2000, at C10.
- “He became a member of James Brown’s ultra-hip, ever funky J.B.’s back in 1964. . . . During the course of the conversation, Parker touched upon his *formidable* [read *formative*] years with Brown.” Ian D’Giff, “Q&A Maceo Parker,” *J. News* (Westchester Co., N.Y.), 6 June 2002, at G31.

See **formidable** & WORD-SWAPPING.

LANGUAGE-CHANGE INDEX
formidable misused for *formative*: Stage 1

former; latter. A. Application. If these terms are to be used at all (and it’s often best to abstain), they should apply only to a series of two. The *former* is the first of two, the *latter* the second of two. In contexts with more than two elements, *first* should be used rather than *former*, *last* rather than *latter*.

Former and *latter* can bewilder the reader when coupled with numbers—e.g.: “The *former* are liberals first and Catholics second, the *latter* Catholics first, liberals second.” David R. Carlin Jr., “A Liberal Catholic Taxonomy,” *Commonweal*, 22 Sept. 1995, at 8. (A possible revision, based on the fuller text: *Catholic liberals are liberals first and Catholics second; liberal Catholics are Catholics first and liberals second*. There is, by the way, a certain irony in the revision: what is described as *first* is the second word, and what is described as *second* is actually the first. The point is

that the noun in each phrase [*Catholic liberal* vs. *liberal Catholic*] is the more important word.)

B. Misapplication. Sometimes otherwise brilliant writers get confused with *former* and *latter* and then misapply one term or the other—e.g.: “Thus, if for some special reason, X has contracted with Y to go on the *former’s* [read *latter’s*] own land, it is obvious that X has, as regards Y, both the privilege of entering and the duty of entering.” Wesley Newcomb Hohfeld, *Fundamental Legal Conceptions* 39 (1919; repr. 1946).

LANGUAGE-CHANGE INDEX
former misused for *latter*: Stage 1

C. Latter without former. May one have a *latter* without an explicit *former*? Yes, as long as there are two identifiable elements. For a similar problem, see **on the other hand**.

***former alumnus, etc.** See **alumnus** (B).

formerly; formally. *Formerly* (= once, at a time in the past) is sometimes confounded with *formally* (= [1] by authorized sanction; or [2] based on form rather than substance). Doubtless the blunder results from the similar pronunciations—e.g.:

- “Roger Westwell, *formally* [read *formerly*] chief accountant for Nadin Contracting, has now been promoted to financial controller of the company.” “Mining People,” *Mining Mag.*, Dec. 1989, at 543.
- “The Sheriff’s Office *formally* [read *formerly*] had used for its rolling station a converted bread truck and a county hand-me-down bookmobile.” “Playback,” *Herald-Sun* (Durham, N.C.), 8 Sept. 2002, at C3.

LANGUAGE-CHANGE INDEX
formally misused for *formerly*: Stage 1
Current ratio (*was formerly the case* vs. **was formally the case*): 105:1

***former veteran.** See **veteran**.

formidable is preferably pronounced /fɔr-mə-də-bəl/, not /for-mid-ə-bəl/. See **formative**.

formula. Pl. *formulas* or *formulae* /fɔrm-yə-lee/. The native plural, ending in -s, predominates in all but scientific writing—e.g.: “Their appearances, after all, are mostly ceremonial, and they are expected to mouth empty and generally comforting *formulae* [read *formulas*].” Richard Mitchell, *Less than Words Can Say* 77 (1979). See PLURALS (B).

formulaic; formulistic; formalistic. *Formulaic* = of, relating to, following, or constituting a formula. *Formulistic* = fond of formulas. *Formalistic* = adhering unduly to form without regard to substance.

fornication. See **adultery** (A).

forsake > forsook > forsaken. So inflected. **Forsaked* is a solecism that has never had currency—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Lawrence . . . *forsaked* [read *forsook*] his love of classical piano for the wild blue yonder.” James Hill, “1st Black Astronaut Added to Space Hero Roster,” *Chicago Trib.*, 27 Oct. 1997, at 1.
- “Taking up the sport [soccer] at age 5, he frequently *forsaked* [read *forsook*] the pleasurable vices of most teenagers to work on his game.” Michael Lewis, “Ford Drives UNCW,” *Morning Star* (Wilmington, N.C.), 10 Nov. 1998, at C1.
- “Katz, a first-team all-Hillsborough County pick at Brandon High in 1997, *forsaked* [read *forsook*] a full scholarship at Southern Wesleyan to play close to home and friends at Tampa.” Brant James, “Local Connection Is Paying Off for Tampa Series,” *St. Petersburg Times*, 13 Apr. 2000, at C12.

Forsake is sometimes corrupted into **foresake*—e.g.: “It *foresakes* [read *forsakes*] the rounded look of the previous Camry for a crisper, squarer silhouette.” James R. Healey, “Moving Target Toyota Aims at No. 1 Spot,” *USA Today*, 25 Sept. 1996, at B1. See FOR- & IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

1. **forsaked* for *forsook*: Stage 1
Current ratio (*forsook* vs. **forsaked*): 1,434:1
2. **foresake* for *forsake*: Stage 1
Current ratio (*forsake* vs. **foresake*): 615:1

***forseeable**. See **foreseeable**.

for sure (= certain, certainly) is a colloquial idiom that dates back to the 17th century and persists as a CASUALISM <Am I going? For sure.>. The phrase grew staggeringly in popularity during the 20th century.

forswear (= to renounce; pledge to give up) is sometimes misspelled **foreswear*—e.g.:

- “In threatening a trade war, the administration also undercut the fledgling World Trade Organization and the principles that nations *foreswear* [read *forswear*] tariffs as weapons and play by the same rules.” John Talton, “It’s Too Soon to Celebrate Trade Pact,” *Cincinnati Enquirer*, 29 June 1995, at B11.
- “By the same token, Israel should be asked to *foreswear* [read *forswear*] future persecution of Lebanese civilians.” “The Enemies of Lebanon’s People,” *Boston Globe*, 19 Apr. 1996, at 18.
- “He proposed a chivalrous code of conduct for outer space security that essentially asks all capable militaries to voluntarily *foreswear* [read *forswear*] making space a shooting gallery.” John Siebert, “Outer Space Warfare and Metaphor Drag,” *Ploughshares Monitor*, Summer 2015, at 14.

If **foreswear* were a proper word, it might mean “to swear before,” since the prefix *fore-* denotes a previous time. See FOR-. Cf. **forego**.

LANGUAGE-CHANGE INDEX

- forswear* misspelled **foreswear*: Stage 2
Current ratio: 8:1

forte (= a person’s strong point) has long been thought to be preferably pronounced with one syllable, like *fort*. That’s because the word is originally French (in which *fort* means “strong,” corruptly made with a feminine *-e* suffix) and is so pronounced. But most

speakers of AmE use the two-syllable version (/for-tay/), probably under the influence of the Italian *forte*, a two-syllable word referring to a musical notation to play or sing loudly. Though it might have been nice to keep the two words separate in pronunciation, that hasn’t happened—and the two-syllable version can no longer be condemned. What can be condemned is the pretentious pronunciation /for-tay/ and the occasional use of an acute accent on the *-e*.

LANGUAGE-CHANGE INDEX

forte (= strong point) as two syllables: Stage 5

for the duration of is reducible to *during* or *throughout*—e.g.:

- “For all practical purposes, Oscar-winning Walter Matthau became Albert Einstein *for the three-month duration of the filming* [read *during the three-month filming*] of ‘I.Q.’” Joyce J. Persico, “The Eyes Had It for Matthau,” *S.F. Examiner*, 24 Dec. 1994, at C1.
- “Treasury prices opened firmer Monday morning and remained in positive territory *for the duration of* [read *during* or *throughout*] the session.” Niamh Ring, “Trading Grinds to a Near Halt as ‘Bored’ Players Ready for Holiday,” *Bond Buyer*, 26 Dec. 1996, at 1.

for the purpose of [+ vb. + -ing]. This construction signals wordiness—e.g.:

- “Elections Board lawyer George Dunst said the board could agree with the group’s argument that because it was created solely *for the purpose of boosting* [read *to boost*] voter turnout, what it does and who gives to it can remain secret.” Steven Walters, “Court Race Defends Its Anonymity,” *Milwaukee J. Sentinel*, 13 July 1997, at 5.
- “And if you’re doing it only *for the purpose of selling* [read *to sell*] your house more quickly, yes, you should avoid over-improving.” Ruth Hepner, “Pick Improvements to Make Home Nicer for You,” *Wash. Times*, 1 Aug. 1997, at F2.

for the reason that. See **because (D)** & **reason why**.

fortitude refers to inner strength, willpower, and courage. Yet writers often seem to use it in reference to physical strength, stamina, or endurance—e.g.: “Talk-show host David Brudnoy showed off his physical *fortitude* [read *prowess*], bearhugging a reporter and lifting her off the floor.” Susan Bickelhaupt, “Neely’s New Shtick,” *Boston Globe*, 20 Sept. 1996, at D2.

LANGUAGE-CHANGE INDEX

fortitude in the sense “physical strength”: Stage 3

fortuitous, strictly speaking, means “occurring by chance,” not “fortunate.” The traditional sense remains fairly strong—e.g.:

- “Unless the victim dies, the law cannot assume that the transgressor really meant to kill—even though whether the victim lives or dies might be entirely *fortuitous*.” Jerome H. Skolnick, “A Capital Offense Spared by Luck?” *L.A. Times*, 27 Aug. 1993, at B7.
- “He began his career with a *fortuitous* meeting and handshake with his brother, William C. Liedtke Jr., whom he encountered by chance on the South Pacific island of Saipan during the war. They decided that if they survived the war, they would start an independent oil and gas business.” “J. Hugh Liedtke” (obit.), *Tulsa World*, 1 Apr. 2003, at A12.

See **aleatory**.

Meanwhile, of course, the word is commonly misused for *fortunate*, in itself a very unfortunate thing—e.g.:

- “My choice of Leeds University was quite *fortuitous* [read *lucky* or *fortunate*]. A few weeks before the university session was scheduled to begin, I was given a scholarship to study in England.” Wole Soyinka, “Yoruban Astrophysics,” *Wash. Post*, 9 Apr. 1995, at C3.
- “That Smoltz would be so *fortuitous* [read *fortunate* or *lucky*] is something of a good howl in itself, given all the cruel twists in his career.” Tom Verducci, “Eye Opener,” *Sports Illustrated*, 10 June 1996, at 46.
- “Keeping home and business under one roof is a constant challenge for Coover. Perhaps the *most fortuitous* [read *most fortunate* or *best*] feature of the house is a full-length staircase between the second and third floors, which physically separates the living and work areas.” Alvin Rosenbaum, “The Balancing Act,” *Home Office Computing*, Dec. 1996, at 62.

In the phrases **fortuitous accident* and **fortuitous coincidence*, the word *fortuitous* bears the right sense but is redundant: every accident or coincidence is fortuitous. Writers using those phrases, though, almost invariably mean “fortunate” or “lucky”—e.g.:

- “Without that *fortuitous accident* [read *lucky accident*] of layout, even Conran’s space might have stayed empty.” Claudia H. Deutsch, “The Shops at Citicorp Center,” *N.Y. Times*, 16 June 1996, § 9, at 10.
- “By a *fortuitous coincidence* [read *fortunate coincidence*] that allows a unique movement-by-movement comparison, Pittsburgh Symphony’s incoming music director, Mariss Jansons, has recorded a Sibelius disc released simultaneously with Maazel’s completion of his third Sibelius cycle.” Robert Croan, “Two Perspectives on Sibelius,” *Pitt. Post-Gaz.*, 1 Sept. 1996, at F9.

Fortuity is the seldom-seen noun corresponding to *fortuitous* (usually in the strict sense)—e.g.: “Voters tend to be more straightforward, rewarding presidents who, whether by *fortuity* or by design, happen to be in office when the public’s pocketful swells.” John Liscio, “History, and Hard Numbers, Favor Bill Clinton,” *Commercial Appeal* (Memphis), 18 Aug. 1996, at C1. *Fortuitousness*, which emphasizes the quality as opposed to the state of being fortuitous, is also rare.

LANGUAGE-CHANGE INDEX
fortuitous misused for *fortunate*: Stage 3

fortunately. See SENTENCE ADVERBS.

Fort Worthian; ***Fort Worther**. The first is the standard term for someone who hails from or lives in Fort Worth, Texas. The second is a fairly uncommon equivalent. See DENIZEN LABELS.

forum. The standard plural *forums* has predominated in AmE since the early 1930s and in BrE since the

mid-1970s. Although **fora* was prevalent in earlier periods, it is now a pedantic ARCHAISM—e.g.:

- “Their various *forums* unite hobbyists.” Tom Foremski, “Selecting Online Services,” *Fin. Times*, 3 Dec. 1997, at 4.
- “Even so, the debate over bigness—and how big is too big for corporate entities—continues in many different *forums*.” Tom Petrino, “Your Money,” *L.A. Times*, 7 Dec. 1997, at D1.
- “His presence at conventions and other public *fora* [read *forums*] honors it still.” David A. Mittell Jr., “Governors We Have Known,” *Providence J.-Bull.*, 15 June 2006, at B5 (referring to former Massachusetts Governor Michael Dukakis).

But some writers, especially in political science and law, persist in using the Latinate plural. See PLURALS (B).

Current ratio (*forums* vs. **fora*): 4:1

forward; ***forwards**. *Forward* is the usual form in both AmE and BrE. See DIRECTIONAL WORDS (A).

Current ratio: 29:1

forwent. See **forego**.

founder. See **flounder** & **forefathers**.

founding fathers. See **forefathers**.

fourth estate (= the journalistic profession; the news media) was coined as a jocular extension of the three estates of the (English) Realm. These “estates” represented social classes that were traditionally considered to have specific and distinct political powers. The English estates were (1) Lords Spiritual, (2) Lords Temporal, and (3) the Commons. (In France, the three analogous estates were [1] the clergy, [2] the nobles, and [3] the commons.)

Today, of course, this system of classifying estates is obsolete, but the term *fourth estate* is still commonly used, especially to indicate the media’s extraordinary influence on politics—e.g.:

- “But now journalists make more than the people they are covering, and the *fourth estate* has become a conservative elite.” “Culture, Et Cetera,” *Wash. Times*, 31 Dec. 1996, at A2 (quoting John F. Kennedy Jr.).
- “Don’t stop reading. This isn’t just another journalist spouting off about the public’s right to know or the role of the *fourth estate*.” Mickie Valente, “What This Verdict May Mean to You,” *Tampa Trib.*, 23 Jan. 1997, Bus. & Fin. §, at 1.

foyer. The best pronunciation for this word is /**foy**-ər/, not the affected /**foy**-ay/ or the Frenchified and old-fashioned /fwah-yay/.

fracas (= a noisy fight; brawl) is pronounced /**fray**-kəs/ in AmE and /**frak**-ah/ in BrE. Pl. *fracases*.

fractious. See **factional**.

***fraenum**. See **frenum**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

fragile; frangible; friable. *Fragile*, the most common term, means “delicate, brittle” <a fragile vase> <a fragile ego>. *Frangible* means “breakable” but doesn’t necessarily imply inherent weakness <frangible bones>. *Friable* means “crumbly” <friable asbestos>. See **friable**.

FRAGMENTS, SENTENCE. See INCOMPLETE SENTENCES.

fragrant. For a humorous MALAPROPISM, see **flagrant**.

framable. So spelled—not **frameable*. See MUTE E.

frambesia; framboesia. The technical term for the tropical skin disease known also as *yaws* is *frambesia* in AmE, *framboesia* in BrE. Both are pronounced /fram-**bee**-zhee-ə/ or /fram-**bee**-zhə/.

franchisor; *franchiser. **Franchiser* was long the preferred form for the word denoting the holder of a franchise. It predates *franchisor* by about 120 years—the *-or* spelling dating only from the 1960s. But today the *-er* form is ambiguous: it may denote the granter of a franchise or the holder of one, as here: “Regulators also emphasize that before potential investors write any checks, they need to read and be sure they understand the disclosure documents—called Uniform Franchise Offering Circulars—that *franchisers* are required to file in certain states.” Richard Gibson, “Have I Got a Franchise Opportunity for You!” *Chicago Trib.*, 22 May 2007, Small Bus. §, at 6.

Perhaps because of that ambiguity, *franchisor* is about ten times as common as **franchiser* in law, and about eight times as common in modern print sources. It has won the fight in our fast-food nation—and has won the franchise as the newly preferred spelling.

LANGUAGE-CHANGE INDEX
franchisor: Stage 5

frangible. See **fragile**.

frangipani /fran-ji-pan-ee/ (= [1] a tropical American shrub; [2] a perfume obtained from the shrub’s flowers; or [3] an almond-flavored tart or custard) is the standard spelling. **Frangipane* and **frangipanni* are variants.

Current ratio (*frangipani* vs. **frangipane* vs. **frangipanni*): 30:4:1

Frankenstein. In Mary W. Shelley’s novel *Frankenstein* (1818), Dr. Victor Frankenstein creates a gruesome creature that eventually kills the doctor’s brother and sister-in-law, and tries but fails to kill the doctor before ending its own life. Strictly speaking, then, a *Frankenstein* (usually capitalized) is a creator of a monster or other destructive agency, while a *Frankenstein’s monster* is either a monster that turns on its creator or a destructive agency that cannot be controlled.

But popular usage has created a monster of its own: *Frankenstein* has come to refer to the creature itself. Today this ubiquitous usage must be accepted as standard—e.g.:

- “A visit to ‘Bordello of Blood’ is like a date with *Frankenstein* on Prozac: It’s a bloated, lumbering, bloody bore.” Rick Holter, “‘Bordello’ Merely Rolls Over and Goes to Sleep,” *Dallas Morning News*, 16 Aug. 1996, at C5.
- “I freaked out in the hospital when I saw myself. I looked like *Frankenstein* . . . They cut your legs and your chest.” Tom Roland, “Truth and Consequences: K.T. Oslin Wouldn’t Have It Any Other Way,” *Tennessean*, 18 Jan. 1997, at D1 (quoting K.T. Oslin).

LANGUAGE-CHANGE INDEX

Frankenstein in reference to a monster: Stage 5

frantically—so spelled—is fairly often wrongly made **frantically*, probably because the *-al-* is not pronounced. E.g.:

- “U.S. Park Police said two officers spotted a man waving his arms *frantically* [read *frantically*] and pulled over, but the baby was born before they made it to the truck.” “Baby Arrives on Parkway,” *Wash. Post*, 13 May 1997, at B8.
- “‘This is so much fun, and it’s all about tradition and getting everyone out here together,’ Leverton said moments before he began *frantically* [read *frantically*] dancing circles with a group of four children.” Geoff Grammar, “Lighting the Menorah,” *Santa Fe New Mexican*, 30 Nov. 2002, at B1.

See -IC.

LANGUAGE-CHANGE INDEX

frantically misspelled **frantically*: Stage 1

Current ratio: 94:1

fraternal. This word means “brotherly,” with one exception: twins that develop from separate ova are *fraternal* regardless of their sex—e.g.:

- “Our daughter has 3-year-old *fraternal* twin girls.” Letter to Dr. T. Berry Brazelton, “Adult Shares Memories of Ending a ‘Babyish’ Comfort,” *Times Union* (Albany), 5 Sept. 2007, at E2.
- “Shavon [Miles], a *fraternal* twin, was born March 10, 1994. Within months, she and her brother were in the hospital, where doctors determined that the twins had internal injuries and were blind from being shaken.” Ofelia Casillas, “Girl’s Abuse Was Hinted Early On,” *Chicago Trib.*, 17 Sept. 2007, News §, at 1.

fratricide (= [1] the killing of one’s brother, or [2] someone who kills his or her own brother) has been conscripted by the military to denote (1) the accidental or intentional killing of one’s brother- or sister-in-arms, also known as *friendly fire*; or (2) the detonation or disablement of one nuclear warhead by the explosion of another missile aimed at the same target. See -CIDE.

fraudulent; *fraudful; *defraudulent. The last two are NEEDLESS VARIANTS.

Current ratio (*fraudulent* vs. **fraudful*): 507:1

fraught. A. Generally. *Fraught* (= laden, equipped) typically takes *with* in an ominous statement <a statement fraught with doubt>. While in the original sense a ship might be *fraught* with riches or democracy *fraught* with blessings (to use two phrases quoted in

the *OED*), today *fraught with* is invariably associated with danger or something else bad.

There is a new sense of *fraught*, too—“distressed” or “distressing”—dating from the mid-1960s. This new use (without a *with*) is now fairly common. Though much more frequent in BrE than in AmE, the sense does appear in American sources—e.g.:

- “He was an energetic campaigner and perhaps most important in such a politically *fraught* time, he was not a politician.” Elizabeth Kolbert, “Abortion, Dole’s Sword in ’74, Returns to Confront Him in ’96,” *N.Y. Times*, 8 July 1996, at A1, A8.
- “The sail-off escape of Kevin Patterson proves more funny than *fraught* as he flees a broken heart and tries to put his army days behind him.” Gilbert Lewthwaite, “H₂O: Life, Death, War,” *Baltimore Sun*, 23 July 2000, at F11.
- “Podeswa’s starting points are the five senses . . . through which he tells a tale of disconnected urbanites whose attempts at human connection are *fraught* and incomplete.” Deborah Hornblow, “Intellectual Ambitions of ‘Five Senses’ Go Unrealized,” *Hartford Courant*, 11 Aug. 2000, at D5.

LANGUAGE-CHANGE INDEX
fraught (without *with*): Stage 5

B. *Fraught with* and *wrought with*. *Wrought*, an archaic past participle of *work*, is frequently but erroneously substituted for *fraught* in the idiom *fraught with* (danger, peril, etc.)—e.g.:

- “Despite the joyous homecoming, the transition from a life that was *wrought* [read *fraught*] with danger and emotion won’t be easy for the soldiers or their families, said Lt. Col. Mary Erickson, a Combat/Operational Stress Control Officer.” Sharon Schmickle, “Home After Doing Their Job,” *Star Trib.* (Minneapolis), 7 Apr. 2004, at B1.
- “LaValle admits that the Highway Department is *wrought* [read *fraught*] with problems. But he denies he is at their source.” Anne Givens, “Highway Chief Jabs at LaValle,” *Newsday* (N.Y.), 18 May 2004, at A24.
- “The Games will go on. But they will go on so *wrought* [read *fraught*] with problems and scandals that some athletes have decided not to attend.” “Cancel Olympics: No One Really Cares,” *Miami Herald*, 20 June 2004, at C15.

The confusion may be due in part to the similarity of another idiom, *wrought up* (= worked up; excited).

LANGUAGE-CHANGE INDEX
wrought with misused for *fraught with*: Stage 1

fräulein (the German word for an unmarried woman) is pronounced /froy-lɪn/—not /frow-lɪn/.

-FREE. Except with an indisputably established word such as *carefree*, this combining form always takes a hyphen, whether the resulting phrase appears before or after what it modifies <alcohol-free drinks> <drinks that are alcohol-free>.

free; for free. Because *free* by itself can function as an adverb in the sense “at no cost,” some critics reject the

phrase *for free*. A phrase such as *for nothing*, *at no cost*, or a similar substitute will often work better.

Yet while it’s true that *for free* is a CASUALISM that is severely overworked in ads, the expression is far too common to be called an error. It dates from the early 20th century. Sometimes the syntax all but demands it—e.g.: “Soft-dollar arrangements . . . include various services like research and information that big institutional clients receive *for free* from brokers.” Anita Raghavan, “Pension Fund Plans to Scrap Certain Deals,” *Wall Street J.*, 26 Jan. 1995, at A5. That same writer, however, omitted the *for* when it wasn’t needed: “That research is sent *free* to the client.” *Ibid.*

For an early discussion of this usage, see John R. Krueger, “On Pleonastic ‘For,’” 41 *Am. Speech* 79–80 (1966).

LANGUAGE-CHANGE INDEX
for free instead of *free*: Stage 4
Current ratio (*get it free* vs. **get it for free*): 1:1

freedom. A. And liberty. These synonyms have connotative distinctions. *Freedom* is the broader, all-encompassing term that carries strong positive connotations. *Liberty*, slightly less emotive, generally suggests the past removal of restraints on specific freedoms.

B. *Freedom of* vs. *freedom from*. Both are correct, the first denoting possession of a right and the second denoting protection from a wrong. Note the shift in forms: *freedom of speech* but *freedom from oppression*, *pestilence*, *coercion*, etc.

***free gift.** This REDUNDANCY, the result of advertisers’ attempted assurances that you’ll really get something for nothing, isn’t much used by careful writers. But that’s not to say it’s not used—e.g.:

- “Merchants offered special discount drawings, fashion shows, decorating tips and *free gifts* [read *gifts*].” Michelle Daniels, “Sani Family Event Benefits Hinds Hospice,” *Fresno Bee*, 29 Dec. 1995, at B2. (The serial comma would clarify that sentence; that is, insert a comma before the *and*. See ENUMERATIONS (B) & PUNCTUATION (D).)
- “Volunteers at the 20th annual Tammi Tuck Wrap-a-thon distributed *free gifts* [read *gifts*] to the children in West Palm Beach.” Natalie Hopkinson, “No Children Got Left Out at Annual Toy Giveaway,” *Palm Beach Post*, 25 Dec. 1996, at B2.
- “He was also softened up with *free gifts* [read *gifts*] such as tablecloths and coasters.” Andrew Levy, “Dementia Sufferer, 103, Swindled Out of £60,000,” *Daily Mail*, 27 Aug. 2015, at 28.

BrE has the related tautology **free gratis* (or **free and gratis*), which is hardly ever seen in AmE—e.g.:

- “I am not demanding that the shares should be given out *free gratis* [read *free* or *gratis*].” Padraig Yeates, “Telecom Urged to Allocate Shares to Workers,” *Irish Times*, 7 Feb. 1996, at 2.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “They know that they can leave *free gratis* [read *free* or *gratis*] and pocket all the transfer fee.” Ian Paul, “Where Egos Are Part of the Game,” *Herald* (Glasgow), 8 Oct. 1996, at 35.

A little history may surprise you. **Free gift* is much older than you might have thought. In contexts discussing what is “freely given,” the phrase dates back to the late 17th century. In 1684, Henry Abbut wrote a book with an inspired title: *A Free Gift, Freely Given of God to Henry Abbut*. A 1722 polemic pamphlet printed in London was titled *A Free Gift to the Clergy*. A year later, the same author (Thomas Woolston) produced *A Second Free-Gift to the Clergy*, and the same year a *Third*. They were all anti-clergy tracts containing allegations against “Ministers of Antichrist.” So the phrase is old, even if the modern context in which it appears is much different. You might well be wary of using it.

LANGUAGE-CHANGE INDEX

1. **free gift* for *gift*: Stage 4
2. **free gratis* for *free*: Stage 2

free rein is the correct spelling of this phrase—not **free reign*. The allusion is to horses, not to kings or queens. But some writers have apparently forgotten the allusion—e.g.:

- “Indianapolis deserves to be a healthy and livable city, not just a place where developers enjoy *free reign* [read *free rein*], routinely decimating our few remaining significant tree stands.” Letter of Clarke Kahlo, “The Public’s Interest in Tree Protection,” *Indianapolis Star*, 19 Jan. 1997, at B4. (On the use of *decimating* in that example, see **decimate**.)
- “Holmgren was quoted in a New Orleans paper as saying his players have a fairly *free reign* [read *free rein*] to enjoy New Orleans during their stay there. However, he did warn them about talking to ‘weird women.’” Danny Wells, “Backup Draws a Crowd: McMahon Still a Super Attraction,” *Charleston Gaz.*, 23 Jan. 1997, at C1.
- “The forward was given *free reign* [read *free rein*] behind Clark by Warburton but the home players were not so accommodating.” “Oduwa Repeatedly Hacked as Rangers Cruise Once Again,” *Daily Telegraph*, 20 Aug. 2015, Sport §, at 6.

Full rein is a synonymous but less common expression. See **rein**.

LANGUAGE-CHANGE INDEX

- **free reign* for *free rein*: Stage 3
Current ratio (*free rein* vs. **free reign*): 3:1

freethinker. See **atheist**.

free will, n.; **freewill**, n.; **freewill**, adj. Although some philosophers have begun using the one-word spelling for the noun, the standard form remains *free will* (= [1] the view that people have the power to make choices and are not predestined either by earlier causes or by divine will; or [2] voluntary choice). (Cf. **fatalism**.) But when the adjective is needed, *freewill* (= voluntary) is the predetermined choice <that was her freewill decision>.

freeze > **froze** > **frozen**. So inflected. Yet the barbarous **frozened* isn’t uncommon—e.g.:

- “When they say they *frozened* [read *froze*] taxes for three years, what they are really saying is, ‘We have frozen your overtaxation for three years.’” John Springer, “Tax Rate Is an Issue in Bristol,” *Hartford Courant*, 26 Oct. 1997, at B1.
- “To complete the procedure, he said, Karina’s body needs to be *frozened* [read *frozen*] for 14 minutes at 68 degrees Fahrenheit to stop blood flow.” Victor Manuel Ramos, “Retirees Open Home and Hearts to Sick Girl,” *Newsday* (N.Y.), 31 July 1998, at A26.
- “In season through July, mulberries keep in the fridge only for a few days after picking but they can be *frozened* [read *frozen*] for later use.” Gretchen McKay, “Purple Reigns with Mulberries Everywhere,” *Pitt. Post-Gaz.*, 17 June 2015, at C1.

Cf. **deep-freeze**. See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

Current ratio (*frenetic* vs. **phrenetic*): 95:1

frenum; ***fraenum**. Since about 1900, *frenum* /**free-nəm**/ has been the standard spelling—in AmE and BrE alike—for the word denoting a connecting fold of skin or mucous membrane that supports or restrains the movement of an organ or body part <lingual frenum> <labial frenum>. The Latinate spelling **fraenum* is now but a variant form. If the *frenum* is small, the DIMINUTIVE *frenulum* is used <clitoral frenulum>—**fraenulum* being a variant.

Current ratio (*frenum* vs. **fraenum*): 10:1

frenzy. See **frenetic**.

frequently. This adverb can be ambiguous when used with a plural subject and verb. Do individuals do something frequently (i.e., often), or is the characteristic true of a group that may do something only once (i.e., commonly)? Note the MISCUE here: “A study last year by Jack Hadley of the Georgetown University School of Medicine showed that uninsured patients

arrived at the hospital sicker than those with health insurance, and died in the hospital more *frequently*.” Jane Bryant Quinn, “Woe the Reformers,” *Newsweek*, 19 Oct. 1992, at 55. If the final clause is changed to *and were more likely to die in the hospital*, the miscue disappears.

fresco. Pl. *frescoes*. See PLURALS (D).

friable; fryable. *Friable* = able to be crumbled into dust or powder <friable soil>. E.g.: “The ideal carrot soil is sandy loam, or at least something *friable* and well-draining.” Sylvia Thompson, “Garden Fresh: Underground Royalty,” *L.A. Times*, 3 Nov. 1994, at H18. *Fryable* = able to be fried <a fryable chicken>. E.g.: “It was a long time before I appreciated eggplant as anything other than a breadable, *fryable*, bakeable medium.” Molly O’Neill, “Essential Eggplant,” *N.Y. Times* (Mag.), 23 Aug. 1992, § 6, at 49. See **fragile**.

friar. See **fryer**.

fridge, a shortened form of *refrigerator*, is so spelled—not **frig*.

friend. This word has settled into some exceptional idioms: *a friend of mine*; *he is friends with me*; *she made friends with me*; *he has been a friend to me*. Handle them with care.

For more on *a friend of mine*, see POSSESSIVES (D).

friendlily. See ADVERBS (B).

-FRIENDLY. When used in a compound with another word, *-friendly* implies ease of use. Several such compounds have become VOGUE WORDS on their own, probably beginning with *user-friendly*. That term usually describes a device, software, or website that is easy to use—e.g.: “I use online resources nearly exclusively for researching your complaints and keeping up to date on consumer issues. . . . None of these sites requires a fee, and most of them are pretty *user-friendly*.” Suzanne Palmer, “Consumers’ Protection Is Information,” *St. Petersburg Times*, 4 Feb. 2007, at E3. Many other analogous terms also exist, such as *customer-friendly*, *driver-friendly*, and *pet-friendly*.

These compounds are best hyphenated, since the construction puts a spin on the usual sense of *friendly*. The hyphen is occasionally omitted in such compounds—e.g.: “The future of newspapers is the Internet. . . . But the present is still in print. And part of the strategy is to make the print version more *reader friendly* [read *reader-friendly*].” Mike Littwin, “Where’s Littwin? Way Back Here on News 38,” *Rocky Mountain News* (Denver), 23 Jan. 2007, News §, at 38.

In all these terms, *-friendly* means that the thing being discussed is good for the user, customer, driver, pedestrian, or reader. But one recent marketing term turns that sense on its head—e.g.: “I think [the school

cafeteria] is also going to introduce more *allergen-friendly* choices. More and more kids, it seems, have peanut or milk allergies.” Linda Bock, “School System Faces Gluten Allergies Head-On,” *Telegram & Gaz.* (Worcester), 1 June 2006, at B1 (quoting Diane O. Mercier, a parent). Here, the meaning is not that the food is “friendly” or beneficial to allergens, but quite the opposite—that it contains no allergens. The twist may cause some readers to suffer an unpleasant gastrointestinal reaction.

friend of the court. See **amicus curiae**.

***frier.** See **fryer**.

frijol /free-hohl/ (= a bean used in Mexican cuisine) forms the plural *frijoles* /free-hoh-leez/, which typically refers to refried beans. Because the plural is much more common than the singular, it’s hardly surprising that the BACK-FORMATION **frijole* has emerged as a singular form. Avoid it.

LANGUAGE-CHANGE INDEX

**frijole* as a false singular for *frijol*: Stage 3

Current ratio (*a frijol* vs. **a frijole*): 2:1

frisson (/free-sohn/) is a GALLICISM meaning “a shiver of excitement or emotion”—e.g.: “‘But I don’t know what that is,’ she answered, trying to persuade herself, as she spoke, that the touch of his hand was giving her a tremendous *frisson*.” Aldous Huxley, *Brief Candles* 232 (1957).

frivol, vb. This word, meaning “to trifle; to fritter away time,” is a lighthearted BACK-FORMATION from *frivolous* dating from the mid-19th century. Its peak in popularity came about 1920. It’s inflected *frivoled*, *frivolling* in AmE, *frivolled*, *frivolling* in BrE. E.g.:

- “‘Be frivolous with me,’ he begs Mr. Waterston, who—typical American or no typical American—has plainly never *frivoled* in his life.” Walter Kerr, “Verbal Witchcraft Produces Magical Responses Out Front,” *N.Y. Times*, 12 June 1988, § 2, at 5.
- “Ten percent of tax revenues devoted to deficit reduction is 10 percent that cannot be *frivoled* away on new spending.” “The Cultural Elite in New York, the Republicans in Houston,” *Wash. Times*, 23 Aug. 1992, at B2.
- “Not all our elected officials *frivol* their time away on trivial matters such as ethics.” Dan Majors, “Thought for Food in U.S. House,” *Pitt. Post-Gaz.*, 8 Jan. 2003, at B1.

frivolity; frivolousness. *Frivolity* (= [1] silliness, light-mindedness; or [2] a frivolous act or thing) isn’t a general-purpose noun corresponding to the adjective *frivolous*. It is, of course, just the word for the child who is being silly or for the silly things that a child might do, but it doesn’t work for the more negative connotations of *frivolous*. For example, when lawyers engage in frivolous conduct, courts take that as a serious offense and often fine the lawyers large

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

sums. To call an offending lawyer's conduct *frivolity* is to trivialize it—there's nothing lighthearted about a frivolous lawsuit. So in that context, the better noun is *frivolousness*—e.g.:

- “The seriousness of the issues and the preceding discussion of them belies the claims of *frivolity* [read *frivolousness*]. Sanctions are denied.” “Court Decisions: Right to Litigate Is Deemed Waived in One of Two Consolidated Actions,” *N.Y.L.J.*, 7 Apr. 1994, at 21.
- “In allowing sanctions against those whose *frivolity* [read *frivolousness*] was short-lived, and perhaps caused little harm, the new rule promotes deterrence.” Jeffrey A. Parness, “How to Deter Frivolous Papers,” *Legal Times*, 21 Nov. 1994, at S7.
- “As no check or witness's name was attached, the court denied the motion, with \$50 costs, saying sanctions for *frivolity* [read *frivolousness*] should be permitted in small claims cases.” “New Trial Is Denied, with \$50 Costs,” *N.Y.L.J.*, 8 Feb. 1995, at 25.

LANGUAGE-CHANGE INDEX

frivolity misused for *frivolousness*: Stage 1

frizz (= to make tight curls) is the standard spelling. **Friz* is a variant.

Current ratio: 7:1

froe (= a chopping tool with the handle set at a right angle to the blade, traditionally used in splitting shingles) is the standard spelling. *Frow* is a variant.

Current ratio: 1.1:1

frog legs; frogs' legs; *frog's legs; *frogs legs. Although *frog legs* seems to be the most natural phrase, there is an amazing mélange of forms.

Some cookbook authors write *frog legs*. See, e.g., Irma S. Rombauer & Marion Rombauer Becker, *Joy of Cooking* 415 (1975); Jacqueline Killeen, *The Whole World Cookbook* 267 (1979); Fredy Girardet, *The Cuisine of Fredy Girardet* 44 (1982); Emeril Lagasse, *Louisiana Real & Rustic* 61 (1996).

But most writers on culinary matters write *frogs' legs*. See, e.g., Ruth R. Tyndall, *Eat Yourself Full* 66 (1967); Helen Corbitt, *Helen Corbitt Cooks for Company* 67 (1974); *Gourmet's France* 426 (1978); Howard Mitcham, *Creole Gumbo and All That Jazz* 242 (1978); Pierre Franey, *More 60-Minute Gourmet* 132–33 (1981); *France: A Culinary Journey* 46 (1992). This form appears to be a direct translation of the French *cuisse de grenouilles* (= legs of frogs, or frogs' legs).

The other forms are less defensible. At least one writer uses **frog's legs*, as if they were served always in pairs (and carefully matched up). See Jacques Pepin, *La Methode* 79 (1979). Some writers indecisively mix two or more forms. See Alan Davidson, *The Oxford Companion to Food* 321 (1999) (using both *frog legs* and *frogs' legs*).

Those citations don't quite reflect general usage in newspapers and journals. Of 1,600 examples checked in WESTLAW's ALLNEWS database in January 2002, the breakdown was as follows: *frog legs*—880 (55%); *frogs' legs*—450 (28%); **frog's legs*—194 (12%); and **frogs legs*—76 (5%). Likewise, informal surveys suggest

that most cultivated speakers who would order this item say *frog legs*. The cookbook writers' preference for *frogs' legs* seems a mite pedantic. In any event, the two forms to be avoided are **frog's legs* (unless you're talking about a particular frog) and **frogs legs* (unless you eat them without utensils or napkins)—e.g.:

- “They were out of *frog's legs* [read *frog legs* or *frogs' legs*] the night we ordered them, so we can't say whether we agree.” Mollie Yood & Andy Yood, “Food, Fun and Music Are the Order of the Day,” *Wash. Post*, 8 Nov. 2001, So. Md. §, at T6.
- “Johnny's Bistro . . . offers . . . an appetizer list that includes country pork pate, *frogs legs* [read *frog legs* or *frogs' legs*] and other delicious treats.” Ralph McGreevy, “Carve Out Time for Bite and a Belt,” *Plain Dealer* (Cleveland), 14 Dec. 2001, at 26.
- “That top price . . . buys one of the stars of the menu, a dish of sweet, succulent little *frogs legs* [read *frog legs* or *frogs' legs*], one of the best renditions I've had in years.” Marion Warhaft, “But Ask for Favourites, Anyway,” *Winnipeg Free Press*, 21 Dec. 2001, at D4.

3. **frog's legs*: Stage 3

4. **frogs legs*: Stage 1

Current ratio (in order of headwords): 11:9:4:1

from hence; from thence. The words *hence* (= from this time, from this place) and *thence* (= from that time, from that place)—as well as *whence*—are sufficient without the preposition *from*. E.g.: “Collier, then 32, was an erudite intellectual who had gone to the best prep schools and *thence* to Yale.” Matt Walsh, “Don't Buy Until You See the Whites of Their Eyes,” *Forbes*, 19 Dec. 1994, at 76. Yet grammarians have never considered *from hence* and the like incorrect, and the word *from* may help orient readers who aren't very familiar with these increasingly creaky words. James Boswell, Samuel Johnson's biographer, used *from thence*: “Mr. Scott of University College, Oxford . . . accompanied [Johnson] *from thence* to Edinburgh.” *5 Life of Johnson* 16 (1791).

The two phrases *from hence* and *from thence* appeared frequently in printed books from about 1580 to 1800 but gradually fell into disuse. Today they hardly ever appear except in quotations or in purposeful attempts at an antique tone. See **hence, thence & whence**.

***from henceforth.** See **henceforth (B)**.

from thence. See **from hence**.

from whence. See **from hence, thence & whence**.

frowsy (= unkempt, untidy, slovenly) is the standard spelling—and has predominated in World English since the 19th century. **Frowzy* and **frouzy* are variants.

Current ratio (*frowsy* vs. **frowzy* vs. **frouzy*): 20:9:1

frustrum (a geometric term referring to the remaining part of a cone or pyramid that has had its top cut

off by an intersecting plane parallel to the base) overwhelmingly forms the plural *frustra*—not **frustrums*.

Current ratio: 223:1

fryable. See **friable**.

fryer (= [1] someone who fries; [2] something intended for frying, esp. a small chicken; or [3] a large frying pan) has been predominantly so spelled since the late 1930s in AmE and the early 1960s in BrE. Today *fryer* appears in print sources more than ten times as often as **frier*, a NEEDLESS VARIANT. Of course, *fryer* shouldn't be confused with *friar* (= a member of a mendicant religious order).

fuchsia is so spelled—after the German botanist Leonhard Fuchs (1501–1566). The term denotes either (1) a decorative shrub with drooping reddish-purple or purplish-pink flowers, or (2) the color associated with those flowers. Although the botanist's name was pronounced /fuuks/ or /fooks/, the derivative word is /fyoo-shə/. Doubtless because of its standard pronunciation in English, the term is often misspelled **fuschia*.

Current ratio: 14:1

FUDGE WORDS. Phrases such as *it seems* and *it appears* will make your writing sound tentative—and sometimes that's no doubt how you want to sound. But if you use them frequently, readers' energy and attention will fly.

fuel, vb., makes *fueled* and *fueling* in AmE, *fuelled* and *fuelling* in BrE. See SPELLING (B).

fugitive, adj., is a FORMAL WORD in the sense “elusive, fleeting.” E.g.:

- “The latter being dependent on the vagaries of light, it is *fugitive*, even evanescent.” “The Picture of Excellent Photography,” *Portland Press Herald*, 8 Oct. 1995, at E1.
- “Such books would now be priceless reminders of dancers lost and dances forgotten, monumental little mementos of the fleeting times of a *fugitive* art.” Clive Barnes, “Jack Mitchell: Photographer to the Dance,” *Dance Mag.*, Jan. 1996, at 64.
- “She moved every year of her childhood from school to school and her character itself is *fugitive*, preliminary.” Sam Leith, “Review: The Rise and Fall of Great Powers,” *Guardian*, 7 June 2014, at 10.

An even more learned equivalent is *fugacious*, which is a literary word as well as a botanical term describing plants that wither or drop their leaves early. On the use of this type of word, see SESQUIPEDALITY.

-FUL. See PLURALS (G).

fulcrum. Pl. *fulcrums*. Although the Latinate plural **fulcra* predominated in print sources from the early 18th century to the mid-20th, it has largely been superseded. See PLURALS (B).

Current ratio: 2:1

fulfill; fulfil. The first is the AmE spelling, the second the BrE spelling.

fulfillment; fulfilment. The word is spelled *-ll-* in AmE, *-l-* in BrE.

full complement. For the mistaken phrase **full compliment*, see **compliment**.

full-fledged is a SET PHRASE in AmE. But BrE writers often use *fully fledged*. See **fledgling**.

fullness is preferably so spelled—not **fulness*.

full-scale, a PHRASAL ADJECTIVE, should be hyphenated.

FULL STOP. See PUNCTUATION (L).

fully fledged. See **full-fledged**.

fulsome (= abundant to excess; offensive to normal tastes or sensibilities) is still best used in its traditional, disparaging sense—e.g.: “‘Superbad’ . . . begins with pornography. The loud, large, and ribald Seth (Jonah Hill) calls his best friend . . . to discuss in *fulsome* detail a Web site called ‘Vag-Tastic Voyage.’” Richard Brody, “The Biblical Sense,” *New Yorker*, 17 Dec. 2007, at 20. But unfortunately, the loose usage to mean “very full” dominates today—e.g.:

- “Her energy is both warm and *fulsome* [read, perhaps, *vibrant*], and her big, deep laugh is always at the ready, especially when she is goofing on herself.” Allison Glock, “Uma,” *Redbook*, 1 Mar. 2008, at 114 (describing Uma Thurman).
- “Even for moviegoers who don't automatically gravitate to such fare, ‘Prince Caspian’ allows the [C.S.] Lewis book to spring to *fulsome* [read *full*], fantastic life.” Barbara Vancheri, “Chronicles of Caspian,” *Pitt. Post-Gaz.*, 16 May 2008, at D1.

The word might justifiably be treated as a SKUNKED TERM because the loose sense is so common, especially in the expression *fulsome praise*. Usually the true sense of that expression is something like “lavish praise”—e.g.: “Just before Mobutu was run out of his lair in Kinshasa, National Public Radio played some old audiotapes of the *fulsome* [read *lavish*] praise heaped on this corrupt blackguard by Presidents Reagan and Bush.” David Nyhan, “Those Buddies of Uncle Sam We Didn't Know Were Soooo Baaad,” *Boston Globe*, 25 May 1997, at D4. Cf. **noisome**.

LANGUAGE-CHANGE INDEX
fulsome in a flattering sense: Stage 4

fumitory (= a flowering plant of the genus *Fumaria*) is sometimes misspelled *fumatory*—e.g.: “Here's what's blooming this week: Basil Balm, Bee Balm, Butterfly Bush, Carolina Phlox, Fringe Loosestrife, *Fumatory* [read *Fumitory*].” “Botanical Gardens,” *Asheville Citizen-Times* (N.C.), 5 July 1996, at C2.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Actually, *fumatory* is a rare word meaning “a smoking room or section.”

LANGUAGE-CHANGE INDEX
fumatory misused for *fumitory*: Stage 1

fun, traditionally a noun, has come into vogue as an adjective—but only as a CASUALISM. Why has usage changed here? Two main reasons. (1) Unlike other nouns of emotion, *fun* hasn’t had a corresponding adjective to mean “productive of fun.” *Funny* long ago took on other senses, such as “risible” and “weird.” Most other nouns of emotion have adjectives that mean “productive of” <excitement–exciting> <fear–fearful> <gloom–gloomy> <sadness–sad>. But not *fun*, which is among the most popular nouns of emotion. (2) Because *fun* is always a mass noun, it never appears with an indefinite article. So although we may say *This is a pleasure* or *a joy*, we cannot say **a fun*. Instead we say *This is fun*—and this predicate noun looks as if it might be a predicate adjective. There are other reasons that get more technical. For a detailed explanation, see Dwight Bolinger, “It’s So Fun,” 38 *Am. Speech* 236–40 (1963).

For speakers who consider *fun* in *This is fun* to be a predicate adjective, it’s no significant change to say, instead, *This is a fun thing to do*—or *This is so fun* instead of *This is so much fun*. Still, the usage remains casual at best—e.g.: “To liven things up the last few weeks of the season, some resorts create *fun* events to entice customers,” Susan McKee, “Ski Resorts Making Plans for Season-Ending Events,” *Sacramento Bee*, 16 Apr. 1997, at C7.

R.W. Burchfield notes that “in serious writing, it (so far) lacks a comparative and a superlative” (*FMEU3* at 318). That may be true of serious writing, but not of spoken AmE (especially among those born after 1970 or so)—e.g.:

- “‘It’s always *funner*,’ says 13-year-old Jeff Oehrlein, ‘to be where the parents aren’t.’” Mary Battiata, “The Friday Night Ice Age,” *Wash. Post*, 6 Dec. 1982, at B1.
- “‘You’ve got to be super-aggressive and ride just a hair over your head without blowing it,’ agrees Mike Cotes, 42, a Spokane condominium maintenance man who won the Masters Amateur category last year. ‘It’s pretty intimidating to do it. Once you get comfortable with it, it’s the “*funnest*” thing to do.’” Fiona Cohen, “Legendary Banked Slalom Preview,” *Bellingham Herald* (Wash.), 6 Feb. 2003, at B1.
- “‘It definitely wasn’t one of the *funner* games I have ever played in,’ Duke freshman J.J. Redick said after making only three of 12 shots.” Tim Peeler, “Duke Gets Ugly Win in ‘Man’s Game,’” *News & Record* (Greensboro), 10 Feb. 2003, at C1.

The *NOAD* records *funner* and *funnest* as informal. Some writers use them seriously—e.g.:

- “This year, he was the guy everybody but Bob Huggins wanted to replace with Chadd Moore, the faster, *funner* [read *more fun*] freshman.” Lonnie Wheeler, “Barker Reason Bearcats Are 13–3,” *Cincinnati Post*, 7 Jan. 2003, at C1.
- “This is the simplest, arguably *funnest* [read *most fun*], fondue of all—particularly for kids.” “Do You Fondue?” *Wash. Post*, 12 Feb. 2003, Food §, at 4.

The linguist Steven Pinker has been quoted as saying that he “can tell whether people are under or over thirty years old by whether they’re willing to accept *fun* as a full-fledged adjective. [‘Boomers allow *fun* to have a few adjective privileges, and slackers allow it to have most or all of them, including modification by *so* and comparative *-er* and *-est* forms.’]” Barbara Wallraff, *Word Court* 87 (2000).

To traditionalists, the adjectival *fun* and its comparative forms remain blemishes in both writing and speech.

 2. *fun* as an inflectable adjective (hence *funner*, *funnest*): Stage 2
- Current ratio (*more fun* vs. *funner*): 211:1

FUNCTIONAL SHIFT. A. Generally. Renaissance rhetoricians called it *enallage* (/i-**nal**-i-jee/), and some modern grammarians call it *transfer*: the ability of a word to shift from one grammatical function to another. A noun acts as an adjective (*candy store*); an adjective as a noun (*a collectible*); a noun as a verb (*housing the collection*); a verb as a noun (*apt quotes*); and so on. Many of these functional shifts lead to a compactness that Americans like: “We Americans will not use the more elaborate form when the simpler, more direct one is absolutely unambiguous and does the work without a hitch.” Edward N. Teall, *Putting Words to Work* 25 (1940).

By itself, of course, a word has no part of speech. Only in context does a part-of-speech label make any sense. Still, many words appear usually as one or another part of speech, so that we tend to think of even an isolated word as being a noun, verb, adjective, etc. For example, most people see *umpire* as a noun, and to say that you are *umpiring* a baseball game sounds, to most speakers of English who might pause to consider the point, as if you are using a noun as a verb. This type of shift involves an age-old custom that was especially robust in the Elizabethan age. Although a functional shift sometimes upsets purists—indeed, a new shift (such as *officing* or *tasking*) often seems ugly at first—both colloquial usage and literary usage tend to defy them in the long run.

But this inevitably runs only to certain types of shifts: noun-to-adjective, noun-to-verb, verb-to-noun, and adjective-to-noun. Other shifts are generally much less acceptable in English. For example, adverb-to-conjunction shifts are thoroughly disapproved; hence it remains a solecism to use *however* or *also* as a conjunction to combine two independent clauses with no more punctuation than a comma. As another example, preposition-to-verb shifts are considered CASUALISMS (*upping* the ante, *downing* a bear, or *outing* an acquaintance).

B. Nouns as Adjectives. The transmutation of nouns into adjectives is one of the most frequent types of functional variation. Henry Bradley noted this linguistic feature in 1904:

One highly important feature of English grammar which has been developed since Old English days is what has been called the attributive use of the substantive, which may be exemplified by such expressions as “a silk hat,” “the London County Council,” “the Shakspeare Tercentenary,” “Church of England principles,” “a House of Commons debate,” “the Marriage Law Amendment Act,” “the half-past-two train,” “the London, Brighton, and South Coast Railway,” “the High-street front of the Town Hall,” “my lawyer cousin.” No other European language has anything exactly parallel to this usage.

Henry Bradley, *The Making of English* 64 (1904).

Usually the semantic shift is unobjectionable, as in the first word in each of the following phrases: *body weight, insurance policy, telephone wires, home repairs, family problems*.

Occasionally, however, shifts of this kind give rise to ambiguities or play tricks on the reader. Perhaps the worst problems arise when an adjective used as a noun is then used as an adjective—a recipe for ambiguity. Examples are *poor relief* (relief for the poor), *editorial reply* (if the sense is a reply to an editorial, as opposed to an editorial that replies to something else), and *hypothetical discussion* (if the sense is the discussion of a hypothetical). And it would be unwise for one writing about a statute concerning invalids to call it an *invalid statute*. The problem increases as the phrases grow longer <explosive device detection equipment> (see PHRASAL ADJECTIVES).

To make a somewhat different point, the reader's expectations are thwarted when a noun is used adjectivally in place of the more usual adjective. E.g.: “Police would have access to the fingerprints for *investigation* [read *investigative*] purposes only after obtaining a court order.” “Giving Fingerprints: Price of Security,” *News Trib.* (Tacoma), 4 Mar. 1997, at A10. Often, of course, the sense conveyed is different when one uses the noun adjectivally as opposed to the adjective form. For example, *pornography commission* seems to mean something different from *pornographic commission* (which is somehow difficult to visualize). But at other times, the two ways of phrasing the idea are synonymous, as in *prostate cancer* vs. *prostatic cancer* or *pronoun problem* vs. *pronominal problem*. The main difference is that, in such pairs, the more usual phrasing uses the noun (*prostate cancer, pronoun problem*). Only specialists use adjectives such as *prostatic* and *pronominal*. Or, for that matter, *adjectival* (over *adjective, adj.*).

The adjective-noun relationship often becomes vague when nouns that would normally follow prepositions are adjectives placed before nouns, and the relation-bearing prepositions are omitted. Hence *victim awareness* is a vague phrase: does it mean *on the part of, by, of*? E.g.: “*Victim awareness* gained momentum in the early 1980s, with the passage of the Victim and Witness Protection Act.” We can deduce that the

intended sense is *awareness (on the part of the public) of victims and their rights*, but perhaps we should not ask our readers to have to make such deductions. The same sort of uncertainty infects *victim restitution* (= full restitution to the victim of a crime).

Almost every phrasal adjective involves a noun phrase used adjectivally—hence *birch tree* yields *birch-tree study*, *government department* yields *government-department brouhaha*, *space flight* yields *space-flight objectives*, and so on.

C. Adjectives as Nouns. Many English words that are ordinarily adjectives can function as nouns (*collectibles, edibles, receivables, rentals*). *Indigent* was originally an adjective (15th c.), but it came to be used as a noun (16th c.). The same process occurred with *editorial, hypothetical, postmortem, principal* (= [1] principal investment, or [2] principal administrator), *ignitables, potential, explosives, and recitative*. Among recent examples are *finals* (= final examinations) and *classifieds* (= classified advertisements). Other examples are not hard to come by:

my dearest
the accused
the condemned
the deceased
the elite
the homeless
the poor
the religious
the rich

Though words that have recently undergone semantic shift are typically unsuitable for formal contexts, we should resist the benighted temptation to condemn all such shifts in parts of speech if they help fill gaps in the language. But as one commentator notes, some shifts have little to recommend them: “Can't we at least use correct English? That would distinguish Richmond from those places where the likes of ‘multicultural collaboratives’ are springing up. *Collaborative*, of course, is not a noun; it is an adjective. There can no more be a *collaborative* for youth than there can be an *exhaustive* for marathoners or a *repressive* for dictators or a *suggestive* for exotic dancers.” Robert Holland, “No Collaboration Without Elaboration,” *Richmond Times-Dispatch*, 30 July 1997, at A13. As the headline says, the critic here would substitute the noun *collaboration*.

D. Nouns as Verbs. A type of semantic shift a little less common than the noun-to-adjective shift occurs when nouns function as verbs. There are scores of examples, such as *appeal, bias, deal, function* (as in the preceding sentence), *handle, people, perfume, reward, room, silence, survey, and weather*. Often these new usages are slangy—e.g.:

- “‘The Firm’ . . . for a time even out-box-officed ‘Jurassic Park.’” Joe Dirck, “Grisham’s Latest Loses on Appeal,” *Plain Dealer* (Cleveland), 22 May 1994, at K1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “He’d be as busy *ambassadoring* in Rome as he’s been *mayoring* in Boston.” David Nyhan, “Bill’s Dabble at Diplomacy,” *Boston Globe*, 2 May 1997, at A23.
- “Samples were *air-expressed* to Atlanta for testing.” Ken Kaye, “Asbestos Threat Delays Flights,” *Sun-Sentinel* (Ft. Lauderdale), 3 Dec. 1997, at B3.
- “George will be *limoed* to the Vet and given great seats.” “The Winners! When ‘K’ Means a Home Run,” *Phil. Daily News*, 12 Sept. 2002, at 41.
- “‘Unless you can type, you’re not going to make it,’ she said. ‘But they don’t even call it typing anymore; anymore, it’s called *keyboarding*.’” Chuck Stinnett, “E-Mail, PC Have Redefined the Field and the Job,” *Evansville Courier & Press*, 15 Dec. 2002, at F1. (On the second use of *anymore* in that sentence, see **anymore**.)

Although some writers enjoy referring to *fast-tracking* budgets, *tasking* committees, and *mainstreaming* children, be wary of these VOGUE WORDS. They reek of JARGON.

Increasingly, too, people are turning noun phrases into awkward PHRASAL VERBS even when much simpler verbs are available. This phenomenon typically involves an evolution from the simple verb to the noun phrase and then to the phrasal verb. For example, hotel clerks frequently deal with customers who, when checking in, request a different room from their preassigned one—that is, they *change rooms*. The staffers then refer to this as a *room change*, and that phrase becomes so customary among those staffers that they begin using it as a verb. So in some hotels—especially in New York—it’s not uncommon to hear someone at the front desk say, “Did you *room-change*?” Of course, the more natural question would be, “Did you change rooms?” The same phenomenon is apparent when gate agents (using AIRLINESE) say that a flight has been *gate-changed*, or when children ask whether they can go *bike-ride* or *ice-skate*.

Some brand names are susceptible of being used as verbs (e.g., *Xerox* for “copy a document,” *FedEx* for “send a package,” *Rollerblade* for “skate on inline skates”). E.g.: “But when her mother *Googled* her way onto the blog and learned her daughter was planning to adopt, she got upset and asked Friedman, “When were you going to tell me this?” Pamela Paul, “The New Family Album,” *Time*, 12 Apr. 2004, at A1. This type of CASUALISM is often considered sloppy: among other things, it can result in a cease-and-desist letter from the trademark’s owner. See (B).

For other examples of noun-to-verb shifts, see **author**, **autopsy**, **gift**, **honcho**, **impact**, **juxtaposition**, **mainstream**, **office**, **premier** (where *premiere* is discussed) & **reference**.

E. Adjectives as Verbs. Adjective-to-verb transformations have never been common in English. They usually have a jargonistic quality (as in the first and third examples below) or a trendy quality (as in the second). Careful writers tend to avoid them or, when quoting someone else, to distance themselves with telltale quotation marks (as in the first example):

- “The New York City Fire Commissioner directed that her cargo tanks be ‘*inerted*’ through the introduction of carbon dioxide into the tanks.” Grant Gilmore & Charles L. Black Jr., *The Law of Admiralty* 925 (2d ed. 1975).

- “Clinton would be well-advised to *low-key* the task force before it announces anything embarrassing.” Joe Klein, “Time to Step Back,” *Newsweek*, 17 May 1993, at 40.
- “If any industry can be described as cutthroat, disk drives fit the bill. The industry *obsoletes* its products every nine months.” Brian Deagon, “Quantum Sells Division to Maxtor for \$1.4 Billion,” *Investor’s Bus. Daily*, 30 Mar. 2001, at A6.

There are exceptions <greening rooftops>. And to copyeditors, it is natural to talk about *lowercasing* and *uppercasing* words. But to those not familiar with copyediting, references such as these smell of JARGON.

F. Prepositions as Adverbs or Particles. Many prepositions (such as *by*, *down*, *in*, *off*, *on*, and *up*) function also as particles in PHRASAL VERBS (some grammarians call them adverbs). The distinguishing feature is that the preposition invariably has an object <we walked *by* the park>, whereas a particle does not <they never came *by*>. When people bristle at the sight of a sentence-ending preposition, the preposition is often functioning as a particle <we’ll try to work you *in*>. See PREPOSITIONS (B) & SUPERSTITIONS (A).

G. Conjunctions as Prepositions. Conjunctions such as *but* and *than* may serve as prepositions. Compare the prepositional *but* in *Everyone but you was there* (*but* meaning “except”) with the conjunctive *but* in *She liked the design, but she didn’t like the drawing*. See **but** (D) & **than** (C).

H. Any Other Part of Speech as an Interjection. Almost any word can serve as an interjection. You might call it an exclamatory noun or verb, or an exclamatory conjunction, but in fact it is probably functioning as an interjection: *great!* (adjective); *moron!* (noun); *look!* (verb); *fast!* (adverb); *you!* (pronoun); *if only!* (conjunction).

fundament = (1) basis; or (2) anus or buttocks. Sense 2 is more common in BrE than in AmE—e.g.: “There is even a 12-step group for people addicted to 12-step groups—which is very Fight Club, but surely only a small step away from one’s head disappearing entirely up one’s own *fundament*.” Mimi Spencer, “Let’s Talk About Me,” *Sunday Times* (London), 19 Jan. 2003, Features §, at 12. But because sense 2 is current in AmE as well, it typically can’t be used without creating a double entendre. One hardly knows what to think about sentences such as this: “This is the best of the best, and like it or not, it’s the *fundament* of our private culture and public life.” Kyrie O’Connor, “‘Great Books,’ with a Classic Male Slant,” *Hartford Courant*, 22 Sept. 1996, at G3. To avoid trouble, try *foundation*.

Sometimes the word is misused in the plural as an INELEGANT VARIATION of *fundamentals*—e.g.: “[Kyle] Korver is like a golfer, always tinkering, always looking for the perfect swing. He’ll watch other players, work on his *fundaments* [read *fundamentals*], tweak his own shot.” Tom Shatel, “Korver Puts in the Hours to Become Jays’ Big Shot,” *Omaha World-Herald*, 18 Jan. 2003, at C1. (He wouldn’t get far by working on his *fundament*.)

funeral; funereal; funerary; *funebrial. *Funeral*, commonly a noun, serves as its own adjective <funeral expenses>. *Funereal*, adj., which is frequently confused with *funeral*, means “solemn, mournful, somber.” *Funerary* = of, used for, or connected with burial. **Funebrial* is a NEEDLESS VARIANT of *funereal*. H.W. Fowler wrote that no one who can help it uses *funerary* or **funebrial* (FMEU1 at 205).

funeral home. This Americanism dating from the 1920s is, in the incisive commentary of a mid-20th-century critic, “unquestionably one of the ultimates of verbal absurdity.” J. Donald Adams, “Ugly Words,” in *The Ways of Language* 2, 2 (Raymond J. Pflug ed., 1967). By the 1960s, the phrase was ubiquitous: “It now disfigures the streets of every American town and city.” *Ibid.* It had also pervaded BrE by that time. The particular silliness of the phrase is that there is no such thing as a “home” for funerals.

So what did such a place used to be called? *The undertaker’s* (itself a bygone EUPHEMISM). Centuries ago it was the *deadhouse*. Later the *morgue*. Then the *mortuary*. Then the *mortician’s*. Then the *funeral parlor*. And finally a *funeral home*, where the bodies are kept in a *slumber room*.

funereal; funerary. See **funeral**.

fungus. Pl. *fungi*: /fʌn-ji/, not /fʌŋ-gɪ/. See PLURALS (B). The noun *fungicide* likewise has a soft -g-/fʌn-ji-sid/.

funnel, vb., makes *funneled* and *funneling* in AmE, *funnelled* and *funneling* in BrE. See SPELLING (B).

funnily. See ADVERBS (B).

fur. For an odd misusage, see **fir**.

furor; furore. *Furor* /fyuʊ-ər/ is the standard spelling in AmE, *furore* /fyuu-ror-ee/ in BrE. Why the difference? Although both AmE and BrE predominantly adopted the Latin spelling of the word (*furor*) in the 18th century, in the late 19th century BrE publications increasingly adopted the Italian spelling (*furore*), which became unquestionably predominant in BrE during the 1940s.

further. See **farther**.

***furtherest** is a dialectal term not to be found in good writing—except in dialogue involving nonstandard speech. Dating from the early 19th century, this NONWORD mars a good many pieces—e.g.:

- “*Furtherest* [read *Furthest*] along is an investigation of the disclosure in life insurance policies.” John F. Berry, “Insurance Industry Faces Federal Fire,” *Wash. Post*, 18 July 1977, at D11.
- “Duke’s only real hope is that the open primary system operates as it has many times in the past, selecting the candidate from the *furtherest* [read *furthest*] right and the

one from the *furthestest* [read *furthest*] left for the runoff, thereby pitting Duke against, say, Fields.” Jack Wardlaw, “Some New, Interesting Developments in Senate Race,” *Times-Picayune* (New Orleans), 25 Feb. 1996, at B7.

- “The plan targets aid on a sliding scale . . . Those *furthestest* [read *furthest*] below average get the most; those highest on the scale get the least.” Tom Fahey, “School Aid ‘Losers’ May Band Together,” *Union Leader* (Manchester, N.H.), 10 Feb. 2005, at A1. On the choice between *furthest* and *farthest* in that sentence, see **farther**.

See DIALECT.

LANGUAGE-CHANGE INDEX
**furtherest* for *furthest*: Stage 1

furthermore, adv. & conj. This word is quite proper, of course, but its heaviness can weigh down a passage. A quicker word—such as *also*, *and*, *besides*, *further*, or even *moreover*—usually serves better.

***further to your letter.** This phrase, like **enclosed please find*, epitomizes business JARGON. If you want to write effective letters, don’t use it.

***fuschia.** See **fuchsia**.

fuse, n.; fuze. A *fuse* is a wick or other combustible cord for an old-fashioned explosive. A *fuze* is for more high-tech explosives: it’s a mechanical or electronic device used for detonations.

In a different sense, *fuse* refers to a component that protects an electrical circuit by preventing it from overloading. The two CLICHÉS derive from the different senses of the word: *blow a fuse* from the electrical-component sense, and *have a short fuse* from the wick sense.

FUSED PARTICIPLES. H.W. Fowler gave the name “fused participle” to a participle that is (1) used as a noun (i.e., a gerund), and (2) preceded by a noun or pronoun not in the possessive case—thus *Me going home made her sad* rather than the preferred *My going home made her sad*. Or *Shareholders worried about the company reorganizing* rather than the preferred *Shareholders worried about the company’s reorganizing*.

The fused participle is said to lack a proper grammatical relationship to the preceding noun or pronoun. Yet no one today doubts that Fowler overstated his case in calling fused participles “grammatically indefensible” and in never admitting an exception. The grammarians Otto Jespersen and George Curme have cited any number of historical examples and have illustrated the absolute necessity of the fused participle in some sentences (barring a complete rewrite)—e.g.: “The chance of that ever happening is slight.”

But Fowler had a stylistic if not a grammatical point. Especially in formal prose, the possessive ought to be used whenever it is not unidiomatic or unnatural. In the following sentences, then, possessives would have been better used than the nouns and pronouns in the objective case:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “If his patients asked, he would not object to *them trying* [read *their trying*] it.” Elisabeth Tacey, “Doctor Puts Faith in Shark Cancer Cure,” *S. China Morning Post*, 21 Apr. 1994, at 3.
- “The pattern of our life, which now involves *me spending* [read *my spending*] some days each week totally alone so as to write, proves to be creative and necessary for all of us.” Terry Waite, “A Long, Long Way to Travel,” *Times* (London), 27 Aug. 1994, at 15.
- “Now when 11-year-old Shelby Young rides the bus to Loudon Grade School, he doesn’t worry *about the older kids soaking* [read *that the older kids will soak*] him with water guns.” Carrie Sturrock, “Separate Buses, Better than Equal,” *Concord Monitor*, 7 Sept. 1994, at B1. (The difference in meaning between *kids soaking* and *kids’ soaking* is slight: as currently worded, *the older kids soaking him* seems elliptical for *the older kids who are soaking him* [in which case the original sentence is right]. But the writer probably meant *their soaking him*—hence *the older kids’ soaking him*. The question is what he’s not worrying about: the *kids* or the *soaking*. The revised version, with a new subordinate clause [*that the other kids will soak him*], is a good way to avoid the problem altogether.)

A modern rule might be formulated thus: when the *-ing* (present) participle has the force of a noun, it preferably takes a possessive subject, especially in formal contexts. But when the *-ing* participle has the force of a verb, a nonpossessive subject is acceptable, especially in informal contexts. When the participle falls in the predicate—as it usually does when case selection is a subtle question—another key is to analyze what the proper direct object should be. Consider this exchange: *Is John in the shower?* / *Yes, I heard him singing.* / *Is he talented?* / *Yes, I heard his singing.* The object of the first reply may be John himself (*him*), but the object of the second is clearly John’s (hence, *his*) singing.

Yet there are other exceptions. For example, there’s typically no choice of construction when you’re using nonpersonal nouns <he was responsible for the luggage having been lost>, nonpersonal pronouns <she couldn’t accept nothing being done about the problem>, and groups of pronouns <he regretted some of them being left out in the rain>. For a scholarly discussion of still other exceptions, see Thomas Nunnally, “The Possessive with Gerunds,” 66 *Am. Speech* 359, 363–65 (1991).

If you can’t get a handle on fused participles, then just remember the words of an influential grammarian: “It’s a niggling point but one on which many people niggle.” Paul Roberts, *Modern Grammar* 20 (1968).

LANGUAGE-CHANGE INDEX

Garden-variety fused participle <I can understand him not wanting to participate>: Stage 3

fusible. So spelled—not **fusable*. See -ABLE (A).

futilely, adv., is sometimes misspelled **futilely*—e.g.:

- “As she *futilely* [read *futilely*] tries to emotionally latch on to someone . . . , she becomes more unhinged.” Paul Sherman, “Video View,” *Boston Herald*, 2 July 1995, at 10.
- “But the bottom line is Starks got the calls and the Nuggets were left *futilely* [read *futilely*] pleading their case to referees.” Dave Krieger, “Nuggets End East Trip 0–4,” *Rocky Mountain News* (Denver), 15 Dec. 1996, at C12.
- “Whales traces his spiritual quest to write his life’s magnum opus as he *futilely* [read *futilely*] rages against his condition.” Charlotte Cripps, “Brainwaving but Drowning,” *Independent* (U.K.), 2 June 2003, at 18.

Cf. **agilely** & **solely**. See ADVERBS (B).

LANGUAGE-CHANGE INDEX

futilely misspelled **futilely*: Stage 1

future, in the near. This phrase is unbearably wordy for either of the simple one-word equivalents: *soon* and *shortly*. See **in future**.

fuze. See **fuse**.

-FY. Most verbs ending in *-fy*—from the French *-fier* or Latin *-ficare* “to do or make”—are preceded by an *-i-* (e.g., *classify*, *mollify*, *mortify*, *pacify*). But a few of them aren’t: *liquefy*, *putrefy*, *rarefy*, *stupefy*. The reason for the difference is merely that the corresponding infinitives in French and Latin are spelled with an *-e-* (*liquefier*, etc.), and the words were borrowed directly into English from those infinitives. In any event, it’s a common error to misspell these words *-ify*. The same mistaken switch of *-e-* to *-i-* occurs in the corresponding nouns, which should be *liquefaction*, *putrefaction*, *rarefaction*, and *stupefaction*.

G

GAAP. See **generally accepted accounting principles** & ABBREVIATIONS (A).

gabardine; gaberdine. These variant spellings have undergone DIFFERENTIATION. *Gabardine* is the modern fabric having a hard finish and diagonal ribs. *Gaberdine* is the outer garment traditionally associated with Jews of the Middle Ages.

Gaelic; Gallic. *Gaelic* /*gay*-lik/ means “Scottish” or “Irish”; *Gallic* /*gal*-ik/ means “French.”

As a noun, *Gaelic* denotes the language spoken by the Celts of the Scottish Highlands—or, more broadly, by the Celts of Ireland and the Isle of Man as well. *Gallic*, though formerly denoting a person from France, is not used as a noun in modern English.

gaffe; gaff, n. *Gaffe* = (1) a blunder in etiquette; faux pas; or (2) a blatant error. *Gaff* (a rarer word) = (1) a long pole with a metal hook used in fishing; (2) a metal spur; (3) a trick or swindle; (4) harsh treatment, abuse; or (5) (BrE) a cheap theater.

Gaffe is sometimes misspelled *gaff*—e.g.:

- “His biggest risk,” Mr. Schoen said, “is that something will happen and he will make another *gaff* [read *gaffe*] as he did in 1989.” Catherine S. Manegold, “Giuliani Shows a Polished Image,” *N.Y. Times*, 7 Sept. 1993, at A1.
- “The Webster episode is only Pitt’s latest ethical *gaff* [read *gaffe*].” Steven Syre, “Money Men on Hot Seat,” *Boston Globe*, 3 Nov. 2002, at E2.

LANGUAGE-CHANGE INDEX
gaff misused for *gaffe*: Stage 1

gainsay; contradict. Originally *gainsay* [ME “to say against”] was the popular word and *contradict* the erudite one. Today just the opposite is true: “This is an interesting example of the substitution of a learned word for a popular word. *Withsay* [or, later, *gainsay*] is pure Anglo-Saxon, and *contradict* is a ‘learned’ borrowing [from Latin]. Yet few words are now more popular than *contradict*.” James B. Greenough & George L. Kittredge, *Words and Their Ways in English Speech* 215 (1902). *Gainsay* is now a FORMAL WORD somewhat more common in BrE than in AmE—e.g.: “He is nonetheless persuaded of a heroism in his subject that will not be *gainsaid*.” Andrew Mcneillie, “Part Woolf, Part Lamb,” *Guardian*, 13 Sept. 1994, at T13.

gait (= a manner of walking, trotting, etc.) is sometimes confused with *gate*—e.g.:

- “Eddie squinted at the ball through thick black-framed glasses, his spindly legs and stooped shoulders giving him an awkward *gate* [read *gait*].” Hilary Waldman, “They Were Family,” *Hartford Courant*, 24 Nov. 1991, at 14.
- “He was moving with the feeble *gate* [read *gait*] of an old man.” Greg Logan, “Hampton Jitney Running on Empty,” *Newsday* (N.Y.), 9 Dec. 1994, Sports §, at A118.
- “American Creams, which were not recognized as a breed until 1950, are medium-size draft horses, weighing about 1,600 to 1,800 pounds. . . . Their *gate* [read *gait*] is smooth and easy, and their temperament is amiable and trustworthy.” Suzanne Hively, “American Cream Is Featured Draft at Lake Farmpark Horse Show,” *Plain Dealer* (Cleveland), 16 May 2002, at E3.

LANGUAGE-CHANGE INDEX
gate misused for *gait*: Stage 1

gala (= a huge party or public entertainment to celebrate a special occasion) is most traditionally pronounced /*gay-lə*/, but in recent years it has been largely displaced by /*gahl-ə*/ or /*gal-ə*/.

gallant. In all senses as an adjective, this word is best pronounced /*gal-ənt*/. (In the dated sense “polite and attentive to women,” it may also be pronounced /*gə-lahnt*/ or /*gə-lant*/.) As a noun, however, the word is pronounced either /*gə-lahnt*/ or /*gə-lant*/. Today the noun is considered literary.

Gallic. See **Gaelic**.

GALLICISMS (/gal-ə-siz-əms/) appear frequently in modern prose—e.g., *blasé*, *coup de grâce*, *cul-de-sac*, *joie de vivre*, *mésalliance*, *succès d’estime*, *tête-à-tête*, and *tour de force*. None of these is unduly *recherché*, to use yet another. But foreignisms of any kind become affectations when used in place of perfectly good English terms—e.g., *peu à peu* for *little by little*, or *sans* for *without*. (See **sans**.)

One stylist of high repute cautions sternly against all but thoroughly anglicized Gallicisms: “Of *Gallicisms* . . . it is perhaps not necessary to say much: they are universally recognized as a sign of bad taste, especially if they presuppose the knowledge of a foreign language. A few foreign words, such as *cliché*, have no English equivalent and are in current use; and there may be others [that] are desirable. But except in technical works it will generally be found possible to avoid them.” Herbert Read, *English Prose Style* 10 (1952).

On whether to italicize words borrowed from French and other languages, see **ITALICS** (B).

For a fascinating collection of loan translations from French, see A.A. Prins, *French Influence in English Phrasing* (1952).

gallop makes *galloped* and *galloping* in both AmE and BrE. See **SPELLING** (B).

galosh (= an overshoe designed to keep shoes dry) is the standard spelling. **Galoshe* and **golosh* are variants. The pronunciation is /*gə-losh*/.

Current ratio (*galosh* vs. **golosh* vs. **galoshe*): 22:14:1

gambade; gambado. These synonymous doublets have come into English through French (*gambade*) and Spanish (*gambado*). They denote (1) the spring of a horse, (2) an antic-filled dance; a caper or gambol. *Gambade* /*gam-bayd*/ is slightly older in English and has always been slightly predominant in AmE and BrE alike. Although *gambado* /*gam-bay-doh*/ has shared the two senses listed above, it has undergone **DIFFERENTIATION**, so that in its primary sense today it denotes a horse rider’s legging. The standard plural is *gambadoes*, not **gambados*. See **PLURALS** (D).

Current ratio (*gambadoes* vs. **gambados*): 5:1

gambit. A. General Uses. In chess, a *gambit* is a move, usually an opening move, likely to sacrifice a piece to gain a strategic advantage. In strictest usage, it is the sacrifice that makes a tactical move a *gambit*. The word lost some of its unique punch when writers began applying it loosely to any trick, tactical move, or ploy. But that shift in meaning was clear by the mid-20th century, especially in the popular satires of Stephen Potter, most notably *The Theory and Practice of Gamesmanship* (1947), *Some Notes on Lifemanship* (1950), *One-Upmanship* (1951), and *Golfmanship*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

(1968). For example, in the last of these, Potter wrote: "History is a *gambit*. More precisely the writing of history is a double or treble *gambit*. It is a way of saying 'I think' and 'what about this' in a tone [that] is supposed, simply by adding the word 'History,' to silence argument" (p. 3). Throughout his many satirical texts, Potter used and popularized *gambit* as a synonym for *psychological ploy*.

Today this use is relatively common—e.g.:

- "In general, their *gambits* [read *tactics*] are legal. The state laws on who's eligible for Medicaid conceal many weak points that let moneyed people onto the rolls." Jane Bryant Quinn, "Moneyed Freeloaders Put Pressure on Medicaid," *Pantagraph* (Bloomington, Ill.), 31 May 2001, at C3.
- "In addition to its other provocative narrative *gambits* [read *twists*], 'Six Feet Under' tweaks stereotypes by having its gay characters also the show's most devoutly religious, even though many faiths would blindly condemn them." David Kronke, "Killer Comedy," *Daily News* (L.A.), 1 June 2001, at L30.
- "The double-name *gambit* [read *trick*] isn't new to Chicago." Betsy Rothstein, "Coping with Burden of Being Jesse Jackson Jr.," *The Hill*, 10 Apr. 2002, at 36.

B. For *gamut*. *Gamut* = a full range or extent, literally of musical notes, but more often figuratively of anything <the gamut of available options>. Misusing *gambit* for *gamut* is an increasingly common MALAPROPISM—e.g.:

- "Participants run the *gambit* [read *gamut*] of age and experience from 14-year-old riders to men in their early 20s with very little exposure to the bulls." Donna Logan Wisdom, "Despite Risk, Amateur Bull Riders Chase Rodeo Dreams," *Times Union* (Albany), 28 May 1995, at G1.
- "[Valerie] Harper's performance is nothing short of amazing: not only does she pull off the acting equivalent of a marathon, but as [Golda] Meir she runs the emotional *gambit* [read *gamut*] from joy to devastation to frustration to reflection." Mat DeKinder, "Harper Shines as Golda Meir," *St. Louis Post-Dispatch*, 26 Apr. 2006, at C5.
- "So why do we mentor? Faculty motivations run the *gambit* [read *gamut*] from sheer altruism to a utilitarian interest in research assistance." W. Brad Johnson, *On Being a Mentor: A Guide for Higher Education Faculty* 17 (2006).

LANGUAGE-CHANGE INDEX

- **running the gambit* for *running the gamut*: Stage 1
Current ratio (*running the gamut* vs. **running the gambit*): 89:1

C. In the Sense "opening." Because the chess *gambit* is most often associated with openings, some criticize *opening gambit* as a REDUNDANCY. But strictly speaking, it's not: a *gambit* can come at any point in a chess game.

gambling. See **gaming**.

gambol (/gam-bəl/), vb., makes *gamboled* and *gamboling* in AmE, *gambolled* and *gambolling* in BrE. See SPELLING (B).

gaming; gambling. The first is a EUPHEMISM for the second, especially in law and casino advertising—e.g.: "State officialdom, when hoping to sound professional

and clinical, uses the term *gaming* as having an ameliorative sense. By contrast, . . . *gambling* has a pejorative connotation." Thomas L. Clark, "Gaming and/or Gambling: You Pays Your Money," 10 *Verbatim*, Spring 1984, at 20.

gamut. See **gambit** (B).

ganglion (= [1] an encapsulated group of nerve cells external to the brain and spinal cord, or [2] a cystic tumor on a tendon sheath) has predominantly formed the plural *ganglia* since the early 19th century—not **ganglions*.

Current ratio: 51:1

gantlet; gauntlet. Lexicographers and usage critics—especially American ones—have sought since the 19th century to make a distinction. One runs the *gantlet* (= a kind of ordeal or punishment) but throws down the *gauntlet* (= a glove). The trend, however, is to use *gauntlet* for all senses (a trend reinforced by the 1977 Clint Eastwood movie *The Gauntlet*). In fact, though, writers of English have never reserved *gantlet* for the ordeal. Instead, despite etymological faultiness in conflating two different words—*gantlet* (glove) and *gantlope* (ordeal)—*gauntlet* has taken over both meanings. One is tempted to resist, as this book did in earlier editions, but empirical evidence now available shows that *run the gauntlet* outdistances *run the gantlet* by an 11-to-1 margin and has consistently done so since about 1800. The "battle" was lost before it began. Hence usages like this one are legion, and typical: "They tortured him last year, dragged him through a senseless frat-boy *gantlet* that accomplished nothing." Jay Mariotti, "Sauerbrun Kicks Away Past at Last," *Chicago Sun-Times*, 4 Sept. 1996, § 1, at 10.

Many writers, however, have heeded all the editorial admonitions—e.g.:

- "In the lawsuit, Douglas Hartman, an Illinois air traffic controller[,] says he was forced to walk through a Tailhook-style *gantlet* during a workshop designed by Eberhardt to combat sexual harassment. Hartman says he became a victim himself when he was groped by his female co-workers, who then rated his sexual attributes." Jean Marbella, "Daring Tailhook-Style Gantlet Stirs Up Debate," *Detroit News*, 12 Oct. 1994, at A12.
- "The streetside culinary *gantlet* of hot grease and grills—stands selling everything from tacos to burgers to funnel cakes, pierogis and pizza—was shuttered, awaiting the evening rush." Brian E. Albrecht, "Year of Pig at Popular E. Side Fest," *Plain Dealer* (Cleveland), 3 Aug. 1996, at B2.
- "On opening day, the East Harlem school was a model of nostalgic decorum as the 50 young women . . . marched into their school through a *gantlet* of reporters and cameras." Liz Trotta, "School-Choice Ideas Gaining Ground in New York City," *Wash. Times*, 15 Sept. 1996, at A1.

The word *gauntlet* is uncontroversially used in the phrase *throwing down the gauntlet* (= issuing a challenge)—e.g.:

- "But now it is too late to throw down the *gauntlet* to the Americans." Emily Sheffield, "Jackdraw," *Guardian*, 18 July 1996, at 17.

- “Don Davis, who threw down the *gauntlet* through newspaper ads, figures his Corvette is the better car.” “People,” *Orange County Register*, 4 Sept. 1996, at A2.
- “Anyone who passes her has thrown down the *gauntlet*.” Patricia Volk, “Shotgun Weddings,” *N.Y. Times*, 15 Sept. 1996, § 5, at 1.

The corresponding phrase is *pick up the gauntlet* (= accept a challenge)—e.g.:

- “It remains for the Palestinians to *pick up the gauntlet* and accept the challenge to adopt the path of nonviolent resistance.” David R. Hunsicker Jr., “Do Palestinians Have Courage to Resist Nonviolently?” *Morning Call* (Allentown, Pa.), 30 July 2002, at A9.
- “The outcome depends on whether other big institutional investors *pick up the gauntlet* that has been thrown down by the Missouri Public School Retirement System.” David Nicklaus, “Pension Fund May Get Ball Rolling for Startup Businesses,” *St. Louis Post-Dispatch*, 21 Aug. 2002, at C1.

Occasionally the phrase invites a confused METAPHOR—e.g.: “‘It probably just took a person who was willing to *pick up the gauntlet* and run with it,’ Burk said about Earle’s leadership.” Dean Geroulis, “High Schools Mark 100 Years of Progress,” *Chicago Trib.* (Park Ridge ed.), 18 Sept. 2002, at 26 (Eddon Burk praising C.A. Earle).

running the gantlet): 11:1

gaol. See **jail**.

garage is pronounced /gə-**rahzh**/ in AmE, /**gar**-ij/ in BrE.

garden path; primrose path. The two phrases have similar but not quite the same meanings.

Garden path, the phrase that appears in print more frequently, is usually literal—e.g.: “Ipe is also available in interlocking tiles that require no nails or finish. Using a jigsaw to cut rounded edges or odd corners, they can be placed on the surfaces of decks, courtyards, balconies, patios, porches, hot tub and pool surrounds, *garden paths*, garages and saunas.” Stacy Downs, “Brazilian Walnut Hardwood Prized for Its Good Looks,” *Chicago Trib.*, 29 Sept. 2006, Your Place §, at 16. But it may also be used figuratively to denote an intentional misleading—e.g.: “Blair has been under pressure at home from critics who contend that he let U.S. President Bush take him down the *garden path* in Iraq.” Editorial, “Horror in London,” *Tulsa World*, 8 July 2005, at A14.

Primrose path, on the other hand, is almost always allusive. It traditionally denotes a profligate or debauched lifestyle destined for ruin—e.g.: “‘The man is said to be a well-to-do merchant of Memphis, but he followed the *primrose path* too far in Los Angeles,’ the newspaper said.” “Man on Bender Seeks to Go

Straight,” *L.A. Times*, 24 Sept. 2006, News §, at A3. The phrase was used twice by Shakespeare, in *Hamlet* (1.3.45–51) and *Macbeth* (2.3.17–18).

It would be helpful to distinguish the two phrases. But unfortunately, *primrose path* is now being used more and more frequently the same way as *garden path*, to denote being misled, as here: “Regardless of form—oil, gas, coal or nuclear—the Green movement is blocking efforts to harness our accustomed energy sources while leading us down the *primrose path* [read *garden path*] of so-called ‘renewable energy.’” Steven Milloy, “Color Energy Woes Green,” *Wash. Times*, 7 June 2005, at A16.

***garden snake.** See **garter snake**.

GARNER’S LAW OF LOANWORDS. The more arcane or technical a loanword (= a word borrowed from another language), the more likely it is to retain a foreign plural, diacritical marks, and italics; the more common it becomes, the more likely it is to lose them. Corollary: if the loanword becomes widespread, it typically loses italics first, diacritical marks second, and a foreign plural last.

garnish; garnishee, v.t. In AmE, the usual verb form is *garnish* (= to take property, usu. a portion of someone’s wages, by legal authority). *Garnishee* is usually reserved for the noun sense “a person or institution, such as a bank, that is indebted to another whose property has been subjected to garnishment, esp. to satisfy the debt.” The noun corresponding to *garnish* is *garnishment*.

In BrE, however, and in a few North American jurisdictions, *garnishee* as well as *garnish* is used as a verb. Although the *OED* gives passing notice to this usage and to the corresponding noun **garnisheement*, these forms are historically unwarranted and therefore ill-advised—e.g.:

- “Our caller felt certain that repayment had been fully made, and that the *garnisheement* [read *garnishment*] of his wages should end.” “The Ombudsman,” *Dayton Daily News*, 5 May 1996, at B5.
- “A Virginia court this year ordered the money *garnisheed* [read *garnished*] from six months of Brawley’s wages as a nurse there.” Michael Gartland, “Pay-Up Time for Brawley,” *N.Y. Post*, 4 Aug. 2013, News §, at 6.
- “He said the senators who have yet to reimburse their expenses should either go to arbitration, or see their wages *garnisheed* [read *garnished*] (if they are still sitting) or face a lawsuit (if they are retired).” Daniel Leblanc & Gloria Galloway, “Senate Leaders Say Changes to Rein In Spending Have Already Been Made,” *Globe & Mail* (Toronto), 10 June 2015, at A1.

Current ratio (*garnished his wages* vs.
 **garnisheed his wages*): 5:1

garrote, vb. (= to strangle with a cord or wire), is the standard spelling today in World English. *Garrotte*,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

**garotte*, and **garote* are variants—the first of which was once the predominant BrE spelling.

The word is traditionally pronounced /gə-**roht**/, but /gə-**rot**/ now predominates and must be accepted as standard. With the first of these pronunciations, it's inflected *garroted* and *garroting* in AmE (to preserve the long -o-); with the second, it's *garrotted* and *garrotting* (with a short -o-). See SPELLING (B).

The word is also a noun meaning “a cord or wire for strangling.”

Current ratio (*garroted him* vs. **garrotted him* vs. **garrotted him*): 14:3:1

garter snake; ***garden snake**. A *garter snake* is a non-venomous North American snake having longitudinal stripes that resemble garters. A **garden snake* is an unknown variety—perhaps “a snake that can be found in a garden.” But beginning about 1960, the herpetologically challenged have often referred to this unknown species—e.g.:

- “These were not those cute little *garden* [read *garter*] snakes, but rattlers and cobras.” Kathleen Merryman, “Spine Shivering Stories,” *News Trib.* (Tacoma), 29 Oct. 1997, Fam. §, at 1.
- “Midway through the three-week program, campers have already seen a *garden* [read *garter*] snake, dragonflies, frogs and lots of grasshoppers and crickets.” Molly Kavanaugh, “Backyard Wonderland,” *Plain Dealer* (Cleveland), 5 Aug. 1998, at B1.
- “In an extraordinary passage in which the boy describes catching and then killing a *garden* [read *garter*] snake, he seems to encapsulate all the contradictions of human behavior.” Edith Milton, “A Tumbult of Experience Through a Child's Eyes,” *Boston Globe*, 29 Nov. 1998, at F3.

LANGUAGE-CHANGE INDEX

**garden snake* for *garter snake*: Stage 2

Current ratio (*garter snake* vs. **garden snake*): 8:1

gas. See **fluid**.

gases, not *gasses*, is the plural form of the noun *gas*. Still, for the verb *gas*, *gassed* is the accepted past tense and *gasses* is the third-person singular in the present tense. Cf. **bus**. See SPELLING (B).

Current ratio (*the gases* vs. **the gasses*): 42:1

gasoline; ***gasolene**. The first is standard in AmE and BrE alike; the second is a primarily BrE variant.

gateau (= a rich, elaborately decorated cake), an 18th-century French loanword, predominantly retained its original circumflex (*gâteau*) until the early 20th century. The standard plural is *gateaux* in all varieties of World English—not **gateaus*. Whether singular or plural, the word is pronounced /gah-**toh**/ in AmE and /ga-**toh**/ (or even /**gat**-oh/) in BrE.

Current ratio (*gateaux* vs. **gateaus*): 63:1

gaudy (= [1] ostentatious, showy; or [2] dazzlingly brilliant or extravagant) is the standard spelling. **Gawdy* is an archaic variant that still sometimes appears—e.g.: “Chris Warren carried nine times for 61 yards as Seattle averaged a *gawdy* [read *gaudy*] 6.1

yards per rush.” Peter King, “Inside the NFL,” *Sports Illustrated*, 22 Sept. 1997, at 56 (photo caption). In BrE, *gaudy* is also a noun denoting an annual festivity, especially at a college.

Current ratio (*gaudy* vs. **gawdy*): 181:1

gauge is often misspelled **guage*, perhaps because when *gauge* is spelled correctly it looks as if it might be pronounced the same as *gouge*, so the writer “corrects” it by transposing the first two vowels. The misspelling might also be influenced by *language*, despite the differences in pronunciation (/lang-gwɪj/ vs. /gayj/). The *OED* calls the misspelling “a mere blunder.”

When *gauge* refers to the width of wire, needles, or shotgun barrels—or to the thickness of sheet metal—higher numbers indicate narrower thicknesses. So avoid words such as *small* and *large* in favor of less ambiguous terms such as *thick* and *thin*—e.g.: “The company reported that [the thief] frequented the business, bringing in *large-gauge* [read *heavy-gauge*] copper wiring to sell.” “Wire Thief Faces 10 Years,” *Huntsville Times* (Ala.), 4 Apr. 2008, at B1. When *gauge* refers to the width of railroad tracks, the best descriptors are *standard*, *broad*, and *narrow*.

gantlet. See **gantlet**.

gavel, vb., makes *gaveled* and *gaveling* in AmE, *gavelled* and *gavelling* in BrE. See SPELLING (B).

gavotte (= [1] a lively dance that originated in 17th-century France; or [2] the music accompanying this dance, set in a brisk 4/4 time) is the standard spelling. **Gavot* is a variant.

Current ratio (*gavottes* vs. **gavots*): 12:1

gay. **A. Generally**. In 1980, a well-known language critic commented: “[The] special-interest use of *gay* undermines the correct use of a legitimate and needed English word. It now becomes ambiguous to call a cheerful person or thing gay; to wish someone a gay journey or holiday, for example, may have totally uncalled-for over- and undertones and, in conservative circles, may even be considered insulting. The insulting aspect we can eventually get rid of; the ambiguous, never. What do we do about it? If we energetically reject *gay* as a legitimate synonym for *homosexual*, it may not be too late to bury this linguistic abomination.” John Simon, *Paradigms Lost* 27 (1980).

Hardly anyone today would dispute, though, that it's too late to contain the word. *Gay* is now all but universal in referring to homosexuals, both male and female, and has been embraced by the gay community. Its stronger associations are with men, so that we have the phrase **gay and lesbian affairs*, as if lesbians weren't gay. See (B).

The homosexual sense of *gay* first appeared in the mid-20th century; before that the word did, however, bear the derogatory senses “leading an immoral life” and “(of a woman) engaging in prostitution” (*SOED*). Those connotations have disappeared in recent years.

But is Simon's point about ambiguity a valid one? Consider the following passage, from a book published in 1993. Was Hoccleve homosexual?

Hoccleve, Thomas (c.1369–c.1450) poet, began to work as a clerk/copyist in the Privy Seal in about 1378, and had his salary raised to £10 a year in 1399, and to £13 6s.8d in 1408. This, with his private means of £4 a year, should have been adequate, but his pay was often late and he lived a gay bachelor life—dressing fashionably, travelling to the office by boat, eating and dining in taverns, and entertaining pretty girls. All this we know from “La Mâle Règle,” a poem which includes a plea to the Treasurer, asking for his back pay. A few years later, his long-awaited benefice having failed to materialize, he married, for love.

Antony Kamm, *Collins Biographical Dictionary of English Literature* 216 (1993).

Readers are likely to believe, at first, that he was homosexual—because of the word *gay*. By the end of the passage, most readers will be convinced that Hoccleve was heterosexual and that the author has simply used *gay* in an old-fashioned way. A few might finish the passage thinking that Hoccleve was bisexual. But almost any observant reader will have spent some time considering Hoccleve's sexuality—to the detriment of the information that's actually being conveyed. The writer would have been well advised to avoid the traditional sense of *gay*; it's now all but obsolete. And that's just as well, since there are (and always have been) plenty of alternative choices that have no sexual connotations.

The new sense of *gay* is standard. Trying to reclaim the old sense is an exercise in futility. Meanwhile, there's much to be said for gays' having a more or less neutral term to describe themselves—something besides the familiar old DYSPHEMISMS.

LANGUAGE-CHANGE INDEX
gay meaning “homosexual”: Stage 5

B. *Gay and lesbian. Though common, this phrasing is peculiarly redundant, since lesbians are gay women. So to say **gay and lesbian* raises a genus–species problem akin to saying **human beings and women* (an insult to women). What is actually happening, no doubt, is that *gay* is undergoing what linguists call specialization—that is, in some of its senses the word is becoming sex-specific. In the end, *gay* may end up referring always to men. In the meantime, though, it's more logical to use *gay* as a solo adjective, as in the title of the *Handbook of Affirmative Psychotherapy with Lesbians and Gay Men* (2002). And when the use is attributive—a noun sense being desired—it's probably more clearly descriptive to refer to *gay men and women*, as in the title of Tom Cowan's *Gay Men and Women Who Enriched the World* (1997).

gazebo. Pl. *gazebos*. See PLURALS (D).

geisha (= a Japanese woman trained in the arts of dancing, singing, conversation, and other entertainment,

esp. for men), an 1881 Japanese loanword, is preferably pronounced /gay-shə/—not /gee-shə/.

geminate. So spelled. See SPELLING (A).

gemology; gemmology. For “the study of gems,” the first is AmE; the second, BrE.

gender has long been used as a grammatical distinction of a word according to the sex assigned (usually arbitrarily in the Romance languages) to a given noun. It has newly been established in the language of the law in phrases such as *gender discrimination*, a use disapproved as jargonistic by some authorities. In reformers' eyes, it eliminates the distracting word *sex* (which, of course, denotes coitus as well as physical characteristics that contribute to one's sense of self).

In recent years, *sex* in one of its senses has narrowed its meaning to designate a set of physical characteristics <sex change>, while *gender* (at least in academic circles) increasingly denotes the social and psychological distinctions between men and women <gender roles>. For example, most academics today would use *gender* in place of *sex* in the following sentence: “Given strong patriarchal traditions here, it is hardly surprising that the criticism is often put in ways that emphasize the two leaders' *sex*, even if Bangladesh has had plenty of reason in 22 years of nationhood scarred by military coups and assassinations to conclude that men in power are no less likely than women to be governed by the whims of personality and ambition.” John F. Burns, “Two Women, at the Top and at Odds,” *N.Y. Times*, 28 July 1994, at A7. As worded, the sentence might even contain a MISCUE for some readers; that is, one might expect the sentence to be completed differently—e.g.: “Given strong patriarchal traditions here, it is hardly surprising that the criticism is often put in ways that emphasize the two leaders' *sex*, which by all accounts is becoming more frequent.”

There are, in short, legitimate reasons for preferring *gender* outside grammatical contexts. But polemicists sometimes argue that the reasons are entirely political—e.g.: “The [‘gender equity’] industry prefers the word ‘gender’ to ‘sex’ because ‘sex’ suggests immutable differences, while ‘gender’ suggests differences that are ‘socially constructed’ and can be erased by sufficiently determined social engineers.” George F. Will, “A Train Wreck Called Title IX,” *Newsweek*, 27 May 2002, at 82.

gendered is a jargonistic VOGUE WORD (dating from the early 1970s) meaning “biased in favor of one sex.” The term can seem preposterous at times. A correspondent who contributed the following example asked whether the suggestion is to remove all men and women from the military: “There are now demands to change the culture of the military, to create an *ungendered* military as if that were the ultimate

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

solution to social problems having to do with sexuality.” Elaine Donnelly, as quoted in “Experimental Army,” *Wash. Times*, 29 Sept. 1997, at A2. Presumably, the sense is “a military free from sexual biases,” but the language is badly stretched—at least, that is, the language as it stood in the early 2000s. See FUNCTIONAL SHIFT (B) & **unisex**.

gender-neutral. See **unisex**; see also **SEXISM**.

genealogy (= [1] the study of the history of a family, or [2] a description or depiction of how family members and their ancestors are related), an Anglo-French loanword from the 14th century, doesn’t end (like so many other words) in *-ology*—but instead in *-alogy*. How is it pronounced, then? Traditionally /jee-nee-al-ə-jee/, as opposed to /-ahl-ə-jee/. Cf. **mineralogy**.

genera. See **genus**.

***general consensus**. See **consensus**.

generalissimo. Pl. *generalissimos*. See **PLURALS** (D).

generalized (= made general) sometimes appears in contexts where *general* would serve better—e.g.: “For what begins in many of the stories as rich subject matter with great possibilities for originality soon turns—because of the hurried, vague patches and *generalized* [read *general*] language—predictable or, worse, uninteresting.” Mark Bautz, “‘Golden Boys’ Offers Gilded Promises, but Results Are Dull and Tarnished,” *Wash. Times*, 6 Oct. 1991, at B8. The sentence surely does not intend to convey that the language was *made general* by the author, but that it is *general*.

LANGUAGE-CHANGE INDEX
generalized misused for *general*: Stage 1

generally has three basic meanings: (1) “disregarding insignificant exceptions” <the quality of the acting is generally very high>; (2) “in many ways” <he was the most generally qualified applicant>; and (3) “usually” <he generally leaves the office at five o’clock>. Sense 3 is the least effective in formal writing, although at times it merges with sense 1.

generally accepted accounting principles; generally accepted accountancy principles. The first is the usual phrase in AmE and BrE alike. The second is a variant. The phrase is often abbreviated *GAAP* /gap/—e.g.: “[Deferred Acquisition Cost] is the way insurers defer some of the costs of acquiring a customer and amortize them over a number of years under *generally accepted accounting principals* [read *principles*], or *GAAP*.” Lee Ann Gjertsen, “Insurers’ Annuity Moves Could Crimp Bank Profits,” *Am. Banker*, 1 Nov. 2002, *Ins./Inv. Prods.* §, at 1. Because *GAAP* is an acronym, it should not have a period after each letter. See **ABBREVIATIONS** (A) & **principal** (B).

***generally always; *usually always**. These are unconscious **OXYMORONS** that have occasionally appeared since the 19th century—e.g.:

- “There’s *generally always* [read *generally*] a Harmon student on staff.” Karen Hulenhuth, “That Neighborhood Intimacy,” *Kansas City Star*, 24 Mar. 1996, *Star Mag.* §, at 6.
- “We *generally always* [read *generally*] know who is in the running for the largest companies.” Matt Krantz, “Federal Signal Puts Being Tops at Top of List,” *Investor’s Bus. Daily*, 10 Dec. 1996, at A4.
- “It’s always something. And it’s *usually always* [read *usually*] something silly.” C. Jemal Horton, “Thomas’ [read Thomas’s] Coaching Is Reason Pacers Are Talk of the League,” *Indianapolis Star*, 29 Nov. 2002, at C3. (For more about forming the possessive of *Thomas*, see **POSSESSIVES** (A).)

LANGUAGE-CHANGE INDEX

1. **generally always*: Stage 1
2. **usually always*: Stage 1

generative; generational. The distinction is clear. *Generative* = procreative. *Generational* = pertaining to generations. The two words seem to have been correctly used in the following passage: “We also need to honor the *generative* obligation and claim our part in the transmission and upholding of life. We are the *generational* bridge to the future for the human community.” Kenneth Vaux, “The Vatican’s Cry of Protest,” *Chicago Trib.*, 20 Mar. 1987, at C19.

genericness; *genericalness; genericism. *Genericness*, though odd-looking, is now the most widely used noun corresponding to the adjective *generic*—at least in AmE. It is recorded from 1939 in the *OED* and appears most commonly in reference to trademarks—e.g.: “Microsoft sued Windows for trademark infringement, but a judge found that Windows is generic. Microsoft says the findings were based on ‘a fundamental misapprehension of the test for *genericness*.’” Cathy Keim, “Loose Change,” *St. Petersburg Times*, 21 Apr. 2002, at H1. Despite its specialized currency, *genericness* retains an un-English appearance. Cf. ***prolificness** under **prolificacy**.

**Genericalness*, listed in the *OED* and *W2*, does not, like *genericness*, flout principles of English word formation. But perhaps because it derives from the archaic adjective **generical*, it is exceedingly rare. It has no standing in the language.

Genericism /jə-ner-i-siz-əm/ has also appeared, sometimes in legal contexts and sometimes, well, generically—e.g.: “The Gateway/Dell 200 certainly gives new meaning to the expression ‘PC clone.’ But it’s only the most blatant symptom of the PC industry’s creeping *genericism*.” Rob Pegoraro, “Latest from Gateway, Dell: Separated at Birth?” *Wash. Post*, 9 June 2002, at H7. Though labeled “rare” in the *OED*, it has been the prevalent term in BrE since the 1970s.

Current ratio (*genericness* vs. *genericism*): 2:1

Genevese; Genovese. The first denotes an inhabitant of Geneva, Switzerland; the second, an inhabitant of Genoa, Italy. But because the two words are so easily confused, many writers and editors prefer *Genevan* for the Swiss inhabitant and *Genoan* for the Italian one. See **DENIZEN LABELS**.

genial. See **congenial**.

genie; jinni; *djinni. Although these words overlap, *genie* (/jee-nee/) more commonly denotes the magic spirit that, when summoned, carries out its master's wishes (the best-known one living inside Aladdin's lamp). On the other hand, a *jinni* (/ji-nee/ or /jin-ee/) is a spirit or demon that, according to Muslim mythology, appears on Earth in human or animal form and exercises supernatural powers. **Djinni* is a variant spelling of *jinni*.

Both words have multiple plural forms. *Genie* forms *genies* or, less good, **genii*. (See PLURALS (B).) *Jinni* forms *jinn* (which itself sometimes wrongly appears as the singular) or *jinnis* (corresponding to the incorrect singular *jinn*). The variations are so common that some dictionaries disagree about which spelling is standard. Cf. **genius**.

GENITIVES. See **POSSESSIVES**.

genius = (1) a person of high intellectual and inventive power; or (2) the prevailing character or spirit; characteristic method or procedure. Sense 2 often refers to language—e.g.:

- “What has been called ‘the *genius* of the language’ can’t be resisted. If the new meaning attached to a word satisfies enough people, that use will stick.” Allan Massie, “Minimising the Language Potential,” *Scotsman*, 19 Sept. 1995, at 15.
- “We go to poetry to meditate, to feel, to experience our private lives through the outward *genius* and beauty of language.” Donald Hall, “Poetry’s Muchness and Manyness,” *St. Louis Post-Dispatch*, 5 May 1996, *Everyday Mag.*, §, at C1.
- “It was just by some miracle that the core notion of ‘common sense’—of taking things sometimes towards the cliff, but not over—became instilled in the *genius* of our language, and possibly not in some other ones.” David Warren, “Misjudging the People,” *Ottawa Citizen*, 8 Nov. 2009, at A11.

In its oldest sense, *genius* means “a guardian spirit assigned to a newborn child”—e.g.: “All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent them with the *genius* whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice . . .” Plato, 10 *The Republic*, in 1 *The Dialogues of Plato* 878 (Benjamin Jowett trans., 1937).

The plural *geniuses* is preferred over *genii* except in the sense of demons or spirits. E.g.: “These themes are an integral part of the book as she ventures into the realm of the *genii*, ghosts and spirits.” Chris Reynolds, “Anne Rice Afraid of the Dark?” *Ark. Democrat-Gaz.*, 8 Sept. 1996, at J7. (See PLURALS (B).) The *genii* in that quotation, by the way, is different from *genies* (= magical servants). For more on *genie*, see **genie**.

Genovese. See **Genevise**.

gentleman. **A. General Use.** *Gentleman* should not be used indiscriminately as a genteelism for *man*, the

generic term. *Gentleman* should be reserved for reference to a cultured, refined man. It is a sign of the times that “no word could be, it seems, more thoroughly out of style than *gentleman*.” John Mortimer, “Wooster Sauce,” *Sunday Times* (London), 29 Sept. 1991, § 7, at 6. In 2001, a Phoenix resort specified that at one of its restaurants, “Jackets are required for *gentlemen*.” Which leaves one to wonder what’s required for all the other men.

In BrE, the word formerly referred to a man of independent means not working gainfully. No doubt because the word is a vestige of a class-conscious society, it often appears in ironic phrases, especially in BrE <gentleman of the road = highway robber> <gentleman who pays the rent = pig>.

B. Set Phrases. *Gentleman* appears in many SET PHRASES, such as the introductory “ladies and gentlemen” and auto racing’s “gentlemen, start your engines.” A *gentlemen’s agreement* is an informal one that relies on the good faith of the parties rather than the legal obligations created by a contract. *Gentlemen* carries no class distinction as the sign on a public restroom, nor do its connotations of civility translate when it’s used in the EUPHEMISM *gentlemen’s club*.

C. And *gentleperson*. This word is occasionally used as a neutral term in salutations, especially in the plural, but it has never lost its look of jocularity. *The Second Barnhart Dictionary of New English* (1980) says this of *gentleperson*: “often used humorously or ironically.” E.g.: “*Gentlepeople* don’t read other *gentlepeople*’s e-mail.” James Coates, “Computer Privacy? It’s Not a Given,” *Chicago Trib.*, 23 May 1993, at C1. Jocularity aside, the plural is *gentlepersons*, not **gentlepeople*.

LANGUAGE-CHANGE INDEX
gentleperson for *gentleman*: Stage 1

genuflection; *genuflexion. The first is the standard spelling in both AmE and BrE; the second is a chiefly BrE variant.

Current ratio: 4:1

genuine. See **authentic**.

genus. The only plural form included in many dictionaries is *genera*, but both the *OED* and *RH2* include the variant *genuses*. That variant has become fairly common, and it is undeniably more comprehensible to more people—e.g.:

- “New kinds of dinosaurs are described every month. Peter Makovicky, curator of dinosaurs at the Field Museum in Chicago, estimates there are 900 valid *genuses*, at least double the figure from two decades ago.” Jerry Adler, “Buried Treasure,” *Newsweek*, 27 June 2005, at 44.
- “He created his own system of classification, his own set of *genuses* and species, under rubrics like ‘Charity, Aged,’ ‘Charity, Children,’ and ‘Charity, Tuberculosis.’” Edward Rothstein, “Categorized, Compared and Displayed: Social

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Ills as Museum Specimens,” *N.Y. Times*, 22 Jan. 2007, at E3 (referring to Francis Greenwood Peabody, a professor of Christian morals at Harvard from 1886 to 1912).

- “One is enthroned upon a symbol-studded ‘Tree of Life,’ one kneels in apology to a sawed-off trunk with an all-seeing eye among its rings, and others are painted on slick slabs of wood—nymphs of different *genuses*.” Leah Ollman, “No Need to Read Beyond the Book Title,” *L.A. Times*, 6 Apr. 2007, at E27.

Still, somewhat surprisingly, *genera* overwhelmingly predominates in modern usage, whether AmE or BrE—e.g.:

- “‘In Search of Nature’ amounts to a kind of précis of decades of work encapsulating his close study of ant *genera*.” Edward Hoagland, “The Best Books of 1996,” *L.A. Times*, 29 Dec. 1996, Books §, at 4.
- “The campanula genus, which comprises more than 300 annuals, perennials and biennials, has become one of the most popular and identifiable *genera* in the United States.” Erle Nickel, “These Abundant Bells Are a Joy to Behold,” *S.F. Chron.*, 17 Jan. 2007, at WB8.
- “[T]he boundaries between plant species are far more porous than they are in animals, and different species and even *genera* of plants cross-hybridize with each other surprisingly often.” Natalie Angier, “Green, Life-Giving and Forever Young,” *N.Y. Times*, 17 Apr. 2007, at F1.

See PLURALS (B). Cf. **species**.

LANGUAGE-CHANGE INDEX

genuses for *genera*: Stage 3

Current ratio (*genera* vs. *genuses*): 372:1

geographical; geographic. Since the early 18th century, *geographical* has been the standard adjective throughout the English-speaking world. In the late 19th century, *geographic* emerged as a serious competing form—bolstered no doubt by the 1888 founding of *National Geographic Magazine* (its original name). Only in the late 1980s did *geographic* surpass *geographical* in AmE in frequency of use in print sources. The two remain locked in a tight race—but only in AmE. In BrE, *geographical* is more than twice as common in print sources. See -IC.

Current ratio (*geographical area* vs.

geographic area): 1:1

geometric; *geometrical. *Geometric* has been the standard term in AmE since the 1950s and in BrE since the 1970s. Long the prevalent term, **geometrical* is now a NEEDLESS VARIANT. See -IC.

Current ratio: 2:1

geriatric. This word is an adjective meaning either (1) “of, relating to, or involving the branch of medicine known as geriatrics” or (2) “of, relating to, or involving old age.” (**Geriatric* is a NEEDLESS VARIANT.) An old person is no more a *geriatric* than a young one is a *pediatric*. Yet *geriatric* is becoming a pejorative VOGUE WORD in just that noun sense—e.g.: “To your left, you will find several *geriatrics* [read *old people* or *senior citizens* or (perhaps) *octogenarians*] trying to keep pace with Richard Simmons’ invigorating workout video, ‘Sweatin’ to the Oldies.’” George Diaz, “Save

Your Pay-Per-View Money Until a Real Fight Comes Along,” *Orlando Sentinel*, 21 Oct. 1994, at D3.

LANGUAGE-CHANGE INDEX

geriatric as a noun meaning “old person”: Stage 2

Current ratio (*geriatric* vs. **geriatric*): 29,610:1

GERMANICISMS. Although the English language is known as a Germanic language (evolving from Anglo-Saxon) and has a basic Germanic syntax, it has not borrowed as heavily from the modern German vocabulary as it has from the Romance languages Latin and French. Even so, the German contribution has been significant. Among the more frequent Germanicisms in English are these, all of which can be found even in abridged English dictionaries:

allergen	hasenpfeffer	rucksack
angst	hinterlands	sauerkraut
anlage	histamine	schadenfreude
biergarten	katzenjammer	schnapps
blitz	kindergarten	schriftsprache
bratwurst	kitsch	schuss
bundt	kohlrabi	stein
delicatessen	lederhosen	strudel
diesel	leitmotif	sturm und drang
doppelgänger	neanderthal	tannenbaum
dummkopf	poltergeist	waltz
feldspar	pretzel	wanderlust
foosball	pumpnickel	weltanschauung
frankfurter	quartz	weltzschmerz
gesundheit	rathskeller	wunderkind
glockenspiel	realpolitik	zeitgeist
hamburger	rottweiler	zeppelin

Although in German the nouns are capitalized, loanwords tend to be lowercased as soon as they become common in English. See **gestalt**.

gerontocracy. See GOVERNMENTAL FORMS.

gerrymander, an early-19th-century satirical PORTMANTEAU WORD, combines the name of Elbridge Gerry (governor of Massachusetts from 1810 to 1812) with the ending of *salamander*. When Gerry’s party redistricted Massachusetts in 1812 to favor the Anti-Federalists, Essex County was divided in a way that made one voting district look, in the eyes of Federalists, something like a salamander. A famous editorial cartoon in the *Boston Gazette* added a dragon’s head, wings, and claws, and named the beast the *gerrymander*. Hence *gerrymandering* came to refer to the practice of arranging electoral divisions so as to give one political party an unfair advantage.

Gerry’s name was pronounced with a hard -g-: /**ger**-ee/, and *gerrymander* was originally pronounced /**ger**-ee-man-dər/. Today /**jer**-ee-man-dər/ predominates, though both pronunciations are standard.

When extended beyond geographic senses, the word is subjected to what could only be described as SLIPSHOD EXTENSION: “In the last few years, the 30-second ‘attack ad’ and the 10-second television news ‘sound bite’ have become such prominent . . . features of political campaigns that members of Congress have introduced more than two dozen bills in

an attempt to *gerrymander* them out of existence.” Randall Rothenberg, “Politics on TV: Too Fast, Too Loose?” *N.Y. Times*, 15 July 1990, at E1. How the metaphor of gerrymandering fits that sentence is anyone’s guess.

***gerry-rig.** See **jury-rig.**

GERUNDS. Oddly, there is a widespread prejudice against nouns ending in *-ing*. It’s largely unfounded. When it comes to reducing verbosity, one effective way is to use gerunds directly; so *administering the medicine* is better than *the administration of the medicine*, *presenting the proposal* is better than *the presentation of the proposal*, etc. See DANGLERS (D), FUSED PARTICIPLES & ZOMBIE NOUNS.

gestalt; Gestalt. Borrowed from German in the mid-19th century, this term denotes a shape, configuration, or structure that, as an object of perception, forms a specific whole or unity incapable of expression simply in terms of its parts. This VOGUE WORD was formerly capitalized and italicized because it was long treated as a German noun (hence the italics), and in German all nouns are capitalized. But today it is increasingly treated as a naturalized word—e.g.:

- “So Clinton becomes the consensus candidate, capitalizing on the latest *gestalt* of the electorate.” Gloria Borger, “The Little Big Men,” *U.S. News & World Rep.*, 28 Oct. 1996, at 37.
- “But at least give them credit for trying to break the destructive *gestalt* of our times—this absurd idea that the only way to deliver public services and bolster the economy is to keep on taxing and spending more.” Lorrie Goldstein, “Kicking the Guilt over Tax Breaks,” *Toronto Sun*, 12 Jan. 1997, at C3.

Even those who capitalize the term today don’t usually italicize it. It is pronounced /gə-**shtahl**t/ or /gə-**stahl**t/. See ITALICS (B) & GERMANICISMS.

get. A. Generally. *Get* is good English. Yet many writers want to avoid it because they consider it too informal; they prefer *obtain* or *procure*, two FORMAL WORDS. The same tendency is at work here that leads some writers to shun *before* in favor of **prior to*, *later* in favor of **subsequent to*, and the like. But confident, relaxed writers use the word *get* quite naturally—e.g.:

- “It was until recently a civil offense, called ‘alienation of affections,’ for which either spouse could *get* damages.” Max Radin, *The Law and You* 54 (1948).
- “Duke was obviously referring to some of the conference championship teams or playoff winners that either *got* lucky or hot during the playoffs or played an unimpressive schedule to win a conference title and gain an automatic berth.” Gordon S. White Jr., “N.C.A.A. Tourney Snubs Syracuse,” *N.Y. Times*, 9 Mar. 1981, at C1.
- “People have told the Amherst couple to *get* divorced.” Miriam Hill, “The Costs of Caring,” *Plain Dealer* (Cleveland), 3 Feb. 1997, at D1.

Although some pedants have contended that *get* must always mean “to obtain,” any good dictionary will confirm that it has more than a dozen meanings, including “to become.” So the second and third bulleted examples above are quite proper. And it’s entirely acceptable to use such phrases as *get sick*, *get well*, *get rich*, and *get angry*.

Anthony Burgess has noted the enormous versatility of *get*: “Foreign learner and native speaker alike can get through a great part of the day with only one verb . . . ‘get.’ . . . I get up in the morning, get a bath and a shave, get dressed, get my breakfast, get into the car, get to the office, get down to work, get some coffee at eleven, get lunch at one, get back, get angry, get tired, get home, get into a fight with my wife, get to bed.” *A Mouthful of Air* 60 (1992). And he speculates that people regard it as a vulgar word precisely because it makes life so easy.

B. Inflection: get > got > gotten, got. The past participle *gotten* predominates in AmE, *got* in BrE. As recently as the early 20th century, some British writers benightedly lambasted the American form. Consider this misbegotten advice: “America need not boast the use of ‘gotten.’ The termination, which suggests either wilful archaism or useless slang, adds nothing of sense or sound to the word. It is like a piece of dead wood in a tree, and is better lopped off.” Charles Whibley, “The American Language,” 183 *Blackwood’s Mag.* 117, 118 (1908). Others, however, noted that *gotten* was the standard BrE form as late as the early 20th century. See G.H. Vallins, *Good English: How to Write It* 31 (1951). See IRREGULAR VERBS.

C. Have got for have or must. The phrase *have got*—often contracted (as in *I’ve got*)—has long been criticized as unnecessary for *have*. In fact, though, the phrasing with *got* adds emphasis and is perfectly idiomatic—e.g.:

- “Most pathetic lyrics: The dumbest lyrics *have got* to be ‘Whose junkpile or Chevelle is this? You boys come here to race or just kiss?’ from ‘455 Rocket.’” Kathy Mattea, “In Sync,” *Richmond Times-Dispatch*, 21 Mar. 1997, at E11.
- “For this offense to work, *he’s got* to be able to do more than dump the ball off desperately to his receivers.” Michael Wilbon, “Latest Effort Leaves a Lot to Be Desired,” *Wash. Post*, 6 Oct. 1997, at C1.
- “That’s pretty cool, but as an Ohio boy, *I’ve got* to go with the Fighting Irish in this one.” Michael Beaven, “Sports Sage Knows All and Sees All for Week 1,” *Akron Beacon J.*, 27 Aug. 2015, at C1.

The *OED*, under *get* (24), has examples of *have got* from 1876 to 1889. Ruskin is cited. Jespersen adds Disraeli, Dickens, Eliot, Wilde, Shaw, Wells, Trollope. Although the *OED* calls it “colloquial or vulgar,” Albert H. Marckwardt and Fred Walcott say (in light of the strong authorial evidence) that it’s good literary English. *Facts About Current English Usage* 29 (1938).

The main error to watch out for is omitting *have* in either its full or its contracted form. That is, such expressions as **I gotta leave now* and **I got a \$10 bill in my billfold* aren't in good use. But *I've got to leave now* and *I've got a \$10 bill in my billfold* are good English. Cf. **better** (A).

D. Passive Voice with *get*. See PASSIVE VOICE (A).

get rid of. See PHRASAL VERBS.

get the best of; get the better of. Eric Partridge suggested a narrow distinction between these verb phrases: "Properly, the former applies to swindling and other trickery, whereas the latter has no offensive connotation and simply = to overcome, to defeat" (*U&A* at 135). But the *OED* records no such distinction, and today the phrases are used synonymously to mean "to gain the advantage over" or "to prevail against." The older phrase, *get the better of*, dates from the early 18th century and occurs with somewhat greater frequency in modern print sources. *Get the best of* emerged in the 19th century and appears most often in AmE. *Get the best of* is about three times as common in print as the other.

gewgaw /gyoo-gaw/ (= a gaudy trinket or flashy bauble) has been predominantly so spelled since the 16th century. The 20th-century variant **geegaw* hardly qualifies as even a lexicographic *gewgaw*.

ghastlily. See ADVERBS (B).

ghetto forms the plural *ghettos*, not **ghettoes*—and certainly not the pretentious **ghetti*. See PLURALS (B), (D).

Current ratio (*ghettos* vs. **ghettoes* vs. **ghetti*): 310:61:1

gibberish. So spelled—not **jibberish* (a misspelling that arises from the pronunciation). E.g.: "At best they strove for remote, unrealizable ideals—insofar as their revolutionary *jibberish* [read *gibberish*] could be deciphered at all." Dietrich Fischer-Dieskau, *Reverberations* 326 (Ruth Hein trans., 1989).

LANGUAGE-CHANGE INDEX
gibberish misspelled **jibberish*: Stage 1
Current ratio: 98:1

gibbet (= an upright post used to hang executed criminals; a gallows) is pronounced /jib-it/, with a soft *g*.

gibbous (= [1] protuberant, convex, or [2] having or resembling a hump; humpbacked) is most traditionally pronounced /gib-əs/, but today the standard pronunciation is /jib-əs/.

gibe; jibe; gybe; jive. A. Meanings. This set of words can be hard to keep straight.

Gibe is both noun and verb. As a noun, it means "a caustic remark or taunt"—e.g.: "Irving Lewis . . . personified the faceless civil servants who, for all the *gibes* about pointy-headed bureaucrats, make government work." "The Lives They Lived," *N.Y. Times*, 29

Dec. 1996, § 6, at 13. As a verb, it means "to heckle, mock, or taunt."

Jibe is generally considered a verb only, meaning "to accord with, to be consistent with"—e.g.: "The sight just doesn't *jibe* with the image of her character." Jamie Schilling Fields, "Saintly Bernard," *Texas Monthly*, Jan. 1997, at 52.

Gybe, a sailing term meaning primarily "to shift a sail from one side of a vessel to the other while sailing before the wind," is so spelled in BrE but is usually spelled *jibe* in AmE.

Jive, like *gibe*, is both noun and verb. As a noun, it refers either to swing music or to the argot of hipsters. As a verb, it means "to dance to swing music" or "to tease"—e.g.: "Snipes and Harrelson previously *jived* and juked and ragged their way through 'White Men Can't Jump,' so they're old hands at this." Jeff Simon, "Right on Track," *Buffalo News*, 24 Nov. 1995, at G31.

B. *Jive* for *jibe*. Some writers misuse *jive* for *jibe*—e.g.:

- "If staying in a dorm doesn't *jive* [read *jibe*] with your requirements for ski accommodations, the Fireside still may suit you." David Gonzales, "Fireside: A Cozy Spot for the Budget Skier," *Dallas Morning News*, 13 Dec. 1992, at G3.
- "The new songs were clamorous and spacey, with distorted hooks and extended feedback that *jived* [read *jibed*] well with the futuristic stage lighting." Sandy Stahl, "Separate Accommodations Prevent Lollapalooza from Coming Together," *Morning Call* (Allentown, Pa.), 5 Aug. 1995, at A53.
- "Former deputy prosecutor Lawrence Taylor . . . believes the district attorney's media-driven loser image doesn't *jive* [read *jibe*] with reality." Bill Blum, "In Defense of the Prosecution," *L.A. Times*, 28 July 1996, Book Rev. §, at 1.

LANGUAGE-CHANGE INDEX
jive misused for *jibe*: Stage 2

Current ratio (*jibe well with* vs. *jive well with*): 9:1

C. *Jibe* for *gibe*. While *jibe* is a recognized variant spelling of *gibe*, it is not the preferred spelling. And since the words are confusing enough as it is, the alternative spelling should be avoided—e.g.:

- "Chat rooms on the hockey fan website Faceoff.com were filled with *jibes* [read *gibes*] from fans and detractors alike." Eric Beaudan, "Canadian Hockey Up Against the Financial Boards," *Christian Science Monitor*, 13 Jan. 2003, World §, at 5.
- "During football season, he hung a Purdue flag on the rectory that drew good-natured *jibes* [read *gibes*] from the parish's Michigan, Michigan State and Notre Dame alums." David Shepardson, "Parishes Hope Sex Crisis Over," *Detroit News*, 14 Jan. 2003, at C3.
- "Once the game started, players continued to exchange *jibes* [read *gibes*], but that was the extent through the first 20 minutes." Will Parrish, "Eagles Get Key Big South Victory Against Liberty," *Herald* (Rock Hill, S.C.), 17 Jan. 2003, at C1.

LANGUAGE-CHANGE INDEX
jibe misused for *gibe*: Stage 4
Current ratio (*bitter gibes* vs. **bitter jibes*): 2:1

D. Other Mistaken Uses. While less frequent than the above misuses, other errors do occur. *Jibe* is

sometimes mistaken for *jive*—e.g.: “Plug and play. It sounds so ‘good to go.’ . . . Yet the ‘plug and pray’ *jibe* [read *jive*], while admittedly tired, exists among engineers for a reason.” Leslie Ellis, “Plug and Play: Easy, Right? Ha!” *Multichannel News*, 13 Jan. 2003, at 30. Even less frequent is the misuse of *gibe* for *jibe*, though this error also sometimes occurs—e.g.: “‘The Gift of the Magi’ is played out in the broader-than-broad conventions of uninspired children’s theater, which doesn’t really *gibe* [read *jibe*] with the material.” Roy Proctor, “‘Gifts’ Appears Fashioned for Non-Existent Audience,” *Richmond Times-Dispatch*, 9 Dec. 2002, at E5.

LANGUAGE-CHANGE INDEX
gibe misused for *jibe*: Stage 1

giblets (= the edible internal organs of a fowl) is preferably pronounced /jib-lits/, not /gib-lits/.

gift, vb. It may be surprising to learn that English speakers have been using *gift* as a verb since the 16th century. The traditional *gift* that is *gifted* is some innate talent (i.e., a gift from God) or a grant, especially of land, from a sovereign or a noble. That sense lives on, most often in the participial adjective <a gifted pianist> but also in participial phrases—e.g.: “*Gifted* with size, speed and a strong arm, his abilities were apparently lost on recruiters.” Will Webber, “St. Pius Stand-out Headed to Air Force,” *Albuquerque J.*, 8 Feb. 2007, Sports §, at 7. (Note that *gifted* is a dangling participle in that sentence: see DANGLERS (C).)

But now *gift* as a verb is on the rise in a more mundane realm—e.g.: “M&M’s is looking to be a big presence at this year’s Oscar fest. The candymaker already has *gifted* all the nominees in the top acting categories with boxes of personalized M&Ms.” Lewis Lazare, “M&M, BBDO Score Oscar Winner,” *Chicago Sun-Times*, 8 Feb. 2007, Fin. §, at 49. (Read: *The candymaker has already given all the nominees in the top acting categories boxes of personalized M&Ms.*)

Though old, the usage is not yet standard. Still, English speakers often transform nouns into verbs (see FUNCTIONAL SHIFT (D)) and sometimes revive moribund usages. A century ago, many stylists objected to using *contact* as a verb, though it had been used that way since the early 19th century; few writers feel uncomfortable with the verb today. *Gift* may end up in the same class.

A perceived difference, however, is that we already have a perfectly good verb (*give*) and even a secondary verb for formal contexts (*donate*). The objection to *contact* was only that it made people uncomfortable, but there was no existing equivalent—*get in touch with* being far more cumbersome. Cautious writers may prefer to restrict *gift* to its noun uses for now. We are accustomed to *gifted children*, but not *gifted stock*.

From *gift* as a verb, it was a natural step to *regift* (= to give an unwanted gift to someone else, under

the pretense that it was selected for that person)—e.g.: “Their child received an unwanted Webkinz for a recent birthday—and it’s already rewrapped for Christmas *regifting*.” Daniel McGinn, “Waving ‘Bye to Webkinz?” *Newsweek*, 10 Dec. 2007, at 18.

LANGUAGE-CHANGE INDEX
1. *gift* for *give*: Stage 2
2. *regift*: Stage 4

gigolo. Pl. *gigolos*—neither **gigoloes* nor **gigoli*. See PLURALS (D).

gild. A. And **guild**. To *gild* a thing is to put a thin layer of gold on it. Misusing *guild* (= an association made up of people with similar occupations or interests) for the verb *gild* is a fairly common error—e.g.:

- “Inside, large parts of the *gilded* [read *gilded*] baroque monastery have been removed to reveal four stone chambers of the original Inca temple.” Nathaniel C. Nash, “An Archeologist’s Cry: Reclaim Site for Incas!” *N.Y. Times*, 31 Aug. 1993, at A6.
- “It did make perfect sense to have the ‘Final Draw’ at the Las Vegas convention center and have Dick Clark as the host. But Stevie Wonder? Isn’t that *gilding* [read *gilding*] the lily just a bit?” Taylor Buckley, “Did the World Cup Draw Really Need the Vegas Glitz?” *USA Today*, 21 Dec. 1993, at C11.
- “No one is fooled by *gilding* [read *gilding*] the lily.” Gene Amole, “A Pox on Shameless Public Radio’s Ode to Ploy,” *Rocky Mountain News* (Denver), 14 Feb. 2002, at A6.

LANGUAGE-CHANGE INDEX
guild misused for *gild*: Stage 1
Current ratio (*gilded* vs. **gilded*): 162:1

B. Gilding the lily. The phrase *gilding the lily* misquotes its Shakespearean source, which reads, “To gild refined gold, to paint the lily” (*King John* 4.2.11). But because the phrase has become a CLICHÉ, criticizing the misquotation would be as fruitless as complaining about the inaccuracy of “Play it again, Sam” (which is never actually said in the film *Casablanca*—the line is “Play it, Sam”).

gimme, a golf term shortened from “give me,” refers to a short putt that needn’t be holed—usually because playing partners concede that the player would sink it. The plural form, naturally, is *gimmes*. But occasionally the plural is mistakenly written **gimmies*—even by those who spell the singular form correctly. This mistake occurs, for example, throughout the following book (even in the title): Jane Blalock & Dawn-Marie Driscoll, *Gimmies* [read *Gimmes*], *Bogeys and Business* (1996).

Gimme is also used outside golf contexts as an adjective for various types of free merchandise, especially baseball caps bearing advertising logos and messages <*gimme cap*>.

LANGUAGE-CHANGE INDEX
**gimmies* for *gimmes*: Stage 3

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

gimmickry. So spelled—not **gimmickery*.

Current ratio: 69:1

ginkgo /ging-koh/ (= a gymnospermous tree indigenous to Asia, with tasty yellow fruit enclosed in a malodorous seed-bearing jacket) is the standard spelling. **Gingko* and **jingko* are variants.

gin out. See **gin up** (B).

gin up /jin əp/. **A. Generally.** *Gin up* (= [1] to rev up (as an engine); or [2] to concoct) is a late-19th-century Americanism that is barely mentioned in the *OED* and appears to have been missed by most American lexicographers (being omitted from most dictionaries). *Gin* here is derived from a clipping of *engine*. The PHRASAL VERB is increasingly common—e.g.:

- “So they *ginned up* a ‘law and order’ message suggesting that Democrats were soft on crime.” David S. Broder, “Mudball Politics,” *Wash. Post*, 4 Nov. 1990, at C7.
- “‘This is a law enacted by Congress. This is not something we just *ginned up* out of whole cloth.’” Carl Ingram, “Debt-Reduction Bill Could Cost Community Colleges,” *L.A. Times*, 21 Dec. 1990, at A3 (quoting Bill Moran, of the U.S. Department of Education).
- “The Phillies organization has been working hard to *gin up* a tide of nostalgia for the last season in ‘The Vet,’ but it’s an impossible sell.” “There’s Nothing Like the Home Opener to Make Spring a Reality,” *Morning Call* (Allentown, Pa.), 4 Apr. 2003, at A14.

B. And gin out. This related phrase means “to produce, esp. on a routine basis or in a hurry”—e.g.: “We’ll call it the Courthouse Diet Plan, and I’ll *gin out* a trade paperback so we can stay on the *New York Times* bestseller list for years and years.” Tom Alleman, “Why Are Lawyers So Cranky? They Don’t Eat Enough Ribs,” *Fulton Co. Daily Rep.* (Ga.), 20 Sept. 2002, at 1. Occasionally, though, it loosely replaces *gin up* in sense 1—e.g.: “Those three hard-working, high-tech liters *gin out* [read *gin up*] 225 horses, good enough to sling you to 60 mph in 6.4 seconds, BMW tells us.” Brooks Peterson, “330i Another BMW Winner,” *Corpus Christi Caller-Times*, 25 May 2002, at E4.

LANGUAGE-CHANGE INDEX

gin out misused for *gin up*: Stage 1

***gipsy.** See **gypsy**.

girl. This word is widely (and understandably) regarded as an affront when used in reference to an adult, just as *boy* is. But for a female minor, *girl* is the appropriate word; for an odd avoidance of the word in its proper context, see ***minor woman**.

girlie; girly; girlish. First having appeared in the late 19th century, *girlie* (= [1] of or like a girl, or [2] featuring naked or scantily clad women) has always been the predominant spelling in AmE and BrE alike. Since about 1990, however, *girly* has inexplicably surged in English-language print sources. Today it closely rivals *girlie*.

With either spelling, the term is likely to be considered a DYSPHEMISM. Those who in sense 1 refer

to *girlie behavior*, *girlie girls*, or *girlie stuff* often do so with condescension—though admittedly, too, sometimes with approbation. Those who in sense 2 refer to *girlie magazines*, *girlie bars*, and *girlie shows* (the terms are hopelessly old-fashioned) almost invariably do so with disapproval.

Girlish (= of or like a girl) can often carry positive connotations of innocence and artlessness <girlish charm>—though it can also tend in the other direction <girlish emotions>. In this way, the term doesn’t quite mirror *boyish*, which is almost invariably positive <boyish enthusiasm> <boyish grin>. This fact doubtless tells us something about cultural views; any discussion of it belongs in a book on sociology, not English usage.

Current ratio (*girlie* vs. *girly*): 1.1:1

gist (= the main point or essential part), pronounced /jist/, is so spelled. The word is sometimes misspelled **jist*—e.g.: “The *jist* [read *gist*] of the opening is: Does Junior’s trade to Cincinnati mean Senior will be taking over for McKeon as manager?” John Fay, “Griffey’s 1st Day Lasts for 3 Hours,” *Cincinnati Enquirer*, 22 Feb. 2000, at D1.

Current ratio (*the gist* of vs. **the jist* of): 357:1

give in to temptation. So written—not **give into temptation*. See PHRASAL VERBS.

Current ratio: 7:1

given. For this word as an acceptable dangling modifier, see DANGLERS (E).

given name. For the meaning of this term, see the discussion at **surname**.

given (that). At the head of a statement (most commonly), *given* is an age-old shorthand way of saying “assuming as a fact” or “with [the thing stated] supplied as a basis for reasoning.” If what follows *given* is a mere phrase (without a verb), *given* appears alone—e.g.: “*Given* her high position, she does have opposition.” Larry Whitham, “Episcopalians Brace for Divisive Sessions,” *Wash. Times*, 13 July 1997, at A4. But if a clause follows (with a verb), a *that* should accompany *given*—e.g.: “*Given that* he was a medical student at Brown before turning to professional hockey, Bill McKay might be expected to be a quick study.” Peter Barrouquere, “McKay Learns How to Wing It,” *Times-Picayune* (New Orleans), 26 Nov. 1997, at C3. Cf. **provided**.

For more on wrongly omitted *thats*, see **that** (B).

giveth . . . taketh away. This phrasing alludes to the biblical sentence, “The Lord gave, and the Lord hath taken away.” Job 1:21 (King James Version). Though variations on this phrase have become cliché, they have a resilient wittiness—e.g.: “For another thing what Subsection (1) *giveth*, Subsection (2) largely *taketh away*: the promise, even if made, will be

'binding' only within narrow limits." Grant Gilmore, *The Death of Contract* 74–75 (1974). Note that *giveth* is a form found 141 times in the King James Version, but not in the quoted verse. See **ARCHAISMS**.

gizmo (= a gadget) is the preferred spelling. **Gismo* is a variant.

Current ratio: 34:1

gladiolus—/gla-dee-oh-ləs/ or (pretentiously) /glə-dɪ-ə-ləs/—is the singular form. The plural form is *gladioluses* or (predominantly) *gladioli*, the latter pronounced /gla-dee-oh-lee/ or /-li/. See **PLURALS** (B).

But because *gladiolus* is sometimes wrongly taken to be a plural, especially in speech, the mistaken form **gladiola* has emerged. It is an arrant mistake that should be stamped out. E.g.:

- "A *gladiola* [read *gladiolus*] among a patch of violets, her spirit shines all the more brightly against the backdrop of her restrictive society." Mary McCarty, "The Real Little Women," *Dayton Daily News*, 1 Jan. 1995, at C1.
- "Minutes later they crowd into Celsa Garcia's house, delivering their figures of Joseph and Mary to a makeshift corner altar that Ms. Garcia, 65, has draped with garlands of *gladiolas* [read *gladioli*] and pine." Sam Dillon, "Tehuixtla Journal," *N.Y. Times*, 25 Dec. 1996, at A4.
- "Anyone at the fair at 11 a.m. Thursday, Sept. 3, can join the new *gladiola* [read *gladiolus*] competition in the Horticulture Building. Fairgoers can try to make a *gladiola* [read *gladiolus*] arrangement in 10 minutes." Debra J. Groom, "State Fair Gears Up," *Advance-News* (Ogdensburg, N.Y.), 23 Aug. 2015, at 7.

2. *glance* misused for *glimpse*: Stage 1

glassful. Pl. *glassfuls*. See **PLURALS** (D).

glean (= to gather [esp. information or, orig., crops left over after a harvest]) is occasionally confounded with *gleam* (= to shine)—e.g.: "A social worker visits new patients to *gleam* [read *glean*] information about their social and financial resources." Editorial, "The Graying of Texas," *Dallas Morning News*, 30 Dec. 1999, at A24.

LANGUAGE-CHANGE INDEX
gleam misused for *glean*: Stage 1

glimpse. See **glance**.

glitter; *glister; glisten. *Glitter*, dating from the 14th century, derives from the Middle English *gliteren*. It has four senses: (1) to sparkle; to reflect many small flashes of light <the sequins glittered>; (2) to flash positive emotions <when praised, the children glittered>; (3) to be spectacularly attractive <at the party, the couple glittered>; and (4) to be superficially attractive or exciting; to flash <those arguments may glitter, but there's little substance to them>.

**Glister* is related to *glitter*, having arisen from the same root, with the same meaning, and at the same time. It is now an archaic or dialectal form of *glitter* (in sense 1) <all is not gold that glisters>.

Glisten is the oldest term; the OED cites its use in a poem written about 1000. To *glisten* is to "produce a lustrous shine or sparkle like light on water" <the wood's polish is so brilliant it glistens> <moonlight glistening on snow>. In modern usage, *glisten* most often occurs in allusions to moisture in some form <her eyes glistened with unshed tears>.

glue, vb., preferably makes *gluing*, not **glueing*. E.g.: "Teams start out with easier actions such as painting graffiti, *glueing* [read *gluing*] locks and breaking windows." Rebecca Merritt & Steve Lundgren, "A Guerrilla War for Animal Rights," *Bulletin* (Bend, Or.), 3 Aug. 1997, at B1. See **MUTE E**.

Current ratio (*goatherd* vs. **goatherder*): 34:1

gobbledygook; gobbledegook. Maury Maverick’s original spelling was *gobbledygook*, and today that spelling outnumbers its variant form by a ratio of about 7 to 1 in AmE. Yet since the early 1990s, *gobbledegook* has been the predominant form in BrE print sources—but barely. Nevertheless, most American and British dictionaries list *gobbledygook* first.

The term refers to the obscure language characteristic of jargonmongering bureaucrats. Thus *iterative naturalistic inquiry methodology* supposedly refers to a series of interviews. Much technical writing is open to the criticism of being gobbledygook. One of the purposes of this book is to wage a battle against it. See ABSTRACTITIS, JARGON, LATINISMS, LEGALESE, OBSCURITY & PLAIN LANGUAGE.

goddamned; goddamn, adj.; goddam. Strictly speaking, the first form is the only correct one. Yet because

of the way this word is spoken—the final *-d* usually being silent—the latter two spellings commonly appear in print. In terms of word frequency in print, *goddamn* is by far the most common, followed by *god-damned*, and then *goddam*. The more loosely spelled forms make the expletive seem less literal, and therefore somewhat less offensive—e.g.:

- “‘Hated those *goddam* meetings,’ she says.” Karen Schoemer et al., “Rockers, Models and the New Allure of Heroin,” *Newsweek*, 26 Aug. 1996, at 50.
- “Rostenkowski said in a recent interview: ‘Lyndon Johnson was in Texas, and he called me. “*Goddamn* you,” he said. “Take that . . . get up there . . . tell Carl Albert.” Oh, he was mad.’” John A. Farrell, “’68 Convention Unrest Boosted O’Neill’s House Rise,” *Boston Globe*, 1 Sept. 1996, at A15.
- “‘He never misses a day,’ said Robert Beaudoin. ‘With that small boat, he’ll be out no matter what the *goddam* weather is.’” Peter Pochna, “Lobsterman’s Creed: Keep It Simple,” *Portland Press Herald*, 2 Sept. 1996, at C1.
- “Then someone handed me a metal pole with a glowing jellyfish perched at the top. I was now the Jellyfish King. I danced around with the jellyfish and poked the air with it until my arms got tired and I scoured feverishly for someone to pass the jellyfish to. Will someone please take this *goddamn* jellyfish?” Andrew Magary, “My Morning Ravers,” *GQ*, 1 Aug. 2015, at 48.

See **damn**.

godlily. See ADVERBS (B).

-goer. This combining form attaches to many nouns denoting places or events without the need of a hyphen, resulting in words such as *beachgoer*, *concertgoer*, *moviegoer*, *museumgoer*, *partygoer*, *seagoer*. The no-hyphen rule was adopted by the *AP Stylebook* in 2014.

goes without saying, it. This phrase isn’t generally suitable for formal contexts, although it may be appropriate in speech or in informal prose. Often, an editor is justified in thinking that if it really goes without saying, then it need not be said.

Goethe /gə[ˈr]-tə/. “Americans who pronounce Goethe’s name ‘Go-eeth’ are not always poor, ignorant clodhoppers in need of pity.” Edward N. Teall, *Putting Words to Work* 19 (1940). Oh, no?

***go fetch.** See **fetch**.

golf. One may either *play golf* (the phrase dates from ca. 1575) or simply *golf* (ca. 1800)—that is, *golf* can be a verb as well as a noun. Most golfers use the older phrasing and say that they *play golf* <I’ll be playing golf on Saturday>, whereas nowadays nongolfers tend to be the ones who use *golf* as a verb <she’ll be golfing on Saturday>. In modern print sources, *played golf* is 20 times as common as *golfed*.

Writers on golf often disparage the verb *golf* as symptomatic of linguistic dufferdom—e.g.:

- One writer states: “If you call yourself a golfer, you never use *golf* as a verb. You never say ‘We went *golfing*.’ *Golf* to a golfer is a noun. A guy tells you he ‘*golfs*,’ and you know he’s clueless.” David Burgin, “A True Olympian’s Golden Review,” *S.F. Examiner*, 14 June 1998, at D18.

- Another refers mockingly to “the unwashed who think the word *golf* and its derivatives can be used as verbs (‘Hey, Ralph, ya wanna go *golfing* tomorrow?’ ‘Nah, Jim, I *golfed* yesterday’).” David Climer, “Senior Tour Isn’t Aging Very Nicely,” *Tennessean*, 20 July 1999, at C1.
- A third says that “using *golf* as a verb [is] a linguistic gaffe akin to shortening San Francisco to Frisco.” Bill Ott, “Blue Fairways,” *Booklist*, 1 Sept. 1999, at 63.

See FUNCTIONAL SHIFT (D).

If you’re serious about golf and writing, stick to the noun uses of *golf*. That will never tee off anyone.

The *-l-* is pronounced in this word, preferably: /gahlf/ or /gawlf/—not /gahf/ or /gawf/.

go missing (= to disappear, become lost) is a Britishism that has encountered an odd mix of resistance and acceptance in AmE. Still, it seems to be on an irreversible ascent—e.g.: “In Fort Worth last June, bronze memory urns disappeared from graveyards. The following month, at a high school football field in Washington, D.C., 750 pounds of aluminum bleachers *went missing*.” Telis Demos, “The Dark Side of Metal Madness,” *Forbes*, 9 July 2007, at 32.

The phrase, now recorded in *W11* and *NOAD*, chafes many Americans. Some object to the notion of voluntariness that *go* suggests (did the bleachers in the example above run away and hide?). They incorrectly assume that the idiom suggests voluntary absence and should therefore be restricted to uses such as desertion or going AWOL. Others believe it to be ungrammatical.

But many usage pros defend it—e.g.:

- “Why has this construction lasted so long and now blossomed? It does a semantic job that needs doing, that’s why. No other term quite encapsulates ‘to become lost inexplicably and unexpectedly,’ which connotes suspicion of trouble. From the most serious loss (a person kidnapped, or a soldier unaccounted for or absent without leave) to an irritating minor loss (an object is mislaid), to *go missing*—always in the past tense, *went*, or past participle, *gone*—conveys a worried, nonspecific meaning that no other word or phrase quite does.” William Safire, “Gone Missing,” *N.Y. Times*, 27 June 2004, § 6, at 21.
- “People ask me over and over again about certain things. For instance, where did ‘*gone missing*’ come from? England. Is it a blight on our language? I don’t think so.” Barbara Wallraff, “Get Original, Brief, Lively Comments in Print,” *Times Union* (Albany), 27 Nov. 2005, at G2.
- “Why have Americans . . . shunned *gone missing*? It’s neither unclear nor ungrammatical (if you can *go bankrupt*, why not *go missing*?), and action-verb boosters should be applauding it as stronger than *is missing*. Anti-British prejudice can’t explain the animus; even people who don’t know its pedigree heap scorn on *gone missing*.” Jan Freeman, “Missing in Action,” *Boston Globe*, 19 Nov. 2006, at E3.

Although the phrase has been traced to the late 19th century, it spread primarily in World War I with reports of British air and sea missions when planes or

ships didn’t return. It began its spike in AmE usage in the mid-1990s, especially in missing-persons reports—e.g.:

- “Authorities in Oregon are searching for a Garden Grove Jesuit priest and his traveling companion, who may have *gone missing* as long as two weeks ago during a tour of the Pacific Northwest.” Christian Berthelsen, “Garden Grove Priest and Friend Reported Missing,” *L.A. Times*, 22 June 2007, at B1.
- “One of the actor’s friends has *gone missing*, and it seems an easy enough matter for her to look into. Of course, that’s before people start dying, putting Wiggins herself in jeopardy.” David J. Montgomery, “Mysteries,” *Chicago Sun-Times*, 24 June 2007, Books §, at B9.
- “Melodie Rowe was a quiet 17-year-old when she *went missing* from her Syracuse, N.Y., home in September 1972.” Richard Willing, “New Scientific Progress Makes Identifying Remains Easier,” *USA Today*, 25 June 2007, at A2.

gondola (= a long narrow boat with a flat bottom and high points on each end, traditionally used in Venetian canals) is pronounced /**gon**-də-lə/—not /gon-doh-lə/.

good, adv. “You did good.” “Yeah, I played good tonight. Practice is coming along real good.”

These *goods* would once have been considered clearly nonstandard, even substandard. They’re typical of DIALECT, the adverb being *well*—not *good*. But in a few SET PHRASES, the adverbial *good* cannot be replaced; among these are *did it but good* and *a good many more*.

Although adverbial uses appear frequently in print, they are almost always in reported speech—e.g.:

- “The coyote ran up and tried again to bite Hawthorne. ‘I kicked him *good*,’ and the animal ran back in the woods.” Rex Springston, “New Kent Man Battles Coyote ‘Tooth and Nail,’” *Richmond Times-Dispatch*, 28 Jan. 2003, at A1.
- “‘We came out, threw the ball up the court *good*, passed *good*, looked for the open man,’ [coach Wayne] Berry said.” “Calais, MA Lynx in Split,” *Bangor Daily News*, 29 Jan. 2003, at C4.
- “[Larry] Dixon ran so *good* last year, it was unbelievable,” [Tony] Schumacher said. “May the Force Be Withered?” *Daily News* (L.A.), 6 Feb. 2003, at S9.

While the adverbial *good* is rare in edited prose, it has become almost universal in sports, even when the speaker obviously knows the right word—e.g.: “St. Joe’s coach Mark Simon, who had to laugh a little and shook his head as he reviewed the Wolverines, [said]: ‘They shot the ball very *good*, they passed the ball inside very *well*.’” Keith McShea, “Falls Crushes St. Joe’s with Third-Quarter Blitz,” *Buffalo News*, 29 Jan. 2003, at C3.

Of course, *real good* (a common dialectal phrase) may also occur in STANDARD ENGLISH if *good* is a noun, as here: “I believe in what we do, especially in

1. *good for well* (as an adverb) in reference to personal performance (as in **the team played good*): Stage 2
Current ratio (*played well* vs. **played good*): 11:1
2. *good for well* (as an adverb) in reference to the functioning of inanimate things (as in **the engine runs good*): Stage 3
Current ratio (*runs well* vs. **runs good*): 8:1

goodbye; good-bye; good-by; *goodby. Each of the first three is listed as the main headword in at least one major American dictionary. But *goodbye* is by far the most usual form, since the hyphen seems almost as archaic here as in **to-day* and **to-morrow*. And it has the advantage of resembling the related terms *bye* and *bye-bye*. The final headword—**goodby*—is merely a variant.

Current ratio (in order of headwords): 69:51:9:1

good(-)faith. *Good faith* is the noun phrase <in good faith>, *good-faith* the PHRASAL ADJECTIVE <good-faith efforts>. See **bona fide & bona fides**.

goodness' sake. So written. See POSSESSIVES (N).

goodwill. Formerly two words, then hyphenated, the term has now become one word both as an adjective <a goodwill gesture> and as a noun <a symbol of our goodwill>.

Google. Because *Google* is a proper noun and trademark denoting the company that so successfully launched its Internet search engine in 1998, dictionaries don't generally list the noun. But within a few years of the company's founding, the verb *google* came to prominence in the sense "to look (something) up on the Internet using the Google search engine." The term has spun off such derivatives as *googleable* (= having a significant presence on the Internet) and *google-ganger* (= someone having the same name as oneself and therefore showing up in search results when one googles oneself). A variant term for the latter is *dopplegoogler*—which, like *googleganger*, is modeled on the German word *dopplegänger* (= someone who bears a striking resemblance to someone else).

Even the verb is more often capitalized than not.

goose bumps; gooseflesh; goose pimples; goose skin. All four terms refer to the skin condition brought on by fear, exhilaration, or cold, and marked by bumps located at hair follicles, especially on the forearms. *Goose bumps* (often written *goosebumps*) is the newest term, dating only from the 1930s. Yet today, in both AmE and BrE, it appears much more often in print sources than *goose pimples*, which dates from the late 19th century. In BrE, the older *gooseflesh* (early 19th century) and *goose skin* (mid-17th century) are still

common as well. In medical circles, the condition is called *horripilation* (essentially, "hair standing on end") or, less commonly, *piloerection*.

Current ratio (in order of headwords): 126:33:15:1

goosey (= [1] of, relating to, or resembling a goose; [2] foolish; or [3] hypersensitive to being prodded or startled) is the standard spelling. **Goosy* is a variant. *Loosey-goosey* is a low CASUALISM meaning "relaxed" (as in "loose as a goose") or, in describing machinery, "rattletrap."

GOP. A. Generally. This abbreviation, short for *Grand Old Party* (= the Republican Party), may be doomed. In late 2002, the editors at *The Wall Street Journal* and at several other newspapers decided to drop it from all copy, including headlines, on grounds that not everyone knows what it stands for. See William Safire, "On Language," *N.Y. Times*, 15 Dec. 2002, at 48. Safire objected, pointing out that he knows what a DVD is but doesn't know what the letters stand for. *Ibid.* (See **DVD**.) Part of the problem, it seems, is that while *Republican Party* has the short form *GOP*, *Democratic Party* has no equivalent short form. (That's a quirk of language.) Also, some editors believe that abbreviations should be explained with the full phrase on first use, and they rebel at writing out "Grand Old Party" in each piece in which the phrase appears. If the abbreviation falls into disuse, it will dwindle very gradually. The 2002 editorial decision may ultimately be registered as a temporary blip in the history of the term, as editors retreat from a hasty decision because headlines and quotations make the abbreviation unavoidable. Then again, the decision may signal the onset of moribundity.

B. Redundancy. When coupled with *party*, *GOP* creates an odd REDUNDANCY. **GOP party* represents **Grand Old Party party*. Either drop *party* or change *GOP* to *Republican*—e.g.:

- "We're playing ball," said *GOP party* [read *GOP*] chairman Richard S. Williamson." Lynn Sweet, "Bush Plans Major Illinois Ad Blitz," *Chicago Sun-Times*, 27 Oct. 2000, at 4.
- "In those cases, local Democrats are seeking to have tossed out thousands of absentee ballots because of alleged mishandling of the ballot applications by *GOP party* [read *GOP*] workers." Bob Davis & Phil Kuntz, "Gore Comments Unnerve Certain Democrats," *Wall Street J.*, 6 Dec. 2000, at A12.
- "The *GOP party* [read *GOP*] leaders . . . then learned how to apply for a job in the prospective Bush administration." Tyler Whitley, "Republicans Cheer Halt in Fla. Recount," *Richmond Times-Dispatch*, 10 Dec. 2000, at C1.

LANGUAGE-CHANGE INDEX

**GOP Party* for *GOP*: Stage 2

***gormand.** See **gourmet**.

gossip, vb., makes *gossiped* and *gossiping* in both AmE and BrE. See SPELLING (B).

got, p.pl.; **gotten.** See **get (B)**.

gotten. See **get**.

gourmet; gourmand; epicure. As a noun, *gourmet* now means “a connoisseur of food and drink,” although it originally referred more specifically to a connoisseur of wine. *Gourmet* (/goor-**may**/ or /goor-may/) shares with *gourmand* (/goor-**mahnd**/ or /goor-mahnd/) the basic sense “someone who loves good food and drink,” but their connotations have come to be markedly different. A *gourmet* knows well and appreciates the finer points of food and drink. A *gourmand*, on the other hand, is commonly understood to be a glutton for food and drink. An *epicure* (/ep-ikyoor/) is essentially the same as a gourmet, though perhaps with a touch of overrefinement. Epicureanism is a philosophy concerned with personal happiness and freedom from pain.

The pejorative sense for *gourmand* has been the source of some confusion because the corresponding GALLICISM, *gourmandise* (/goor-mən-**deez**/), means “gastronomic expertise; an appreciation of fine cuisine.” The negative connotations of *gourmand* and the positive connotations of *gourmet* were once decried by those who want *gourmand* to correspond to *gourmandise*:

The word [*gourmet*] first began to take on its improper sense in the last decade of the 18th century, a time when certain noble lords, not to mention the nouveaux riches (who are always with us), were quite ignorant of true gastronomy But it was not till well on in the 19th century that this word was applied to the *gastronome*, or connoisseur of the table. Then the stupid, pretentious, and ill-mannered new rich of the Second Empire (1851–1870) began to feel squeamish over the shameful word *gourmand*, and soon it was replaced, among these ridiculous snobs, by *gourmet* Let us not fear *gourmand*. It has only one meaning. *La gourmandise* is and always has been celebrated as a virtue among the kind of sensitive people who despise gluttony as they do drunkenness.

M. des Ombiaux, as quoted in Donald Moffat, “Gourmet or Gourmand?” *Atlantic Monthly*, Apr. 1956, at 90, 91.

But the *gourmand* is no longer such a celebrated figure. The “ridiculous snobs” of the mid-19th century held sway, the curious result being that *gourmand* no longer corresponds to *gourmandise*. (**Gormand* is a variant spelling formerly common.)

The word *gourmet* is also used—and perhaps overused—as an adjective meaning “of, involving, or serving fine or exotic food” <a trendy gourmet restaurant>. With *gourmet chocolates on the pillow* and *gourmet pasta and sauce sets*, the word has been devalued to the point that it merely describes food with pretensions.

governance. In 1926, H.W. Fowler pronounced *governance* an ARCHAISM for which either *government* or *control* suffices, allowing it only in “rhetorical or solemn contexts” (*FMEU1* at 220). The word was simply in a prolonged lull. In the 1960s, it was awakened in AmE and by the 1990s had become something

of a VOGUE WORD throughout the English-speaking world. In legal contexts, it frequently refers to running or governing a corporation—e.g.: “Pierre-Henri Leroy [is] founder of Proxinvest, which advises companies on French corporate *governance* issues.” “French Drug Stocks Soar as Elf Proposes Alliance,” *N.Y. Times*, 20 Dec. 1996, at D4.

governing (= regulating, controlling) is sometimes mistakenly written *governoring*—e.g.:

- “The regents, historically a coordinating board rather than *governoring* [read *governing*] board, were given the power to cut only funding, not actual programs.” John Funk, “Regents’ Cutbacks Hit Humanities,” *Plain Dealer* (Cleveland), 10 June 1996, at B1.
- “Cigars have become a major concern as they are becoming a status symbol and need to have the same tight laws *governoring* [read *governing*] them as cigarettes, he said.” Tom Ernst, “Clergyman Sees Place for Church in Anti-Smoking Campaign,” *Buffalo News*, 5 Jan. 1997, at C6.
- “Glenda Kendrick, a spokeswoman for Justice’s Office of Justice Programs, said each of the department’s grant programs has different rules *governoring* [read *governing*] how states may use the money.” Craig Whitlock & Lori Montgomery, “Md. Agency’s Use of Grants Investigated,” *Wash. Post*, 13 Aug. 2002, at B1.

Though rare, *governoring* does have its use in denoting an automotive device that limits a vehicle’s speed (its *governor*)—e.g.: “The factory sets its top speed at 130 miles per hour and warns drivers to call if the *governoring* system breaks.” Royal Ford, “2000 Audi TT: A Smooth, Sultry Scamperer,” *Boston Globe*, 23 May 1999, at F1.

LANGUAGE-CHANGE INDEX
governoring misused for *governing*: Stage 1

government is preferably pronounced with the *-n*-distinctly in the second syllable: /gəv-ər-n-mənt/. According to the pronunciation expert Charles Harrington Elster, it is “one of a number of words that careful speakers are particularly diligent about pronouncing precisely. . . . How you say it is an indication of whether you are an average educated speaker or a cultivated one.” *BBBM* at 229. Robert W. Burchfield, the *OED* chief editor and BBC consultant, said that *government* belongs “to a small group of words that [give] a maximum of offence to listeners if pronounced in a garbled manner, with the first *n* silent.” *FMEU3* at 339.

governmental; government, adj. Increasingly today, the noun *government* is used attributively—that is, in an adjectival function <government rules and regulations>. In only a few phrases is *governmental* the more frequently encountered adjective, examples being *governmental authority* and *governmental organization*. On the whole, though, the longer form appears to be in retreat. The choice seems to do not with whether

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

a vowel follows the word, since *government agency* predominates over *governmental agency* in AmE and BrE alike, but rather with meter. Over time, the longer form may well look and sound more and more archaic.

GOVERNMENTAL FORMS. The English language abounds in words denoting almost every conceivable form of government, usually ending in either *-cracy* or *-archy*. What follows is only a sampling of the scores of familiar and arcane terms:

<i>androcracy</i>	= government by men
<i>autocracy</i>	= government by a single person
<i>bureaucracy</i>	= government by administrative bureaus
<i>democracy</i>	= government by the people
<i>dyarchy</i>	= government by two rulers
<i>ergatocracy</i>	= government by workers
<i>gerontocracy</i>	= government by the elderly
<i>gynecocracy</i>	= government by women
<i>hagiocracy</i>	= government by saints
<i>juvenocracy</i>	= government by youth
<i>kakistocracy</i>	= government by a country's worst citizens
<i>kleptocracy</i>	= government by thieves
<i>meritocracy</i>	= government by those who have the most merit
<i>monarchy</i>	= government by a king or queen
<i>ochlocracy</i>	= government by the mob (also termed <i>mobocracy</i> , a HYBRID)
<i>oligarchy</i>	= government by a small group of people
<i>pantisocracy</i>	= government by all people equally (in a utopia)
<i>plutocracy</i>	= government by the wealthy
<i>polyarchy</i>	= government by many people
<i>stratocracy</i>	= government by the military
<i>technocracy</i>	= government by technicians
<i>theocracy</i>	= government by religious leaders

Bureaucracy, of course, does not refer only to government by administrative bureaus. More commonly, it denotes inaccessible and inefficient government characterized by red tape. See BUREAUCRATESE.

governor-general (= a governor of high rank; esp., the chief representative of the British Crown in a Commonwealth country) has always predominantly formed the plural *governors-general*, not **governor-generals*.

Current ratio: 4:1

gracile (/gras-əl/) = slender, physically slight <gracile vines> <long, gracile fingers>. The word is sometimes misused for *graceful*—e.g.: “The Adagio has all the pretty, *gracile* [read *graceful*] wit you expect from Mozart.” Stephen Brookes, “Music,” *Wash. Post*, 11 May 2006, at C9. Sometimes the meaning is doubtful—e.g.: “The exhibition includes many works by well-known artists—a *gracile* [read *small? graceful?*] drawing of a dancer before a mirror by Henri Matisse.” Margaret Moorman, “Best of a Decade and Whimsical Works,” *Newsday* (N.Y.), 21 Dec. 1990, § II, at 85.

LANGUAGE-CHANGE INDEX
gracile misused for *graceful*: Stage 1

gracious (= kind and polite) is sometimes misused for *grateful* (= thankful). Common in speech (and

reported speech), the error occurs less commonly in written work. But it does appear—e.g.:

- “He is *gracious* [read *grateful*] for all the newfound attention, even if it catches him a bit off-guard.” Adam Mertz, “FitzRandolph Mulls,” *Wis. State J.*, 20 Mar. 2002, at A1.
- “She was very *gracious* [read *grateful*] for the love and support of her family.” “Marlyn R. Riffey” (obit.), *Patriot-News* (Harrisburg), 4 Aug. 2002, at B8.

President George W. Bush was quoted as making this gaffe in 2001: “I’m so thankful, and so *gracious*—I’m *gracious* [read *grateful* times two] that my brother Jeb is concerned about the hemisphere as well.” As quoted in “Weather in Florida Can Play Tricks on Your Mind,” *Chicago Sun-Times*, 14 June 2001, at 38. See **grateful**.

LANGUAGE-CHANGE INDEX
gracious misused for *grateful*: Stage 1

graduate, vb. The traditional idiom (dating from the 16th century) was that the school *graduated* the student or the student *was graduated* from the school. By extension (during the 19th century), a student was said to *graduate* from the school. (See ERGATIVE VERBS.) Those two uses of the verb are standard, as Teall explained in the mid-20th century: “‘Graduate’ may be a transitive or an intransitive verb. To be graduated is to be admitted to a scholastic standing or an academic degree; to graduate is to pass the final examinations, be dismissed with honor, take the degree. Many teachers ride the ‘was graduated’ hobby, but common usage, good literary practice and dictionary sanction may all be lined up on the side of the active [intransitive] form, ‘to graduate.’” Edward N. Teall, *Putting Words to Work* 280 (1940).

Today the old-fashioned *was graduated* is most common in wedding announcements and obituaries—e.g.:

- “Born and raised in Philadelphia, she *was graduated* from the University of Pennsylvania in 1974.” Paul M. Rodriguez, “Thankless Task,” *Insight Mag.*, 21 May 2001, at 10.
- “He *was graduated* from Moberly High School in 1949.” “Wheeler, Ronald Eugene” (obit.), *Roanoke Times*, 24 May 2001, at B2.
- “The bride-elect . . . *was graduated* from Archmere Academy in Claymont, Del.” “Elizardi/Gragg,” *Times-Picayune* (New Orleans), 26 May 2001, at 3. (On the use of *bride-elect*, see **bride-to-be**.)

In the mid-20th century, usage began to shift further toward an even shorter transitive form: students were said to **graduate college* (omitting the *from* after *graduate*). This poor wording is increasingly common—e.g.:

- “Today three quarters of boys and half of girls have had sex by the time they *graduate* [read *graduate from*] high school.” Michele Ingrassia, “Virgin Cool,” *Newsweek*, 17 Oct. 1994, at 59, 60.
- “None of the brothers *graduated* [read *graduated from*] college.” Bruce Upbin, “Scholars of Shelf Space,” *Forbes*, 21 Oct. 1996, at 210.
- “‘I have a reading disorder,’ Leschuk says, yet he struggles to think of any friends who *graduated* [read *graduated from*] college who are doing as well.” Del Jones, “Diplomas Decline as Degrees of Separation in the Workforce,” *USA Today*, 3 Jan. 1997, at B1.

You may be happy to learn, however, that the collocation *graduated from college* remains much more common in modern print sources than *graduated college*. That ratio is bound to shrink over time.

LANGUAGE-CHANGE INDEX

1. *graduate* as an intransitive verb (as in *he graduated from college*): Stage 5
 2. *graduate* as a transitive verb (as in **he graduated college*): Stage 3
- Current ratio (*he graduated from college* vs. **he graduated college* vs. *he was graduated from college*): 29:3:1

graffiti. *W11* notes that this plural, originally Italian, “is sometimes used with a singular verb as a mass noun <the *graffiti* is being covered with fresh paint . . .>.” This shift has largely taken place since the late 1980s. (Cf. **data**.) Yet one still sees it being used as a plural—e.g.: “During the past year *graffiti* have begun to appear in cities.” Lara Marlowe, “Revolutionary Disintegration,” *Time*, 26 June 1995, at 42, 43. See PLURALS (J).

Sometimes one sees *graffito* when the sense is undeniably singular and the mass noun would be inappropriate—e.g.:

- “The young Indian submerged in the menacing urban emptiness of a London ghetto where the least offensive *graffito* says ‘Go Home to Pakistan.’” Julian Symons, “The Three Faces of Ruth Rendell,” *Wash. Post*, 18 Oct. 1987, Book World §, at 9.
- “Tommaso adds a peace symbol to his completed *graffito*.” John McPhee, “Season on the Chalk,” *New Yorker*, 12 Mar. 2007, at 58.
- “Troops in Qurah, Iraq, rest under a *graffito* left by insurgents.” *Time*, 16 Apr. 2007, at 28 (photo caption).

grammatical error. Because *grammatical* may mean either (1) “relating to grammar” <grammatical subject> or (2) “consistent with grammar” <a grammatical

sentence>, there is nothing wrong with the age-old phrase *grammatical error* (sense 1). It’s as acceptable as the phrases *criminal lawyer* and *logical fallacy*. The phrase *grammatical error* dates from the 18th century.

Current ratio (*grammatical error* vs. *error in grammar*): 9:1

granary (= a place where grain is stored, esp. wheat) is most traditionally pronounced /**gran**-ə-ree/, though /**gray**-nə-ree/ is also acceptable. The spellings **grainary* and **grainery* are obsolete variants.

Current ratio (*granary* vs. **grainery* vs. **grainary*): 798:3:1

grandad. See **grandpa**.

granddad. See **grandpa**.

grandeur (= impressive beauty, power, or size) has long been preferably pronounced /**gran**-jər/ or /**gran**-juər/—not /**gran**-door/ or /**gran**-dyoor/ (two *grandi*-ose overpronunciations).

grandfather clause = a clause in the constitutions of some southern American states exempting from suffrage restrictions the descendants of men who voted before the Civil War. The *OED* misleadingly labels this phrase colloquial; it is the only available name for these statutes, and it appears in formal writing. E.g.: “A state law directly denying Negroes the right would be overthrown as a matter of course, and in 1915 the Court had invalidated a so-called ‘*grandfather clause*’ [that] required literacy tests of those who were *not* descendants of those who could vote in 1867.” Robert G. McCloskey, *The American Supreme Court* 212 (1960). Moreover, it has taken on an extended sense, referring to any statutory or regulatory clause exempting a class of people or transactions because of circumstances existing before the clause takes effect.

This phrase has given rise to the verb *grandfather*, meaning “to cover (a person) with the benefits of a grandfather clause.” E.g.: “The council could, and should, have crafted language that *grandfathered*’ Mrs. Gary’s job.” “Nepotism Has No Place in Government,” *Baltimore Sun*, 12 Jan. 1998, at A14. Sometimes, in passive uses, the phrase is *be grandfathered in*—e.g.: “There is one exception to the ban on new roads: Any project already on the drawing board can *be grandfathered in*, or continued as scheduled because its planning occurred before the new restrictions were put in place.” Christina Nifong, “Environmental Battle—New Roads vs. Clean Air,” *Christian Science Monitor*, 14 Jan. 1998, at 3.

A few writers and speakers—sometimes in jest—have resorted to *grandparent clause* to avoid what might be perceived as **SEXISM**—e.g.: “Since she was ordained four years before the policy was issued,

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Spahr was sure a *grandparent clause* [read *grandfather clause*] would protect her.” Yonat Shimron, “Gay Presbyterians Fight for Ordination,” *News & Observer* (Raleigh), 30 Mar. 1996, at A1. That neutering skews the historical sense and is likely to strike most readers and listeners as too politically correct or downright jocular. The phrase is appropriate, however, in other contexts, such as some parental-notification laws that let grandparents substitute for parents in giving permission for a minor to have an abortion.

LANGUAGE-CHANGE INDEX

grandparent clause for *grandfather clause*: Stage 1
Current ratio (*grandfather clause* vs. *grandparent clause*): 660:1

grandfather clock; *grandfather’s clock. The first is standard; the second is a variant form.

Current ratio: 10:1

grandma (= grandmother) is generally so spelled in AmE and BrE alike. The *-d-* being silent, both *granma* and *gramma* are infrequent variants.

grandpa; granddad; grandad. These are colloquial terms for *grandfather*. *Grandpa* (the most prevalent term) is sometimes shortened to *granpa*, *gramp*, *grampa*, or *gramps*, all of which are recognized as good colloquial English. As for the *-dad* terms, the standard spellings are *granddad* in AmE and *grandad* in BrE.

grandparenting. See **parenting**.

grateful; gratified. The distinction is well established. *Grateful* = appreciative, thankful <I’m grateful for your help>. *Gratified* = pleased, satisfied <we’re gratified that you’ll attend our party>. Cf. **gracious**.

gratis is pronounced /*grat-is*/ in AmE, traditionally /*gray-tis*/ in BrE. For a serious blunder involving this word, see **persona non grata**.

gratuitous; fortuitous. These two words are occasionally confounded. *Gratuitous* = (1) done or performed without obligation to do so <gratuitous promises>; or (2) done unnecessarily <gratuitous criticisms>. *Fortuitous* = occurring by chance <fortuitous circumstances>. See **fortuitous**.

gravamen (= the crux of a complaint or accusation) has predominantly formed the classical plural *gravamina* since the 18th century. The term appears primarily in legal writing. Although some have naturalized the plural to *gravamens*, that form remains a variant only.

The term is sometimes misspelled **gravaman* and is subject to uncertainty in pronunciation. The traditional pronunciation is /*grə-vay-mən*/, but many lawyers today say /*grah-və-mən*/.

Current ratio (*gravamina* vs. *gravamens*): 21:1

GRAVE ACCENT. See **DIACRITICAL MARKS**.

gravel, vb., makes *graveled* and *graveling* in AmE, *gravelled* and *gravelling* in BrE. See **SPELLING (B)**.

gravitas. Not many LATINISMS spring into popular use. This one arose in English in the 1920s, mostly lay dormant until the early 1990s, and then became a **VOGUE WORD**. Meaning “personal stature, trustworthiness,” it carried lots of weight during the 2000 U.S. presidential campaign. People used it to denote something once conveyed by the **CLICHÉ** *presidential timber*. The election year saw *gravitas* take off, appearing twice as often in U.S. print sources as it had in 1999, and almost three times as frequently as it had in 1998. It has since been sagging a bit under its own weight. But in its heyday it soared with literary eagles—e.g.:

- “What is troubling to Republicans who have plighted their troth to this man is not that they think he is a coarse or cruel man. Rather it is that Carlson’s profile suggests an atmosphere of adolescence, a lack of *gravitas*—a carelessness, even a recklessness, perhaps born of things having gone a bit too easily so far.” George F. Will, “Not Ready for Prime Time?” *N.Y. Post*, 12 Aug. 1999, at 35.
- “It is the biggest question of the primary season whether Mr. Bush will be rejected by the voters, on the grounds that he is lacking in such *gravitas* as is evident in John McCain and Steve Forbes.” William F. Buckley Jr., “The Party Spoiler . . . and the Thug,” *Wash. Times*, 10 Sept. 1999, at A18.
- “‘He has to show his *gravitas*,’ said a top Bush aide, ‘and he can’t make any mistakes. If he pulls that off, he’s probably unstoppable.’” Thomas M. DeFrank, “Bush Score in Debate a Primary Concern,” *Daily News* (N.Y.), 2 Dec. 1999, News §, at 4.

gray; grey. The former spelling is more common in AmE, the latter in BrE; both are old, and neither is incorrect. The BrE preference had been established by 1715, the AmE preference by the mid-1820s. Note that *greyhound* is an invariable spelling.

Great Britain consists of England, Scotland, and Wales—all three on the island known to the Romans as *Britannia*. (Modern usage routinely shortens the name to *Britain*.) It differs from *United Kingdom*, which also includes Northern Ireland.

Some people wrongly think of *Great Britain* as a boastful name. But it’s not: it’s rooted in history. *Great Britain* was once contrasted with *Little Britain* (or simply *Brittany*), in France, where the Celtic Bretons lived. Although the *OED*’s last citation for *Little Britain* dates from 1622, the term *Great Britain* has persisted (though perhaps not without a sense of pride).

Grecian; Greek. As adjectives, these words both generally mean “of, relating to, or involving Greece or the Greeks.” If a difference exists, it’s that *Grecian* more often refers to ancient Greece—and in particular its art and architecture <Grecian urn>. An exception is *Greek mythology*. In general, though, *Greek* is the broader term <Greek salad>.

greenkeeper (= the person in charge of the upkeep of a golf course) is the standard term. **Greenskeeper* is a chiefly AmE variant.

Current ratio: 2:1

Grenadian; *Grenadan. The first is standard; the second is a NEEDLESS VARIANT. See DENIZEN LABELS.

Current ratio: 7:1

grey. See **gray**.

grievance; *aggrievance. The latter is a NEEDLESS VARIANT.

Current ratio: 2,997:1

grieve is most often an intransitive verb meaning “to feel grief.” It is also, traditionally, a transitive verb meaning (1) “to cause distress to,” or (2) “to suffer from a loss.” Sense 2 is now more common—e.g.: “After taking leave to *grieve* his wife, he returns to CTU in an unexpectedly violent temper.” Matthew Gilbert, “Television Review: 24,” *Boston Globe*, 29 Oct. 2002, at C1.

But recently the verb has taken on a new meaning: “to bring a grievance for the purpose of protesting.” The emergence of this sense is not entirely surprising because it is implied by the words *grievable* and *grievant*. It’s most often used in employment contexts—e.g.:

- “‘Given the circumstances of what happened, I find it almost unbelievable that they would *grieve* this disciplinary action,’ he said earlier this week.” Tom Farmer, “2 More Firefighters Disciplined for Delay,” *Boston Globe*, 25 Aug. 2005, NW §, at 3 (quoting John C. Curran, mayor of Boston).
- “[Sgt. Brett] Eisenlohr, who has worked for the department since July 1982, is *grieving* the discipline, which he has already served.” Katie Melone, “3 Police Officers, Sergeant Suspended,” *Hartford Courant*, 17 Apr. 2007, at B3.
- “‘There is too much deal-making,’ [Special Counsel Merrick] Bobb wrote. ‘An employee has everything to gain and nothing to lose by *grieving* discipline. The nearly inevitable result of the grievance will be an ultimate reduction in the discipline.’” Troy Anderson, “Discipline Flaw Lets Deputies Play System,” *Daily News* (L.A.), 17 May 2007, Valley §, at N1.

Stylists are not likely to use the verb, but neither are they likely to be awarded relief.

LANGUAGE-CHANGE INDEX
grieve meaning “to bring a grievance”: Stage 3

grievous (/gree-vəs/) is frequently misspelled **grievious* and mispronounced (/gree-vee-əs/), just as *mischievous* is frequently misspelled **mischievious* and similarly mispronounced. These are grievous and mischievous malformations. See **mischievous**.

Current ratio (*grievous* vs. **grievious*): 440:1

grill; grille. A *grill* is a cooking device, especially one with a gridiron over an open flame; as a verb, it means to cook something on a grill. By extension, a *grill* is also an informal restaurant serving a limited menu highlighting *grilled* (or often just fried) food. A *grille* is a protective metal latticework such as that in front of an automobile’s radiator.

Grill is a recognized variant spelling for *grille*, but not vice versa—e.g.: “He hauls a huge *grille* [read *grill*], made from a split oil tank, to the park and cooks chickens by the dozen.” Michael Sangiacomo, “Cook Finds Buyers for Homemade BBQ Sauce,” *Plain Dealer* (Cleveland), 15 Oct. 2001, at B10. Still, *grille* is very popular in the pretentious names of restaurants, perhaps to suggest a pub-like atmosphere, as in *Ye Olde Bar & Grille*. In fact, the name has become so ubiquitous that the mere detail that a *grille* is not a *grill* is unlikely to make a difference.

LANGUAGE-CHANGE INDEX
grille misused for *grill*: Stage 2
Current ratio (*charcoal grill* vs. **charcoal grille*): 333:1

grimace (= a facial expression of physical pain or mental disgust) is now almost universally pronounced /grim-əs/. But the word came into English from French in the 17th century as /gri-mays/ (rhyming with *face*), and as recently as the 1970s that pronunciation was still preferred. Charles Harrington Elster pinpoints the death of the traditional pronunciation: “Then came the inane McDonald’s restaurant advertising campaign with Ronald McDonald the clown and his puppet sidekick GRIM-is, and poor old gri-MAYS swiftly became as strange as a square hamburger.” *BBBM* at 233.

grind > ground > ground. So inflected. But the erroneous form *grinded* is gaining ground—e.g.:

- “The ancient constitutional process of impeachment *grinded* [read *ground*] into operation again yesterday for the first time in 24 years.” David M. Shribman, “A Titanic Jousting Act,” *Pitt. Post-Gaz.*, 20 Nov. 1998, at A17.
- “The Giants’ return units have all but *grinded* [read *ground*] to a halt.” Neil Best, “Giants vs. Broncos,” *Newsday* (N.Y.), 13 Dec. 1998, at C12.
- “Masahiro Tanaka (9–6), coming off a complete-game victory last Saturday in Toronto, *grinded* [read *ground*] through six innings.” Erik Boland, “Yanks Go Down Swinging to Tribe,” *Newsday* (N.Y.), 22 Aug. 2015, at A34.

See IRREGULAR VERBS.

In one context, however, *grinded* is perfectly legitimate (though lamentable, in the eyes of high-school chaperons everywhere). There is now a style of dancing known as *grinding*, involving a female’s pressing her buttocks against her partner’s groin (through clothing), or sometimes a direct rubbing of groins or of her breasts, often with vigorous perfrication. (Call it part of the coarsening of our culture.) Someone who has engaged in such dancing would say that he or she *grinded*, not *ground*. *O tempora! O mores!*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

grisly; grizzly; gristly; grizzled. *Grisly* = ghastly, horrible <grisly murders>. *Grizzly* = (1) grayish; or (2) of, relating to, or involving the large brown bear that inhabits western North America. Each word is sometimes misused for the other. Most commonly, *grizzly* displaces *grisly* from its rightful position—e.g.: “That night the television news is full of the *grizzly* [read *grisly*] horror of it all.” Myra MacPherson, “Songs for a Native Son,” *Wash. Post*, 2 May 1980, at C1. But the opposite error also occurs—e.g.: “Dolphins, storks, cranes, pelicans, *grisly* [read *grizzly*] bears, an 8-foot map of Texas: Joe Kyte has stuffed them all.” “Topiary Reindeer Harmless Grazers,” *Pitt. Post-Gaz.*, 30 Nov. 1996, at D1.

Gristly = (of meat) containing an unappetizing amount of cartilage. The error is rare, but on occasion this word is also misused for *grisly*—e.g.: “In London, take in Jack the Ripper’s walking tour that explores hidden courtyards and gaslit alleyways of London in the year 1888, when residents were shocked and frightened by a series of *gristly* [read *grisly*] murders.” Jerry Morris, “Hunting Ghosts in Old England,” *Boston Globe*, 27 Oct. 1996, at M2.

Grizzled is a synonym for *grizzly* in the sense of “grayish,” most often describing hair streaked with gray—e.g.: “Jennet turned her attention to Davy Ingram, deep in conversation with Zachary Alday, a middle-aged man whose most distinguishing feature was a mole on one cheek. Ingram, younger but more *grizzled*, showed no outward trappings of newfound wealth.” Kathy Lynn Emerson, *Face Down Across the Western Sea* 47 (2002). Because gray hair and beards are associated with old men, *grizzled* has also come, by extension, to describe any old-timer. In fact, this is its most common use today—e.g.: “Those, as *grizzled* fans here say while sipping a Hudepohl, were the days.” Todd Jones, “Good Old Days Gone for Good for the Reds in Cincinnati?” *Columbus Dispatch*, 23 July 2002, at D1.

LANGUAGE-CHANGE INDEX
grisly misused for *grizzly*: Stage 1

grocery /grohs-[-ə]-ree/ is often mispronounced /groh-shree/. See PRONUNCIATION (B).

groom = (1) someone who takes care of horses; or (2) a bridegroom. Both senses are standard. Some writers, however, have ill-advisedly objected to sense 2, which is first recorded in Shakespeare’s *Othello* (1604): *like bride and groom* (2.3.173). But there’s no sound basis for objecting to *groom* in sense 2.

The historical facts are these. The original term was *bridegroom*, not *bridegroom*, and the unetymological *-r-* got added in the early 16th century (probably from the influence of what has now become sense 1). In the early 17th century, Shakespeare (or perhaps predecessors or contemporaries) shortened *bridegroom* to *groom* through aphaeresis. In 1755, Samuel Johnson recorded both *bridegroom* and *groom* as standard.

In 1806, Noah Webster defined *bridegroom* as “the name of a new-married man.” But 22 years later, in

his big two-volume *American Dictionary of the English Language*, Webster decided to revive *bridegroom* without the *-r-*—which had lain dormant since the 14th century—to no avail. And he cut *groomsman* (which he had recorded in his 1806 *Compendious Dictionary of the English Language*) from the big dictionary of 1828, presumably because the prospect of touting *goomsman* made him uneasy. As for *bridegroom* (again without the *-r-*), Webster wrote that “[t]his word, by a mispronouncing of the last syllable, has been corrupted into *bridegroom*, which signifies a *bride’s hostler* . . . Such a gross corruption or blunder ought not to remain a reproach to philology.” Yet it has remained.

Somehow, in the middle of the 19th century, a prejudice against *groom* as a shortened form of *bridegroom* arose, perhaps from the fallacious thought that a word can have only one correct meaning. But it makes no more sense than objecting to *plane* for *airplane* or *ball* for *baseball* <Play ball!>.

grotesquerie (= something grotesque; a grotesque quality) is the preferred spelling. **Grotesquery* is a variant—not exactly a grotesquerie, just a variant.

Current ratio: 3:1

grotto (= a small picturesque cave, whether natural or artificial) has predominantly formed the plural *grottoes* since the early 19th century in both AmE and BrE. **Grottos* is a variant form. See PLURALS (D).

Current ratio: 2:1

grounds, on the. See **because** (D).

groundwater. One word.

ground zero = (1) the site of a bomb explosion, esp. a nuclear bomb, or (2) the site of the destroyed World Trade Center. Sense 1 is typically literal—e.g.: “To the northeast, tunneled one mile below the surface of Cheyenne Mountain, is the NORAD facility—in all likelihood, *ground zero* during a nuclear attack.” David Feela, “A Bull Market,” *Denver Post*, 31 Dec. 2000, Perspective §, at K2. But it may also be figurative—e.g.: “The nation’s jails and prisons are at *ground zero* of the war against AIDS.” Scott Wyman, “Out of Jail and into the Arms of Angels,” *Sun-Sentinel* (Ft. Lauderdale), 31 Dec. 2002, at B1.

As a reference to the site of the former World Trade Center, *ground zero* might seem to be a proper noun requiring capitalization. But a year after the terrorist attack, that usage had not become standardized: for example, *Newsday* and *Newsweek* capitalized it but *The New York Times* and *U.S. News & World Report* did not. And though some do not capitalize the phrase when referring to the New York site, others mistakenly capitalize it even when it’s used generically—e.g.: “Everybody’s slate is wiped clean,” Lyons said. “It does make it a little easier from the standpoint that everybody starts at *Ground Zero* [read *square one*].” Rob Daniels, “Scholarship Rule Stirs Up Controversy,” *News & Record* (Greensboro), 15 July 2002, at C1.

As in the example just quoted, it is common to hear and read phrases such as *start from ground zero* and *back to ground zero* where the meaning is *start from scratch* or *back to square one*. In these phrases, using *ground zero* is ill-advised because (1) a ready-made phrase is already at hand (either of the substitutes just mentioned), (2) the sense of destruction is wholly absent, and (3) the phrases seem to trivialize the 2001 devastation of lower Manhattan, with which the phrase is now so closely associated—e.g.:

- “Members of the Orchard Park Village Board held out hope Monday that planning for the Orchard Downs site at the village’s heart might not be back *at ground zero* [read *to the drawing board*].” Elmer Ploetz, “Board Hopeful for Project at Four Corners Site,” *Buffalo News*, 14 Aug. 2001, at C3.
- “It starts at *ground zero* [read *square one*] and helps you develop routines you can do on your own.” Lowell E. Sunderland, “Fitness Is Not Just for Fanatics,” *Baltimore Sun*, 7 Apr. 2002, at B3.
- “Baer knew he didn’t have to start from *ground zero* [read *scratch*].” David Wooks, “Irish Defense Ahead of the Offense,” *Indianapolis Star*, 29 Apr. 2002, at C6.

LANGUAGE-CHANGE INDEX
ground zero for *square one*: Stage 1

grovel, vb., makes *groveled* and *groveling* in AmE, *grovelled* and *grovelling* in BrE. See SPELLING (B). The word is pronounced either /**grah**-vəl/ or /**gr**-vəl/.

grow, v.t. Although this verb is typically intransitive <he grew two inches taller over the summer>, its transitive use has long been standard in phrases such as *grow crops* and *grow a beard*.

Recently, however, *grow* has blossomed as a transitive verb in nonfarming and nongrooming contexts. It is trendy in business JARGON: *growing the industry*, *growing your business*, *growing your investment*, and so on. But because many readers will stumble over these odd locutions, the trend should be avoided—e.g.:

- “The plan was to help each key industry develop an industry allocation, create a business plan, create a strategic plan and then implement the plans to *grow* [read *expand* or *develop*] the industry.” John M. Grund, “Triage It, but Don’t Kill It,” *Oregon Bus.*, Jan. 1997, at 26.
- “To this common mix Quantum has added a clever way to keep the teams’ collective vision focused on how to *grow* [read *expand* or *develop*] the business rather than just on how to cooperate inside.” Thomas A. Stewart, “Another Fad Worth Killing,” *Fortune*, 3 Feb. 1997, at 119.
- “Whether you are an existing landlord looking to *grow* [read *expand*] your portfolio or looking to become a first-time landlord, my thoughts are take advice from as many people as possible.” “Are Homeowners Warming to the Idea of Renting?” *Canterbury Times* (U.K.), 19 Aug. 2015, at 33.

LANGUAGE-CHANGE INDEX
grow as a transitive verb in reference to nonliving things <growing the economy>: Stage 3

grudging (= reluctant; with grumbling) is the standard adjective in phrases such as *grudging acceptance*. Avoid the participial adjective **begrudging*—e.g.: “I have heard even some die-hard Hillary-haters express *begrudging* [read *grudging*] admiration for her determination, resourcefulness and fierce advocacy for her beliefs.” Clarence Page, “Obama’s Next Hurdles,” *Chicago Trib.*, 14 May 2008, News §, at 27.

LANGUAGE-CHANGE INDEX
**begrudging* for *grudging*: Stage 2
Current ratio (*a grudging respect* vs. **a begrudging respect*): 13:1

grueling; gruelling. Meaning “extremely tiring and demanding,” *grueling* is the standard spelling in AmE, *gruelling* in BrE. The spellings diverged in the 1930s, before which time *gruelling* was standard in all varieties of World English.

gruesome is so spelled—not **growsome*. E.g.: “Hughes’s innkeeper obligingly applied his mouth to the ‘Blawing Stwun,’ producing ‘a *growsome* [read *gruesome*] sound between a moan and a roar.” Christopher Somerville, “Back Again to Tom Brown’s Vale Days,” *Daily Telegraph*, 5 Feb. 1994, at 36. Let us hope that the next edition of this book does not have to report that, since the previous edition, this misusage grew some.

LANGUAGE-CHANGE INDEX
gruesome misspelled **growsome*: Stage 1

guacamole (= a dip made with mashed avocados and a combination of lime or lemon, chiles, onions, tomato, and cilantro) is usually pronounced /gwah-kə-**moh**-lee/. In the Southwest, it is often pronounced /gwah-kə-**moh**-lay/, a bit closer to the Spanish pronunciation.

guarantee, n. & vb.; **guaranty**, n. These homophones are related in meaning as well as in sound, but they are not interchangeable. The broader term, *guarantee*, is more common and is used as a noun and a verb. To *guarantee* something is to assure someone that a promise will be kept <our company guarantees customer satisfaction>. As a noun, a *guarantee* is the promise itself <bring this written guarantee with your proof-of-purchase card if the television breaks down>.

The narrower term, *guaranty*, is a promise to pay money if someone else fails to do so <a mortgage guaranty company>. It is mostly used in banking and other financial contexts, and seldom appears outside legal writing.

A person who gives a *guaranty* is a *guarantor* <the guarantor must sign a guaranty for the car loan in case the borrower doesn’t make the payments>.

guerrilla (Sp. for “raiding party”) = a member of a small band of military fighters who, mostly through surprise raids, try to harass and undermine occupying

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

forces. The word is preferably so spelled—not **guerrilla*. It's often used attributively <guerrilla warfare>.

The MALAPROPISM **gorilla forces* occasionally surfaces.

Current ratio (*guerrilla warfare* vs. **gorilla warfare*): 400:1

guess what. This is an imperative phrase, not an interrogative one. So it shouldn't end with a question mark. Hence the title of Mervin Bishop's *Guess What!* (1995) is preferable to the title of Mem Fox's *Guess What?* (1990), Beau Gardner's *Guess What?* (1985), and Taro Gomi's *Guess What?* (1992).

guild is often misused for *gild*. See **gild**.

guillotine (= a piece of equipment to behead people by slicing) entered English in the late 18th century and was almost immediately anglicized in pronunciation: /gil-ə-teen/. Only in the mid-20th century did AmE speakers begin re-Frenchifying the pronunciation to /gee-yə-teen/. See PRONUNCIATION (D).

guilty. See **not guilty**.

gulf; bay. In oceanographic contexts, these words share the basic sense "a portion of an ocean or sea surrounded by land; an indentation in a shoreline." The difference between the terms is this: a *gulf* is narrow at the mouth but deeply recessed; a *bay* is a wide, shallow inlet. But historically, the distinction hasn't been rigorously followed: consider the Gulf of Mexico with its vast mouth and the Hudson Bay with its narrow one.

gully (= a small ravine) is sometimes misspelled **gully*—perhaps because of the similarity to *valley*. The correct plural is *gullies*. E.g.: "Its six small fields, severed by roads, *gulleys* [read *gullies*] and a river, made it awkward for modern machinery, and much of the land was unproductive." Larry Towell, "The World from My Front Porch," *Life*, Sept. 1997, at 62.

LANGUAGE-CHANGE INDEX
gully misspelled **gully*: Stage 1
Current ratio: 14:1

***gunnel.** See **gunwale**.

gunwale /gən-əl/ (= the upper edge of a boat's side) is the standard spelling. **Gunnel*—a phonetic spelling—is a variant.

Current ratio: 10:1

gustatory; *gustatorial. The latter is a NEEDLESS VARIANT.

Current ratio: 234:1

gut reaction. This phrase, meaning "an instinctive response," is sometimes malapropistically said (and written) **guttural reaction*, or, what is worse, **guttural reaction*—e.g.:

- "And it's told in Mamet's poetry of the inarticulate dispossessed—a language of ellipses, crudities and *guttural reactions* [read *gut reactions*]." Bob Hicks, "Ain't Misbehavin'," *Oregonian* (Portland), 18 Jan. 1991, at R21.

- "But there is a scene—one of the most revealing in the documentary series—when Carole Brennan, Menino's press spokesperson, tangles with Herald reporter David Guarino over a story he's reporting about the mayor's daughter and her *guttural reaction* [read *gut reaction*] to angry firefighters picketing Menino." Monica Collins, "Where's the Hub, Bub? ABC's Documentary Series 'Boston 24/7' Presents a Harsh Dose of Reality," *Boston Herald*, 30 May 2002, at 59.
- "But it is emotion talking. It is the raw, *guttural reaction* [read *gut reaction*] to someone daring to suggest that Rice athletics be scaled back, played at a diminished level or even vaporized." John P. Lopez, "Rice Needs Our Help, Not Just Our Concerns," *Houston Chron.*, 7 May 2004, Sports §, at 1.

Occasionally, the redundant DOUBLE BOBBLE **guttural instinct* (for *instinct*) also appears—as does **guttural instinct* (a triple bobble):

- "What's more, his vacuous screen presence—he gives the impression of a man with absolutely nothing on his mind—is actually a bonus in the role of a beleaguered jungledweller who drop kicks cops and swings from skyscrapers driven by *guttural instinct* [read *instinct*] alone (and, anyway, I heard Robert De Niro was unavailable for the role)." Joel Rubinoff, "He May Not Be Arnold but Tarzan Gets It Done," *Hamilton Spectator* (Ont.), 11 Oct. 2003, at 19.
- "And it's weird enough with the Braves having a *guttural instinct* [read *the instinct*] to pull for the Mets the night Glavine is going for 300." Carroll Rogers, "Braves Blog," *Atlanta J.-Const.*, 2 Aug. 2007, Sports §.

See MALAPROPISMS & DOUBLE BOBBLES.

LANGUAGE-CHANGE INDEX
**guttural reaction* for *gut reaction*: Stage 1

guttural. So spelled—not **guttural*, which is a frequent misspelling. The confusion probably occurs because of a mistaken association with *gutter*, when in fact *guttural* derives from the Latin *guttur* ("throat"). E.g.: "I find myself gripping the handle and uttering a *guttural* [read *guttural*] 'vroom! vroom!'" Ron Alexander, "Metropolitan Diary," *N.Y. Times*, 30 Oct. 1996, at C2. See **gut reaction**.

LANGUAGE-CHANGE INDEX
guttural misspelled **guttural*: Stage 1
Current ratio: 32:1

guy; guys. The singular form is invariably masculine, and the plural often is, too <*Dave Barry's Complete Guide to Guys*>. But the plural is now often used inclusively to address a group that includes males and females, especially in the CASUALISM *you guys*. It can be seen as a handy term because the truly inclusive alternatives are more likely to offend ("guys and gals" or, worse, from the '50s musical, "guys and dolls").

gybe. See **gibe**.

gymnasium. Pl. *gymnasiums*—preferably not **gymnasia* (the standard plural till about 1900). See PLURALS (B).

Current ratio: 1.2:1

gynecocracy. So spelled—not **gyneocracy*. See GOVERNMENTAL FORMS.

Current ratio: 7:1

gypsy. In literal senses, denoting members of the tribes that migrated from northern India to Europe in the 14th or 15th century as well as their language, *Gypsy* is capitalized. (The term now preferred is *Roma*.) In figurative senses—as an adjective meaning “wanderer” or a verb meaning “to live like a Gypsy”—it is not. Nor is it capitalized in such phrases as *gypsy cab* and *gypsy moth*. The term comes from an erroneous belief that the people were from Egypt. Cf. **Romany**.

**Gipsy*, the standard spelling for much of the 19th century (and in BrE, for much of the 20th as well), is an occasional variant.

Because *gypsy* is often used in a pejorative sense, some authorities recommend avoiding it in all contexts. But that advice seems unduly strict. A *gypsy cab* easily becomes an *unlicensed cab*, but there is no ready substitute for *gypsy moth*.

Current ratio (*gypsy* vs. **gipsy*): 3:1

gyrfalcon /jər-fal-kən/ (= a large falcon found in Arctic regions) is the standard spelling. **Gerfalcon* (standard through the early 20th century) is a variant.

Current ratio: 2:1

gyro. Two words are so spelled. A *gyro* (/jɪ-roh/) is a spinning (gyrating) device such as a gyroscope or a gyrocompass. *Gyro* (/yee-roh/ or /zhir-oh/) is a loaf

of meat, typically lamb, but sometimes beef, pork, or a mixture, prepared by roasting the loaf on a rotating vertical spit. A *gyro* is also a sandwich made from the meat and served in folded or rolled-up pita bread.

The sandwich takes its name from the singular Greek noun *gyros*, meaning “a turning” (no doubt a reference to the spit that the meat is roasted on). The *-s* in *gyros* was erroneously taken to be plural, and the singular *gyro* was formed—e.g.: “We made do nicely with . . . a hearty double-fistful of beef shawarma, the Middle Eastern version of a *gyro*, sporting marinated meat, lettuce, tomato and tahini tucked into a warm pita.” Nancy Leson, “Middle East Inspires a Middling Feast at Aladdin,” *Seattle Times*, 25 Jan. 2002, at H3. See **BACK-FORMATIONS**.

Today *gyros* is typically a plural—e.g.: “Jose Bineda said he wants to make his *gyros* even better; he wants to buy a machine to roast lamb on a spit.” Sue Kovach Shuman, “Hermanos Restaurant in Manassas Serves Up a Whole World of Flavors,” *Wash. Post*, 23 Jan. 2002, Prince William Extra §, at T5.

Two final points. First, although *gyros* occasionally appears as a singular (like *kudos*), the plural form **gyroses* is essentially unknown as an English word. Second, the phrase *gyro sandwich*, like *pizza pie*, might be considered a venial **REDUNDANCY**, but perhaps it shouldn't be: the meat is also served on platters and as pizza toppings.

H

ha—the interjection that expresses surprise, triumph, discovery, anger, and various other states of mind—is so spelled. **Hah* is a variant spelling.

For laughter, *ha-ha* is the usual spelling.

habeas corpus (lit., “you shall have the body”) = a writ ordering that a person be brought before a court, esp. to ensure that the person has not been illegally imprisoned. When used as a **PHRASAL ADJECTIVE**, the term is sometimes hyphenated—e.g.: “The Senate is scheduled to consider crime legislation, including *habeas-corpus* proposals, possibly as soon as next week.” *Wall Street J.*, 16 May 1990, at B6. But with such a *prima facie* foreignism (like *prima facie* in that phrase), the hyphen is unnecessary to prevent **MISCUES**. See **PHRASAL ADJECTIVES (H)**.

The traditional plural *habeas corpora* has gradually given way to *habeas corpuses*. See **corpus**.

Current ratio (*habeas corpuses* vs. *habeas corpora*): 2:1

habitability; *inhabitability. Because of confusion over the prefix *in-*, which is intensive and not negative

in **inhabitability* (or, e.g., in *inflammable*), today the positive form is *habitability* and the negative form *uninhabitability*. **Inhabitability* has never been much used—and whenever it is used it's ambiguous. See **flammable & NEGATIVES (A)**.

Current ratio: 30:1

habitation. See **addicted**.

***habitude.** As generally used today, this **GALLICISM** is a **NEEDLESS VARIANT** of *habit*, one that supplies a hint of **ARCHAISM**—e.g.: “Tocqueville spent nearly a year examining American *habitudes* [read *habits*] and mores.” Richard Wolin, “Liberalism as a Vocation,” *New Republic*, 2 Sept. 1996, at 34. (On the use of *Tocqueville*—without the particle *de*—in that sentence, see **NAMES (D)**.)

LANGUAGE-CHANGE INDEX

**habitude* for *habit*: Stage 1

Current ratio (*habit* vs. **habitude*): 241:1

habitué (= a frequent visitor to a particular place, or sometimes a resident) is printed in roman type but

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

predominantly retains the acute accent. If you aspirate the *h*, it should be *a habitué*; if not, it can permissibly be *an habitué*. Both forms appear with frequency in English-language print sources. BrE tends more toward *an* over *a*. See **(A)**.

Although the French pronunciation is /hə-bich-ə-way/, English speakers often anglicize the pronunciation to /hə-bich-ə-way/. Avoid the misspelling **habituée*.

háček. See DIACRITICAL MARKS.

had better. See **better (A)**.

***had have; *had've; *had of.** All these constructions are poor usage, the word *had* being sufficient by itself. *Had* is the auxiliary verb used in forming the past-perfect tense. It commonly expresses a past condition <if I had been there, I would have said something> or a wish <I wish I had been there>. (See **TENSES (A)**.) A superfluous *have* after *had* is typical of DIALECT, and it sometimes makes its way into print—e.g.:

- “Lazutina said her success would not have happened if she *had have* [read *had*] stayed with Grushin.” “Russia Earns Women’s Cross-Country Sweep,” *Salt Lake Trib.*, 20 Feb. 1998, at D4.
- “He also said that the fact he was arrested in Las Vegas also supports his innocence because *if he had have* [read *if he had*] been involved in the crime, he would have left town.” Glenn Puit, “Victims of Quadruple Homicide Lost Lives for \$240, Officials Say,” *Las Vegas Rev.-J.*, 29 Aug. 1998, at A1.
- “If they *had have* [read *had*] been [asked to justify their actions], they might have come out of it subject to an idiot tax.” Chris Young, “Tax Deal for Pros a Con Job,” *Toronto Star*, 28 Nov. 1998, at C6.

Those inclined to make this mistake often collapse the erroneous phrase into the contraction **had've*—e.g.:

- “My friend Russ called. ‘Read your article today. Well written, *wished you had've* [read *wish you had*] warned me what it was about.’” James A. Buist, “On Friendship and Not Wanting to Know,” *Globe & Mail* (Toronto), 17 Nov. 1998, at A26.
- “‘I wish there *had've* [read *had*] been something like this group then.’” Ed Marcum, “Support Group Shows Grieving Spouses How to Begin Living Again,” *Knoxville News-Sentinel*, 12 July 2000, at W1 (quoting Sue Lane).
- “‘*Waistin'* would've been a slacker classic if it *had've* [read *had*] been written 10 years ago.’” Patrick Donovan, “More Light,” *The Age*, 20 Oct. 2000, at 7.

Worst of all, the contracted *have* is sometimes mistakenly rendered *of*, resulting in a DOUBLE BOBBLE. Notice that two of the following three instances occur in quoted speech (in which **had've* would have been the better transcription of dialectal phrasing):

- “‘If I *had of* [read *had*] known that, we would have been looking for those papers for all those years.’” Hayes Hickman, “Getting Flag for Veteran’s Funeral Takes Some Planning,” *Knoxville News-Sentinel*, 11 Nov. 1999, at A1 (quoting the daughter of a deceased veteran).
- “‘If I *had of* [read *had*] dropped 20 spots I would have called myself a real dummy,’ Doyle said.” “Doyle Leads,”

Houston Chron., 5 Mar. 2000, at 11 (quoting Allen Doyle, the professional golfer).

- “If he *had of* [read *had*] been 10 years older he could have tried some of the water sports.” Sue Mathias, “Time to Relax in a Dalmatian Idyll,” *Daily Express* (London), 30 June 2001.

Sometimes this same error is rendered **Id of* (where *Id* alone would be correct).

For more on this type of error, see **(D)**.

LANGUAGE-CHANGE INDEX

1. **had have* or **had've* for *had*: Stage 2
Current ratio (*had been* vs. **had have been*): 31,802:1
2. **had of* for *had*: Stage 1
Current ratio (*had been* vs. **had of been*): 84,741:1

***had ought.** See **ought (c)** & DOUBLE MODALS.

had rather; would rather. Both phrases are idiomatic and old <he had rather play golf> <she would rather be fishing>. Today *would rather* is the predominant form. But both forms are fully established. The *OED*, under *rather* (9d), cites examples of *had rather* from 1450 to 1875. Otto Jespersen’s *Modern English Grammar* (1948) cites writers such as Daniel Defoe (1660–1731), William Makepeace Thackeray (1811–1863), George Bernard Shaw (1856–1950), and H.G. Wells (1866–1946). For the similar phrase *had better*, see **better (A)**.

***had used to be** is unidiomatic and awkward in place of *had been* or *had once been*—e.g.: “Still there came a time when I was anxious again. I was still in St. Louis but in another apartment, shared with the man who was later to be my husband. The house *had used to be* [read *had once been*] a butcher’s shop.” Abby Frucht, “Come in, Come in,” *Seattle Times*, 21 May 1995, Pacific §, at 50. See **used to**.

LANGUAGE-CHANGE INDEX

haemoglobin. See **hemoglobin**.

haemorrhage. See **hemorrhage**.

hagiarchy; hagiography; hagiolatry. These words—meaning, respectively, “rule by saints,” “biography of saints,” and “idolatry of saints”—may be pronounced either with a hard -g- (as Fowler preferred) or with a soft -j- sound. The only disadvantage of the traditional pronunciation with the hard -g- (/hag-ee-ahr-kee/, etc.) is that it sounds more as if it denotes “rule by hags” than “rule by saints.”

hagiocracy. See **GOVERNMENTAL FORMS**.

hagiography. See **hagiarchy**.

hagiolatry. See **hagiarchy**.

Hague, The. The definite article in this place name is always capitalized. See **Netherlands**.

Current ratio (*The Hague* vs. **the Hague*): 3:1

***hah.** See **ha**.

hail, vb. See **hale**.

***hail and hardy.** See **hale and hearty**.

***hairbrained.** See **harebrained**.

***hairbreadth.** See **hair's breadth**.

***hairlip.** See **harelip**.

hair-raising, a near-equivalent of the Latin *horribilis* (= making to stand on end), is sometimes misrendered **hair-razing*, as in the headline for an item that began: "Jimmy Johnson's hair was messed up, and he couldn't have cared less because he had just seen his Dallas Cowboys mess up the Buffalo Bills even worse." Randy Riggs, "Beating Bills Was *Hair-Razing* [read *Hair-Raising*] Experience," *Austin Am.-Statesman*, 24 Jan. 1994, at C10. The error occurs also in BrE—e.g.: "Hail a taxi here and be prepared for a *hair-razing* [read *hair-raising*] journey spiced with general discomfort and rudeness from the driver." David Osborne, "New Rulebook Leaves Cabbies Speechless," *Independent*, 6 July 1996, at 13.

To *raze* is either to tear down or to cut close (as with a razor). See **raze**.

LANGUAGE-CHANGE INDEX

**hair-razing* for *hair-raising*: Stage 1

hair's breadth; hair's-breadth; *hairbreadth; *hairs-breadth. Although most American dictionaries list **hairbreadth* first as both noun and adjective, that is one of the less common forms. The standard terms today are *hair's breadth* as a noun <victory by a hair's breadth> and *hair's-breadth* as an adjective <a hair's-breadth victory>. E.g.:

- "Eventually it will blunt conservatism's edge, leaving voters to see but a *hair's-breadth* difference between Republicans and Democrats." "Crisis of the Soul," *Daily Oklahoman*, 27 July 1997, at 12.
- "In 1972, we came within a *hair's breadth* of being arrested by Franco's Spanish police." Linda Matchan, "Can You Really Go Back?" *Boston Globe*, 17 Aug. 1997, at M1.

The other forms are NEEDLESS VARIANTS.

The phrase is sometimes wrongly written **hare's breath* or **hair's breath*—e.g.:

- "CBS won by a *hare's breath* [read *hair's breadth*], followed by ABC and NBC, in a close race." Kinney Littlefield, "Cable Viewers Get Their Kicks from Football," *Orange County Register*, 5 Dec. 1993, at F11.
- "The Harvest Moon Inn, a *hair's breath* [read *hair's breadth*] away from achieving four-star status in the mere

months of its existence, is clearly on the rise." "Discover Rising Food Star at the Harvest Moon Inn," *Asbury Park Press* (Neptune, N.J.), 31 Mar. 1996, at D5.

- "You don't come a *hare's breath* [read *hair's breadth*] away from making an Olympic team by taking part in a hobby." Bill Ward, "Hasbach Takes His 'Hobby' to New Heights," *Tampa Trib.*, 21 Apr. 2001, at 21.

LANGUAGE-CHANGE INDEX

1. **hare's breath* for *hair's breadth*: Stage 1

Current ratio (*hair's breadth* vs. **hare's breath*): 420:1

2. **hair's breath* for *hair's breadth*: Stage 1

Current ratio (*hair's breadth* vs. **hair's breath*): 27:1

hale, vb., = to compel to go. This is the correct verb in the idiom *hale into court*—e.g.: "Taney ordered that the general himself be *haled into court*." Robert G. McCloskey, *The American Supreme Court* 98 (1960). Unfortunately, though, the verb is often mistakenly written *hail*—e.g.:

- "He grabbed the trespasser by the seat of the pants and the scruff of the neck and tossed him out—an outburst that got the diminutive mystic, much to his dismay, *hailed* [read *haled*] into court for sedition." Wilson Frank, "That Rare Thing: A Happy Man," *Des Moines Register*, 2 June 1996, at 5.
- "Although the court eventually recognized that the three officials were just doing their job, these agents and others similarly situated may, in the future, be less willing to do that job in the most effective manner, based on a reasonable fear that they could be *hailed* [read *haled*] into court and potentially subjected to personal civil liability as a result." Michelle Visser, "Sovereign Immunity and Informant Defectors: The United States' Refusal to Protect Its Protectors," 58 *Stanford L. Rev.* 663, 692 (2005).

LANGUAGE-CHANGE INDEX

hail misused for *hale*: Stage 2

Current ratio (*haled into court* vs.

**hailed into court*): 9:1

hale and hearty is the SET PHRASE meaning "strong and healthy." But writers often get one or the other of the words wrong, and occasionally both—e.g.:

- "[S]tepping into the maelstrom that is today's health care environment . . . is a daunting prospect for even the most *hail and hardy* [read *hale and hearty*] executive." Kim Norris, "Hard Task Met with a Smile," *Detroit Free Press*, 23 Apr. 2003, at E1.
- "In two outings, biologists got 34 walleye ready to spawn, yielding 1.3 million eggs. Of those, 938,500 walleye fry emerged *hail and hearty* [read *hale and hearty*] and were released in South Bay at pre-selected sites, a phenomenal 71.5 percent survival rate." Fred LeBrun, "Turnaround for Walleye," *Times Union* (Albany), 27 Apr. 2006, at C7.
- "The reasons for the paradox are a matter of some debate. Some scholars attribute it to immigration, which may draw selectively from the ranks of the *hale and hardy* [read

***Haley's Comet**. See **Halley's Comet**.

half. **A. Half (of)**. The preposition *of* is often unnecessary. Omit it when you can—e.g.: “Nearly *half of* [read *half*] the people in Cuba receive economic help from family and friends in the United States.” “Family Pulls Painting from Auction,” *Fresno Bee*, 28 Nov. 1997, at C2. Here the better form appears:

- “Everyone else can still write off only *half* the cost of that cinnamon roll.” Nancy Gibbs, “A Conspiracy of Celebration,” *Time*, 11 Aug. 1997, at 26.
- “About *half* the prisoners had been loaded on planes for Miami.” Evan Thomas, *Robert Kennedy: His Life* 237 (2000).

Concededly, in modern print sources the collocation *half of the* has outnumbered *half the* since about 1900, today by a 2-to-1 ratio. The shorter form vastly predominated in the 18th and 19th centuries and remains perfectly idiomatic. Of course, when a pronoun follows, the *of* is typically needed <half of them are>.

B. Number. Although we say *half of it is*, we should say *half of them are*. When the noun or pronoun following *half of* is singular, then *half* is treated as singular; but when the noun or pronoun is plural, then *half* is treated as plural. For the principle underlying the latter phrase, see **SYNESIS**.

C. Half a dozen and a half dozen. For this noun phrase, either *half a dozen* or *a half dozen* is good form. The predominant form in print sources has always been *half a dozen*. Avoid **a half a dozen* and *half of a dozen*. When the phrase is used as an adjective, it becomes a **PHRASAL ADJECTIVE** that should be hyphenated <a half-dozen twirlers with the band>.

Current ratio (*half a dozen* vs. *a half dozen*): 5:1

D. *Two halves. This phrase is often redundant—e.g.:

- “Die-cut into *two halves* [read *halves*], this coilbound book works both from a pictorial and alphabetical point of view.” Gordon Morash, “Toy Box Books,” *Edmonton J.*, 4 Dec. 1994, at B1.
- “Peel your own or buy peeled fresh squash cut into *two halves* [read *halves*].” Donna Lee, “Eating Lean and Liking It,” *Providence J.-Bull.*, 5 Mar. 1997, at G1.

On the plural *halves*, see **PLURALS** (C).

Current ratio (*cut into halves* vs. **cut into two halves*): 3:1

half-staff; half-mast. As a memorial, most flags on land fly at *half-staff*. Strictly speaking, they fly at *half-mast* only on ships and at naval stations. (That's because only there does a flag hang from the part of a ship known as the mast.) This is a distinction that

newspaper styles are usually careful to make, but that dictionaries and the general public mostly ignore—e.g.: “Friday night, the flags at Scarborough Downs were lowered to *half-mast* [read *half-staff*].” Steve Solloway, “Former Downs GM Dies,” *Maine Sunday Telegram*, 11 Aug. 2002, at D9.

As a **METAPHOR**, either phrase will do. Writers usually choose *half-mast*, perhaps because it seems more colorful—e.g.:

- “[H]e was down on one creaky knee, one arm propped on the scorer's table for ballast, tie at *half-mast*, sweater long ago discarded, voice in that familiar, rasping, jackhammer syncopation, eyes ablaze like a blast furnace and sweeping the floor, seeing every sin.” Bill Lyon, “Villanova–Temple Matchup a Contrast in Coaching Styles,” *Phil. Inquirer*, 21 Mar. 2002, at E1.
- “He looks like a man in serious need of a double espresso, his eyelids dangerously close to *half-mast*.” Gordon Edes, “A Lot to Like About Gordon,” *Boston Globe*, 1 Apr. 2002, at D4.

But sometimes *half-mast* is undoubtedly chosen because of its phonic similarity to *half-assed*—e.g.: “We weren't too crazy about Bill Clinton's ‘don't ask, don't tell’ policy (although we adored Bill, and especially his charming wife Hillary) but we figured even a *half-mast* policy that would let gay soldiers serve their country was better than just tossing them out on their keisters because of their sexual orientation.” Dennis Rogers, “Putting Liberals in a Quandary,” *Dallas Morning News*, 16 Feb. 2002, at B1.

LANGUAGE-CHANGE INDEX

half-mast misused for *half-staff*: Stage 2

half-yearly. See **biannual**.

Halley's Comet, named after Edmund Halley /**hal-ee**/ (1656–1742), is often misspelled **Haley's Comet*. In print sources, the misspelling is almost 25% as common as the correct one—e.g.: “For Rita's own mother, there were brighter memories—watching *Haley's* [read *Halley's*] comet with her father.” Marie Villari, “Heritage Retraced from a Thousand Cups of Tea,” *Post-Standard* (Syracuse), 15 Feb. 2001, at 9. This probably results from the widespread mispronunciation /**hay-leez**/ for /**hal-eez**/. Even if the erroneous pronunciation can be called “standard,” the spelling remains unchanged.

LANGUAGE-CHANGE INDEX

**Haley's Comet* for *Halley's Comet*: Stage 1

Current ratio (*Halley's Comet* vs.

**Haley's Comet*): 15:1

***halliard**. See **halyard**.

Halloween, a contracted form of *All Hallow Even*, is so spelled. **Hallowe'en*, a variant spelling, is pedantic.

hallucination; delusion. A *hallucination* results from disturbed sensory perceptions, as when a person “hears voices” or sees ghosts. A *delusion* results from disturbed thinking, as when a person incorrectly imagines that he or she is being persecuted. Cf. **illusion**.

halo. Pl. *halos* (in AmE), *haloes* (traditionally in BrE). The American-style plural is making inroads into BrE. It predominates in World English. See PLURALS (D).

Current ratio (*halos* vs. *haloes*): 3:1

halve (= to separate into two equal portions) is preferably pronounced like *have*. The pronunciation /hahv/ is less good—and worse still is /halv/.

For the plural noun *halves*, see **half** (D).

halyard (= a rope device designed for raising or lowering something, as a flag or a ship's sail) is the standard spelling. **Halliard* and **haulyard* are variants.

Current ratio (*halyard* vs. **halliard* vs. **haulyard*): 237:33:1

hamstring, vb. *Hamstrung* is the settled past-tense and past-participial form. Although this form has no etymological basis—that is, the verb comes from the noun *hamstring* and not from any form of the verb *string* (we don't "string the ham")—the past tense **hamstringed* hardly exists today and strikes most readers as pedantic. E.g.:

- "Anderson was in fine physical form, still striking all the characteristic moves of a *hamstringed* [read *hamstrung*], drunken marionette." Tom Phalen, "Jolly Jethros' Keep Crowd Involved," *Seattle Times*, 23 Oct. 1992, at 8.
- "Mr. Clinton . . . might investigate how President Lyndon Johnson's minute direction of operations *hamstringed* [read *hamstrung*] the military and prevented victory." "Political Warriors," *Orange County Register*, 13 Aug. 1993, at B10.
- "Wind was just one factor that *hamstringed* [read *hamstrung*] city and rural firefighters who teamed up to control and then extinguish the fire around 1:15 p.m." David Diehl, "Blaze Shows State Is at High Fire Risk," *Bismarck Trib.*, 21 May 2002, at A1.

LANGUAGE-CHANGE INDEX

**hamstringed* for *hamstrung*: Stage 1

Current ratio (*hamstrung* vs. **hamstringed*): 135:1

hamzah. For a brief discussion of this DIACRITICAL MARK in Hawaiian English, see **Hawaii** (B).

hand, on the other. See **on the other hand**.

handcraft. See **handicraft**.

hand down. See PHRASAL VERBS.

handful. **A. Plural.** The word is *handfuls*, not **handsful*. See PLURALS (G).

Current ratio: 77:1

B. Handful is or handful are. When followed by the preposition *of* plus a plural noun, *handful* typically takes a plural verb—e.g.:

- "Today there *is* [read *are*] only a *handful* of residents in what is left of the white section of town." Peter Applebome, "Deep South and Down Home, but It's a Ghetto All the Same," *N.Y. Times*, 21 Aug. 1993, at 1, 6.

- "There *is* [read *are*] a *handful* of people around the Pebbled Sea who pay highly for magical curiosities," replied Niko." Tamora Pierce, *Circle of Magic: Daja's Book* 119 (1998).

- "A *handful* of local teams *is* [read *are*] hitting the pool this fall to compete in the quickly emerging sport of water polo." Tom Ramstetter, "St. X Rises to Top in Water Polo," *Cincinnati Enquirer*, 26 Aug. 2015, at C2.

For the reason, see **SYNESIS**. In both AmE and BrE, the collocation *a handful are* has predominated over *a handful is* in print sources since about 1950; before that, the two usages were close contenders from about 1890 on.

Current ratio (*a handful of them are* vs. *a handful of them is*): 13:1

handicapped. The phrases **handicapped-accessible* and **handicap-accessible* are illogical. Although *wheelchair-accessible* makes sense (accessible by wheelchair), **handicapped-accessible* does not—unless we do some contortions to suggest that it means "accessible to the handicapped."

Handicapped parking is a well-known example of HYPALLAGE.

handicraft (= [1] an art or avocation requiring manual skill; or [2] an article made by manual skill) is the standard noun. *Handcraft*, n., is a NEEDLESS VARIANT.

But the verb *handcraft* (= to fashion by hand) and the adjective *handcrafted* are perfectly good. In fact, sometimes *handicraft* is wrongly asked to do their work—e.g.: "Dress up a wooden container with a selection of *handicrafted* [read *handcrafted*] tiles." "Tile Looks Terrific Out in the Garden," *S.F. Chron.*, 25 June 1997, Home §, at 5 (photo caption).

LANGUAGE-CHANGE INDEX

**handicrafted* for *handcrafted*: Stage 1

Current ratio (*handcrafted* vs. **handicrafted*): 670:1

handiwork, n. So spelled—not **handywork*.

Current ratio: 99:1

handkerchief /hang-kər-chif/. Pl. *handkerchiefs*—not **handkerchieves*. See PLURALS (C).

Current ratio: 392:1

hands and knees. The mental image of a person begging has the pleader on knees. Yet speakers often embellish that image unnecessarily—e.g.: "The Muncie City Council's finance committee last week made final recommendations on next year's municipal budget after listening to tax protesters do everything but beg on *hands and knees* [read *their knees*]." Larry Riley, "Muncie City Council Failed to Curtail Spending," *Star Press* (Muncie, Ind.), 23 Sept. 2007, at A7.

***handsful.** See **handful** (A).

hand-wringing. See **wring** (B).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

*handywork. See **handiwork**.

hangar; hanger. The shelter for airplanes is spelled *hangar*. All other senses belong to the spelling *hanger*. But that spelling sometimes invades the domain of *hangar*—e.g.: “[They] convert[ed] scores of old warehouses into offices and production sites, and airplane *hangers* [read *hangars*] into sound stages.” Joel Kotkin, “The Business of Entertainment,” *L.A. Times*, 29 Dec. 1996, at M1.

LANGUAGE-CHANGE INDEX
hanger misused for *hangar*: Stage 3
 Current ratio (*aircraft hangar* vs.
 **aircraft hanger*): 4:1

hanged; hung. Coats and pictures are *hung*, and sometimes so are juries. But criminals found guilty of capital offenses are *hanged*—at least in some jurisdictions. To be *hanged* is to be suspended by the neck with a rope or cord for the purpose of causing death—e.g.:

- “The six officers were executed by a firing squad and the two civilians were *hanged*, the radio said.” “Libya Hints at CIA Plot, Executes 8,” *Chicago Trib.*, 3 Jan. 1997, at 5.
- “But while mere murderers were *hung* [read *hanged*], a quick thing if the hangman were skilled, women found guilty of poisoning their husbands were condemned to be burnt at the stake.” Kathy Lynn Emerson, *Face Down Beneath the Eleanor Cross* 32 (2000).
- “Mr. Caskey, pushing fifty, had taken up with his secretary, whereupon his wife *hung* [read *hanged*] herself.” Edward Hoagland, “Sex and the River Styx,” *Harper’s Mag.*, Jan. 2003, at 49, 50.

But the mere fact that a person is suspended doesn’t mean that *hanged*—which implies an attempted killing or self-killing—is always the right word. If a person is suspended for amusement or through malice, and death isn’t intended or likely, then *hung* is the proper word—e.g.: “He charges that authorities did little or nothing after he complained at various times of being attacked by dogs, shot at, beaten with a rake and tortured while being *hanged* [read *hung*] upside down.” Jeffrey A. Roberts, “Despite Suit, Gilpin Retains Racial Epithet,” *Denver Post*, 3 Jan. 1997, at B1. In Italy in 1944, Benito Mussolini and his mistress were executed and then their bodies *hung* upside down, but press reports often say incorrectly that they were *hanged*—e.g.: “Hitler decided to do so after hearing that Partisans had captured and shot Italian dictator Benito Mussolini, and *hanged him* [read *hung his body*] upside down in Milan plaza.” “A Time of Remembrance,” *Plain Dealer* (Cleveland), 8 May 1995, at B8. See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

 Current ratio (*hanged by the neck* vs.
 **hung by the neck*): 3:1

hanger. See **hangar**.

hanger-on (= a sycophantic follower) forms the plural *hangers-on*—not **hanger-ons*. See PLURALS (G).

Current ratio: 212:1

Hanukkah; Chanukah; Hanukah. The spelling of the Jewish Festival of Lights—an eight-day celebration that falls in November or December—has long been troublesome. Today, though, *Hanukkah* is much more common in AmE and BrE print sources than the next-most-common variants, *Chanukah* and *Hanukah*. It also generates almost three times as many hits on Internet search engines as *Chanukah*, and ten times as many as *Hanukah*. The festival’s name has been spelled many other ways as well. It’s a matter of tricky transliteration: how to represent some Hebrew sounds that do not correspond to any letter or combination of letters in the Latin alphabet.

The beginning sound is especially troublesome, being not quite an /h/ sound nor a /ch/ sound but what phoneticians call a *voiceless fricative*. (*Chutzpah* begins with the same sound.) The sound is represented in phonetics by a symbol resembling a connected *k* and *h*. The Yiddish linguist Max Weinreich (1894–1969) transliterated the word as *khanike*, but added that in English the spelling should be *Hanukkah*.

That spelling certainly predominates in AmE. It is also becoming more common in BrE, which has traditionally preferred the *Ch-* variant.

haply (= by chance, perhaps) is an ARCHAISM best avoided—e.g.: “One may rush out into the middle of Broadway in moving traffic observed by a large group of police officers *haply* [delete *haply*] grazing on doughnuts and not merit even a menacing belch.” Scott Patterson, “The Truth About Jaywalking,” *Virginian-Pilot* (Norfolk), 23 Dec. 1995, at A10. Many readers of that sentence would misread *haply* as a misprint for *happily*; they are to be sympathized with, not disapproved of.

happily means “fortunately,” not “in a happy manner,” when used as here:

- “*Happily*, the title sequence, which always gives me a delicious feeling of nervous apprehension, is unchanged.” William Leith, “Television: Saturday 14 September,” *Observer*, 8 Sept. 1996, at 58.
- “*Happily*, some things never change.” Craig Smith, “Music Hall Madness Will Reign Again,” *Santa Fe New Mexican*, 30 Nov. 1996, Feliz Navidad §, at 10.

See SENTENCE ADVERBS. Cf. **hopefully**.

hara-kiri (Jap. “belly-cutting”) is often misspelled in various ways, including **hari kari*, **hari-kari*, and **hiri kiri*. These misspellings may be especially tempting because they exemplify what linguists call “reduplicative” or rhyming syllables, whereas the actual phrase does not have reduplicative sounds. E.g.:

- “While Baltimoreans are certainly entitled to their disappointment—the fear here is the brass section of the Colts’ Band will be found on their trombone slides, *hari kari* [read *hara-kiri*] style, any day now—the city has apparently learned nothing from Washingtonians’ ritual whining about losing the Senators eons ago.” Johnette Howard, “Baltimore Suffers NFL’s Growing Pains,” *Wash. Post*, 2 Dec. 1993, at B3.

- “‘*Hiri kiri* [read *Hara-kiri*] squeeze!’ I yelled. ‘*Hiri kiri* [read *Hara-kiri*] squeeze!’ To which an Asian gentleman seated to my right turned, nodded and said, ‘Very good, very good.’” Mike Downey, “Now It Seems Winning Is Also a Mania,” *L.A. Times*, 26 June 1995, at C1.
- “I’m beginning to wonder when the instructor plans to pass out the *hari-kari* [read *hara-kiri*] swords and provide us with a more merciful end to offing ourselves.” Tom Murawski, “The Pen May Be Mightier, but the Sword Is So Much More Cool,” *Chapel Hill Herald*, 18 Sept. 2002, Editorial §, at 5.

Fortunately, the proper spelling is more than twice as common in print as any of the erroneous forms.

LANGUAGE-CHANGE INDEX

hara-kiri misspelled **hari-kari* or **hiri kiri*: Stage 2
Current ratio (*hara-kiri* vs. **hari-kari*): 6:1

harass; harassment. During the Senate’s confirmation hearings on the appointment of Justice Clarence Thomas in October 1991, senators were divided over whether to say /**har**-is/ and /**har**-is-mənt/ on the one hand, or /hə-**ras**/ and /hə-**ras**-mənt/ on the other. (They were divided on other issues as well.) Because the proceedings were closely watched throughout the country, the correct pronunciation became a popular subject of discussion. Although in BrE first-syllable stress predominates—and many Americans (therefore?) consider it preferable—in AmE the second-syllable stress is standard.

The words are often misspelled *-rr-*. See SPELLING (A).

LANGUAGE-CHANGE INDEX

harass misspelled **harrass*: Stage 1
Current ratio: 64:1

harbor (= a shelter for vessels) has been predominantly so spelled in AmE since the early 1840s; *harbour* has been the established BrE spelling since Middle English. See -OR; -OUR.

hardly. In DIALECT, this word appears in at least three erroneous forms: **can’t hardly* (for *can hardly*), **not hardly* (for *hardly*), and **without hardly* (for *almost without*). See **can hardly** & ***not hardly**. Cf. **scarcely any**.

LANGUAGE-CHANGE INDEX

1. **can’t hardly* for *can hardly*: Stage 1
Current ratio (*can hardly* vs. **cannot hardly*): 98:1
2. **not hardly* for *hardly*: Stage 1
Current ratio (*is hardly* vs. **is not hardly*): 282:1
3. **without hardly* for *without*: Stage 1
Current ratio (*without being* vs. **without hardly being*): 51,558:1

hard put. G.H. Vallins once insisted that it’s wrong to say *the reader is hard put to know what is happening*, insisting instead on adding *to it* to the sentence: *the reader is hard put to it to know what is happening*. Vallins, *Better English* 73 (4th ed. 1957). Today, however,

idiom doesn’t even allow the *to it*, and virtually no one is hard put to know why—because hardly anyone even thinks of it.

hard sell = (1) strong pressure tactics used in selling; or (2) a difficult sales job resulting from reluctant buyers. So the phrase can be used in a negative sense (about the seller’s actions) from the buyer’s perspective (sense 1), or a negative sense (about the buyer’s actions) from the seller’s perspective (sense 2). Sense 1 is the more traditional one—e.g.:

- “When you start looking at builders’ furnished models, don’t avoid the sales agent because you fear the *hard sell*.” Katherine Salant, “Browsers Welcome to New Home Models,” *Chicago Trib.*, 28 Dec. 1996, New Homes §, at 3.
- “Don’t fall for the *hard sell*. Some of the most dubious investments and ‘bargains’ around are sold with a now-or-never urgency befitting heart transplants.” Ronald Campbell, “No Free Lunch” *Orange County Register*, 30 Dec. 1996, at D3.

Though sense 2 has become common, it is shared with the phrase *hard sale* (a more logical form). Indeed, whereas *sell* is usefully a noun in sense 1 because the phrase denotes the seller’s actions, it isn’t needed in sense 2, which denotes the buyer’s actions. So the better, more logical phrasing for sense 2 is *hard sale*—e.g.:

- “The movie is going to be a *hard sell* [read *hard sale*] for most of today’s audiences.” Vincent Canby, “‘Stanley and Iris’: A World Not Seen,” *N.Y. Times*, 9 Feb. 1990, at B4.
- “Adequate hand washing—which involves more than just a quick swipe under tepid water—remains a *hard sell* [read *hard sale*].” Kathleen Donnelly, “Keep Hands Clean, Germ-Free,” *News & Record* (Greensboro), 3 Jan. 1997, at D1.
- “Hurricane Katrina created opportunities for Jindal to push public policy initiatives that might have been a *hard sell* [read *hard sale*] otherwise.” Julia O’Donoghue, “After the Storm, a Political Shift,” *Times-Picayune* (New Orleans), 30 Aug. 2015, at A2.

LANGUAGE-CHANGE INDEX

hard sell misused for *hard sale*: Stage 1

hardy; hearty. *Hardy* = bold, vigorous, robust. *Hearty* = (1) warm and enthusiastic <a hearty greeting>; (2) strong and healthy <a hearty rancher>; (3) (of food) nourishing, satisfying <a hearty meal>; or (4) (of an eater) needing or demanding plenty of food <a hearty appetite>. Although sense 2 of *hearty* overlaps somewhat with *hardy* (and is therefore avoided by some careful writers), the other senses don’t. Still, some writers confuse the two words—e.g.:

- Sense 1: “A *hardy* [read *hearty*] welcome home to Cleo Parker Robinson and the 18 members of her dance troupe.” Robert Jackson, “Cleo Parker Robinson Troupe a Hit in Kenya,” *Rocky Mountain News* (Denver), 8 Feb. 1996, at D2.
- Sense 3: “Milwaukee Bucks center Alton Lister . . . settled in on the more secluded side of the counter for a *hardy*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

[read *hearty*] meal after a practice with the team.” Edith Brin, “Lifelong Dream,” *Milwaukee J. Sentinel*, 23 Nov. 1995, at 10.

- Sense 4: “It is an immensely popular spot that has been serving huge portions of gutsy food to enthusiastic *hardy* [read *hearty*, and delete *enthusiastic*] eaters for nearly three years.” Richard Jay Scholem, “A La Carte,” *N.Y. Times*, 31 Dec. 1995, Long Island §, at 10.

Cf. **hale and hearty.**

Sometimes, too, *hearty* is misused for *hardy*. We speak of *hardy* (not *hearty*) plants—e.g.:

- “At first, Thronson’s customers were mostly public agencies seeking cheap, *hearty* [read *hardy*] plants to adorn highways and public buildings.” Vince Kohler, “Growth Industry: The Nursery Business Is Going Strong in Oregon,” *Oregonian* (Portland), 10 July 1994, at K1.
- “These are solid, *hearty* [read *hardy*] plants that can take a lot of neglect—a perfect choice for first-time gardeners.” Tara Aronson, “May Gardening,” *S.F. Chron.*, 3 May 1995, Home §, at 1.
- “Turnips, which also date back to ancient times, are *hearty* [read *hardy*] vegetables, able to survive long, cold winters stored underground.” Amy Peterson, “Root Force: Let the Roots That Nourish Plants Nourish You,” *Diabetes Fore-cast*, Aug. 1995, at 32.

LANGUAGE-CHANGE INDEX

1. *hardy* misused for *hearty*: Stage 1

Current ratio (*hearty laugh* vs. **hardy laugh*): 61:1

2. *hearty* misused for *hardy*: Stage 1

Current ratio (*hardy plants* vs. **hearty plants*): 78:1

harebrained is the correct form; **hairbrained* is the common blunder. The misspelling falls just short of being what it attempts to denote—e.g.:

- “But what makes the episode such a delight is that it takes us inside the goofy mind of Helms and his *hairbrained* [read *harebrained*] sidekick.” David Zurawik, “‘Homicide’ Goes Out with a Bang,” *Baltimore Sun*, 5 May 1995, at D1.
- “[Lincoln] did argue that whites were superior to blacks in some ways (though not in having a right to freedom), and he did support some *hairbrained* [read *harebrained*] schemes to send blacks to Africa or Central America.” Edward Achorn, “The Latest Lincoln Conspiracy Theory,” *Providence J.-Bull.*, 23 Apr. 2002, at B5.
- “Mocked by its failure to find Osama bin Laden, the Bush Administration . . . exchanged the hard currency of our inherent idealism for the counterfeit coin of a *hair-brained* [read *harebrained*] cynicism.” Lewis H. Lapham, “Cause for Dissent,” *Harper’s Mag.*, Apr. 2003, at 39.

LANGUAGE-CHANGE INDEX

**hairbrained* for *harebrained*: Stage 1

Current ratio (*harebrained* vs. **hairbrained*): 11:1

harelip (= a congenital deformity in which the upper lip is cleft, like that of a hare) is sometimes erroneously spelled **hairlip*—e.g.:

- “The company president [in the novel is] a ranting little geek with wild, Hitler eyes and a pronounced *hairlip* [read *harelip*].” Bill DeYoung, “Crews Leaves Bottle, Returns to Writing,” *Ledger* (Lakeland, Fla.), 15 Oct. 1995, at G4.
- “She says she was willing to overlook his *hairlip* [read *harelip*] and the resulting speech impediment.” Alan Cairns, “Profile of a Pedophile,” *Toronto Sun*, 31 Mar. 1996, at 26.

- “Gay said that over the years he has caught many deformed fish, especially brown bullhead catfish, known as hornputs, that had *hairlips* [read *harelips*], body lesions and festering sores.” Richard Higgins, “Tracing Health of Assabet River State,” *Boston Globe*, 12 Oct. 1997, at 1.

The term is considered offensive. *Cleft lip* has been the preferred term since the late 1950s.

LANGUAGE-CHANGE INDEX

**hairlip* for *harelip*: Stage 1

Current ratio (*harelip* vs. **hairlip*): 43:1

***hare’s breath.** See **hair’s breadth.**

hark back. A. And ***hearken back**; ***harken back.** The phrase *hark back* is now the preferred form throughout the English-speaking world. E.g.:

- “For an example of this sort of hazard, Biggs *harks back* to June 1950, when the Japanese market fell more than 50 percent in eight days as hostilities flared in Korea.” Chet Currier, “Russia Mutual Fund May Require Leap of Faith,” *News & Record* (Greensboro), 21 July 1996, at E2.
- “But the concept *harks back* to the first World’s Fair in 1851 in London, for which Joseph Paxton designed the Crystal Palace.” Herbert Muschamp, “Melding Past and Present in Portugal,” *N.Y. Times*, 22 Nov. 1996, at C24.

**Hearken back* and **harken back* are NEEDLESS VARIANTS that, taken together, are markedly less common than *hark back*.

B. **Wrongly Written *harp back.** This odd mistake seems not to have spread beyond BrE—e.g.:

- “It just encourages blokes to *harp* [read *hark*] back to a time when men were men and women were very pissed off.” Julia Clarke, “Isn’t It About Time That Rabbie Was Barred?” *Daily Record* (Glasgow), 24 Jan. 1996, at 28.
- “It makes interesting reading for those who *harp* [read *hark*] back to a golden age of *childish* [read *childlike*] innocence, and condemn the horrors and ‘new sexuality’ of modern children.” Euan Ferguson, “Reclaiming the Streets: Full of Woe or Far to Go?” *Observer*, 9 June 1996, at 16. (See **childlike**.)
- “The coach is determined not to let his men *harp* [read *hark*] back to that September result in Limerick as a means of motivation.” “Al: Don’t Think About Last Time,” *Daily Record* (Glasgow), 11 Apr. 2015, at 51.

Curiously, most British dictionaries say nothing about this error.

LANGUAGE-CHANGE INDEX

**harp back* for *hark back*: Stage 1

Current ratio (*harked back* vs. **harped back*): 170:1

***harp back.** See **hark back (B).**

harp on (= to talk or write about persistently and tediously) is frequently miswritten **hark on*, especially in BrE. Whereas *harp on* usually takes a direct object <kept harping on his foibles>, **hark on* often occurs in the collocation **hark on about* (as in the second and third examples below)—e.g.:

- “It’s about stitching the club into the fabric of the community for years to come, rather than *harking on* [read *harping on*] times past.” Michael Gannon, “The Dons of a New Era,” *Daily Herald* (Glasgow), 18 Apr. 2013, at 30.

- “He’s at a different club now and no one will move forward if they keep *harking on about* [read *harping on*] the past.” Ian Rush, “Five Things Rodgers Must Do to Turn Season Around,” *Irish Independent*, 13 Dec. 2014, at 75.
- “You’re probably sick of hearing about them, to be fair. But Conor O’Brien is worth *harking on about* [read *harping on*].” “More from the Village Folk,” *Daily Mirror*, 17 Apr. 2015, at 12.

HARVARD COMMA. See PUNCTUATION (D).

hashtag (#) is the quintessential VOGUE WORD of the early 21st century. Known also as the *pound sign* or *number symbol*, it took on a new life with the advent of Twitter and other social-media sites. People would post a message and then add, for example, “#goodmemories” or “#happilymarried”—always without internal spaces or punctuation. About 2008, the term even entered conversations as people would make a comment and then remark, “Hashtag annoyed” or “Hashtag HappyMothersDay.” Often the term is invoked with more than a tinge of sarcasm: someone else will self-pityingly harp on personal disappointments, and another (perhaps a “frenemy”) will say, “Hashtag Woeisme.”

hassle (= [1] a squabble; or [2] a needlessly difficult situation) is sometimes misspelled **hassel*—e.g.: “Take the big *hassel* [read *hassle*] over the IMF contribution. Right off, this was interpreted in Congress as a bank-bailout operation.” Joseph D. Hutnyan, “Beleaguered Banks Glad to Get the Easter Break,” *Am. Banker*, 1 Apr. 1983, at 4.

LANGUAGE-CHANGE INDEX
hassle misspelled **hassel*: Stage 1
 Current ratio: 958:1

has to do with; is to do with. The first predominates in AmE and BrE alike; the second is a chiefly BrE variant. E.g.: “The other measure *is to do with* [or, in AmE, *has to do with*] one’s colleagues.” Lucy Kellaway, “Yes, We Have No Free Bagels,” *Fin. Times*, 15 Jan. 2001, at 10.

hateable. So spelled in both AmE and BrE—not **hatable*. See MUTE E.

Current ratio: 6:1

***hauyard.** See **halyard**.

hauteur /hoh-tuur/ is a GALLICISM denoting haughtiness in manner—e.g.:

- “This gives her dancing a folkish, down-home, countrified cast, a bit of humor or even a moment of toughness in the midst of her conventional flamenco *hauteur*.” Judith Green, “La Tania, Marin Move Past Gypsy Roots of Flamenco,” *S.F. Examiner*, 12 Oct. 1996, at C1.
- “Robinson goes for a dry *hauteur* as Jacqueline, which she often achieves, anchoring the play in a certain feigned reality.” Jan Herman, “French Farce,” *L.A. Times*, 14 Jan. 1997, at F4.

- “[Brad] Smith is a polished, thoughtful, and credible advocate whom some have described as the face of the kinder, gentler, post-monopoly Microsoft. But that’s not really an apt description of Smith; he projects intensity, determination, a hint of Ivy League *hauteur*, and ambition.” Roger Parloff, “Microsoft Takes On the Free World,” *Fortune*, 28 May 2007, at 76.

have. On the question of morphing *’ve* into *of*, see **of** (D).

have got. See **get** (C).

have your cake and eat it too. See **you can’t eat your cake and have it too**.

having said that. This phrase, which hedges a previous assertion, is a frequent source of DANGLERS. The phrase is perfectly fine, of course, if *I* or a word for some other speaker follows the comma: “*Having said that*, I freely acknowledge that I have returned to work to catch up on my rest.” Tom Jackson, “Snared in Pasco’s Comfy Time Warp,” *Tampa Trib.*, 20 July 1999, Pasco §, at 1. But the expression becomes a mid- to low CASUALISM when it’s not anchored to a term for the speaker in the main clause—e.g.:

- “*Having said that*, after a while one gobsmacking building looks pretty much like another.” Simon Hattenstone, “48 Hours in . . . Prague,” *Guardian*, 27 June 1998, at 10.
- “*Having said that*, it’s time to step out from behind the safety of third person to say goodbye.” Frank LoMonte, “Georgia’s Potential Untapped,” *Fla. Times-Union*, 24 May 1999, at B1.
- “*Having said that*, some clubs are going to be more aggressive and growth-oriented.” Hank Ezell, “Investment Club Strategy,” *Atlanta J.-Const.*, 3 July 1999, at 32.
- “*Having said that*, there is no excuse ever for violence at a concert.” Letter of Ed Levine, “Promoter Michael Lang Owes Region an Apology,” *Post-Standard* (Syracuse), 12 Aug. 1999, at 20.

An easy solution is simply to delete the phrase, which doesn’t say much anyway.

The variant *that said* does not create the same problems: it’s an elliptical nominative absolute standing for *that having been said* <That said, some clubs are going to be more aggressive>.

havoc, vb., forms *havocked* and *havocking*. See -C-.

havoc, wreak. See **wreak** (C). See also **reek**.

Hawaii. A. Sense. To most people, the place name *Hawaii* is unambiguous. It refers to the 50th state of the U.S., comprising eight volcanic islands (and more than 120 islets), inhabited from the 5th century A.D. by Polynesians, annexed by the United States as a territory in 1900, and admitted as a state in 1959. The islands have individual names: Oahu, Maui, Kauai, Molokai, and so on. The biggest island, which is geologically the newest and still has active volcanoes, is called *Hawaii*.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Hence an ambiguity: when you say *Hawaii*, do you mean all the islands collectively (the 50th state) or just the biggest of the islands? To cure this ambiguity, the big island is usually called *the Big Island* (so capitalized). But officially it is known as *Hawaii*.

In New York, of course, a similar problem exists: the major city and the state bear the same name. But here the semantic hegemony goes the other way (from the smaller political unit to the larger): if you say you're going to New York, everyone assumes it's New York City—no one thinks of Albany or Rochester or Buffalo. But if you say you're going to Hawaii, most people would think of Oahu or Maui—few would assume that you're referring to the Big Island.

B. Spelled *Hawai'i*. Sometimes you'll see a DIA-CRITICAL MARK (called an *okina* [/oh-**kee**-nə/], *u'ina* [same pronunciation], or *hamzah* [/ham-zə/ or /hahm-zə/] inserted in *Hawaii* and other Hawaiian names, usually between repeated vowels <Ni'ihau> but occasionally between vowels not repeated <O'ahu>. E.g.: "It looks like the rest of Hawai'i." Andrew Doughty & Harriett Friedman, *Maui Revealed* 141 (2001). It is typically printed as an inverted comma, not as an apostrophe. This accent marks a glottal stop—a sharp guttural break that prevents a diphthong.

The *okina* is part of the Hawaiian language. It didn't crop up much in English-language contexts until the late 20th century. For example, the *Honolulu Advertiser* began using the *okina* on all its pages in October 2000, and today its front-page motto contains an odd-looking possessive: *Hawai'i's Newspaper*. But usage isn't uniform: whereas the *Honolulu Advertiser* uses the *okina* throughout, names mentioned in the *Maui News* are free of it.

As a diacritical mark in an English context, the mark seems largely out of place and undesirable: (1) it smacks of a provincialism that resists linguistic assimilation to standard AmE; (2) it isn't much help to the nonnative speaker who seeks to pronounce Hawaiian names correctly (look at *u'ina* itself—most speakers would be at a loss to know how to say it); (3) it leads to odd-looking phrases, such as the *Honolulu Advertiser's* motto; and (4) most Hawaiian names (such as *Hawaii* itself) have been assimilated into English without the mark—usage has long been settled, and the *okina* simply unsettles it.

A University of Hawaii professor opposed the needless diacritical mark in English contexts as early as 1973: "The use of diacritics is not only superfluous but also contrary to the facts of conventional HE [Hawaiian English] orthography and normal HE pronunciation . . . The practice must therefore be regarded as sheer pedantry or as sheer folly if it is to be interpreted as a pitch for the preservation of the glottal stop and the like in HE loans." Stanley M. Tsuzaki, "Hawaiian English," *48 Am. Speech* 117, 119 (1973).

C. Pronunciation. Most Americans say /hə-wi-ee/ or /hə-wah-ee/—the only pronunciations recognized by most English-language dictionaries. Most locals say /hə-vi-ee/, since in the Hawaiian language

a *-w-* preceded by a vowel is pronounced as a *-v-*. The *-v-* sound is an "insider" pronunciation, used only by denizens of Hawaii. Among residents interviewed in August 2002, most agreed that it would be pretentious for anyone but a longtime resident to adopt the pronunciation. If one moved to the state, there might well be social pressures after some time to adopt the *-v-* pronunciation. And the feeling among interviewees was that the pressures would be much weaker on the island of Oahu than on the other islands.

Hawaiian. Among residents of Hawaii, this term expresses ethnicity, not nativity or residency. Whereas most state labels refer to where you were born or now live (e.g., *Californian*, *Iowan*, *New Yorker*), *Hawaiian* is reserved only for those descended from indigenous Hawaiian Islanders. E.g.: "*Hawaiians* believe that all of life is part of a force they call *ma'ana*, and they believe *ma'ana* can be shared." Judith Kreiner, "Aloha' Speaks Volumes in Hawaii," *Wash. Times*, 7 Oct. 2000, at E1. Other residents of Hawaii, even those born there, are termed *locals* or *islanders*. The standards explained here are pretty well recognized in the press—e.g.:

- "The term '*Hawaiian*' refers to an ethnic group, a person who is of Polynesian descent. Unlike a term like *Californian*, *Hawaiian* should not be used for everyone living in Hawaii. The distinction is not trivial. Possible alternatives: *islander*, *Hawaiian resident*." "Ten Tips for Covering Asian American Issues," *Presstime*, June 2001, at 12.
- "'*Locals*' [is] a term that includes native Hawaiians and certain non-European ethnic groups, but generally not white people or the middle class of any colour." Christina Thompson, "Forked Tongue," *Australian*, 13 June 2001, at B19.
- "'*Hawaiian*' refers to the original inhabitants of the islands, the Polynesians, and their descendants." Vera Vida, "Island Cooking," *Patriot Ledger* (Quincy, Mass.), 24 Apr. 2002, Features §, at 27.

In the following example, *Hawaiians* is loosely used as meaning "all residents of Hawaii": "New Yorkers pay about 14 cents and *Hawaiians* [read *residents of Hawaii*] pay nearly 17 cents, according to the Department of Energy." John Woolfolk, "Regulators to Boost Power Bills by as Much as 36 Percent," *San Jose Mercury News*, 27 Mar. 2001, State & Regional News §, at 10.

See DENIZEN LABELS. On a related subject, see **Native American**.

***hayday**. See **heyday** (A).

He; Him. When referring to God, most professional writers and editors don't capitalize the pronouns—e.g.: "God is a spirit. I have had tremendous messages from *him*, which are from the Bible; it's not something I've dreamed up or had a vision of. It's important to study the Bible on a daily basis so *he* can speak to me." Billy Graham, as quoted in "Of Angels, Devils and Messages from God," *Time*, 15 Nov. 1993, at 74. Is *Time* bowing to secularism? No. As the 14th edition of *The Chicago Manual of Style* noted, "in few areas is an author more tempted to overcapitalize or an editor more loath to urge a lowercase style than in religion" (§ 7.74, at 265

[14th ed. 1993]). In the 16th edition, the hand-wringing is gone: “Pronouns referring to God or Jesus are not capitalized” (§ 8.94, at 427 [16th ed. 2010]).

Many versions of the Bible itself—including the King James Version, the Revised Standard Version, the New International Version, and the English Standard Version—don’t capitalize *he* or *him* in reference to God. So while members of the clergy might capitalize these pronouns in letters to the congregation, other writers should make them lowercase.

***he/she**. See **he or she (B)**.

HEADLINESE. A. Headlines and Headings Generally. Headlines in journalism, like headings in other documents, are both the most important and least important parts of the writing. They are the most important because they are the most read and, if effectively written, most valuable to the reader. Their value comes in attracting the reader’s attention and guiding the reader to where particular information might be found. Piquing the reader’s interest is equivalent to a salesperson’s getting a foot in the door. It’s not the closing of the deal by any means. The text must deliver what the head promises or the deal’s off. That’s why the heading might also be said to be the least important part of the writing.

Besides capturing the reader’s attention and generating interest, headlines (or, in documents, headings and subheadings) guide the reader through the content. Headlines show the reader where to find things of interest, both on a first reading and later, when the reader wants to refer to that information. In longer articles and essays—and certainly in documents—headings and subheadings are crucial finding tools.

The ability to write brief, accurate, and clear headlines and headings is an important skill, and a hard one to learn. As a University of Kansas journalism professor put it: “Many students find précis writing a hard art to master. A newspaper copy editor has to master not only the art of writing a précis but also the far more difficult art of writing a précis of a précis. He writes news headlines.” John B. Bremner, *HTK* 1 (1972).

B. Peculiar Usage of. Space constraints are responsible for the odd, nonconversational way in which news headlines are often written. The “count” (loosely speaking, the number of lowercase letters that can fit in a column of type) is absolute and often small. So short words are the headline writer’s friend. And since good heads are those that get attention, short, snappy words are especially close friends. So a basketball player becomes a *cager*, a school superintendent becomes a *chief*, and a symposium becomes a *confab*. The epitome of this style of headline writing remains the alliterative banner over a 1935 article in *Variety* about rural moviegoers’ preference for stories of city life: “Sticks Nix Hick Pix.” See **ALLITERATION (A)**.

It’s easy to see how that sort of writing becomes hackneyed pretty quickly, and in fact much of the old cant is falling or has fallen into disuse. Lawmakers are seldom called *solons* anymore, track-and-field athletes *thinclads*, or tickets *ducats*. But the short action verbs—such as *axe* (= fire), *balk* (= object; oppose), *hit* (= adversely affect), *inks* (= signs), *mull* (= consider), *nab* (= arrest), *nix* (= refuse; veto), *rap* (= criticize), *rout* (= defeat handily), and *slay* (= murder)—are still common. Likewise, short nouns remain useful—words such as *buzz* (= chatter), *cap* (= limit), *cut* (= reduction), *guru* (= expert), *probe* (= investigation), and *toll* (= number of casualties; extent of damage).

ABBREVIATIONS, acronyms, and initialisms naturally fit the need for short forms, and well-known ones get plenty of use <State St. CEO: No Need for Fresh Capital> <EPA Weighs TVA’s Duty in Cleanup> <FCC Fines 9 Cable Providers>. But editors rightly discourage or even ban the use of obscure initialisms as too reader-unfriendly <Host Agrees: ‘No Thanks’ to Guttled ESG>.

Finally, the use of nouns as adjectives is fairly common in headlines <Massey Ltd. Seeks Canada Financial Aid> <Okinawa Case Pressed in Court>. In text, a writer would be better off using the adjectival forms *Canadian* and *Okinawan*. See **FUNCTIONAL SHIFT**.

C. Peculiar Grammar of. Another effect of space constraints in headlines is the adoption of punctuation and syntax constructions that are not found in general prose. They would sound strange indeed in conversation.

Commas and semicolons serve unique purposes in headlines, largely because periods usually appear only in abbreviations. Commas routinely stand in for the conjunction *and* <Obama, Biden Take Oaths>. Semicolons stand in for periods and join two sentences, sometimes sentences that would not easily fit together as independent clauses in a compound sentence <Israel Speeds Withdrawal from Gaza; Efforts to Buttress Ceasefire Continue>.

Colons show up often in headlines, serving one of two purposes. They may follow an introductory tag <GOP: On the Road to Recovery?>, an attribution <Cops: Real-Life Horror at Cinema>, or the equivalent of a dateline <Illinois: Legal Team Quits Impeachment Defense>. Or they may be used traditionally, linking a statement with some explanation, supporting information, resulting outcome, or other related matter <As Flight Went Down, He Got Ready to Help at Exit: ‘I Thought, You Sat in This Seat, You Have to Figure This Out’>.

Single quotation marks replace the double marks used in AmE text <Fond Memories of ‘Shoeshine Man’>.

Headlines also show several oddities of syntax, all of which are also aimed at saving space. The articles

a, *an*, and *the* are often omitted altogether, as are *be*-verbs <Coke-Fired Plant [Is a] Bad Idea>. Having the option of using or omitting these words gives headline writers some flexibility in making heads fit the space allowed.

Verb tenses also differ from the traditional rules of English grammar. The present tense often denotes recent past events <Rain Delays Game 2 of Series> <Fiat, Chrysler Form Alliance>. And the infinitive often denotes future tense <Sears to Keep Layaway Option> <New Chief to Face Budget Crunch>.

D. Peculiar Style of. Some final points. First, as a matter of style, the passive voice is far more common in headlines than in general prose, where its overuse is a well-known fault. The reason for its acceptance in headlines is that once a writer has reduced the gist of a story to a mere handful of words, the most important thing about the story turns out to be the recipient of the action (the object), not the actor (the subject). The natural word order, then, becomes passive <Recount Ordered in Mayoral Election> <Dads Locked Up Till They Pay Up>. See **PASSIVE VOICE**.

Second, line breaks should reflect logical and grammatical breaks as closely as possible. Sometimes a break can create a **MISCUE**. Consider the headline *Political / ads blitz / — — —*, for example. After reading the first two lines, the reader might think that's the subject, a three-word noun phrase, and expect a verb such as *planned* to follow. When the final line turns out to be *viewers*, the reader might hesitate and then look back before realizing that *blitz* is the verb. Even when no miscue is possible, it's best not to split a preposition from its object between lines, for example, or *to* from the verb in an infinitive.

In a similar vein, the importance of hyphenating **PHRASAL ADJECTIVES** becomes apparent in the close quarters of a headline. Consider this headline: "Wall Street Retreats as Bank Fears Crash Party," *Orlando Sentinel*, 21 Jan. 2009, at B7. Which bank is afraid of a crash party? That could have been *Bank-Fears Crash Party* or *Banks' Fears Crash Party*.

E. Guidance for Journalists. Over the years, newspaper editors and web designers have developed many pointers for effective headline writing. Among the principal ones are these:

- Capsulize the gist of the piece. Use words that apply so specifically to the story that they couldn't be used to headline another one <Pa. Race Won't Tip Superdelegates>.
- Make a definite statement with a concrete idea that can be easily grasped. Always prefer a tangible example over a general concept <50 Iraqis Die in Suicide Bombing> (as opposed to *Violence Continues in Middle East*).
- Ensure that the headline reflects the right tone for the publication and for the specific article, be it serious and sober or light and sensational <All 155 Aboard Safe as Crippled Jet Crash-Lands in Hudson (N.Y. Times)> <CRASH RESCUE A REAL SLAM DUNK / GEESE KO ENGINES (N.Y. Post)>.
- Include a verb <A Dash of Wit Salts Obama's Speech>, even if it's only implied <Scalia, Long Shy of News Media, Now More Open> (in which *Is* is implied after *Media*).

Hence every headline is a statement. If suppressed, the verb must be readily supplied by the reader's mind—its feeling remains <Air Trips Slowest in Past 20 Years>.

- Use the present tense, not past <Chaos Rules at Nevada Polygamist Hearing> (not *Chaos Ruled . . .*).
- Use an active verb if possible <Attacks Rooted in Religion Energize Faith in Many>. Avoid the word *was* <B.U. Ex-President Named as Man on Drifting Barge> (as opposed to *Man on Drifting Barge Was Ex-President of B.U.*).
- Don't repeat any important word in any part of the same headline <Businesses Absorb Oil Costs> (as opposed to *Business Costs Rise with Oil Costs*).
- Omit articles unless necessary for the sense <3 Charged with Arlington Heights Apartment Break-In>.
- Avoid ending lines with fizzle-words. Put the punch word at the end. <Icicles Can Hurt Roofs, Interiors of Homes, and, of Course, Passersby>.
- Avoid cramming in too much information <To Nest Best, Feather Together> (as opposed to *To Pamper Their Parrots, Cockatiels, and Macaws, Bird Lovers Are Creating a Whole New Species of Rooms*).
- Avoid a clutter of punctuation <School Woes Aren't Over Yet> (as opposed to *Political Animals of Public Schools; So the Amarillo Unified School Board Has Finally Been Assimilated by the Recall/Reform Movement: Problem Solved, Right? Nope!*).
- Don't use a comma as a substitute for any word except *and* <Pet Owners, Landlords Need Win-Win Strategy>.

F. Further Reading. For reliable treatments, see Robert E. Garst & Theodore M. Bernstein, *Headlines and Deadlines* (1933); John B. Bremner, *HTK* (1972); Barbara G. Ellis, *The Copy-Editing and Headline Handbook* (2001); Paul LaRocque, *Heads You Win: An Easy Guide to Better Headline and Caption Writing* (2003).

headlong. See **headstrong**.

headquarters. This noun commonly takes a plural verb, as in the first two examples listed below. But the singular predominates when the reference is to a building, as in the third example, or to authority (as opposed to a place), as in the fourth example:

- "Heather Cook [is the] manager of public relations for SurfControl, whose U.S. *headquarters are* in Scotts Valley, Calif." Morgan Lee, "General Services to Add Internet Filters," *Albuquerque J.*, 11 Dec. 2000, at 4.
- "The company's world *headquarters are* in Ramat-Gan, Israel." "Technology," *Atlanta J.-Const.*, 18 Jan. 2001, at C2.
- "The Louisiana Lottery Corp.'s new state *headquarters is* still on the drawing board, but it's already turning heads" Scott Dyer, "Lottery Building Bends with Downtown Decor," *Advocate* (Baton Rouge), 17 Dec. 2000, at B1.
- "Its *headquarters is* in Tide Point." Stacey Hirsh, "High-Techs Learn Some Old Rules," *Baltimore Sun*, 21 Jan. 2001, at P5.

Of course, if you're torn by this dilemma, you can usually recast the sentence <the company has its headquarters in St. Louis>.

headstrong, adj.; headlong, adv. *Headstrong* (= stubborn, obstinate) is sometimes misused for the adverb

headlong (= [1] headfirst; or [2] in a blindly impetuous way)—e.g.:

- “While my parents’ generation rushed *headstrong* [read *headlong*] into adulthood, mine has tried to postpone it as long as possible.” Don McLeese, “Birth Rights or Wrongful Births?” *Austin Am.-Statesman*, 1 May 1997, at E1.
- “Mr. Chehabi wasn’t exactly running *headstrong* [read *headlong*] into the great unknown.” Cheryl Hall, “A Rock-Solid Reputation,” *Dallas Morning News*, 18 Jan. 1998, at H1.
- “His underlying message was more subtle: Republicans should not rush *headstrong* [read *headlong*] this early into backing either of the two most popular contenders: Gov. George W. Bush of Texas or Elizabeth Dole.” Richard L. Berke, “Lamar Alexander Declares Run for President in 2000,” *N.Y. Times*, 10 Mar. 1999, at A15.

Sometimes the senses truly seem to merge, as *headstrong* takes on an adverbial quality more evocative than *headlong*—e.g.: “Creationists have run *headstrong* into teachers and scientists who have effectively lobbied their state and local school boards.” Michael Janofsky, “New Mexico Rules Out Teaching Creationism,” *Times-Picayune* (New Orleans), 10 Oct. 1999, at A13.

LANGUAGE-CHANGE INDEX
headstrong misused for *headlong*: Stage 1

head up, vb.; **heads-up**, n. & adj. **A.** *Head up*, vb. This PHRASAL VERB is vogueish in business and academic JARGON—e.g.:

- “Nigel Wilson, a transit expert at the Massachusetts Institute of Technology, will *head up* the panel.” Doug Hanchett, “MBTA on Board for Review of Silver Line Buses,” *Boston Herald*, 22 Oct. 2000, at 9.
- “At Rocco, Ranelin will *head up* a superb band that includes greats John Heard on bass and Roy McCurdy on drums and rising pianist Danny Grissett.” Zan Stewart, “Valley Life Ticket to Slide,” *L.A. Times*, 8 Dec. 2000, at B5.
- “Reddy, of the school of computer science, *heads up* something called the Aura project.” Steve Hamm, “Net Culture,” *BusinessWeek*, 11 Dec. 2000, at 102.

B. *Heads-up*, n. & adj. As a noun, this CASUALISM is a vogueish substitute for “warning”—e.g.: “[Louis W.] Uccellini said this new forecasting method should . . . give local governments a *heads-up* to get out their snow plows and call in their snow-removal crews.” Scott Burke, “Better Forecasts in the Future?” *Capital* (Annapolis), 17 Nov. 2002, at A1. As a PHRASAL ADJECTIVE, it is informal for “alert”—e.g.: “Franco Wakhisi tied it at 1–1 in the 73rd minute with a *heads-up* play.” Will Parrish, “Eagles Meet Coastal for BSC Title, NCAA Berth,” *Herald* (Rock Hill, S.C.), 17 Nov. 2002, at D3.

heal. See **cure**.

healthcare; health care. In actual usage—especially among healthcare providers—the one-word version

is well on its way. It seems inevitable. The problem with *health care* as a noun phrase is that it requires a hyphen when used attributively, as a PHRASAL ADJECTIVE <health-care issues>—and few people seem to have patience for this nicety. And *healthcare* is different from *managed care* and *medical care* because it’s a compound formed from two one-syllable words.

healthful; healthy. Strictly speaking, *healthy* refers to a person (or personified thing) in good health, *healthful* to whatever promotes good health. E.g.: “Low-fat dairy products . . . will keep you feeling *healthy* and good about ourselves, she says. A vegetarian, Barnes takes *healthful* dishes to parties.” Pat Dooley, “Dreaming of a Lite Christmas,” *Dayton Daily News*, 17 Dec. 1996, Metro §, at 1. In fact, though, many writers use *healthy* when they mean *healthful*, and *healthy* threatens to edge out its sibling altogether. Such a development would be unhealthful, since it would lead to a less healthy state of the language. Although the phrase *healthful recreation* was more common in print sources from 1770 to about 1960, since that time *healthy recreation* has become predominant in AmE and BrE alike.

LANGUAGE-CHANGE INDEX
healthy for *healthful*: Stage 4

hear. See **listen**.

***hearken back.** See **hark back** (A).

heart-rendering is sometimes wrongly written **heart-rendering*—e.g.:

- “He’s proudest, perhaps, of his non-musical work, including *heart-rendering* [read *heart-rendering*] shots taken during the early ’60s of the Appalachian poor and the civil-rights movement in the South.” Craig Marine, “Wild at Heart,” *S.F. Examiner*, 26 May 1996, at M6.
- “He returns to his regular style on a cover of Larry Graham’s R&B classic, a *heart-rendering* [read *heart-rendering*], emotional ‘One in a Million You.’” Teresa Graham, “Record Reviews,” *Times Union* (Albany), 24 July 1997, at 31.
- “What a humbling, rewarding, *heart-rendering* [read *heart-rendering*] experience.” Hugh McMillan, “Puget Sound Honor Flight Leaves Indelible Memory for WWII Vet,” *News Trib.* (Tacoma, Wash.), 10 June 2015, at 1141.

Of course, the verb *rend* (= to split, tear) has nothing to do with the verb *render* (= to make, perform, provide). The errant phrase is particularly unpleasant because one definition of *render* is “to boil down (fat).” See **rend** & MALAPROPISMS.

into view and *heave into sight*, both meaning “to become visible”—e.g.:

- “We were waiting for a table when Jerry Simpson *hove* into view, at the helm of a 23-foot fiberglass boat.” Peter Rowe, “How Hot Is It?” *San Diego Union-Trib.*, 14 Nov. 1996, at E1.
- “Last time, when the University of Arkansas Marching Band *hove* into view, Brotman boomed, so he recalls, ‘Mr. President, here comes the Arkansas band.’” Paul Hendrickson, “Pageantry: America’s Answer to Royalty,” *Wash. Post*, 20 Jan. 1997, at E17.

Some writers incorrectly understand the past-tense *hove* as a special present-tense verb. The error is most prevalent in BrE—e.g.:

- “But along with empathy there is wry humour too, particularly when England’s cricket supremo, Ray Illingworth, *hoves* [read *heaves*] into view.” Harry Pearson, “All Over Bar the Shouting,” *Independent*, 9 Nov. 1996, Books §, at 8.
- “Not long after, the O2 Arena—completing the trinity of London’s major tennis venues—*hoves* [read *heaves*] into view.” Andy Murray & Mike Dickson, “I’ve Got to Make the Most of This Because It Won’t Last Forever,” *Daily Mail*, 27 June 2015, at 108.

LANGUAGE-CHANGE INDEX

hove misused for present-tense *heave*: Stage 1
Current ratio (*heaves* vs. *hoves*): 85:1

heaven’s sake. So written—not (as often erroneously written) **heavens sake*, **heaven’s sakes*, **heaven sakes*, or **heavens’ sake*.

Current ratio (in order of terms in entry): 204:7:5:2:1

hecto-; centi-. *Hecto-* derives from the Greek *hekatón*, *centi-* from the Latin *centum* (both meaning “one hundred”). Whereas the root *hecto-* means “multiplied by 100,” *centi-* means “divided by 100.” Hence a *hectometer* is 100 meters; a *centimeter* is a hundredth of a meter.

he’d better; he better. See **better (A)**.

hegemony /hi-**jem**-ə-nee/ is fundamentally a political term (“political dominance; the leadership or predominant authority of one state of a confederacy, union, or region over the others”) that has been imported into commercial and nonpolitical contexts. E.g.:

- “Influential men began to expand the old-fashioned and physiologically specific definition of masculinity into an overwhelming concept implying social and (especially important at Harvard) intellectual *hegemony*.” Susan Jacoby, “What Makes a Real Man?” *Newsday* (N.Y.), 15 Dec. 1996, at C36.
- “Clearly, the new peace process on all three tracks—Syrian, Palestinian and moderate Arab states—is shaping to play out as part of the wider struggle between Iran and the U.S. for regional *hegemony*.” Leslie Susser, “An Ambush on the Way to Peace,” *Jerusalem Rep.*, 20 Aug. 2007, at 14.

The term verges on being a **VOGUE WORD**.

The corresponding adjective is *hegemonic*—e.g.: “As history shows, *hegemonic* empires almost automatically elicit universal resistance, which is why all

such aspirants eventually have exhausted themselves.” Christopher Layne & Benjamin Schwarz, “U.S. Can Become Less of a Target,” *Times Union* (Albany), 18 Nov. 2002, at A7.

hegira /hi-**ji**-rə/ (= a journey undertaken to escape a troublesome situation) is the standard spelling. **Hejira* is a variant (although the Arabic word for “emigration, flight” is *hijra*). When used in reference to Muhammad’s flight from Mecca to Medina in A.D. 622, the word is capitalized: *Hegira*.

height has a distinct /t/ sound at the end. To pronounce or write this word as if it were **heightth* is less than fully literate—e.g.: “Second-seeded Syracuse had intermittent difficulties with No. 15 Coppin State’s zone defenses, but Syracuse’s *heightth* [read *height*] and strength won out.” “Tourney Was Here in ‘90,” *Richmond Times-Dispatch*, 15 Mar. 1996, at D3. The mistake may occur for any of several reasons: (1) other words conveying measurement end in *-th* (e.g., *depth*, *width*, *breadth*); (2) people might confuse its ending with that of *eightth*; or (3) **heightth* is an archaic variant once used in southern England. See **CLASS DISTINCTIONS & PRONUNCIATION (B)**.

LANGUAGE-CHANGE INDEX

height misspelled or mispronounced
**heightth*: Stage 2
Current ratio: 1,652:1

heinous /hay-nəs/—rhyming with “pain us”—is one of our most commonly mispronounced words. It is also frequently misspelled **heiniuous*—e.g.: “[It was as if] Maris had committed some *heiniuous* [read *heinous*] crime in threatening Ruth’s record.” Sean McAdam, “All Ripken Wants Is to Play, Play and Play,” *Providence J.-Bull.*, 11 Aug. 1995, at D1. See **PRONUNCIATION (B)**.

For the misuse of *onerous* for *heinous*, see **onerous**.

LANGUAGE-CHANGE INDEX

1. *heinous* mispronounced /**hee**-nəs/ or /**hee**-nee-əs/: Stage 4
2. *heinous* misspelled **heiniuous*: Stage 1
Current ratio: 3,123:1

heiress. Despite the feminine ending (see **SEXISM (D)**), this word shows no signs of obsolescence in denoting a woman who has inherited wealth—e.g.:

- “So far five young women have claimed to be the missing *heiress*.” Mary Evertz, “Romance Writer Takes a Turn at Mystery and Intrigue,” *St. Petersburg Times*, 23 July 1995, at D7.
- “Like so many of the repressed characters in the novels of Henry James, Isabel Archer, a young American *heiress* who has the notion that she will find happiness abroad, is a psychosexual tuning fork.” Tom Glatto et al., “Screen,” *People*, 27 Jan. 1997, at 21.
- “‘Mistress America’ also harks back to an even earlier age, when madcap *heiresses* played by Claudette Colbert or Carole Lombard would traipse around Manhattan with louche abandon.” Ann Hornaday, “‘Mistress America’ Celebrates Women, Screwball Comedies,” *Denver Post*, 28 Aug. 2015, at 7C.

Although *heiress-apparent* is more strictly correct, *heiress* is also commonly used to denote a woman who stands to inherit—e.g.: “[Paris] Hilton stands to inherit \$30 million of her family fortune, but in 2005 she made a reported \$7 million on her own. The hotel *heiress’s* name is emblazoned on everything from perfume to lip-enhancement serum.” Meghan Keane, “She’s with the Brand,” *N.Y. Sun*, 21 Aug. 2006, at 16. Purists frown on that usage as loose.

***hejira**. See **hegira**.

helix yields the plural *helices* or *helixes*. The classical plural *-ces* vastly predominates in modern print sources. Cf. **appendixes**. See PLURALS (B).

helm, vb. Originally a nautical term meaning “to steer,” *helm* has been borrowed by the entertainment industry in the sense “to direct or produce (a film, play, album, etc.)” This extended sense, now entrenched in showbiz talk, is likely to strike many readers as new-fangled and catchpenny—e.g.:

- “The multiple-director system works sometimes, as witness Zucker/Abrahams/Zucker *helming* the hits ‘Airplane!’ and ‘Ruthless People.’” “The Movies: Blank Checks,” *L.A. Times* (Mag.), 27 May 1990, at 22.
- “Shadowy friend Steve Albini will be *helming* Schneider’s second solo effort, and has tentatively assembled bands to alternately back the quirky vocalist.” Kieran Grant, “Shadowy Doings,” *Toronto Sun*, 26 Aug. 1995, Entertainment §, at 38.
- “‘La Promese,’ a study of immigration *helmed* by brothers Luc and Jean-Pierre Dardenne, won the Golden Spike award for best film.” John Holland, “Euro Indies Give Fest a Big Boost,” *Variety*, 4–10 Nov. 1996, at 20.

help. See **assist**, v.t.

help but. See **cannot help but**.

helpmate; helpmeet. *Helpmeet*, now archaic, was the original form, yet folk etymology changed the spelling to *-mate*, which is now the prevalent form. (See ETYMOLOGY (D).) In fact, *helpmate* is now about twice as common as *helpmeet*.

Here’s the story behind the development of the words. *Helpmeet* is a compound “absurdly formed” (as the *OED* puts it) from the two words *help* and *meet* in Genesis: “an help meet for him” (Genesis 2:18, 20), in which *meet* is really an adjective meaning “suitable.” Some writers still use *helpmeet*—e.g.: “Naturally, I am a loyal and patient *helpmeet* whose only reward is a smile on the lips of my beloved—a smile, and ceaseless extravagant praise.” Jon Carroll, “Movie at Our House,” *S.F. Chron.*, 3 Sept. 1996, at D8. But *meet* was widely misunderstood as *mate*, and the form *helpmate* sprang up and has been predominant since the 18th century—e.g.: “She leads the choir, works with its youth and is her husband’s steadfast and (usually) cheerful *helpmate*.” Marie Rhodes, “These Real-Life ‘Preacher’s

Wives’ Both Defy, Embody Stereotypes,” *St. Petersburg Times*, 4 Jan. 1997, *Seminole Times* §, at 8.

Helpmate means “a companion or helper,” and it need not refer to a spouse—e.g.: “We need to talk about the frustrations you face when you rely on a computer—Mac or IBM-compatible—as electronic *helpmate*.” Bill Husted, “Mac–IBM Battle Hides Big-ger Problem,” *Palm Beach Post*, 13 Jan. 1997, at 7.

help to. In most contexts, the better practice is to use a bare infinitive after *help* (if the choice is between a fully expressed infinitive [with *to*] and a bare one [without *to*])—e.g.: “Critics called this a bookkeeping gimmick that *helps* disguise the true cost of the bill.” Janet Hook, “Lawmakers Reach Deal on Tax Relief,” *L.A. Times*, 26 May 2001, at A1. Notice how two writers, on the same day and in the same publication, handled the word:

- “The accord also *helps to* [read *helps*] avoid a destabilizing competition in northeast Asia among Communist-ruled North Korea and two of its immediate neighbors, Japan and China.” “N. Korea, U.S. Near Nuclear Arms Ban,” *Milwaukee J. Sentinel*, 18 Oct. 1994, at A1.
- “An accord with the United States that will open North Korea’s nuclear program to inspection should *help* resolve nuclear tensions ‘once and for all,’ North Korea’s top negotiator said Tuesday.” “Accord Eases Tension with North Korea,” *Milwaukee J. Sentinel*, 18 Oct. 1994, at A1.

The bare-infinitive form after *help* overtook the *to*-form in the late 1960s and remains more than twice as common with various verbs.

hemoglobin; haemoglobin. *Hemoglobin* (= the red protein that transports oxygen in the blood of vertebrates) has been the standard AmE spelling since about 1900. *Haemoglobin* was the established BrE spelling from the late 19th century, but the levels of *hemoglobin* in BrE print sources surged in the 1970s, and the two spellings have vied for supremacy ever since. So far, *haemoglobin* holds a slight lead in BrE.

In AmE and BrE alike, *a* (not *an*) precedes the word. See **a** (A).

Current ratio (World English): 4:1

hemorrhage; haemorrhage. *Hemorrhage* (= an escape of blood from a ruptured blood vessel) has been the established AmE spelling since about 1800, *haemorrhage* the established BrE spelling since about 1850. Since the late 1970s, however, BrE has increasingly tended toward *hemorrhage*: the two spellings are now locked in rivalry in BrE.

In AmE and BrE alike, *a* (not *an*) precedes the word. See **a** (A).

Current ratio (World English): 4:1

hence. This adverb has several meanings, listed here in decreasing order of frequency: (1) “for this reason; therefore” <your premise is flawed; hence, your

argument fails>; (2) “from this source” <she grew up in Colorado: hence her interest in mountain climbing>; (3) “from this time; from now” <our anniversary is just two weeks hence>; and (4) “from this place; away” <the park is three miles hence>.

From hence for *hence* (in senses 3 and 4) is an ARCHAISM. See **from hence**. Cf. **thence** & **whence**.

henceforth. A. And *henceforward. The latter is a NEEDLESS VARIANT.

Current ratio: 8:1

B. *From henceforth. This phrase is an ARCHAISM that the *OED* records as having last been current in the 17th century. Today the word *from* ought to be rooted out of the phrase—e.g.:

- “We are told that they have just remastered that disc, and all orders *from henceforth* will be [read *will henceforth* be] filled using the new one, not the one Mr. Bauman complains about.” Editor’s Note, *Am. Record Guide*, 1 Mar. 1994, at 190.
- “*From henceforth* [read *Henceforth*], Connerly suggested last week, applicants to the UC system no longer should petition by name.” Peter H. King, “Under Every Rock, Agents of Diversity,” *L.A. Times*, 16 Mar. 1997, at A3.
- “IMPORTANT!!! We can no longer refer to the Freedom Fuel Initiative,” John Sullivan, a deputy assistant at the Energy Department wrote in a memo. “*From henceforth* [read *Henceforth*] it is to be referred to as “The President’s Hydrogen Fuel Initiative.”” H. Josef Hebert, “U.S. Finds It Isn’t Free to Use Zippy Phrase,” *Chicago Trib.*, 15 Feb. 2003, News §, at 8.

LANGUAGE-CHANGE INDEX

**from henceforth* for *henceforth*: Stage 3
Current ratio (*Henceforth* vs. **From henceforth*
at start of sentence): 38:1

C. Misused for hence. Whereas *henceforth* means “from this point on,” *hence* can mean “after now.” Idiomatically, one speaks of *two years hence*, not **two years henceforth*—e.g.: “But there are simply too many happy and successful quarterbacks who have been left in Fassel’s wake to think that Brown won’t be joining that list at some point *henceforth* [read *hence*].” Bob Glauber, “Brown Ultimate Test for Fassel,” *Newsday* (N.Y.), 15 Jan. 1997, at A71. See **hence**.

LANGUAGE-CHANGE INDEX

henceforth misused for *hence*: Stage 1

D. For thenceforth. When you’re discussing past or future events, and you mean “from that time forward”—and you don’t mind sounding extremely formal—the word you want is *thenceforth*, not *henceforth*. E.g.: “The film sank without trace but Denholm’s part in it lived on in the memories of casting directors. *Henceforth* [read *Thenceforth* or *After that*], he found his greatest success as a failure.” Susan Elliott, “The Day Denholm Said He Wanted an Open Marriage,” *Daily Mail*, 22 Aug. 1994, at 28. Even when *thenceforth* is accurate, a better wording is usually possible, such as *then*, *from that time*, *from then on*, *later*, or *after that*—e.g.: “The jewel in the crown of the museum this year will be the reopening in late

September of what will *thenceforth* [read, perhaps, *then*] be known as the Janet Annenberg Hooker Hall of Geology, Gems, and Minerals.” Hank Burchard, “Coming Soon to a Museum Near You,” *Wash. Post*, 3 Jan. 1997, at N26.

LANGUAGE-CHANGE INDEX

henceforth misused for *thenceforth*: Stage 1

he or she. A. Generally. The traditional view, now widely assailed as sexist, was that the masculine pronouns are generic, comprehending both male and female. One way to avoid the generic masculine *he*, *his*, and *him* is to use—not at every turn, but sparingly—*he or she*, *his or her*, and *him or her*. These expressions, in occasional use from the 17th century on, have been very much on the rise since the early 1970s. E.g.: “The notion that a business can teach a customer about *his or her* desires will reshape industries, he says.” “Strategy with a Touch of Showbiz,” *Fin. Times*, 7 Aug. 1997, at 14.

Another way to avoid the problem—not possible in all contexts—is to pluralize the antecedent of the pronoun. E.g.: “If *children* think *they* look different—because *they* feel a lot bigger or a lot smaller or a lot thinner than *their* peers—it calls extra attention to *them* and can make *them* uncomfortable.” Nancy Anderson, “Parents’ Network,” *Boston Herald*, 3 Aug. 1997, at 51. The disadvantage of such a wording is that it often too strongly suggests a singleness of mind in the group, as opposed to the uniqueness of an individual mind. This despite, in the example given, an implication of unique differences.

He or she is by no means a newfangled concession to feminism. In 1837, the English Wills Act stated: “And be it further enacted, That every Will made by a Man or Woman shall be revoked by *his or her* Marriage (except a Will made in exercise of Appointment . . .).” See SEXISM (B).

LANGUAGE-CHANGE INDEX

he or she for *he*: Stage 5

B. *He/she. One big problem with using this contrived device is that once you start you can’t stop. Sometimes this gets quite out of hand. But it’s rare to see such an exquisite example as this: “If a child is not corrected when he/she first misspells a word, by the time he/she is in eighth grade, the errors are so ingrained they are never even noticed. . . . I think it is a disservice to the child to let him/her go along for seven years and then tell him/her that the spelling is all wrong.” Letter of M. Ann Davis, “Spelling Important,” *Ariz. Republic/Phoenix Gaz.*, 9 Sept. 1995, at B8. What about letting him/her go seven years using **he/she* and **him/her*, when reasonable readers will otherwise think that he/she is off his/her rocker? See PUNCTUATION (Q).

LANGUAGE-CHANGE INDEX

**he/she* for *he or she*: Stage 2

herb, n.; herbal, adj. Although *herb* is pronounced /ɜrb/, *herbal* has traditionally been pronounced /hɔrbəl/. In BrE, *a herbal* has predominated in usage

since 1890. In AmE, *a* and *an* vied closely until the early 1970s, when *an* decisively won. Today, /əɹ-bəl/ predominates in AmE. It therefore seems more natural to most American readers to sip *an herbal tea*, not *a herbal tea*. But *herbicide*, with an aspirated *h*-, should be preceded by *a*, not *an*. See **a (A)**. Cf. **homage & humble**.

In BrE, the aspirated *h* in *herb* has been restored since the early 19th century. It's a telltale distinction in pronunciation between AmE and BrE.

Herculean is pronounced either /hər-kyoo-lee-ən/ or /her-kyə-lee-ən/. Traditionally, the first of these was considered the better pronunciation, but today the second predominates.

hereabout(s), adv. This FORMAL WORD, meaning “in this vicinity,” has been predominantly spelled with the final *-s* since the 17th century. The shorter form is a variant.

Current ratio: 5:1

hereditary. See **heritable**.

heretofore. See **hitherto & up to now**.

herewith. See ***enclosed please find**.

heritable; inheritable; hereditary. As between the first two—both meaning “capable of being inherited”—*heritable* has been standard since 1800. It is more than three times as common as *inheritable*. E.g.: “Robert Pilarski counsels and tests patients who may be at risk for *heritable* forms of cancer, considered to be 5 percent to 10 percent of all cancers,” Betsy Witteman, “Genetic Testing, the Pluses and Minuses,” *N.Y. Times*, 2 Nov. 1997, at CN14. Somewhat surprisingly, a DIFFERENTIATION seems to be emerging: *heritable* almost always refers to traits and genetic characteristics, and *inheritable* refers more commonly (though not exclusively) to wealth, titles, and goods. E.g.: “Memberships will be *inheritable* and will carry no annual fee for at least the club's first five years of operation.” Jerry Dean, “Boathouse, Club to Anchor Waterfront,” *Knoxville News-Sentinel*, 9 Nov. 1997, at D1. The negative forms are *nonheritable* and *uninheritable*. One notable exception is the Western Heritable Investment (a major landlord in the New York City diamond district).

Hereditary = (1) descending by inheritance from generation to generation <hereditary privileges customary in European societies>; or (2) transmitted genetically from parent to offspring <fat under the eyelids is hereditary>. Although **an hereditary* was once common, since the 1930s *a hereditary* has predominated in AmE and BrE alike. See **a (A)**.

hers, an absolute possessive, is sometimes wrongly written **her's*—e.g.:

- “One man, who had started the somewhat lengthy process of filling out his forms, stood up and said, ‘I don't have time for this;’ ripped up his form, took his wife's form out of her hand and tore *her's* [read *hers*] up, too.” Natasha Korecki, “Workers Scramble to Correct Poll Glitches,” *Daily Herald* (Chicago), 4 Apr. 2001, at 4.
- “Arthur is excited about planning his birthday, until he finds out his friend Muffy is planning *her's* [read *hers*] on the same day.” Gretchen Marie-Goode, “Arthur's Celebration,” *Hartford Courant*, 3 May 2001, at 24.
- “Let the mother remember that the daughter's mistakes are *her's* [read *hers*] to make.” Barbara Donlon, “Wishes for a Daughter Who's Growing Every Minute,” *Boston Herald*, 13 May 2001, at 55.

See POSSESSIVES (C).

LANGUAGE-CHANGE INDEX

**her's* for *hers*: Stage 1

Current ratio (*hers* vs. **her's*): 134:1

***herstory**. See SEXISM (C).

hesitancy; *hesitance; hesitation. Strictly speaking, *hesitancy* is a quality (“the state of being hesitant; reluctance”), while *hesitation* is an act (“the act of hesitating”). So the better usage is to say that you have *no hesitancy* about doing something, not to say that you have *no hesitation*. But *hesitation* may well drive *hesitancy* out of the language. In word frequency within modern print sources, it vastly predominates over *hesitancy*. Meanwhile, **hesitance* is a NEEDLESS VARIANT of *hesitancy*.

Current ratio (*hesitation* vs. *hesitancy* vs. **hesitance*): 87:8:1

heterogeneous; *heterogenous. The first is the correct spelling of the term meaning “diverse in some characteristic” <the university strives to achieve a culturally heterogeneous student body>. The preferred six-syllable pronunciation is a mouthful (/he-tə-rə-jeə-nee-əs/). A less rigorous elided pronunciation (/he-tə-rah-jə-nəs/) corresponds to the second spelling, which the *OED* calls “less correct.” Because *heterogeneous* has predominated since the 17th century and is about 28 times as common in modern print sources as **heterogenous*, the latter ought to be considered a NEEDLESS VARIANT. Still, it does appear with some regularity in otherwise well-edited publications—e.g.:

- “In District 5, he will represent the county's most *heterogenous* [read *heterogeneous*] neighborhoods One in five district residents is Latino, many of them recent immigrants.” Michael H. Cottman, “Broad Support Powered Latino to Historic Win,” *Wash. Post*, 10 Nov. 2002, at C1.
- “One line of research, for instance, shows that all students learn better in racially *heterogenous* [read *heterogeneous*] settings than in racially *homogenous* [read *homogeneous*] ones.” “The Big One Hits the Court,” *Atlanta J.-Const.*, 1 Apr. 2003, at A12.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Heterogenous* is also an obsolete medical term describing foreign tissue. For the antonyms, see **homogeneous.

LANGUAGE-CHANGE INDEX

**heterogenous* for *heterogeneous*: Stage 1

Current ratio (*heterogeneous* vs. **heterogenous*): 28:1

hew. **A. And hue.** *Hew*, vb., = (1) to chop, cut; or (2) to adhere or conform (to). Thus sense 1: "Other pieces in this amazing residence include functional tables, chairs and benches, typically *hewed* from a single piece of wood and incised with a variety of designs." Laura Pope, "Where Furniture, Sculpture Collide," *Union Leader* (Manchester, N.H.), 25 Aug. 1996, at E1. And sense 2: "So many actors pretend not to be seeking fame and fortune that Firth's protestations naturally arouse skepticism. But he has *hewed* to this line from the start." Bart Mills, "That Tortured Look," *Chicago Trib.*, 2 Jan. 1997, Tempo §, at 11.

There are actually two words spelled *hue*. One, deriving from Anglo-Saxon, means (1) "color" <a yellowish hue>, or (2) "appearance, complexion" <partisans of every hue>. The other derives from Old French and means "a loud shout made by someone pursuing a suspected felon" <they raised the hue and cry>—or, by extension, "an uproar." In any event, apart from its use as a past-participial adjective <multihued image>, the word is consistently a noun.

But some writers misuse the word for the verb *hew*—e.g.: "Mr. Major *hued* [read *hewed*] to a more middle-of-the-road strategy, arguing that a common currency would certainly not happen by the end of the century." John Darnton, "Major's Scorecard," *N.Y. Times*, 7 July 1995, at A2.

For the misuse of *hew* for *hue* in the SET PHRASE *hue and cry*, see **hue and cry**.

LANGUAGE-CHANGE INDEX

hued misused for *hewed*: Stage 1

Current ratio (*hewed to* vs. **hued to*): 20:1

B. Inflections. In sense 2, the preferred past participle is *hewn* in BrE and *hewed* in AmE. For an American publication, the following example gets the form wrong: "His campaigning this fall shows how closely he has *hewn* [read, in AmE, *hewed*] to that strategy." John F. Harris, "Out Loud, Clinton Puts Little Emphasis on His Party," *Wash. Post*, 24 Oct. 1996, at A17.

In sense 1, the exceptional form in AmE is the past-participial adjective *rough-hewn*. See IRREGULAR VERBS.

Current ratio (*has hewed to* vs. **has hewn to*): 6:1

heyday. **A. Spelling.** So spelled—not **heydey* or **hayday*. E.g.:

- "In its *heydey* [read *heyday*], Microsoft vs. Apple was computing's Coke vs. Pepsi, its Ali vs. Frazier." Kevin Maney, "Goliath Takes a Bite of Apple," *USA Today*, 7 Aug. 1997, at A1.
- "However, the children of those who played in the club's *hayday* [read *heyday*] are becoming old enough to play, and are bringing the club back to where it used to be."

Mike Allende, "Can-Am Summer 7s Rugby Tournament," *Bellingham Herald* (Wash.), 15 July 2001, at D1.

LANGUAGE-CHANGE INDEX

heyday misspelled **heydey* or **hayday*: Stage 1

Current ratio: 1,519:7:1

B. And field day. Each term most often appears in its distinct SET PHRASE: *in (its, his, her, their) heyday* (= in [its] prime) and *having a field day* (= having an extraordinarily good time). Dwight Bolinger was perhaps the first to note that when the terms are switched in these phrases, the result is a classic MALAPROPISM: "The columnist Peter Weaver wrote *Professional bill collectors are having a heyday*, confusing *heyday* with *field day*; the two are faintly related in the common notion of 'prosperity.' *Heyday* itself may have developed in a similar way from an exclamation *heyda* 'hey there!' used to express exaltation and later applied to a time of excitement, causing the *-da* part to be identified with *day*." *Language: The Loaded Weapon* 23 (1980).

The error isn't common, but *heyday* does sometimes displace *field day*—e.g.:

- "The play, an actors' *heyday* [read *field day*], is rich with memories of the sisters and their camaraderie." Janet Maslin, "5 Unmarried Sisters in Postcard Ireland," *N.Y. Times*, 13 Nov. 1998, at E1.
- "Critics had a *heyday* [read *field day*] with Sheffield last season when he didn't want to dive for balls on artificial turf because it causes rug burns." Joe Christensen, "Devo, Diving Don't Mix," *Press-Enterprise* (Riverside, Cal.), 4 May 2000, at E6.

The opposite error is quite rare.

LANGUAGE-CHANGE INDEX

heyday misused for *field day*: Stage 1

Current ratio (*had a field day* vs. **had a heyday*): 24:1

hiatus. The standard plural has been *hiatuses* since about 1800. The Latinate plural *hiatus* is not only rare but also liable to cause confusion. (See PLURALS (B).) **Hiati* is a malformed plural—e.g.: "They have offers from Columbia for four movies during their *hiati* [read *hiatuses*]." Army Archerd, "Just for Variety," *Daily Variety*, 10 Nov. 1992. See HYPERCORRECTION (A). Cf. **apparatus**.

LANGUAGE-CHANGE INDEX

**hiati* for *hiatuses*: Stage 1

Current ratio (*hiatuses* vs. **hiati*): 49:1

hiccup; *hiccough. The first is the standard spelling; the second is a variant form arrived at through folk etymology. See ETYMOLOGY (D).

Hiccup, vb., traditionally makes *hiccuped* and *hiccuping* in AmE and BrE alike. See SPELLING (B).

Current ratio: 5:1

hie (= to hurry or hasten) makes the present participle *hieing*—e.g.: "Many of the 28,000 fleetfoots and plodders *hieing* the 26.2 miles of Sunday's New York City Marathon were at the starting line because of Dr. George Sheehan." Colman McCarthy, "Running on a Higher Plane," *Wash. Post*, 16 Nov. 1993, at B11. The

verb is often reflexive—e.g.: “As they bustle about, sometimes *hieing* themselves off to unseen corners of their establishment, we meet their clientele.” John Coulbourn, “Less Is More with Two,” *Toronto Sun*, 27 Nov. 1996, Entertainment §, at 7.

hierarchical; ***hierarchic**. The latter is a NEEDLESS VARIANT that is not nearly as common as the standard term, *hierarchical*. See -ic.

Current ratio: 37:1

highfalutin (= pretentious, pompous) has been the standard spelling since the mid-19th century, as opposed to **highfaluting*, **highfalutin'*, or **hifalutin*. But the variants persist—e.g.: “Chief among these are the geo people—those apostles of geopolitics, geostrategies and all the *hifalutin'* [read *highfalutin*] rest—who argue against the ‘sentimentality’ of human rights and democratic concerns.” Meg Greenfield, “No Hard Feelings?” *Newsweek*, 27 Sept. 1993, at 80. The *W11* spelling is *highfalutin*, without the apostrophe and with *high* spelled out. The *OED*, recording the word as an Americanism dating from the mid-19th century, has two spellings: *highfalutin* (first) and **highfalutin'*. The *Funk & Wagnalls New Standard Dictionary* (1942) records **hifalutin* (without the apostrophe) as a variant spelling; the main entry is under *highfalutin*. (Other variants listed there are **highfaluten* and **highfaluting*.) The best course is to do two things: spell the word *highfalutin*, and avoid being what it denotes.

***highjack**. See **hijack**.

highlight > **highlighted** > **highlighted**. **Highlit* is a variant past-tense and past-participial form that occasionally surfaces—e.g.:

- “The story is read aloud at a speed suggesting a pre-literate user, [and] *highlit* [read *highlighted*] words are defined at a level appropriate for a smart 5th grader.” “Says You,” *Wash. Post*, 29 Mar. 1995, at R25.
- “It has an ingratiating, easy-to-navigate interface; users can click on icons, *highlit* [read *highlighted*] words or map points of Stratford-upon-Avon or London to explore.” “Fast Forward Data Bank—What’s in Gigastore?” *Wash. Post*, 27 Sept. 1995, at R25.
- “It is The Great Metaphysician, a figure some 10 feet tall, female, with elements of architecture and the instruments of architectural drawing, *highlit* [read *highlighted*] in gold, pressed into her dress of dark brown bronze.” Brian Sewell, “Shadow Cast,” *Evening Standard*, 30 Jan. 2014, at 40.

B. His or her. See **he or she** & **SEXISM (B)**.

Hispanic, n.; Latino; Latina; Chicano; Chicana. To denote someone of Spanish descent, the term *Hispanic* (gender-neutral in all its applications) was the commonest of all these terms from 1980 to 2000. Since that time, it has vied closely with *Latino* /la-tee-noh/ for predominance—the feminine form being *Latina* /la-tee-nə/. The first similar words to gain widespread use in AmE were the much more specific terms *Chicano* /chi-kah-noh/ (= a U.S. resident of Mexican extraction) and its feminine equivalent *Chicana* /chi-kah-nə/, which arose in the late 1960s and spread in the 1970s. (Note that the first syllable isn’t /shi-/) But a hypernym having been needed for the broader group, *Hispanic* and *Latino* have eclipsed the more specialized terms (including *Mexican-American*). Justice Sonia Sotomayor of the U.S. Supreme Court, of Puerto Rican descent, is more frequently identified in the press as a *Latina* than as *Hispanic*.

If a definite article is needed before *Hispanic*, it should be *a*, not *an*. See **a (A)**.

***hissself.** See **PRONOUNS (E)**.

historian. Although **an historian* was standard in the 18th century and the early 19th, *a historian* became predominant in AmE by 1890 and in BrE by 1960. See **a (A)**.

Current ratio (*a historian* vs. **an historian*): 4:1

historical. A. And historic. *Historical*, meaning “of, relating to, or involving or occurring in history,” is called on for use far more frequently. *Historic* means “historically significant” <the Alamo is a historic building>. An event that makes history is *historic*; momentous happenings or developments are *historic*—e.g.: “The Supreme Court’s *historic* decision about whether mentally competent, dying patients and their doctors have the right to hasten death won’t be known for months.” “Voices: Should Doctors Be Able to Assist Terminally Ill Patients in Suicide?” *USA Today*, 10 Jan. 1997, at A12.

A documented fact, event, or development—perhaps having no great importance—is *historical*. E.g.: “Despite the *historical* data, some people just don’t feel comfortable knowing their loan’s rate can drift up 5 or 6 points.” Ilyce R. Glink, “Refinancing Is Wise, Even in a Bouncy Market,” *Chicago Sun-Times*, 24 Jan. 1997, at 8.

Examples of *historic* used incorrectly for *historical* could easily run for several pages—e.g.:

- “The Sunday Trading Act, which formally became law yesterday, removes *historic* [read *historical*] anomalies of the kind that allowed shopkeepers to sell pornographic magazines but not Bibles on the Sabbath, and instant but not ground coffee.” Marianne Curphey, “M&S Gives Up Fight to Keep Stores Shut on Sundays,” *Times* (London), 27 Aug. 1994, at 5.
- “The odds are now on a further easing of monetary policy and there is a good *historic* [read *historical*] correlation between falling interest rates and a rising stock market.” “Indian Summer,” *Fin. Times*, 13 June 1996, at 12.
- “Rape is also *an historic* [read *a historical*] soldiers’ sport.” Edward Hoagland, “Sex and the River Styx,” *Harper’s Mag.*, Jan. 2003, at 49, 62.

The far less common mistake is misusing *historical* for *historic*—e.g.: “Gary Pinkel didn’t know what to expect after Toledo and Nevada found themselves going into a *historical* [read *historic*] overtime in the Las Vegas Bowl.” “Vegas Bowl Passes OT Test,” *Austin Am.-Statesman*, 16 Dec. 1995, at E5. See **-IC**.

B. A historic(al); *an historic(al). On the question whether to write *a* or *an historic(al)*, see **a (A)**.

***hi-tech.** See **high-tech**.

hither; thither; whither. All three are **ARCHAISMS** in decline, *hither* (= here; to this place) being the most

common. Except in the PHRASAL ADJECTIVE *come-hither* (= sexually appealing) or the quaint expression *hither and yon*, the word *hither* is best replaced with a more modern term—e.g.: “They are men who have come from Europe—German, Irish, French and Scandinavian—men that have come from Europe themselves, or whose ancestors have come *hither and settled here* [read *here and settled*], finding themselves our equals in all things.” Andrew Delbanco, “The Universalist,” *New Republic*, 20 Jan. 1997, at 26.

Thither (= there; to that place) is even more strikingly archaic, but it sometimes appears with *hither* for a pleasant touch of humor and euphony—e.g.: “We have forfeited this joy and peace for the tinsel and glitter, the rushing *hither and thither*.” Kathy Hogan, “The True Meaning of Christmas,” *Indianapolis News*, 11 Dec. 1996, at A13.

Whither (= where; to what place) is the most old-fashioned of all <at Chelsea Square, whither we had gone>. It has virtually no place in modern writing. For a misusage, see **wither**.

hitherto; thitherto. *Hitherto* = heretofore; up to this time. *Thitherto* = theretofore; up to that time. These ARCHAISMS are hardly worth using, since the terms just used in defining them—*heretofore* and *theretofore*—are perfectly equivalent and much more common. Cf. **up to now**.

HIV virus. For this redundant acronym, see ABBREVIATIONS (B).

hoard; horde. A *hoard* is a stash of something, usually hidden away. To *hoard* items is to accumulate them and stash them away. A *horde* is a throng or teeming crowd (originally a nomadic tribe). Like many other pairs of homophones, these give writers trouble. *Hoard* often displaces *horde*—e.g.:

- “Ice-cream melted in seconds, sweat beads trickled down faces and *hoards* [read *hordes*] of residents hurried to the beach to avoid the searing temperatures that scorched the county Saturday afternoon.” Jody Kleinberg, “Heat Sizzles to 8-Year High,” *Press Democrat* (Santa Rosa), 21 July 1996, at B1.
- “A dry winter wasn’t enough to reduce the roving *hoards* [read *hordes*] of Africanized honey bees that have swarmed the region in recent years.” Joyesha Chesnick, “Abuzz About Bees,” *Tucson Citizen*, 7 Aug. 1999, at B1.
- “Thanks to the movie ‘Titanic,’ *hoards* [read *hordes*] of teenagers head to the railings to mimic the famous scene in the movie in which the ship’s hero shouts, ‘I’m king of the world!’” Anne Veigle, “Set Sail for Fascinating Journey Through Navy Museum,” *Wash. Times*, 10 Aug. 1999, at E5.

Likewise, *horde* (exclusively a noun) sometimes displaces the verb *hoard*—e.g.:

- “They prefer to binge on points rather than *hording* [read *hoarding*] a stash.” Ryan Ori, “Semifinal Victors Turn Foes Inside Out,” *Peoria J. Star*, 14 Mar. 1999, at D16.

- “No ticket *hording* [read *hoarding*] allowed, though.” “TGIF,” *Fla. Today*, 23 July 1999, at G7.
- “The U.S. is poised for a spate of even more heightened deal-making after years of slow growth and *hording* [read *hoarding*] cash.” Alexander Coolidge, “Merger Mania Hits Home with 2 Takeovers in 1 Week,” *Cincinnati Enquirer*, 24 May 2015, at G1.

Finally, through a mistaken association of the two words, the misspelling **hoarde* often crops up—e.g.: “This has provoked *hoardes* [read *hordes*] of ethnic Albanian refugees to return to their homeland before it is safe.” “Civilized Nations Should Never Resort to War,” *Buffalo News*, 14 July 1999, at B3.

***hoarhound.** See **horehound**.

hobo (= [1] a homeless, impecunious vagrant, or [2] a migratory worker), an Americanism dating from the late 19th century, has always predominantly formed the plural *hoboes*—not **hobos*. See PLURALS (D).

Current ratio (*hoboes* vs. **hobos*): 1.1:1

HOBSON-JOBSONISM. This term denotes the principle that with loanwords, foreign-sounding phonemes of the original language are modified to approximate the phonemes available in the borrowing language. Hence *Rodriguez*, pronounced in Spanish with two instances of the guttural *r*, is normally pronounced with the usual English *r* in English-speaking contexts—even when spoken by a Spanish speaker. An insistence that *Rodriguez* be enunciated just as it would be in Spanish—with the concomitant idea that an anglicized pronunciation is a “mispronunciation”—is perverse.

Most English speakers, for example, don’t have trilled *r*s or guttural *ch*s—hence *terza rima* comes out /*tärt-zə reem-ə*/ and *Bach* comes out /*bahk*/. To insist that Johann Sebastian’s last name must have a guttural aspiration at the end is sheer pedantry and pretension: *Johann* can naturally be said /*yoh-hahn*/, but *Bach* cannot naturally be said /*bahkh*/. I once watched a European music critic spend 15 minutes trying to teach an accomplished American music professor how to say the name *Leos Janaček* authentically. In the end, /*lay-ohs yah-nah-chek*/ was as close as the available phonemes made it possible to come. Frustrated, the music critic ended up declaring his efforts unsuccessful. Cf. PRONUNCIATION (D).

The term got its name from *Hobson-Jobson*, an 1866 glossary of South Asian terms collected during the British rule of India, each term having been roughly transcribed into approximate English pronunciations.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The book was written by Henry Yule and A.C. Burnell and updated in 1903. The title comes from an entry in the glossary denoting a ritual Muslim procession called *Ya Hasan, Ya Husain*. The authors' "transliteration" was widely considered pejorative.

Hobson's choice. A. Generally. This ever-spreading catchphrase has loosened its etymological tether. Tradition has it that Thomas Hobson (1549–1631), a hostler in Cambridge, England, always gave his customers only one choice among his horses: whichever one was closest to the door. Hence, in literary usage, a *Hobson's choice* came to denote no choice at all—either taking what is offered or taking nothing.

Though purists resist the change, the prevailing sense in AmE is not that of having no choice, but of having two bad choices—e.g.:

- “Meanwhile, the women—if we can believe them—had a *Hobson's choice*: Either lie and ruin men's careers and lives; or tell it like it was and learn to live with hell in this man's Army.” Deborah Mathis, “Race Becomes Issue in Aberdeen Rape Cases,” *Fla. Today*, 15 Mar. 1997, at A11.
- “Walking that thin line between trusting your customer and seeking protection from risk can be a *Hobson's choice*. Make the deal and risk not getting paid. Turn down the sale and you reduce the risk of being stiffed, but you won't stay in business long.” David J. Wallace, “Draft Transactions Can Leap Trade Barriers,” *Denver Bus. J.*, 6 June 1997, at A20.
- “The city then foists a *Hobson's choice* upon its electorate: Either vote to tax the city's property owners with a sizable bond issue, or just endure the increasingly unsafe streets and bridges.” Lester Kleinberg, “Seattle's Crumbling Roads,” *Seattle Times*, 26 June 1997, at B5.

In a sense, this usage isn't much of a SLIPSHOD EXTENSION. After all, the choice of either taking what is offered or taking nothing must often be two poor options.

B. Article with. Traditionally—and still in BrE—the phrase takes no article; that is, you are faced not with a *Hobson's choice* but with *Hobson's choice*. In AmE, though, the phrase usually takes either *a* or *the* (as in the preceding examples).

C. *Hobbesian choice. Amazingly, some writers have confused the obscure Thomas Hobson with his famous contemporary, the philosopher Thomas Hobbes (1588–1679). The resulting MALAPROPISM, while increasingly common since the early 1980s, is still beautifully grotesque:

- Henry A. Kissinger, “How to Live with a *Hobbesian Choice* [read *Hobson's Choice*],” *L.A. Times*, 11 June 1995, at M2. (Kissinger probably wasn't responsible for the headline.)
- “Governing is full of *Hobbesian choices* [read *Hobson's choices*] between clashing, sometimes irreconcilable ideas.” Dana Milbank, “Is Negativity Good for Politics? Positively,” *Wash Post*, 2 Apr. 2000, at B1.
- “If you have to shoot yourself in the foot, should it be the right or the left? Italian Prime Minister Silvio Berlusconi faced that *Hobbesian choice* [read *Hobson's choice*] last week.” Malcolm Beith, “Decisions,” *Newsweek*, 24 Dec. 2001, at 8.
- “But there was a *Hobbesian choice* [read *Hobson's choice*] to be made: To get an hour-long ‘Letterman,’ ABC also

would have to kill ‘Nightline.’” Verne Gay, “Letterman's One-Night Stand,” *Newsday* (N.Y.), 8 July 2002, at B23.

- Current ratio (*Hobson's choice* vs. **Hobbesian choice*): 41:1

hoe, vb., makes *hoeing* and *hoeable*. See **row to hoe**.

hoi polloi (= the common people, the masses). Because *hoi* in Greek means “the (plural),” *the hoi polloi* is technically redundant. But the three-word phrase has spread since about 1850, has become common, and ought to be accepted.

What shouldn't be accepted, though, is the growing misuse of *hoi polloi* to refer to the elite. This might occur through a false association with *hoity-toity* (= arrogant, haughty) or *high and mighty*—e.g.: “You may shell out \$75 or \$80 per person, sans tax and tip, for the Tribute experience, but, trust me: This is money very well spent. Which is why Tribute has been drawing Detroit power brokers and the *upper-end hoi polloi* [read, perhaps, *upper crust*] since it opened in April.” Jane Rayburn, “Restaurant Reviews,” *Detroit News*, 3 July 1997, at F5.

LANGUAGE-CHANGE INDEX

1. *the hoi polloi* for *hoi polloi*: Stage 5
2. *hoi polloi* in the sense “elite”: Stage 1

hoist(ed) with one's own petar(d). This Shakespearean phrase, meaning “ruined by one's own scheming against others,” raises several editorial issues.

First, the actual line in *Hamlet* is *hoist with his own petar* (3.4.207). The form *petar* is an archaic variant of *petard*, meaning “an explosive device used in ancient warfare to blow open a gate or to breach a wall.” So *hoist with one's own petard* literally means to blow oneself into the air with one's own bomb. In modern print sources, *petard* greatly outnumbers *petar*—in journalism by a 66-to-1 ratio. So almost every writer who uses the phrase updates Shakespeare by using *petard*. Or more likely, they're relying on editions of Shakespeare in which the spelling has been modernized.

Second, the verb is ordinarily inflected *hoist* > *hoisted* > *hoisted*. But Shakespeare used *hoist* as the past participle for the archaic verb *hoise* (= to raise aloft). Many writers update *hoist* and make it *hoisted*; that is the usual form by a 2-to-1 ratio in modern journalistic sources. E.g.: “In these areas, feminists are in danger of being *hoisted by their own petard*.” Jean Bethke Elstain, “Harassment and Politics Are Poor Bedfellows,” *Newsday* (N.Y.), 19 Jan. 1997, at A46. But in published books *hoist* predominates by a 7-to-1 ratio and has done so since 1850. Book authors and publishers have tended to treat *hoist with his own petard* as a SET PHRASE.

Third, as illustrated in the quotation just above, there is a question about what preposition to use. Shakespeare's was *with*, not *by*, and that preference has consistently been reflected in book publishing since

the early 19th century. But *by* now preponderates by a 4-to-1 ratio in journalism. Some writers mistakenly use *on*, possibly from the false notion that *petard* refers to a sword or lance. Whatever the reason for the mistake, *on* makes no literal sense—e.g.: “Mr. Family Values, the holier-than-thou little butterball, hoisted *on* [read *with* or *by*] his own petard.” Margery Eagan, “Naughty Newtie Samples America’s Moral Decay,” *Boston Herald*, 10 Aug. 1995, at 4.

In sum, almost every contemporary writer who uses this popular phrase misquotes Shakespeare in some way—and it would be pedantic to insist on *hoist with his own petard*. The usual renderings are *hoist with his own petard* and *hoisted by his own petard*. Some preference might be given to the first of those. See LITERARY ALLUSION.

hold out. See PHRASAL VERBS.

hole in one. Pl. *holes in one*—not **hole in ones*. See PLURALS (G).

Current ratio: 70:1

holistic (= [1] of, relating to, or involving holism, i.e., the theory [esp. as applied in medicine] that organisms have an existence other than as the mere sum of their parts; or [2] relating to or concerned with complete systems rather than with their component parts) is so spelled. But the word is fairly often misspelled **wholistic*, a blunder that began spreading in AmE in the 1930s and in BrE in the 1950s. E.g.:

- “So Duke started the long journey toward recovery, sampling traditional veterinarian medicine, canine acupuncture, obedience techniques, *wholistic* [read *holistic*] medicine, and animal behavior modification.” Michelle Dally Johnston, “Behavior Modification: Problem Dogs Can Be Helped, but It Takes Time,” *Denver Post*, 18 Aug. 1997, at F1.
- “The Ursuline Sophia Center . . . provides local women with programs and services that foster *wholistic* [read *holistic*] growth and health in body, mind, heart and spirit.” Marcus Gleisser, “Nun Named Spiritual Director of Sisters of Charity Hospitals,” *Plain Dealer* (Cleveland), 2 Sept. 1997, at C2.
- “Barker is still highly motivated to lead her team to victories, but Barker has developed a much more *wholistic* [read *holistic*] approach to dealing with her players.” Bob Buttitta, “Coaching Calling,” *Ventura County Star*, 11 Feb. 2015, at C3.

hollowware (= concave serving dishes that are traditionally fairly hollow) is the standard spelling. **Holloware* is a variant.

Current ratio: 4:1

holocaust (Gk. “burnt whole”) is one of our most hyperbolic words, beloved of jargonmongers and second-rate journalists. The historical sense from World War II, of course, is beyond question. Figurative applications of the term, however, are often questionable. Here it is used to no avail in reference to a scandal: “He would soon be engulfed in a *holocaust* of painful controversy that would maim several lives, wound hundreds of other people, and jostle the foundations of the fashion industry.” Inherent in the sense of the word, whether literal or figurative, is the idea of a complete burning; hence it may be used appropriately of fires, but not, for example, of floods.

Also, of course, it brings to most modern minds the Nazi campaign to exterminate European Jews during World War II. When referring to that ghastly series of atrocities, the word is capitalized. And because of its association with those acts of genocide, the word is generally seen as inappropriate when used in reference to deaths that are (1) not caused by malice and (2) not on a massive scale. E.g.: “History has a way of repeating itself, doesn’t it? I consider what happened in Chicago this summer—the poor dying in their own apartment buildings [from the heat wave]—America’s own *Holocaust* . . . Who is responsible for this inhumane negligence?” Kathy Arthur, “Heat and Negligence Are Killers,” *Roanoke Times*, 31 July 1995, at A4. (That terrible heat wave in Chicago caused nearly 200 deaths, but it shouldn’t have been called a *holocaust*—especially not with a capital *H*.) See ETYMOLOGY (C).

LANGUAGE-CHANGE INDEX
holocaust in reference to death brought about by natural causes (e.g., *the holocaust caused by the African famine*): Stage 3

homage is best pronounced /*hom-ij*/. It is a silly (but quite common) pretension to omit the /*h*/ sound. Cf. **herb & humble**.

home. See **house**.

home in, not **hone in*, is the correct phrase. In the early 20th century, the METAPHOR referred to what homing pigeons do; by the early 20th century, it referred also to what aircraft and missiles do.

And by the late 20th century, some writers had begun mistaking the phrase by using the wrong verb, *hone* (= to sharpen) instead of *home*—e.g.:

- “While Mr. Bradley *honed* [read *homed*] in on healthcare, Mr. Gore scolded his opponent as lacking a comprehensive education plan and for supporting a school voucher program when he was in the Senate.” Richard L. Berke, “Bradley, in Debate with Gore, Goes on the Attack,” *N.Y. Times*, 18 Dec. 1999, at A12.
- “The knowledge gained from these conferences informs the intervention and helps the instructional team *hone* [read *home*] in on the specific strategies that will help the

students move forward.” Carol Collier Kuhlthán et al., *Guided Inquiry: Learning in the 21st Century* 120 (2007).

- “British and American agents began to *hone in* [read *home in*] on his location and activities.” Herbert von Feilitzsch, *The Secret War on the United States in 1915* 209 (2015).

In modern print sources—both AmE and BrE—the collocation *homing in on the* ~ predominates over **honing in on the* ~ by a 2-to-1 margin. For more on these competing phrases, see pp. ix–x.

LANGUAGE-CHANGE INDEX
**hone in* for *home in*: Stage 4

homely; homey. These two words have undergone DIFFERENTIATION. *Homey* means “characteristic of a home; homelike.” *Homely* originally shared this sense, but it was gradually extended to mean “simple, unpretentious.” From there, the word was extended further to the sense that is prevalent in AmE (but not BrE) today: “unattractive in appearance; plain.” R.W. Burchfield points out that if *homely* refers to a British woman, it means that she is “adept at housekeeping, warm and welcome” (*FMEU3* at 363). A *homely* American woman, however, is simply unattractive. *Homey* has been predominantly so spelled in AmE since about 1905 and in BrE since about 1915. Before that time, **homy* was the standard spelling.

homeopathy (= a therapeutic system, developed in the 18th century, premised on the idea that “like cures like,” that infinitesimally small doses of medicine are best, and that only one medicine should be taken at a time) is pronounced /hoh-mee-**ah**-pə-thee/. The corresponding adjective is *homeopathic* /hoh-mee-ə-**path**-ik/.

homeowner. One word.

home page (the first page encountered by a website visitor) is predominantly spelled as two words in both AmE and BrE—though unification seems inevitable. Cf. **website & webpage**.

homestead, v.t. The past tense is *homesteaded*, not *homestead*. Someone who homesteads is a *homesteader*.

homey. See **homely**.

homicide refers not to a crime (as is commonly thought), but to the killing of a person, whether lawful or unlawful. The word is frequently misspelled **homicide*. See **murder** (A) & -CIDE.

Further, the word is preferably pronounced /**hom**-i-sid/—not /**hohm**-i-sid/.

***hommos.** See **hummus**.

homocentric. See **anthropocentric**.

homogeneous; *homogenous. Although strictly speaking these words are distinct, they have become thoroughly conflated through confused misuse and mispronunciation. The more common term is *homogeneous* /hoh-mə-**jeen**-ee-əs/, which means “of

uniform characteristics” <Japan is a more homogeneous society than the United States>. **Homogenous* /hə-**mah**-jə-nəs/, meanwhile, is a slightly archaic biological term describing genetically related tissue or organs. The terms have a long history of causing trouble. In 1934, W2 recorded *homogeneous* as a variant spelling of the technical term **homogenous*, but not vice versa. In 1961, W3 recorded each spelling as a variant of the other.

To further complicate matters, *homogeneous* is routinely mispronounced in four syllables, like the medical term, instead of five. Naturally, that only encourages the spelling confusion. Add to this the cognate four-syllable verb *homogenize* and its four-syllable participle that’s familiar on milk products: *homogenized*. Actually, it’s amazing that anyone uses the original spelling and pronunciation anymore.

Yet the two spellings appear in print with remarkable homogeneity: a March 2003 newspaper-database search found 774 instances of **homogenous* and 787 instances of *homogeneous* in the previous six months, including these from *The New York Times* during the same month:

- “The \$425 million foundation . . . has financed such plans in Oregon and South Dakota, in communities that are smaller and more *homogenous* [read *homogeneous*].” Stephanie Strom, “A Withdrawn Aid Offer Leaves Yakima Bruised,” *N.Y. Times*, 6 Mar. 2003, at A20.
- “‘Beyond the Melting Pot’ . . . scoffed at ‘the notion that the intense and unprecedented mixture of ethnic and religious groups in American life was soon to be blended into a *homogeneous* end product.’” Adam Clymer, “Daniel Patrick Moynihan Is Dead,” *N.Y. Times*, 27 Mar. 2003, at A1 (quoting Moynihan).

Writers are best advised to use *homogeneous*, and to pronounce all five syllables. It corresponds nicely to its antonym, *heterogeneous*. See **heterogeneous**.

The scientific community has moved on from the theft of its four-syllable term, **homogenous*, and today uses *homologous* instead.

LANGUAGE-CHANGE INDEX

1. **homogenous* for the traditional *homogeneous*: Stage 3
Current ratio (*homogeneous* vs. **homogenous*): 5:1
2. *homogeneous* pronounced nontraditionally with four syllables: Stage 4

homophobe, n. This word, together with its cognates *homophobia* and *homophobic*, dates from the mid-1960s but didn’t become widespread until the 1980s. Some writers object to the words on etymological grounds—e.g.: “The gays’ most recent coinage is ‘homophobe,’ their epithet for anyone they accuse of being against them. But that is an error, . . . since it would not translate as anti-homosexual but . . . as ‘somebody fearing or disliking *himself*.’” Gary Jennings, *World of Words* 71 (1984). Jennings’s analysis, of course, depends on translating from Greek, in which the noun *homos* means “same.” If you instead interpret the prefix *homo* as an abbreviation for *homosexual*, then the term *homophobe* makes sense. Besides, it’s

surely better than *homosexualphobe*, and it appears quite often in print—e.g.:

- “There is no doubt that [Patrick Buchanan] is a dangerous *homophobe*; in more than one column, he argued that the people he calls the ‘pederast proletariat’ deserve to die of AIDS.” Robert Scheer, “Why I Can’t Stand Pat,” *Playboy*, July 1992, at 47.
- “Now researchers armed with naughty movies and a device that measures male sexual arousal have collected evidence suggesting that many *homophobes* may be sexually aroused by men.” Richard Morin, “New Facts and Hot Stats from the Social Sciences,” *Wash. Post*, 8 Sept. 1996, at C5.
- “A passing driver shouted at him while driving through the lot, calling him a four-letter word and a *homophobe*.” Craig Gilbert, “Protests Follow Walker,” *Milwaukee J. Sentinel*, 17 Aug. 2015, at A1.

See ETYMOLOGY (A).

LANGUAGE-CHANGE INDEX
homophobe: Stage 5

***homy**. See **homely**; **homey**.

honcho (= leader, chief, boss) is a SLANG term derived from the Japanese word *hancho* (lit., “squad leader”). The word typically appears in the SET PHRASE *head honcho*; although some consider that phrase redundant, it is thoroughly established.

Journalists have recently begun using the word as a verb, the effect being breezy and vogueish-sounding—e.g.:

- “Party sources said that Bill Daley, who *honchoed* [read *championed*?] passage of the North American Free Trade Agreement for the Clinton administration, also supports the vice-president.” Greg Hinz, “Forget 1996: Corporados Look to 2000,” *Crain’s Chicago Bus.*, 2 Sept. 1996, at 4.
- “I dealt with this treaty to ban chemical weapons for almost eight years, first as a U.N. Ambassador *honchoing* [read *championing*?] the issue there and then as U.S. arms control director for most of the Reagan years.” Ken Adelman, “Fallout from a Failed CWC Treaty,” *Wash. Times*, 18 Sept. 1996, at A17.
- “He *honchoed* [read *directed*] state probes that led to jailing Jerry Sandusky and dozens of state lawmakers and aides caught up in public corruption.” John Baer, “The Philly Sting That Stung No One,” *Phil. Daily News*, 17 Mar. 2014, at 4.

As in the last example quoted, this verbal use is so vague that one can claim to have “honchoed” without ever being accused of claiming too much credit. See FUNCTIONAL SHIFT (D).

LANGUAGE-CHANGE INDEX
honcho as a verb: Stage 2

***hone in**. See **home in**.

honeyed, not **honied*, is the standard form in AmE and BrE alike—e.g.: “This is a mold that weakens the skins and allows the water to escape at the same time imparting an extraordinary *honied* [read *honeyed*]

flavor to the concentrated juice.” Frank J. Prial, “Wine Talk,” *N.Y. Times*, 24 July 1996, at C4. Cf. **moneyed**.

honeyed misspelled **honied*: Stage 1
Current ratio: 9:1

Hong Kong; Hongkong. The spelling preferred by the major dictionaries and stylebooks is the two-word *Hong Kong*. A few publications, such as *The Economist*, use the one-word form.

Current ratio: 48:1

Hong Konger; *Hong Kongite; *Hong Kongian. The first is standard throughout the English-speaking world. The others are NEEDLESS VARIANTS. See DENIZEN LABELS.

***honied**. See **honeyed**.

***honorand**. See **honoree**.

honorarium. Pl. *honoraria* or *honorariums*. Though the latter has much to commend itself as a homegrown plural—and is *The New York Times*’ preferred plural—*honoraria* generally prevails in AmE and BrE alike. See PLURALS (B).

Current ratio (*honoraria* vs. *honorariums*): 5:1

honoree; honorand. In the 19th century, these two forms sprang up, both denoting a person who receives an honor. Both words are acceptably formed. The *OED* records only *honorand*, which predominates in BrE but appears only occasionally in AmE—e.g.: “But as President Harry S. Truman’s newly appointed secretary of state, Marshall was one of 12 *honorands* at the following year’s Commencement.” John T. Bethell, “The Ultimate Commencement Address,” *Harvard Mag.*, May–June 1997, at 36. In AmE today, *honorand* is no better than a NEEDLESS VARIANT because *honoree* has taken the field—e.g.:

- “Among the *honorees* in 10 categories are Cambodian sculptor Chum Sambath, conductor David Wilson and Wade Hobgood, dean of the College of the Arts at Cal State Long Beach.” Steven Linan, “Morning Report,” *L.A. Times*, 14 Oct. 1997, at F2.
- “The evening, hosted by the Arkansas Game and Fish Foundation, began with the Governor’s Reception for the *honorees* and their families.” Cary Jenkins, “100 Years on Record,” *Ark. Democrat-Gaz.*, 30 Aug. 2015, at 40.

hoof. This word, pronounced either /huuf/ or /hoof/, has undergone a curious change in its plural. From 1700 to about 1975, the predominant form in English-language print sources was *hoofs*, analogous to *roofs*. But in the early 20th century, *hooves* emerged as a competing plural and became predominant first in BrE (1960) and later in AmE (1975). In modern journalistic sources, *hooves* is now five times more common; in book publishing, the two forms are about

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Hoosier; Indianan; *Indianian. The first is the standard name for someone who hails from or lives in Indiana. The second and third forms are fairly rare variants (the second less rare than the third). See DENIZEN LABELS.

Current ratio: 63:1.3:1

***hooved.** See **hoofed**.

hopeful, n. When used in the sense “a candidate,” this word smacks of journalistic. It came into vogue especially after World War II. E.g.:

- “Garcia and nine other City Council *hopefuls* [read *candidates*] are vying for an appointment that will fill the District 4 council seat left vacant after Cook was elected mayor on Nov. 7.” Roberto Hernandez, “10 Seeking Colton Council Seat,” *Press-Enterprise* (Riverside, Cal.), 15 Dec. 2000, at B3.
- “For our part, *The Sun* pledges to make public safety a central issue by which all the gubernatorial *hopefuls* and legislative candidates [read gubernatorial and legislative candidates] will be measured in the 2002 state elections.” “Violent Crime Pays in a City of Soft Sentences,” *Baltimore Sun*, 18 Dec. 2000, at A12.
- “When Fox turned over the very same Friday 10 p.m. hour to presidential *hopefuls* [read *candidates*] Al Gore and George W. Bush in October, only 2.9 million watched.” Lisa de Moraes, “For NBC, Julie Andrews Brings the Sound of Memory,” *Wash. Post*, 20 Dec. 2000, at C7.

LANGUAGE-CHANGE INDEX

hopeful for *candidate*: Stage 4

hopefully. A. Generally. Four points about this word. First, it was widely condemned from the 1960s to the 1980s. Briefly, the objections are that (1) *hopefully* properly means “in a hopeful manner” and shouldn’t be used in the radically different sense “I hope” or “it is to be hoped”; (2) if the extended sense is accepted, the original sense will be forever lost; and (3) in constructions such as “Hopefully, it won’t rain this afternoon,” the writer illogically ascribes an emotion (*hopefulness*) to a nonperson. *Hopefully* isn’t analogous to *curiously* (= it is a curious fact that), *fortunately* (= it is a fortunate thing that), or *sadly* (= it is a sad fact that). How so? Unlike all those other SENTENCE ADVERBS,

hopefully can’t be resolved into any longer expression involving a corresponding adjective (*hopeful*)—but only the verb *hope* (e.g., *it is to be hoped that* or *I hope that*). See SLIPSHOD EXTENSION. Cf. **thankfully**.

Second, whatever the merits of those arguments, the battle is now over. The *AP Stylebook*, considered the bible of U.S. newspaper copy desks, controversially accepted the “it is hoped” or “let’s hope” sense in its 2012 edition. *Hopefully* is now a part of AmE, and it has all but lost its traditional meaning—e.g.:

- “*Hopefully*, other guests will join in the ensuing brawl.” Mike Royko, “Why Perot Sings Wedding Bell Blues,” *Dallas Morning News*, 31 Oct. 1992, at A31.
- “That way, if one of them gets stuck in traffic on the way to the ceremony, the other will—*hopefully*—still make it there in time.” Ed Brown, “The Most Glam Job in Accounting,” *Fortune*, 31 Mar. 1997, at 30.
- “*Hopefully*, one day we will all grow older.” Pamela DeCarlo, “Never Too Old for HIV Prevention,” *San Diego Union-Trib.*, 26 Nov. 1997, at B7.

Sometimes the word is genuinely ambiguous (if the original meaning is considered still alive)—e.g.: “Dave Krieg will take the snaps and, *hopefully*, hand off to RB Garrison Hearst.” Larry Weisman, “NFC East: Teams Aim at Dallas Dozen,” *USA Today*, 1 Sept. 1995, at E14. (Is Krieg hoping for the best when Hearst runs? Or is the writer hoping that Krieg won’t pass the football or hand off to another running back?) Indeed, the original meaning *is* alive, even if moribund—e.g.:

- “But if one can’t very *hopefully* go about understanding the learning process, one can with more confidence try to figure out the thing learned, the grammar.” Graham Wilson, Foreword, *A Linguistics Reader* xxiii (Graham Wilson ed., 1967).
- “Officials recently have pointed *hopefully* to signs of increased usage of the garage.” John Laidler, “Low Usage Plagues Lynn MBTA Station,” *Boston Globe*, 9 Oct. 1994, North Weekly §, at 1.
- “Joe Lieberman looks *hopefully* toward the White House.” Jeffrey Toobin, “Candide,” *New Yorker*, 16 Dec. 2002, at 42.
- “On the trip, Paul tentatively, *hopefully*, begins a flirtation with a young painter, Fern.” Meryl Gordon, “Cinderella Story,” *New York*, 13 Jan. 2003, at 24, 26.

Third, some stalwarts continue to condemn the word, so that anyone using it in the new sense is likely to have a credibility problem with some readers—e.g.:

- “Where we do not move forward, we regress. To be sure, it begins with slight lapses. Errors of usage—confusing ‘disinterest’ with ‘uninterest,’ using ‘hopefully’ for ‘it is to be hoped.’ And then, with astonishing swiftness, the rot sets in.” Henry Louis Gates Jr., “Canon Confidential: A Sam Slade Caper,” *N.Y. Times*, 25 Mar. 1990, § 7, at 1.
- “In the 1969 Usage Panel survey [*hopefully*] was acceptable to 44 percent of the Panel; in the most recent survey it was acceptable to only 27 percent.” *AHD3* at 871.
- “Professor Michael Dummett, an Oxford logician, condemns the new usage of *hopefully* because only a person can be hopeful, and in many such cases there is nobody around in the sentence to be hopeful.” “Christopher Howse’s Grammar School Lesson XXVII,” *Daily Telegraph*, 11 Dec. 1996, at 21.

- “Although various adverbs may be used to modify entire clauses, *hopefully* isn’t among them—yet. I only hope I won’t have to concede that it is until I’m an old, old woman.” Barbara Wallraff, *Word Court* 120 (2000).

Fourth, though the controversy swirling around this word has subsided, it is now a SKUNKED TERM. Avoid it in all senses if you’re concerned with your credibility: if you use it in the traditional way, many readers will think it odd; if you use it in the newish way, a few readers will tacitly tut-tut you.

LANGUAGE-CHANGE INDEX
hopefully as a sentence adverb: Stage 4
 Current ratio (*I hope it won’t* vs.
Hopefully it won’t): 17:1

B. History. Throughout the late 20th century, the common wisdom was that the use of *hopefully* as a sentence adverb began sometime around the early 1930s. Then, in 1999, the lexicographic scholar Fred R. Shapiro, using computer-assisted research, traced it back to Cotton Mather’s 1702 book, *Magnalia Christi Americana*, in this sentence: “Chronical diseases, which evidently threaten his Life, might *hopefully* be relieved by his removal” (p. 529). The evidence then skips to 1851, and then to the 1930s. See Fred R. Shapiro, “Earlier Computer-Assisted Evidence on the Emergence of *Hopefully* as a Sentence Adverb,” *75 Am. Speech* 439 (1999).

horde. See **hoard**.

horehound (= a minty herb sometimes used for medicinal purposes) has always been the standard spelling. **Hoarhound* is a variant.

Current ratio: 10:1

horns of a dilemma. See **dilemma**.

horrific; horrendous; horrible; horrid. The words are listed in decreasing degree of horror.

hors d’oeuvre. Although this noun serves as both the singular and the plural in French, the anglicized plural *hors d’oeuvres* became standard in English during the 20th century. See PLURALS (B) & SPELLING (A).

LANGUAGE-CHANGE INDEX
hors d’oeuvres as a plural of *hors d’oeuvre*: Stage 5

horsey; *horsy. For this adjective (as opposed to the diminutive noun *horsie*), the standard spelling has been *horsey* since the 18th century—in AmE and BrE alike. The *SOED* misgauges the historical evidence by listing **horsy* first.

Current ratio (*horsey face* vs. **horsy face*): 1.5:1

hospitable is traditionally pronounced /*hos-pit-ə-bəl*/, though /*hah-spit-ə-bəl*/ is now widespread and acceptable. Cf. **inhospitable**.

hostler; ostler. *Hostler* (= [1] someone who takes care of horses or mules, esp. at an inn or stable; or

[2] someone who moves a railroad engine or a truck at the end of a trip) is so spelled in AmE—and has been, predominantly, since about 1850. The BrE spelling has always been *ostler*—representing the mute *h*—that has typified the word’s pronunciation in BrE beginning in Middle English. Sense 2 does not apply in BrE.

house; home. In the best usage, the structure is always called a *house*. So it is not good form to speak of a recently built *home* that hasn’t yet been sold. Nor should one point to the building and call it one’s *home*: it’s a *house* except in non-U speech. (See CLASS DISTINCTIONS.) The word *home* connotes familial ties.

The plural *houses* should be pronounced /*howz-əz*/, not /*hows-əz*/.

houseful. Pl. *housefuls*. See PLURALS (G).

hove. See **heave**.

hovel (= a small dirty habitation) is preferably pronounced /*həv-əl*/ to rhyme with *shovel*—not /*hoh-vəl*/ or /*hah-vəl*/. For a hovel in the mountains, see **eyrie**.

hover, vb., pronounced /*həv-ər*/, is surprisingly often mispronounced /*hoh-vər*/.

howbeit. This literary word, a true ARCHAISM, means “nevertheless” and begins principal clauses—e.g.: “Bryan suspects Megan of murder but is *loathe* [read *loath*] to arrest her; there are simply not enough facts. *Howbeit* there are rumors aplenty.” Mary Starr, “*Historic* [read *Historical*] Tome Captures Your Attention,” *Telegraph Herald* (Dubuque), 18 Feb. 2001, at E6. (For the reason for changing *loathe* to *loath*, see **loathe**. See also **historical** (A).) But it can always be replaced by some better, more modern word, such as *still* or *nevertheless*. And when it is used—almost always pretentiously—it’s usually the wrong word. That is, modern writers who use it tend to put it into a subordinate clause and wrongly make it equivalent to *albeit*, *though*, or some other word—e.g.:

- “Everyone in Texas had come from somewhere else, *howbeit* [read *albeit* or *though*] several generations removed.” Uldene Harrison McIntyre, “Demise of the Stairs of Bedias,” *Houston Chron.*, 29 Mar. 1992, *Tex. Mag.* §, at 4.
- “This is a form of isolationism, *howbeit* [read *albeit* or *though*] selective.” Robert A. Seiple, “Peace Is an Integral Part of the Fight Against Hunger,” *Seattle Times*, 28 Nov. 1996, at B7.
- “That will create jobs, *howbeit* [read *albeit* or *though*] mainly minimum wage.” “Positive Jobs Report Isn’t All Great News,” *London Community News* (Ontario, Can.), 14 Aug. 2014, Opinion §, at 1.

Cf. **albeit**.

LANGUAGE-CHANGE INDEX
howbeit for *though*: Stage 2

how come is a CASUALISM for *why*. Although it has an ancient lineage, avoid it in serious writing.

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

how dare. See **dare** (F).

however. A. Beginning Sentences with. It seems everyone has heard that sentences should not begin with this word—not, that is, when a contrast is intended. But doing so isn't a grammatical error; it's merely a stylistic lapse, the word *But* or *Yet* ordinarily being much preferable. (See **but** (A).) The reason is that *However*—three syllables followed by a comma—is a ponderous way of introducing a contrast, and it leads to unemphatic sentences. E.g.:

- “*However*, Gross forced third baseman Alan Andrews to pop up.” Timothy Sullivan, “Dave Kolar, Manager of the Ambridge-Baden Economy,” *Pitt. Post-Gaz.*, 8 July 1997, at D3. (Better: *But Gross forced third baseman Alan Andrews . . .*)
- “*However*, Nets sources report, when Keith Van Horn got into a tussle with Utah’s Karl Malone during a preseason game, Williams stepped in and defended the honor—and the game—of his rookie teammate.” Jackie MacMullan, “No. 7 New Jersey Nets,” *Sports Illustrated*, 10 Nov. 1997, at 126. (Better: *But Nets sources report that when Keith Van Horn . . .*)
- “*However*, these small issues should not take away from what is a detailed, and intellectually stimulating collection.” Ni Bhroimeil Una, “Identity and Governance,” *Irish Lit. Supp.*, Fall 2015, at 9. (Better: *But these small issues . . .*)

But when used in the sense “in whatever way” or “to whatever extent,” *however* (not followed by a comma) is unimpeachable at the beginning of a sentence. E.g.: “*However* we manage to perform the feat of perceiving productive relationship, we may be thankful that we can.” Max Black, *The Labyrinth of Language* 67 (1968).
1700 ratio (*But* vs. *However* as sentence-starter): 28:1
1800 ratio: 19:1
1900 ratio: 24:1
2008 ratio: 3:1

B. Emphasizing Certain Words. Assuming that *however* isn't put at the front of a sentence, the word has the effect of emphasizing whatever precedes it. If you say, “Jane, however, wasn't able to make the trip,” you're presumably contrasting Jane with others who were able to go. But if the story is about Jane alone, and the fact that she had been hoping to make a trip, the sentence should be something like “Jane wasn't able, however, to make the trip.” Some otherwise good writers don't seem to understand this straightforward point of rhetoric. Cf. **therefore** (A).

C. Undue Delay in the Sentence. Because of the point established in (B), it's quite unwise to put the *however* very far into a long sentence. The cure is an initial *But*—e.g.: “We use data only for individuals from the former West Germany in this study, *however*, and restrict our attention to data reported for the years prior to 1989, the year of reunification.” Kenneth A. Couch & Thomas A. Dunn, “Intergenerational Correlations in Labor Market Status,” *J. Hum. Resources* 210 (1997). (Read: *But we use data only for individuals from the former West Germany in this study. And we*

restrict our attention to the years before 1989, the year of reunification.)

D. Playing a Role in Run-On Sentences. Like a few other adverbs—notably *therefore* and *otherwise*—*however* often plays a role in RUN-ON SENTENCES. These sentences don't appear nearly as often in print as they do in informal writing, student papers, and the like. They read something like this: “I wanted to go on the trip, however, there wasn't a slot available.” One cure, of course, is a semicolon after *trip*. But the better cure is usually to give the sentence an initial *Although*-clause: “Although I wanted to go on the trip, there wasn't a slot available.”

hub-and-spoke, adj. See AIRLINESE.

hue. See **hew** (A).

hue and cry = (1) formerly, a general call to citizens to chase down and capture a suspected criminal; or (2) commonly, a general clamor or uproar. *Hue* here is used in a sense (= an outcry) that is now obsolete except in this SET PHRASE.

The phrase is occasionally misrendered **hew and cry*—e.g.:

- “It would not be surprising to see airlines charge Coach passengers for checking their bags. Or at least trial balloon it. The *hew and cry* [read *hue and cry*] would be loud, but you can never tell what carriers will do.” Alfred Borcover, “Is Checked Baggage Going the Way of the Free Lunch?” *Chicago Trib.*, 29 Apr. 2007, Travel §, at 2.
- “All of which makes the *hew and cry* [read *hue and cry*] from [James] Dobson's pro-life detractors so puzzling.” Dan Gilgoff, “Dobson's Bit-by-Bit Strategy Has Worked,” *Denver Post*, 10 June 2007, at E3.

LANGUAGE-CHANGE INDEX

**hew and cry* for *hue and cry*: Stage 1

Current ratio (*hue and cry* vs. **hew and cry*): 253:1

human, n. Purists long objected to *human* as a shortened form of *human being*, but today it's so pervasive—even in formal writing—that it should be accepted as standard. References to *humans* as opposed to *human beings* became predominant in AmE about 1978 and in BrE about 1985.

LANGUAGE-CHANGE INDEX

human as a noun equivalent to *human being*: Stage 5

humankind; mankind. *Humankind*, a 17th-century creation, is unexceptionable, while *mankind* is, to many people, a sexist word. The prudent writer will therefore resort to *humankind*—e.g.: “They are so convinced of its authenticity and importance to *human-kind* that they have created the Turin Shroud Center, a research facility that mixes hard science and deep faith.” Dick Kreck, “105 Degrees West Longitude,” *Denver Post*, 30 Nov. 1997, at 4. See SEXISM (C) & **womankind**.

Current ratio (*mankind* vs. *humankind*): 4:1

humanness. So spelled—not **humaness*. But the misspelling is fairly common—e.g.: “*Humaness* [read

Humanness] is overpowered by conformity and order, and beauty is rendered irrelevant.” Margaret Hawkins, “Sculptures Pit Uniqueness vs. Uniformity,” *Chicago Sun-Times*, 18 Mar. 1994, Weekend Plus §, at 27.

LANGUAGE-CHANGE INDEX
humanness misspelled **humaness*: Stage 1
 Current ratio: 457:1

humble is now preferably pronounced with the *h*-sounded: /həm-bəl/. But the pronunciation without an aspirated *h*- has long been common. In fact, *humble* was recognized as having a silent *h*- as early as the 17th century: “In *Latin* [letters] are to be pronounced as often as they are written: and in particular the letter *h*, as in *haeres, homo, humilis*, though it be not sounded in the English words, as in *heir, honour, humble*.” Eli-sha Coles, *Syncrisis* 2 (1677).

In Humble, Texas (near Houston), the residents all say /əɪm-bəl/. That pronunciation has led local writers to use *an* before the proper name—e.g.: “West Brook got on the board early in the second quarter following *an Humble fumble*.” Brian McTaggart, “Ambres, West Brook Stun No. 1 Humble,” *Houston Chron.*, 16 Nov. 1997, at 19. Most out-of-town readers would probably find that phrase odd-looking. But locals know better—and proudly so. See **a (A)**. Cf. **herb & homage**.

hummus; ***hommos**. The standard spelling for this paste of ground chickpeas and tahini has long been *hummus*. It first appeared in 19th-century English as the anglicized Arabic word for chickpea. The alternative spelling, **hommos*, was equally common until 1880, but *hummus* predominates today by a 549-to-1 ratio. There are at least 18 more variant spellings, but all are rare. The only one worth mentioning is **humus*, which is the modern Turkish spelling.

Current ratio (in order of headwords): 549:1

hundred /hən-drɪd/ is sometimes mispronounced /hən-drit/ or /hə-nərd/. See PRONUNCIATION (B).

hung. See **hanged**.

hurdle. See **hurl**.

hurl; **hurtle**; **hurdle**, vb. To *hurl* (/hɜrl/) is (1) to throw or fling mightily <hurl a javelin>, (2) to speak (epithets, etc.) vehemently <hurl abuse>, or (3) to vomit <hurled three times last night>. Sense 3 is SLANG. To *hurtle* (/hɜrt-əl/) is to move or make something else move with great velocity, especially in a reckless or uncontrolled manner and often with a collision resulting <the car hurtled down the street, scraping vehicles parked on both sides> <the symphony had already begun as the usher hurtled us to our seats>. To *hurdle* (/hɜrd-əl/) is (1) to jump over (an obstacle) while running or jogging <he hurdled two suitcases on his way to the airline’s gate>, or (2) to overcome (difficulties,

etc.) <with some deft politicking, she hurdled opposition to the proposal>. Of course, *hurdle* is also (and primarily) a noun denoting an obstacle or barrier.

The *OED* notes that *hurtle* is “sometimes confused with *hurl*,” distinguishing the two in this way: “the essential notion in *hurtle* is that of forcible collision, in *hurl* that of forcible projection.” A more appropriate distinction today is that *hurl* denotes a greater degree of separation between the propelling force and the thing propelled than *hurtle* does: you *hurl* a discus but *hurtle* down the hallway.

Although collision was an essential part of *hurtle*’s original meaning (dating from the 13th century), the word took on a collisionless sense in the early 16th century. Today the idea of violent impact depends largely on the preposition that follows the verb: *against, into, or together* denotes a collision <hurtled [or into] a tree> <the knights hurtled their steeds together>, whereas *along, by, down, past, and up* tend to denote collisionless rushing <the car hurtled by [or past] the crowd> <the horse hurtled along [or down or up] the road> <the plane hurtled up into its flight pattern>.

The essential idea of *hurdle* is leaping over obstacles. Sometimes the word is misused for *hurtle*—e.g.:

- “You have people *hurdlng* [read *hurltng*] down the road in machines that weigh several tons.” Julie M. King, *Post-Standard* (Syracuse), 19 Dec. 2002, at 2.
- “What he’d seen were pieces of Columbia *hurdlng* [read *hurltng*] toward earth.” Nancy Bergeron, “Policeman Sickened by Sight of Shuttle,” *News-Star*, 4 Feb. 2003, at A6.

The opposite error, *hurtle* for *hurdle*, is somewhat less common but does occur—e.g.:

- “It was awkward hearing the applause and congratulations, as if I had *hurtdled* [read *hurtdled*] a major obstacle.” Mary Awosika, “Don’t Cry Out Loud,” *Sarasota Herald-Trib.*, 6 July 2001, at 12.
- “He watched three horses *hurtle* [read *hurdle*] a brush jump on the Great Meadow steeplechase course.” Ian Shapira, “Bringing Ponies to the People,” *Wash. Post*, 9 Oct. 2002, at B1.

LANGUAGE-CHANGE INDEX

1. *hurdle* misused for *hurtle*: Stage 2
2. *hurtle* misused for *hurdle*: Stage 1

hurricane; **typhoon**; **cyclone**. All three terms refer to massively destructive storms that form over oceans and generate high winds. *Hurricane* is the term used by meteorologists for North America, the Caribbean, Hawaii, and the northeastern Pacific Ocean. *Typhoon* is used for storms in Asia, from the northwestern Pacific down to the China Sea. *Cyclone* is the most common term used for storms in the South Pacific and the Indian Ocean.

hurt > **hurt** > **hurt**. The past form **hurted*, which has been nonstandard from the 18th century, appears

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

most frequently in quotations from dialectal speakers—e.g.: “‘She *hurted* me to the point where I just walked up to her and shanked her probably like six, seven times,’ said Bell, then 24, who was charged with murder for the July 2000 stabbing of his mother, Netta.” Ken Armstrong, Steve Mills & Maurice Posley, “Coercive and Illegal Tactics Torpedo Scores of Cook County Murder Cases,” *Chicago Trib.*, 16 Dec. 2001, at C1. For more on nonstandard tense forms, see DIALECT.

Current ratio (*had hurt* vs. **had hurted*): 2,656:1

hurtle. See **hurl**.

***hutzpah(h)**. See **chutzpah**.

huzza, an exclamation of joy or approval for formal occasions, has been the predominant spelling since the late 1600s. **Huzzah* is a variant. Of course, *hurrah* and *hurray* are more common—and much less formal.

Current ratio (*huzza* vs. **huzzah*): 2:1

HYBRIDS, or words composed of morphemes from different languages (such as *teleprinter* [Gk. *tele-* + OF *preint*]), became quite common in the 20th century. In fact, they have existed for a very long time in English: *grandfather* (dating from the 15th century) has a French prefix and an English root; *bicycle* (dating from the mid-19th century) has a Latin prefix and a Greek root. One occasionally finds hybrids criticized in older literature—e.g.:

- “*Ize* and *ist* ‘are Greek terminations, and cannot properly be added to Anglo-Saxon words. *Ist* is the substantive form, *ize* the verbal.’ Jeopardize is one of the monsters made by adding *ize* to an English verb. *Jeopard* means to put in peril—and jeopardize could mean no more . . . So, also, is the Anglo-Saxon *er* (sign of the doer of a thing) ‘incorrectly affixed to such words as *photograph* and *telegraph*’; the proper termination is *ist*: *photographist*, *telegraphist*, the same as *paragraph*–*paragraphist*. *Geographer* and *biographer* are exceptions firmly fixed in the language.” Ralcy Husted Bell, *The Worth of Words* 149–50 (1902).
- “A- (not) is Greek; *moral* is Latin. It is at least desirable that in making new words the two languages should not be mixed.” H.W. Fowler & F.G. Fowler, *The King’s English* 50 (3d ed. 1930).
- “Neologisms . . . should be formed with some regard to etymological decency; the marriage of a so very English word as *swim* with a so very Greek vocable *stad* strikes one as an unseemly misalliance.” Eric Partridge, *U&A* at 202.

Today, though, only a few Classics professors object. As an American lexicographer once observed, “Not many people care whether a word has Greek and Latin elements mixed in it.” Mitford Mathews, *American Words* 93 (1959). Perhaps this is because of our increasing ignorance of Classical tongues. Whatever the cause, though, modern neologists have little regard for the morphological integrity of the words they coin.

Virtually all the hybrids condemned by H.W. Fowler in *FMEU1* (e.g., *amoral*, *bureaucracy*, *cablogram*, *climactic*, *coastal*, *coloration*, *gullible*, *pacifist*, *racial*, *speedometer*) are now passed over without mention even by those who consider themselves purists.

Other hybrids that Fowler didn’t mention also fall into this class:

antedate	meritocracy
antibody	merriment
aqualung	monorail
automobile	naturopathy
biocide	postwar
claustrophobia	retrofit
ecocide	riddance
epidural	semiyearly
likable	telegenic
lumpectomy	television
megaton	transship

We also have our own fringe hybrids: *botheration*, *raticide*, *scatteration*, and *monokini* (the last being a MORPHOLOGICAL DEFORMITY as well).

One rarely hears complaints about hybrids, though Mario Pei once called the legal term *venireman* a product of “the worst kind of hybridization (. . . half Latin, half Anglo-Saxon).” *Words in Sheep’s Clothing* 83 (1969). The nonsexist *veniremember*, of course, solves that problem. See **venireman**.

Other hybrids are widely accepted. *Breathalyzer* (formerly *drunkometer*) has become standard, although in 1965 Ernest Gowers wrote that the term was “stillborn, it may be hoped” (*FMEU2* at 253). *Creedal* is a near-commonplace hybrid. And Fowler may not be resting in peace.

hygienic (= [1] of, relating to, or involving healthfulness or cleanliness; or [2] healthful) is often misspelled **hygenic*—e.g.: “But that, Mr. Deedrick subsequently told Ms. Clark, could stem from the different *hygenic* [read *hygienic*] conditions Mr. Simpson has encountered in jail, or even the different brand of shampoo he was using.” David Margolick, “After 92 Days of Testimony, Simpson Prosecution Rests,” *N.Y. Times*, 7 July 1995, at A1, A12.

LANGUAGE-CHANGE INDEX
hygienic misspelled **hygenic*: Stage 1

hymeneal; hymenal; hymenial. Though related etymologically, these words have taken on quite distinct senses. *Hymeneal* = of, relating to, or involving marriage. E.g.: “In the evening, the party streamed off to the medieval hilltop town of Asolo, . . . along whose streets groups of men spontaneously and undrunk-enly came together to sing *hymeneal* numbers to the couple.” Alex Hamilton, “Italy: The Wedding Procession,” *Guardian*, 3 June 1995, at 56. *Hymenal* = of, relating to, or involving the hymen. E.g.: “If the pain is superficial, it might be caused by *hymenal* strands or lack of vaginal lubrication.” Allan Bruckheim, “Health Line,” *Chicago Trib.*, 23 Dec. 1996, at C7. *Hymenial* = of, relating to, or involving the superficial layer of spore-producing cells in fungi. See DIFFERENTIATION.

HYPALLAGE /hi-**pal**-ə-**jee**/, known also as the transferred epithet, is a figure of speech in which the proper subject is displaced by what would logically be the object (if it were named directly). Usually hypallage

is a mere idiomatic curiosity. It has a distinguished lineage—a famous example being Shakespeare’s line from *Julius Caesar*: “This was the most unkindest cut of all” (3.2.183). It was not the *cut* that was unkind, but rather the *cutter*. Hence the object has become the subject.

In any number of everyday phrases, an adjective logically modifies not the noun actually supplied, but an implied one—e.g.:

angry fight
black colleges
cruel comments
cynical view
disgruntled complaints
drunken parties
elementary classroom
English-speaking countries
feminine napkin
gay marriage
Greek neighborhood
handicapped parking
hasty retreat
healthy foods
humble opinion
nondrowsy cold medicine
overhead projector
permanent marker
provincial attitude
unfair criticisms
vulnerable period
well-educated home

Generally, this figure of speech is harmless, even convenient. Pedants who complain about almost any phrase like the ones listed (“But the marker itself isn’t permanent, is it?”) are simply parading their own pedantry. Perhaps the phrase that most commonly gives rise to spurious objections is *The book says . . .*—which is perfectly good English.

hyperbaric. See **hyperbolic** (B).

hyperbola /hi-**pər**-bə-lə/ (= in geometry, a curved line that moves so that the difference of its distances from two fixed points is constant) has formed the standard plural *hyperbolas* since the 18th century—the classical plural **hyperbolae* (/hi-**pər**-bə-lee/) being both a variant and an unfortunate homophone of *hyperbole*.

Current ratio (*hyperbolas* vs. **hyperbolae*): 5:1

HYPERBOLE. See **OVERSTATEMENT**.

hyperbolic. A. Two Meanings. It’s no exaggeration to say that this word has two remarkably different meanings, one rooted in the abandon of rhetoric and another in the rigors of mathematics. In fact, though, it is essentially two separate adjectives. The more common by far answers to *hyperbole* (= the rhetorical device of deliberate overstatement)—e.g.: “He has written a book . . . that may never be confused with, say, ‘War and Peace’ or ‘Wuthering Heights,’ but it’s

a book with a more provocative title—including a *hyperbolic* exclamation point—“Perfect I’m Not!” Ira Berkow, “Colorful Pitcher, but Not a Stand-Up Guy,” *N.Y. Times*, 3 Mar. 2003, at D3. The other one answers to *hyperbola* (= in geometry, a pair of open and infinite curves mirrored about their vertices)—e.g.: “Against notable losses in recent years, such as famed architect I.M. Pei’s *hyperbolic* paraboloid when the Adam’s Mark hotel expanded in 1997 and Currigan Hall, conference attendees were generally optimistic.” J. Sebastian Sinisi, “State’s Preservationists See Reasons for Optimism,” *Denver Post*, 11 Feb. 2003, at F9.

B. And hyperbaric. *Hyperbolic* is sometimes mistakenly used in place of *hyperbaric* (= of, relating to, or involving a pressurized chamber used in scientific experiments and medical treatment)—an odd error: “*Hyperbolic* [read *Hyperbaric*] oxygen chambers have been used successfully by several National Hockey League clubs, and that has not gone unnoticed in the National Football League.” Vinny DiTrani, “High-Tech Rush for Giants?” *Record* (N.J.), 12 June 1995, at S2.

LANGUAGE-CHANGE INDEX

hyperbolic misused for *hyperbaric*: Stage 1

Current ratio (*hyperbaric oxygen* vs.

**hyperbolic oxygen*): 319:1

C. And *hyperbolical. The standard adjective has been *hyperbolic* since the late 19th century—not **hyperbolical*.

HYPERCORRECTION. Sometimes people strive to abide by the strictest etiquette, but in the process behave inappropriately. The very motivations that result in this irony can play havoc with the language: a person will strive for a correct linguistic form but instead fall into error. Linguists call this phenomenon “hypercorrection”—a common shortcoming.

This foible can have several causes. Often, it results from an attempt to avoid what the writer wrongly supposes to be a grammatical error. (See **SUPERSTITIONS**.) At other times, it results from an incomplete grasp of a foreign grammar, coupled with an attempt to conform to that grammar. Yet again, it sometimes results from a misplaced sense of logic overriding a well-established idiom. A few of the most common manifestations are enumerated below.

A. False Latin Plurals. One with a smattering of Latin learns that, in that language, most nouns ending in *-us* have a plural ending in *-i*: *genius* forms *genii*, *nimbus* forms *nimbi*, *syllabus* forms *syllabi*, *terminus* forms *termini*, and so on. The trouble is that not all of them do end in *-i*, so traps abound for those trying to show off their sketchy knowledge of Latin:

<i>Hypercorrect Plural</i>	<i>Latin Plural</i>	<i>English Plural</i>
*apparati	apparatus	apparatuses
*fori	*fora	forums
*ignorami	[A vb. in L.]	ignoramus

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

*isthmi	[Gk. sing. n.: isthmus]	isthmuses
*mandami	[A vb. in L.]	mandamuses
*mittimi	[A vb. in L.]	mittimuses
*nexi	nexus	nexuses
*octopi	[Gk. pl. octopodes]	octopuses
*prospecti	prospectus	prospectuses
*stati	status	statuses

B. *Between you and I. Some people learn a thing or two about pronoun cases, but little more. They learn, for example, that it is incorrect to say *It is me* or **Me and Jane are going to school now*. (See **it is I**.) But this knowledge puts them on tenterhooks: through the logical fallacy known as “hasty generalization,” they come to fear that something is amiss with the word *me*—that perhaps it’s safer to stick to *I*. They therefore start using *I* even when the objective case is called for: “She had the biggest surprise for Blair and I [read *me*].” / “Please won’t you keep this between you and I [read *me*].” These are gross linguistic gaffes, but it is perennially surprising how many otherwise educated speakers commit them. See **between (C)** & **PRONOUNS (B)**.

Many writers and speakers try to avoid the problem by resorting to *myself*, but that is hardly an improvement. See **myself**.

C. Number Problems. Sometimes, in the quest for correctness, writers let their sense of grammar override long-established idioms. They may write, for example, **A number of people was there*, when the correct form is *A number of people were there*. Or they will write, **A handful of problems arises from that approach*, instead of *A handful of problems arise from that approach*. For more on these correct but “antigrammatical” constructions, see **SYNESIS & number of**.

D. Redundantly Formed Adverbs. The forms *doubtless*, *much*, and *thus* are adverbs, yet some writers overcompensate by adding *-ly*, thereby forming barbarisms: **doubtlessly*, **muchly*, and **thusly*. See **ADVERBS (C)**.

E. As for like. When writers fear using *like* as a conjunction, they sometimes fail to use it when it would function appropriately as a preposition or adverb. Thus *She sings like a bird* becomes **She sings as a bird*. But the latter sentence sounds as if it is explaining the capacity in which she sings. The hypercorrection, then, results in a **MISCUE**. See **like (C)**.

F. Whom for who. Perhaps writers should get points for trying, but those who don’t know how to use *whom* should abstain in questionable contexts. That is, *against whom*, *for whom*, and the like may generally be instances in which the writer knows to choose *whom*. But things can get moderately tricky—e.g.: “In ‘An Independent Woman,’ Barbara is confronted by an African-American burglar, *whom* [read *who*] she realizes is well-educated but desperate.” Jocelyn McClurg, “At 82, Fast Has Slowed but Hasn’t Stopped as a Writer,” *Fresno Bee*, 3 Aug. 1997, at G2. Although *whom* in that sentence may seem to be the object of *realizes*, in fact it is the subject of the verb *is*. See **who & PRONOUNS (B)**.

G. Unsplit Infinitives Causing Miscues. Writers who have given in to the most widespread of **SUPERSTITIONS**—or who believe that most of the readers have done so—avoid all split infinitives. They should at least avoid introducing unclear modifiers into their prose. But many writers do introduce them, and the result is often a **MISCUE** or ambiguity—e.g.: “Each is *trying subtly to exert* his or her influence over the other.” Mark H. McCormack, *What They Don’t Teach You at Harvard Business School* 26 (1984). In that sentence, does *subtly* modify the participle *trying* or the infinitive *to exert*? Because we cannot tell, the sentence needs to be revised in any of the following ways: (1) *Each is subtly trying to exert his or her influence over the other*, (2) *Each is trying to exert his or her influence subtly over the other*, (3) *Each is trying to subtly exert his or her influence over the other*, or (4) *Each is trying to exert his or her subtle influence over the other*. See **SPLIT INFINITIVES**.

H. Unsplit Verb Phrases. A surprising number of writers believe that it’s a mistake to put an adverb in the midst of a verb phrase. The surprise is on them: every language authority who addresses the question holds just the opposite view—that the adverb generally *belongs* in the midst of a verb phrase. (See **ADVERBS (A)**.) The canard to the contrary frequently causes awkwardness and artificiality—e.g.: “I *soon will be calling* you.” (Read: *I will soon be calling you*.) See **SUPERSTITIONS (C)**.

I. Prepositions Moved from the Ends of Sentences. “That is the type of arrant pedantry up with which I shall not put,” said Winston Churchill, mocking the priggishness that causes some writers and speakers to avoid ending with a preposition. See **PREPOSITIONS (B)** & **SUPERSTITIONS (A)**.

J. Borrowed Articles for Borrowed Nouns. When a naturalized or quasi-naturalized foreignism appears, the surrounding words—with a few exceptions, such as *hoi polloi*—should be English. So one refers to *finding the mot juste*, preferably not **finding le mot juste*. But see **hoi polloi**.

K. Overrefined Pronunciation. Some foreignisms acquire anglicized pronunciations. For example, in AmE *lingerie* is pronounced in a way that the French would consider utterly barbarous: /lon-jə-**ray**/, as opposed to /la[n]-**zhree**/. (See **lingerie**.) But for a native speaker of AmE to use the latter pronunciation sounds foolish. Another French word that gives some AmE speakers trouble is *concierge*: it should be pronounced /kon-see-**erzh**/, not /kon-see-**er**/. See **concierge**.

Similarly, American and British printers refer to the typefaces without “feet” (small projections coming off the straight lines) as *sans serif* /sanz **ser-iff**/, not /sahnz sə-**reef**/. The latter pronunciation may show a supposed familiarity with the French language (though *serif* is Dutch), but it betrays an unfamiliarity both with publishing and with the English language.

Even native-English words can cause problems. The word *often*, for example, preferably has a silent *-t-*, yet

some speakers (unnaturally) pronounce it because of the spelling. The next logical step would be to pronounce *administration* /ad-min-i-**stray**-tee-on/, and all other words with the *-tion* suffix similarly. See PRONUNCIATION (A) & **often** (A).

hypertension is medical JARGON for *high blood pressure*. Because of the confusing terminology, some writers confound *hypertension* with *nervous tension*, as those in medicine know: “Hypertension and ‘nervous tension’ are not the same thing. Some people can feel very tense and have normal blood pressure, and others can feel quite relaxed and have high blood pressure.” “Hypertension,” *HealthTips*, Dec. 1992, at 45.

hyphenate; hyphen, vb.; *hyphenize. *Hyphenate* had become the standard verb in AmE by 1900 and in BrE by 1940. In BrE, *hyphen* is a variant. **Hyphenize* is a NEEDLESS VARIANT in both AmE and BrE—except perhaps in the sense analogous to *hyphenization* described in the immediately following entry.

Current ratio (*hyphenated* vs. *hyphened* vs. **hyphenized*): 1,446:33:1

hyphenation; hyphenization. *Hyphenation* is the standard form for the literal use of hyphens to separate words into syllables—e.g.: “Since the demise of typewriters and the universal use of computers in the newsroom, *hyphenization* [read *hyphenation*] is done automatically by the computer.” Jean Otto, “‘Van’ or ‘Von’?” *Rocky Mountain News* (Denver), 1 Jan. 1995, at A106.

Although *hyphenization*, dating from the mid-19th century, has traditionally been just a NEEDLESS VARIANT of *hyphenation*, some degree of DIFFERENTIATION now appears to be emerging: increasingly, the word denotes the designation of ethnic origins by using compound forms such as *African-American*, *Asian-American*, *Mexican-American*, and the like. With its *-ize* infix, *hyphenization* carries negative connotations of divisiveness—e.g.:

- “While she sometimes describes herself as Indo-American, Mukherjee deplores the ghettos of ethnic *hyphenization*.” John Habich, “Mukherjee Is Inspired by Struggles of Immigration,” *Star Trib.* (Minneapolis), 24 Mar. 2002, at E1.
- “They sometimes face school boards or parents who worry that lessons that used to focus on a unified sense of ‘America’ are falling by the wayside in an era of *hyphenization*.” Stacy A. Teicher, “Opening the Book on Race,” *Christian Science Monitor*, 18 June 2002, Features §, at 14.

Inconsistently enough, though, we use the term *hyphenated Americans*, dating from the late 19th century—not **hyphenized Americans*.

hyphenize. See **hyphenate**.

HYPHENS. See PUNCTUATION (J) & PHRASAL ADJECTIVES.

hypnotism; hypnosis. These words aren’t quite interchangeable. One might use either term to name the art of mesmerism, but one should never say, “He is under *hypnotism*.” *Hypnotism*, the more popular word only in the late 19th century, refers only to the practice or art; *hypnosis* refers either to the practice or to the state of consciousness itself. But some writers mistakenly use **under hypnotism* when they mean the person was *under hypnosis*—e.g.: “*Under hypnotism* [read *Under hypnosis*] in the office of John C. ‘Jack’ Kasher, the woman described being taken into the saucer and seeing people four feet tall with large heads, wraparound eyes and four fingers on each hand.” Michael Kelly, “Prof: UFOs ‘Out There,’” *Omaha World-Herald*, 15 Feb. 2000, News §, at 13.

The two words are susceptible to INELEGANT VARIATION—e.g.: “In 1988, the Texas Court of Criminal Appeals ruled that testimony helped by *hypnotism* was admissible as evidence, providing certain procedural safeguards were followed. *Hypnosis*, often associated with stage shows that seem to transform spectators into clucking chickens, is easily misunderstood.” Rachel Boehm, “Past Hints: Crime Fighters Glean Clues with Hypnosis,” *Dallas Morning News*, 7 Mar. 1993, at A39. Either word, consistently used, might suffice in that passage. Probably the better choice would be the less restrictive one: *hypnosis*.

hypnotize is pronounced /**hip**-nə-tɪz/. The erroneous /**hip**-mə-tɪz/, with an /m/ sound, is all too common. See PRONUNCIATION (B).

LANGUAGE-CHANGE INDEX

hypnotize mispronounced /**hip**-mə-tɪz/: Stage 2

***Hypocratic.** See **Hippocratic**.

hypostatize /hɪ-**pos**-tə-tɪz/ (= to make an idea into, or to regard it as, a self-existent substance or person) has been standard since the early 19th century. **Hypostatize* is a NEEDLESS VARIANT.

Current ratio (*hypostatized* vs. **hypostasized*): 2:1

hypotenuse (= the longest side of a right triangle, lying opposite the 90° angle) is the standard spelling. **Hypothenus* is a variant with a spelling that departs from that of the Greek etymon.

Current ratio: 10:1

hypothecate is not, as some believe, a synonym of *hypothesize* (= to make a hypothesis, i.e., a proposition put forward for discussion). *Hypothecate* is a legal term meaning “to pledge (property) without delivery of title or possession.”

President George H.W. Bush occasionally misused *hypothecate*—e.g.:

- “So I’m not going to speculate or *hypothecate* [read *hypothesize*] beyond that. I want to see them out of

there . . . ?” “Confrontation in the Gulf” *N.Y. Times*, 9 Aug. 1990, at A15 (quoting President Bush).

- “Our sitting president, George Bush, . . . said, ‘Now is no time to speculate or *hypothecate* [read *hypothesize*], but rather a time for action’” Don Addis, “Wrapping Up Homelessness,” *St. Petersburg Times*, 22 Mar. 1992, at D5.

LANGUAGE-CHANGE INDEX

hypothecate misused for *hypothesize*: Stage 1
Current ratio (*hypothesize that* vs.
**hypothecate that*): 1,375:1

hypothesis. Pl. *hypotheses* /hɪ-**p**o-thə-seez/. See PLURALS (B).

hypothetical; *hypothetic. The longer form is now standard.

Current ratio: 129:1

hysterical; *hysteric. The first has been the standard adjective since the early 19th century; the second is a NEEDLESS VARIANT.

Current ratio: 10:1

I

I; me. See FIRST PERSON, PRONOUNS (A), (B) & **it is I**.

ibid.; ib.; id.; op. cit.; loc. cit. *Ibid.* is an abbreviation of *ibidem* (L. “in the same place”); *ib.* is a variant abbreviation that, despite its greater compactness, fell into disuse about 1900 (before which time it had been standard for a century). *Id.* is an abbreviation of *idem* (L. “same”). Both *ibid.* and *id.* are commonly used in citations to denote that a reference is to a work cited immediately before. The first is the abbreviation more generally used; the second is typical of legal writing.

Op. cit. is an abbreviation of *opere citato* (L. “in the work cited”). *Loc. cit.* (or *l.c.*) is an abbreviation of *loco citato* (L. “in the place cited”). Either abbreviation was formerly used, along with the author’s last name, as a short citation to an earlier-cited work. In modern bibliography, though, *op. cit.* and *loc. cit.* are disfavored. The trend is to use instead a shortened form of the work’s title, such as *Modern English Usage* or *GMEU* for this book.

-IBLE. See **-ABLE** (A).

-IC; -ICAL. Adjective pairs ending in these two suffixes, which denote “of, like, or relating to,” could easily fill up an entire page. Suffice it to say that you should keep a couple of good dictionaries nearby to help you decide which adjective to use. But keep in mind the two “desirable tendencies” cited by H.W. Fowler (*FMEU* 1 at 249): favoring DIFFERENTIATION where it exists (as with *economic* vs. *economical* and *historic* vs. *historical*) and rejecting NEEDLESS VARIANTS that are truly needless (such as **biologic* and **ecologic*).

Most adjectives ending in *-ic* form the adverb by adding *-ally* (e.g., *academically*, *frantically*, *plastically*, *prolifically*, and *rustically*). The most notable exceptions are *impolitically* and *publicly*.

ice cream; *iced cream. Although **iced cream* was the original phrase, *ice cream* predominated in print sources by 1880 and is firmly entrenched as the standard form today. See ADJECTIVES (F).

iced tea; ice tea. The first is more logical and far more frequent in print. In speech, however, the /d/ sound in *iced* is usually slurred into the following /t/; hardly

anyone asks a server for a glass of /ɪsd **tee**/. But despite this indistinct pronunciation, *iced tea* shows little evidence of following the progression of **iced cream* to *ice cream*. See ADJECTIVES (F). Cf. **fine-toothed comb**, **skim milk** & **stained glass**.

Current ratio: 8:1

-ICS. It can sometimes be difficult to decide whether to use a singular or plural verb with words such as *acoustics*, *athletics*, and *politics*. If a word is used as the name of an academic discipline, it is singular <linguistics is the study of human languages>. Otherwise, it is plural <this theater’s acoustics are terrible>. A good clue that a plural verb is needed is the presence of a pronoun, article, or possessive before the *-ics* word <statistics guides decision-making> <your statistics are misleading>.

ID; I.D. The first is preferable for this shortened form of *identification*. In the second, the periods should indicate that the initials *I* and *D* each stand for something. But they don’t: everybody knows that *I.D.* is simply shorthand. Given the illogic of the periods—and the trend in AmE away from periods in abbreviations—the form *ID* is better. See ABBREVIATIONS (A).

As an abbreviation with periods (*I.D.*), it can mean many different things to different people, such as “intradermal” to the dermatologist, “inside diameter” to the physiologist, “infective dose” to the bacteriologist—and those are just the medical senses.

id. See **ibid.**

I’d better; I better. See **better** (A).

ideal. See ADJECTIVES (B) & **idyll** (B).

***idealogy.** See **ideology**.

identical takes either *with* or *to*. Historically, *with* has been considered better because one has *identity with* something or someone, not *to* it. *Identical to* was not widely used until the mid-20th century. The *OED*’s illustrative examples contain only the phrase *identical with*. But since the mid-1970s in AmE and the mid-1980s in BrE, *identical to* has been the predominant form in print sources.

The phrase **same identical*—more often heard than seen—is redundant. E.g.:

- “From dawn to darkness they [cult members] lived *the same, identical*, [read *identical*] controlled lives.” “Death of a Salesman,” *Seattle Times*, 1 Apr. 1997, at B4.
- “No one who has not traveled the *same identical* [read *same*] road could possibly know the mountains that were climbed, the blood, sweat and tears and the fear like punches in the gut constantly in a barrage that few professional fighters could or would tolerate.” Patricia Tedesco, “Utica Community Was There When the Times Were Tough,” *Observer-Dispatch* (Utica, N.Y.), 6 Aug. 2015, at A7.

LANGUAGE-CHANGE INDEX
identical to for *identical with*: Stage 5
 Current ratio (*to* vs. *with*): 2:1

identify = (1) to treat as or consider identical <he identified his parents’ interests with his own>; (2) to ascertain or demonstrate what something or who someone is <the building in the photograph has not yet been identified>; (3) to associate or affiliate with <she has never been identified with the impressionist school>; (4) to consider (oneself) as being associated or affiliated with <nevertheless, she identified herself with the impressionists>; or (5) to understand sympathetically or intuitively, esp. through experience. Sense 5 is often disapproved of because when used in that way, *identify* is a **VOGUE WORD**—more specifically, a pop-psychology **CASUALISM**—bearing a nontraditional sense. Sometimes it is followed by *with*, sometimes not—e.g.:

- *With*: “Let’s face it, this is one governmental service that the people can *identify* closely *with*.” “Superior Court to Soon Appear No Longer a Mirage,” *Ariz. Republic*, 2 June 2001, at 2.
- *With*: “While many parents haven’t suffered as many difficulties as Cheever has, most can *identify with* the ‘accidental’ manner in which she has gained some important insights.” Rosemary Herbert, “Growing Pains,” *Boston Herald*, 10 June 2001, at 51.
- *No with*: “Although Accorsi feels for Cleveland fans, he can’t really *identify* as he could when the Colts moved.” Don Pierson, “Ernie Accorsi Is the Giants’ GM but Has Ties to Baltimore’s Storied Football Past,” *Chicago Trib.*, 19 Jan. 2001, at 1.
- *No with*: “We’ve all experienced workplace politics . . . It’s duplicity and hardball. It’s serious emotions. We can *identify*.” Diana Lockwood, “Feeling Good,” *Columbus Dispatch*, 6 June 2001, at F2 (quoting Mark Burnett, producer of the television series *Survivor*).

In each of those sentences, a more conservative writer (or, in the final example, a more conservative speaker) would probably have used the verb *understand* in place of *identify with* or *identify*.

Here the cant phrase is inappropriately used in reference to early-19th-century historical figures: “In the end, the difference was that Jefferson *identified with* Virginia while Marshall *identified with* the United States.” J. Wade Gilley, “University’s Namesake

Was Great for Many Reasons,” *Charleston Gaz.*, 3 Feb. 1997, at A5. Neither Jefferson nor Marshall would have identified with writing like that. Cf. **relate to**.

LANGUAGE-CHANGE INDEX
identify with (as in *I could identify with the main character*): Stage 4

ideology. So spelled. But many writers misunderstand its **ETYMOLOGY**, believing that the word is somehow derived from our modern word *idea*, and so misspell it **ideology*. In fact, like several other words beginning with *ideo-* (e.g., *ideograph*), *ideology* passed into English through French (*idéologie*) and has been spelled *ideo-* in English since the 18th century. Although the bungled spelling has become common enough that it’s listed in some dictionaries, that isn’t a persuasive defense of its use. Cf. **minuscule**.

LANGUAGE-CHANGE INDEX
ideology misspelled **ideology*: Stage 2

I doubt that; I doubt whether; *I doubt if. See **doubt (A)**.

idyll. A. Spelling and Pronunciation. *Idyll* (= [1] a poem or prose composition depicting rustic simplicity; or [2] a narrative, esp. in verse, resembling a brief epic) is the standard spelling. **Idyl* is a variant. Either way, the word is pronounced /I-dəl/, like *idle*.

B. Adjective Misused. *Idyllic* = of, belonging to, or resembling an idyll; full of pastoral charm or rustic picturesqueness. E.g.: “But after a pretend visit to Antarctica, it’s easy in Christchurch to decide to spend

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

most of your time outdoors, especially on an *idyllic* spring day in November.” Millie Ball, “Take a Boat Ride to Christchurch, New Zealand,” *Times-Picayune* (New Orleans), 26 Jan. 2003, Travel §, at 1. The word is often misused as if it meant *ideal*—e.g.:

- “The setting couldn’t be more *idyllic* [read *ideal*] for Marcus Allen. It’s Super Bowl week in his hometown of San Diego.” Randy Covitz, “Allen Would Feel Right at Home if He Makes It into Hall of Fame,” *Kansas City Star*, 25 Jan. 2003, Sports §, at 1.
- “[I]t would constitutionally mandate an almost *idyllic* [read *ideal*] situation in which ‘every Michigan resident has affordable and comprehensive health care coverage through a fair and cost-effective financial system.’” Editorial, “No Health Plan,” *Flint J.* (Mich.), 13 Jan. 2008, at A10.

To say that the governor of New York has an *idyllic* (= pastoral, countrified) life is preposterous. In fact, the meaning here seems to be “suggestive of a story-book; fairy-tale”: “It’s hard to say what role, if any, Mr. Spitzer’s escalating disappointment in Albany played in his extraordinarily risky, self-destructive behavior, and it remains unclear when his once seemingly *idyllic* life went so awry.” Danny Hakim & Michael Powell, “A Leader Recalled as Focused but Unable to Bend,” *N. Y. Times*, 23 Mar. 2008, at 18.

LANGUAGE-CHANGE INDEX
idyllic misused for *ideal*: Stage 3

-IE. See DIMINUTIVES (G).

i.e. A. Generally. The abbreviation for *id est* (L. “that is”) introduces explanatory phrases or clauses. Although the abbreviation is appropriate in some scholarly contexts, the phrase *that is* or the word *namely* is more comprehensible to the average reader.

B. And e.g. *I.e.* is frequently confounded with *e.g.* (short for *exempli gratia* [L. “for example”])—e.g.:

- “Our increased expectation is due to the company growing its presence in the \$2 billion U.S. meal-replacement market through increased advertising in national magazines (*i.e.* [read *e.g.*,] *People*, *Readers Digest*, *Parade*) and newspapers (*i.e.* [read *e.g.*,] *Globe and Enquirer*.” Taglich Brothers, “How Analysts Size Up Companies,” *Barrons*, 18 Nov. 2002, at 35 (that use of *i.e.* indicates that advertising will not be placed in other magazines and newspapers).
- “The production staff and Gateway reps huddle. They shoot a screen test of a fuller-figured blonde cast as an extra and decide that she—with some work (*i.e.* [read *e.g.*, unless that was all the work needed], ditch the suede pants)—looks more like a mom.” Frank Ahrens, “Gateway Ditches Cow Motif for a Sleeker Image,” *Miami Herald*, 18 Nov. 2002, at 27.
- “I have many electrical items that no longer work, *i.e.* [read *e.g.*]: cameras, video recorder, outlet strip, video rewinder, to name a few.” Sandy Shelton, in question to “Post Your Problems,” *Pitt. Post-Gaz.*, 19 Nov. 2002, at A14 (and since *e.g.* means “for example,” *to name a few* is redundant).

See **e.g.**

LANGUAGE-CHANGE INDEX
i.e. misused for *e.g.*: Stage 2

C. Style and Usage. As with other familiar abbreviations of Latin phrases such as *etc.*, *et al.*, and *e.g.* (and

despite their appearance here, where they are being discussed as terms), *i.e.* is not italicized <the state capital, *i.e.*, Jefferson City>. And like the others, *i.e.* is best confined to lists, parenthetical matter, footnotes, and citations rather than used in text, where some substitute such as *namely* is more natural <the state capital, which is Jefferson City>.

Formerly it was said that in speaking or reading, the abbreviation should be rendered *id est*. But this is never heard today, whereas the abbreviated letters *i.e.* are occasionally heard.

D. Punctuation. Generally, a comma follows *i.e.* in AmE (though not in BrE). E.g.:

- “The implicit assumption is that the fountains were designed for some wading—*i.e.*, ‘interactive’ participation.” “Tempest in a Memorial Pool,” *Wash. Post*, 3 Aug. 1997, at C8.
- “There was absolutely no need for any U.S. network to ‘cover’ (*i.e.*, ‘interpret’) the funeral.” Letter of Mary L. Spencer, “Too Much Talk,” *Indianapolis Star*, 2 Oct. 1997, at E7.

I enjoyed myself. Though literalistic pedants sometimes criticize this idiom as hopelessly illogical (which it is), it is standard—e.g.:

- “And *I enjoyed myself*, so it doesn’t seem that I failed.” Dan McGrath, “For Better or Worse, This Gig Was Fun,” *Sacramento Bee*, 20 Aug. 1995, at A2.
- “In all, *I really enjoyed myself*, even if there was no yapping.” Tony Kornheiser, “I May Not Know Opera, but I Know a Major Babe When I See One,” *Rocky Mountain News* (Denver), 26 Jan. 1997, at B6.
- “*I enjoyed myself* and the children seemed to enjoy listening to me read.” Frank Roberts, “Reading to Children Takes Real Talent,” *Virginian-Pilot* (Norfolk), 17 Aug. 1997, *Suffolk Sun* §, at 7.

For some similar idioms, see ILLOGIC (A).

if. A. And whether. It’s good editorial practice to distinguish between these words. Use *if* for a conditional idea, *whether* for an alternative or possibility. Hence *Let me know if you’ll be coming* means that I want to hear from you only if you’re coming. But *Let me know whether you’ll be coming* means that I want to hear from you about your plans one way or the other.

B. If, and only if. Ordinarily, this adds nothing but unnecessary emphasis (and perhaps a rhetorical flourish) to *only if*. E.g.: “Such a ‘homocentrist’ position takes the human species to define the boundaries of the moral community: you are morally considerable *if, and only if*, [read *only if*] you are a member of the human species.” Colin McGinn, “Beyond Prejudice,” *New Republic*, 8 Apr. 1996, at 39. The variation *if, but only if*, which sometimes occurs in legal writing, is unnecessary and even nonsensical for *only if*.

Yet in math and logic, *if and only if* marks a relationship in which if either proposition is true (or false), both are true (or false).

C. For though, even if, or and. Some writers use *if* in an oddly precious way—to mean “though,” “though perhaps,” “even if,” or even “and.” Though several

dictionaries record this use, it's not recommended because it typically carries a tone of affectedness—e.g.:

- “On one level of analysis these are unrelated ‘accidents.’ But on another they are concrete, *if* [read *though*] mainly unconscious and uncoordinated, responses to industry's need for concentrated and specialized learning.” Richard Ohmann, *English in America* 289 (1976).
- “Their presentation is passionate; their prose hectic, *if* [read *and*] occasionally hectoring; their Darwin ambitious, angry and agitated.” Roy Porter, “Devil's Chaplain,” *Sunday Times* (London), 29 Sept. 1991, § 7, at 3.
- “Trump regularly puts his mouth in gear before his brain and the results are usually fascinating, *if* [read *even if*] sometimes offensive.” Michael Putney, “Whatever Happened to the Summer Doldrums?” *Miami Herald*, 21 July 2015, Opinion §.

Cf. **if not**.

if and when. A. Generally. The single word *when* typically conveys everything this three-word phrase does. Although the full idiom does emphasize both conditionality and temporality, if a thing is done at a certain time it is *ipso facto* done. Still, the phrase helpfully sets up two conditions: (1) I won't perform my duty unless you perform yours, and (2) don't expect me to go first. As a popular idiom, *if and when* is not likely to disappear just for the sake of brevity.

LANGUAGE-CHANGE INDEX
if and when for *if*: Stage 4

B. And when and if. Perhaps in an attempt to get out of a rhetorical rut, some writers reverse these words and make it *when and if* with no change in nuance intended. But that construction loses any logical value that the original may have had—*when* the thing is done, there is no further question about *if* it will be done. Some other phrasing is usually advisable—e.g.:

- “Lawmakers should have a right to determine *when and if* [read *when*] such a tax should be considered.” “Local Assessors Require Oversight,” *Sunday Advocate* (Baton Rouge), 28 July 2002, at B8.
- “But with only a little bit of light from their dwindling lamps, miners could never tell *when or if* [read *whether*] the water was coming back at them.” Guy Gugliotta, “In a Flooded Coal Mine, 3 Days of Waiting, Praying,” *Wash. Post*, 29 July 2002, at A1.
- “*When and if* [read *If*] Gonzalez signs a new contract, Dunn is a backup again.” Adam Teicher, “Chiefs Won't Ask Dunn to Be Another Gonzalez,” *Kansas City Star*, 30 July 2002, at C1.

When and if can have a distinct nuance, however, by emphasizing that the event may never happen. Punctuation can help—e.g.: “The investment is usable, however, only *when—and if*—you take the profits out.” Jane Bryant Quinn, “Home Sweet Piggy Bank?” *Newsweek*, 29 July 2002, at 58.

When *not* is substituted for *and*, the construction emphasizes the inevitability of the event at some

point—e.g.: “And he's the only one making arguments from the perspective of the men and women who will run into those buildings *when (not if)* they catch fire.” Terry Golway, “A Terrifying Vision of Towering Infernos,” *N.Y. Observer*, 29 July 2002, Pol. & Op. §, at 5.

if ever there was; if ever there were. When posing a question beginning with one of these phrases, the writer or speaker almost invariably means to raise a question of historical fact—not to state something contrary to fact. So the past-indicative *was* is called for, not the subjunctive *were*. (See **SUBJUNCTIVES**.) If the subjunctive *were* in order (now, *that's* counterfactual!), it would be the past subjunctive: **if ever there had been*. But this wording is clearly erroneous and unidiomatic. In modern print sources, the correct phrasing (*if ever there was*) is more than four times as common as the incorrect one—e.g.: “A dark horse *if ever there was* one, Beaver was suddenly thrust into the limelight.” Colin Eatock, “A Dark Horse on a Rescue Mission,” *Globe & Mail* (Toronto), 7 Aug. 2002, at R3.

The phrasing also raises questions of verb tense. The ordinary sequence of tenses is to have a past-tense verb in the principal clause when the subordinate clause is in the past tense, as in *If ever there was an artistic genius, he was it*. Many published examples exhibit this sequence of tenses—e.g.:

- “That was followed by the terror of anthrax and by the threat in Afghanistan, an unlikely combination *if ever there was one*.” Douglas Gould, “It's Been an Astonishing, Unpredictable Year,” *Globe & Mail* (Toronto), 28 Dec. 2001, at 11.
- “*If ever there was* a gimme, this was it.” Wright Thompson, “Risk and Reward,” *Times-Picayune* (New Orleans), 30 Dec. 2001, Sports §, at 1.

Yet many others violate this grammatical sequence by having the principal verb in the present tense, as in *If ever there was an artistic genius, he is it*. Nearly a third of the examples in modern print sources have the main clause in the present tense—e.g.:

- “*If ever there was* a team in need of validation, it's Nebraska.” Eric Olson, “Defensive Huskers Dig In,” *Wash. Post*, 27 Dec. 2001, at D1.
- “*If ever there was* a character created for the modern world of media, Jimmy seems to be it.” Eric Elkins, “Paving the Way for Gold,” *Denver Post*, 30 Dec. 2001, at E1.
- “*If ever there was* a time to make your move, it's now.” Trevor Delaney, “Five Tempting Sectors,” *Wall Street J.*, 30 Dec. 2001, at 3.

To change any one of those last three examples to *If ever there has been . . .* might seem unnatural and pedantic, yet many fastidious writers do it to good effect. E.g.: “*If ever there has been* a franchise that had a hold on a region, it's the Leafs.” Bill Griffith, “Turning Over All the Leafs in Toronto,” *Boston Globe*, 24 Aug. 2001, at E10. The logic is certainly heightened with the more punctilious sequence. See **TENSES** (B).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

By the way, a variation of the basic phrase without INVERSION of the usual word order—namely, *if there ever was*—is also quite common and is perfectly good English.

iffy (= uncertain) is a CASUALISM dating from the mid-20th century—e.g.:

- “Hair growth? It’s *iffy*. Some say yes; others no. You would think that female hormones in the birth-control pills would reduce facial hair growth.” Paul Donohue, “Immune System’s Been in the News a Lot Lately,” *St. Louis Post-Dispatch*, 15 Nov. 1996, *Everyday Mag.* §, at E2.
- “We also believe Michael Jordan can wheeze, struggle, brick, shoot air balls, be frozen by Allen Iverson and depend on *iffy* officiating calls to win games he normally devours like a chew toy.” Jay Mariotti, “Next Heroics for MJ Involve Taking a Seat,” *Chicago Sun-Times*, 20 Mar. 1997, at 118.
- “The two banks’ fit had been *iffy* from the start.” Peter Galuszka, “Will Keycorp Be Shark Bait?” *BusinessWeek*, 7 Apr. 1997, at 121.

if it be. See SUBJUNCTIVES.

if need be. This phrase can lead to problems of tense-shifting. For example, in the sentence “We always did what we had to do, if need be,” the tense abruptly switches from past (*did*) to present (*be*). Eric Partridge suggested *if need were* as a substitute (*U&A* at 150), but that phrase is both archaic and unidiomatic. The best course is often to rephrase with *if necessary*—though in the example above, the phrase is redundant and could be dropped without any loss of meaning. See TENSES.

if not is often an ambiguous phrase to be avoided. It may mean either (1) “but not; though not”; or (2) “maybe even.” Sense 2 is exemplified in the following sentences, but in each one it’s possible to misread the phrase as bearing sense 1:

- “If all this is true, the President [Reagan] should go down in history as one of the greatest, *if not* the greatest.” William L. Jones, “The President, Iran, and the Boland Amendment,” *San Diego Union-Trib.*, 20 Dec. 1986, at B11.
- “The greater Phoenix area is one of the fastest—*if not* the fastest—growth areas for call centers nationwide.” Paul Giblin, “Accent-Neutral Phoenix Draws Calling Centers,” *Dallas Morning News*, 8 Dec. 1996, at A45.
- “One of the best, *if not* the best, predictors of health care expenditure levels in a given geographic area or political jurisdiction is family or per-capita income.” Lawrence D. Cohen, “Managed Care Can Right Its Own Ship,” *Hartford Courant*, 16 Feb. 1997, at B3.

Sense 1 is confusing if, as is quite likely, the reader first thinks of the phrase in terms of the more common sense 2. It would be clearer to substitute *though* for *if*:

- “She gave proficient, *if not* [read *though not*] profound, readings.” Josef Woodard, “Monroe Plays Mostly in a Classical Mode,” *L.A. Times*, 12 Apr. 1996, at F14.
- “This is the story William Kleinknecht lays out competently *if not* [read *though not*] stirringly in ‘The New Ethnic Mobs,’ a useful primer on the shifting criminal threat.” Ralph Blumenthal, “Books of the Times,” *N.Y. Times*, 5 Sept. 1996, at C21.
- “Kwan’s conservative short program, adequately *if not* [read *though not*] flawlessly executed, gave her the votes of

all nine judges for first place.” John Markon, “Kwan Takes the Safe Route to Lead in U.S. Skating Finals,” *Richmond Times-Dispatch*, 15 Feb. 1997, at D5.

Generally speaking, when an understated term such as *adequate* or *competent* precedes *if not*, it has sense 1; when a more laudatory term precedes the phrase, sense 2 applies. Cf. **if**.

-IFY. See **-FY**.

if you will. This phrase typifies the language of those who engage in WORD PATRONAGE. An elliptical form of *if you will allow me to use the phrase*, the phrase is almost always best deleted. Cf. **as it were**.

ignis fatuus (= will o’ the wisp; a delusive hope or desire) forms the plural *ignes fatui*. But even the few readers who understand the singular LATINISM are likely to puzzle over the plural.

ignitable. So spelled in AmE and BrE alike—not **ignitable*. See **-ABLE** (A).

Current ratio: 6:1

ignominy is accented on the first, not the second, syllable: /ig-nə-min-ee/.

ignoramus. Until 1934, if a grand jury in England considered the evidence of an alleged crime insufficient to prosecute, it would endorse the bill *ignoramus*, meaning literally “we do not know” or “we know nothing of this.” Long before, though, the word *ignoramus* had come to mean, by extension, “an ignorant person.” In 1615, George Ruggle wrote a play called *Ignoramus*, about a lawyer who knew nothing about the law; this fictional lawyer soon gave his name to all manner of know-nothings, whether lawyers or nonlawyers.

The modern nonlegal meaning appears most frequently—e.g.: “There’s no surprise—or challenge—in watching a sycophantic, misogynistic *ignoramus* like Burdette win out over the self-effacing, truth-loving Hutchinson.” Lawrence Bommer, “‘Lip Service’ Subtle as a Sledgehammer,” *Chicago Trib.*, 5 Aug. 1997, at 2.

The plural is *ignoramuses*. The form **ignorami* is a pseudo-learned blunder, since in Latin *ignoramus* is a verb and not one of the Latin nouns ending in *-us*. This erroneous form reached the peak of its popularity in print (often in jocular contexts) in the 1920s but today is relatively infrequent. See PLURALS (B) & HYPERCORRECTION (A).

The word is preferably pronounced /ig-nə-ray-məs/—not /ig-nə-ram-əs/.

Current ratio (*ignoramuses* vs. **ignorami*): 32:1

ignorant; stupid. *Stupid* refers to a lack of innate ability, whereas *ignorant* refers merely to a lack of knowledge on a particular subject. Geniuses are *ignorant* of many facts, but that doesn’t make them *stupid*. But *stupid* people can’t grasp that they are *ignorant* of even the most basic facts.

LANGUAGE-CHANGE INDEX
ignorant for *stupid*: Stage 4

-ILE; -INE. Most words with these endings are best pronounced with the *-i-* short rather than long. Thus: *agile* /aj-əl/, not /aj-ɪl/; *genuine* /jen-yoo-in/, not /jen-yoo-ɪn/. But as with any other rule of pronunciation, there are many exceptions, among them *infantile* /ɪn-fən-tɪl/, *magazine* /mag-ə-zeɪn/, and *turpentine* /tər-pən-tɪn/.

Also, the ANIMAL ADJECTIVES ending in *-ine* may go either way, but they tend to have the long *-i-*, as in *feline* and *asinine*.

ilex (= a holly or holm oak) has made the standard plural *ilexes* since the early 19th century—not **ilices*. See generally PLURALS (B).

Current ratio: 30:1

ilk. A. Meaning. Originally, this Scottish term meant “the same”; hence of *that ilk* meant “of that same [place, territory, or name]” <McGuffey of that ilk>. By extension during the 19th century—from a misunderstanding of the Scottish use—*ilk* came to mean “type” or “sort” <Joseph McCarthy and his ilk>. Because there is little call outside Scotland for the original sense, the extended use must now be accepted as standard—e.g.:

- “That those of the *ilk* who call themselves journalists succumb is something to be loudly denounced—and roundly rejected.” Jane Ely, “Multiple-Choice Puzzle Circles Diana’s End,” *Houston Chron.*, 3 Sept. 1997, at A25.
- “Renji terms Pearlman and his *ilk* clever but dangerous.” Maggie Farley, “Showdown at Global Warming Summit,” *L.A. Times*, 7 Dec. 1997, at A8.
- “It’s composed essentially like Nickelback and bands of the similar *ilk*.” B.J. Lisko, “Excellent Label Debut from Akron Rockers,” *Repository* (Canton, Ohio), 27 Aug. 2015, at E14.

Still, one occasionally encounters puzzling uses that seem worthy of disapproval—e.g.: “It is also maddening to know there exists the human *ilk* that would, for whatever twisted motive, drag our young over the line.” Gil Griffin, “Essayist Takes Race Relations Personally,” *San Diego Union-Trib.*, 24 Nov. 1997, at E1. The sentence would surely be improved by changing *there exists the human ilk that* to *there exist people who*.

LANGUAGE-CHANGE INDEX
ilk for *type* or *sort*: Stage 5

B. Connotation. The word’s accepted definition is hardly defamatory. But the word increasingly conveys derogatory connotations (perhaps from sound association with the expletive *ick*?)—e.g.: “The book wrestles with the excruciating ethical dilemmas facing America . . . in battling Osama bin Laden and his *ilk*.” Jean Bethke Elshtain, “Duty Bound,” *Wash. Post* (Book Rev.), 6 Apr. 2003, at T4. It has been known to give offense—e.g.: “Larouche wrote her own letter to the editor . . . to attack me and my opinions personally, such as by calling me and my ‘*ilk*’ (whoever they are) ‘hypocrites in Birkenstocks.’” Letter of Hanna Bordas, *Boston Globe*, 6 Apr. 2003, Mag. §, at 3.

ill. The comparative form of this adjective is *worse*, the superlative *worst*. The adverb is *ill*, **illy* being an illiterate NONWORD that is acceptable neither in formal writing nor in nondialectal informal writing. *Ill* itself acts as an adverb—e.g.: “There he had knocked a hole in the roof and poured in gasoline, a primitive technique *that illy fit* [read *ill-fitting* or *that ill fitted*] the Waldbaum evidence.” Murry Kempton, “Standing by Convictions, Wrongly,” *Newsday* (N.Y.), 19 Aug. 1994, at A8. For other adverbs with a superfluous *-ly*, see ADVERBS (C).

LANGUAGE-CHANGE INDEX
**illy* for the adverb *ill*: Stage 1

illation (= the act of inferring or something inferred) is a learned term little used today, though a few philosophers are quite fond of it. (See SESQUIPEDALITY.) *Inference* serves just as well—and it’s more understandable.

illegal; illicit; unlawful. These terms are fundamentally synonymous, although *illicit* carries moral overtones <illicit love affairs> in addition to the basic sense of all three: “not in accordance with or sanctioned by law.” Since 1800 or so, *illegal* has been the most frequently used, followed by *unlawful* and then *illicit*. During most of the 18th century, *unlawful* appeared in print somewhat more frequently than *illegal*.

Illegal is not synonymous with *criminal*, though some writers mistakenly assume that it is. Anything against the law—even civil statutes—is, technically speaking, *illegal*, but only violations of criminal law are *criminal*. See **legal**.

For two MALAPROPISMS involving *illicit*, see **illicit**.

illegal immigrant; illegal alien; undocumented immigrant; undocumented alien. The terminology relating to those who come to live in another country without official permission is highly charged—increasingly so since about 1980. From 1930 on, *illegal immigrant* has been the usual phrase in BrE, but only from about 1945 to 1970 was it the predominant term in AmE.

About 1970, *illegal alien* surged into common use in AmE, and it remains predominant today. But some think it doubly tendentious: coupling the dysphemistic *alien* with the negatively charged *illegal* makes it easy, the argument goes, to dehumanize people who struggle to improve their lives without complying with bureaucratic requirements for entry. People who hold views something like this consider *illegal alien* a snarl-phrase and prefer instead a EUPHEMISM such as *undocumented immigrant* (or, even more euphemistically, *undocumented worker*).

Those who, on the other hand, prefer *illegal alien* note that *alien* is the age-old legal term for a noncitizen within a country—that there are *resident aliens* who have green cards that allow them to stay indefinitely. Those taking this position note that both unsanctioned

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

entry into the United States and overstaying one's visa are infractions—hence illegal. On this view, *illegal alien* is therefore a denotatively accurate phrase for someone who is present in a country in violation of the immigration laws. People with this view scorn *undocumented* as **DOUBLESPEAK** because the word ordinarily means “unaccounted for” but in this instance seems to bear the anodyne sense “not having the requisite documents to enter or stay in a country.”

There are those who take the (very) long view that, anthropologically speaking, people have always migrated across land masses according to their needs. Notions of national sovereignty, they might say, are relatively recent constructs.

Although few might be thought to share this radical view, something like it has become fairly mainstream. On 7 March 2015, addressing the nation from Selma, Alabama, 50 years after Martin Luther King Jr.'s famous march, President Barack Obama said (as part of a long litany): “We are the people who swim across the Rio Grande in search of a better life.” In his very next utterance (after completing the litany), he disclaimed the idea that “some of us are more American than others.”

In such a climate, the phrase *illegal alien* is perceived as hostile—mostly by those on the left. *Undocumented immigrant* has gradually become preferable in their eyes. Yet that phrase is viewed as hopelessly evasive and misleading by those on the right.

So the terminology is shifting. Big data tell us that as of 2008, *illegal alien* remained prevalent in AmE print sources, followed closely by *illegal immigrant*, which itself was nearly three times as common as *undocumented immigrant*. Least common of all was *undocumented alien*. Meanwhile, in the Republican-primary presidential debates of 2015, the attributive noun *illegals* was used by moderators and candidates alike—which is rather like the 1920s habit of referring to people afflicted with tuberculosis as *tuberculars*.

The resolution of these political and terminological struggles is yet to be documented.

Current ratio (in order of headwords): 11:9:3:1

illegible; unreadable. *Illegible* = not plain or clear enough to be read (used of bad handwriting or defaced printing). *Unreadable* = too dull, obfuscatory, or nonsensical to be read (used of poor writing).

illegitimate child. Although the phrase is still often used, and although it's undeniably better than *bastard*, it's also undeniably insensitive. Since the mid-1970s, it has been falling in frequency of use. As a far-sighted judge once observed, “There are no illegitimate children, only illegitimate parents.” *In re Estate of Woodward*, 40 Cal. Rptr. 781, 784 (Dist. Ct. App. 1964) (Yankwich, J.). Increasingly, the phrase *child out of wedlock* or *nonmarital child* is displacing *illegitimate child*. See **EUPHEMISMS & natural child**.

illicit. This adjective, meaning “illegal,” appears in two **MALAPROPISMS**. First, it is sometimes used for *elicit* (= to bring out)—e.g.:

- “The NFL tempered Cincinnati's first free agent signing Wednesday when it raised the league's salary cap \$500,000, making it \$2.5 million higher than in 1994 and *illiciting* [read *eliciting*] more fears from Bengals General Manager Mike Brown for the future.” Geoff Hobson, “Bengals Rocked by New, Expanded Salary Cap,” *Cincinnati Enquirer*, 23 Mar. 1995, at D1.
- “The 43-point average of its star player *illicits* [read *elicits*] awe.” Doug Bedell, “Home-schoolers Team Wins Amid Controversy,” *Dallas Morning News*, 16 Jan 1998, at B2.
- “Few comments *illicit* [read *elicit*] more disbelief, disgust, and downright anger than suggestions that the economy has performed as well during George W. Bush's presidency as during Bill Clinton's.” Bob Rayner, Editorial, “Horrors! Bush's Record Better Clinton's,” *Richmond Times Dispatch*, 27 June 2007, at A11.

This misuse caught the attention of a famous linguist during the first half of the 20th century: “Illiterate spellers will often write *illicit* for *elicit*, *enumerable* for *innumerable*, etc.” Otto Jespersen, *Growth and Structure of the English Language* 146 n.25 (9th ed. 1938).

Second, and perhaps more surprisingly, the word is sometimes misused for *solicit*—e.g.:

- “Pele was banned from the World Cup draw last December after accusing Texiera of *illiciting* [read *soliciting*] bribes for Brazilian television rights.” Mike Mulligan, “Havelange Gets Sixth Term,” *Chicago Sun-Times*, 17 June 1994, World Cup §, at 129.
- “Yet, it is those volunteers and the community-spirited donations they *illicit* [read *solicit*] that keep the doors open at nearly every food pantry you'll find.” Jerry Nunn, “Hunger Pains,” *Bay City Times* (Mich.), 30 Nov. 2007, at E1.

For more on the word, see **illegal**.

LANGUAGE-CHANGE INDEX

1. *illicit* for *elicit*: Stage 1
Current ratio (*elicit* vs. **illicit*): 2,853:1
2. *illicit* for *solicit*: Stage 1

Illinois is pronounced /il-ə-**noy**/—not /il-ə-**noyz**/. See **PRONUNCIATION (B)**.

Illinoisan; *Illinoisian. The first, pronounced /il-ə-**noy**-ən/, is standard. The second is a **NEEDLESS VARIANT**. See **DENIZEN LABELS**.

Current ratio: 5:1

illiterate = (1) unable to read or write; or (2) unlettered. Sense 1 refers to the most minimal literacy, sense 2 to grander notions of literacy. Today sense 1 threatens to drive out sense 2.

ILLOGIC. A. Generally. The writer on language who would dare drag logic into the discussion must do so warily. For centuries, grammarians labored under the mistaken belief that grammar is nothing but applied logic and therefore tried to rid languages of everything illogical. But to paraphrase Justice Oliver Wendell Holmes, the life of the language has not been logic: it has been experience.

No serious student believes anymore that grammatical distinctions necessarily reflect logical ones. Our language is full of idioms that defy logic, many of them literary and many colloquial. We should not,

for example, fret over the synonymy of *fat chance* and *slim chance*, *burn up* and *burn down*, or *miss* and *near miss*. We should instead smile at the playful genius of the language. Applying “linguistic logic” to established ways of saying things is a misconceived effort.

We see this misconception today when armchair grammarians insist that *grammatical error* is an Irish bull; that *I don't think so* is wrong in place of *I think not* (see **don't think**); that *the reason why* is wrong (no more so, certainly, than *place where* or *time when*); that *a number of people* must take a singular, not a plural, verb (see **synesis**); that *none* must always take a singular verb; or that, in *Don't spend any more time than you can help*, the final words should be *can't help*. When logic is used for such purposes, it is worse than idle: it is harmful.

That does not mean, of course, that logic is of no concern to the writer. For rhetorical purposes, logic is essential. Some readers will seek out holes in the logic; but almost all readers will be distracted if they notice this type of problem. In evaluating our own writing, therefore, we should strictly follow idiom and usage, but otherwise apply logic.

The exercise will tighten your prose. Since idiom does not yet prefer **could care less*, much less require it, write *couldn't care less*. Logically speaking, if you say that you **could care less*, then you're admitting that you care to some extent. (See **couldn't care less**.) Logic will help you avoid saying **I was scared literally to death*, because you'll recognize the literal meaning of *literally*—and you're still alive to report how scared you were. Likewise, logic would have you banish thoughtless words such as **preplanned*.

Logic promotes clear thinking. To avoid the ills catalogued below, consider closely how your words and sentences relate to one another.

B. Illogical Comparison. This lapse occurs commonly in locutions such as **as large if not larger than*, which, when telescoped, becomes **as large than*; properly, one writes *as large as if not larger than*. (See **CANNIBALISM**.) Similar problems occur with classes of things. For example, when members of classes are being compared, a word such as *other* must be used to restrict the class: “Representative democracy is better than any [other] political system in the world.”

Another problem of comparison occurs when the writer forgets the point of reference in the comparison:

- “Like the hard-hitting Dianne Feinstein, a candidate for California’s governorship, *Silber’s views are striking* [read *Silber strikes*] a chord among many Democrats tired of losing.” Mike Graham, “Democrats’ New Breed Upsets the Party Old Guard,” *Sunday Times* (London), 15 Apr. 1990, at A23. The sentence compares a person to someone’s views.
- “Like many others in Los Angeles, the quake helped Mr. Becker decide to leave.” “Deciding to Escape Los Angeles,” *N.Y. Times*, 18 Feb. 1994, at A10 (photo caption). This is a fine dangling modifier: the quake joined many others in L.A. in persuading Mr. Becker to leave.

- “But the bone marrow transplant Mr. Getty is to receive is different from the earlier *cases* [read *ones* or *transplants*] because the marrow is being processed so that it consists of only two types of cells.” Lawrence K. Altman, “Hope in AIDS Case Is Put in Marrow from Baboon,” *N.Y. Times*, 15 Dec. 1995, at A1, A16. You don’t compare a *transplant* to a *case*, which in medicine comprises the whole situation—the patient, the doctors, the injection, and everything else relating to the patient’s problem.
- “Significantly, although industrial relations is regarded as more important than when the survey was last conducted, in September, it does not rate in the top 10 most dominant issues.” Michael Gordon, “Voters Swing Back to ALP on Issues,” *Weekend Australian*, 20–21 Jan. 1996, at 1. Insert the word *now* after *important*. Otherwise, it seems as if you’re comparing *industrial relations* to a given time. In fact, we’re comparing the importance of the issue then and now.

For related issues, see **best of all, better than any (other), everyone . . . not, every other (A) & vice versa**.

C. Danglers and Misplaced Modifiers. Every dangler or misplaced modifier perverts logic to some degree, sometimes humorously—e.g.: “I saw the Statue of Liberty flying into Newark.” To avoid these disruptions of thought, remember that a participle should relate to a noun that is truly capable of performing the participle’s action. Another example: “The 1993 law, which was invalidated before it went into effect, required pregnant teen-agers or their doctors to notify a parent or guardian at least 48 hours before undergoing abortions.” Aaron Epstein, “High Court Leaves Intact Abortion Rule,” *Amarillo Daily News*, 30 Apr. 1996, at A1. Who is getting abortions? This sentence literally suggests that doctors are getting abortions, but that they must notify their parents first.

For a fuller discussion of these matters, see **DANGLERS & MISCUES (B)**.

D. The Disjointed Appositive. Phrases intended to be in apposition shouldn’t be separated—e.g.:

- “A respected English legal authority on the common law, the view of William Blackstone permeated much of the early thinking on freedom of expression.” John Murray, *The Media Law Dictionary* 11 (1978). (Blackstone himself, not Blackstone’s *view*, is the respected authority.)
- “As the editor of *Godey’s Lady’s Book* from 1837 to 1877—years in which this widely read magazine almost never mentioned the Civil War because war was not the business of ladies—Hale was regarded as one of America’s most influential women.” Mark Kurlansky, *Salt: A World History* 305 (2002). (The author’s assertion for the years 1837 to 1860 is illogical—the Civil War didn’t begin until 1861, so of course it wasn’t mentioned before then.)

See **APPPOSITIVES**.

E. Mistaken Subject of a Prepositional Phrase. This problem crops up usually when a word or phrase intervenes between the noun and the prepositional phrase referring to that noun. Often, as in the example below, the noun (*school bus*) functions as an

adjective: “*Wallin was the school bus driver in which* [read *Wallin was driving the school bus in which*] Hillman and Ellington and Kleven were passengers.” Cf. REMOTE RELATIVES.

F. Poor Exposition of Sequence. Don’t ask your readers to assume what is not logically possible by your very assumptions—e.g.: “The twin-engine turbo prop Merlin Fairchild 300 carrying driver Alan Kulwicki and three other men suddenly dropped off the radar screen and crashed *shortly before landing*.” Karen Allen & Erik Brady, “Motor Sports,” *USA Today*, 5 Apr. 1993, at C9. (The plane crashed before it would have landed, but as it happened the plane never did land in any normal sense of the word. And if you take the crash itself as a landing, the logic of the temporal sequence is absurd.)

G. *Times less than. Brand Y may cost twice as much as Brand X, but that doesn’t mean Brand X is twice as cheap as Brand Y. Farburg may be two times as far away as Nearville, but that doesn’t mean Nearville is two times closer than Farburg. Big Dog may be twice the size of Little Dog, but that doesn’t mean Little Dog is two times smaller than Big Dog.

One time is 100% of the cost, distance, size, or any other measure. If you take away “one time” something, you’ve taken away all there is. If you walk toward me and cover all the distance, you can’t get any closer—you can’t be twice as close as you were before. If the price is discounted *one time* or 100%, the item is free. **Two times cheaper*, if it means anything, might imply that the store will pay you the full price of Brand Y if you will take Brand X home with you. That mangles the meaning of *cost*, and it surely isn’t what the writer means.

What does the writer mean? Probably “half,” but who can say for sure? Yet despite the illogic of the phrase, it is used all the time, even in scientific literature—e.g.:

- “It came within just 4,000 miles of the 10-mile-wide nucleus of the comet, or *about 10 times closer than* [read *much closer than*] any of the other missions to Halley’s Comet.” Bernie Reim, “One Eye’s on Planets, One’s on Spring,” *Portland Press Herald*, 28 Feb. 2001, at C3.
- “Virus levels in the one animal were intermittently higher but still *more than 100 times lower than* [read *less than 1% as much as*] those in four control animals that had not received the vaccine.” “HIV Vaccines: New Prime-Boost Strategy Shows Promise in Monkeys,” *Gene Therapy Weekly*, 22 Mar. 2001, at 9.
- “States were further required to limit soot from power plants, cars and other sources to 2.5 microns, or *28 times smaller than* [who can be sure what this means?] the width of a human hair.” “EPA’s Tougher Clean Air Rules Cloud the Michigan Economy,” *Detroit News*, 5 Apr. 2001, at 2.

H. *Times more than. A problem similar to but far less egregious than the illogic of **times less than* comes up when we say that X is **two times more than* Y. The common understanding is that if Y is 1, then X is 2. But strictly speaking, *one time more than* Y could also be 2, because *more* implies that the result of 1-times-X is added to X to arrive at Y. The more

precise and unambiguous wording is “X is two times as much as Y.”

I. Miscellaneous Other Examples. For various other brands of poor thinking, see ADJECTIVES (B), **all** (D), **between** (F), **contiguous**, **every other** (A), ***ex-felon**, ***least worst**, **much less**, **much-needed**, **same** (C), **temperature** (B), ***these kind of**, **underestimate**, ***up to — off and more**, **wean**, **within**, ***without scarcely & yet** (B).

illude. See **allude** (B).

illuminate; illumine; *illum. *Illuminate* is most common by far. *Illumine* is archaic except in poetry. **Illume* is obsolescent.

Current ratio (in order of headwords): 104:10:1

illusion; delusion. These words are used differently despite their similar meanings. An *illusion* exists in one’s fancy or imagination. A *delusion* is an idea or thing that deceives or misleads a person. *Delusions* are dangerously wrong apprehensions; *illusions* are also wrong perceptions, but the connotation is far less dire. Cf. **hallucination**.

Sometimes *delusion* is misused as hyperbole for *illusion*—e.g.: “Houston Coach Kim Helton has no *delusions* [read *illusions*] about why the Cougars ended an 11-game losing streak by beating Southern Methodist 38–15.” Mark Rosner, “Longhorns Had *Alternate* [read *Alternative*] Plan Ready,” *Austin Am.-Statesman*, 23 Oct. 1995, at C3.

For a misuse of *illusion* for *allusion*, see **allusion**.

LANGUAGE-CHANGE INDEX

delusion misused for *illusion*: Stage 1

illusory; *illusive. The former has been the predominant form since about 1850. **Illusive* is a NEEDLESS VARIANT. See **elusive**.

Current ratio: 7:1

illustrate, in modern usage, means “to provide a good example of (something); to exemplify.” In the following sentence it is used ambiguously: “Jennings’s analysis *illustrates* the fallacy of accepting the theory too literally.” The writer here wasn’t claiming—as the sentence seems to do—that Jennings’s analysis is itself a good example of “the fallacy of accepting the theory too literally.” Rather, the sentence was intended to hold up Jennings’s analysis as one that elucidates well the nature of this fallacy.

Illustrate is accented on the first syllable: /il-ə-strayt/.

illustrative. A. Pronunciation. The second syllable is accented: /i-ləs-trə-tiv/, not /i-ləs-tray-tiv/.

B. And illustrious. *Illustrative* means “providing a good illustration or portrayal; representative.” *Illustrious* means “distinguished; acclaimed; renowned.” Occasionally, through WORD-SWAPPING, *illustrative* displaces *illustrious*—e.g.:

- “Karloff received a great number of critical plaudits and many critics called the film a fine climax to a long and

illustrative [read *illustrious*] film career." Michael R. Pitts, *Horror Film Stars* 85 (1991).

- "Both Howard and Eugene Odum continued basic research on the relation of energy to ecosystem structure and function into the new millennia in astonishingly long and *illustrative* [read *illustrious*] careers." 2 *Encyclopedia of Energy* 144 (Cutler J. Cleveland & Robert U. Ayers eds., 2004).

LANGUAGE-CHANGE INDEX

illustrative misused for *illustrious*: Stage 1

**illy*. See *ill*.

IM-. See EN-.

imaginative; imaginary. *Imaginative* (= creative) is occasionally misused for *imaginary* (= unreal)—e.g.:

- "Robin, foraging in a deserted plantation house for wine for the wounded, finds a book that recounts 'an unheard-of prodigy [that] . . . occurred in England during the reign of King Stephen.' This story both sustains Robin as the war becomes more horrific, and helps him to escape brutality in his *imaginative* [read *imaginary*] world." Mary A. McCay, "The Blue and the Gray and the Green," *Times-Picayune* (New Orleans), 26 May 2002, Books §, at 5.
- "It's easy to forget the utterly *imaginative* [read *imaginary*] things that flourish as rumors and 'fact' when something untoward happens." Liz Smith, "An Instinct for Money," *Newsday* (N.Y.), 29 May 2002, at A15.

LANGUAGE-CHANGE INDEX

imaginative misused for *imaginary*: Stage 1

imbecile; imbecilic. The preferred adjectival form of *imbecile*, n., was once thought to be *imbecile*. But *imbecilic*, which emerged in the late 19th century, is now standard as well.

LANGUAGE-CHANGE INDEX

imbecilic: Stage 5

Current ratio (*imbecile grin* vs. *imbecilic grin*): 2:1

imbibe is a FORMAL WORD meaning "to drink"—e.g.: "She sees groups of women 'having some social interaction' over piping hot cups, but adds that men *imbibe* as well." Lisa Martin, "The New Brew," *Ark. Democrat-Gaz.*, 13 Feb. 1997, at E1. The word often occurs in figurative senses—e.g.:

- "And young existentialists can *imbibe* the heady atmosphere of Ze Left Bank." Joe Williams, "Name Your Poison," *St. Louis Post-Dispatch*, 6 Feb. 1997, at 29.
- "He personifies the new breed of musicians, South Asian in origin, who haven't forgotten their roots but have *imbibed* the culture they're placed in." Vivien Goldman, "Gimme Indi Pop!" *Village Voice*, 18 Feb. 1997, at 68.

The corresponding noun is *imbibition* /im-bə-bish-ən/, which is not so rare as one might suspect—e.g.: "Wanda Morehead, a captain from Newark and secretary of the charter group, could recall only one customer in nine years whose *imbibitions* dangerously compromised his inhibitions." Dave Golowenski, "Skippers Deal with All Types on Charter Boats,"

Columbus Dispatch, 14 Apr. 2002, at D15. The word **imbibement* is a NEEDLESS VARIANT—e.g.: "A 'made' mobster is formally inducted through a ritual that entails the commingling of blood, recitation of oaths and an *imbibement* [read *imbibition*] of wine." Scott Ladd, "Why the Tough Should Get Going," *Newsday* (N.Y.), 26 Nov. 1991, at 43.

***imblaze**. See **emblazon**.

imbroglio. Pl. *imbroglios*. See PLURALS (D).

imbue (= [1] to inspire [a person, group of people, etc.] with; or [2] to saturate; soak or stain) is subject to OBJECT-SHUFFLING. Properly, a person is *imbued with values*; values aren't **imbued into* a person. In the latter phrase, *imbue* appears to have been misused for *instill*. The mistake is fairly common—e.g.:

- "In announcing the gifts, Jamail invoked the memory of his mother, Marie, and the values she *imbued* [read *instilled*] in him." Armando Villafranca, "Attorney Jamail, Wife Hand Out \$17 Million," *Houston Chron.*, 5 Sept. 1996, at A1.
- "While the landscape at the Holt home might not be pristine, the sauciness she *imbues in it* [read *imbues it with*] more than makes up for the occasional weed." Susan Banks, "A Garden That's a Riff on Paintings," *Pitt. Post-Gaz.*, 14 June 2014, at B1.
- "His parents David and Naomi would *imbue* [read *instill*] in him a strong sense of right and wrong; of justice and social equality." Jeremy Corbyn, the Boy to the Manor Born," *Sunday Telegraph*, 23 Aug. 2015, News §, at 13 (the title here being a pun: see **manner born, to the**.)

See **impart & instill**.

LANGUAGE-CHANGE INDEX

imbue misused for *instill*: Stage 1
Current ratio (*instilling in them* vs. **imbuing in them*): 77:1

I'm enjoying myself. See **I enjoyed myself**.

imitation. See **counterfeit**.

immaculate conception. Even among Catholics, it's a common misconception that this phrase refers either to the birth of Jesus (properly called the *virgin birth*) or to the impregnation of Mary. In fact, the doctrine of the *immaculate conception* refers to the conception of Mary herself, not Jesus. According to the doctrine, at the time Mary was conceived in her mother's womb, God sanctified her by removing "all stain of original sin." The phrase is often misapplied to refer to the conception that led to the "virgin birth" of Jesus, even by those who purport to be knowledgeable about church doctrine—e.g.:

- "Orthodox Christianity allows priests to marry; the Roman Catholic Church does not. And Orthodox Christians do not believe in the *immaculate conception of Jesus Christ* [read *immaculate conception of Mary*]." Lois M. Collins, "Patriarchal Pilgrimage," *Deseret News* (Salt Lake City), 4 Oct. 1997, at C1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The last time a millennium turned in the parts of the world that date things from the *immaculate conception* [read *birth*] of Jesus Christ, no more than a hundred scholarly clerics supposed that it mattered.” Michael Heywood, “Forget These Zeros, Bring on the Tukes,” *Columbian* (Vancouver, Wash.), 31 Dec. 1999, at A9.
- “For decades, that pilgrimage was repeated each Dec. 8, which Catholics celebrate as the feast of Mary’s ‘*immaculate conception*’ of Jesus [omit *of Jesus*].” Carol Jeffares Hedman, “Shrines Provide Peace on Earth,” *Tampa Trib.*, 11 July 2000, Pasco §, at 1.

One writer gamely corrected his error: “I implied that the birth of Jesus was the result of the *Immaculate Conception*. Uh-uh. The term doesn’t refer to Mary conceiving the infant Jesus without sexual intercourse, but to Mary herself having been conceived without original sin in her soul. The friars back at St. Bonaventure must be so bummed with me.” Mark McGuire, “Fox News Can Start from Scratch,” *Times Union* (Albany), 15 Nov. 1999, at C1.

LANGUAGE-CHANGE INDEX

immaculate conception in reference to Jesus: Stage 2

immanent. See **imminent.**

immaterial; nonmaterial, adj. Although both may mean “not consisting of a material substance,” *immaterial* tends to mean “of no substantial importance; inconsequential.” *Nonmaterial*, by contrast, generally means “cultural, aesthetic” <the nonmaterial rewards of a career in theater>.

immediately, used as a conjunction in the sense “as soon as, promptly when,” is obsolete in AmE but still occurs in BrE—e.g.: “He succeeded in persuading MPs to vote to restore the ban on benefits for all those who fail to claim asylum *immediately* they arrive in Britain.” Paul Eastham, “MPs Slam Door on Bogus Refugees,” *Daily Mail*, 16 July 1996, at 11. In AmE phrasing, the word *when* or *after* would be inserted after *immediately*.

immerse; *immerge. Both mean “to dip or plunge into liquid,” but *immerse* is now the standard term. **Immerge*, which was infrequent in the 18th century and exceedingly rare today, is a NEEDLESS VARIANT—e.g.: “Fishing a bottle out of the pot, I carelessly *immersed* [read *immersed*] my fingers into the boiling hot water.” Stacie L. Bezdach-Moore, “I Was Pregnant at 16,” *Teen Mag.*, Mar. 1995, at 62.

Current ratio: 113:1

immigrate; emigrate. *Immigrate* = to migrate into or enter (a country). *Emigrate* = to migrate away from or exit (a country). In other words, *immigrate* considers the movement from the perspective of the destination; *emigrate* considers it from the perspective of the departure point. Perhaps it was indicative of the relative worth of the two forms of government that before the Soviet Union collapsed in the late 20th century, the United States was plagued by illegal *immigration* and the Soviet Union by attempts at illegal *emigration*.

Emigrate is to *immigrate* as *go* is to *come*, or as *take* is to *bring*. People *emigrate from* or *out of*, and

immigrate to or *into*. And just as those other two pairs are sometimes misused, *emigrate* and *immigrate* sometimes get reversed—e.g.:

- “The store is owned by Maria Guadalupe Flores, a native of Mexico who *emigrated* [read *immigrated*] into the U.S. at age 17.” “Cinderella Story MN,” *Pioneer Press* (St. Paul), 19 May 1996, at D6.
- “His most recent hire is a programmer he recruited and helped to *immigrate* [read *emigrate*] from Singapore.” Lisa Biank Fasig, “Jetsoft Co. Scans Its Way to Innovation,” *Cincinnati Enquirer*, 25 May 1997, at J3.

The terms can be almost interchangeable, with the help of the right preposition or adverb. In the first example, *emigrated* to rather than *into* would properly convey the same meaning as *immigrated into*. In the second, *immigrate here from Singapore* would correct the meaning as well as the recommended edit, *emigrate from Singapore*.

LANGUAGE-CHANGE INDEX

emigrate misused for *immigrate*: Stage 2

imminent; eminent; immanent. *Imminent* = certain and very near; impending <imminent danger>. *Eminent* = distinguished; unimpeachable <Moore is an eminent cardiac surgeon>. (See **eminently**.) *Immanent* (primarily a theological term) = inherent; pervading the material world <the immanent goodness of the divine will>.

These words are misused in more ways than one might suppose. *Imminent*, of course, ousts *eminent* from its rightful place (perhaps the most common misusage)—e.g.:

- “While making employees ‘raise their hands to go to the bathroom,’ may have a 19th century ring to it, such rules may be *imminently* [read *eminently*] sensible on assembly lines.” “Their Unappointed Rounds the Issue: Postmaster to Relax Work Rules Following Massacres,” *Rocky Mountain News* (Denver), 14 May 1993, at A62.
- “Fortunately, Peebles seems *imminently* [read *eminently*] qualified to build a 500-room Crowne Plaza Hotel on the 4.4-acre site.” Jack Nease, “Convention Center Hotel Escaped Becoming Racial Crisis,” *Sun-Sentinel* (Ft. Lauderdale), 27 Feb. 1997, at D3.
- “The *imminently* [read *eminently*] qualified Johnson associate Ed Tapscott (a good friend) should have a team to run, finally.” Michael Wilbon, “Network Man Hits Nothing but Net,” *Wash. Post*, 19 Dec. 2002, at D1.

But *eminent*, likewise, sometimes wrongly displaces *imminent*—e.g.: “[A] judge indicated on a court document that Cho [Seung-Hui] ‘is mentally ill and in need of hospitalization, and presents an *eminent* [read *imminent*] danger to self or others as a result of mental illness . . .’” Nancy Gibbs et al., “Darkness Falls,” *Time*, 30 Apr. 2007, at 36.

Finally, *immanent* (= inherent) sometimes appears where *imminent* belongs—e.g.:

- “Had it been an A priority—signifying present or *immanent* [read *imminent*] danger to life—any police car in the city would have been ordered to the scene, he said.” Ray Tessler, “S.F. Police Dispatcher’s Role Questioned in the Death of Carlsbad Attorney’s Son,” *L.A. Times* (S.D. ed.), 12 Oct. 1990, at B2.

- “HB 2850 allows a driver to delay reporting an automobile accident involving over \$500 damage if such driver is in fear of ‘*immanent* [read *imminent*] danger of bodily injury’ by other individuals involved in the accident.” Jan Pauls, “1994 Legislative Update: Transportation and Utilities,” *J. Kansas Bar Ass’n*, Aug. 1994, at 40.

LANGUAGE-CHANGE INDEX

1. *imminent* for *eminent*: Stage 2
2. *eminent* for *imminent*: Stage 2
3. *immanent* for *imminent*: Stage 1

immolate = (1) to kill or destroy as a sacrifice, esp. by fire; or (2) to kill or destroy for any reason, esp. by burning. Sense 1 is the classic sense—e.g.: “Sati was the Hindu practice where widows would allow themselves to be *immolated* on the funeral pyres of their late husbands as the ultimate proof of their loyalty.” Stephen Mansfield, “A City Caste in Royal Mold,” *Daily Yomiuri* (Japan), 20 Jan. 1996, at 7.

Sense 2 is a product of SLIPSHOD EXTENSION; the word loses its traditional nuance of sacrificial destruction—e.g.: “She *immolates* a closetful of fine clothing, then holds a fire sale to get rid of the rest of her soon-to-be-ex’s possessions.” Michael Warren, “Bold, Determined, and Dangerous,” *Des Moines Register*, 18 Jan. 1996, Today §, at 2. This sense sometimes appears for purposes of INELEGANT VARIATION—e.g.: “Fearing that he looked presumptuous, Williams has already burned roughly 100 of the cards and is searching for the last 400, which he also hopes to *immolate* [read *destroy* or *burn*].” Christian Stone, “The Rose Bowl Seemed Far Away After Northwestern,” *Sports Illustrated*, 16 Sept. 1996, at 54.

Immolate is a transitive verb, not an intransitive one—nothing merely “immolates.” Rather, an agent of some kind, usually a person, *immolates* something else. But some writers misunderstand this—e.g.: “If a can of nitrate stock *immolates* [read *catches fire* or *burns*], he said, a deluge sprinkler system would kick in.” Steven Rea, “Preserving a Legacy in the Poconos,” *Orange County Register*, 25 Aug. 1996, at F13.

immoral; unmoral; amoral. These three words have distinct meanings. *Immoral*, the opposite of *moral*, means “evil, depraved.” The word is highly judgmental. *Unmoral* means merely “without moral sense, not moral,” and is used, for example, of animals and inanimate objects. *Amoral*, perhaps the most commonly misused of these terms, means “not moral, outside the sphere of morality; being neither moral nor immoral.” It is loosely applied to people in the sense “not having morals or scruples.”

immovable. So spelled in AmE and BrE alike—not **immoveable*. See MUTE E.

immune may take the preposition *to* or *from*, depending on nuance. What you’re *immune from* can’t touch you; what you’re *immune to* may touch you but it has

no effect. The collocation *immune to* is now the more common phrase.

To be *immune to* something is to be impervious to it—e.g.:

- “Yesterday I made sales to people from Ireland, England, Sweden and Denmark, and that was before lunch,” he said. “Presley is *immune to* the ups and downs of war and the economy.” Doug Warren, “Presley Pilgrimage,” *Boston Globe*, 14 Aug. 2002, at B1 (quoting Steve Templeton, an Elvis-memorabilia vendor).
- “Despite its considerable resources, Intel, which has \$8 billion in cash, is not *immune to* market forces.” Alex Pham, “Intel to Use Technology for Building Tinier Chips,” *L.A. Times*, 14 Aug. 2002, Bus. §, pt. 3, at 1.

To be *immune from* something is to be free of some duty, liability, or restriction that others are subject to—e.g.:

- “The fact that Hale viewed husbands as *immune from* rape prosecution is not surprising.” Susan Estrich, *Real Rape* 73 (1987).
- “Judges are *immune from* such lawsuits.” William K. Slate II, “The Justice-at-a-Price Guys Take Aim at Arbitration,” *L.A. Times*, 13 Aug. 2002, Cal. Metro §, pt. 2, at 13.
- “New York, California and North Carolina agreed last month to require that all investment houses . . . make stock analyst reports *immune from* influence by the investment banking side of their firms.” David Cay Johnston, “Officials of 14 States Pledge Protection of Pension Assets,” *N.Y. Times*, 13 Aug. 2002, at C7.

In this latter sense, the preposition *from* is preferable to *to*, but *to* is used so commonly that it can’t be stigmatized as incorrect—e.g.: “Commission member John O. Wynne of Norfolk, a former publishing executive, noted that the largest sectors of the Virginia budget, including education and Medicaid, will be *immune to* [read, preferably, *immune from*] Wilder commission cuts.” R.H. Melton, “Wilder Panel Adopts Guide for Va. Cuts,” *Wash. Post*, 15 Aug. 2002, at B1.

Current ratio (*immune to* vs. *immune from*): 2:1

immunity; impunity. An *immunity* is any type of exemption from a liability, service, or duty—or (of course) a bodily resistance to an illness. *Impunity* is exemption from punishment; for a spreading misuse of this word, see **impunity**.

I’m not sure that; I’m not sure whether. The first phrase means “I doubt” <I’m not sure that we can make it in time>; the second means “I wonder if; I don’t know if” <I’m not sure whether Shakespeare died in the 16th or the 17th century>. (He died in the 17th—in 1616.) Cf. **doubt** (A).

impact, v.i. & v.t. *Impact* was traditionally only a noun. In the mid-20th century, however, it underwent a semantic shift that allows it to act as a transitive or intransitive verb. So uses such as the following have

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

become widespread (and are also widely condemned by stylists):

- “The researchers concluded that this low level of intensity may have *impacted* [read *affected*] the results.” Katherine Preble, “Forget Warming Up,” *Tampa Trib.*, 17 July 1997, Baylife §, at 3.
- “Breast-feeding can be *impacted* [read *affected*] by visitation and custody decisions.” Carol Brzozowski-Gardner, “Her Specialty: Lactation Advocacy,” *Sun-Sentinel* (Ft. Lauderdale), 30 Nov. 1997, at E1.
- “Though the I-285/Georgia 400 interchange is squarely in the midst of our PCIDs, it *impacts* [read *affects*] traffic flow across metro Atlanta and the 29 counties included in our metro area.” Yvonne Williams, “Opening Our Own Wallets to Help Speed Traffic Flow,” *Atlanta J.-Const.*, 1 Sept. 2015, at A8.

These uses of the word would be perfectly acceptable if *impact* were performing any function not as ably performed by *affect* or *influence*. If *affect* as a verb is not sufficiently straightforward in context, then the careful writer might use *had an impact on*, which, though longer, is probably better than the jarring impact of *impacted*. Reserve *impact* for noun uses and *impacted* for wisdom teeth. See FUNCTIONAL SHIFT (D) & VOGUE WORDS.

Interestingly, *impact* as a verb might have arisen partly in response to widespread diffidence about the spelling of *affect*. In terms of word frequency, the verb use of *impact* skyrocketed after 1980. See **affect**.

LANGUAGE-CHANGE INDEX

1. *impact* as a transitive verb <this could impact our decision>: Stage 3
Current ratio (*might affect the vs. *might impact the*): 12:1
2. *impact* as an intransitive verb <this could impact on our decision>: Stage 3
Current ratio (*might affect the vs. *might impact on*): 11:1

***impactful**, adj., is barbarous JARGON dating from the mid-1960s. Unlike other adjectives ending in *-ful*, it cannot be idiomatically rendered in the phrase *full of* [+ quality], as in *beautiful* (= full of beauty), *regretful* (= full of regret), *scornful* (= full of scorn), and *spiteful* (= full of spite). If *impact* truly denotes a quality, it does so only in its newfangled uses as a verb <it impacts us all> and as an adjective <the mechanic’s tool known as an impact driver>.

Whatever its future may be, **impactful* is, for now, a word to be scorned. Among its established replacements are *influential* and *powerful*—e.g.:

- “If Labor Secretary John Dunlop can win labor and management support for such far-reaching changes . . . , he will have made an infinitely *impactful* contribution to the fight against inflation.” M.S. Forbes Jr., “Help the City if It Helps Itself” *Forbes*, 15 Aug. 1975, at 15. (A possible—and less hyperbolic—revision: *If Labor Secretary John Dunlop can win labor and management support for such far-reaching changes . . . , he will have made a truly significant contribution to the fight against inflation.*)
- “After eight *impactful* [read *influential*] and sometimes tumultuous years, Lou Swift’s term on the Colorado

Wildlife Commission expired earlier this month.” Charlie Meyers, “Two Men’s Contributions as Big as All Outdoors,” *Denver Post*, 22 Mar. 1998, at C2.

- “Elise makes several short but *impactful* [read *memorable*] appearances as Laura, the production’s assistant stage manager.” Christine Dolen, “A ‘Godot’ Parody at Thinking Cap Finds the Laughs in Waiting to Go On,” *Miami Herald*, 29 Aug. 2015, Entertainment §.

LANGUAGE-CHANGE INDEX

**impactful* for *influential* or *powerful*: Stage 2

impale (= to drive a stake or lance through [usu. a living body]) is the standard spelling, **empale* being a variant spelling. Sometimes the word is misspelled **impail*—e.g.:

- “Another pattern with a nautical basis is the ‘Pineapple,’ for returning sea captains *impaled* [read *impaled*] these fruits on their fenceposts as symbols of good luck.” William Zimmer, “Cozy Household Items Show Top Quality Artistry,” *N.Y. Times*, 30 Nov. 1986, § 11, at 38.
- “The billboards show a dog with a large fishhook *impaled* [read *impaled*] in its upper lip. The message reads: ‘If you wouldn’t do this to a dog, why do it to a fish?’” Bill Sargent, “PETA Wants Fishing Columns Deep-Sixed,” *Fla. Today*, 3 Apr. 2005, Outdoors §, at 10.

LANGUAGE-CHANGE INDEX

Current ratio (*impaled vs. *impailed*): 1,068:1
2. **empale* for *impale*: Stage 1
Current ratio (*impaled vs. *empaled*): 192:1

impanel. See **empanel**.

impart = (1) to give (information, a quality, etc.) <the sage imparted wisdom to dozens of followers daily>; or (2) to make known or explain <she imparted the details of her plan>. In good idiom, you impart something to a person (as opposed to imparting a person with something)—e.g.: “While in the hole, she meets some truly deep roots who *impart her with supernatural powers* [read *impart supernatural powers to her*].” “New Line Buys Rights to Novel,” *Star-Ledger* (Newark), 2 Apr. 1997, at 27. (See OBJECT-SHUFFLING.) Sometimes this misuse could be corrected simply by changing *impart* to *imbue*—e.g.: “The Times declared that the Princess Royal’s ‘innate feelings of a benevolence of mind’ *imparted* [read *imbued*] her with a beauty that went far beyond what the power of a dress could bestow.” Marilyn Morris, “The Royal Family and Family Values in Late Eighteenth-Century England,” *J. Family Hist.*, 1 Oct. 1996, at 519. See **imbue**.

LANGUAGE-CHANGE INDEX

1. **impart someone with something* for *impart something to someone*: Stage 1
2. *impart* misused for *imbue*: Stage 1
Current ratio (*imbued with vs. *imparted with*): 124:1

impartable; impartible. These are two different words. *Impartable* = capable of being imparted (made known or bestowed). *Impartible* = indivisible. In the first, the

prefix *im-* is intensive; in the second, it's negative. Historically, the word *impartible* has occurred with far greater frequency than *impartable*. See *-ABLE* (A).

impartially. See **partially** (B).

***impass.** See **impassé**.

impassable. See **impassible**.

impassé (= [1] a deadlock; or [2] a blind alley), a French loanword, is sometimes misspelled **impass*—e.g.: “Finally Brearley broke the *impass* [read *impassé*], taking the puck around the back of the Renegades’ net and scoring on a wraparound shot at 19:01.” Katrina Waugh, “Roanoke Fights Back in 2nd,” *Roanoke Times*, 6 Dec. 1997, at C1.

LANGUAGE-CHANGE INDEX

impassé misspelled **impass*: Stage 1

Current ratio (*an impassé* vs. **an impass*): 699:1

impassible; impassable. These words have separate origins and meanings. *Impassible* = incapable of feeling or suffering. *Impassable* = not capable of being passed. Since the 18th century, *impassable* has occurred with far greater frequency. See *-ABLE* (A). Cf. **passable**.

Occasionally, *impassible* wrongly displaces *impassable*—e.g.:

- “The recreation area’s parking problem . . . leaves the park’s main road nearly *impassible* [read *impassable*].” Shalmali Pal, “Pelican Park Gets Tough on Parking,” *Times-Picayune* (New Orleans), 11 May 1996, at A1.
- “Interstate 35 has often seemed like an *impassible* [read *impassable*] barrier for promoters of African-American shows, gospel and otherwise.” Michael Point, “Lift Every Voice and Sing,” *Austin Am.-Statesman*, 31 Jan. 1997, at F1.

LANGUAGE-CHANGE INDEX

impassible misused for *impassable*: Stage 1

Current ratio (*impassable barrier* vs.

**impassible barrier*): 19:1

impassionate. Because this adjective can mean either “impassioned” or “dispassionate,” it is best avoided in favor of one of those defining words. In short, it is a SKUNKED TERM. Despite its absence from American desk dictionaries, *impassionate* is still used by journalists in both senses—e.g.:

- “An intense, *impassionate* [read *impassioned*] personality, even when she was young. Bush began putting on variety shows at age 5, charging the neighbors 15 cents to attend.” Joanne Kaufman, “Barbara Bush Rides Out the Pain of a Doomed Soap Opera Role,” *People*, 1 Feb. 1988, at 56.
- “Thermometers are altogether *impassionate* [read *dispassionate*].” Ron Spomer, “If the Car Starts, You Can Shoot,” *Lewiston Morning Trib.* (Idaho), 27 Dec. 1990, at E2.
- “But the National Rifle Association said crime has skyrocketed nationally and that *impassionate* [read *dispassionate*] statistics don’t back up Griffin’s stance.” Barbara Carmen, “Gun Bill Opposed by Council,” *Columbus Dispatch*, 13 June 1995, at C2.

- “Last year, Barack Obama stood before the General Assembly and delivered an *impassionate* [read *impassioned*] call for Palestinian statehood within a year.” Robert Z. Nemeth, “Beware of Arab Spring,” *Worcester Telegram & Gaz.*, 2 Oct. 2011, at A14.

impecunious (= poor; penniless) is sometimes misused in either of two ways. Some writers seem to think it means “unthrifty,” as in *she was utterly impecunious with her earnings*. Other writers mistake the word as meaning “hapless, unfortunate,” as in *the impecunious junior left to work on the assignment through the night*. For the antonym *pecunious*, see **pecuniary**.

impel. See **compel**.

impending. See **pending**.

impenitence (= the quality or state of not regretting something one has done and of having no intention of refraining in the future) has been the established form since the late 18th century. **Impenitency* is a NEEDLESS VARIANT.

Current ratio: 9:1

imperative. See **imperious** (B).

imperial. See **imperious** (A).

imperil, vb., makes *imperiled* and *imperiling* in AmE, *imperilled* and *imperilling* in BrE. See **SPELLING** (B).

imperious. A. And imperial. Deriving from the same root (L. *imper-* “power over a family, region, or state”), these words have been differentiated by their suffixes. *Imperial* = of or belonging to an emperor or empire. E.g.: “Hoagland notes that the *imperial* collection now on view at the National Gallery was removed from the Forbidden City, but he fails to point out that the transfer occurred in the 1930s to avoid capture by the Japanese, not the Communists, as he suggests.” “Clues to China,” *Wash. Post*, 22 Feb. 1997, at A21.

Imperious = overbearing, supercilious, tyrannical. E.g.: “The man running this gold mine at Bear, Stearns is Richard Harriton, 61, an imposing and *imperious* man who came to the firm in 1979.” Gretchen Morgenson, “Sleazy Doings on Wall Street,” *Forbes*, 24 Feb. 1997, at 114.

B. And imperative. An *imperative* (= commanding, obligatory) tone can come from anyone in a position of authority; an *imperious* tone comes from someone who, in that position, tries to wield power in a dictatorial way.

imperium = supreme authority. E.g.: “Silberman . . . has unmitigated scorn for the scholarly, predominantly Catholic ‘*imperium*’ whose ‘orthodox interpretation of the Dead Sea Scrolls [has] prevailed,’ despite the conflicting testimony of the scrolls themselves.” Alan Ireland, “Probing the Mysteries of the Dead Sea Scrolls,” *Evening Standard*, 8 Feb. 1997, Books §, at 14.

Pl. *imperia*. See **PLURALS** (B).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

impermissible. So spelled. See -ABLE.

impersonation; *personation. The latter is a NEED-LESS VARIANT.

Current ratio: 10:1

impersuadable; *impersuasible. See **persuadable**.

impervious; *imperviable. *Impervious* = (1) not allowing something to pass through <the concrete in the basement is impervious to water>; or (2) not open to <some people are impervious to reason>. Sense 1, which is literal, most commonly (but not exclusively) refers to the soaking of water or some other liquid through a surface—e.g.:

- “Sunset Valley’s subdivision regulations at the time allowed builders to cover as much as 70 percent of the land with *impervious* cover, such as parking lots or buildings that keep storm water from naturally filtering into the ground.” Steven Kreytak, “Sunset Valley Puts Development on Hold,” *Austin Am.-Statesman*, 2 Dec. 2002, at A1.
- “There is definitely a story—about Bolshevik resistance to the White Russians—and there is definitely a hero, the square-jawed, craggily handsome Timosh, who remains *impervious* to bullets when he bares his chest to attackers in the climactic scene.” Philip Kennicott, “Ukraine’s Dovzhenko, Auteur of the Proletariat,” *Wash. Post*, 3 Dec. 2002, at C1.

Sense 2 is figurative (“thick skull” comes to mind)—e.g.: “To be biased is to be settled on an issue because of one’s background, and to be *impervious* to reason and common sense.” Jay Evensen, “It’s Rocky Who Is Divisive on Plaza Issue,” *Deseret News* (Salt Lake City), 24 Nov. 2002, at AA1.

Avoid using *impervious* in the watered-down sense “not affected by”—e.g.: “And he says he is untroubled by the criticism from Congress. Much of it, he says, is domestic politics, aimed at President Bush, whose recent electoral victories have made him *impervious* [read *immune*] to other political broadsides.” Christopher Marquis, “Saudi Tries to Calm U.S. Opinion,” *N.Y. Times*, 2 Dec. 2002, at A21.

**Imperviable* is a NEEDLESS VARIANT that has seldom appeared in print.

Current ratio: 2,579:1

impetus. See **impotence (B)**.

impinge; infringe. *Impinge* is intransitive only, followed by *on* or *upon*—e.g.: “He acknowledges that the line separating ‘fine’ art from craft is blurry in the present era. He even calls making such distinctions ‘dangerous,’ likely to *impinge* on the creative ‘elbow room’ of artists.” Anna Webb, “Frame Job,” *Idaho Statesman*, 5 Nov. 2002, Thrive §, at 28. *Infringe*, by contrast, may be either transitive or intransitive—e.g.:

- “Lilly, in a federal lawsuit filed Tuesday in its Indianapolis hometown, said the generic treatment would *infringe* four patents related to the drug.” “Lilly Sues to Block Osteoporosis Generic,” *L.A. Times*, 28 Nov. 2002, Bus. §, at 3 (transitive).
- “Washington, though populous and wealthy, would *infringe* on the Baltimore Orioles’ market, setting up

potential legal opposition from that club.” David A. Markiewicz, “Keeping It International,” *Atlanta J.-Const.*, 1 Dec. 2002, at D3 (intransitive).

H.W. Fowler pointed out that *infringe* was historically transitive far more commonly than intransitive, “but 20th-century newspaper columns give a very different impression, viz that *infringe* can no longer stand at all without *upon*.” Nowadays things aren’t quite that bad, though: the two uses are split about evenly. The distinction is that patents and copyrights are typically *infringed*, while other rights are typically *infringed on*. As a matter of style, however, the transitive construction is almost always stronger.

Though *impinge* and *infringe* are often used as if they were interchangeable, we might keep in mind the following connotations from the literal senses: to *impinge* is to strike or dash *upon* something else; to *infringe* is to break in and thereby damage, violate, or weaken.

impious is pronounced /im-pee-əs/, not /im-pi-əs/.

implement = (1) to carry out or put into effect; to take practical steps toward the fulfillment of; or (2) to furnish with implements. In sense 1, which is more common, the word typifies BUREAUCRATESE but is sometimes undeniably useful. *Carry out* is often better and less vague.

implementer. Although the variant spelling **implementor* predominated for much of the late 20th century, today *implementer* is considered standard.

Current ratio: 4:1

implication is the noun corresponding to both *implicate* and *imply*. Thus it means (1) “the action of implicating, or involving, entangling, or entwining” <Smith’s implication of Jones in the crime>; (2) “the action of implying; the fact of being implied or involved” <by necessary implication>; or (3) “that which is implied or involved” <implications of wrongdoing>.

implicit (= implied) functions as a correlative of *explicit* (= express or expressed), just as *implied* is a correlative of *express* <no warranty, either express or implied>. H.W. Fowler called *implicit* “a shifty word” and suggested that the language would be better off without it. The problem, he pointed out, is that while *implied* and *express* are neat opposites, *implicit* and *explicit* seem to overlap when they mean “complete, unmitigated” <implicit trust> <explicit pornography>. In this sense, the words can sometimes become interchangeable—e.g.: “Gun enthusiasts, particularly those most active in the NRA, share no *implicit* [read *innate*] trust in a beneficent government. . . . *Explicit* faith is reserved for family and community.” Michael Powell, “Call to Arms,” *Wash. Post* (Mag.), 6 Aug. 2002, at W8. (For more on using different words to mean the same thing, as with *trust* and *faith* in that quotation, see INELEGANT VARIATION.)

The *OED* labels this usage both obsolete and erroneous. But in fact it shows no signs of disappearing, and “erroneous” may be a bit harsh. Noah Webster used the word in this disputed sense: “To men who have been accustomed to repose almost *implicit* confidence in the authors of our principal dictionaries and grammars, it may appear at first incredible, that such writers as Johnson and Lowth, should have mistaken many of the fundamental principles of the language.” Noah Webster, *A Compendious Dictionary of the English Language* iii (1806). In that book, Webster defined *implicit* as “resting upon another, involved, real,” and *implicitly* as “absolutely, by inference.”

Logic is on the side of this usage: if one has *implicit* faith in something, no evidence or rationalization is needed to bolster that belief. The *Century Dictionary* recognized this sense of *implicit* in 1895: “involved in or resulting from perfect confidence in or deference to some authority or witness; hence, submissive, unquestioning, blind.” And the phrase *implicit faith* does not carry any negative connotation the way *blind faith* may. So in certain SET PHRASES in religious contexts, the writer may have no choice. Even so, the Presbyterian Church USA muddied the waters a bit when it adopted a statement on faith in June 2002. That document contained the following implicit reference to non-Christians: “We neither restrict the grace of God to those who profess *explicit faith* in Christ nor assume that all people are saved regardless of faith.”

Still, in most contexts the writer is well advised to seek an alternative wording—e.g.:

- “Such *implicit* [read *complete* or simply delete *implicit*] trust heralds a new dawn in married life—until we get the next sex poll, and spouses revert to normal.” Nancy McIntyre, “Have Sexual Revolutionaries Surrendered?” *Ariz. Republic*, 18 Nov. 1994, at F20.
- “In an ideal situation, police, prosecutors and the medical examiner’s office should have *implicit* [read *complete*] confidence in the skill and professionalism of each other if justice is to be adequately served.” “Benz Should Make Graceful Retreat in Response to ‘No Confidence’ Vote,” *Sun-Sentinel* (Ft. Lauderdale), 20 May 1996, at A8.

See **impliedly**.

LANGUAGE-CHANGE INDEX
implicit for *complete*: Stage 4

implicitly. See **impliedly**.

implied; express. These adjectives are correlative <there are no express or implied warranties>. *Expressed* is sometimes incorrectly contrasted with *implied*. See **express**.

impliedly; implicitly. Though neither form is strictly incorrect, *impliedly* (answering to *expressly*) is awkward and characteristic of LEGALESE. H.W. Fowler wrote merely that “*impliedly* is a bad form” (*FMEU1* at 260). Though unknown to most people, it is a favorite

of lawyers. *Impliedly* is old, dating in the *OED* from ca. 1400. Still, *implicitly*—long the usual term—is normally an improvement. See **implicit**.

Current ratio: 25:1

imply. See **infer** (B).

impolitic, adj. (= not politic; injudicious; imprudent), forms the unusual adverb *impolitically*. Some writers *impolitically* make it **impolitically*—e.g.: “All these solicitations are protected speech and . . . the government may not discriminate among them—even when some of them are *impolitically* [read *impolitically*] and counterproductively ‘surly, bilious, [and] argumentative.’” Stuart Comstock-Gay, “The Panhandler’s Message,” *Baltimore Sun*, 22 Sept. 1994, at A13. See -IC. Cf. **politically**.

LANGUAGE-CHANGE INDEX
**impolitically* for *impolitically*: Stage 1

import, n.; **importation**. A product that comes into a country from abroad is an *import*. The process of bringing it in is *importation*.

importantly. This word is enjoying an odd vogue. Here, Meg Greenfield uses it puzzlingly: “But almost without exception, it seems, the thing [a politician’s prospective embarrassment] comes back and *importantly* it looks worse and gets worse the second time around.” Meg Greenfield, “We’re Wallowing Again,” *Newsweek*, 25 Apr. 1994, at 72. See **more important(ly)** & SENTENCE ADVERBS.

importation. See **import**.

***importunacy**. See **importunity**.

importune is a verb meaning “to beg or beseech; entreat.” It is also a NEEDLESS VARIANT of the adjective *importunate* (= troublesomely urgent) and an obsolete variant of *inopportune*. The intended meaning in the following sentence is not clear, but perhaps *inopportune* would have been the right word: “It is a minor comfort to learn that Soviet audiences in the 1950’s and 60’s coughed as *importunely* [read *inopportunely*] during concerts as their free-world counterparts.” Bernard Holland, “Classical View: Horsepower in Place of History,” *N.Y. Times*, 18 Feb. 1996, § 2, at 33.

LANGUAGE-CHANGE INDEX
importune misused for *inopportune*: Stage 1
Current ratio (*inopportune time* vs. **importune time*): 213:1

importunity; *importunacy. The second is a NEEDLESS VARIANT of the first, which means “irksome tenacity in soliciting something.”

Current ratio: 77:1

impossible. See ADJECTIVES (B).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

***impossible to underestimate.** See **underestimate.**

impostor; *imposter; imposture. The *-or* spelling is preferred over *-er* for the actor. *Imposture*, a term now rarely seen (though common in Early Modern English), is the act of fraud itself or a spurious thing (and of course, the spurious thing could also be the actor). See **-ER (A) & SPELLING (A).**

Current ratio (*impostor* vs. **imposter*): 3:1

impotence. A. And sterility. *Impotence* (/im-pə-tən[t]s/) refers to the inability of a male to copulate (esp. to achieve an erection), and *sterility* to anyone's inability to procreate. *Impotence* in the modern literal sense should be used only in reference to men. **Impotency* is a NEEDLESS VARIANT. See **potence.**

Current ratio (*impotence* vs. **impotency*): 11:1

B. And impetus. *Impotence* for *impetus* (= force, impulse) is a MALAPROPISM worthy of Mrs. Malaprop, Mistress Quickly, or Archie Bunker. E.g.: "The main *impotence* [read *impetus*] for recruiting people who have published is to ensure that they are used to long hours." This is a blunder that professional writers seldom make: most instances occur in unpublished documents.

C. Pronunciation. The word *impotence* is pronounced /im-pə-tən[t]s/—not /im-poh-tən[t]s/. The corresponding adjective is /im-pə-tənt/—not /im-poh-tənt/.

LANGUAGE-CHANGE INDEX
impotence misused for *impetus*: Stage 1

***impower.** See **empower.**

impracticability (= practical impossibility) is sometimes misspelled **impracticability*—e.g.: "The *impracticability* [read *impracticability*] of backing reservoir water back over Hanford reactor sites helped prevent construction of Ben Franklin Dam." Bill Dietrich, "Ecology—An Opportunity or Embarrassment?" *Seattle Times*, 9 Nov. 1992, at D1.

impractical. A. And impracticable. *Impractical* = not manifested in practice; incapable of being put to good use. *Impracticable* = not workable or accomplishable; infeasible. Although *impractical* is considered an ordinary word today and *impracticable* an unusual one, that was not always true: from the late 17th century until the mid-20th, *impracticable* appeared far more commonly in print than its shorter sibling. Cf. **practical.**

B. And unpractical. H.W. Fowler had a point in believing that "the constant confusion between *practicable* and *practical* is a special reason for making use of *im-* and *un-* to add to the difference in the negatives" (*FMEU1* at 260). But *unpractical* has not been used much in AmE since about 1900, and it has been in decline in BrE since 1950. Even so, it occasionally appears (perhaps because of Fowler's influence)—e.g.: "The letter on behalf of Mr. Underwood's 'Ketchup-Only' bill is a spoof on the arguments being made for the English-only bill, an Underwood aide said, adding that the Guam Democrat is seeking to illustrate his point that making English the official language

of the United States is *unpractical*." "Spoof Pours It On in 'Try to Nationalize Ketchup,'" *Toledo Blade*, 20 Oct. 1995. The word *unpractical* isn't included in *W11*, and even in the (British) *COD* the entry under *impractical* is longer than the one under *unpractical* (which is moribund). See **possible (A) & practical.**

Current ratio (*impractical* vs. *unpractical*): 13:1

impregnable; impregnatable. Etymologically, these two words are unrelated—the *g* in *impregnable* having been added by Renaissance philologists who misunderstood the history of the Middle English *imprenable* (= not able to be taken). In any event, the meanings today are also quite distinct. *Impregnable* = not capable of subjugation by force; not subject to being taken by assault. *Impregnatable* = [1] capable of being made pregnant, or [2] capable of being permeated or saturated.

impresario. So spelled. See **SPELLING (A).**

impressive; impressible; impressionable. *Impressive* = likely to impress people <an impressive array of trophies>. *Impressible* (a fairly rare word) = easily impressed <if that doesn't impress you, you're not impressible>. *Impressionable* = easily influenced <impressionable children>.

Impressible is misused for *impressive* especially in the adverbial form—e.g.:

- "There is no doubt that Gayle Martin, who performed *impressibly* [read *impressively*] on the piano at the National Gallery last night, has developed her own personal musical style." Joan Reintaler, "Gayle Martin," *Wash. Post*, 23 June 1980, at C9.
- "And as for whether Reeves can act, he does *impressibly* [read *impressively*] rise a notch above his usual mediocre performances." Kris Dessen, "'Speed' Hits Perfect Pace," *News Trib.* (Tacoma), 11 June 1994, at H2.
- "It was Higgins' *impressibly* [read *impressively*] swinging, persistently groove-driven drumming—along with the sterling work of bassist Haden—that laid the foundation for the Coleman group's free-jazz flights of fancy." Jon Thurber, "Billy Higgins" (obit.), *L.A. Times*, 4 May 2001, Metro §, at 6.

Impressible is the preferred spelling—not **impressable*. See **-ABLE (A).**

LANGUAGE-CHANGE INDEX
impressibly misused for *impressively*: Stage 1

imprimatur; *imprimatura; *imprimature. The normal form for ordinary purposes is *imprimatur* (pronounced /im-pri-mah-tər/ or /im-prim-ə-tər/), meaning literally "let it be printed," from the formula used in the Roman Catholic Church by an official licensor, approving a work to be printed. This term (now meaning "commendatory license or sanction; sponsorship") takes the preposition *on*—e.g.: "The announcement . . . puts Pena's *imprimatur* on a draft proposal that was announced two months ago." "Rocky Flats Cleanup May Speed Up," *Salt Lake Trib.*, 8 Aug. 1997, at A14. **Imprimatura* is a NEEDLESS VARIANT.

**Imprimature* (= a print, impression) is an obsolete term sometimes wrongly used for *imprimatur*—e.g.: “He produced the special under the *imprimature* [read *imprimatur*] of his Daddy’s Krazee production company.” Allan Johnson, “Standup Guy,” *Chicago Trib.*, 26 Dec. 1991, at C15.

LANGUAGE-CHANGE INDEX

**imprimature* for *imprimatur*: Stage 1

Current ratio (in order of headwords): 368:11:1

***improper noun.** See **proper noun.**

***impropriety** is a NONWORD that sometimes displaces *improper*—e.g.:

- “We’ll try to come to grips with the facts and see if there was any *impropriety* [read *improper*] activity.” Michael Eastman, “Supply Purchases for Greenbelt Homes Questioned,” *Wash. Post*, 29 Nov. 1979, Md. Weekly §, at 3 (quoting Joseph Jenkins).
- “If somebody else feels it’s *impropriety* [read *improper*] then they’re just going to have to live with it.” Colleen Heild, “Lottery Meeting Kept Quiet,” *Albuquerque J.*, 4 May 1997, at A1 (quoting Bruce Wiggins).
- “Having seen and heard our president halfheartedly admit to an *impropriety* [read *improper*] relationship, I am now more convinced than ever that this man is a shrewd and pathological liar.” Editorial, “Americans Right to Want Decency in White House,” *Pantagraph* (Bloomington, Ill.), 22 Aug. 1998, at A12.

The word, a BACK-FORMATION from *impropriety*, is highly improper.

LANGUAGE-CHANGE INDEX

**impropriety* for *improper*: Stage 1

Current ratio (*improper* vs. **impropriety*): 11,972:1

improvise is sometimes misspelled **improvize*—e.g.: “Harrelson likes to gamble and *improvize* [read *improvise*] his way out of jams.” Robert Denerstein, “Formula Derails This ‘Money Train,’” *Rocky Mountain News* (Denver), 24 Nov. 1995, at D6.

LANGUAGE-CHANGE INDEX

improvise misspelled **improvize*: Stage 1

Current ratio: 235:1

improviser; *improvisator; *improvisor; improvisatore. The usual term for “someone who improvises” is *improviser*. (The *-or* spelling is not preferred.) **Improvisator* is an archaic FORMALISM. *Improvisatore* is an Italianate literary word meaning “someone who composes verse or drama extemporaneously.”

Current ratio (*improviser* vs. **improvisator* vs. **improvisor*): 23:1.4:1

***improvize.** See **improvise.**

imprudent; impudent. *Imprudent* = rash; indiscreet. *Impudent* = insolently disrespectful; shamelessly presumptuous.

impugn. A. And oppugn; repugn. *Impugn* (= to challenge, call into question) has been the most usual of

these three terms since the late 17th century. E.g.: “In a second ruling today, Judge Sweeney also appeared to *impugn* the church’s handling of accused molesters who had been placed back in parishes after receiving therapy.” Pam Belluck, “Judge Denies Church’s Bid to Seal Records on Priests,” *N.Y. Times*, 26 Nov. 2002, at A18.

Oppugn and *repugn* are less frequently encountered. *Oppugn* = to controvert or call into question; to fight against. *Repugn* is an ARCHAISM meaning “to offer opposition or strive against; to affect disagreeably or be repugnant to.”

B. For impute. This is a strange error, *impute* meaning “to ascribe or attribute.” E.g.: “Overall, Kupetz rejected the notion that a court should simply ignore the actual intention of the parties and *impugn* [read *impute*] constructive intent in every instance.” Irving D. Labovitz, “Countering Fraudulent Conveyance and Voidable Preference Concerns in LBOs,” *J. Commercial Lending*, Mar. 1993, at 34. See **impute.**

LANGUAGE-CHANGE INDEX

impugn misused for *impute*: Stage 1

C. Corresponding Noun. *Impugnment* is the standard noun corresponding to *impugn*. **Impugnation* is an obsolete variant. For the mistaken form **impugnity* (for *impunity*), see **impunity (b).**

Current ratio (*impugnment* vs. **impugnation*): 2:1

impunity. A. Meaning and Use. This word means “free from punishment or other adverse consequences”; it typically appears in the idiom *with impunity* <she can fire her predecessor’s staff with impunity>.

Sometimes this SET PHRASE, *with impunity*, gets mangled into **without impunity* (which seems to suggest that punishment or adverse consequences would follow, but that’s never the intended sense). This error appears most frequently in sportswriting—e.g.:

- “Without Camby patrolling the middle, the Pacers drove to the hoop *without impunity* [read *with impunity*].” Marc Berman, “Knicks Say No Camby, No Excuses,” *N.Y. Post*, 11 Nov. 2001, at 102.
- “I would have the NCAA . . . [a]llow athletes to transfer to another school *without impunity* [read *with impunity*], should their head coach leave for a job elsewhere.” Kirk Bohls, “Some Prudent Suggestions for the NCAA,” *Austin Am.-Statesman*, 27 Jan. 2002, at C1.
- “Reggie Miller is 36, still firing jumpers [i.e., jump shots] *without impunity* [read *with impunity*], still building his Hall of Fame resume at an age when most great two-guards have lost their legs, lost their desire, lost their passion and nerve and mental edge.” Dave D’Alessandro, “Miller May Be Down to His Final Shot,” *Star-Ledger* (Newark), 28 Apr. 2002, Sports §, at 7.

For more on this word, see **immunity.**

LANGUAGE-CHANGE INDEX

**without impunity* for *with impunity*: Stage 1

Current ratio (*with impunity* vs.

**without impunity*): 235:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. *Impugnity. Some writers apparently confuse the word *impunity* as having some association with *impugn* (= to assail the integrity of [a person, a person's motives, etc.])—e.g.:

- “Did they mean to threaten and compromise the security of the United States so as to pursue with *impugnity* [read *impunity*] their designs in Berlin and elsewhere?” Terence Ball, *Idioms of Inquiry* 105 (1987).
- “[T]he institutions of punishment and imprisonment have the responsibility to sustain the very lives that enter their domains precisely because they have the power, in the name of ‘ethics,’ to damage and destroy lives with *impugnity* [read *impunity*].” Judith Butler, *Giving an Account of Oneself: A Critique of Ethical Violence* 37 (2003).

LANGUAGE-CHANGE INDEX

impunity misspelled **impugnity*: Stage 1
Current ratio: 3,944:1

impute (= to ascribe; to regard [usu. something bad] as resulting from or being possessed by) takes *to*. There is a growing idiomatic bias in favor of *imputing* undesirable things or qualities—e.g.:

- “‘That in no way reflected my being,’ she said in an interview, *imputing* the nude photos to ‘a few foolish days of being stupid.’” Louise Continelli, “Vanessa’s Revenge,” *Buffalo News*, 23 June 1996, at G1.
- “The State House is fertile ground for rumors and speculation that *impute* motive to every pronouncement and bit of posturing by the major players.” Brian C. Mooney, “Finnernan Challenge,” *Boston Globe*, 1 Feb. 1997, at B2.
- “Rambo seems reluctant to *impute* unsavory motives to either pastor, and there are no sex or accounting scandals in this church.” Margaret Gray, “Competition in Clergy,” *L.A. Times*, 24 Aug. 2015, Calendar §, at 3.

See **impute (B)**.

I myself. See **myself & I personally**.

IN-. See **EN- & NEGATIVES (A)**.

in; into. These prepositions aren’t ordinarily interchangeable, and care must be taken in choosing between them: *in* denotes position or location, and *into* denotes movement. So a person who swims *in* the ocean is already there, while a person who swims *into* the ocean is moving from, say, the mouth of a river. There are many exceptions, however, especially with popular idioms <go jump in a lake>.

inability. See **disability (A)**.

in absentia (= not present), typically used in legal contexts, is sometimes misspelled **in abstentia*—e.g.: “Congress holds the key. It can permit courts to hold trials of defendants ‘*in abstentia* [read *in absentia*],’ with the defendants not present.” Dan Robinson, *Nuevo Laredo: A Prelude to War* 361 (2009).

in accord; in accordance. See **accord, n.**

in a . . . context. See **context of**.

in actual fact. See **fact (C)**.

in actuality. This phrase, which became vogueish during the 20th century, is virtually always inferior to *actually*.

inadmissible. So spelled. **Inadmissible* is a common misspelling. See **-ABLE (A)**.

inadvertence; inadvertency. The DIFFERENTIATION between these terms should be carefully observed. *Inadvertence* = an inadvertent act; a fault of inattention. *Inadvertency* = the quality or state of being inadvertent <the inadvertency of the act is not disputed>. **Inadvertancy* is a common misspelling.

inadvisable; *unadvisable. The latter, though common in the 19th century, has become a NEEDLESS VARIANT.

inalienable; unalienable. The first is slightly better formed, with a Latinate prefix as well as suffix. And although Jefferson used *unalienable* in the Declaration of Independence (“unalienable rights”)—that form predominated in the 18th century—*inalienable* is nearly five times as common as *unalienable* in modern print sources. Hence *inalienable* is preferable in all contexts except those where the Declaration of Independence is directly quoted or cited. But even then, *unalienable* is often displaced—e.g.: “The Declaration of Independence offered a remarkable mission statement, ‘We hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain *inalienable* [read *unalienable*] Rights.’” Tristram Hunt, “Can Obama Purge America’s Original Sin?” *Times* (London), 30 Aug. 2008, Features §, at 17.

***inalterable.** See **unalterable**.

in a — manner. See **manner**.

inanity; inanition. As the noun corresponding to *inane*, *inanity* means “intellectual or spiritual emptiness or shallowness; vapidness.” *Inanition*, by contrast, means “emptiness from lack of nourishment.” *Inanition* sometimes gets misused for *inanity*—e.g.: “Elvis didn’t have to appear in just ‘Elvis movies,’ those formulaic monuments to cinematic *inanition* [read *inanity*], full of females, fistfights, forgettable songs—and little else.” Mark Feeney, “Elvis Movies,” *Am. Scholar*, Winter 2001, at 53, 54.

LANGUAGE-CHANGE INDEX

inanition misused for *inanity*: Stage 1

in any event; at all events. These phrases are perfectly synonymous. The first is somewhat more common in AmE, the second in BrE. The BrE phrase is a loan translation of the French *à tous événements*.

inapposite (= inappropriate; irrelevant) is sometimes misspelled **inopposite*—e.g.: “Federal laws governing probate and land use can lead to results *inopposite* [read *inapposite*] to traditional laws for communal property.” David S. Case & David A. Voluck, *Alaskan Natives and American Laws* 117 (3d ed. 2012).

Current ratio: 216:1

inapt; unapt; inept. Although these words overlap in meaning, they can be usefully distinguished. *Inapt* = not suitable, fitting, or appropriate <an inapt

quotation>. *Unapt* = not likely or inclined <she is unapt to tolerate laziness>. *Inept* = lacking aptitude; clumsy; incompetent; foolish <an inept basketball player who can't dribble, pass, or shoot>. Although *inept* can also mean "inappropriate," that sense is rare today. And because the word is usually intended as an insult, it's an inapt choice in other contexts.

in arrears. See **arrear(s)**.

inartistic; unartistic. *Inartistic*, which refers to people, means "lacking in artistic taste; not appreciative of art" <a workaday, inartistic writer of pulp fiction>. *Unartistic*, which refers to things, means "not relating or conforming to art" <an unartistic photograph>.

inasmuch as; in as much as; insofar as; in so far as. In AmE, the standard spellings are *inasmuch as* and *insofar as*. In modern BrE, usage is split: *inasmuch as* is standard, and *in so far as* is preferred as four separate words.

However the phrase is spelled, though, *inasmuch as* is almost always inferior to *because* or *since*. In fact, as H.W. Fowler noted, "its only recommendation as compared with *since* is its pomposity" (*FMEUI* at 263). See **insofar as**. Cf. **insomuch**.

inaugural, n.; inauguration. The ceremony for a president entering office is the *inauguration*; the speech the president makes on this occasion is the *inaugural address*, sometimes shortened to *inaugural*. The word is correctly pronounced with the liquid *-u-* sound in the penultimate syllable: /i-**naw**-gyə-rəl/.

inaugurate is a FORMAL WORD (some might say pompous) for *begin* or *start*, being more formal even than *commence*. Little has changed since Richard Grant White wrote that *inaugurate* "is a word [that] might better be eschewed by all those who do not wish to talk high-flying nonsense." *Words and Their Uses, Past and Present* 128 (2d ed. 1872). Cf. **initiate**.

in back of. See **back of**.

in behalf of; on behalf of. See **behalf**.

Inc. Unless otherwise required by syntax, a comma need not follow this abbreviation—e.g.: "Pantheon, Inc. was founded in 1998." Nor does a comma have to precede it, although typically one does. Modern journalistic style is to omit both commas. For the comma before *Inc.*, though, it's best to follow the individual company's preference. Cf. **NAMES (B)**.

incapable; unable. The words are basically synonymous, with perhaps a slight difference in connotation. *Incapable* suggests a permanent lack of ability <an incapable worker>, while *unable* often suggests a temporary lack of ability <I'm unable to accept your offer right now>. But these are hardly absolutes: if you're

unable to lift 500 pounds, there's no implication that you'll ever be able to.

incapacitation; incapacity. These words should be distinguished as follows: *incapacitation* = the action of incapacitating or rendering incapable; *incapacity* = lack of ability or qualification in some legal respect. See **capacity**.

in case; in cases in which. See **case (A)**.

***incase.** See **encase**.

***incentivize; *incent,** vb. These NEOLOGISMS—dating from the mid-1970s—have become VOGUE WORDS, especially in American business JARGON. E.g.:

- "Together, the programs represent the most aggressive *incentivizing* to date by Honda." "Subaru, BMW Are Now Offering Consumer-Incentive Programs," *Atlanta J.-Const.*, 15 Mar. 1991, § S, at 6. (A possible revision: *Together, the programs provide the best incentives that Honda has ever offered.*)
- "And you know, we shouldn't *incent* [read *provide incentives for*] all the wrong behaviors. Right now, what we're doing is *incenting* [read *encouraging*] young girls to leave home, to not marry the person they're . . . having a child with because they won't get the welfare check if they're married." Jack Thomas, "Ann Romney's Sweetheart Deal," *Boston Globe*, 20 Oct. 1994, at 61.
- "Today it is management—usually *incentivized by stock options and the like* [read *having stock options and other incentives*]*—*that seeks to be recognized by institutional shareholders." Benjamin Mark Cole, "New Economic Pressures Force Banks to Cut Costs, Consolidate," *L.A. Bus. J.*, 24 Mar. 1997, at 29.

***Incentivize**, an *-IZE* barbarism, is much more common than ***incent**, a BACK-FORMATION. There is no good incentive to use either one.

LANGUAGE-CHANGE INDEX

1. ***incentivize**: Stage 2

2. ***incent**: Stage 1

Current ratio (*to provide incentive* vs. **to incent*): 3:1

inception; incipency. Both words mean "beginning, commencement, initiation." The difference is that *inception* refers to the action or process of beginning, while *incipency* refers to the fact or state of having begun. *Inception* is far more often the appropriate word.

inchoate. A. Meaning and Pronunciation. *Inchoate*, pronounced /in-**koh**-it/ in AmE and /in-**koh**-ət/ in BrE (always three syllables), means "just begun; in the early stages of forming; not fully developed"—e.g.: "American understanding of Islamic terrorism then was still *inchoate*. Al-Qaida was barely on the screen." Terry McDermott et al., "Al-Qaida 'Engineer' Slips DragNet," *Newsday* (N.Y.), 27 Dec. 2002, at A42.

B. And choate. The prefix is an intensive *in-*, not a negative or privative *in-*. So the BACK-FORMATION

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

choate (= complete)—premised, as it is, on the notion that *inchoate* is a negative—makes little sense. But it's now established in law <choate lien>.

C. And chaotic. Because what is undeveloped is usually also confused and incoherent, the context in which *inchoate* is used often suggests those errant senses. The resemblance of *-choate* to *chaotic* probably reinforces this misunderstanding. For whatever reason, *inchoate* is often misused to mean something more like *chaotic* than *aborning*—e.g.:

- “Valencius concludes that . . . American settlers ‘transformed a landscape they experienced as wild and *inchoate* [read *alien*?] into the familiar and understood.” Myron A. Marty, “Book Links Health of Missouri, Arkansas Pioneers to the Land,” *St. Louis Post-Dispatch*, 22 Dec. 2001, at G10.
- “Surrounded by an *inchoate* [read a *chaotic*] household of prostitutes and ruffians, the good-hearted Lick survives a brutal correctional school, masters the steamy new music, rubs shoulders with Louis Armstrong and Kid Ory and pines for his high-yellow stepsister, Sylvie.” Mark Rozzo. “First Fiction,” *L.A. Times*, 24 Nov. 2002, Book Rev. §, at 14.
- “But when Thursday night came, Satre found the words, talking about how it is possible to fall in love with institutions—Stanford, in his case—and ‘even something as *inchoate* [read *chaotic*?] as a company, Harrah’s.” Thomas J. Walsh, “Phil Satre Stepping into Elder Statesman’s Role,” *Reno Gaz.-J.*, 12 Jan. 2003, at E1.

LANGUAGE-CHANGE INDEX
inchoate misused for *chaotic*: Stage 1

D. And innate. Harder to understand is the misuse of *inchoate* to mean “innate” or “inherent”—e.g.:

- “A bored and sophisticated American couple, Port and Kit Moresby, travel to North Africa, where the heat and light and estranging landscape, the incomprehensible languages and customs and *inchoate* [read *innate*?] sensuality unmoor them psychologically and emotionally.” Fredric Koepfel, “Library of America Adds Stauch Exile to List,” *Commercial Appeal* (Memphis), 2 Feb. 2003, at F1.
- “Music Man is not one of the most wise or even coherent products of American musical theater. . . . But, like Oklahoma, it can be mesmerizing in all its energy, optimism and certainty about the *inchoate* [read *inherent*?] goodness of the American character.” David Zurawik, “Forecast: Warm Glow Moves In from River City, Iowa,” *Baltimore Sun*, 16 Feb. 2003, at F14.

LANGUAGE-CHANGE INDEX
inchoate misused for *innate*: Stage 1

incident; incidence. A. Meanings. Although these words overlap, their primary senses are distinguishable. An *incident* is an occurrence or happening <several unfortunate incidents led to the curfew>. Though *incidence* sometimes bears this sense, it more often means “the rate of occurrence” <a high incidence of truancy>. In fact, whenever *incidence* appears where *incident* would fit, a switch is probably in order—e.g.:

- “In the last couple of years there have been several *incidences* [read *incidents*] of applause in the middle of movements.” Richard Dyer, “No Encore of This Audience, Please,” *Boston Globe*, 9 Oct. 1998, at D15.

- “There were several *incidences* [read *incidents*] of unruly behavior by fans, players, and LSU band members.” Michael DiRocco, “Alabama Coach in Denial Mode,” *Fla. Times-Union*, 7 Dec. 2001, at C4.
- “Police don’t have simple answers for these unrelated *incidences* [read *incidents*], but they believe it could be a combination of drugs, gangs, population spurts, socioeconomics and heat-of-the-moment exchanges.” Javier Erik Olvera, “String of Homicides Stuns Tulare,” *Fresno Bee*, 16 Mar. 2003, at A1.

This error is common in educated speech. Also, beware that *incidents* and *incidence* are homophones that may give listeners trouble.

LANGUAGE-CHANGE INDEX
incidence misused for *incident*: Stage 2

B. Incident Meaning “accident.” See EUPHEMISMS.

incidentally. A. Generally. This SENTENCE ADVERB commonly introduces casual asides and minor digressions—e.g.:

- “The dictionary says a schmuck is a person who is ‘clumsy or stupid; an oaf.’ (*Incidentally*, there are four people named Oaf with phone listings.)” Mike Royko, “Downloading Some Lowdown Computer Statistics,” *Houston Chron.*, 20 Jan. 1995, Houston §, at 2.
- “*Incidentally*, the best-tailored trousers have a cuff, from 1 1/4 to 1 1/2 inches wide.” Lois Fenton, “Flood Pants’ Shrink Image,” *Chicago Sun-Times*, 15 Feb. 1997, § 2, at 37.

H.W. Fowler’s observation, though too harsh, still holds a kernel of truth: “those who find it most useful are not the best writers” (*FMEUI* at 264).

B. And incidently. *Incidentally* means “loosely, casually” or “by the way.” *Incidently* (a rare word that the *OED* labels obsolete) means “so as to be incident to or resultant from; so as to depend on or appertain to something else.” The most common mistake with these words is to misspell *incidentally*, no doubt because of the pronunciation—e.g.:

- “*Incidently* [read *Incidentally*], her openness is an indicator of the good quality of your relationship with her as well.” Sylvia B. Rimmq, “Parents Sleeping Nude Shouldn’t Bother Child,” *Plain Dealer* (Cleveland), 18 Jan. 1997, at E2.
- “Its walls and windows can repel fire from .50-caliber guns—which, *incidently* [read *incidentally*], are on the prohibited equipment list, along with grenade launchers and weaponized aircraft.” Callum Borchers, “Obama Order Spares Mass. Firm,” *Boston Globe*, 21 May 2015, at A1.

Cf. **accidentally.**

LANGUAGE-CHANGE INDEX
incidently misused for *incidentally*: Stage 1

incident to; incidental to. Though to some extent interchangeable historically, these phrases have undergone a plain DIFFERENTIATION that has gained acceptance among stylists. *Incidental to* means “happening by chance and subordinate to some other thing; peripheral”—e.g.: “Inside a Niketown or the REI store in Seattle, shopping seems *incidental to* the spectacle of the store.” Hugo Kugiya, “What’s in Store?” *Seattle Times*, 19 Oct. 1997, at 16.

Incident to is a legalism meaning “closely related to; naturally appearing with”—e.g.: “The government

argued that the search of the Cadillac's passenger compartment was permissible since it was *incident to* Adam's arrest." "Search & Seizure," *Chicago Daily Law Bull.*, 11 July 1994, at 1. Over the history of Modern English, *incident to* has appeared in print far more frequently than *incidental to*.

incipiency. See **inception**.

incipient; insipient. The former means "beginning, in an initial stage"; the latter is an obsolete word meaning "unwise, foolish." But *incipient* is often misspelled with an *-s-*—e.g.:

- "Mexico lost little time reasserting itself as a no-nonsense nation renowned for dealing in summary justice. *Insipient* [read *Incipient*] terrorism was brutally repressed for a couple of years, then burst forth between 1972 and 1975." Bill Waters, "Guatemalan President Cautious," *Ariz. Republic*, 4 May 1986, at C6.
- "Allen devised a program for factory workers at Bridgeport Machines to detect the signs and symptoms of angina pain and *insipient* [read *incipient*] heart attacks." James Lomuscio, "First a Checkup, Then to Baseball," *N.Y. Times*, 6 Aug. 1995, at CN13.
- "What's more, [Ralph Nader] has tapped into an *insipient* [read *incipient*] social movement that raised its voice even before his candidacy came along." Salim Muwakkil, "Gore: Our Defense Against a 3-Headed Beast," *Chicago Trib.*, 6 Nov. 2000, Commentary §, at 17.

Given the rarity of *insipient*, it's a little surprising to see it used correctly—e.g.:

- "But spare us the inevitable flood of self-satisfied, self-congratulatory interviews that will follow this *insipient* actor's [i.e., Michael Caine's] resurrection, rendering indigestible our morning coffee." Letter of Richard Harris, "A Sharp Kick from a Man Called Horse," *Sunday Times* (London), 6 Aug. 1995, § 3, at 8.
- "*Insipient* proposals to create and raise taxes are hardly what D.C. officials had in mind when they established the commission in 1996." Editorial, "Kill the Lawyers' Tax," *Wash. Times*, 4 May 1998, at A16.
- "Some legislators tried to change the constitution to allow (and therefore guarantee) unequal and ineffective public education in Texas. Fortunately, they failed to convince their less *insipient* colleagues and the public of the merits of their ambition." Editorial, "Texas Public School Finance Needs Efficiency Experts," *Houston Chron.*, 8 July 2001, Outlook §, at 2.

LANGUAGE-CHANGE INDEX
insipient misused for *incipient*: Stage 1

***incitation.** See **incitement**.

inciteful; *incitive; *incitative; *incitatory; incitant. What is the adjective meaning "tending to incite"? Most American dictionaries don't list one, and the *OED* merely records sparse and ancient examples of **incitive*, **incitative*, and **incitatory*—all of which should today be considered NEEDLESS VARIANTS of *inciteful*. This word is a legal NEOLOGISM that first

appeared in mid-20th-century AmE. Today it is fairly common even outside law—e.g.:

- "He is not going to be dragged into any warfare with Reggie Miller, the undisputed king of the *inciteful* comment. But just because Latrell Sprewell won't engage in verbal jousting does not mean he will in any way back down." Paul Schwartz, "Spree—Reggie War Brewing," *N.Y. Post*, 25 May 2000, at 92.
- "Oslo was mortally wounded the day the Palestinian leader issued his first *inciteful* message to an Arabic-speaking crowd." Julian Schvindlerman, "Oslo's Collapse," *Wash. Times*, 21 Nov. 2000, at A17.
- "They [the essays] are almost always *inciteful*, occasionally insightful, witty, moving, revealing, and intelligent, and invariably universal." Curt Schleier, "Wasserstein Discovers Birth, Loss and Her WASP Roots," *Grand Rapids Press*, 20 May 2001, at J6.

The word has two unfortunate qualities. First, it is anomalously formed. Unlike most words ending in *-ful*, it doesn't consist of a [noun +] *-ful* construction (as with *beautiful*, *colorful*, *hurtful*, *merciful*, *pitiful*), but of [verb +] *-ful*. That's quite unusual. Second, the word is liable to confusion with its homophone, *insightful*—e.g.: "That may not be the most *inciteful* [read *insightful*] analysis of human nature. But under those circumstances it'll do." Janet Maslin, "Terrifying a Mass Killer with Pure Brain Power," *N.Y. Times*, 20 Dec. 2001, at E10. Where the word isn't clearly a mistake, as in that quotation, the reader (and the listener more so, with no spelling clue) may have to think twice to know whether you are condemning your subject's inflammatory comments or praising your subject's enlightening observations. So for *inciteful*, consider using an unambiguous alternative such as *antagonistic*, *incendiary*, or *provocative*.

Incitant is both a noun meaning "an activating agent" and an adjective meaning "activating." But that rare word pertains to physical rather than emotional causation: things that trigger disease or chemical reactions, for example.

LANGUAGE-CHANGE INDEX
inciteful misused for *insightful*: Stage 1

incitement; *incitation. The latter is a NEEDLESS VARIANT.

Current ratio: 26:1

inclement (= unmerciful, stormy) is increasingly replaced by the MALAPROPISM and NONWORD **inclimate*. Because *inclement weather* is such a common phrase—a SET PHRASE, really—many have come to hear the phrase as a redundant comment on the *climate* as well as the *weather*. Hence the erroneous **inclimate weather*—e.g.:

- "Because of the soggy turf and *inclimate* [read *inclement*] weather Thursday, the Bears practiced at South Park instead of behind their traditional Halas Hall facility."

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Fred Mitchell, "Bits & Pieces on Chicago's Teams," *Chicago Trib.*, 20 Oct. 1989, at C11.

- "The Cotton Bowl Classic, always threatened by *inclimate* [read *inclement*] weather, had to live with IRS audits, internal squabbling and increased competition from other major bowls in the 1990s." "What Killed the SWC?" *Dallas Morning News*, 6 Aug. 1995, at B13.
- "Worcester State plays host to the Central Mass./Western Mass. Super Bowls Dec. 7, and in the event of *inclimate* [read *inclement*] weather, Belmont, Mansfield, and Catholic Memorial are possible backup sites for EMass games." Chris Forsberg, "MIAA Declares Two Sites Super," *Boston Globe*, 16 May 2002, at C10.

In pronouncing the word, stress the second syllable, not the first.

LANGUAGE-CHANGE INDEX

Current ratio (*inclement* weather vs.
**inclimate* weather): 781:1

***incline**. See **encline**.

***inclosure**. See **enclosure**.

***includable**. See **includible**.

include. **A. Introducing Exhaustive or Nonexhaustive List.** The word has traditionally introduced a non-exhaustive list but is now coming to be widely misused for *consists of*—e.g.: "The Department of Public Safety report detailing the reprimand was released to the AP . . . one day after the all-male, three-member Public Safety Commission cleared the Rangers of wrongdoing in a separate sexual harassment charge. [¶] The [three-member] commission—which *includes* [read *consists of*] Robert Holt of Midland, James Francis of Dallas and Ronald Krist of Houston—said it would continue to investigate whether any changes in policy are needed." Chip Brown, "Bush Defends Rangers Amid Allegations of Discrimination," *Austin Am.-Statesman*, 14 July 1995, at B1. Only three people are on the commission, and all are named.

Hence the age-old lawyers' phrase *including but not limited to* is, strictly speaking, a REDUNDANCY. See Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts* 132–33 (2012).

B. To include. Use of the phrase *to include* to mean "including" is a silly bit of OFFICIALESE. Unfortunately, it's much too common in military, healthcare, and legal writing—e.g.:

- "Mrs. Vieira consented to a search of the *home to include* [read *home, including*] their home computer." *U.S. v. Vieira*, 64 M.J. 524, 527 (A.F. Ct. Crim. App. 2006).
- "As an initial matter, this case demonstrates that a hospital can be held liable for the acts of the personnel working at the facility, *to include* [read *including*] doctors." Blake J. Delaney, "Improper Use of Forceps Results in Large Federal Tort Verdict," *Healthcare Risk Mgmt.*, 1 Feb. 2007.

includible. Predominantly so spelled in all varieties of English—not **includable*. Weirdly enough, its antonym is spelled *excludable*. See -ABLE (A).

Current ratio: 3:1

inclusive. This word is often helpful in expressing lengths of time. For example, the phrase *from November 1 to December 15 inclusive* makes it clear that both the starting date and the ending date are included; without the word *inclusive*, the meaning is debatable.

incognito (= [1] in disguise; or [2] under an assumed name) is sometimes misused for *incommunicado* (= unable, unwilling, or forbidden to communicate with others)—e.g.:

- "The crackdown, which began almost two weeks ago, has included the arrest and imprisonment of activists, some of whom are apparently being held *incognito* [read *incommunicado*] in Cuban jails." "Over Cuba: Castro Shows Again That He's Not to Be Trusted," *Houston Chron.*, 27 Feb. 1996, at A18.
- "The reporter for U.S.-funded Radio Liberty has yet to tell the full story of his arrest, his days held *incognito* [read *incommunicado*] by Russian troops and the weeks that followed the prisoner exchange." Jamie Dettmer, "Putin Revives Soviet-Style Media Curbs in Russia," *Wash. Times*, 27 Feb. 2000, at C12.
- "Warring with this nation's tradition of freedom, the Bush administration . . . [h]as rounded up hundreds of foreign nationals living in the United States and has held them *incognito* [read *incommunicado*]." Gregory Stanford, "Fight Against Terror Must Not Trample Rights," *Milwaukee J. Sentinel*, 8 Sept. 2002, Crossroads §, at J1.

Although the traditional pronunciation was /in-kog-ni-toh/, the standard today is /in-kog-nee-toh/.

LANGUAGE-CHANGE INDEX

incognito misused for *incommunicado*: Stage 1

incommensurate; incommensurable. See **commensurate**.

in common with occasionally displaces *like* from its rightful place—e.g.: "Houdini, however, wanted to be special. *In common with* [read *Like*] many other entertainers of the time (including Al Jolson and Irving Berlin), he was the son of a rabbi." Andrew Rosenheim, "Escapes of an Egotist," *TLS*, 5 Nov. 1993, at 24. See **like** (C).

***incommunicative**. See **uncommunicative**.

incomparable; noncomparable; *uncomparable. *Incomparable* (= so good as to be beyond comparison) is the usual word; it has been in common use since the 15th century. *Noncomparable* (= not similar enough to something else to allow comparison) emerged in the early 20th century to rival its synonym, **uncomparable*. By 1940, *noncomparable* had been established as standard. **Uncomparable* remains a NEEDLESS VARIANT.

The words are pronounced /in-kom-pər-ə-bel/ and /non-kom-pər-ə-bel/. Don't stress the third syllable.

incompetence; incompetency. A growing distinction exists between these forms, especially in law. Reserve *incompetency* for contexts involving sanity or ability to stand trial or to testify; use *incompetence* when referring to unacceptable levels of performance. See **competence**.

INCOMPLETE SENTENCES. A. Fragments. Grammarians typically define *fragment* as a part of a sentence punctuated as if it were complete. Usually denoting an error—as opposed to literary license—the term *fragment* (or *frag.*) appears frequently in the marginal jottings of high-school and college English teachers. That is to say, some high-school and college students don't know how to write complete sentences. Hence elementary grammars warn against constructions such as the following one, in which a main clause and a subordinate clause are each written as a complete sentence:

We usually go to the fair in the evening. Because everything is more glamorous under the lights.

Ex. fr. Philip Gucker, *Essential English Grammar* 133 (1966).

The fragment might be corrected in any of several ways:

We usually go to the fair in the evening because everything is more glamorous under the lights.

We usually go to the fair in the evening; everything is more glamorous under the lights.

We usually go to the fair in the evening. Everything is more glamorous under the lights.

This type of elementary problem rarely occurs in the writing of those who know enough about writing to be able to construct complete sentences. (The more frequent problem is **RUN-ON SENTENCES**, which occur when writers punctuate two sentences as if they were one.) Therefore, basic advice on avoiding fragments—"don't write a phrase or dependent clause as if it were a complete sentence"—is of limited utility to most writers. Further, for reasons discussed in (B), that advice might be misleading.

B. Incomplete Sentences in Informal Writing.

Grammarians' definitions of the word *sentence* range widely. Here's a sampling:

- "A sentence is a group of words containing a subject and a predicate and expressing a complete thought." C. Rexford Davis, *Toward Correct English* 1 (1936).
- "A complete sentence says something about something." Robert M. Gorrell & Charlton Laird, *Modern English Handbook* 195 (2d ed. 1956).
- "Sentence [means] a group of words consisting of a finite verb and its subject as well as any complement that may be present and any modifiers that belong to the verb, to the subject, to the complement, or to the entire statement, the whole group of words constituting a grammatically complete statement, i.e., a statement that is clearly not part of a larger structure." Ralph M. Albaugh, *English: A Dictionary of Grammar and Structure* 170 (1964).
- "A sentence is a combination of words so connected as to express a complete thought: Man is mortal. Is man mortal? How mortal man is?" James C. Fernald, *English Grammar Simplified* 161 (Cedric Gale ed., 2d ed. 1979).

Given that the word *complete* appears in each of those definitions, one might surmise—as many writers believe—that it is impossible to write an *incomplete* sentence and still be within the bounds of good usage.

Yet the more sophisticated grammarians have long qualified the notion of "completeness." The great linguist Otto Jespersen defined *sentence* as "a (relatively) complete and independent unit of communication . . .—the completeness and independence being shown by its standing alone or its capability of standing alone, i.e. of being uttered by itself." *Essentials of English Grammar* 106 (1933; repr. 1964). Similarly but more specifically, C.T. Onions defined *sentence* as a group of words—or sometimes a single word—that makes a statement <I'm a tennis enthusiast>, a command <Open the window>, an expression of a wish <Let's go>, a question <How are you?>, or an exclamation <What a deal!>. *Modern English Syntax* 1 (B.D.H. Miller ed., 1971). More recently still, a dictionary of grammar states that a sentence "usually" has a subject and a predicate. Sylvia Chalker & Edmund Weiner, *The Oxford Dictionary of English Grammar* 358 (1994). And Sidney Greenbaum commented, "The traditional definition of a sentence states that a sentence expresses a complete thought. The trouble with this notional definition is that it requires us to know what a complete thought is." *The Oxford English Grammar* 308 (1996).

It appears possible, then, for a sentence to be "incomplete"—i.e., with a subject or verb that is at best implicit—without being "incorrect." Jespersen called one type "amorphous sentences," noting both that they are "more suitable for the emotional side of human nature" and that it would be impossible to say precisely what is "left out." *Essentials* at 105, 106. Examples are *Yes! / Goodbye! / Thanks! / Nonsense! / Of course! / Why all this fuss? / Hence his financial difficulties!* *Ibid.* at 105–06.

More modern authorities agree—e.g.:

- "Experienced writers know how to use fragments deliberately and effectively—noun phrases and verb phrases that add a detail without a full sentence and invariably call attention to themselves." Martha Kolln, *Rhetorical Grammar* 190 (3d ed. 1999).
- "Only the most tin-eared, fuddy-duddy excuses for copy editors routinely convert every single fragment they see into a complete sentence." Bill Walsh, *Lapsing into a Comma* 201 (2000).

More than a dozen types of verbless sentences occur in modern prose. As the examples below illustrate, the important quality in each type is that the sentence be short enough that the reader will recognize it as purposely incomplete:

- **Transitional:** "It will be worth our while to consider the loans from a few languages, as they have great cultural importance. First the Dutch." Otto Jespersen, *Growth and Structure of the English Language* 158 (9th ed. 1938).
- **Afterthought:** "I write entirely to find out what I'm thinking, what I'm looking at, what I see and what it means. What I want and what I fear." Joan Didion, "Why I Write" (1976), in *The Living Language* 397, 399 (Linda A. Morris

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- et al. eds., 1984). / "Although most Americans sense that they live within an extremely complicated system of social classes and suspect that much of what is thought and done here is prompted by consideration of status, the subject has remained murky. And always touchy." Paul Fussell, *Class 1* (1983).
- **Emphatic:** "As a rough principle enjoining on the ordinary writer the necessity for a careful choice of words, this statement contains a modicum of truth. But only a modicum." G.H. Vallins, *The Best English 28* (1960; repr. 1973).
 - **Signaling an emphatic appositive:** "Disorder, redundancy, omission, ambiguity in general. These are the four by-ways into which we stray from the highroad of good English." Janet Rankin Aiken, *Commonsense Grammar 32* (1936). / "Young editors and also so-called mature adults are sometimes unable to make publishing judgments because of certain emotional or mental blocks. The question of values arises. Integrity. Morality. Taste. Aesthetics. Standards. These virtues are sometimes obstacles to an editor's business judgment." William Targ, "What Is an Editor?" in *Editors on Editing 4*, 16–17 (Gerald Gross ed., rev. ed. 1985).
 - **Negating:** "All a dying man could utter would be a pre-judgement. Which is absurd." Christopher Ricks, *T.S. Eliot and Prejudice 91* (1988).
 - **Explanatory:** "For the compromise theory the question of justice is a question of balance, and the balance is both impersonal and intuitive. Impersonal because individuals become the instruments of achieving aggregate quantities—of equality as much as of utility. Intuitive because the correct balance must be a matter of inarticulate 'feel.'" Ronald Dworkin, *A Matter of Principle 272* (1985).
 - **Elaborating:** "Or he may confess and avoid: for instance, by admitting that the sheriff had a *capias* to arrest the servant but asserting that he had used excessive violence. And so on, until an affirmative is negated." J.H. Baker, *An Introduction to English Legal History 92* (3d ed. 1990).
 - **Bolstering:** "One needs only to read Terence, Plautus, or Seneca to realize how little human nature has changed in two thousand years. (If it has changed at all, which I doubt.)" Frank Yerby, "How and Why I Write the Costume Novel," in *Writing in America 125, 129* (John Fischer & Robert B. Silvers eds., 1960).
 - **Recanting:** "The Age of Aquarius has finally dawned in Presidential politics. Sort of." Maureen Dowd, "2 Baby Boomers on 1 Ticket: A First, but Will It Work?" *N.Y. Times*, 13 July 1992, at A1.
 - **Undercutting:** "In poetry, [Herbert Read] says, 'there is no time interval between the words and the thought.' A very rash assertion indeed." I.A. Richards, "Herbert Read's *English Prose Style*," in *Complementarities: Uncollected Essays 178, 180* (John Paul Russo ed., 1976).
 - **Imitating the mind's processing of information:** "What kind of boy was this? I had to know. I looked up. I looked directly at him. A skinny fellow with glasses. Small-boned and loose-limbed, and not so tall as I'd first thought. Wearing a loose-fitting jacket and baseball cap. Not, in my estimation, 'cute.'" Monty S. Leitch, "A New Edge to the Dangers of Youth," *Roanoke Times*, 13 Jan. 1997, at A5.
 - **Urgent:** "Never mind the discounts and the espresso; patronize your independent bookseller. Soon. And often." Leonard Garment, "Mid-List Crisis," *Forbes*, 20 Oct. 1997, at 118.
 - **Staccato:** "Men rather than women, black men if possible. Older people rather than younger. Discerning rather than deferential. Shepherds rather than sheep, football buffs

rather than football widows, fans of 'L.A. Law' rather than 'NYPD Blue.' And though there are no longer any blank slates when it comes to O.J. Simpson . . . it's better that they get their news from 'MacNeil/Lehrer' or Newsweek than 'Geraldo!' or The Star. Among lawyers and jury consultants that is the consensus prescription for Mr. Simpson's ideal juror." David Margolick, "Ideal Juror for O.J. Simpson: Football Fan Who Can Listen," *N.Y. Times*, 23 Sept. 1994, at A1.

- **Summing up an emotional circumstance:** "Suppose that you and I are acquaintances and we're in my apartment having a conversation and that at some point I want to terminate the conversation and not have you be in my apartment anymore. Very delicate social moment." David Foster Wallace, "Tense Present," *Harper's Mag.*, Apr. 2001, at 39, 50.

Whatever the purpose, though, the incomplete or verbless sentence carries some degree of risk. You risk not being expert enough to carry it off adroitly. You risk your readers' being suspicious about whether you intended a rhetorical effect or simply failed to finish a complete sentence. You should therefore be wary: "Most writers . . . use the incomplete sentence sparingly, except in reports of conversation. It is a special device, to be used for special effects. In the hands of anyone but an expert, it is usually unsuccessful because the basic patterns have not been established, and missing ideas cannot be supplied." Robert M. Gorrell & Charlton Laird, *Modern English Handbook 202* (2d ed. 1956).

Here, for example, is an ill-advised fragment: "While print people still have every right to be bemused by the rapid shift in conventional wisdom, they would be wise to avoid complacency. Because the industry stands at a very serious crossroads." Rem Reider, "At the Crossroads," *Am. Journalism Rev.*, Mar. 2001, at 6. The writer might have (1) put a dash before *because* (for emphasis), (2) used a comma (see **because (B)**), or (3) omitted the *because* and started a separate sentence. As the sentence stands, though, readers are likely to think they're reading a subordinate clause to be followed by a main clause. So the fragment results in a MISCUE. As a rule, any fragment starting with *because* is suspect for just these reasons.

Incomplete or verbless sentences of the acceptable type are not classified as "fragments," but technically they are precisely that. So it is possible, in good usage, to write fragments. Possible but difficult.

For examples of incomplete sentences beginning with *Which*, see **which (C)**.

incongruous (= not having corresponding or appropriate characteristics; out of keeping) is often misspelled **incongrous*—e.g.:

- "Last night, she turned in an achingly soulful, sorrow-filled rendition of 'Hellhound,' followed by a wonderfully *incongrous* [read *incongruous*], bright and funky take on the violent '32-20 Blues.'" Michael Norman, "Paying Homage to a Master," *Plain Dealer* (Cleveland), 28 Sept. 1998, at D1.
- "Their tinkling calls, so *incongrous* [read *incongruous*] from such gigantic birds, carried across the water mingled

with the cries of gulls and whonks of geese.” Mike Drew, “Portraits of Elegance,” *Calgary Sun*, 3 Apr. 1999, at 33.

The word is preferably accented on the second rather than the third syllable: /in-**kong**-groo-əs/. For the distinction between *congruous* and *congruent*, see **congruent**.

LANGUAGE-CHANGE INDEX
incongruous misspelled **incongruous*: Stage 1

in connection with is almost always a vague, loose connective, often used in reporting wrongdoing. Occasionally—very occasionally—it is the only connective that will do. Use it as a last resort—e.g.: “The F.B.I. was searching for Mr. Bailey *in connection with* the stabbing of his friend, Demming F. Rocker 3d.” “Officer’s Killer Was Told F.B.I. Sought Him, Detectives Say,” *N.Y. Times*, 28 Nov. 1997, at B8. Here, Bailey may have been wanted for help in solving the crime rather than as a suspect.

But when criminal charges have officially been made, *in connection with* is almost always too fuzzy—e.g.:

- “Bonds, 26, whose last address was 4 Linden St., Winthrop, is wanted on multiple warrants *in connection with* [read *for*] an April armed robbery at a Dorchester pizza restaurant.” Ann E. Donlan, “Cops Seeking Murder-Try Suspect,” *Boston Herald*, 28 Nov. 1997, at 16.
- “Bowser, King and Meggerson were arrested shortly afterward and charged *in connection with* [read *with*] another robbery that occurred that day before Wood was wounded.” Glenn E. Rice, “Trial Set for January for Three Men Accused in Shooting a Wyandotte County Deputy,” *Kansas City Star*, 1 Sept. 2015, News §.

Cf. **in this connection**.

inconsistency; ***inconsistence**. Writers on usage formerly tried to distinguish between the forms, reserving *inconsistency* for the sense “the general quality of being inconsistent” and making **inconsistence* mean “an inconsistent act; an instance of being inconsistent.” Today, however, *inconsistency* has ousted *-ce* in all senses. Avoid **inconsistence* as a NEEDLESS VARIANT. Cf. **consistency**.

Current ratio: 143:1

in contrast with; **in contrast to**. These are equally good. See **contrast** (A).

***incontrollable**. See **uncontrollable**.

***increasingly more** is increasingly—or rather, more and more—common as a REDUNDANCY. E.g.: “As the business becomes *increasingly more* [read *increasingly* or *more*] competitive, do publishers care which books they publish or what shape the manuscripts are in when they hit the press?” Roger Cohen, “When a Best Seller Is at Stake, Publishers Can Lose Control,” *N.Y. Times*, 12 May 1991, at E4.

The phrase **increasingly less* is a jarring OXYMORON that would be better rendered *less and less* or

decreasing—e.g.: “[Alien pirates] were highly entertaining when we first saw them in the ‘Star Wars’ cantina 25 years ago; they’ve grown *increasingly less* [read *less and less*] so with every ripoff since.” Joe Miller, “Don’t Dig: ‘Treasure’ Isn’t There,” *News & Observer* (Raleigh), 27 Nov. 2002, at E1.

In fact, *increasingly* is a word that aspiring stylists might do well to jettison from their vocabulary—or at least use less and less.

LANGUAGE-CHANGE INDEX
1. **increasingly more* for *more*: Stage 1
2. **increasingly less* for *less and less*: Stage 1

incredible; **incredulous**. *Incredible* (= unbelievable) has become a VOGUE WORD to describe something that astounds, especially in a pleasing way—e.g.: “Moore combined this with meditations on the *incredible* [read *rare? priceless?*] paintings she found in a warehouse several months after Sargent’s death in 1978.” Susy Schultz, “Troubled Life Leads to Poetic Justice,” *Chicago Sun-Times*, 2 June 1996, at 16.

Incredulous has long meant “disbelieving, doubting, skeptical” <she was incredulous when listening to the story>. E.g.:

- “It took Shoup about 10 minutes to convince George that he wasn’t joking. Then he had to convince [George’s] wife, who was equally *incredulous*.” Susan A. Cantonwine, “Money Will Not Change Lotto Winner,” *Dayton Daily News*, 23 July 1997, at Z41.
- “Secrets spin from his fertile imagination and into the *incredulous* ears of his passengers.” Roger Ebert, “An Implausible ‘Theory,’” *Chicago Sun-Times*, 8 Aug. 1997, at 33.

Although early writers, in the late 16th and early 17th centuries, used *incredulous* as a synonym for *incredible* (= unbelievable), the DIFFERENTIATION between the words has long been settled. Today it must be regarded as a mistake to use *incredulous* interchangeably with *incredible*—e.g.:

- “He said it is *incredulous* [read *incredible*] to accuse him of creating a deficit when he has cut spending by more than \$70 million since he took office.” Diane C. Walsh, “Essex Prosecutor Lashes Back at County Executive,” *Star-Ledger* (Newark), 4 May 1999, at 41.
- “With every report from every scientific organization saying how much the Department of Energy has botched the science or, just as bad, not completed it before recommending the site to President Bush, . . . it seems *incredulous* [read *incredible*] that Bush would plow ahead.” Brian Greenspun, “Yucca Fight Won’t End,” *Las Vegas Sun*, 12 Feb. 2002, at A13.

This distinction was firm even in the early to mid-20th century, when Wodehouse wrote the following: “It contained an offer to swap the cow-creamer for Anatole, and Tom is seriously considering it!” [¶] “I stared at her. ‘What? *Incredulous!*’ [¶] “‘*Incredible*, sir.’ [¶] “‘Thank you, Jeeves. *Incredible!* I don’t believe it. Uncle Tom would never contemplate such a thing for

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

an instant.” P.G. Wodehouse, *The Code of the Woosters* 91–92 (1938; repr. 1976). See **credible**.

LANGUAGE-CHANGE INDEX
incredulous misused for *incredible*: Stage 1
Current ratio (*it is incredible* vs.
**it is incredulous*): 133:1

incriminate; *criminate. The first is now more usual in both AmE and BrE. Although **criminate* was the more common word through the 19th century, today it is a NEEDLESS VARIANT.

Current ratio (*incriminated* vs. **criminated*): 20:1

incrustation; *encrustation. Although *encrust* (not **incrust*) is the verb, the spelling *incrustation* has predominated since the mid-18th century—apart from an anomalous period from 1975 to 2005 (inexplicably). The most prestigious dictionaries correctly put the main headword under *in-*. For more, see **EN-**.

incubus; succubus. An *incubus* is a male demon said to have sex with sleeping women. A *succubus* is a female demon said to have sex with sleeping men. (**Succuba* is a NEEDLESS VARIANT.) Each should be confined to its narrow sense, rather than being used broadly as a synonym for “demon”—e.g.: “Sainte-Croix promptly fled, whereupon Mme. de Brinvilliers leapt upon Briancourt’s back like some crazed *incubus* [read *succubus* or, better, *demon*].” Anne Somerset, *The Affair of the Poisons* 27 (2003). In the mid-1990s, the Reebok shoe company made news by selling a women’s running shoe called the *Incubus*. After being on sale for a year, the shoe was pulled off the market when ABC News reported the gaffe. Apparently the marketing wizards and the trademark lawyers all neglected to consult a dictionary.

The plural forms are *incubi* (or *incubuses*) and *succubi* (or *succubuses*). It might be better to adopt *succubuses*, though, than to lead writers into the inconsistent forms seen in the following sentence: “We discovered that we could fashion medieval *incubuses* and *succubi* [read *succubuses*] not only from blacks but from late 19th-century immigrant hordes.” Florence King, “Current Need to Awaken Dormant Beelzebub,” *Wash. Times*, 12 Nov. 1995, at B8. Some writers would write *incubi* and *succubi*, but see **PLURALS (B)**. Others have wisely espoused *incubuses* and *succubuses* (well, the words, not the things denoted by them)—e.g.: “These days, there are no *incubuses* or *succubuses*, I suspect, but we still have nightmares.” Michael G. Gartner, “Words, Words, Words,” *Courier-J.* (Louisville), 8 Dec. 1991, at D3.

inculcatable. So spelled. See **-ATABLE**.

inculcate (into). **A. And indoctrinate.** *Inculcate* is sometimes misused for *indoctrinate*. Although these are both transitive verbs (i.e., they take direct objects), the nature of the objects is different. One *inculcates* values into people; and one *indoctrinates* people with certain values—e.g.: “Green schools can also *inculcate* green values in students at an impressionable

age.” Bryan Walsh, “Little Green Schoolhouse,” *Time*, 1 Oct. 2007, at 59. So one does not *inculcate* people, but rather values or beliefs or ideas. The mistake is common—e.g.:

- “A way must be found to *inculcate these youth with values* [read *inculcate values into these youths*].” Sharon Pratt Kelly, “Can We Win the Battle for America’s Streets?” *USA Today* (Mag.), May 1994, at 22.
- “But [Chris] Burden said his obsession with such models sprang from some serious thinking over many years about the nature of toys. ‘They’re the tools we use to *inculcate* children into how to be adults, how to live in the world,’ he said.” Randy Kennedy, “An Artist’s Vision,” *N.Y. Times*, 8 June 2008, at A37. (A possible revision: *They’re the tools we use to teach children how to be adults, how to live in the world.*)
- “Sexually loaded media is, unfortunately, a fact of life. The solution then is to *inculcate teens with the knowledge* [read *inculcate into teens the knowledge*] they need to protect themselves.” O. Ricardo Pimentel, “Sex, Sex and More Sex. Got Your Attention?” *Milwaukee J. Sentinel*, 10 Aug. 2008, Crossroads §, at J4. (On *media* is, see **media**.)

H.W. Fowler noted this aberration and called it “a curious mistake” (*FMEU1* at 266). No longer is it curious, but it is still a mistake. See **OBJECT-SHUFFLING**. For more on *indoctrinate*, see **indoctrinate**.

LANGUAGE-CHANGE INDEX
inculcate misused for *indoctrinate*: Stage 3
Current ratio (*inculcated into him* vs.
**inculcated him with*): 4:1

B. And instill. *Instill* usually follows the syntactic pattern of *inculcate* <a commander must instill confidence in the troops>. The terms overlap to a great degree, each one denoting compulsion by persistent repetition. But there are subtleties in their connotations. To *inculcate* a value or belief is to pound it in (a rare second sense of the word is “to trample”). To *instill* it is to build up the value or belief bit by bit (a rare second sense is to introduce a liquid drop by drop). So *instill* carries more positive connotations than *inculcate*, which is closer in nuance to *indoctrinate*. See **instill**.

***inculpable.** See **culpable & inculpable**.

inculpable, not *inculpable*, is the correct form of the word meaning “capable of being inculpated [i.e., incriminated].” (See **-ATABLE**.) *Inculpable* is, however, a negative form that generally means “not culpable; blameless; free from guilt.” Use of *inculpable* may cause incriminating ambiguities. See **culpable**.

inculpatory; *inculpative. The standard form is *inculpatory* (= tending to incriminate)—e.g.: “When the room was finally checked, police found no *inculpatory* evidence.” Kristen Delguzzi, “Jurors See Scene of Hotel Slaying,” *Cincinnati Enquirer*, 15 Nov. 1996, at C1. **Inculpative* is a NEEDLESS VARIANT. Cf. **culpable & exculpatory**.

Current ratio: 108:1

***incumbrance.** See **encumbrance**.

incurrence; *incurment. Sometimes writers need a noun corresponding to the verb *incur*. *Incurrence* is the standard term; **incurment* is a NEEDLESS VARIANT. *Incurrence* is sometimes misspelled **incurrence*.

Current ratio (*incurrence* vs. **incurment*): 718:1

in danger. See **danger** (A).

indebtedness. A. Generally. *Indebtedness* = the state or fact of being indebted. E.g.:

- “Existing heavy bonded *indebtedness*, state-government budget woes and a lingering recession do not make for a healthy environment in which to issue new bonds.” Ray Dussault, “Financing Dicier After Market Slips on Orange Peel,” *Bus. J.—Sacramento*, 13 Feb. 1995, at 28.
- “O’Toole, for all his playfulness and his pub-crawling, is a serious student of the theater whose sense of its past—and his own *indebtedness* to that past—is powerful.” Jonathan Yardley, “Loitering with Intent,” *Int’l Herald Trib.*, 15 Feb. 1997, at 5.
- “The scale and quality of Western *indebtedness* versus Chinese investment was a contributory factor to the Great Financial Crisis of 2008.” Nigel Wilson, “Our Rebirth as an Investing Economy Needs to Begin Now,” *Sunday Telegraph*, 30 Aug. 2015, *Bus. J.*, at 4.

The term is often used where the simpler word *debt* would be preferable—e.g.: “Holders of certain unsecured *indebtedness* [read *debts*] of the company have deferred payments until Feb. 28.” “In Brief,” *Ariz. Bus. Gaz.*, 16 Feb. 1995, at 26. In this sense, *indebtedness* is a NEEDLESS VARIANT of *debt*. But in some contexts one can hardly discern what is being referred to: the state of being indebted or the actual debt.

B. And *indebtment. A NEEDLESS VARIANT of *indebtedness* or *debt*, **indebtment* was much more common up to the mid-20th century than it is today. Now it’s confined to a few legal texts—where it would still be better replaced with *indebtedness* or *debt*.

INDEFINITE PRONOUNS. See **PRONOUNS** (D).

independence; *independency. Interestingly, **independency* was the standard term until shortly before the American colonies’ Declaration of Independence (1776). Since then, *independence* has been the standard form in all varieties of World English.

Current ratio: 196:1

independent contractor; employee. Unlike an *employee*, an *independent contractor* is left free to do the assigned work and to choose the method for accomplishing it. And unlike an *employee*, an *independent contractor* does not, upon committing a wrong while carrying out the work, create liability for an employer that did not authorize the wrongful acts. For example, a taxi driver is an independent contractor, while a private chauffeur is an employee. A freelance writer is an independent contractor; a staff writer is an employee.

independent(ly). A. Preposition with. *Independent* should take the preposition *of*, not *from*—e.g.: “The International Criminal Court, which is *independent from* [read *independent of*] the United Nations, would have no mandate to try Mr. [Charles G.] Taylor.” Lydia Polgreen & Marlise Simons, “Sierra Leone Asks to Move Liberian’s Trial,” *N.Y. Times*, 31 Mar. 2006, at A7.

B. Adverb or Adjective. The proper adverbial phrase is *independently of*. E.g.: “He said the men were flying *independently of* each other.” Susan Gilmore et al., “The Lure of Ultralights,” *Seattle Times*, 8 Aug. 1997, at A1. The phrase *independent of*, an adjective phrase, is sometimes wrongly asked to perform an adverbial function—e.g.: “In the summers in the South, people rise early to get work done before the heat comes up; Franklin does it *independent of* [read *independently of*] the weather.” Paul Hendrickson, “Hope Is His Middle Name,” *Wash. Post*, 6 Aug. 1997, at C1.

index. A. Plurals. For ordinary purposes, *indexes* is the preferable plural, not *indices*—e.g.:

- “The book is beautifully produced, [is] profusely illustrated, [and] contains scrupulous filmographies and two *indexes* (of boy actors and film titles).” Peter Parker, “Sweet Boys with Insufferable Parents,” *Independent*, 12 Oct. 1996, *Books J.*, at 6. (For the reasons behind the inserted words, see PARALLELISM.)
- “A list of contributors and several *indexes* are included.” Anne C. Fullam, “Almanac Offers Insights to the Hudson,” *N.Y. Times*, 12 Jan. 1997, *Westchester J.*, at 17.

In modern print sources, the collocation *book indexes* greatly predominates over *book indices*. See **PLURALS** (B).

Indices (/in-də-seez/), though less pretentious than **fora* or **dogmata*, is pretentious nevertheless. Some writers prefer it to *indexes* in technical contexts, as in mathematics and the sciences. Though not the best plural for *index*, *indices* is permissible in the sense “indicators”—e.g.: “Various *indices*, from satellite photos of crops in the Third World, to emergency room reports of overdoses in America’s inner cities, make possible rough estimates of the quantities of drugs being produced and reaching America’s streets.” George F. Will, “Put Blame Where Blame Belongs in War on Drugs,” *Chattanooga Times*, 25 Sept. 1996, at A7. Cf. **appendixes**.

Writers who use the Latinate form, of course, should spell it correctly. Some misspell it with a medial *-e-* on the influence of *index*—e.g.: “Standard & Poor’s Equity Services Group plans to add Newport News Shipbuilding to one of its equity *indeces* [read *indices*] after the shipyard is spun off.” “S&P to Add Peninsula Yard to Equity Index,” *Virginian-Pilot* (Norfolk), 6 Dec. 1996, at D1.

B. And *indice. The erroneous BACK-FORMATION **indice* (/in-də-see/) has been around for a while.

Although the term is noted as the singular form of *indicia* (= indicators) in the *OED*, it is labeled both rare and obsolete; the surviving alternative, *indicium*, is also rare. What has happened is that the Latinate plural of *index*, namely *indices*, has confused people into using **indice* as a singular (instead of *index*). In September 1982, President Ronald Reagan mentioned economic *indices* and then used the singular, three-syllable **indice* where *index* might have been expected. See Alan R. Slotkin, "Media Watch," 58 *Am. Speech* 192 (1983).

Though heard fairly often from television announcers, **indice* is seldom seen in print. But it does appear—e.g.: "Kielholz firmly believes that a younger workforce will be more in tune with the knowledge-worker spirit. However, Kielholz's most important *indice* [read *index* or, perhaps, *criterion*] remains IQ." "Employer Meets Burden of Demonstrating Nondiscriminatory Reason for Termination," *N.Y.L.J.*, 17 May 2001, at 17.

LANGUAGE-CHANGE INDEX
**indice* for *index*: Stage 1

Indianan; ***Indianian**. See **Hoosier**.

indicable. See **-ABLE (D)** & **-ATABLE**.

***indicant**. See **indicative**.

indicate shouldn't appear where *say*, *state*, *show*, or *suggest* will suffice—e.g.:

- "Memos between White House staffers *indicated* [read *said* or *suggested*] that McAuliffe had checked to make sure the call had been made." Leah Garchik, "Happy Birthday, Mr. Fat Cat," *S.F. Chron.*, 6 Mar. 1997, at E10.
- "Homicide Bureau detectives could not be reached to comment Saturday, but law enforcement officials *indicated* [read *said*] that the probe is continuing." Dan Herbeck, "Woman Pressing Police to Step Up Probe of Death of Twin," *Buffalo News*, 23 Nov. 1997, at B5.

indicated, to be. This phrase is common medical JARGON, as in "Further medication is *indicated* [i.e., advisable]." Better for Dr. X to say, "You should continue taking your medicine." Cf. **contraindicate**.

indicative; ***indicant**; ***indicatory**; **indicial**. *Indicative* is the usual adjective corresponding to the noun *indication*. **Indicant* and **indicatory* are NEEDLESS VARIANTS except in archaic medical contexts. *Indicial* is the adjective corresponding to both *indicia* and *index*; it means (1) "of the nature of an *indicia*; indicative"; or (2) "of the nature or form of an *index*." See **indicia**.

indices. See **index (A)**.

indicia; **indicium**. *Indicia* (/in-dish-ə/ or /in-dish-ee-ə/), the plural of *indicium* (= an indication, sign, token), is usually treated as a mass noun forming the plurals *indicia* and **indicias*, the former being preferred: "The 1980s takeover cases identified several *indicia* of due care in a board's deliberation." Harvey L. Pitt, "Ten Commandments for Takeover in the 1990s,"

Corporate Board, Jan. 1992, at 21. The singular *indicium* is, in this sense, obsolescent.

But *indicium* is a live singular in the sense "a graphical element on printed matter that indicates paid postage"—e.g.: "It uses a two-dimensional bar code; the *indicium*, or 'stamp,' includes both machine-readable and human-readable information." Cheryl Currid, "Creating Stamps on Printer Is Another Hassle Made Easy," *Houston Chron.*, 27 Aug. 1999, Tech. §, at 3. See **index (B)** & **indicative**.

indicial. See **indicative**.

indicium. See **indicia**.

indict; **indite**. Both words are pronounced /in-dɪt/. The former means "to charge formally with a crime"; the latter, "to write, compose, dictate." A literary term, *indite* is rarely used today. But it isn't unknown—e.g.:

- "Its principles hold for drafting a policy memorandum to the head of a business firm or for *inditing* a letter to a friend." Gorham Munson, *The Written Word* 9 (rev. ed. 1949).
- "I would take it to one of my dupes who would *indite* a blackmail demand to the young man's father." Donald Thomas, "The Case of the Talking Corpse," in *Sherlock Holmes and the Voice from the Crypt* 223, 318 (2002).
- "Max, who supposedly *indites* these confessions in the year 1930, . . . has survived a number of the young century's crises." John Updike, "Mind/Body Problem," *New Yorker*, 26 Jan. 2004, at 90.

Cf. **extradite**.

indictment usually takes *of*, but *against* has also been fairly common since the 19th century. The prosecutors may have a *case against* a suspect, but the *indictment* can be either *of* or *against* the suspect. In journalism, *against* is quite common—e.g.:

- "The order is the prelude to possible detention and multiple *indictments against* [or *indictments of*] Milosevic." Smita Nordwall, "After Years of Urging, China Ratifies Human Rights Treaty," *USA Today*, 1 Mar. 2001, at A6.
- "In a motion Thursday to dismiss the *indictment against* [or *indictment of*] John Cumbee, Jed Stone argued that his client's case should not be heard again in McHenry County." Dave Barnes, "Cop Seeks Change of Venue for His Retrial," *Chicago Trib.*, 2 Mar. 2001, at 1.
- "Wolf . . . is presiding over the 1995 racketeering *indictment against* [or *indictment of*] Bulger and Flemmi." Shelley Murphy, "Renewed Strain for Bulger Squad," *Boston Globe*, 3 Mar. 2001, at B1.

For more on *indictment*, see **arraignment**.

LANGUAGE-CHANGE INDEX
**indictment against* for *indictment of*: Stage 5

indifference; ***indifferency**. The latter is an ARCHAISM and a NEEDLESS VARIANT.

Current ratio: 336:1

indifferent takes *to*, preferably not *as to*—e.g.:

- "If we're intelligent about how we design and deploy them, we'll be *indifferent as to* [read *indifferent to*] how consumers use them." Rebecca Cantwell, "Business Person of the Year Tele-Visionary," *Rocky Mountain News* (Denver), 20 Dec. 1998, at G1.

- “Brokers will be *indifferent as to* [read *indifferent to*] whether the funds their customers buy are load funds or no-load funds.” Patrick McGeehan & David Franekci, “Monthly Mutual Funds Review,” *Wall Street J.*, 2 Aug. 1999, at R1.

See **as to**.

indigence; indigency. Since 1700, *indigence* has been the predominant form in general English-language sources—by a significant margin. But in legal sources *indigency* predominates. Although there is no DIFFERENTIATION between the terms other than that contextual one, neither can be declared a NEEDLESS VARIANT. Current ratio: 9:1

indigenous. In Canada and Australia, *indigenous* (= native to a place) is capitalized when it refers to the land’s original inhabitants <the Indigenous tribes> but lowercase when it refers to other things <the indigenous flora>. This practice has not taken root in either the U.S. or the U.K.

indigenous American. See **Native American**.

indigent, n. See **FUNCTIONAL SHIFT (C)**.

indigestion. For the pronunciation, see **digestion**.

INDIRECT QUESTIONS. See **QUESTIONS, DIRECT AND INDIRECT**.

indiscernible; *indiscernable. The former spelling is standard. See **-ABLE (A) & discernible**.

Current ratio: 71:1

indiscreet; indiscrete. *Indiscreet* = lacking discretion in the sense of prudence, circumspection, and cautious reserve; *indiscrete* = not divided into distinct parts. *Indiscreet* is a common term, *indiscrete* a rare one. And, perhaps not surprisingly, some writers choose the wrong form—e.g.:

- “Mr. Pavelic concluded . . . that Mr. Shapiro may have been set up to look *indiscrete* [read *indiscreet*].” David Margolick, “Uneasy Quiet After Turmoil on the Team for Simpson,” *N.Y. Times*, 17 Jan. 1995, at A12.
- “The brouhaha that broke out over an NDP MLA’s somewhat *indiscrete* [read *indiscreet*] Facebook photos following the stunning crush of the governing Progressive Conservative party points to a gross trend in politics in the social media age.” Tyler Dawson, “Average Albertans Replacing Political Pros,” *Edmonton J.*, 11 May 2015, at A15.

See **discrete**.

LANGUAGE-CHANGE INDEX
indiscrete misused for *indiscreet*: Stage 1

indisputable is pronounced either /in-di-**spyo**-tə-bəl/ or (formerly, and sometimes still in BrE) /in-**dis**-pyoot-ə-bəl/.

indisputably (= unquestionably) is the usual word, not **indisputedly*, which is an odd hybrid between

indisputably and *undisputedly* (= without challenge). E.g.:

- “She is the mother of three sons, which *indisputedly* [read *indisputably*] makes her the only justice to have experienced pregnancy.” “All Eyes on Justice O’Connor,” *Newsweek*, 1 May 1989, at 34.
- “The third is ‘Shadow of a Doubt’ (1943), in which [Teresa] Wright starred—‘his favorite film,’ Dr. [Ruth] Prigozy said, and *indisputedly* [read *indisputably* or *undisputedly*] first-class.” Alvin Klein, “Scholarly Regard for a Master of Suspense and the Cinema,” *N.Y. Times*, 17 Oct. 1999, § 14, at 15.
- “As the composer of one *indisputedly* [read *indisputably*] great musical (‘A Chorus Line’) . . . Hamlisch is still reaching for the sustained depth found in the mentors he often cites: Cole Porter, Richard Rodgers, Jerome Kern and so on.” Andrew Adler, “Hamlisch Still Seeking the Depth of His Mentors,” *Courier-J.* (Louisville), 25 Nov. 2001, at D3.

LANGUAGE-CHANGE INDEX

**indisputedly* for *indisputably* or *undisputedly*: Stage 1
Current ratio (*indisputably* vs. **indisputedly*): 364:1

indistinguishable; *undistinguishable. The former has been standard since about 1870 in AmE and 1880 in BrE; the latter is a NEEDLESS VARIANT.

Current ratio: 23:1

indite. See **indict**.

individual was formerly thought to be a newfangled barbarism as a noun substituting for *man*, *woman*, or *person*. Certainly, those more specific terms are generally to be preferred over *individual*, but this word has made a place for itself in contexts in which the writer intends to distinguish the single person from the group or crowd.

Some writers grossly overuse the term for no apparent reason—e.g.:

Several corollary points flow from this concept of style and its application to political biography. The first is that *an individual’s* [read *a person’s*] style may conflict with the requirements of his office; it is just such a condition that may lie at the base of political failure. The possibility of such “misfit” between style and role is greatest when *an individual* [read *someone*] comes to a new and demanding office . . . late in life . . . It is thus crucial to examine the fit between *an individual’s* [read *the person’s*] style and the requirements of his political roles, and whether those requirements change as *the individual moves through his* [read *during the person’s*] career.

Moreover, the use of the concept of style makes it imperative to examine that point in a subject’s early life at which his style was first formed and applied successfully . . . It is at this point that we may find the key to *an individual’s* [read *the person’s*] later political behavior. This creation of a political style will often be part of an identity crisis in young adulthood; the *individual’s* [read *person’s*] psychological equilibrium may therefore depend upon the creation and successful application of a particular style.

H.N. Hirsch, *The Enigma of Felix Frankfurter* 7 (1981).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

In the page following that passage, 11 more *individuals* crowd the text. And after reading that page, one is tempted to banish the word altogether. But some writers use the word more responsibly, and they shouldn't have it taken away from them.

Much of the teeth-gnashing this word causes can be blamed on police-blotter JARGON—e.g.: “Two people were attacked by several *individuals* [read *other people*] at this *location* [read *place*],” Denver police spokesman Detective John White said in a prepared statement.” Jim Kirksey, “Officer Wounds Alleged Attacker,” *Denver Post*, 27 Jan. 2003, at B6. (Overprepared, most stylists would agree.)

individualize; individuate. These words, which have basically the same sense (“to make individual in character, to give individuality to”), have undergone DIFFERENTIATION. *Individualize* is the ordinary term—e.g.: “While the strategies for just how to prepay your mortgage can be *individualized* to fit your own cash flow, there are some other general rules to follow.” Don Hunt, “Full Speed Ahead,” *Chicago Trib.*, 8 Aug. 1997, at 1.

Individuate is often used in scientific contexts and in Jungian psychology in highly technical senses, and it should generally be confined to these uses. E.g.: “Not that the Bob Joneses and Jane Smiths of the world aren't *individuated*, as the Jungians say.” Bill Tammeus, “Newt Should Have Known Enough to Be Wary of Guys with Goofy Names,” *Milwaukee J. Sentinel*, 3 Aug. 1997, at 6.

indoctrinate is sometimes displaced by **indoctrine*, an obsolete variant that has rarely appeared in Modern English. E.g.:

- “If one generation of parents—that's all it takes, just one—could be *indoctrined* [read *indoctrinated*] with valid child-rearing concepts, those children *will* [read *would*] grow up to pass on those universal truisms to their children.” Lendon H. Smith, “Where Have They Been?” *Health News & Rev.*, 22 Sept. 1993, at 7.
- “African American women often are *indoctrined* [read *indoctrinated*] with the belief that there's something wrong, unattractive, about their curvy bodies, broad noses, full lips and kinky hair, the women said.” Norma Martin, “Austinites Experience ‘Exhale,’” *Austin Am.-Statesman*, 24 Dec. 1995, at E1, E5.

LANGUAGE-CHANGE INDEX

**indoctrine* for *indoctrinate*: Stage 1
Current ratio (*indoctrinated* vs.
**indoctrined*): 1,405:1

indorse. See **endorse.**

***indow.** See **endow.**

induce. See **deduce (B).**

inducement; induction; inductance. *Inducement* ordinarily means “that which induces or persuades.” *Induction*, in the context of reasoning, means “the establishment of a general proposition from a number of particular instances.” *Inductance* is a technical electrical term.

inducible. So spelled—not **induceable*. Cf. **deducible**.
Current ratio: 4,825:1

inductance. See **inducement.**

induction. See **deduce (B) & inducement.**

***indue.** See **endue.**

indulge. When the target of the indulgence is a habit, custom, or form of gratification, this verb is usually intransitive: one *indulges* in a given habit. Here, the writer got the idiom wrong: “Employees in a New York City office building have to trek outside to *indulge* their habit [read *indulge in their habit*].” Christopher John Farley, “The Butt Stops Here,” *Time*, 18 Apr. 1994, at 59.

But when the target of the indulgence is the person seeking that gratification, the verb is transitive and the person is the verb's direct object—e.g.:

- “*Indulge* your inner Sue Ellen with this Ciner Torsade necklace with freshwater pearls, crystal, onyx and jet beads, \$495, at Saks.” Jan Tyler & Susan Abrams, “Blast from the Past,” *Newsday* (N.Y.), 5 Dec. 2002, Home & Gardens §, at B31.
- “While they *indulge* themselves in adult interaction, their little ones are in nearby rooms being tended to by professional preschool teachers.” Kathy Barberich, “Helping Moms, Helping Kids,” *Fresno Bee*, 26 Jan. 2003, at H1.

industrious; industrial. *Industrious* corresponds to *industry* in the general sense of a person's work ethic. *Industrial* corresponds to *industry* in the narrow sense of manufacturing goods. *Industrious* typically refers to people <an industrious worker>; *industrial* typically refers to manufacturing activities or productive enterprises <an industrial town>. *Industrial* is pronounced in four distinct syllables: /in-dəs-tree-əl/—not /in-dəs-trəl/.

-INE. See **-ILE.**

ineffectual; ineffective; inefficacious; inefficient. See **effective.**

INELEGANT VARIATION. H.W. Fowler devised the name “elegant variation” for the ludicrous practice of never using the same word twice in the same sentence or passage. When Fowler named this vice of language in the 1920s, *elegant* was almost a pejorative word, commonly associated with precious overrefinement. Today, however, the word has positive connotations. E.g.: “The book is exceedingly well edited, and several essays are *elegantly* written.”

Lest the reader think that the subject of this article is a virtue rather than a vice in writing, it has been renamed unambiguously: *inelegant variation*. The rule of thumb with regard to undue repetition is that one should not repeat a nearby word if it can be felicitously avoided; this is hardly an absolute proscription, however.

Variety for variety's sake in word choice can confuse readers. If you call a car “the BMW” in one place and “the sporty import” in another, can your reader be certain that you're referring to the same car? If you

write about a person's "candor" in one sentence and "honesty" in the next, is the reader to infer that you are distinguishing between two traits, or using different words to refer to the same one?

The more formal the writing, the worse fault this lack of clarity can be. It is a maxim in interpreting legal language that if different words are used, different meanings must have been intended. In less formal contexts, variety is more forgivable—but there are always limits.

Perhaps the most famous example is *elongated yellow fruit* as the second reference for *banana*. Hence Charles W. Morton named "the elongated-yellow-fruit school of writing," citing examples such as these:

billiard balls	=	the numbered spheroids
Bluebeard	=	the azure-whiskered wifeslayer
Easter-egg hunt	=	hen-fruit safari
milk	=	lactal fluid
oysters	=	succulent bivalves
peanut	=	the succulent goober
songbird	=	avian songster
truck	=	rubber-tired mastodon of the highway

Morton, "The Elongated Yellow Fruit," in *A Slight Sense of Outrage* 99, 99–102 (1955). As Morton explains, this sin "lies somewhere between the cliché and the 'fine writing' so dreaded by teachers of English Composition. . . . It does bespeak an author who wishes to seem witty, knowledgeable, and versatile. . . . It can also bespeak an author who is merely pompous." *Ibid.* at 100. Other commentators have been less charitable—e.g.: "The attempt to ring the changes on a word is often positively vicious." Paul M. Fulcher, "These But the Trappings . . .," in *Foundations of English Style* 189, 204 (Paul M. Fulcher ed., 1927).

There is even a book full of these things, in which a minister is "an old pulpit pounder," a prizefighter is "a braggart of the squared circle," and a vegetarian is "a confirmed spinach-addict." See J.I. Rodale, *The Sophisticated Synonym Book* (1938).

The basic type of variation found objectionable by Fowler is the simple change from the straightforward term to some slightly more fanciful or formal synonym, as here:

- "This is Allen's first *directing* bid since 1989's 'Crimes and Misdemeanors'—he won the *helming trophy* [read *directing trophy* or *best-director Oscar*] for 1977's 'Annie Hall'—and his 11th writing nomination." Kathleen O'Steen, "Hit Happens: 'Gump' Nods at 13," *Daily Variety*, 15 Feb. 1995, at 1.
- "Pakistan's top court has ruled that male doctors may no longer perform *autopsies* on female corpses, saying *post-mortems* [read *autopsies*] by the opposite sex show disrespect for the dead." "Autopsies Segregated," *Fresno Bee*, 28 Mar. 1996, at A12.
- "[The price controls] imposed by this budget will cause more distortions, more animosity among patients, hospitals and *doctors* and more thoughts among *physicians*

[read *doctors*] of quitting and joining labor unions." "Medicare Balances the Budget," *Asian Wall Street J.*, 4 Aug. 1997, at 12.

Equally common in modern prose is the switch from one form of a word to another—e.g.:

- "But it's not just those with a *sanguinary* view. Those with a *sanguine*—make that *super-sanguine*—view are eyeing California, too." Don Bauder, "Don Bauder" [series], *San Diego Union-Trib.*, 30 Aug. 1989, at E1. See **sanguine**.
- "During the hoopla about Vice President Dan Quayle's remark about Murphy Brown, his critics reminded him that she is a *fictional* character. Well, Murphy might be *fictitious*, but so am I, according to the same critics." Lisa Hirsh, "Traditional Families Aren't Modern Fiction," *St. Louis Post-Dispatch*, 23 July 1992, at C3. On that use of *fictitious*, see **fictional**.
- "Now just 27, he's a thoughtful and gifted writer, but he's in something of a *collegiate* rut. Or maybe the patience of those of us not in a *collegial* rut has just worn thin." Jeremy Gerard, "Wonderful Time," *Variety*, 15–21 Jan. 1996, at 135. See **collegial**.
- "For delayed coking, this means having to cope with greater quantities of vacuum *residuum* with a higher carbon *residue*." A. Stefani, "Debottleneck Delayed Cokers for Greater Profitability," *Hydrocarbon Processing*, June 1996, at 99. See **residue**.

Certain pairs may lend themselves to this snare: *arbiter* and *arbitrator*, *adjudicative* and **adjudicatory*, *investigative* and *investigatory*, *exigency* and **exigence*. In fact, it sometimes seems that amateurish writers believe that NEEDLESS VARIANTS were made for this specific stylistic purpose.

Sometimes the variation leads to real confusion. For example, in the following headline, the reader must wonder at first whether *victim* and *loved one* refer to the same person: "Victim's Family Can Witness Death of Loved One's Killer," *Austin Am.-Statesman*, 17 Nov. 1995, at A11. The solution there would be to delete *Victim's*.

"The point to be observed," wrote H.W. Fowler, "is that, even if the words meant exactly the same, it would be better to keep the first selected on duty than to change guard" (*FMEU1* at 132).

inept. See **inapt**.

inertia (= resistance to movement, change, or effort) is occasionally confused with a nearly opposite sense, resulting in a MALAPROPISM—e.g.: "Other business incubators evolve from local entrepreneurs, [James] Segedy said, and provide business support to help the businesses gain *inertia* [read *momentum*] needed to survive their first year." Michael Wanbaugh, "Argos Residents Look to the Future," *South Bend Trib.*, 24 Jan. 2003, at A2. Perhaps the confusion is with *impetus* (= incentive; encouragement). See WORD-SWAPPING.

LANGUAGE-CHANGE INDEX
inertia misused for *momentum*: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

inessential. See **nonessential**.

inestimable. See **estimable**.

inevitability; *inevitableness. The latter is a NEEDLESS VARIANT.

Current ratio: 37:1

inevitable. See **ADJECTIVES (B)**.

in excess of is verbose for *more than*, *exceeding*, or some other word—e.g.: “Within hours a storm with maximum wind velocities *in excess of* [read *exceeding*] a hundred miles an hour swept across southern England and Wales.” Thomas Levenson, “At the Speed Limit,” *Atlantic Monthly*, Mar. 1990, at 40.

***inexpense** is a NONWORD that first appeared (wraithlike) in the late 19th century and has been spotted from time to time since. It’s not listed in any major unabridged dictionary, and it doesn’t really fill a need in the language—e.g.:

- “The *relative inexpense* [read *relatively low price*] of much of [Kurt] Strobach’s work doesn’t make him less worthy of recognition than artists and craftsmen who sell their work for much more money.” Steve Stanek, “A Cut Above,” *Chicago Trib.*, 3 Nov. 1991, Tempo Northwest §, at 1.
- “The *relative inexpense* [read *affordability*] with which a band can record and manufacture a disc has blown open the playing field to anyone with a credit card who has the yen to be a rock star; in turn, there’s a plethora of product from bands that aren’t, let’s say, quite ready for mass consumption.” Joan Anderman, “How Do Local CD’s Stack Up?” *Boston Globe*, 25 Dec. 1998, at C17.
- “Because of the ease and *relative inexpense* [read *relatively low cost*] of obtaining spices today, we forget how rare, costly and sought-after they were in earlier ages.” Andrew Jayasundera, “Spices of Influence,” *Seattle Times*, 24 Sept. 2000, at 10.

See **BACK-FORMATIONS & NEOLOGISMS**.

LANGUAGE-CHANGE INDEX

**inexpense* for *affordability*: Stage 1

inexpert, adj.; nonexpert, adj. An important distinction exists. *Inexpert* = unskilled <the novice’s *inexpert* shooting caused a real danger to observers>. *Nonexpert* = not of or by an expert, but not necessarily unskilled <even *nonexpert* drivers can handle this course>. Whereas *inexpert* has been in common use since the 18th century, *nonexpert* did not appear with any frequency till about 1900.

inexplicable (= unexplainable) is accented on the second syllable (/in-**ek**-spli-kə-bəl/) or the third (/in-**ek**-sp~~li~~-ə-bəl/). Cf. **explicable**.

inexpressible; *inexpressable. The former spelling is standard. See **-ABLE (A)**.

Current ratio: 364:1

inexpressive; *unexpressive. The first is standard; the second is a NEEDLESS VARIANT.

Current ratio: 4:1

infanticide = (1) the killing of a baby; or (2) a parent who kills a baby, or someone who kills a baby esp. with

a parent’s consent. Sense 2 invariably takes an article <a merciless infanticide>, whereas sense 1 only sometimes takes an article <the infanticide committed by a deranged father> <infanticide committed by a mother with postpartum depression>.

In law, strictly speaking, not every killer of a baby has committed infanticide. The killing of another person’s child is simple murder or manslaughter. Infanticide, by definition, must be by or on behalf of a parent. See Glanville Williams, *The Sanctity of Life and the Criminal Law* 13 (1957).

Despite the legal meaning of *infant* (= a person under the age of majority, usu. 18 years old), the word *infanticide* is restricted to baby-killing. A parent who kills a 17-year-old child would not be called an “infanticide” (sense 2). (In England, the Infanticide Act applies to the killing of a child up to one year old.) The slightly broader term *child-slaying*, however, might cover situations in which children who are old enough to walk—and up to the age of 18—are killed. By contrast, the most restrictive term is *neonaticide*, which refers to the killing of a newborn. Among the three terms—*infanticide*, *child-slaying*, and *neonaticide*—the first two are the most emotive terms because they are widely known, and the third is a clinical, abstract description that many would read or hear without understanding. See **-CIDE**.

in fault. See **at fault**.

infeasible; *unfeasible. Though once standard, the latter has become a NEEDLESS VARIANT.

Current ratio: 2:1

infect. See **infest (A)**.

infectious is sometimes erroneously rendered **infectuous*—e.g.: “A note of caution: *West End Christmas* possesses a humor that’s *infectuous* [read *infectious*].” Lynne Cline, “West End Christmas,” *Santa Fe New Mexican*, 6 Dec. 1996, Pasatiempo §, at 6. See **contagious**.

LANGUAGE-CHANGE INDEX

infectious misspelled **infectuous*: Stage 1

Current ratio: 6,813:1

infer. A. Meaning. Properly used, *infer* means “to deduce from evidence; to reason from premises to a conclusion”—e.g.:

- “We get no sense of the man himself from this book except what we can *infer* from the biographical facts that Mr. Magida presents.” John B. Judis, “Maximum Leader,” *N.Y. Times*, 18 Aug. 1996, § 7, at 24.
- “FBI spokesmen have told us that we are not to *infer* that Richard is guilty of anything merely because he is a suspect, among others.” Larry Maddry, “FBI Should Charge Jewell or Cut Him Some Slack,” *Virginian-Pilot* (Norfolk), 26 Aug. 1996, at E1.
- “Research shows that a daily glass or two of wine is associated with greater longevity than drinking either more or less alcohol. So it’s irresistible to *infer* that modest amounts of alcohol cause a person to live longer.” “The Art of Being Smart,” *Daily Telegraph*, 15 Aug. 2015, at 1.

B. And imply. Writers frequently misuse *infer* when *imply* (= to hint at; suggest) would be the correct word—e.g.:

- “So they obliged him, publishing his life story in its March 24th issue, without *inferring* [read *implying*] that he was going to die.” Lennie Grimaldi, “Connecticut Q&A: Robert Pelton,” *N.Y. Times*, 7 Apr. 1991, Conn. §, at 3.
- “One [response] was a bright and chatty letter that clearly *inferred* [read *implied*] that Grandma had put her message across.” June Lejeune, “Thanks or No Thanks,” *Sarasota Herald-Trib.*, 12 Feb. 1997, at B4.
- “Pulis said yesterday he would decide whether to select the 22-year-old once he had spoken to him in training. But he *inferred* [read *implied*] Berahino is still too distracted to perform to his best.” “Midweek Knocks Hamper Brunt and McManaman,” *Birmingham Mail* (U.K.), 29 Aug. 2015, at 34.

Remember: a speaker or writer *implies* something without putting it expressly. A listener or reader *infers* beyond what has been literally expressed. Or, as Theodore Bernstein put it, “The *implier* is the pitcher; the *inferer* is the catcher.” *The Careful Writer* 227 (1965).

Don’t be swayed by apologetic notes in some dictionaries that sanction the use of *infer* as a substitute for *imply*. Stylists agree that the important distinction between these words deserves to be maintained.

LANGUAGE-CHANGE INDEX
infer misused for *imply*: Stage 3

inferable; *inferrable; *inferrible. The preferred form *inferable*, pronounced /in-fər-ə-bəl/, was standard by the mid-19th century. **Inferrable* is a variant spelling. Through the mid-1950s, some commentators considered **inferrible* the best spelling because of the rule that a consonant should be doubled after a stressed syllable. *Inferable*, which has now ousted the other forms, is anomalous in its spelling. Cf. **deferable & transferable**.

Current ratio (in order of headwords): 20:3:1

inference. Traditionally, one *draws*, not *makes*, inferences. If one says “to make an inference” (like “to make a deduction”), many listeners will confuse *inference* with *implication*. The verb *draw* is therefore clearer. Concededly, however, since the early 1960s the collocation *make inferences* has appeared in print somewhat more frequently than *draw inferences*. Hence the widespread confusion about the precise meaning of *inference*—properly a conclusion arrived at through reasoning, not suggestion. See **infer**.

inferentially. This fancy word often displaces a more common substitute, such as *seemingly* or *we can infer that*. The *OED* states that *inferentially* means “in an inferential manner,” but allows that it is used “sometimes qualifying the whole clause or statement [and meaning] as an inference, as may be inferred.” This use is common especially in writing about technical

and legal subjects—e.g.: “In 1926, the Supreme Court *inferentially* [read, perhaps, *seemingly*] decided, in *Myers v. U.S.*, that President Johnson was right in principle on this issue.” Martin D. Tullai, “A Senator Saved the Presidency,” *Plain Dealer* (Cleveland), 29 Mar. 1994, at B7. See SENTENCE ADVERBS. Cf. **hopefully & thankfully**.

In AmE, *inferentially* was once almost exclusively a lawyers’ word, but it’s passing into general use—e.g.: “Clinton, on CBS, *inferentially* conceded that Congress might not approve either element.” “Oh Noooo!” *Time*, 14 Mar. 1994, at 35.

inferior takes *to*, not *than* (which requires a grammatical comparative, not a notional one)—e.g.: “Neither Drew nor Ryan offered the same offensive potential as Refsnyder, whose glove is considered to be far *inferior to* [read *inferior to*] *his counterparts* [read *those of his counterparts* or *his counterparts’ gloves*].” Alex Schiffer, “Beltran Gets Right Back to Work with Bat,” *Star-Ledger* (Newark), 21 July 2015, at 28.

Current ratio: 355:1

***inferrable; *inferrible.** See **inferable**.

infest. A. And infect. *Infest* (= to inhabit either as a parasite or in menacingly large numbers) is sometimes confounded with *infect* (= [of a germ or virus] to introduce a disease into an organism). In general, living things are *infected*; places are *infested*. And while an infestation may result in disease, the cause of the disease will be infection. Some writers miss that distinction, typically with *infest* displacing *infect*—e.g.:

- “I’m thinking, is our opposition to the archbishop’s point of view a classic case of Seattle overhang? That’s the disease that rapidly *infests* [read *infects*] editorial offices and gives us in these towers the eyesight to see things only from under Seattle’s roof.” James Vesely, “Classic Seattle Overhang and the Cross We Carry,” *Seattle Times*, 19 Mar. 2001, at B4.
- “Once the germs *infest* [read *infect*] wildlife populations, the wild animals can just as easily spread it to other domestic herds through the same mechanisms.” Editorial, *Denver Post*, 1 May 2001, at B8.
- “Citrus canker is a bacterial disease that *infests* [read *infects*] the leaves of trees and causes lesions on the fruit.” Bill Rufty, “Officials Iron Out Canker Plan,” *Ledger* (Lakeland, Fla.), 12 Mar. 2002, at E1.

The opposite error, in which *infect* ousts the proper word *infest*, is rare but not entirely exterminated—e.g.: “There were no demons in his past, but night after night demons would *infect* [read *infest*] his dreams to the point that he was beginning to question his sanity.” A.S. Mott, “In His Head,” in *Fireside Ghost Stories* 9, 9 (2003).

LANGUAGE-CHANGE INDEX

1. *infest* misused for *infect*: Stage 1
2. *infect* misused for *infest*: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. And invest. *Infest* is sometimes, in a gross MALAPROPISM, confused with *invest*—e.g.:

- “Cited: Harvest from about 1,470 Boise National Forest acres in Logging Creek and French Creek drainages will thin stands of *insect-invested* [read *insect-infested*] trees.” “Idaho,” *USA Today*, 17 Dec. 1991, at A10.
- “The resulting *crime-invested* [read *crime-infested*] tenement becomes uninviting to would-be renters.” Willard Woods, “Landlords See Basketball Camp for Kids as Way to Cut Apartment Problems,” *Star Trib.* (Minneapolis), 3 July 1993, at H22.
- “Channel 39 will dip its toe into the *shark-invested* [read *shark-infested*] waters known as late-night talk beginning in the fall of 1995.” Mike McDaniel, “‘Juvenile Justice’ Series Picked Up by 40 Stations,” *Houston Chron.*, 17 Dec. 1994, Houston §, at 5.

LANGUAGE-CHANGE INDEX
invest misused for *infest*: Stage 1

infinite (= unimaginably large in degree or amount) doesn’t work well with qualifiers in phrases such as **almost infinite* or **nearly infinite*, which are examples of ILLOGIC—e.g.:

- “There have been an *almost infinite number of* [read *countless*] studies.” Earl W. Buxton, *Looking at Language v* (M.H. Scargill & P.G. Penner eds., 1969).
- “The world that asks for the maximum information in the minimum time creates a problem of *nearly infinite* [read *infinite* or *seemingly infinite*] possibilities.” Sara S. Kennedy, “American Society’s Fast Track to Oblivion,” *Hartford Courant*, 26 Nov. 2000, at G3.
- “Picasso’s also has quite an extensive pizza menu, featuring pies that can be topped in *almost infinite* [read *many*] combinations.” Angela Shah, “Grill Makes a Palette of Italian Favorites,” *Dallas Morning News*, 23 Jan. 2003, Garland §, at S9.

The word is also often a sign of hyperbole, as those examples show. See ADJECTIVES (B).

LANGUAGE-CHANGE INDEX
**almost infinite* for *countless*: Stage 1

infinitely. **A. And eminently.** *Infinitely* (= endlessly, limitlessly) for *eminently* (= to a high degree) is either gross OVERSTATEMENT or a MALAPROPISM. It’s a surprising error even in our hyperbole-ridden culture—e.g.:

- “The voice is quite pleasant, really. Low, well-modulated and *infinitely* [read *eminently*] reasonable, it is the voice of a good person.” Karla Peterson, “Sandra Bernhard: Shocking Ms. B. Has Her Warm and Comfy Side,” *San Diego Union-Trib.*, 23 June 1994, Entertainment §, at 11.
- “Riggins used to train bird dogs in his spare time. Some observers might suggest that experience makes him *infinitely* [read *eminently*] qualified to instruct the Cardinals’ 1994 staff.” Dan O’Neill, “Credentials of Riggins Rate Triple A All the Way,” *St. Louis Post-Dispatch*, 26 Oct. 1994, at D5.
- “But for readers desiring a richly poetic treatment of [Robert] Frost in all his splendid contrariety—kindly/surly, selfish/magnanimous, caring/distant, childish/*infinitely* [read *eminently*] wise—this is a book to savor.” Marjorie Kehe, “When Robert Frost Met Khrushchev,”

Christian Science Monitor, 8 Apr. 2008, Book §, at 13.

LANGUAGE-CHANGE INDEX
infinitely misused for *eminently*: Stage 1
Current ratio (*eminently successful* vs. **infinitely successful*): 488:1

B. And Comparatives. When *infinitely* modifies a comparative adjective or adverb, the result is almost always either illogical or at least hyperbole—e.g.:

- “Barron, a game-fowl breeder who has about 200 roosters, said the average gamecock lives a lot longer than the average broiler chicken and agrees with Rubio that their game birds are *infinitely* [read *far*] better cared for.” Stella Davis, “Fighting Fowl,” *Santa Fe New Mexican*, 30 Nov. 2002, at B1.
- “The source of that speed comes in a very different package, and gaining horsepower requires a lot less grease and *infinitely* [read *much*] more RAM.” Michael Yount, “Imported Speed,” *Salt Lake Trib.*, 1 Dec. 2002, at S1.
- “Self-acceptance is *infinitely* [read *far* or *so much*] sexier and more appealing than the relentless racing after eternal youth.” Joy Rothke, “50 May Not Be So Fabulous, but at Least She’s Still Here,” *Chicago Trib.*, 4 Dec. 2002, Woman News §, at 6.

See ADJECTIVES (B).

Occasionally, though, the usage is justified when the thing designated could truly be infinite—e.g.: “[Ornette] Coleman opened the door to improvisation based on melodic and rhythmic lines. It was a door that opened *infinitely* more doors.” Dean Kuipers, “Break the Music Mold,” *L.A. Times*, 5 Dec. 2002, Calendar Weekend §, pt. 5, at 2. Here, the number of variations in an improvisational performance really is infinite.

LANGUAGE-CHANGE INDEX
infinitely used with a comparative: Stage 1

infinitive. See BE-VERBS & SPLIT INFINITIVES.

infinity; *infinitude. The latter term, though dating from the 17th century, remains little more than what H.W. Fowler labeled it in 1926: a NEEDLESS VARIANT of *infinity*. It occurs where *infinity* would surely be the better word—e.g.: “Electron microscopes have revealed the nearly incomprehensible complexity and *infinitude* [read *infinity*] of the subvisible world.” Charles Siebert, “Quantum Leaps,” *N.Y. Times*, 29 Sept. 1996, § 6, at 137. The word appears often in theological contexts, perhaps seeming to lend some concreteness to the idea being discussed—e.g.: “In prayer we find that the trustworthy place wherein to feel at home is the *infinitude* of God, divine Love.” “A Home of Your Own,” *Christian Science Monitor*, 28 June 1996, at 17.

LANGUAGE-CHANGE INDEX
**infinitude* for *infinity*: Stage 2
Current ratio (*infinity of* vs. **infinitude of*): 5:1

inflame; *enflame. The first is standard; the second is a NEEDLESS VARIANT.

Current ratio: 18:1

inflammable. See **flammable & inflammatory.**

inflammatory; inflammable. Surprisingly, *inflammable* (= combustible) is occasionally misused for *inflammatory* (= provocative of an angry or violent reaction). While both words are synonymous with *incendiary*, *inflammable* is always literal <the arsonist used an inflammable liquid to spread the fire>, *inflammatory* always figurative <the inflammatory rhetoric almost caused a riot>. It's a well-known distinction, but writers occasionally take a wrong turn halfway through spelling *inflammatory*—e.g.:

- “Newman’s a veteran; he knows better than to incite the opposition with such *inflammable* [read *inflammatory*] bulletin-board material.” Mike Penner, “1987 Revisited? Braves Say No,” *L.A. Times*, 25 Oct. 1991, at C1.
- “Why is it so hard to understand that the social fabric of our society can be tragically destroyed by the *inflammable* [read *inflammatory*] words of the dividers and haters among us?” Letter of Charles L. Deremer, *Morning Call* (Allentown, Pa.), 1 May 1995, at A8.
- “Her opponents this time were the *inflammable* [read *inflammatory*] words of her father, who accused a player and the tennis world of racism, and a persistent pack of reporters.” Shaun Powell, “U.S. Open: All Eyes Focused on Venus,” *Newsday* (N.Y.), 8 Sept. 1997, at A54.

This confusion provides yet one more reason why *flammable* is to be encouraged over *inflammable*, which should be ignited and consumed. See **flammable**.

LANGUAGE-CHANGE INDEX

inflammable misused for *inflammatory*: Stage 1

***inflatus**. See **afflatus**.

inflict; afflict. *Inflict* takes *on*; *afflict* takes *with*. Non-living objects, especially scourges or punishments, are *inflicted on* people; living things, especially humans, are *afflicted with* diseases.

But misusing *inflict* for *afflict* is increasingly common—e.g.:

- “While other urban superintendents were trying to hide the depths of the problems *inflicting* [read *afflicting*] their school systems, Alice Pinderhughes, who passed away last Thursday at age 74, was at least honest.” “Alice Pinderhughes,” *Baltimore Sun*, 20 Nov. 1995, at A10.
- “This lack of freedom of speech is what people in Russia and many other countries have dealt with in the past, and are *inflicted* [read *afflicted*] with now.” Susan DeBow, “Society Stifles Freedom of Speech,” *Cincinnati Post*, 3 July 2000, at A19.
- “The speakers . . . dismissed concerns . . . that some oak trees are *inflicted* [read *afflicted*] with Sudden Oak Death disease.” Maria Brosnan Liebel, “Quick Action Ordered on Lafferty,” *Press Democrat* (Santa Rosa), 14 Nov. 2000, at B1.

See OBJECT-SHUFFLING.

The reverse error is also surprisingly frequent—e.g.:

- “The whole reason for reaching this settlement was to make Big Tobacco financially accountable for the health costs its addictive product has *afflicted* [read *inflicted*] on

the nation.” Editorial, “Tobacco Plan Worth the Wait,” *Morning Call* (Allentown, Pa.), 22 June 2001, at A14.

- “Although the nation has . . . been spared from another Sept. 11, a repeat of the kind of horror *afflicted* [read *inflicted*] on New York City, the Pentagon and airliners on that day is not out of the question.” Editorial, “Addressing Aftermath of an Attack,” *Daily Herald* (Chicago), 16 Feb. 2002, News §, at 10.
- “Some of the myriad hassles *afflicted* [read *inflicted*] on air travelers come from federal security mandates, among them the much-hated random searches.” Editorial, “Get Some Hassles Out of Air Travel,” *Herald-Sun* (Durham, N.C.), 22 Oct. 2002, at A10.

LANGUAGE-CHANGE INDEX

1. *inflict* misused for *afflict*: Stage 1

Current ratio (*afflicted with* vs. **inflicted with*): 15:1

2. *afflict* misused for *inflict*: Stage 1

Current ratio (*inflicted on* vs. **afflicted on*): 177:1

influence. The first syllable receives the primary accent (/in-floo-ənts/), not the second (/in-floo-ənts/). That’s so whether it’s used as a noun or as a verb. See PRONUNCIATION (B).

influence-peddlers. This term should refer to the politicians who sell their influence, not to the people who try to buy it. Yet many politicians get it backwards—e.g.: “He [Patrick J. Buchanan] even updated his stump graphics with a giant mock check at his side made out for hundreds of millions of dollars to the major parties and signed *Influence Peddlers* [read, perhaps, *Special Interests*].” Francis X. Clines, “Buchanan Wraps Himself in McCain’s Flag of Reform,” *N.Y. Times*, 17 Mar. 2000, at A17.

The distinction is hardly a fine line, though. Office-holders and government officials often avail themselves of the “revolving door” option to make more money as private-sector lobbyists. But they still retain some influence through friendships and political connections and could be seen as peddling that advantage.

***inforce**. See **enforce** (A).

informant; informer. Both terms are used in reference to those who confidentially supply police with information about crimes. *Informant* is now more than four times as common in AmE and BrE alike. The Evanses wrote that *informant* is neutral, whereas *informer*, which acquired strong connotations of detestation in the 17th and 18th centuries, remains a connotatively charged term (DCAU at 245). Although that statement doesn’t hold true for legal writing, it does in most other contexts. See INELEGANT VARIATION.

informative; informatory. The latter is a NEEDLESS VARIANT, except in bridge (the card game).

Current ratio: 378:1

informer. See **informant**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

infrequent; *unfrequent. The latter, predominant till about 1880, is now a NEEDLESS VARIANT.

Current ratio: 25:1

infringe. See **impinge.**

infusable; infusible. These two words—found primarily in medical and other technical fields—are sometimes confused. *Infusable* = capable of being infused. *Infusible* = not capable of being fused. The latter appears much more frequently in print.

in future. This phrase is BrE, perhaps through direct translation of the Latin phrase *in futuro* or perhaps because of the BrE pattern of usage without the definite article <she's in hospital>. AmE uses the definite article: *in the future*. So does BrE occasionally. For the phrase *in the near future*, see **future**.

-ING. See DIMINUTIVES (H).

ingenious; ingenuous. These words are virtual antonyms, yet *ingenious* (= clever, skillful, inventive) is sometimes displaced by *ingenuous* (= artless, simple, innocent)—e.g.:

- “They’re no different from Kenneth Lay or Jeffrey Skilling at Enron, who either claimed ignorance of the crimes that were going on around them or found *ingenious* [read *ingenious*] ways to cover them up.” Sheryl McCarthy, “Church Needs to Do Some Serious Spring Cleaning,” *Newsday* (N.Y.), 15 Apr. 2002, at A26.
- “Clocking in at about three hours (the original play ran six), it is a handsome venture, equipped with an *ingenious* [read *ingenious*] set of modular walls by Andrew Jackness, sensitive lighting by Jennifer Tipton and sinister gongs-and-crickets music by John Gromada.” Misha Berson, “Despite Fine Efforts, O’Neill’s ‘Electra’ Showing Its Age,” *Seattle Times*, 29 Apr. 2002, at E2.

Ingenuous is also misused for its other opposite, *disingenuous* (= tricky; feigning ignorance in order to deceive)—e.g.:

- “With all due respect, isn’t it a bit *ingenuous* [read *disingenuous*] to say that we haven’t made the decision whether or not to go to war yet, because absent our going in there and kicking him out to get the regime change, we don’t expect him to step aside.” Charlie Gibson, interviewing Secretary of Defense Donald Rumsfeld on ABC’s *Good Morning America*, 9 Sept. 2002.
- “Obfuscating and *ingenuous* [read *disingenuous*] comments are often made by guests of all political and social persuasions, including Islamic spokespersons appearing on his show. He is indeed a ‘no-spin doctor’ when he forthrightly cuts through the sand-in-your-eyes kind of bull appearing in Omar’s opinion piece.” Kenneth Yerington, “Hate Is Not as Rampant as Writer Claims It Is,” *Iowa City Press-Citizen*, 3 Nov. 2002, at A9.

LANGUAGE-CHANGE INDEX

1. *ingenuous* misused for *ingenious*: Stage 1
2. *ingenuous* misused for *disingenuous*: Stage 1

ingenuity once corresponded to *ingenuous*, and **ingeniosity* (last used with any validity in 1608) to *ingenious*. Through a curious historical reversal of the role of *ingenuity*, it came to mean “ingeniousness.”

Ingenuousness was the only term left to do the work of the noun corresponding to the adjective *ingenuous*. So although *ingenuity* appears to be the correlative of *ingenuous*, it no longer is.

LANGUAGE-CHANGE INDEX

ingenuity as the noun corresponding to *ingenious*: Stage 5

ingenuous. See **ingenious.**

ingraft. See **engraft.**

ingratiate (= to bring [oneself] into favor [with]) should always be reflexive in modern usage <they ingratiated themselves to the company>. Nonreflexive uses are unidiomatic—e.g.:

- “Rep. Phil English[s] . . . conservative voting record and responsiveness to the large, integrated steel mills has *ingratiated him with* [read *endeared him to*] steel lobbyists.” Nancy E. Kelly, “Labor Has Its Day in Democratic Politics,” *Am. Metal Market*, 30 Aug. 1996, at 1.
- “And even if you present a memo listing every inaccurate event she’s related, she may be so *ingratiated with* [read *close to*] the boss that a report will have little effect.” Lindsey Novak, “Bad Sign: Boss’ Editing Changes Put Employee in a Bind,” *Chicago Trib.*, 26 Jan. 1997, at C1.

LANGUAGE-CHANGE INDEX

ingratiate used nonreflexively: Stage 1

ingress; egress. The correct prepositions are illustrated by this sentence: “The company breached its duty to furnish Collins with a safe means of *ingress to* and *egress from* the vessel.”

-ING WORDS. See GERUNDS, FUSED PARTICIPLES & DANGLERS (B), (D).

***inhabitability.** See **habitability.**

inhere. A. Preposition with. *Inhere* takes the preposition *in*—not *within*. E.g.: “Of course that fusion *inheres within* [read *inheres in*] Judaism.” Alisa Solomon, “What’s God Got to Do with It?” *Village Voice*, 18 Apr. 1995, at 33.

Current ratio (*inhere in vs. *inhere within*): 29:1

B. For *inure*. Whereas *inhere* means “to exist as a basic quality in” <a conscience *inheres in* every well-adjusted child>, *inure* means either “to become accustomed” <inured to the honking horns> or, at law, “to take effect to (someone’s) advantage” <inured to the heir’s benefit>. Using *inhere* in place of *inure* is a stunning MALAPROPISM—e.g.: “Plaintiff alleges that such strategy *inhered* [read *inured*] to the financial benefit of defendant Carter when Carter subsequently sold the mortgage loans to other financial institutions.” Steven P. Bann, “Case Digests: Banks—Mortgages,” *N.J.L.J.*, 19 Dec. 1994, at 60. See **inure**.

LANGUAGE-CHANGE INDEX

inhere misused for *inure*: Stage 1

inherent (/in-**heer**-ənt/ or /in-**hair**-ənt/) takes the preposition *in*—e.g.: “They say the extreme risks now *inherent in* Mexican investments may not be fully

reflected in the securities' prices." Tom Petruno, "To Vultures, Mexico a Different Animal," *L.A. Times*, 22 Feb. 1995, at D1. Some writers mistakenly use *to*.

inheritable. See **heritable**.

inhibitory; *inhibitive. The latter is a NEEDLESS VARIANT.

Current ratio: 68:1

inhospitable (= [1] (of a place) difficult to live or stay in because of adverse conditions, or [2] (of a person) not welcoming visitors in a friendly way) is traditionally pronounced /in-hos-pi-tə-bəl/—though today /in-hah-**spit**-ə-bəl/ is probably more frequent throughout the English-speaking world. Cf. **hospitable**.

inimical (/i-nim-i-kəl/) means "hostile, injurious, adverse." It often appears where *adverse* otherwise might <a position inimical to the best interests of the university>. **Inimicable* (a NONWORD) for *inimical* is a fairly common error. The *OED* records **inimicable* as a "rare" adjective, but it should be extinct—e.g.:

- "An international treaty that imposes new concepts of guaranteed rights and benefits is *inimicable* [read *inimical*] to a sovereign nation and a free society." Edwin Meese III & Andrew J. Cowin, "Domestic Policy Courtesy of the U.N.," *San Diego Union-Trib.*, 19 Nov. 1993, at B7.
- "Luke's Jedi powers, Leia's level-headed leadership and Han Solo's seat-of-the-pants swashbuckling are all put to the test by an alien society that is *inimicable* [read *inimical*] to humans and truly menacing." Andrew Smith, "Sci-Fi Novels Excel, Repel in Spinoff Mode," *Commercial Appeal* (Memphis), 18 May 1997, at G2.
- "These issues have taken on totemic significance in the mainstream in the broadside against both multiculturalism in general and non-European immigration in particular as though they were *inimicable with* [read *inimical to*] the principles of social equality." Gary Younge, "Comment: Gay Equality Can't Yet Be Claimed a Western Value, but It Is a Human Right," *Guardian*, 7 June 2010, at 27.

Cf. *unequivocal* (discussed under **unequivocal**).

LANGUAGE-CHANGE INDEX

**inimicable* for *inimical*: Stage 1

Current ratio (*inimical* vs. **inimicable*): 244:1

initial, vb., makes *initialed* and *initialing* in AmE, *initialled* and *initialling* in BrE. See SPELLING (B).

INITIALESE. See ABBREVIATIONS (C).

INITIALISMS. See ABBREVIATIONS.

initiate—a FORMAL WORD for *begin*, *open*, or *introduce*—is appropriate when referring to taking the first step in an important matter. Although you may *begin* an interview, *begin* a conversation, or *begin* a lecture, you *initiate* a series of high-level negotiations. But it is ludicrous to say that you *initiate* an ordinary telephone call. Cf. **inaugurate**.

injunction. See **enjoiner**.

injunctive; *injunctional; *injunctory. *Injunctive* is the standard term. The others are NEEDLESS VARIANTS.

Current ratio: 2,092:2:1

in lieu of. A. Generally. The phrase *in lieu of* (= in place of) is now English, and *instead of* will not always suffice in its stead—e.g.: "The two were arraigned before a town of Montezuma justice and sent to the Cayuga County Jail *in lieu of* \$100,000 bond or \$50,000 cash bail." Jeff Stage, "Troopers Find 43 Pounds of Marijuana in Car," *Syracuse Herald-J.*, 8 Aug. 1997, at B1. But *instead* is usually better whenever it naturally fits—e.g.: "The stations originated in Europe as rest stops for travelers walking long distances or for those making pilgrimages to local cathedrals *in lieu of* [read *instead of*] going to the Holy Land." "Walking in Jesus' Steps," *Patriot Ledger* (Quincy, Mass.), 22 Mar. 1997, at 44.

B. For *in view of* or *in light of*. The day after President Clinton announced his healthcare plan in the fall of 1993, a radio host, broadcasting from the White House lawn, said to his listeners: "This morning we're going to discuss what state health care means *in lieu of* the President's new federal plan." This mistake—which is spreading—results from a confusion of *in lieu of* with *in view of* or *in light of*, either of which would have sufficed in that sentence. As it is, *in lieu of* is a MALAPROPISM when used for either of the other phrases.

LANGUAGE-CHANGE INDEX

in lieu of in the sense "in view of": Stage 1

in like Flynn. This phrase, meaning "assured of success," first became widespread during World War II as an allusion to the actor Errol Flynn's legendary prowess in seducing women. (In 1942, Flynn was prosecuted for the statutory rape of two teenage girls—and was acquitted.) Today the phrase has generally lost any sexual connotation—e.g.:

- "By these standards, Gore should be *in like Flynn*." Kevin Phillips, "The Bush Restoration," *Memphis Commercial Appeal*, 13 Feb. 2000, at B3.
- "Based on the results of our Triangle Census, you'll be *in like Flynn*." Joe Miller, "Road Rage, Grits and Biscuits," *News & Observer* (Raleigh), 27 Mar. 2000, at E1.
- "Follow the formula, and you're *in like Flynn*." Kerry Capell, "Tiny Telecom, Terrific Results," *BusinessWeek*, 7 Aug. 2000, at 26.

The phrase has been the subject of wordplay and consequent confusion. In 1966 appeared *Our Man Flint*, a film starring James Coburn and spoofing the James Bond series; the following year, its sequel, *In Like Flint*, was released. The popularity of these films—especially the latter with its pun on *in like Flynn*—sparked lingering confusion about what the proper phrase should be. So, for example, during

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

coverage of the 2000 Republican Convention, Mark Shields, a PBS commentator, said that George W. Bush might be “in like Flynn, or in like Flint—whatever we say” (PBS Convention Coverage, 3 Aug. 2000). This confusion had already surfaced in print—e.g.:

- “Yep, with my peacoat, I was in like *Flint* [read *Flynn*], I thought, able to hubbub with the highbrows or hang with the homeboys.” Liz McGehee, “Nice in the Offseason” (pt. 2), *News & Observer* (Raleigh), 11 Jan. 1998, at H1 (in this example, *hubbub* should probably be *hobnob*).
- “If you want to be ‘in like *Flint* [read *Flynn*],’ there has to be a measure of exclusivity.” Larry Lipson, “Westside Supper Club Very Inviting, Once You Find It,” *Daily News* (L.A.), 27 Aug. 1999, at L55.
- “Finder praises Gawande as a quick learner. If he failed to incorporate advice initially, says Finder, ‘the second time he was in like *Flint* [read *Flynn*].’” Vanessa E. Jones, “Reporter from the OR,” *Boston Globe*, 10 Nov. 1999, at F1.

Although **in like Flint* occasionally appears in tongue-in-cheek references to Flint, Michigan, and to flint as stone, it shouldn’t appear in sentences such as those just quoted. Errol Flynn is reported to have resented the phrase, but it will always be linked etymologically to him. See James Ross Moore, “Errol Flynn,” 8 *Am. Nat’l Biography* 155, 156 (1999).

LANGUAGE-CHANGE INDEX

**in like Flint* for *in like Flynn*: Stage 2

Current ratio (*in like Flynn* vs. **in like Flint*): 9:1

in line, stand. See **stand in line.**

inmate. Strictly speaking, anyone who shares a dwelling with others, whether involuntarily or not, is an *inmate* of that dwelling. The usual reference is to a prisoner or to a patient in an asylum, other uses of the term having become archaic. Even when used in contexts not involving institutionalization, the word still usually carries unpleasant connotations—e.g.: “The houses are large, drafty places where fires are slow to draw, meals are protracted, and the *inmates* often feel physically uncomfortable.” Lesley Chamberlain, “Torments of Pretense,” *L.A. Times*, 10 June 2001, at 14.

in memoriam is sometimes misspelled **in memorium*—e.g.: “Alfred Lord Tennyson reputedly staged the first reading of ‘In *Memorium* [read *Memoriam*]’ to a group of Irish nuns in the Asgard room.” George Kimball, “Golfers Are Discovering the ‘Garden of Ireland,’” *Boston Herald*, 17 Mar. 1996, Travel §, at 7-1. Unfortunately, one unsure about the spelling may have difficulty looking it up in a dictionary. That’s because *memoriam* exists in English only in this phrase, which is alphabetized under *I* rather than *M*.

LANGUAGE-CHANGE INDEX

in memoriam misspelled **in memorium*: Stage 1

Current ratio: 40:1

inmost. See **innermost.**

innately is sometimes misused for *inherently*. What is *innate* is inborn—the term should be confined

to living things. But *inherent* (= essential, intrinsic) applies best (but not exclusively) to nonliving things such as objects or ideas. The error of misusing *innate* for *inherent* is becoming widespread—e.g.:

- “Natural disasters are not *innately funny* [read *funny in themselves*], but they can produce humor.” Mike Harden, “What Makes Good Comedy?” *Star Trib.* (Minneapolis), 28 July 1994, at E4.
- “Why the idea of Belgium should be so *innately* [read *inherently*] funny is a bit of a mystery.” A.A. Gill, “Descending into Bad Habits,” *Sunday Times* (London), 18 June 1995, Style §, at 29.
- “The hushed natural setting fits a genre that’s *innately* [read *inherently*] human-scale—much more so than, say, full-blown orchestral music.” Amy Biancolli, “Ticklish Situation,” *Times Union* (Albany), 27 Aug. 2015, at V14.

LANGUAGE-CHANGE INDEX

innately misused for *inherently*: Stage 1

***innavigable.** See **unnavigable.**

innermost; inmost. Both mean “farthest inward” or “most intimate.” If any substantive difference exists, it’s that *innermost* is more emphatic about being deep inside <innermost thoughts>. In any event, *innermost* is far more common than *inmost*, which has become a purely literary word.

innervate. See **enervate.**

innocence; *innocency. The latter is an obsolete variant.

Current ratio (*inoculation* vs. **innoculation* vs. **inoculation*): 1,759:12:1

***inopposite.** See **inapposite.**

in order to; in order for; in order that. The phrase *in order to* is often wordy for the simple infinitive—e.g.: “*In order to* [read *To*] control class sizes, the district will also place seven portable classrooms at the four schools.” David Woolsey, “Meridian Board Caps 4 Schools’ Enrollment,” *Idaho Statesman*, 28 Feb. 1995, at B1. The primary exception occurs when another infinitive is nearby in the sentence—e.g.: “The controversy illustrates how the forces of political correctness

pressure government *to grow* in size and arbitrariness *in order to pursue* a peculiar compassion mission.” George F. Will, “Fresh Dispatches from the Frontlines of Indignation,” *Baltimore Sun*, 9 Mar. 1995, at A19.

In order for, which is followed by a clause, is often wordy for *for*—e.g.: “*In order for* [read *For*] the RCE scheme to be reliable, both detectors must get exactly the same amount of illumination.” Gail Robinson, *Electronic Eng’g Times*, 10 Mar. 1997, at 37.

Finally, *in order that*, which often needs no reduction, begins a subordinate clause expressing purpose. It is usually followed by *may* or *might*—e.g.:

- “They are glad that the big guy closed down the shop for three days this week *in order that* the lads *might* grab some holiday cheer.” Steve Buckley, “Tuna Talk Drills in Fun,” *Boston Herald*, 28 Dec. 1996, Sports §, at 43. (Here, *so* would be an improvement over *in order*.)
- “*In order that* the child reader *may* emulate the generous whale, the first three books in the series . . . all come with a peel-off sticker on the back cover.” Valerie Cruice, “Heartening Lessons of Winslow Whale,” *N.Y. Times*, 16 Feb. 1997, Conn. §, at 10.
- “Sacrificing jobs *in order that* some *might* enjoy higher pay may soon start to feel much less clever a policy.” Allister Heath, “Fasten Your Seatbelts—There’s a Little Economic Turbulence Ahead,” *Daily Telegraph*, 13 Aug. 2015, at 16.

***inorganic food.** See **organic**.

in other words. The following readerly sentiment is fairly commonplace: “‘In other words’ is likely to prompt the question, ‘Why not have used the right words the first time?’ To be sure, a subtle or complicated thought may need to be clarified by a careful restatement. But too often, repetition is merely a habit—almost a reflex—inviting inattention or boredom from the reader or hearer.” Ellsworth Barnard, *English for Everybody* 107 (1979). In other words, writers should take heed.

in part. See **in whole**.

***inplane.** See **AIRLINESE**.

in point of fact. See **fact (D)**.

in prison. This idiom does not ordinarily take an indefinite article: *he is in prison*, not **he is in a prison*. But if an adjective modifies *prison* and the term therefore becomes more concrete, the article should be inserted—e.g.: “Mr. Bararella, now *in* [read *in a*] high-security prison, wears [his wife’s] wedding band [on a chain] around his neck, traditionally a sign of mourning.” Celestine Bohlen, “As Omerta Crumbles, the Mafia Changes the Rules,” *N.Y. Times*, 11 Oct. 1995, at A3.

input, n. & v.t. This jargonmonger’s word—dating from the 18th century as a noun and from the mid-1940s as a verb—is one that careful writers tend to avoid.

Although the word can almost always be improved on, it can fairly be described as ubiquitous—e.g.:

- “They want to help devise the budget and have more *input* [read *say*] in whether deans and vice presidents receive tenure.” Judy H. Longshaw, “Winthrop Faculty Wants More Involvement,” *Herald* (Rock Hill, S.C.), 1 Mar. 1997, at B1.
- “After last week’s loss to the Flyers, though, Campbell has wondered aloud if, even with the great effort and *input* [read *contributions*] of his stars, the Rangers have enough talent to enjoy more than spasmodic success.” Stu Hackel, “Campbell’s Soup: Can Anyone Coach the Rangers?” *Village Voice*, 11 Mar. 1997, at 125. (On the use of **spasmodic* in that sentence, see **spasmodic**.)
- “Parental *input* [read *influence*] is still more powerful than teacher–child interactions in school.” Mary Newton Brunner, *The Grammar Lady* 22 (2000).

For the verb *input*, as with the IRREGULAR VERB *put*, the usual past-tense form is *input*—e.g.: “Some people had middle initials *inputted* [read *input*] and others didn’t, and some names were misspelled.” Peter Beinart, “Doing the Inaugural Hustle,” *New Republic*, 3 Feb. 1997, at 22. See **COMPUTERISE**. But the verb use is less well accepted than the noun use.

LANGUAGE-CHANGE INDEX

1. *input* as a noun in nontechnical senses: Stage 5
 2. *input* as a verb: Stage 4
 3. **inputted* as a past tense: Stage 2
- Current ratio (*been input* vs. **been inputted*): 7:1

inquire; *enquire. *Inquire* is a FORMAL WORD for *ask*. In AmE and BrE alike, *in-* is the preferred spelling. At least one sophisticated newspaper, however, uses the archaic *en-* spelling in its name (*The Cincinnati Enquirer*). See **EN- & inquiry**.

inquirer; inquisitor. *Inquirer* is the more general of the two terms, meaning “someone who asks questions or investigates.” *Inquisitor*, not to be used where *inquirer* is called for, means “someone who examines others to obtain information,” and carries with it historical connotations of the Spanish Inquisition.

inquiry. **A. Pronunciation.** *Inquiry* may be pronounced either /in-**kwɪr**-ee/ or /in-**kwə**-ree/. The former has long been the dominant AmE pronunciation. It is the only standard pronunciation in BrE.

B. And enquiry. In AmE, *inquiry* is the standard spelling in all senses. In BrE, *enquiry* is equivalent to *question*, whereas *inquiry* means “an official investigation.” See **EN-**.

C. And query. While *query* refers to a single question, *inquiry* may refer also to a series of questions or a sustained investigation. Occasionally writers misuse *query* for *inquiry*—e.g.:

- “You’ve really got a couple of things that are problematic, notwithstanding the idea that a married woman could be counted as unmarried because she kept her maiden name,” said Richard Steffen, a Speier staffer who launched a *query*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

[read *an inquiry*] into the state's record-keeping system." Ramon G. McLeod, "Maiden Names Skew Birth Data," *S.F. Chron.*, 2 May 1996, at A16.

- "Those months of *query* [read *inquiry*] also produced the figures—get ready for the math—to back up its findings." Cathy Gant-Hill, "Arts Scene Is Pretty as a Picture," *News & Record* (Greensboro), 2 Jan. 1997, at D1.

LANGUAGE-CHANGE INDEX
query misused for *inquiry*: Stage 1

inquisitive; inquisitorial; *inquisitional. *Inquisitive* = given to inquiry or questioning <a highly inquisitive mind>. *Inquisitorial* has quite different connotations: "of the character of an inquisitor; offensively or impertinently inquiring, prying" (*OED*). (To contrast *inquisitorial* with *accusatorial*, see **accusatory**.) **Inquisitional* is a NEEDLESS VARIANT of *inquisitorial*.

Current ratio (*inquisitorial* vs. **inquisitional*): 12:1

inquisitor. See **inquirer**.

inquisitorial. See **inquisitive**.

in re; re. Known to nonlawyers as a legalistic term, *in re* (= regarding, in the matter of) was once commonly used at the outset of legal documents and is now often used before case names (particularly in uncontested proceedings) <*In re Wolfson's Estate*>.

In business correspondence, *in re* is usually shortened to *re* as a signal or introductory title announcing the subject of the letter. But *re* is often criticized as unnecessary JARGON: "Even if the caption must be used, as it seldom has to be, the *Re*: is totally unnecessary, as the mere giving of prominence to the item tells the reader it is going to be the subject of the letter. Notice how some of the formality is lost by the omission of this little 'throwback' to early letter-writing days.

<i>Re: Your letter of March 10</i>	<i>Your letter of March 10</i>
<i>Re: August Sales Contest</i>	<i>August Sales Contest</i>
<i>Re: Order No. 8873</i>	<i>Order Number 8873</i>

L.E. Frailey, *Handbook of Business Letters* 242–43 (rev. ed. 1965). Another business-writing text says that *re* "is giving way to *subject*." Charles T. Brusaw et al., *The Business Writer's Handbook* 540 (3d ed. 1987).

This trend has been hurt, though, and may have been doomed by the ubiquitous use of *Re*: in e-mails, for two reasons. First, the short form fits right in with the hurried style of the medium (tho YMMV :o). More important, e-mail software routinely changes the subject line on a reply message by adding *Re* followed by a colon.

***in receipt of.** This phrase, to be avoided as OFFICIALESE and COMMERCIALESE, is invariably inferior to *have received* or *has received*. Instead of **We are in receipt of your letter*, say *We have received your letter*.

in regard to. See **regard (A)**.

in respect of. See **respect**.

insanitary. See **unsanitary**.

inside (of). The word *inside* shouldn't typically be followed by *of* <the ball was inside the 40-yard line>. See **of (B)**.

Current ratio (*inside the* vs. **inside of the*): 9:1

insidious; invidious. Although these words look and sound similar and convey negative ideas, their meanings are nothing alike. *Insidious* = (of people and things) lying in wait or seeking to entrap or ensnare; operating subtly or secretly so as not to excite suspicion—e.g.: "Many Indians still fear that economic liberalization will bring with it cultural imperialism of a particularly *insidious* kind—that 'Baywatch' and burgers will supplant Bharatanatyam dances and bhelpuri." Shashi Tharoor, "India Poised to Become an Economic Superpower," *Wash. Post*, 10 Aug. 1997, at C1.

Invidious = offensive; repulsive; arousing ill will or resentment. This term is often applied to discrimination, as it has been for more than two centuries—e.g.: "The example familiar to us is segregation. In 1896, the justices said there was nothing *invidious* about separating black people unless they chose to see it that way. That pretense . . . could hardly be maintained in 1954." Anthony Lewis, "Justice Spoke to Our Better Angels," *Times-Picayune* (New Orleans), 4 Aug. 1997, at B5.

The two words generally ought not to be used in the same sentence because sound might appear to triumph over sense—e.g.: "At a time when 'difference' and 'identity' are the potent and inevitable terms in a new comparatism grounded in 'culture,' it may be important to remind ourselves how *insidious* comparison can be, how *invidious* and odious." W.J.T. Mitchell, "Why Comparisons Are Odious," *World Literature Today*, 1 Mar. 1996, at 321.

insightful. See **inciteful**.

insignia; *insigne. Today *insignia* (technically plural) is regarded as the singular, *insignias* as its plural. E.g.: "Roses bearing this *insignia* have undergone two years of comparison with other new varieties." Diane Relf, "Rose Blooms, Rose Facts," *Roanoke Times*, 20 June 1996, at 9. Cf. **indicia**.

The Latin singular **insigne* is rarely used. When it does appear, it would be better as *insignia*—e.g.: "Mr. Robb . . . later learned that a red-white-and-blue tie he wore Sept. 5 when he was endorsed by Bobby Scott—the state's only black congressman—was adorned with the *insigne* [read *insignia*] of the Confederacy." Laurie Kellman, "Robb Urged to Fight Harder to Keep Seat," *Wash. Times*, 7 Oct. 1994, at A1.

LANGUAGE-CHANGE INDEX
**insigne* for *insignia*: Stage 1

Current ratio (*an insignia* vs. **an insigne*): 48:1

insipient. See **incipient**.

insist takes the preposition *on*, not *in*—e.g.: "In a society that *persists and insists in* [read *persists in and insists on*, if the rhyming is really necessary] permitting its citizens to own and possess weapons, it

becomes necessary to determine who may and who may not acquire them.”

insistence; *insistment. The latter is a NEEDLESS VARIANT. *Insistence* is often misspelled **insistance*.

Current ratio (*insistence* vs. **insistment*): 42,536:1

insofar as (= in such degree as) is spelled thus in AmE and *in so far as* in BrE. (See **inasmuch as**.) But perhaps, as H.W. Fowler suggested, it shouldn't be spelled at all: “He must have a long spoon that sups with the devil; and the safest way of dealing with *in so far* is to keep clear of it. The dangers range from mere feebleness or wordiness, through pleonasm or confusion of forms, and inaccuracy of meaning, to false grammar” (*FMEU1* at 276). As the following examples illustrate, modern writers are often chargeable with each of the offenses just mentioned.

- **Wordy:** “[Bill Cosby] knows this is a hurt that will never go away, but *insofar as* [read *if*] humanly possible, he wants people to move back to the time where they saw him as someone who brings laughter into their lives.” Lawrie Mifflin, “Cosby Asks to Grieve with Dignity,” *Austin Am.-Statesman*, 31 Jan. 1997, at F1.
- **Pleonastic:** “This is particularly true *insofar as* [read *because*] Mr. Dellums' ascendancy comes at a very sensitive moment.” Frank Gaffney Jr., “Furrowed Brows on the Defense Front,” *Wash. Times*, 28 Dec. 1992, at E1.
- **Ungrammatical:** “His name has surfaced in connection with Commerce Department lobbying *insofar as* [read *because of*] his success in winning Cellular Communications Inc.” Jeffrey Silva, “Nextwave Ownership Edict Begs Question,” *Radio Comm. Rep.*, 13 Jan. 1997, at 1. (*Insofar as* isn't a preposition and therefore can't govern *success*; a preposition such as *because of* is needed.)

Sometimes *insofar as* leads to a false economy. The two words *in* and *so* could be simplified to *as*, so that you end up with *as far as* instead of *insofar as*. The choice is then between three words (and three syllables) and two words (but four syllables). To some, this seems a trivial worry, but to the writer cultivating a lean style it is serious business. And part of the problem with *insofar as* is that it “feels” wordy—e.g.: “Boyer . . . seems to be viewed as a bit more of a dark horse by Republicans interviewed last week—at least *insofar as* [read *as far as*] the top job goes.” Michael Silence & Tom Humphrey, “Pope Campaign Trying to Cover All of 1st District,” *Knoxville News-Sentinel*, 16 June 1996, at B1.

But sometimes a sentence containing *insofar as* isn't easily simplifiable. And where (not *insofar as*!) that is so, the phrase can hardly be faulted—e.g.: “His suggestion that government . . . has no business regulating private behavior amounts to a claim that representative democracy is illegitimate, at least *insofar as* it does not comport with his morality.” J. Stewart Brams, “Outlawing Drug Use Does Not Violate Privacy,” *Pitt. Post-Gaz.*, 5 Aug. 1996, at A10. To replace *insofar as* with *to the extent that* would

make the sentence wordier. To clip it down to *as* would be too elliptical.

On this term's spelling, see **inasmuch**.

insoluble; unsolvable; *insolvable. *Insoluble* is used in reference both to substances that will not dissolve in one or more liquids and to problems that cannot be solved. E.g.:

- “Her duties included making calamine lotion from water-insoluble powders.” Brian Brennan, “Pharmacy Was Fascinating,” *Calgary Herald*, 26 Sept. 1995, at B2.
- “The problem, you see, is delicate. I sometimes fear that it is *insoluble*.” Daniel Horch, *The Angel with One Hundred Wings* 135 (2002).

Unsolvable is used only in reference to problems that cannot be solved. Most stylists prefer it to *insoluble*—e.g.: “In both Iraq and North Korea the drive to contain proliferation has made George Bush the point man in an *unsolvable* problem.” Stefan Halper, “Negotiating the Korean Rift,” *Wash. Times*, 20 Jan. 2003, at A17.

**Insolvable* should be avoided as a NEEDLESS VARIANT.

in some circumstances. See **circumstances (c)**.

insomuch—always one word—is usually best replaced by a less stilted phrasing, such as *in (that)*, *so (as)*, or *so (that)*. As the following examples illustrate, both *insomuch as* and *insomuch that* are sometimes used, but they are both easily replaceable—e.g.:

- “*Insomuch as* [read *Since*] Towey was held to a standard few officials could live up to, yes, killing the confirmation was unfair. And *insomuch as* [read *since*] the Republicans, despite their surface politeness, handled it with all the grace of a demolition derby.” Louis Lavelle, “Caesar's Ghost,” *Tampa Trib.*, 21 May 1995, Commentary §, at 1.
- “The '93 season, Wilhelm's last, was memorable *insomuch that* [read *because of in that*] the Tigers needed to win two of three at FSU to finish 11–11 in the league.” Frank Dascenzo, “Wilhelm Can't Stay Away from Game,” *Herald-Sun* (Durham, N.C.), 16 May 1996, at B6.
- “*Insomuch as* [read *As far as*] the immediate postmatch stats can be trusted, he was credited with being Ireland's leading tackler (with 13).” Gerry Thornley, “Fearless Ireland Cut New Dash in Dramatic Race for Prize,” *Irish Times*, 23 Mar. 2015, Sport §, at 3.

Cf. **inasmuch as**.

insoicant (= cheerfully unconcerned; unworried) may be pronounced either /in-soo-see-int/ or /in-soo-shənt/, the latter being a more anglicized version.

in spite of. See **despite**.

inst.; ult.; prox. F.T. Wood writes that *inst.* (short for *instant*) was “once a quite respectable legal term, now a piece of commercial jargon for ‘the present month’ (e.g., ‘We beg to recognise the receipt of your letter of the 25th inst.’). Use the name of the month instead.”

Wood, *Current English Usage* 123 (1962). The advice is well taken.

Likewise, *ult.* (L. *ultimo* “of last month”) and *prox.* (L. *proximo* “of next month”) should be replaced with the straightforward *last month* and *next month*—or with a precise reference naming the month. See COMMERCIALESE.

installment is the standard AmE spelling. *Instalment* is the BrE spelling.

instance; instancy. *Instance* “in the sense of urgent solicitation or insistence [always in the phrase *at the instance of*] is a useful word; in any other sense it is useless.” Percy Marks, *The Craft of Writing* 53 (1932). Another legitimate meaning of the word is “an illustrative example,” as in *for instance*.

But in the phrase *in a majority of instances* (= usually), the word is indeed useless—e.g.: “*In the vast majority of instances*, the company about to be acquired hires an outside firm to vet the proposed purchase price by reviewing details of the transaction and then comparing them with similar deals.” Rick Brooks, “Some Investment Banks Assess Their Own Acquisitions,” *Wall Street J.*, 9 Jan. 1998, at B2. (Read: *The company about to be acquired usually* [or *almost always*] hires an outside firm)

Instancy, a rare term, means “urgency; pressing nature; imminence” <the instancy of the danger was apparent to all>.

instantly; instantaneously. *Instantly* = at once, directly and immediately. *Instantaneously* = (1) (of two events that occur) so nearly simultaneously that any difference is imperceptible; or (2) done in an instant.

instigation (= the act of inciting or fomenting) is sometimes misused for *initiation* or *installation*—e.g.: “The cover celebrates the 650th anniversary of the *instigation* [read *initiation*] of the Order of the Garter, the UK’s highest civil and military honour.” David McManus, “The British Philatelic Bureau,” *Precision Marketing*, 1 June 1998, at 25. (The writer also errs in describing his subject: the Order is a chivalric honor, neither civil nor military.)

LANGUAGE-CHANGE INDEX
instigation misused for *initiation*: Stage 1

instill; instil. The preferred spelling is *instill* in AmE, *instil* in BrE. This word takes the preposition *in(to)*, not *with* <he instilled character as well as knowledge into his students>. *With* results from confusion of *inspire* with *instill* or *infuse*. See OBJECT-SHUFFLING & **inculcate (B)**. Cf. **imbue**.

instillation; *instillment. The latter is a NEEDLESS VARIANT.

Current ratio: 265:1

instinctive; *instinctual. The latter is a NEEDLESS VARIANT. More than most such variants, it appears in respectable publications—e.g.: “Men notice women’s vulnerabilities with a falcon’s eye—it’s surely

instinctual [read *instinctive*]—yet not just for predatory purposes: also protectively.” Edward Hoagland, “Sex and the River Styx,” *Harper’s Mag.*, Jan. 2003, at 49, 54.

Current ratio: 4:1

institute is a FORMAL WORD for *begin* or *start*. Cf. **commence**.

in-store (= being or occurring within a shop or store) is a PHRASAL ADJECTIVE so hyphenated—preferably not solidified into **instore*. The term became popular in AmE in the 1940s and in BrE in the 1960s <in-store promotions> <in-store displays>.

insubstantial; *unsubstantial. Although H.W. Fowler preferred **unsubstantial* and it predominated till about 1950, it is rarely seen now and should be classed a NEEDLESS VARIANT. *Insubstantial*, the standard term, is much more common than **unsubstantial* in modern print sources.

Current ratio: 3:1

***insue** is an archaic spelling of *ensue*. See **ensue**.

insult, in medical and scientific JARGON, often means “something that disturbs normal functions; a trauma”—e.g.:

- “American experience . . . could be useful in reminding [Russians] that government still has a vital role in repairing the cruel injuries inflicted by chemical and nuclear *insults* to the environment.” “Russia’s Ravaged Environment,” *Boston Globe*, 5 Aug. 1995, at 8.
- “What auxologists call ‘environmental *insults*’ can slow or stop this growth. Obvious ‘*insults*’ are poor nutrition, illness, lack of hygiene, polluted surroundings and overcrowded housing.” Rod Usher, “A Tall Story for Our Time,” *Time*, 14 Oct. 1996, at 64.
- “The evidence of increased danger from teenage smoking is also important, the researchers said, because it’s consistent with the idea ‘that environmental *insults* are most deleterious during breast development.’” Robert Cooke, “Study Links Smoking, Breast Cancer,” *Newsday* (N.Y.), 13 Nov. 1996, at A4.

See **trauma**.

insupportable. See **unsupportable**.

insurable. So spelled.

insurance. A. And assurance. *Insurance* answers to both *insure* and *ensure* (the spelling **insurance* now being obsolete). (See **assure**.) Usually, *insurance* refers to indemnification against loss (from the verb *insure*). In this legal sense, insurance is of two kinds. One is insurance against accidents: buildings burning, ships sinking, cars colliding, bodies being injured, and the like. The other—in BrE frequently called *assurance*—is provision for designated people on the occurrence of death: *life insurance* (AmE) or *life assurance* (BrE).

In AmE, *assurance* (which answers to *assure*) chiefly means “pledge” or “guarantee”—e.g.: “But the *assurances* China provided to the Clinton Administration have not been made public.” James Przystup & Robert

A. Manning, "Clinton's Inscrutable China Policy," *Nat'l Rev.*, 8 Dec. 1997, at 22. It sometimes also means "self-confidence"—e.g.: "Countertenor Robert Harre-Jones, tenors Charles Daniels and Angus Smith and baritone Donald Greig spun out the florid, long, trailing melodic lines of Dufay and Ockeghem motets with delicate assurance." Cecelia Porter, "Orlando Consort at Dumbarton Church," *Wash. Post*, 10 Nov. 1997, at B7.

B. Pronunciation. This word is preferably pronounced with the primary accent on the second syllable: /in-**shuur**-ənts/—not /in-shər-ənts/ (a dialectal pronunciation). See PRONUNCIATION (B) & DIALECT.

LANGUAGE-CHANGE INDEX

insurance mispronounced /in-shər-ənts/: Stage 2

insure. See **assure**.

insured, n., like *deceased* and *accused*, forms an awkward plural <several insureds> and possessive <the insured's liability>. This infelicity can be avoided in one of two ways: (1) by using *insured* as an adjective <both insured representatives> or (2) by using an equivalent term <both insurants> <the policyholder's claim>. If you are using *insured* as a noun, though, use an *of*-phrase for the possessive <the liability of the insured>. See POSSESSIVES (J).

insurer; *insuror. The latter is a NEEDLESS VARIANT.

Current ratio: 3,145:1

insurgence; insurgency. These words have undergone DIFFERENTIATION, but the distinction is a fine one. *Insurgence* = an act or the action of rising against authority; a revolt <the military quelled an insurgence in Bangkok this morning>. *Insurgency* = the state or condition of being in revolt <no deaths occurred during the three-week insurgency>.

***insuror.** See **insurer**.

insurrectionary; *insurrectional. The latter is a NEEDLESS VARIANT.

Current ratio: 6:1

in sync. See **sync**.

integer is pronounced /in-tə-jər/, with a soft -g-.

integrable. This is the standard adjective corresponding to *integrate*—not **integratable*. See -ATABLE.

Current ratio: 29:1

integral; integrant. The second is a NEEDLESS VARIANT of the first as an adjective, but it exists legitimately as a fancy equivalent of *component*—e.g.: "Hauy defines the mineral species to be: 'a collection of matter whose *integrant* molecules are all alike, and composed of the same elements united in the same proportion.'" Robert Jameson, "A Brief History of Systematic Mineralogies," *Mineralogical Record*, 1 July 1995, at 49. It is pronounced /in-tə-grənt/.

Integral (/in-tə-grəl/) is often misspelled **intergral*—e.g.: "Before long the slender, shy immigrant became an *intergral* [read *integral*] part of the New York art scene." Amy Sutherland, "When Yasuo Kuniyoshi Was Still Plain Folk," *Portland Press Herald*, 26 Jan. 1997, at E1. Avoid also the mispronunciation /in-**teg**-rəl/.

LANGUAGE-CHANGE INDEX

integral misspelled **intergral*: Stage 1

***integratable.** See **integrable**.

integration. See **desegregation**.

intelligent. A. And intelligible. *Intelligent* means "(of people) having mental power or grasp." *Intelligible* means "(of statements) understandable."

B. And intellectual, adj. Someone who is *intelligent* has an innate ability to learn quickly and to solve problems easily <an intelligent young child>. Someone who is *intellectual* enjoys using his or her intelligence for scholarly or philosophical pursuits <a quiet, intellectual woman who spends most of her time in bookstores>.

intelligentsia is the standard spelling. **Intelligentzia* is a variant.

In the early 20th century, some purists pronounced the Russian loanword with a hard -g-, as in *get*. But the pronunciation quickly conformed to a soft -g- on the analogy of the cognates *intelligent* and *intelligence*. Only /in-tel-i-**jent**-see-ə/ is now considered the standard pronunciation.

Current ratio: 341:1

intense; intensive. The conventional advice—to shun *intensive* wherever *intense* will fit the context—is sound. *Intensive* is really a philosophical and scientific term best left to philosophers and scientists. Other writers can work well enough with *intense*—e.g.: "Anti-tobacco lawyers complain that the *intensive* [read *intense*] scrutiny serves another purpose too—intimidating some clients into giving up their claims to keep embarrassing personal information from becoming public." Myron Levin, "Private Eyes' Probing Armed Big Tobacco for Court Battles," *Houston Chron.*, 3 Aug. 1997, at 12.

But *intensive* is now customary in jargonistic PHRASAL ADJECTIVES such as *capital-intensive*, *labor-intensive*, *time-intensive*, and the like.

Intensive is sometimes wrongly made **intensive*. This is commented on, along with **preventative*, in an old book: Austin Phelps & Henry Allyn Frink, *Rhetoric: Its Theory and Practice* 24 (1895). Cf. **preventive**.

Back to the present: *intense* has also become a low CASUALISM for "very interesting" <"He showed up at the party half naked." "Really? That's intense!">.

LANGUAGE-CHANGE INDEX

intensive misused for *intense*: Stage 4

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

INTENSIVE PRONOUNS. See PRONOUNS (E).

***intensive purposes, for all.** For this error, see **for all intents and purposes**.

intently (= with rapt concentration or attention, eagerly) is sometimes misused for *intensely* (= to a very great degree, forcefully)—e.g.: “Ah, the Roseanne people love. Or love to hate. Or maybe just dislike *intently* [read *intensely*].” Dusty Saunders, “‘Saturday Night Special’ Loaded for Targets of Roseanne’s Shtick,” *Rocky Mountain News* (Denver), 10 Apr. 1996, at D12.

LANGUAGE-CHANGE INDEX
intently misused for *intensely*: Stage 1

intents and purposes. See **for all intents and purposes**.

INTER-; INTRA-. These prefixes have quite different meanings. *Inter-* means “between, among.” *Intra-* means “within, in.” So *interstate* means “between states” and *intra*state means “within a state.” American bureaucrats and businesspeople have recently created any number of NEOLOGISMS with these prefixes, primarily with *inter-* (e.g., *interagency*, *interbranch*, *intercorporate*, *intermunicipal*) but also with *intra-* (e.g., *intranet*, *intrapreneur*).

interact with one another. This is a glaring REDUNDANCY that should almost always be trimmed to *interact*—e.g.: “It’s the best thing to do in the long run, especially as patients *interact with one another* [read *interact*] and form bonds.” Ronell Smith, “Families Find Adult Day Care a Comfort,” *Augusta Chron.*, 27 Jan. 2003, at B5. The same is true of *interact with each other*. See **each other**.

inter alia; inter alios. The best course, undoubtedly, is to use *among others*, a phrase that can refer to people or things. The Latin is not so simple. Whereas *inter alia* (= among other things) refers to anything that is not human, *inter alios* (= among other people) refers to human beings. (The Latin form *inter alias* means “among other female persons.”)

interceptor; *interceptor. The two forms vied for predominance till about 1930, when *interceptor* became the standard term and **interceptor* a NEED-LESS VARIANT.

Current ratio: 111:1

interesting is pronounced /in-trə-sting/—not /in-ə-res-ting/. See PRONUNCIATION (B).

interestingly. See SENTENCE ADVERBS.

interface, v.i. Outside COMPUTERESE, this verb is jargonmongers’ talk. E.g.:

- “Team members were delegated a project-related job that required minimal *interfacing* [read *interaction*] with others.” Deborah S. Kezsbom & Katherine A. Edward, *New Dynamic Project Management* 252 (2001).
- “Making contact and *interfacing* [read *dealing*] with others from another culture can be stressful and lead to culture

shock.” Wallace V. Schmidt, *Communicating Globally* 84 (2007).

LANGUAGE-CHANGE INDEX
interface to denote interaction between people <the editor must interface with the writer>: Stage 2

interfusible. So spelled—not **interfusible*. See -ABLE (A).

INTERJECTIONS. See FUNCTIONAL SHIFT (H).

interline. See AIRLINESE.

interment; internment. *Interment* = burial <interment will take place just after the funeral services>. *Internment* = detention, especially of aliens in wartime <the internment of Japanese Americans during World War II>.

Interment is sometimes, especially in obituaries, confounded with *internment*—e.g.:

- “Graveside ceremony and *internment* [read *interment*] will be at Hillside Cemetery in Peekskill immediately following.” “Stark, Rosalie White,” *Times Union* (Albany), 22 Aug. 2000, at B7.
- “Memorial services have been planned for a later date *in* [read *on*] Cape Cod, with *internment* [read *interment*] in the Dennis Cemetery.” “Obituaries,” *Ariz. Republic*, 29 Oct. 2000, at B8.
- “*Internment* [read *Interment*] will follow at Middleton Cemetery.” “Deaths,” *Idaho Statesman*, 5 Dec. 2000, at 7.

LANGUAGE-CHANGE INDEX
internment misused for *interment*: Stage 1

intermezzo is pronounced /in-tər-met-soh/ or /in-tər-med-zoh/, but not /-mez-oh/. Pl. *intermezzos* or (pretentiously) *intermezzi*. See PLURALS (B).

Current ratio (*intermezzi* vs. *intermezzos*): 4:1

intermittent; intermitting. Both words mean “occurring at intervals.” The distinction is that *intermittent* connotes random intervals, whereas *intermitting* connotes cyclic repetition. The first word is far more common; in fact, *intermitting* is almost never seen in general writing. But in technical writing, and especially medical writing, *intermitting* conveys a useful distinction—e.g.:

- “By the 17th century, *synochus* had been distinguished from *synocha*, a term Galen did not use. The former continued to be a continuous fever, whereas the latter could be *intermitting*, and was sometimes linked with the periodicities we associate with malaria.” Bill Bynum, “Synochus,” *Lancet*, 21 Sept. 2002, at 956.
- “The cure was as ugly as the disease: *intermitting* doses of chemotherapy, radiation and painful spinal taps.” Carol Sowers, “Woman with Leukemia Urges Minorities to Donate,” *Ariz. Republic*, 15 July 2005, at B6.
- “This method uses an *intermitting* technique, along with a free traveling plunger in the tubing string that acts as an interface between the liquid phase and the gas phase.” “A Pump for All Reasons,” *Oil & Gas J.*, 24 June 2006, at 4.

in terms of is often indefensibly verbose. Whenever you can replace it with a simple preposition, do so—e.g.:

- “Each of the paintings ‘rates’ a different area of Wisconsin, *in terms of* [read *for*] the quality of its towns.” James Auer, “\$2 Million Grant to Met Museum Has Ties to Milwaukee,” *Milwaukee J. Sentinel*, 26 Nov. 1997, Cue §, at 2.
- “Many arts groups have indeed been too exclusive *in terms of* [read *in*] their offerings, he said, and they have been guilty of the sin of elitism.” Elsa Brenner, “Arts Centers Open Doors for Hire to Survive,” *N.Y. Times*, 30 Nov. 1997, Westchester §, at 1.
- “*In terms of* [read *In*] the overall expenditure on the Trident replacement, this is a tiny amount.” “He’s the Chancer of the Exchequer,” *Daily Record* (Glasgow), 1 Sept. 2015, News §, at 8.

But in the sense “expressed by means of,” the phrase is quite defensible—e.g.: “At the same time, he describes Sibelius’s symphonies *in terms of* visual, personal drama, evoking not only smashings and submersions, but also dreamlike journeys through forests and snow.” Leslie Kandell, “Tribute to a Long-Lived Voice from the North,” *N.Y. Times*, 30 Nov. 1997, N.J. §, at 20.

internecine. As originally used in English, and as recorded by Samuel Johnson in 1755, *internecine* means “mutually deadly; destructive of both parties.” In best usage it still bears the sense of devastation—e.g.: “As Zaman portrays himself, he is the civil warlord. He was the one to avoid the *internecine* bloodshed that continues to plague Afghanistan.” Michael A. Lev, “In Power Shift, Afghan Warlord Now Out of Loop,” *Chicago Trib.*, 7 May 2002, News §, at 6.

The word is now routinely used in extended senses, with the suggestion that internecine warfare has a winner. Often, in fact, it is used to mean nothing more than “internal”—e.g.:

- “But whoever emerges victorious from the *internecine* [delete *internecine*] Internet wars, the one sure winner is guaranteed to be the business and residential consumer.” Paul Spillenger, “Internet Access Wars Heat Up,” *Ark. Bus.*, 1 July 1996, at 1.
- “If handled right, *internecine* [read *internal*] struggle can pay off for winners and losers alike.” Bill Walsh, “Managing the Monster,” *Executive Excellence*, Nov. 1996, at 19.
- “It is in the nature of bureaucrats to fight for turf and for money. The goal of winning these fights becomes more important than the formal goals of an agency, because winning the *internecine* [read *interagency*] battles for money and turf is seen as a matter of survival.” Andrew Greeley, “Merger Making Homeland Insecure,” *Times-Union* (Albany), 30 Nov. 2002, at A11.

Today, these uses are so common that they can no longer be called solecisms. But careful writers will respect the word’s traditional roots in belligerency and find other words to describe petty squabbles.

The word is pronounced in several ways, the best perhaps being /in-tər-nee-sin/. But other pronunciations are acceptable: /in-tər-nee-sɪn/, /in-tər-nə-sin/, /in-tər-nə-seen/, and /in-tər-ne-seen/.

LANGUAGE-CHANGE INDEX
internecine misused for *internal*: Stage 3

Internet. Capitalized thus—not **internet*. E.g.: “Mercifully, Lasch did not live to see the *internet* [read *Internet*] or the full digital revolution that the personal computer spawned.” Stewart Weaver, Introduction to Christopher Lasch, *Plain Style* 39 (Stewart Weaver ed., 2002). The word is legitimately viewed as a proper noun. See **World Wide Web**.

internment. See **interment**.

interoffice. One word.

interpellate. See **interpolate**.

interpersonal. “What this [word] adds to ‘personal’ except five letters and a superficial impression of scientific exactness, I do not see—except, perhaps, in a particular context where ‘intergroup’ relations might also be involved.” Ellsworth Barnard, *English for Everybody* 34 n.12 (1979). Point well taken.

interpolate; interpelate. The first /in-tərp-ə-layt/ means “to insert into a text or writing”; the second /in-tər-pel-ayt/, used in legislative reports, means “to question formally; to seek information.”

interpret; *interpretate. The latter is an obsolete BACK-FORMATION and a NEEDLESS VARIANT of *interpret*—e.g.: “The essence of ice dancing is the inventiveness of the performance, how the music is *interpreted* [read *interpreted*] and how the dance steps are choreographed.” Lee Shappell, “International Flair,” *Ariz. Republic*, 20 Jan. 1993, at D1.

LANGUAGE-CHANGE INDEX
**interpretate* for *interpret*: Stage 1
Current ratio (*interpreting* vs. **interpreting*): 1,494:1

interpretive; interpretative; *interpretational. Generally, one forms the adjective on the model of the noun form of a word. Hence *prevention* yields *preventive*, not **preventative*; *determination* yields *determinative*, not **determinive*; *administration* yields *administrative*, not **administerive*. And with *interpretation*, the traditionally correct adjective is *interpretative* (= having the character or function of interpreting; explanatory). E.g.:

- “You will misuse it . . . if you substitute the dictionary for the exercise of your own *interpretative* judgment in reading.” Mortimer Adler, “How to Read a Dictionary” (1941), in *Words, Words, Words About Dictionaries* 53, 59 (Jack C. Gray ed., 1963).
- “Crews continue to work on restrooms, a parking lot and *interpretative* displays near the McMillin Bridge off Washington 162, he said.” Rob Tucker, “Foothills Trail 2.3 Miles Closer to Completion,” *News Trib.* (Tacoma), 6 Aug. 1997, at B9.

But *interpretive* has gained ground since the mid-20th century—so much so that it’s about twice as

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

common in print as *interpretative*. The shorter form surpassed the longer in frequency of use in print sources in the early 1960s. Today it is standard—e.g.:

- “Morrison, also a founding member of Bolsa Chica Conservancy, said her first goal will be to train more volunteer hosts for the conservancy’s *interpretive* center.” Kimberly Brower, “Bolsa Chica Group Fills Education Post,” *L.A. Times*, 30 July 1997, at B2.
- “Signs along the *interpretive* walkway urge visitors not to eat the fruit, but the temptation to savor an exotic fruit plucked fresh from a tree is almost irresistible.” Pat Stein, “Quail’s Subtropical Garden an ‘Opportunity for Discovery,’” *San Diego Union-Trib.*, 10 Aug. 1997, at H21.
- “The Northern Ireland home of influential socialist and Easter Rising leader James Connolly is to be turned into a museum and *interpretive* centre.” Maurice Fitzmaurice, “Museum Plan for Connolly’s Home,” *Mirror* (U.K.), 31 Aug. 2015, at 14.

Refight an old fight, if you like, and stick to *interpretative*. But *interpretive* has already taken hold.

**Interpretational* is a NEEDLESS VARIANT—e.g.: “Therein lies the *interpretational* [read *interpretive*] logjam, the slippery definitions of ‘tradition’ and ‘honor’ that wreak the most havoc on open dialogue.” Lynell George, “When Mascots Unite,” *L.A. Times*, 8 June 1997, at E3.

LANGUAGE-CHANGE INDEX

1. *interpretive* for the traditional *interpretative*: Stage 5
Current ratio (*interpretive* vs. *interpretative*): 2:1
2. **interpretational* for *interpretive*: Stage 1

interregnum. Pl. *interregnums* or *interregna*—AmE writers being inclined to the former and BrE to the latter. See PLURALS (B).

Current ratio (*interregnums* vs. *interregna*): 1.1:1

interrogate is a FORMAL WORD for *question*; it suggests formal or rigorous questioning.

interrogatee; ***interrogee.** *W3* lists **interrogee* (= someone interrogated), not *interrogatee*, but the *OED* lists *interrogatee*, not **interrogee*. Since the agent noun is *interrogator*, it makes more sense to prefer the corresponding passive form, *interrogatee*. This longer form is more than twice as common in modern print sources.

Current ratio: 2:1

interrogative; ***interrogatory**, adj.; ***interrogational.** *Interrogative* (= of, relating to, or resembling a question) is the standard term. E.g.: “Wimsey smiled at Harriet, an odd, *interrogative* smile.” Dorothy L. Sayers, *Gaudy Night* 364 (1936; repr. 1995). The others are NEEDLESS VARIANTS. In legal contexts, *interrogatory* is a noun meaning “a written question (usu. in a set of questions) submitted to an opposing party in a lawsuit as part of discovery” (*Black’s Law Dictionary* 947 [10th ed. 2014]).

Current ratio (*interrogative* vs. **interrogatory* vs. **interrogational*): 52:5:1

***interrogee.** See **interrogatee.**

interrupter; ***interruptor.** The first spelling has long predominated in print sources and is considered standard. See -ER (A).

Current ratio: 20:1

interstate; **intrastate.** These adjectives should not be used adverbially, as here: “Organized crime operates *interstate* [read *in interstate commerce* or *across state lines* or *throughout the states*].” See INTER-.

interstitial (= situated within gaps) is the standard spelling. It’s pronounced /in-tər-**stish**-əl/. **Interstitial* is a variant spelling.

Current ratio: 1,162:1

intervener. Preferably so spelled—*intervenor* being an exclusively legal spelling.

Current ratio: 2:1

***interveniencence.** See **intervention.**

***intervent**, a misbegotten BACK-FORMATION from *intervention*, is incorrect for *intervene*—e.g.:

- “Chilean banking officials will close at least four of the eight banks and finance companies in which the Government *intervented* [read *intervened*] last November.” Mary Helen Spooner, “Chile to Close ‘At Least 4 Financial Institutions,’” *Fin. Times*, 26 Mar. 1982, § I, at 4.
- “Key congressional leaders indicated they might be willing to wait until the end of the week before *interventing* [read *intervening*] in the labor dispute.” Frank Swoboda, “Hill in No Hurry to Settle Railroad Shutdown,” *Wash. Post*, 25 June 1992, at A1.
- “NATO *intervented* [read *intervened*] the following year and has inherited the issue now that Serb-led Yugoslav forces have left.” John Ward Anderson, “A Battle Brews in the Buffer Zone,” *Wash. Post*, 14 Mar. 2001, at A18.

LANGUAGE-CHANGE INDEX

**intervent* for *intervene*: Stage 1

Current ratio (*intervened* vs. **intervented*): 19,299:1

intervention; ***interveniencence.** The latter is a NEEDLESS VARIANT.

in the context of. See **context of.**

in the course of is often wordy for *during* or *while*—e.g.: “Billingsley got to know the widow Doss pretty well *in the course of* [read *during*] the investigation.” Bill Thomas, “He Can Name Tune but Can’t Find Lyrics,” *Jupiter Courier* (Fla.), 26 Nov. 1997, at A9.

in the event. See **event.**

in the final analysis; **in the last analysis.** Both CLICHÉS are likely to detract from your prose. Try to state the proposition without this tepid lead-in.

in the light of; in light of. Both are CLICHÉS. *In the light of* is the more traditional phrasing dating back to the 16th century. Increasingly, in figurative contexts other than the SET PHRASE *in the light of day*, the shorter form has come to be the standard form <in light of how much our bags weigh, it's understandable that we'd have to pay extra>. See **in lieu of (B)**.

in the midst of. See **amid (B)**.

in the negative. See **affirmative**.

in the offing. See **offing**.

in the process of. See **process (B)**.

in the throes of. See **throes of**.

in this connection. All in all, one can understand a mid-20th-century editor's denunciation of the phrase: "Of all the superfluous baggage carried by the journalistic or literary pilgrim, this seems to me the supreme specimen of uselessness. Study this combination of words through a hundred of its innumerable intrusions into printed text, and then say if it is not a monster of futility. It is not merely unnecessary verbiage, it is an actual clogging and cluttering of the channels of clear, concise utterance. To me, as an editor, it seems to suggest desire to consume rather than to conserve paper and typewriter ribbons." Edward N. Teall, *Putting Words to Work* 276 (1940). Cf. **in connection with**.

***inthrall**; ***inthal**. See **enthral**.

***intice**. See **entice**.

intimately. For a misuse of *intricately* for this word, see **intricately**.

intimidatable. So formed—not **intimidable*. E.g.: "Sloan was perhaps the least *intimidatable* player in league history." Ray Ratto, "Nobody Sings the Blues Louder than the Jazz," *News & Observer* (Raleigh), 6 June 1997, at C1. See -ATABLE.

Current ratio: 2:1

into. See **in**.

in toto (= completely, entirely, wholly, in full) is a LATINISM expressing such a fundamental notion, and having so many ready English synonyms, that it is seldom if ever justified. E.g.:

- "I asked and received permission from editor Max Brantley to reproduce it here *in toto* [read *in full*]." Meredith Oakley, "Why Not a Recall Now?" *Ark. Democrat-Gaz.*, 15 Sept. 1997, at B7.
- "Scientists had thought that given the considerable commitment of male sea horses to child care, sex roles would be swapped *in toto* [read *in full*], and the males would sit back peacefully while the females thrashed it out with one

another over the right to mate with them." Natalie Angier, "When (and Why) Dad Has the Babies," *N.Y. Times*, 28 Oct. 1997, at F1.

INTRA-. See **INTER-**.

intramural = conducted within the limits of an organization or body, esp. of an educational institution. The term is misused when the sense extends beyond one college or university—that is, it is impossible to have a competition remain intramural if there are competitors from elsewhere: "They are also trying to determine if there has been any recent contact between Harvard and Dartmouth, like *intramural* sports." "Link Sought Between Sicknesses at Two Colleges," *N.Y. Times*, 6 Dec. 1994, at A12.

There is no counterpart *intermural* meaning "between colleges, etc." Instead, *intermural* is an exceedingly rare "dictionary word" (attested in the *OED* only in early lexicons) meaning "between walls."

intransigence (= stubborn refusal to accommodate or compromise) is standard. **Intransigence* and **intransigency* are NEEDLESS VARIANTS.

intrastate. See **interstate**.

intravenous (= through or into a vein) is pronounced /in-trə-vee-nəs/—not /in-trə-vee-nee-əs/. See **PRO-NUNCIATION (B)**.

intricately (= in a detailed or complicated way) is sometimes misused for *intimately* (= in a close, personal way)—e.g.:

- "Hill has also been *intricately* [read *intimately*] involved with CEPA's operations at Southern Energy and has a good working relationship." Matthew C. Quinn, "Southern Co. Replaces Old Asian Hand with Georgian," *Atlanta J.-Const.*, 14 June 1997, at E1.
- "Carolyn J. Schutz, 61, the secretary of Elmhurst's Epiphany Evangelical Lutheran Church who was *intricately* [read *intimately*] involved in relief work for the area's poor, died Sunday in Elmhurst Memorial Hospital." Deborah Kadin, "Carolyn J. Schutz," *Chicago Trib.*, 11 Sept. 1997, at 9.
- "'Paul was checking off the boxes,' said SMG executive Doug Thornton, who managed the Superdome for the state and was *intricately* [read *intimately*] involved in the process." Jeff Duncan, "How the Saints Were Saved in 2005," *Times-Picayune* (New Orleans), 30 Aug. 2015, at C1.

LANGUAGE-CHANGE INDEX

intricately misused for *intimately*: Stage 1

intrigue, v.i., has traditionally meant "to carry on a plot or secret love affair." But today the word most commonly functions as a mere equivalent of *interest* or *fascinate*. Many editors object to the word when used in this newer sense—e.g.: "Seeing the heads of all four networks gathered in the same room last week is extraordinary enough. Even more *intriguing*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

[read *fascinating*], however, were the downcast eyes and somber expressions." "Networks Under the Gun," *Newsweek*, 12 July 1993, at 64. (The example also shifts tense from present in the first sentence to past in the second.) In the end, however, the traditional use of *intrigue* seems doomed. The word might justifiably be considered among the SKUNKED TERMS.

LANGUAGE-CHANGE INDEX
intrigue in the sense "to interest" <this idea intrigues policy-makers>: Stage 4

introductory should never be used in the phrase *be introductory of* (something); one should instead write *introduce*. E.g.: "This first section is *introductory of* [read *introduces*] some of the tenets that constitute part of that framework." See BE-VERBS (B).

As a noun, *introductory* sometimes serves as a chapter title, but it is inferior to *introduction*.

introvert (= one whose interests are inwardly directed for the most part, often tending toward solitude) is the standard spelling. **Intravert* is a variant. See **extrovert**.

Current ratio: 971:1

intrusive; obtrusive. As with the verbs *bring* and *take*, *come* and *go*, and *immigrate* and *emigrate*, some writers have trouble with the ins and outs of these adjectives. *Intrusive* means "butting in" or "prone to impose upon others against their wishes"—e.g.: "It's naggy and *intrusive*. Windows Vista is always popping up warnings and messages, making you wish you could just be left alone." David Pogue, "Hate Vista? You May Like the Fix," *N.Y. Times*, 22 Jan. 2009, at B1. *Obtrusive* means "jutting out"—e.g.: "But I like many of today's thinner TV stands because they are less *obtrusive* and come in a variety of styles." Mary Carol Garrity, "Flat-Screen TVs Offer Decorating Options," *Detroit News*, 17 Jan. 2009, at H10. But just as *bring* and *take* depend on the point of view, so do *intrusive* and *obtrusive*, to the point that the words do overlap. If you're being *intrusive*, thrusting yourself upon me against my wishes, I may find your *obtrusive* behavior rude. So are you being *intrusive* or *obtrusive*? Both, really. Or consider this example: "Part of the appeal of using a viral technique lies in the less *obtrusive* nature in which a user is confronted by it . . ." James L. Johnston et al., "Widgets in Online Marketing Campaigns—A Balancing Act," *Metropolitan Corporate Counsel*, Jan. 2009, at 16. Either adjective might work there, though a good argument could be made that the more familiar *intrusive* fits better in this type of figurative context.

***intrust.** See **entrust**.

intuit, a mid-19th-century BACK-FORMATION from the noun *intuition*, is often useful—e.g.:

- "Perhaps Scott McNealy—the avowed anti-intellectual who once told an interviewer that his favorite book of all time was *How to Putt Like the Pros*—simply *intuited* that the day would come when Sun and Microsoft would directly face off against one another." Randall E. Stross,

"Sun's Secret Weapon," *U.S. News & World Rep.*, 26 Feb. 2001, at 49.

- "Waking from a dream of a snake swallowing its own tail, he *intuited* the structure of the benzene ring, the central mystery of his scientific quest." Rob Breznsky, "Free Will Astrology," *Village Voice*, 10 Apr. 2001, at 22.
- "Abakanowicz makes visible what is usually only *intuited*." Mary Thomas, "Sculptor Treats Art as a Sacred Creation," *Pitt. Post-Gaz.*, 6 June 2001, at E1.

LANGUAGE-CHANGE INDEX
intuit: Stage 5

***innumerable.** See **enumerable**.

inundate. So spelled, though it is often misspelled **innundate*—e.g.: "The wave of children produced by baby boomers is now *innundating* [read *inundating*] the schools." Ralph Jimenez, "Local-Tax Bills Spell R-e-l-i-e-f New Ways," *Boston Globe*, 26 Jan. 1997, N.H. Weekly §, at 1.

LANGUAGE-CHANGE INDEX
inundate misspelled **innundate*: Stage 1
Current ratio (*inundated* vs. **innundated*): 662:1

inure; *enure. The first is the standard spelling. *Inure* = (1) to take effect, come into use <the trust money *inures* to the symphony's benefit>; or (2) to make accustomed to something unpleasant; habituate <she became *inured* to the nuisance of her neighbors' shouting and, after a time, stopped complaining>. The noun is *inurement*.

For the misuse of *inhere* for *inure*, see **inhere** (B).

Current ratio (*inured* vs. **enured*): 40:1

invaluable. See **valuable**.

invent. See **discover**.

inventable; *inventible. Despite the early-19th-century predominance of **inventible*, the spelling *inventable* is now standard—as it has been since about 1850. See -ABLE (A).

Current ratio: 2:1

inverse, n. See **converse**.

INVERSION. Awkward are most, though not all, grammatical inversions (like the one that begins this sentence). They seem to be on the rise in journalism—e.g.: "*Said* the silver-haired Rotblat, a professor emeritus of physics at the University of London: 'I hope the recognition will help other scientists to recognize their social responsibility.'" William D. Montalbano, "Anti-Nuclear Scientists Win Nobel Peace Prize," *L.A. Times*, 15 Oct. 1995, at A1.

The inversions especially to be avoided are the ones that suggest amateurish literary striving. The problem with these is that, "like the atmospheric inversion that is blamed for smog, the inversion of sentences creates a kind of linguistic smog that puts the reader to work sorting out the disarranged elements, causes his eyes to smart, and perhaps makes him wish he were reading something else. . . . Straining for variety in sentence structure is usually the cause. Tired of starting

with the subject and adding the predicate, some writers make a mighty effort and jump out of the frying pan into the smog.” Roy H. Copperud, *American Usage and Style* 210 (1980).

Inversions are probably intended to signal emphasis, but in fact they often convey preciosity—e.g.:

- “Brief and powerless is man’s life. On him and all his race the slow sure doom falls pitiless and dark.” Bertrand Russell, “A Free Man’s Worship,” 1 *Independent Rev.* 415 (1903). (Russell later called this essay “florid and oratorical”—and the inversions doubtless contributed to this effect. See *The Autobiography of Bertrand Russell 1944–1969* 247 (1969).)
- “Very careful must the writer be.” Paul M. Fulcher, “The Seven Lamps of Style,” in *The Foundations of English Style* 3, 13 (Paul M. Fulcher ed., 1927).
- “Write for an audience and not purely for himself, every true writer does.” Gorham Munson, *The Written Word* 49 (rev. ed. 1949).
- “This it is which leads us into false comparisons and gloomy thoughts.” Jacques Barzun, “English as She’s Not Taught” (1953), in *A Language Reader for Writers* 189, 191 (James R. Gaskin & Jack Suberman eds., 1966).
- “In such desperately sad circumstances one is tempted to let grammatical faults pass. But a fault it is nevertheless.” Robert W. Burchfield, *Points of View* 112 (1992).
- “Unaffected would be the marriage benefit of the current law, which gives a married couple a lower effective tax rate than an unmarried couple if one spouse has much less income than the other.” Kathy M. Kristoff, “Tax Cuts: How They Might Affect You,” *L.A. Times*, 7 Apr. 1995, at 3. (A possible revision: *The marriage benefit of the current law would be unaffected. It gives a married couple . . .*)
- “He never wavered from his crusade. Listen he always did. Respect he always had. Love from his generous soul he always offered.” John Hurt, “Eulogy of Quentin Crisp,” *Time*, 6 Dec. 1999, at 41.
- “Death I thought I understood.” Harold Orlans, “Old Age and Frustration,” *Am. Scholar*, Winter 2001, at 115, 116.

Some inverters mar their grammar as well as their style. They have problems with singulars and plurals, being unable to distinguish the inverted predicate from the subject—e.g.:

- “Our oldest son is now driving, and with privilege comes [read *come*] new challenges and more gray hair for me.” George Olson, “Why Did We Have Four Children?” *Orlando Sentinel*, 21 Sept. 1996, at A17. (*A his* before *privilege* would help the reader through that sentence.)
- “With increased life expectancy comes [read *come*] increased expectations.” Stephanie Shapiro, “Down Model Shows Exceptional Talents,” *Las Vegas Rev.-J.*, 27 Feb. 1997, at E3.

For an archaic verb that appears only in inverted constructions, see **quoth**.

invest. For the blunder of using *infest* for *invest*, see **infest**.

investigable. So spelled—not **investigatable*. See -ABLE (D) & -ATABLE.

Current ratio: 4:1

investigative; investigatory. *W3* calls *investigatory* “chiefly British,” but it occurs almost as commonly as *investigative* in American law-enforcement contexts. There is no need for the two variants to coexist. We might be well advised to throw out *investigatory* and stick with *investigative*, or to develop some DIFFERENTIATION.

Current ratio: 10:1

invidious. This term is sometimes mistakenly, through METATHESIS, written **indivious*—e.g.: “*Indivious* [read *Invidious*] discrimination is not pervasive anymore.” Luis Wilmot, “Affirmative Action,” *San Antonio Express-News*, 25 June 1995. For more on this word, see **insidious**.

LANGUAGE-CHANGE INDEX
invidious misspelled **indivious*: Stage 1
Current ratio: 4,073:1

in view of. See **in lieu of (B)**.

in view of the fact that is a weak equivalent of *because*.

inviolate; inviolable. Although the words are often used interchangeably in practice, careful writers distinguish between them. *Inviolate* suggests that something has not been violated; *inviolable* suggests that it is incapable of being violated. The more common term has always been *inviolable*.

***in virtue of**. See **virtue of**.

invite. Use it in the traditional way—as a verb. Avoid it as a noun displacing *invitation*—e.g.:

- “In the meantime, he isn’t counting on many *invites* [read *invitations*] to cocktail parties.” Jeffrey H. Birnbaum, “Don’t Show Them the Money!” *Fortune*, 3 Mar. 1997, at 116.
- “Apple Inc. will hold an *invite-only* [read *invitation-only*] event Sept. 9 at the Bill Graham Civic Auditorium in San Francisco, where it is expected to reveal the iPhone 6s.” Andrea Chang, “Apple Plans Product Event at Larger Venue,” *L.A. Times*, 28 Aug. 2015, Bus. §, at 2.

In conversational writing, the casual use is more at home—e.g.: “An *invite* to the porch is not an *invite* to the house.” Garrison Keillor, *Lake Wobegon Days* 131 (1985).

LANGUAGE-CHANGE INDEX
invite as a noun: Stage 4

inviter; *invitor. The first spelling is standard. See -ER (A).

Current ratio: 7:1

invocable (= [1] that can be appealed to, or [2] that can be put into effect or operation) has been the standard term since the early 19th century. **Invokable* is a variant spelling. Both are pronounced /in-**vo**h-kə-bəl/.
Current ratio: 2:1

in vogue is sometimes mistakenly rendered **en vogue*, doubtless as an affectation—e.g.: “Only the most optimistic or oblivious would buy a personal computer for a 13-year-old this Christmas and assume that [the] same machine would still be *en vogue* [read *in vogue* or, better, *up to date*] come college.” Shaun Schafer, “Hardware Hunting,” *Tulsa World*, 7 Dec. 1996, at E6.

LANGUAGE-CHANGE INDEX

**en vogue* for *in vogue*: Stage 1

Current ratio (*in vogue* vs. **en vogue*): 36:1

invoke. See **evoke**.

in whole; in part. Wilson Follett wrote that *in whole* is unidiomatic for *as a whole*, the former phrase having been created as a needed parallel of *in part* (MAU at 246). He was wrong, unless we want to count as idiomatic only pre-16th-century language and to ignore steady uses up till the present time. Both *in whole* and *as a whole* (or *on the whole*) are acceptable idioms; indeed, they are not even used in quite the same way. Both refer to a complete thing, but while *as a whole* is the general phrase <as a whole, the chorus performed wonderfully>, *in whole* is always a correlative of *in part* <letters may be reprinted in whole or in part>.

-ION. See **ZOMBIE NOUNS**.

Iowan; *Iowegian. The first is standard; the second is a rare variant. See **DENIZEN LABELS**.

I personally, a phrase that grew enormously in popularity during the 20th century, is usually prolix for a simple *I*. Occasionally, though, it legitimately contrasts one’s personal opinion with a contrary stance or action <I personally don’t care if you smoke, but the city ordinance says you can’t do it here, and I can get fined if I let you>. See **FIRST PERSON**. For *I myself*, see **myself** & **PRONOUNS** (E).

ipse dixit (lit., “he himself said it”) = something said but not proved; a dogmatic statement. E.g.:

- “Cogent legal reasoning was subordinated to *ipse dixit*.” “Benchmarks of the Administration,” *Wash. Times*, 11 Jan. 1994, at A14.
- “[Justice Brennan’s] real doctrine always showed through. It was the doctrine of *ipse dixit*: He has said it, so it must be so.” “Death with Dignity,” *Richmond Times-Dispatch*, 30 Apr. 1996, at A8.
- “As with the whole article, this is just so much *ipse dixit*, without a shred of proof.” Clive Stafford Smith, “All Talk and No Trousers,” *Guardian*, 9 Aug. 2009, Comment §.

ipsissima verba. See **verbatim**.

ipso facto (= by the fact or act itself; by its very nature) is sometimes replaceable by a more direct wording, such as *necessarily* or *in itself*—e.g.:

- “Tales of oppression are *innately* [read *inherently*] dramatic. That doesn’t *mean*—*ipso facto*—[read *necessarily mean*] they make good plays.” Laurie Winer, “‘To Take Arms’ Struggles to Find Real-Life Drama,” *L.A. Times*, 14 Feb. 1997, at F8. (On the misuse of *innately* in that sentence, see **innately**.)

- “What interests me is Dixon’s notion that talking about polygamy and same-sex unions in the same breath is, *ipso facto* [read *in itself*], offensive.” David Reinhard, “Polygamy and Gay Marriage,” *Oregonian* (Portland), 22 June 2008, Editorial §, at 5.

But the **LATINISM** is sometimes undeniably useful—e.g.: “H.L. Mencken, who began his career as a police reporter in Baltimore, wrote that he quickly encountered what he called the ‘police mentality’: Every person accused or suspected of a crime is *ipso facto* guilty of that offense.” Jack Wardlaw, “Reacting to a Harmful TV Story,” *Times-Picayune* (New Orleans), 12 Jan. 1997, at B7. The phrase need not be italicized.

Iran. In educated speech, the country’s name is pronounced either /i-**rah**n/ (preferred) or /i-**ran**/ (more anglicized). Avoid the xenophobic yokel’s pronunciation /I-**ran**/ or /I-**ran**/.

The corresponding adjective and **DENIZEN LABEL** is *Iranian*, pronounced /i-**rah**n-ee-ən/ (preferred) or /i-**ray**-nee-ən/. Avoid /i-**ran**-ee-ən/ and especially /i-**ray**-nee-ən/ or /I-**ray**-nee-ən/. See **NAMES** (C).

Iraq. In educated speech, the country’s name is pronounced either /i-**rah**k/ (preferred) or /i-**rak**/ (more anglicized). Avoid /I-**rah**k/ and /I-**rah**k/, which smack of ignorance and perhaps enmity.

The corresponding adjective and **DENIZEN LABEL** is *Iraqi*, pronounced /i-**rah**k-ee/ (preferred) or /i-**rah**-ee/. Avoid /I-**rah**-ee/ and /I-**rah**-ee/. See **NAMES** (C).

iridescent. So spelled. **Iridescent* is a common misspelling—e.g.: “The Corrente was positively *iridescent* [read *iridescent*] in a French impressionist manner.” Richard Dyer, “Schepkin Masterfully Projects Emotional Conflict,” *Boston Globe*, 2 Nov. 1996, at C3. (On the use of *masterfully* in the title of that article, see **masterful**.)

LANGUAGE-CHANGE INDEX

iridescent misspelled **iridescent*: Stage 1

Current ratio: 77:1

ironic; ironical. *Ironic* is standard. **Ironical* is a **NEED-LESS VARIANT** that used to be the preferred form; it is still occasionally seen in BrE.

Ironic denotes (1) feigned ignorance used against an adversary to elicit information or to point up fallacy in the adversary’s position; (2) a feigned attitude used to produce an effect opposite of what that attitude would seem to convey, such as faint praise used to express contempt, or apparent scorn used to express enthusiasm; or (3) a situation or event that has the opposite outcome of what might have been expected; a twist of fate. Senses 1 and 2 are classic, even classical. Sense 3 is modern, now predominant, and apt to raise the hackles of classicists.

Sense 1, often called *Socratic irony*, is typified by Plato’s chronicling of his teacher’s conversation, in which Socrates assumed a philosophical position similar to that of his Sophist counterpart, leading to situations where faulty reasoning behind those positions

became obvious. This device is still used in American law schools and elsewhere (the *Socratic method*).

Sense 2, often called *literary irony* or *romantic irony*, also involves communication or a situation that is not what it appears to be, though typically the audience or another character understands the intent. Examples abound, among the most famous being Jonathan Swift's satirical *A Modest Proposal*, in which the solution to the Irish famine is suggested to be the eating of children.

Sense 3, often called *situational irony*, is more extended—some would say overextended. It takes in any situation or run of events “that seems deliberately contrary to what was or might be expected; an outcome cruelly, humorously, or strangely at odds with assumptions or expectations” (*OED*). How broad is that? One critic goes so far as to say that “all genuine fiction is, by nature, ironic. For fiction, whether comic or tragic, dramatizes the interplay of compelling opposites . . .” R.W.B. Lewis, *The American Adam* 91 (2009).

For many, though, the singer Alanis Morissette crossed the line with “Ironic,” a song on her 1995 album *Jagged Little Pill*. That tune itemizes such misfortunes as rain on your wedding day, a fly in your wine, and a traffic jam when you're running late. All amount to tough luck, but they are hardly ironic.

ironically. See SENTENCE ADVERBS.

Iroquois (the Indian tribe) is pronounced /*ir*-ə-kwoy/ or /*ir*-ə-koy/—not /*ir*-ə-kwoyz/ or /*ir*-ə-kwah/. The plural is *Iroquois*, pronounced identically.

irrebuttable; irrefutable. To see how these words should be differentiated, see the entry on *rebut* and *refute* under **rebut**. On the pronunciation of *irrefutable*, see **refutable**.

***irregardless**, a semiliterate PORTMANTEAU WORD from *irrespective* and *regardless*, should have been stamped out long ago. But it's common enough in speech that it has found its way into all manner of print sources—e.g.:

- “*Irregardless* [read *Regardless*] of the Big Ten outcome, Knight said he is gratified with IU's improvement over last season.” Stan Sutton, “Hoosiers, with Help from Iowa, Could Share Big Ten Crown,” *Courier-J.* (Louisville), 10 Mar. 1991, at C1.
- “A similar result for the case of finitely repeated games establishes that, *irregardless* [read *regardless*] of whether the number of repetitions is finite or infinite, the swing producer strategy is one possible strategy for achieving profits.” James M. Griffin & William S. Neilson, “The 1985–86 Oil Price Collapse and Afterwards,” *Economic Inquiry*, Oct. 1994, at 543.
- “Pensions were awarded by the states in which veterans lived after the war, *irregardless* [read *regardless*] of which state the veteran served in.” Laura C. Edwards, *Three Centuries in America* 205 (1999).

Perhaps the most surprising instance of this barbarism occurs in a linguistics text, four times on a single page (what follows is a representative instance): “Compounds that were presented without a space received shorter gaze durations (*irregardless* [read *regardless*] of how they were supposed to be spaced).” Barbara J. Juhasz, Albrecht W. Inhoff & Keith Rayner, “The Role of Interword Spaces in the Processing of English Compound Words,” in *Current Issues in Morphological Processing* 291, 305 (Pam Frost et al. eds., 2005).

Although this widely scorned NONWORD seems unlikely to spread much more than it already has, careful users of language must continually swat it when they encounter it.

LANGUAGE-CHANGE INDEX

**irregardless* for *regardless* or *irrespective*: Stage 2
Current ratio (*regardless* vs. **irregardless*): 572:1

IRREGULAR VERBS. A. The Forms. There are two types of verbs—regular (or “weak”) and irregular (or “strong”). Irregular verbs form the past tense or past participle in unpredictable ways, usually by changing the vowel of the present-tense form, without the addition of an ending (e.g., *begin, began; rise, rose; wring, wrung*). Regular verbs, by contrast, form the past tense by adding *-ed, -d, or -t* to the present tense.

Irregular verbs are sometimes called “strong” verbs because they seem to form the past tense from their own resources, without calling an ending to their assistance. The regular verbs are sometimes called “weak” verbs because they cannot form the past tense without the aid of the ending (most often *-ed*).

All told, English now has fewer than 270 live irregular verbs. The trend is against the irregular forms: “For many centuries there has been a steady loss in favor of the weak class.” George O. Curme, *English Grammar* § 42.B.2, at 73 (1947). Here are the most common irregular forms:

Present Tense	Past Tense	Past Participle
abide	abode	abode
arise	arose	arisen
be	was	been
bear	bore	borne
beat	beat	beaten
become	became	become
beget	begot	begotten
begin	began	begun
behold	beheld	beheld
bend	bent	bent
beseech	besought	besought
beset	beset	beset
bet	bet	bet
bid (express)	bade	bidden
bid (offer)	bid	bid
bind	bound	bound
bite	bit	bitten
bleed	bled	bled
blow	blew	blown

B. Past-Participial Adjectives No Longer Used as Verb Forms. Many past participles no longer exist as verbs in good usage, but continue as adjectives. For examples discussed in entries throughout this book, see **behold** (the adjective being *beholden*), **cleave** (*cloven*), **laden**, **melt** (*molten*), **mow** (*mown*), **proved** (*proven*), **saw** (*sawn*), **shape** (*misshapen, well-shapen*), **shave** (*shaven*), **stricken** & **swell** (*swollen*). Some adjectives of this type persist only as ARCHAISMS; see **engrave** (*engraven*) & **gnaw** (*gnawn*).

C. AmE vs. BrE. Sometimes the choice between two past-tense or (more commonly) past-participial forms depends on which major strain of English one is working in. AmE prefers *gotten*, BrE *got*. See **get** (B). A similar pair is *hewed* (AmE) and *hewn* (BrE).

D. Dialectal Forms. One characteristic of DIALECT is the use of past participles in place of past-tense verbs—e.g., **it begun a moment ago*, **he swum*, **the shirt shrunk*, **the grass sprung up*, **she sung loudly*. For examples discussed in various entries, see **drink** (**I drunk it all*), **sink** (**he sunk*) & **swim** (**she swum*).

Another dialectal trait is the use of past-tense verbs for past participles—e.g., **she had began piano lessons*, **he's been bit by a snake*. See **begin** (C) (**had began*), **bite** (**had bit*), **drink** (**had drank*) & **shake** (**was shook*).

Still another characteristic of dialect is the use of regular past forms for irregular verbs—e.g., **the shirt shrinked*, **the bee stinged me*, **he swearred he'd never let it happen*, **he swunged at the ball*. For examples discussed in various entries, see **bet** (**betted*), **cast** (**casted*), **deal** (**dealed*), **drive** (**drived*), **shrink** (**shrinked*) & **strew** (**strewed*).

Finally, dialects have many irregular past forms differing from those of STANDARD ENGLISH. See **bring** (A) (**brung*), **buy** (A) (**boughten*), **chide** (**chid, *chidden*),

climb (A) (**clomb* and **clumb*), **drag** (*drug*), **drown** (A) (**drownded*), **overflow** (**overflown*), **pleaded** (**pled*), **ride** (*rid*), **sling** (*slang*), ***snuck** & **swell** (**swoll, *swole*). Over time an irregular form might become standard; for example, see **fit**.

For the related issue of phrases such as **might should have*, see DOUBLE MODALS.

E. Derived Nouns Used as Verbs. Often, when an irregular verb forms a noun (especially a compound noun) and that noun is then used as a verb, the inflection is regular rather than irregular. For example, in baseball a ball that is hit into the air is a *fly ball*, often shortened to a *fly*. When a batter hits one, we say that he *flied* (not *flew*) out to left field. (See **fly**.) When the ball makes a beeline to an outfielder without touching the ground, we say that the batter *line-driven* (not *line-drove*) it. (See **drive**.) When someone gets the cold-shoulder treatment from associates, we may even say, colloquially, that the person has been **deep-frezed*, though in this particular instance most fastidious editors would prefer *deep-frozen*. (See **deep-freeze**.) Essentially the root verb is removed from its native grammatical form when it is made into a noun (*fly, line-drive, deep-freeze*), and when the noun is then used as a verb it demands regular inflections in order to maintain a close association with the derived noun. Otherwise, the reader is distracted by a MISCUE, such as seeing the batter actually flying or driving.

F. Choice Between -ed and -d. See -ED.

irrelevance; irrelevancy. The DIFFERENTIATION is as follows: *irrelevance* states a quality <the irrelevance of the documents>, while *irrelevancy* cites an instance <one irrelevancy after another>. The only plural form, therefore, is *irrelevancies*. See **relevance**.

irrelevant is sometimes, through METATHESIS, made **irrelevant*. And this spurious form appears in otherwise literate publications—e.g.:

- “The world trade talks are *irrelevant* [read *irrelevant*] to much of the U.S. trade debate.” R.C. Longworth, “Global Trade Talks May End as Boon, or a Mouthful of Air,” *Chicago Trib.*, 7 Dec. 1993, News §, at 1.
- “Democrats know that if Bush chalks up a string of big victories early on, they run the risk of becoming politically *irrelevant* [read *irrelevant*].” Sue Kirchhoff & Susan Milligan, “Ten-Year Tax Cut Plan Battered by Winds of Politics,” *Boston Globe*, 19 Feb. 2001, at A13.

The two words are also confused in speech, by mispronunciation, much like *calvary* and *cavalry*. See **calvary**.

LANGUAGE-CHANGE INDEX

**irrelevant* for *irrelevant*: Stage 1

Current ratio (*irrelevant* vs. **irrelevant*): 2,140:1

irreligious; unreligious; nonreligious. All three words essentially mean “not religious.” But the *ir*-prefix usually marks a dichotomy (e.g., *rational* vs.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

irrational), so *irreligious* often suggests conscious indifference or even hostility toward religion. It is a judgmental term. *Unreligious* is less negative, but *non-religious* is the most common and the most reliably neutral. Cf. **sacrilegious**.

irreparable is pronounced /i-**rep**-ə-rə-bəl/—not /eer-ə-**pair**-ə-bəl/. Cf. **reparable**.

irrepressible. So spelled—not **irrepressable*. See -ABLE (A).

Current ratio: 2,242:1

irresistible. So spelled—preferably not **irresistable*. See -ABLE (A).

Current ratio: 158:1

irrespective of = regardless of. E.g.: “*Irrespective of* the bomb’s part in the outcome of World War II, we all owe President Truman our gratitude for another reason.” “Bomb’s Lessons,” *Phoenix Gaz.*, 13 Feb. 1995, at B12. Confusion of the words *irrespective* and *regardless* has given rise to the semiliterate **irregardless*. See ***irregardless**.

***irresponsive**. See **unresponsive**.

irrevocable; ***unrevokable**; ***irrevokable**. The first—the preferred form—is pronounced /i-**rev**-ə-kə-bəl/, not /ir-ə-**voh**-kə-bəl/. (See PRONUNCIATION (B).) **Unrevokable* is a NEEDLESS VARIANT. **Irrevokable* is simply a misspelling.

On *irrevocable* as a noncomparable adjective, see ADJECTIVES (B).

LANGUAGE-CHANGE INDEX

irrevocable mispronounced /ir-ə-**voh**-kə-bəl/: Stage 4

irruption. See **eruption**.

-ISE. See -IZE.

is is. As early as the 1980s, a doubled *is* (called a reduplicative copula) became common in American speech <what I meant is is that . . .>. This is not the type of double that is sometimes grammatically required <what it is is a major ripoff>. (See **what it is is**.) Rather, the second *is* is grammatically superfluous <the thing that concerns me is is that I’m late>. Rarely is this form found in writing, even when speech containing it is transcribed. In any event, it isn’t an expression for careful speakers.

For a detailed linguistic explanation of this sloppy phrasing—or, as the authors of the study chastely put it, its “teleological *raison d’être*”—see Michael Shapiro & Michael C. Haley, “The Reduplicative Copula *Is Is*,” *77 Am. Speech* 305–12 (2002). Although the authors trace this construction back only to the 1990s, it certainly existed in 1984: the minister who performed my wedding service in May of that year used it habitually (I thought anomalously).

LANGUAGE-CHANGE INDEX

is is for *is*: Stage 2

isolable, not **isolatable*, is the standard form—e.g.: “They are more genetically *isolatable* [read *isolable*]

right now than any ethnic group or gay people.” David Berreby, “Up with People,” *New Republic*, 29 Apr. 1996, at 14. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX

**isolatable* for *isolable*: Stage 4

Current ratio (*isolable* vs. **isolatable*): 2:1

isosceles. So spelled. See SPELLING (A).

Israel (the country) is pronounced /iz-ree-əl/ or /iz-ray-əl/—not /iz-rəl/. In some hymns and other ecclesiastical vocal works, the name is given special pronunciations, such as /iz-ri-el/ and /is-ri-el/. These have no place in ordinary speech. See NAMES (C).

issue. **A. At issue; in issue**. *At issue* = (1) (of people) in controversy; taking opposite sides of a case or contrary views of a matter; at variance <his views are at issue with mine>; or (2) (of matters or questions) in dispute; under discussion; in question <the allegations at issue> (OED). The OED notes that *in issue* shares sense 2 of *at issue*, but calls it rare. Having originated in mid-19th-century legal contexts, *in issue* is common in law but rare elsewhere. *At issue* is the ordinary idiomatic phrase.

B. Issue as to whether; issue of whether. These phrases are prolix for *issue whether*. Cf. **question whether**. See **as to (B)** & **whether (B)**.

C. In the Sense of “offspring” or “descendants.” In the drafting of wills and trusts, the word *issue* invites litigation. English courts—as well as courts in New York and New Jersey—have held that it means all descendants, however remote. Other courts have held that the word refers only to children and not to more remote descendants. And whether it covers adopted children is a question that courts will answer differently. In sum, the word is best avoided altogether.

But anyone who uses it should use it grammatically, and that is not difficult. The question sometimes arises whether the word should be treated as a singular or as a plural noun. The answer is either—e.g.: “Any *issue who is a minor* [or *issue who are minors*] will be assigned a guardian.”

D. Have issues with. Although the colloquial use of *issue* to mean *problem* is becoming common, many people find it grating. It especially stands out in the trendy construction *have issues with*—e.g.:

- “Both kids *have issues with* [read *are troubled by*] their parents’ sexuality.” Roger Ebert, *Roger Ebert’s Movie Yearbook 2007* 655 (2006).
- “This is the third time he’s had his left knee repaired, and I’m hard-pressed to name another golfer—a top-flight one—who’s had the knee *issues* [read *problems*] he’s had.” Dan Daly, “Woods’ Forbidden Apple Pays Off,” *Wash. Times*, 18 June 2008, at C1.

Outside the *have issues with* construction, *issue* and *problem* are often close to synonymous—e.g.: “Cleveland’s version of Phalen Boulevard—a proposed 2¾-mile stretch of road from Interstate 490 to University Circle—has been bottled up by money *issues*.” Jim Nichols, “Proposal for Corridor Faces Major Obstacles,” *Plain Dealer* (Cleveland), 13 July 2008, at A10. In

this example, *issues* denotes matters of public interest, but those issues probably involve money *problems*.

E. And edition. In the newspaper business, the two terms are distinguished. At *The New York Times*, “[a]n *issue* means all the copies printed on a given day. There may be several *editions* of one *issue*.” *The New York Times Manual of Style and Usage* 117 (1999).

Istanbulite; Istanbulu. A citizen of Istanbul, Turkey, is known predominantly in English as an *Istanbulite*. The Turkish *Istanbulu* is a variant term sometimes encountered. See DENIZEN LABELS.

isthmus is pronounced /is-məs/ or /isth-məs/. The latter is almost unpronounceable, and there’s no good reason to try. Pl. *isthmuses*. The word derives from the Greek *isthmos*, and it is an error to make the plural—as some do—**isthmi*. See HYPERCORRECTION (A).

Current ratio (*isthmuses* vs. **isthmi*): 2:1

is to do with. See **has to do with**.

it. This EXPLETIVE and pronoun often appears too many times in one sentence. Careful writers restrict it (*it*, that is) to one meaning in a given sentence—no more. The problems with using more than one in a sentence are threefold. First, ambiguity may arise if each of two pronominal *its* refers to a different antecedent from the other. Second, the sentence may well contain a MISCUE if readers can’t immediately distinguish the pronoun *it* from an expletive *it*. And third, having one *it* followed closely by another often impairs euphony.

The most common sloppiness is to use the expletive *it* and the personal pronoun *it* in the same passage—e.g.:

- “For anyone who really watches the program, *it* is obvious that *it* is not a ‘political attack’ on Catholicism.” Andrew M. Greeley, “TV Series No Threat to Catholics,” *Salt Lake Trib.*, 1 Nov. 1997, at B3. (A possible revision: *Anyone who watches the program will see that it is not a “political attack” on Catholicism.*)
- “Despite the sharp rise in inequality, *it* does not look as if inequality will be an issue in the year 2000 elections. Maybe America will just learn to live with much higher levels of inequality. India does—and *it* is, after all, a democracy. But then again, maybe *it* won’t” Lester C. Thurow, “Inequalities in Wealth a Political, Not Economic Problem,” *USA Today*, 23 Nov. 1999, at A19. (The problem there is that *it* refers, in the next-to-last sentence, to *India*. But in the final sentence, *it* refers to *America*, which occurs two sentences before. One solution would be to put the next-to-last sentence in parentheses. [It’s a parenthetical thought, after all.] Another solution would be to write *But then again, maybe America won’t learn to tolerate this type of inequality.*)
- “More people work in retail than any other business sector in Canada, but few *it* seems view *it* as a real career.” Hollie Shaw, “Changing the Perception of Retail as Career,” *Nat’l Post* (Can.), 1 Sept. 2015, at 4. (A possible revision: *Though the retail sector employs more Canadians than any other, it seems that few in the industry view their jobs as real careers.*)

Also, avoid the double expletive—two filler words in a single phrase. One filler *it* will do—e.g.:

- “*It* is evident that *it* will become necessary to hike taxes from year to year as federal and state dollars dwindle.” “Unfair Tax Proposal,” *Miami Times*, 8 May 1997, at A4. (A possible revision: *The city will surely have to hike taxes each year as federal and state dollars dwindle.*)
- “Now, coach Dave Wannstedt says, *it* is apparent that *it* will take more time for Hughes to acclimate himself to the backfield.” Melissa Isaacson, “Nasty Weather Creates Nasty Situations,” *Chicago Trib.*, 17 Aug. 1997, at 9. (A possible revision: *Now, coach Dave Wannstedt says, Hughes will need more time to acclimate himself to the backfield.*)

When used after a passive-voice verb, *it* often gives the misimpression that it’s a pronoun with an antecedent. E.g.:

- “The burial was to take place at Highgate, and *it* was intended to take the body by train from Winooski to Cambridge Junction over the defendant’s road and thence over the connecting road to Highgate.” (The full passive is *it was intended (by someone) to take the body*; yet, on first reading, *it* appears to refer to *burial*.)
- “Despite her prediction that the economic recovery will be slow, *it* is expected that the company will flourish during the next few quarters.” (*It* seems at first to refer to *economic recovery* when in fact it is merely an expletive.) See MISCUES.

In short, delete *it* when you can; and if you need it, keep it to one meaning within a sentence.

ITALICS. A. Generally. H.W. Fowler cautioned that many people, though competent in their own special subjects, don’t have enough writing experience to realize that they shouldn’t try to achieve emphasis by italicizing something in every tenth sentence (*FMEU1* at 304). With experience comes the competence to frame sentences so that emphatic words fall in emphatic places. (See SENTENCE ENDS.) Also, the writer learns the techniques of subtle repetition—the type that reinforces an idea without cloying.

Ralph Waldo Emerson overstated the case: “‘Tis a good rule of rhetoric [that] Schlegel gives—‘In good prose, every word is underscored,’ which, I suppose, means, Never italicize.” “Lectures and Biographical Sketches,” in *10 Complete Works of Emerson* 169 (1904). By the same reasoning, of course, one might say that we should abolish question marks, exclamation points, and even commas. The point is to italicize only when one must.

B. Foreign Phrases. If an imported term hasn’t been fully naturalized, it should appear in italics—e.g.: *au mieux* (Fr. “on the best terms”); *cogito, ergo sum* (L. “I think, therefore I am”); *dolce far niente* (Ital. “sweet idleness”); *Weltschmerz* (Ger. “depression or pessimism caused by comparing the world’s actual circumstances with ideal ones”). But because English is such a diverse language—having drawn from the resources of dozens of other languages—it

is quite hospitable to foreign-looking words. That is, they become naturalized easily. And when that happens, the terms are written in ordinary roman type. (See GARNER'S LAW.) The words in the following list are italicized here only because they're being referred to as words—e.g.: *caveat emptor* (L.), *décolletage* (Fr.), *gestalt* (Ger.), *glasnost* (Russ.). A good dictionary usually provides guidance on which words should be italicized.

For more on foreignisms, see GALLICISMS & LATINISMS.

Italy (the country) is pronounced /it-ə-lee/, the corresponding adjective being *Italian* /i-tal-yən/—never /I-tal-yən/ (characteristic of uneducated speech). See NAMES (C).

itemization is often unnecessary for *list*.

iterate. Although *iterate* (= to repeat) is not an equivalent of *underscore* or *ensure*, some writers apparently think so—e.g.: “The always-busy [Quincy] Jones is currently completing an ambitious project that *iterates* [read *underscores*] his place in American music annals, an album of new songs and updated classics called *Q's Jook Joint*.” John H. Ostdick, “The Joint Is Jumping,” *Am. Way*, 15 Oct. 1995, at 16. See **reiterate**.

LANGUAGE-CHANGE INDEX

iterate misused for *underscore* or *ensure*: Stage 1

it goes without saying. See **goes without saying**.

it is I; it is me. Generally, of course, the nominative pronoun (here *I*) is the complement of a linking verb <this is she> <it was he>. But *it is me* and *it's me* are fully acceptable, especially in informal contexts: “both forms, ‘It is I’ and ‘It is me,’ are correct—one by virtue of grammatical rule, the other by virtue of common educated usage.” Norman Lewis, *Better English* 186–87 (rev. ed. 1961).

The phrasing has elicited a great deal of comment over the years, mostly in its defense—e.g.:

- “‘It is me’ is not frequent till the first half of the eighteenth century. Before that, ‘It is I’ was general.” W. Murison, “Changes in the Language Since Shakespeare’s Time,” *14 Cambridge History of English Literature* 434, 446 (1932).
- “Such a change [as] from *It is I* to *It’s me* is probably a benefit to the English language. It involves no ambiguity, simplifies grammar, and is intrinsically as euphonious as the alternative form.” Janet Rankin Aiken, *Commonsense Grammar* 26 (1936).
- “The facts surrounding the case of ‘It is me’ are: 1. This expression is in accepted use in informal situations. 2. It is preferable to ‘It is I’ whenever the speaker wishes to emphasize his own personal identity. It is so used and has been so used by dozens of reputable writers from Shakespeare to the present, including such men as Emerson, Meredith, and Stevenson. 3. So far as anyone knows, it has been in good colloquial use for three or four centuries, though for most of that time, the grammarians have been grumbling about it. 4. Many careful, sensitive speakers and writers employ both ‘It is me’ and ‘It is I,’ depending on the desired shade of meaning.” Walter Barnes, “Stepchildren of the Mother Tongue,” *95 Review of Reviews*, Mar. 1937, at 59–60.

- “By the rules of grammar and the dictates of the pedant, it’s heinous. But if everybody who says it were to be hanged, the trees would be full of strange fruit, and soon there would be nobody left to string the culprits up. The second pronoun is in apposition with the first, and should agree with it in number, gender and case. But ‘It’s I’ is awfully straitlaced.” Edward N. Teall, *Putting Words to Work* 298–99 (1940).

Of course, those with even a smattering of French know that *It’s me* answers nicely to *C’est moi*. Good writers have long found the English equivalent serviceable—e.g.:

- “*It is not me* you are in love with.” Richard Steele, *The Spectator*, No. 290, 1 Feb. 1712.
- “But Silver . . . called out to know if *that were me*.” Robert Louis Stevenson, *Treasure Island* 72 (1883; repr. 1985).
- “Not more than four people know that *it is me*.” Raymond Paton, *Autobiography of a Blackguard* 42 (1924).
- “*It’s only me*.” Ian Anderson, “Aqualung” (1971) (song lyric).
- “Begin *talking* out your thoughts on paper as if you were explaining a concept to a friend. Imagine that *it’s me*.” John R. Trimble, *Writing with Style* 22 (2d ed. 2000).

E.B. White told an amusing story about the fear that so many writers have of making a mistake: “One time a newspaper sent us to a morgue to get a story on a woman whose body was being held for identification. A man believed to be her husband was brought in. Somebody pulled the sheet back; the man took one agonizing look, and cried, ‘My God, it’s her!’ When we reported this grim incident, the editor diligently changed it to ‘My God, it’s she!’” E.B. White, “English Usage,” in *The Second Tree from the Corner* 150, 150–51 (1954).

Similar problems arise in the third person, as in *it is him*. When the contraction appears, *Newsweek* makes the phrase *it’s him*—e.g.: “Rostenkowski simply signed an expense-account voucher for stamps that Smith converted into cash. The first time he says he witnessed the alleged scheme, in 1989, ‘I was no doubt taken aback when I saw his [Rostenkowski’s] name on the [\$2,000] voucher. I couldn’t believe it was him.’ Most Democrats on Capitol Hill still can’t believe *it’s him*.” Jonathan Alter, “Rostenkowski Reeling,” *Newsweek*, 2 Aug. 1993, at 20. See PRONOUNS (B).

it is important to note that; it is interesting to note that. These sentence nonstarters merely gather lint. They should be abolished.

it is me. See **it is I**.

its; it’s. The possessive form of *it* is *its*; the contraction for *it is* is *it’s*. But the two words are often confounded—e.g.:

- “Potter County was ordered by the state to do something about overcrowding in *it’s* [read *its*] system.” Zachary Walker, “Randall Needs Jail Space,” *Canyon News* (Tex.), 13 Jan. 1994, at 1.
- “For all *it’s* [read *its*] faults, . . . this is a pretty interesting film.” Craig Kopp, “Fox Film Mixes Wit, Horror,” *Cincinnati Post*, 19 July 1996, at B1.
- “The best moment . . . brings out some energy and droll humor, but *its* [read *it’s*] not enough to keep this unfocused

piece from meandering off to nowhere.” Mike Steele, “Avant-Garde Roots, Performing Charisma Unite ‘Three Women at the Fore,’” *Star Trib.* (Minneapolis), 16 Jan. 1998, at B5.

Confusion is just as much a problem in BrE as it is in AmE—e.g.:

- “With insurgent country providing some of the most clearly defined American rock since grunge, it was never going to be long before the movement found *it’s* [read *its*] very own Nirvana.” Tom Cox, “This Week’s Pop CD Releases,” *Guardian*, 16 Jan. 1998, at T16.
- “But fear not because fashion does award *it’s* [read *its*] very own New Year’s Honour’s list of modern classics.” James Sherwood, “Real Shopping, Police Style,” *Independent*, 16 Jan. 2000, at 8.

See SPELLING (A).

Also, the possessive *its* should never be used—as it sometimes is—as a personal pronoun in place of *his*, *her*, or *his or her*.

LANGUAGE-CHANGE INDEX

1. *it’s* misused for *its*: Stage 2
Current ratio (*its own* vs. **it’s own*): 494:1
2. *its* misused for *it’s*: Stage 2
Current ratio (*it’s not* vs. **its not*): 41:1

it’s me. See **IT IS I**.

I wonder. See **QUESTIONS, DIRECT AND INDIRECT**.

-IZE; -ISE. Adding the suffix *-ize* (or *-ise* in BrE) to an adjective or noun is one of the most frequently used ways of forming new verbs. Many verbs so formed are unobjectionable—e.g.: *authorize*, *baptize*, *familiarize*, *recognize*, *sterilize*, and *symbolize*. The religious leader Norman Vincent Peale helped popularize (ahem) the suffix in the mid-20th century: “‘Picturize, prayerize, and actualize’ was Peale’s key formula.” Tim Stafford, “God’s Salesman,” *Christianity Today*, 21 June 1993, at 35.

But **NEOLOGISMS** ending in *-ize* are generally to be discouraged, for they are usually ungainly and often superfluous. Hence we have no use for *artificialize*, *audiblize*, *cubiclize*, *fenderize* (= to fix a dented fender), *funeralize*, *ghettoize*, *Mirandize*, *nakedize*, *obituarize*, and so on. Careful writers are wary of new words formed with this suffix. See, for example, **Mirandize**, ***operationalize & prioritize**.

J

jaguar (= a large South American wildcat) is pronounced /**ˈjag-wahr**/ in AmE and /**ˈjag-yoo-ə**/ in BrE—preferably not /**ˈjag-yoo-ahr**/ or /**ˈjag-wɪr**/.

jail; gaol. The first is the AmE spelling; the second, a BrE variant. Note, however, that since about 1935 the spelling *jail* has predominated in the print sources of BrE. Both words, of course, are pronounced /**ˈjaɪl**/.

Current ratio: 16:1

jam (= [1] a fruit jelly; or [2] a congested or otherwise difficult situation) is sometimes misused for *jamb* (= the vertical sidepost of a doorway, window frame, or other framed opening)—e.g.:

- “The wide woodwork around the *door jams* [read *doorjams*] highlights the Victorian wallpaper.” Marilyn K. Wempa, “From Eyesore to Eye Pleaser,” *Pitt. Post-Gaz.*, 10 June 1997, at B3.
- “The deputy found a .380 semiautomatic pistol on the floorboard and a marijuana cigar on the driver’s *door jam* [read *doorjamb*].” Paul Purpura, “Mental Exam Ordered After Carjack,” *Times-Picayune* (New Orleans), 12 Feb. 2015, at A10.

LANGUAGE-CHANGE INDEX

James’s; James’. See **POSSESSIVES (A)**.

janissary (= a loyal, subservient follower) has been the standard spelling since the 18th century. It is

capitalized only when used to mean “a Turkish infantry soldier in the sultan’s guard.” ***Janisary** and ***janizary** are variant forms.

Current ratio (*janissary* vs. **janisary* vs. **janizary*): 273:31:1

jarful. Pl. *jarfuls*, not **jarsful*. See **PLURALS (G)**.

Current ratio: 6:1

JARGON refers to the special, usually technical idiom of any social, occupational, or professional group. It arises from the need to streamline communication, to save time and space—and occasionally to conceal meaning from the uninitiated. The subject has a magnified importance today because we live “in an age when vague rhetoric and incomprehensible jargon predominate.” Oliver Letwin, “Good Servant, Bad Master,” *Times* (London), 25 May 1995, Books §, at 37.

Jargon covers a broad span of vocabulary. For the commonplace medical phrase *heart bypass surgery*, a range of jargon is available. There’s the much more technical (and more verbose) *coronary artery bypass graft*. From that phrase comes the acronym **CABG**, pronounced the same as *cabbage* <we’re going to have to give him a CABG>. Some heart surgeons, who would have nothing to do with such **SLANG**, prefer the pompously arcane *myocardial revascularization*. But whatever the name, it’s all bypass surgery.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Other examples of medical jargon abound:

black eye = bilateral periorbital ecchymosis
 (/ek-i-moh-sis/)
 boil = furuncle (/fyuur-əng-kəl/)
 bruise = contusion, ecchymosis
 chicken pox = varicella (/var-i-sel-ə/)
 chilblain = pernio (/pær-nee-oh/)
 clubfoot = talipes (/tal-i-pee-z/)
 cut = laceration
 drunk = suffering from a hyperingestion of ethanol
 headache = cephalalgia (/sef-əl-əl-jee-ə/)
 heartburn = pyrosis (/pr-roh-sis/)
 kidney stone = renal calculus
 measles = morbilli (/mohr-bil-ī/)
 mumps = infectious parotitis (/pær-ə-tr-tis/)
 removal of a lung = pneumonectomy
 (/noo-moh-nek-tə-mee/)
 scrape = abrade, abrasion
 set of symptoms = presentation
 short of breath = SOB
 sneeze = sternutation (/stər-nyoo-tay-shən/)
 spot on the lung = probable bronchogenic carcinoma
 syphilis = lues (/loo-eez/)
 throat = pharynx (/fair-ıngks/)
 urinate = micturate (/mik-chə-rayt/)
 vomiting = emesis (/e-mə-səs/)
 wisdom tooth = dens serotinus (/denz see-roh-ti-nəs/)

Doctors will say things such as *Patients rarely present with* [i.e., have symptoms of] *pleurisy in quite this way*, or *This is an unusual presentation for pleurisy*. Maybe it's understandable that some physicians would use *emesis* as a EUPHEMISM for *vomiting* when speaking among themselves in front of a patient. But surely no one is comforted by being called *the SOB patient*. (Some within the medical profession have started changing SOB to SOA [= short of air] for this very reason.)

Doctors have several ways of saying that a patient is on a respirator (or ventilator). Some, of course, say that a patient is *on the respirator* or *on the ventilator*. Others, being fond of slang, say that the patient is *on the blower*. But then there are the stuffed-shirt doctors who say precisely the same thing in the most pretentious possible way: the patient is *being given positive-pressure ventilatory support*.

Few took note when James C. Leary wrote these wise words in 1957: "Some medical writers tend to overload their pieces with unnecessary technical terms—words like 'ipsilateral' for 'on the same side,' for instance. Few medical [readers] remember enough Latin or Greek to puzzle out the meanings of unnecessarily difficult words and, if they come too frequently, the writer has lost his reader's interest and usually his reader. A good rule for medical writers to follow would be to use simple English words unless there is none exact enough to express the idea sought." Leary, "Medical Writing as Seen by a Layman," in *A Group of Papers on Medical Writing* 16, 16–17 (1957).

Of course, jargon is hardly the exclusive province of such fields as medicine and law. (See LEGALESE.) It can be found in virtually any other specialized field, such as social work (*equality-proofing*, *food-insecure*);

healthcare (*retroactive disenrollment*); statistics (*disaggregated data*); engineering (*tunnel-jacking*, *soil-freezing*); investments (*portfolio optimization*, *derivative leveraging*, *allocated income streams*); business and management (*suboptimized multifunctionality*, *integrator global-value proposition*, *redundant 24/7 b2b solution*); and computing (*kernel panic*, *embedded protocol*).

And don't forget linguistics, here represented in a straight-faced passage: "Rules of construal associate antecedents and anaphors, let us say, by the device of coindexing." Noam Chomsky, "On Opacity," in *Studies in English Linguistics* 1, 1 (Sidney Greenbaum et al. eds., 1979). "On Opacity" indeed! In that sentence, which looks at first like a fragment, the verb is *associate*.

The linguist Dwight Bolinger disapprovingly quotes an example of jargon from an article on linguistics: "In traditional linguistics it has been assumed that the analysis of sentences can be performed upon examples isolated from the process of interaction within which they naturally emerge." He then deflates the jargon to this: "Traditional linguists thought that sentences could be analyzed out of context." See Dwight Bolinger, *Language: The Loaded Weapon* 129 (1980).

One of the more prominent types of jargon—one to which most travelers are exposed—is AIRLINESE. In the late 1990s, a captain announced, in midflight: "We're about to *traverse an area of instability*, so I've *illuminated* the fasten-seatbelts sign." When a flight attendant was asked how she would say the same thing, she said: "We're going to *encounter some light chop*, so I've *turned on* the fasten-seatbelts sign." Another said, "We're about to *go through some choppy air*, so please fasten your seatbelts." Those quotations progress from the most to the least jargonistic—or, to put it judgmentally from the passenger's perspective, from the least to the most admirable.

True, jargon is sometimes useful shorthand for presenting ideas that would ordinarily need explaining in other, more roundabout ways for those outside the specialty. Jargon thus has a strong in-group property, which is acceptable when one specialist talks with another.

But at other times, jargon is no time-saver at all. It can be obtuse and actually inhibit communications. In his book *On the Art of Writing* (2d ed. 1943), Sir Arthur Quiller-Couch set out the two primary vices of jargon: "The first is that it uses circumlocution rather than short straight speech. It says: '*In the case of* John Jenkins deceased, the coffin' when it means 'John Jenkins's coffin'; and its yea is not yea, neither is its nay nay; but its answer is *in the affirmative* or *in the negative*, as the foolish and superfluous *case* may be. The second vice is that it habitually chooses vague woolly abstract nouns rather than concrete ones" (*ibid.* at 105). "To write jargon is to be perpetually shuffling around in a fog and cotton-wool of abstract terms" (*ibid.* at 117). See ABSTRACTITIS, DOUBLESPEAK & ABBREVIATIONS (C).

Jargon is unacceptable when its purpose is to demonstrate how much more the speaker or writer knows

as a specialist than ordinary listeners or readers do. The intended audience, then, is the primary consideration in deciding which words will be most immediately intelligible. See **OBSCURITY & PLAIN LANGUAGE**.

Among the better treatments of the subject are *Languages and Jargons: Contributions to a Social History of Language* (Peter Burke & Roy Porter eds., 1995); Walter Nash, *Jargon: Its Uses and Abuses* (1993); Tom Fahey, *The Joys of Jargon* (1990); Jonathon Green, *Newspeak: A Dictionary of Jargon* (1984); Don Ethan Miller, *The Book of Jargon* (1981); Joel Homer, *Jargon: How to Talk to Anyone About Anything* (1979); Kenneth Hudson, *The Jargon of the Professions* (1978). An older guide worth looking at is James Le Sure, *Guide to Pedagogue: A Handbook for Puzzled Parents* (1965).

jargonistic; ***jargonish**; ***jargonic**. The first has been standard in AmE since the early 1940s and in BrE since the early 1950s. The second and third, both much rarer than the first, are **NEEDLESS VARIANTS**.

Current ratio (in order of headwords): 15:1.2:1

***jarsful**. See **jarful**.

jealousy; **envy**. The careful writer distinguishes between these terms. *Jealousy* is properly restricted to contexts involving emotional rivalry, especially regarding the sex instinct; *envy* is used more broadly of resentful contemplation of a more fortunate person.

But of course there's more to it than just that. For a fascinating study of the nuances (not for the prudish), see T. M. Ankle, *A Study of Jealousy as Differentiated from Envy* (1939).

LANGUAGE-CHANGE INDEX
jealousy for *envy* (of things, not love interests): Stage 2

Jehoshaphat, the name of a king of Judah mentioned in the Old Testament, is often misspelled ***Jehosophat**—e.g.: “The two children hurry to see Baba-Ali, the sword swallower, and watch the daring *Jehosophat* [read *Jehoshaphat*] walk on red-hot coals.” Barnhardt Myl, “To Market, To Market,” *News & Record* (Greensboro), 7 Apr. 1996, at F5.

The name is properly pronounced /ji-**hahsh**-ə-fat/. The mispronunciation /ji-**hoh**-sə-fat/, popularized in the habitual interjection (*Jumpin' Jehoshaphat!*) of Yosemite Sam in the Bugs Bunny cartoons, is based on an erroneous reading of the word (ignoring the -sh-), coupled perhaps with the influence of *Jehovah* (/ji-**hoh**-və/). (Yosemite Sam seems never to hit the books.) But the phrase became so ubiquitous that the interjection would call undue attention to itself if pronounced in any way other than Yosemite's. Not many people today use the phrase.

LANGUAGE-CHANGE INDEX
Jehoshaphat misspelled ***Jehosophat**: Stage 1
Current ratio: 12:1

jejeune /jə-**joon**/ = (1) shallow, insubstantial, dull, insipid; (2) (of nourishment or agricultural lands) scanty, meager, barren; or (3) puerile, childish. The late Jacques Barzun, among others, disapproved of sense 3: “The great usagist [Jacques Barzun] took issue with a political comment . . . about the President's *jejeune jitters*. ‘The meaning “youthful, childish” for *jejeune*,’ Barzun noted, ‘has got into the dictionaries only as a concession to the misusers. The original meaning of *jejeune*—‘empty of food, meager’—led to its modern sense of ‘dull, insipid.’ Probably because the word sounded like *juvenile*, it picked up a meaning of ‘puerile, childish,’ which is the way it is most commonly used today. . . . I say *jejeune* means *puerile* now. And, besides, it goes with *jitters*.” William Safire, “On Language,” *N.Y. Times*, 16 Oct. 1994, § 6, at 18, 20.

Sense 1 now predominates in BrE—e.g.: “Major's toffy cabinet ministers in their pinched Saville Row suits, lisping languidly in accents Oxonian, remind many Brits just how rotten and irrelevant the old aristocracy has become. These *jejeune* relics belong to the 19th century, not the 21st.” Eric Margolis, “Major Deserves His Fate,” *Toronto Sun*, 27 Mar. 1997, at 12. And it still sometimes appears in AmE—e.g.: “Michael Kinsley wrote that Jewish Americans envied Israelis for living out history in a way that made the comfort and security of life in New York seem *jejeune*.” Geoffrey Wheatcroft, “The Big Kibbutz,” *N.Y. Times*, 2 Mar. 1997, § 7, at 6.

Despite disapproval, sense 3 predominates in AmE—e.g.:

- “Svich . . . launch[es] her poetry in speeches that are sometimes beautiful and sometimes embarrassingly *jejeune* or stickily romantic.” Bill Von Maurer, “There's Little Chemistry in 'Alchemy,’” *Sun-Sentinel* (Ft. Lauderdale), 10 Dec. 1996, at E3.
- “My wife had given me carte blanche and other credit cards for the evening and I felt positively *jejeune* again . . . I stood at the corner of Dow and Jones, wondering where to begin.” Herb Caen, “7 Decades of Baghdad by the Bay,” *S.F. Chron.*, 3 Feb. 1997, at H2.
- “The show . . . will delight those who find this sort of frolicsome caper ingenious rather than *jejeune*.” Charles McNulty, “Murder for Two' a Frantic Bid for Musical Amusement,” *L.A. Times*, 5 June 2015, at 11.

The unfortunate thing about this double meaning is that it's sometimes hard to tell what the writer means. *Jejeune* is a put-down, but is the writer calling something “dull” or “adolescent”? In the following sentence, you can't really tell: “This poor translation of a hastily withdrawn French comedy . . . bumps along in a way that makes one yearn for the *jejeune* raunchiness of ‘Private Parts.’” Malcolm Johnson, “Machete Needed to Wade Through ‘Jungle,’” *Hartford Courant*, 8 Mar. 1997, at E1. Maybe, in fact, the word has a tinge of both, as the meanings merge: “The self-indulgent

jewelry; jewellery. The first is the AmE spelling; the second is BrE. In cultivated AmE and BrE speech, the word is pronounced /**joo**-wəl-ree/—not (through METATHESIS) /**jool**-ə-ree/. And *jewel* is /**joo**-wəl/, in two audible syllables—not /**jool**/ or /**juul**/.

jibe. See **gibe.**

jimmy; jemmy. A burglar's crowbar is spelled *jimmy* in AmE, *jemmy* in BrE. The same is true for the verbs as well.

jingoism. See **chauvinism (B)** & **jingoist.**

jingoist; jingo. The former has come to displace the latter as the agent noun corresponding to *jingoism*. A *jingoist* is a belligerent patriot and nationalist who favors an aggressive foreign policy. The word almost always carries pejorative connotations—e.g.:

- “The Duma's *jingoists* seem to care little that the obligations of START-2 are finely balanced.” “Russia's Surly Answer to NATO,” *Economist* (U.S. ed.), 1 Feb. 1997, at 47.
- “Many Serbs . . . escaped the war of the *jingoists* by fleeing or deserting.” Peter Schneider, “The Writer Takes a Hike,” *New Republic*, 3 Mar. 1997, at 34.
- “One customary explanation is that the people who ran covert operations at the C.I.A. from 1947 to 1967 were not right-wing *jingoists*.” Louis Menand, “A Friend of the Devil,” *New Yorker*, 23 Mar. 2015, at 84.

Jingo has pretty much been driven out, unless a pun is needed—e.g.: “*Jingo* bells, *jingo* bells, jingoism all the way on MTV this season.” “The Best of Cable & Satellite,” *Independent*, 21 Dec. 1996, at 57. Otherwise, it appears mostly in the phrase *by jingo*, a mild oath expressing affirmation or surprise <‘I'll do it, by jingo!>.

jinni. See **genie.**

***jiujutsu.** See **jujitsu.**

jive. See **gibe.**

jobsite. One word. Cf. **worksite.**

jocular; jocose; jocund. *Jocular* (/jɒk-yə-lər/) has been the most common since the mid-19th century. But the other two aren't quite NEEDLESS VARIANTS. *Jocular* and *jocose* (/joh-kohs/) both mean “given to joking” or “intended jokingly; humorous.” But *jocular* suggests a playful disposition <her jocular manner endeared her to others> or deliberate facetiousness <jocular remarks during the business meeting>, while *jocose* often connotes mischievous (sometimes feeble) attempts at humor <his jocose wisecracks wore thin>. *Jocund* (/jɒk-ənd/), a broader yet more bookish word, means “jolly, merry, lighthearted” <jocund New Year's Eve revelers>. The following quotations well illustrate typical usage:

- “*Jocular*, tanned and smooth-voiced, he gave the impression he'd rather be at a shrimp boil, getting things accomplished without seeming to strain too hard at it.” Tom Baxter, “Cheerful Dixon Packs Up, Heads for TV Screen,” *Atlanta J.-Const.*, 1 Apr. 1997, at B2.
- “Its violence is facetiously cartoonish, its sexuality just a hint in the air and its *jocose* sense of silliness right out of Nick at Nite.” Michael McWilliams, “Sam Raimi Makes a Successful Play for the Funny Bone with ‘Spy Game,’” *Detroit News*, 3 Mar. 1997, at B3.
- “It's as good a place as any to start trying to lay the foundation for the *jocund* artist's goofily cheeky world view.” Murray Whyte, “On the Road Too Fully Travelled,” *Toronto Star*, 20 Mar. 2014, at E3.

jodhpur /jɒd-pər/ is an eponym for the city of Jodhpur, India. The word (almost invariably used in the plural) refers to a type of flared-at-the-thigh pants used in English horse-riding. Through a kind of visual

METATHESIS, the word is often mispronounced /jɒd-fər/. And believe it or not, this error became pervasive in the horse-riding industry in the mid-20th century.

The mispronunciation sometimes results in the obvious misspelling—e.g.: “Wealthy suburbanites clad in fancy *jodphurs* [read *jodhpurs*] and riding boots will replace overall-clad cowboys like Mizer.” Meghan Meyer, “Old Feed Store Fading into the Sunset,” *Palm Beach Post*, 14 July 2002, at B1.

By inevitable extension, the misspelling also goes back to the source of the word—e.g.: “His name is Ali Akbar Khan, above, whose family traces its musical roots to the 16th century, when an ancestor was court musician to the Emperor Akbar, as Ali Akbar Khan was to the Maharaja of *Jodphur* [read *Jodhpur*] in his 20’s.” Lawrence Van Gelder, “Footlights,” *N.Y. Times*, 7 Nov. 2002, at E1.

How did Jodhpur, a town in central India, come to be famously associated with riding pants? It seems that Rao Raja Hanut Singh, who represented Jodhpur at Queen Victoria’s 60th jubilee in 1897, had designed some comfortable riding trousers that ballooned at the thigh and narrowed at the knee so that they could be tucked into boots. While in London, he had the pants copied by a London tailor, who then began making and selling them. By 1899, the pants were well on their way to international popularity.

LANGUAGE-CHANGE INDEX
jodhpur misspelled and

mispronounced **jodphur*: Stage 2

Current ratio (*jodhpurs* vs. **jodphurs*): 57:1

Johnny-come-lately. Pl. *Johnny-come-latelies*—not **Johnny-come-latelys* or **Johnnies-come-lately*. See PLURALS (E) & (G).

Current ratio (plural forms in order): 4:1.3:1

joint cooperation is a REDUNDANCY.

join together is a REDUNDANCY that should be allowed to survive only in the traditional marriage service, and there only because it is a bona fide remnant of Elizabethan English.

jollily. See ADVERBS (B).

Joneses. See PLURALS (E).

Jones’s. See POSSESSIVES (A).

jostle (= to bump roughly) has been the standard spelling since the 18th century. **Justle* is a variant.

Current ratio (*jostled* vs. **justled*): 208:1

joust. The traditional view is that this word should be pronounced either /jəst/ or /joost/. See *NBC Handbook of Pronunciation* 189 (3d ed. 1964) (listing only /joost/); William H.P. Phyfe, *20,000 Words Often Mispronounced* 421 (1937) (listing only /jəst/ and /joost/). But almost all Americans say /jowst/; this

pronunciation must be considered not just acceptable, but—because of its overwhelming prevalence, coupled with no good reason for opposing it—preferable. Let the orthoepic jousting cease.

Jr.; Sr. See NAMES (B).

joyful (= rapturously happy because of a success) is pronounced /joo-bi-lənt/—never /joob-yə-lənt/. The corresponding noun is *jubilation* /joo-bi-lay-shən/—not /joob-yə-lay-shən/. The mispronunciations were a rather constant habit of former NBC News anchor Brian Williams.

Judaism (the Jewish religion based on the Hebrew Scriptures) is preferably pronounced in four syllables: /joo-dee-iz-əm/, /joo-day-iz-əm/, or /joo-də-iz-əm/—not /joo-diz-əm/. The cognate terms are pronounced as follows:

Judea (or *Judaea*): /joo-dee-ə/ or /joo-day-ə/

Judean (or *Judaeen*): /joo-dee-ən/ or /joo-day-ən/

Judaic: /joo-day-ik/

Judaica: /joo-day-i-kə/

Judeo: /joo-dee-oh/ or /joo-day-oh/—not /joo-dee-oh/ or /joo-day-oh/

judge; justice. In AmE, as a general rule, judges sitting on the highest appellate level of a jurisdiction are known as *justices*. Trial judges and appellate judges on intermediate levels are generally called *judges*, not *justices*.

New York, California, and Texas depart from these rules of thumb. In New York, *justices* sit on the trial court of general jurisdiction (the Supreme Court, oddly), whereas *judges* sit on the state’s highest court, the Court of Appeals. The anomaly of calling trial judges *justices* is a matter of tradition, the “Supreme Courts of Judicature” having been established in 1691. In California, *justices* sit on the intermediate appellate courts (the *Courts of Appeal*) as well as on the Supreme Court. In Texas, *justices* sit on the courts of appeals (between the trial court and the Supreme Court—the latter being the highest civil court, which is also composed of *justices*); *judges* sit on trial courts and on the Court of Criminal Appeals, the highest criminal court.

H.W. Horwill wrote that “*judge* carries with it in America by no means such dignified associations as it possesses in Eng. It may mean [in AmE] no more than a *magistrate* of a police court.” *Modern American Usage* 180 (2d ed. 1944). *Justice* may also denote, in AmE and BrE alike, a low-ranking judge or inferior magistrate, as in the phrases *justice of the peace* and *police justice*. Cf. **Chief Justice of the United States**.

judgeable. So spelled.

judgement. See **judgment** (A).

judging. For *judging* as an acceptable dangling modifier, see DANGLERS (E).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

judging from; judging by. Meaning “if we are to judge by,” each of these phrases is an acceptable dangler or disguised conjunction <judging from your smile, the interview must have gone well>. (See **DANGLERS** (E).) The phrases became especially common in print sources beginning about 1800. Since that time, *judging from* has been the more common of the two in AmE; since the 1930s, *judging by* has been somewhat more common in BrE.

Current ratio (*judging from* vs. *judging by* in World English): 1.1:1

***judgmatic.** See **judgmental**.

judgment. **A. Spelling.** *Judgment* is the preferred form in AmE and in British legal texts, even as far back as the 18th century. *Judgement* is prevalent in British nonlegal texts and was thought by H.W. Fowler to be the better form (*FMEU1* at 310). Cf. **abridgment** & **acknowledgment**. See **MUTE E**.

B. AmE and BrE Legal Senses. In AmE, a *judgment* is the final decisive act of a court in defining the rights of the parties <the judgment constituted the final decree>. In BrE, *judgment* is commonly used in the sense in which *judicial opinion* is used in AmE.

C. Court judgment. This phrase is a **REDUNDANCY**, though an understandable one when the likely readers are nonlawyers. For example, the following book's title might have misled general readers if the word *court* had been removed: Gini G. Scott et al., *Collect Your Court Judgment* (1991).

judgmental; *judgmatic. *Judgmental* = (1) judging when uncalled for; or (2) of, relating to, or involving judgment. Although the newer sense 1 is now more common <a judgmental critic>, sense 2 still appears—e.g.: “In October 1985, police Chief Sid Klein took away Welch's summons book and said he couldn't write any more tickets, citing Welch's ‘lack of judgmental ability.’” “Officer Saw Discipline as Harassment,” *St. Petersburg Times*, 2 Apr. 1996, at A4. **Judgmatic*, which H.W. Fowler called a “facetious formation” because of its irregular formation on the analogy of *dogmatic*, is a **NEEDLESS VARIANT** of *judicious*. See **JUDICIAL**.

***judicative.** See **adjudicative**.

judicial; judicious. *Judicial* = (1) of, relating to, by, or involving the court <judicial officers>; (2) in court <judicial admissions>; (3) legal <the Attorney General took no judicial action>; or (4) of, relating to, or involving a judgment <judicial interest at the rate of 4% annually>. Sense 4, which is confined to legal contexts, is suspect because it hasn't yet gained admission to most dictionaries.

Judicious is a much simpler word, meaning “well considered, discreet, wisely circumspect.” E.g.:

- “The duo put on a lively show that was highlighted by the *judicious* use of video and an inflatable cow skull.” Claudia Perry, “Brooks, Dunn Turn Dome into Honky-Tonk Heaven,” *Houston Post*, 28 Feb. 1995, at A6.

- “He spoke [about] . . . the need to be *judicious* in helping emerging democracies develop institutions to thrive in this changed geopolitical landscape.” Stuart Ingis, “Law Students with Laptops Link Bosnia to the Internet,” *Christian Science Monitor*, 28 Feb. 1997, at 19.
- “There's not much to it: a smattering of the usual suspects (ginger, garlic, scallions), a *judicious* sprinkling of Sichuan peppercorn, some soy and a bit of black vinegar to balance it.” T. Susan Chang, “From a London Blogger, Pages of In-Your-Face Flavor,” *Wash. Post*, 2 Sept. 2015, at E1.

See **judgmental**.

judiciary is pronounced either /joo-**dish**-ee-er-ee/ or /joo-**dish**-ə-ree/. Cf. **beneficiary**.

judicious. See **JUDICIAL**.

jujitsu; *jujutsu; *jiujutsu. Although the Japanese term is *jū-jūtsu*, the phonetic spelling *jujitsu* became the established form in both AmE and BrE during the mid-20th century. The others are variant forms in English.

Current ratio (in order of headwords): 23:8:1

juncture. The phrase *at this juncture* should be used in reference to a crisis or a critically important time—e.g.: “*At this critical juncture* in history, the people of China need and deserve our support and friendship.” Samuel D. Ling, “China's Challenge,” *Chicago Trib.*, 27 Feb. 1997, at 22. Such phrases as *critical juncture* (a **CLICHÉ**) and *pivotal juncture* are redundant, since *juncture* alone will typically suffice in place of those phrases.

But the phrase *at this juncture* isn't equivalent merely to “at this time” or “now.” When used with these meanings—as by the first President George Bush and popularized by his impersonator, Dana Carvey—it's a pomposity. E.g.:

- “While the city has not initiated the program with much grace or deftness, that is no reason to make things even messier at this late *juncture* [read *date*].” “Stick to Your Sticker Guns,” *Austin Am.-Statesman*, 26 Feb. 1997, at A10.
- “*At this juncture* [read *This time*] last season, with the same total of two points, the Toon Army had declared war on manager Alan Pardew and owner Mike Ashley.” Craig Hope, “Grim Up North,” *Daily Mail*, 1 Sept. 2015, at 79.

Sometimes *junction* gets mistakenly substituted, especially in speech—e.g.: “It would be advisable for the Virginia legislature to reconsider this at this *junction* [read *juncture*] . . .,” she said.” “Va. Schools Forge Ahead with National Motto: In God We Trust,” *Wash. Post*, 28 July 2002, at B1. The error occurs in writing as well, but much less often—e.g.: “The new contract pointed toward his release at this *junction* [read *juncture*] before a roster bonus came due.” Don Hammack, “Saints Roster Taking Shape with Moves,” *Sun Herald* (Biloxi, Miss.), 21 Mar. 2002, at B1.

LANGUAGE-CHANGE INDEX

1. *at this juncture* meaning “now”: Stage 3
2. *at this junction* for *at this juncture*: Stage 1

Junior. On whether to include a comma with the abbreviation *Jr.*, see NAMES (B).

junkie (= [1] a drug addict, or [2] an avid aficionado) is the standard spelling. **junky* is a variant.

Current ratio: 5:1

junta; junto. Of Spanish origin, *junta* (= a political or military group in power, esp. after a coup d'état) is pronounced either /hoon-tə/ or /jən-tə/. It is much more common in AmE than its altered form, *junto* /jən-toh/, which has undergone slight DIFFERENTIATION to mean “a self-appointed committee having political aims.” Ernest Gowers wrote that *junto* “is an erroneous form” (FMEU2 at 319), but it appears frequently in BrE where an American would write *junta*—e.g.: “Even so, a compliant civilian government may not be easy for the deeply unpopular *junto* to achieve.” “Myanmar: Deja Vu,” *Economist* (Am. ed.), 16 Jan. 1993, at 34.

jurisprudent, n.; jurisprude. *Jurisprudent*, though appearing to be an adjective, is a noun meaning “a jurist” or “a learned lawyer.” *Jurisprude*, not recorded in the OED, is listed in W3 as a BACK-FORMATION from *jurisprudence* with the meaning “a person who makes ostentatious show of learning in jurisprudence and the philosophy of law or who regards legal doctrine with undue solemnity or veneration.” The word deserves wider currency, preferably with recognition of its pejorative connotations (with the pun on *prude*). Yet today most scholars in the field of jurisprudence call themselves jurisprudes without any hint of self-deprecation.

LANGUAGE-CHANGE INDEX

jurisprude as a nonpejorative equivalent of
jurisprudent, n.: Stage 3

Current ratio (*jurisprudents* vs. *jurisprudes*): 6:1

jurist. A. Generally. In BrE, this word is reserved for someone who has made outstanding contributions to legal thought and legal literature. In AmE, it is loosely applied to every judge of whatever level, and sometimes even to nonscholarly practitioners who are well respected.

B. For juror. This is a surprising error. On the front page of the *Oakland Tribune*, a deck line states: “Group may recommend better pay for *jurists*.” The meaning of that statement isn’t clear until you read the body of the story: “The panel also is expected to recommend *jurors*—who are increasingly reluctant to serve on trials—be paid more money.” “Jury Changes Would Drop Requirement for Unanimity,” *Oakland Trib.*, 30 Apr. 1996, at A1. Nowhere does the story mention judges’ pay. See **juror**.

juror ought to be distinguished from *potential juror* or *veniremember*—e.g.: “When the court was cleared of unchosen *jurors* [read *veniremembers*],

the spectators waiting in the corridor were allowed inside.” John Bryson, *Evil Angels* 346 (1985). The difference is that a *potential juror* or *veniremember* hasn’t yet been selected to sit on the jury, but is merely in the pool of people who might be selected; a *juror* is someone who has been empaneled on a jury. For a surprising misuse, see **jurist** (B).

Juror is preferably pronounced /juur-ər/, though it is frequently overpronounced in AmE /juur-ohr/ to distinguish the syllables—especially by lawyers and judges. In BrE, it is simply /juur-əl/.

jury. In AmE, this is a COLLECTIVE NOUN, and it therefore takes a singular verb <the jury has spoken>. To emphasize the individual members of the jury, we have the word *jurors* <the jurors have spoken>. In BrE, however, it is common to see a plural verb with *jury* <the jury have spoken>, just as with other collective nouns.

jury-rig; jerry-build; *jerry-rig; *gerry-rig. The first is an authentic nautical phrase, dating from the early 17th century. Derived from *jury-mast* (= a temporary replacement for a ship’s broken mast), the *jury* part here has nothing to do with 12 peers deciding someone’s fate. Instead, according to Barnhardt’s *Dictionary of Etymology*, it probably derives from the Old French word *ajurie* (= help). The second is something of a PORTMANTEAU WORD combining *jury-rig* with a 19th-century BrE CASUALISM, *jerry-built* (= shoddy; poorly made to last a short time).

Jerry-build is sometimes used transitively to refer to something assembled from bits and pieces of other things. E.g.:

- “These passages faithfully capture the flavor of Jacobs’s interminable book: corny, juvenile, smug, tired. Jacobs—a poor man’s Dave Barry; no, a bag person’s Dave Barry—has a modus operandi: to drift through the encyclopedia he supposedly read, yank out an entry, tear open his Industrial-Strength Comedy Handbook and *jerry-build* a lame wisecrack.” Joe Queenan, “A Little Learning Is a Dangerous Thing,” *N.Y. Times*, 3 Oct. 2004, § 7, at 13.
- “If history repeats itself, this budget, like the last six, will continue to limit what the universities can charge while the NDP *jerry-builds* something it hopes will keep the province’s three degree-granting institutions from collapsing completely under financial strain.” “Scrap Cap on Tuition,” *Winnipeg Free Press*, 20 Feb. 2006, at A10.
- “Two-time Oscar winner Leo McCarey had to borrow [Robert] Walker footage from Alfred Hitchcock’s *Strangers on a Train*, filmed a year earlier, to *jerry-build* his finale.” Mike Clark, “Film Star’s Death Can Be a Boost or a Hurdle,” *USA Today*, 8 Feb. 2008, at E10.

**Gerry-rig* is a fairly recent American NEEDLESS VARIANT of the mistaken **jerry-rig*—e.g.: “A 150-ton specialized tank landing craft was *gerry rigged* [read *jury-rigged*] to her deck. She weighed anchor and riding low in the water sailed for England.” Sgt. Paul

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Kane, “Ship That Saved Hundreds at Normandy, Still Proudly Sails,” Dept. of Defense U.S. Marine Corps news release, 26 Oct. 2006. Unless you’re writing a legal brief—where *jury-rigged* might create a felonious MISCUE—stick with that authentic original.

Current ratio (*jury-rigged* vs. **jerry-rigged* vs. **gerry-rigged*): 71:38:1

just, like *only*, must be carefully placed—e.g.: “Texas’ Danny Peoples . . . had a two-run double and *just* hit foul a ball that could have been a two-run, game-tying homer.” Kirk Bohls, “Dallas Baptist Assaults Texas Pitching 10–5,” *Austin Am.-Statesman*, 26 Apr. 1994, at E1, E6. *Just* probably modifies *foul*—it might arguably modify *could*—but it certainly doesn’t modify the word that it precedes, *hit*, which might indicate that he had hit the foul immediately before. Perhaps the writer was so eager to indicate how the ball was barely foul that he put the *just* in too early.

Another example: “America needs a decade of renewal and reform,” he [Richard D. Lamm, a presidential candidate] said. ‘It *just doesn’t* [read *doesn’t just*] need a new President—it needs a whole decade of reform and renewal.’” Ernest Tollerson, “Lamm, Ex-Governor of Colorado, Seeks Reform Party’s Nomination,” *N.Y. Times*, 10 July 1996, at A1, A12. See **only**.

just as soon. This idiom is occasionally mangled into the unintelligible MALAPROPISM **just assume*—e.g.:

- “[O]ffice courtships have become as much a fixture in the workplace as fax machines and desktops. And it’s one area most executives would *just assume* [read *just as soon*] not govern, a new survey shows.” Teresa M. McAleavy, “Unwritten Rules Govern Office Wooing,” *Record* (Bergen Co., N.J.), 17 Feb. 2002, Bus. §, at B6.
- “If Tampa Prep coach A.J. Hendrix has his way, he would *just assume* [read *just as soon*] not to see [omit *to*] Shorecrest’s Anthony Katchuk again.” Brandon Wright, “Shorecrest Downs Tampa Prep Again,” *St. Petersburg Times*, 30 Mar. 2006, at C8.
- “I’m not a social butterfly and *just assume* [read *would just as soon*] spend my free time studying the teachings of Aradia.” Nicholas Hanna, *Coven of Rats 3* (2007).

LANGUAGE-CHANGE INDEX

**just assume* for *just as soon*: Stage 1

just deserts (= the treatment one truly deserves) is occasionally misrendered **just desserts*. Sometimes, of course, it’s a playful pun, as when a bakery is called

Just Desserts. But sometimes it’s sloppiness or pure ignorance—e.g.: “The deliciously wicked Francis Urquhart gets his *just desserts* [read *just deserts*] in this third installment of the story [the film *The Final Cut*]” “Best Bets,” *Commercial Appeal* (Memphis), 21 Feb. 1997, at E2. In that example, the adverb *deliciously* creates a nonsensical echo in the wrong word *desserts*.

LANGUAGE-CHANGE INDEX

just deserts misspelled *just desserts*: Stage 3

Current ratio: 3:1

just exactly. Although this REDUNDANCY is common in speech, it shouldn’t appear in careful writing (apart from dialogue)—e.g.: “*Just exactly* [read *Just*] how good are the big, fast and skillful Flyers?” Stephen Harris, “Hockey: B’s Can’t Cool Red-Hot Flyers,” *Boston Herald*, 8 Jan. 1997, Sports §, at 8.

For a similar phrase involving *exact*, see **exact same**.

justice. See **judge**.

juvenile (= [1] of, relating to, or involving young people who aren’t yet adults, or [2] typical of a silly child or adolescent) is correctly pronounced either /*juu-və-nəl*/ or (esp. in BrE) /*juu-və-nil*/.

juvenilely. See ADVERBS (B).

juvencocracy. See GOVERNMENTAL FORMS.

juxtaposition is a noun, not a verb. Although one may *position* a thing, one may not *juxtaposition* two things. *Juxtapose* is the correct verb form—e.g.: “The intended irony of Luther’s skewed morality *juxtapositioned* [read *juxtaposed*] against the President’s lack of morality is not particularly subtle or original.” “It Takes a Sensitive Thief,” *Pantagraph* (Bloomington, Ill.), 21 Feb. 1997, at D3. Likewise, the participial adjective is *juxtaposed*, not *juxtapositioned*—e.g.: “And Martha [Stewart], well, let’s check her magazine’s calendar, . . . with its *juxtapositioned* [read *juxtaposed*] reminders to ‘prune roses’ and ‘climb Mt. Kilimanjaro.’” Jean Marbella, “Just So,” *Baltimore Sun*, 8 Nov. 1996, at E1. See FUNCTIONAL SHIFT (D).

LANGUAGE-CHANGE INDEX

**juxtapositioned* for *juxtaposed*: Stage 1

Current ratio (*juxtaposed* vs. **juxtapositioned*): 421:1

K

***kabala**; ***kabbala**; ***kabbalah**. See **cabala**.

***kabob**. See **kebab**.

kaleidoscope. So spelled. See SPELLING (A).

karat. See **carat**.

karate (the Japanese martial art), a loanword adopted into English in the 1950s, has the settled English pronunciation /*kə-rah-tee*/. Avoid /*kə-rah-tay*/ and /*kə-rat-ee*/.

***kasher**. See **kosher**.

Kazakhstan. So spelled—with the medial *-h-*. The inhabitants of this former Soviet republic are called *Kazakhs*. See DENIZEN LABELS.

kebab; *kabob; *kebob; *cabob. The first of these spellings—the one closest to the Turkish etymon—had become standard by the early 1940s. The others are variant forms.

Current ratio (in order of headwords): 254:41:7:1

***Kelt; *Keltic.** See **Celt**.

kempt. See **unkempt**.

kennel, vb. (= to put or keep in a kennel—that is, a place where dogs are cared for), makes *kenneled* and *kenneling* in AmE, *kennelled* and *kennelling* in BrE. The divergences in spelling date back to about 1800.

kerb. See **curb**.

kerchief. Pl. *kerchiefs*—not **kerchieves*. See PLURALS (C).

Current ratio: 508:1

kerosene is the standard spelling. **Kerosine* is a variant.

Current ratio: 114:1

ketchup; catsup; catchup. The first spelling greatly predominates in modern usage and has done so since about 1850 in BrE and about 1985 in AmE. It has the advantages of phonetically approximating and of most closely resembling the word's probable source, either the Cantonese *k'ê chap* or the Malay *kêhap*, both referring to a kind of fish sauce. The pronunciation is either /*kech-əp*/ or /*kach-əp*/; /*kat-səp*/ is pretentious.

kettledrum. One word. See **timpani** (A).

khaki (= a brownish-yellow fabric of twilled cotton or wool) is frequently misspelled **kahki*—e.g.: “Tuesday is D-day. But don't look for Audie Murphy or a whole lot of *kahki* [read *khaki*].” Lawrence van Gelder, “The Glory and Glamour of Dietrich,” *N.Y. Times*, 31 Mar. 1996, § 12, at 51.

LANGUAGE-CHANGE INDEX
khaki misspelled **kahki*: Stage 1

Khrushchev. So spelled, with three *h*'s, though often misspelled with two (**Khruschev*) or even one (**Kruschev*).

kibbutz /*ki-buutz*/ (= a farm in Israel where many people live and work together) forms the Hebrew plural *kibbutzim* in all varieties of World English—not **kibbutzes*. A member of a *kibbutz* is known as a *kibbutznik*.

Current ratio (*kibbutzim* vs. **kibbutzes*): 39:1

kibitz (= [1] to comment unhelpfully and annoyingly when someone is doing something, or [2] to speak tediously about obvious things) is a Yiddishism introduced into English in the 1920s. The word is accented on the first syllable: /*kib-itz*/. The agent noun is *kibitzer* /*kib-it-zər*/. The variant spellings **kibbitz* (vb.) and **kibbitzer* (n.) have not become predominant in any variety of World English.

Current ratio (*kibitz* vs. **kibbitz*): 4:1
Current ratio (*kibitzer* vs. **kibbitzer*): 10:1

kibosh (= the stopping of a plan or idea from developing or progressing; veto), a word of unknown origin dating in English from the early 19th century, refers to an action or decision that halts further progress on a plan, idea, or activity. It usually appears in the phrase *to put the kibosh on* (something). It was widely adopted in BrE in the 1830s and in AmE in the 1870s. The word is normally pronounced /*kr-bosh*/ in both AmE and BrE, but /*ki-bosh*/ is also an acceptable AmE pronunciation.

kidnapping. A. Spelling. Spell-check programs notwithstanding, the spelling with *-pp-* is preferred, by convention. But the inferior spelling **kidnaping* occasionally appears.

That spelling has its defenders—e.g.: “The form with a single ‘p’ is to be preferred because it is a general rule of spelling that the accent determines whether or not to double the letter when the suffix is to be added to a word ending in a *single consonant* preceded by a *single vowel*. . . . [T]he final consonant is *not* doubled if the word has more than one syllable and the accent is not on the last.” Rollin M. Perkins, *Criminal Law* 134 n.1 (1957) (citing the examples of *develop*, *offer*, and *suffer*).

Perkins's final statement, explaining the general rule, is sound. But it overlooks the exceptional nature of *kidnapping*. First, the word is formed on the model of the shorter verb: *nap*, *napping*. Second, up to the 19th century, *kidnap* was generally accented on the second syllable. Third, *kidnapping* is much more common than **kidnaping* in modern print sources. See SPELLING (B).

Current ratio: 32:1

B. Sense. *Kidnapping* = the act or an instance of taking or carrying away a person without his or her consent, by force or fraud, and without lawful excuse. Does *kidnapping* refer only to the nabbing of kids? No. At common law, it was defined as the forcible abduction or stealing away of a man, woman, or child from his or her own country and taking him or her into another. Originally, the “kids” who were napped were not children at all, but laborers who were taken by force or by guile for service on early American plantations.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The law therefore distinguishes between *adult-kidnapping*, which includes the element of force or fraud, and *child-kidnapping*, which often does not, because, for example, there might be no force or fraud involved in making off with a baby-stroller.

kill . . . dead is a REDUNDANCY popularly promoted (alas) in television commercials touting insecticides that, it is said, will “kill bugs dead.” It’s certainly an emphatic, attention-getting phrase.

kiln is pronounced either /kil/ or /kiln/. According to one authority, “the pronunciation [kil] appears to be used only by those concerned with the working of kilns.” Daniel Jones, *Everyman’s English Pronouncing Dictionary* 283 (14th ed. 1967). Another says: “If you want to show that you know something more about this word than how to spell it, say KIL. If you think saying KIL will make you sound pedantic or weird, or both, pronounce the *n*.” Charles Harrington Elster, *BBBM* at 279.

kilometer; kilometre. Denoting a distance of 10,000 meters, the word is spelled *kilometer* in AmE, *kilometre* in BrE. In AmE, the second syllable tends to be stressed: /ki-**lom**-i-tər/. In BrE, the first syllable tends to be stressed: /**kil**-ə-meet-ər/.

kiltie (= [1] someone who wears a kilt—esp. the thick tartan skirt-like garment traditionally worn by Scotsmen, or [2] a decorative tuft of leather or leatherlike material with serrated ends, traditionally worn atop golf shoes) is predominantly so spelled. In sense 1, *kilty* is a variant spelling that appears almost as frequently as *kiltie*.

Current ratio: 3:1

kimono (= a long, loose Japanese robe) is frequently misspelled **kimona*—e.g.: “Over her fireplace in Maryland hangs a portrait of her in a *kimona* [read *kimono*] from the year she lived in Japan.” Patricia Meisol, “Migration Pattern,” *Baltimore Sun*, 28 Oct. 1997, at E1. The proper pronunciation is /ki-**moh**-noh/; the common but inferior pronunciation /ki-**moh**-nə/ probably accounts for the misspelling.

LANGUAGE-CHANGE INDEX
kimono misspelled **kimona*: Stage 1

Current ratio: 64:1

-**KIN**. See DIMINUTIVES (I).

kind. See **class & type of**.

kindergarten. This German loanword for “children’s garden” has been in use in English since at least the mid-18th century with its foreign spelling intact. It is sometimes misspelled as if it were anglicized—e.g.: “Lexington is the largest school in the state for the profoundly deaf and hard-of-hearing, and educates students from pre-*kindergarden* [read *kindergarten*] to age 21.” Nicole Bode, “Deaf Get into the Act,” *Daily*

News (N.Y.), 6 June 2002, Suburban §, at 1. The word may be pronounced /**kin**-dər-gahr’t’n/ or /-gahr’d’n/.

LANGUAGE-CHANGE INDEX
kindergarten misspelled **kindergarden*: Stage 1

kindergartner has been the standard spelling since the 19th century. **Kindergartener* is a variant.

Current ratio: 3:1

kindly, adv. This word is now frequently misplaced in sentences. Traditionally, it has meant something close to *please*, as in *Kindly take your seats* (= please take your seats). This usage has long been more common in BrE than in AmE. Perhaps that is why Americans have begun to misplace *kindly*, by having it refer not to the person who is requested to do something but to the person doing the requesting—e.g.: “We *kindly* ask you to take your seats.” This linguistic misstep has become fairly common in AIRLINESE.

LANGUAGE-CHANGE INDEX
kindly in reference to the requester instead of the person requested: Stage 2

kind of. A. Meaning “somewhat.” *Kind of* is a poor substitute for *somewhat*, *rather*, *somehow*, and other adverbs. It properly functions as a noun, however, signifying category or class in phrases such as *this kind of paper*. Cf. **sort of**. See ***these kind of**.

B. What kind of (a). With this phrasing, the *a* is not only unnecessary but also typical of uncultivated speech. Thus *It depends on what kind of vacation you want*, not **It depends on what kind of a vacation you want*. See CLASS DISTINCTIONS.

LANGUAGE-CHANGE INDEX
**what kind of a . . .* for *what kind of . . .*: Stage 3
Current ratio (*what kind of person* vs. **what kind of a person*): 6:1

Kingdom of the Netherlands. See **Netherlands**.

kingly; queenly; royal; regal. The first two words should be reserved for specific references to the male or female monarch. *Royal* is the more general word, meaning “of, relating to, or involving a monarch” <the royal family>. It’s sometimes metaphorical, as in *a royal touch*. The term *regal* can also be used broadly—in the sense “splendid, stately, magnificent”—but almost always in reference to a person <regal posture>; *royal* occasionally shares this sense <royal treatment>. Of course, *royal* can also mean “huge, significant” <royal pain> <royal screw-up>.

king-size, adj., is the standard spelling in AmE and BrE alike. **King-sized* is a variant.

Current ratio: 2:1

kismet (= fate; the foreordained events of one’s life) is pronounced /**kiz**-mət/, /**kis**-mət/, or either of those first syllables with /-met/.

kitchenette is the standard spelling. **Kitchenet* is a variant.

kitty-cornered. See **catty-cornered.**

kiwifruit. One word in AmE, generally two in BrE.

kleptomania has been the standard spelling since the 19th century. **Cleptomania* is a variant.

Current ratio: 122:1

knackwurst. See **knockwurst.**

knapsack (= a lightweight frameless backpack) is frequently misspelled **napsack*—e.g.:

- “Safe to say, although Schmidt contends he is still merely exploring, he has all the right equipment in his *napsack* [read *knapsack*].” Kurt Erickson, “The Gauntlet Is Thrown,” *Pantagraph* (Bloomington, Ill.), 16 Feb. 1997, at A4.
- “Of the 53 players a certain notorious owner jammed into his *napsack* [read *knapsack*] and hustled off to Baltimore, only 18 are still with the Ravens as they prepare to meet the Cincinnati Bengals today.” Bob Hunter, “Ravens Haven’t Taken Off in Baltimore Yet,” *Columbus Dispatch*, 7 Sept. 1997, at E1.
- “Thousands of troops returned from Second World War battles with battered copies in their *napsacks* [read *knapsacks*].” Ian Herson, “Author’s Words Are Still Relevant Today,” *Liverpool Echo*, 26 Jan. 2011, at 10.

LANGUAGE-CHANGE INDEX

knapsack misspelled **napsack*: Stage 1

Current ratio: 865:1

knave (= a rogue) is sometimes confused with *nave* (= the main body of a church)—e.g.:

- “As he spoke, the audience sat quietly near the red and turquoise *knave* [read *nave*] of the church, eating cookies and cheese curls.” Nathaniel Sheppard Jr., “At Rally in Chicago, a Load of Facts, 16 Listeners and One Determined Cause,” *N.Y. Times*, 12 Oct. 1980, § 1, at 34.
- “She told me to enter the *knave* [read *nave*] of the church, then step into a small room where there was a wooden partition in the wall.” Jacqueline Higuera McMahan, “Sweet Tamales Are Holiday Tradition,” *S.F. Chron.*, 15 Dec. 1993, Food §, at 10.
- “Many institutions chipped in with money and advice—including English Heritage, the diocese, and the Churches Conservation Trust, a charity funded by the state and the Church Commissioners that looks after churches put to other uses (one has a swimming pool in the *knave* [read *nave*]).” “Saving Churches for Their History—Not Religion,” *Guardian*, 3 July 2010, at 29.

LANGUAGE-CHANGE INDEX

knave misused for *nave*: Stage 1

kneel > knelt > knelt. In modern print sources, the past-tense and past-participial *knelt* is more than five times as common as its variant **kneeled*. See IRREGULAR VERBS.

Current ratio (*knelt down* vs. **kneeled down*): 6:1

knees. See **hands and knees.**

knickknack is so spelled, with a *-kk-* in the middle. Some writers mistakenly omit one of them—e.g.: “Eddy’s daffy, disintegrating mother gets caught climbing in windows or pinching *knickknacks* [read *knickknacks*].” Arion Berger, “Absolutely Frightening,” *Village Voice*, 13 June 1995, at 45. **Nicknack* is a variant spelling.

LANGUAGE-CHANGE INDEX

knickknack misspelled **knicknack*: Stage 1

Current ratio: 32:1

knife. Pl. *knives*. See PLURALS (C).

knight-errant. Pl. *knights-errant*. See PLURALS (G).

Knight Templar. The traditional plural is *Knights Templars* (pluralizing both the noun *knight* and the POSTPOSITIVE ADJECTIVE *templar*). This has been so since the 1600s.

The historic *Knights Templars* were members of a military and monastic Augustinian order founded in 12th-century Jerusalem during the First Crusade. Members were called the Knights of the Temple or *Knights Templars* because their quarters were in a palace next to the building called Solomon’s Temple. The order was suppressed in the 14th century for religious and political reasons.

Although a modern international organization called the Knights Templar (no *-s*) exists, its connection to the monastic order is apocryphal. So although many writers err, the differing plural spellings for the ancient order and the modern organization should be carefully observed.

knit > knitted > knitted. The usual past tense is *knitted*, except in the phrase *close-knit family*. E.g.:

- “Or has Andy MacPhail, without Ed Lynch mucking things up, simply *knitted* together an amazing patchwork quilt?” Jay Mariotti, “Cubs Are for Real,” *Chicago Sun-Times*, 7 May 2001, at 91.
- “Australia’s fairy penguins are all set for winter and any oil spills after 1,000 tiny woolly sweaters were specially *knitted* and sent from as far away as Japan to the Australian island state of Tasmania.” *Daily News* (N.Y.), 27 May 2001, at 44.

The usual phrase is *knitted brow*, not **knit brow*—e.g.:

- “Akeara, Freeman’s 7-year-old daughter, is sprawled on the floor, her hair standing on end, her brow *knitted* as she draws a picture.” Daniel A. Grech, “Home Doesn’t Have to Be Perfect,” *Wash. Post*, 19 Sept. 1999, Prince William Extra §, at 1.
- “He claimed that it reigned supreme in eating quality, but (and here his brows *knitted*) only in its area of origin, north of Sacramento.” David Karp, “Gems Among the Stones,” *L.A. Times*, 23 May 2001, at H1.
- “I just want to get back to playing basketball; Swoopes says, gripping and shaking an imaginary ball, her brow

knitted into an angry sneer.” W.H. Stickley, “Memorable Past, Uncertain Future,” *Houston Chron.*, 26 May 2001, Sports §, at 1.

Cf. **fit**.

Current ratio: 3:1

knock out; knock up. See PHRASAL VERBS.

knockwurst (= a thick, spicy sausage common in German cuisine) is the standard spelling today. Although *knackwurst* is the traditional German spelling, the form *knockwurst*, an accurately phonetic respelling, has predominated in AmE since the 1950s and in BrE since the 1970s.

Current ratio: 4:1

Knopf. The well-known publishing house is pronounced /kə-**nahpf**/—with /k/ distinctly sounded.

knot. A *knot* is a unit of speed equal to one nautical mile per hour. The term originated over 200 years ago when a ship’s speed was measured with a log line, a length of twine or rope marked at intervals by colored knots and attached to a circular log weighted with lead. This float stayed relatively stationary in the water and pulled the log line over the ship’s side. After 28 seconds (if using markers set 47.33 feet apart) or 30 seconds (if using markers set 50.75 feet apart), the line was hauled back. The number of knots that had passed over the side was the measure of the ship’s speed. In the 19th century, the nautical mile (and the *knot*) was standardized as 6,076 feet, compared with 5,280 feet to a mile on land. Today, both watercraft and aircraft measure speed in *knots*.

Since a *knot* is a measure of speed and not distance, a REDUNDANCY results if you append a time element such as *per hour*—e.g.:

- “An effective speed is 1.5 to 1.6 *knots per hour* [read *knots*], or just fast enough to keep the herring rolling slowly.” Fenton Roskelley, “Hunting & Fishing,” *Spokesman-Rev.* (Spokane), 19 Nov. 1999, at C4.
- “They usually work best at slow trolling speeds, no more than 2.5 *knots per hour* [read *knots*].” J. Michael Kelly, “Slammin’ Salmon,” *Post-Standard* (Syracuse), 24 Aug. 2000, at D9.
- “Ships must negotiate 12 sharp turns in waters that flow anywhere from 3 to 7 *knots per hour* [read *knots*].” Louis Meixler, “Oil Tankers Pose Risk on Bosphorus,” *L.A. Times*, 1 July 2001, at A8.

LANGUAGE-CHANGE INDEX

**knots per hour* for *knots*: Stage 2

know, through careless error, is sometimes written *now*—e.g.: “Gempler said he didn’t *now* [read *know*] why the union produced the report.” Hannelore Sudermann, “Teamsters Attack Apple Industry over Core Issues,” *Spokesman-Rev.* (Spokane), 23 July 1997, at A10.

knowledgeable. So spelled—not **knowledgable*.

Current ratio: 139:1

known /nohn/ is often mispronounced /noh-ən/, as if it had two syllables.

known quantity. See **unknown quantity**.

Koran; Qur’an; Quran. These English translations of the Arabic name for Islam’s holy book are phonetic. Although *Koran* long predominated in AmE and BrE, *Qur’an* and *Quran* are now predominant in World English print sources. The second syllable is stressed: /kə-**rahn**/ or /kə-**ran**/.

kosher is the standard spelling. **Kasher* is an archaic variant.

Current ratio: 117:1

kowtow (= to behave subserviently) has been the standard spelling in AmE since about 1930 and in BrE since about 1960. **Kotow* is a variant. See SPELLING (A).

Current ratio: 16:1

kudos (best pronounced /**kyoo**-dahs/ or /**kyoo**-dohs/, with no -z sound at the end) derives from the Greek word *kydos* “glory.” A singular noun meaning “praise, glory,” it is sometimes erroneously thought to be a plural—e.g.:

- “Dresser . . . has received *several kudos* [read *much kudos* or *several rave reviews*] for ‘Better Days’ since it premiered in 1986.” Mark Chalton Smith, “‘Better Days’ Makes Best of Hard Times,” *L.A. Times*, 27 Nov. 1992, at F1.
- “The winning team gave *many kudos* [read *much kudos*] to its ‘anchor,’ chamber member Mark Sharon.” Ken O’Brien, “Chamber Teams Raise Funds, Fun Through Olympics,” *Chicago Trib.*, 19 May 1996, Tempo Southwest §, at 2.
- “Last week, he was nominated for best breakthrough performance by the Independent Spirit Awards, and more *kudos* [read *honors*] seem in the offing.” Lou Lumenick, “The ‘Fisher’ King,” *N.Y. Post*, 16 Dec. 2002, at 37.

As a result of that mistake, **kudoes* (a mistaken plural) and **kudo* (a false singular) have come to plague many texts—e.g.:

- “This is a great-looking show, too: *Kudoes* [read *Kudos*] to the costumer (Ambra Wakefield) and choreographer (Lee Martino).” Eric Marchese, “Curtain Call,” *Orange County Register*, 20 July 1996, at F3.
- “Whether you nail me when you think I’m wrong or toss me a *kudo* [read *kudos*] when you agree, I rely on you for ideas and criticism.” Dan Gillmor, “Looking Back on the Year’s Miscues and Boo-Boos,” *St. Louis Post-Dispatch*, 29 Dec. 1997, at 13.
- “[Army] Archerd is the first [journalist] to receive the humanitarian *kudo* [read *kudos*], which will be presented Jan. 28 at the BevWilshire.” “Archerd to Receive Scopus,” *Daily Variety*, 16 Sept. 2002, at 2.

The mistaken plural use, as well as the back-formed singular **kudo*, came into vogue in World War II. See Atcheson L. Hench, “Singular ‘Kudos’ and Plural ‘Kudos,’” 38 *Am. Speech* 303–04 (1963). But the print evidence of the plural use dates back to the 1920s.

LANGUAGE-CHANGE INDEX

1. *kudos* as a false plural <many kudos>: Stage 4
Current ratio (*kudos is vs. *kudos are*) (sadly): 1:1.1
2. **kudo* as a false singular: Stage 2
Current ratio (*a kudos vs. *a kudo*): 10:1
3. **kudoes* as a false plural: Stage 1

Ku Klux Klan. So spelled. The more thoroughly alliterative misspelling **Klu Klux Klan* is fairly common—e.g.: “Two grandsons . . . said that they had never heard him refer to the bombing or to his membership in the *Klu Klux Klan* [read *Ku Klux Klan*].” David Lamb, “Jury Begins Deliberating ‘63 Church Bombing Case,” *L.A. Times*, 22 May 2002, at A14.

LANGUAGE-CHANGE INDEX

Ku Klux Klan misspelled **Klu Klux Klan*: Stage 1
Current ratio: 53:1

***kummerbund.** See **cummerbund**.

kumquat (= a small citrus fruit resembling a tiny orange) has been the standard spelling since about 1900 (a little later in BrE). **Cumquat* is a variant.

Current ratio: 10:1

Kuwait is accented on the second syllable: /kuu-**wayt**/, /koo-**wayt**/, or /kə-**wayt**/. Avoid /kyuu/ and /-wtt/.

L

label, vb., makes *labeled* and *labeling* in AmE, *labelled* and *labelling* in BrE. See SPELLING (B).

labor, v.t. See **belabor**.

laboratory (= a special building or room in which scientific tests are made or substances prepared) is preferably pronounced /**lab**-rə-tor-ee/ in AmE and /lə-**bor**-ə-tor-ee/ in BrE. The shortened form *lab*, once considered a CASUALISM, is thoroughly established as standard.

Labour Party; Labor Party. In Great Britain, the spelling is *Labour Party*; in Australia, the spelling is *Labor Party*. How should Americans spell the name of the British party? Most newspapers Americanize the spelling, making it *Labor*, but the better practice is to spell this proper name, like any other, the way the nameholder spells it—e.g.:

- “Opposition leader John Smith died from a heart attack Thursday, creating a crisis for the *Labor* [read *Labour*] Party just as it was looking strong enough to regain control of government.” “British Opposition Leader Dies,” *Dallas Morning News*, 13 May 1994, at A10.
- “Mr. Blair, the 43-year-old leader of the *Labor* [read *Labour*] Party, entered 10 Downing Street to the jubilant cheers of flag-waving supporters.” Warren Hoge, “Blair Takes Charge, Vowing ‘Practicable’ Policies,” *N.Y. Times*, 3 May 1997, at 1.
- “When warned by a colleague focused to some extent on winning elections that a particular policy would alienate the voters, a British *Labor* [read *Labour*] Party leader high-mindedly declared that ‘there must be no compromise with the electorate.’” Barney Frank, “They Won’t ‘Compromise’ with Voters,” *Portland Press Herald*, 16 Aug. 2015, at 4.

See -OR.

labyrinthine; *labyrinthian. The first, the usual form, is much more common than the second, a NEEDLESS VARIANT. The word is pronounced /lab-ə-**rin**-thin/.

Current ratio: 33:1

-laced. Although *straitlaced* is formed from an adjective (*strait*), the modern combining form *-laced* (meaning “filled with”) should follow a noun: *arsenic-laced meal*, *metaphor-laced speech*, etc. It shouldn’t be combined with an adjective—e.g.: “After the game, Isaiah Rider, who scored 16 points, questioned his teammates’ will to win with a *profane-laced* [read *profanity-laced*] diatribe.” “Shaq’s Monster Night Lifts L.A.,” *Austin Am.-Statesman*, 30 Dec. 1999, at D4.

lachrymose; *lacrimose. This word, meaning “tearful,” is generally spelled *lachrymose*, which is about 52 times as common as **lacrimose* in modern print sources. Both forms have ancient origins: the classical Latin term is *lacrima* (= teardrop), but the *-chry-* spelling crept into medieval Latin (*lachrymalis*). That newer spelling has been standard since the 18th century. E.g.:

- “It seems like ‘Dying Rose’ is a bit too *lacrimose* [read *lachrymose*], with an image too forced.” Jay Miller, “Ontario’s Mae Moore Keeps Positive View,” *Patriot Ledger* (Quincy, Mass.), 1 Sept. 1995, at 13.
- “Nestled cozily in chintz couches, surrounded by cuddly stuffed bunnies and kitties and puppies, the confessors sprinkle their *lachrymose* monologues with the same catchphrases and catechismal confessions.” Ruth Shalit, “Dysfunction Junction,” *New Republic*, 14 Apr. 1997, at 24.

lackadaisical is often mistakenly written and misspoken **lacksadaisical*, probably under the influence of *lax*—e.g.:

- “There’s a sitcomlike airiness to her *lacksadaisical* [read *lackadaisical*] attitude toward family life.” Chloe Veltman, “Mom’s the Word,” *S.F. Weekly*, 2 May 2007 at N.
- “After a *lacksadaisical* [read *lackadaisical*] freshman year, Gordon was academically ineligible for his sophomore campaign.” Rob Shore, “Making the Most of a Second Chance,” *Charlotte Sun* (Port Charlotte, Fla.), 2 Oct. 2013, at 6.

In fact, the influence of *lax* is made clear in the misspelling **laxadaisical* (a much less common error), the scourge of those who write letters to newspaper editors. Here a columnist lets loose on sports

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

commentators: “I have been able to get away with a slightly *lackadaisical* (or ‘*laxadaisical*’ if you listen to the football pundits on BBC Radio 5 Live) approach to pop.” David Whetstone, “Ever Get the Feeling Everyone Else Is Going in the Opposite Direction?” *The Journal* (Newcastle, England), 28 May 2014, at 45. In 2002, a Grand Rapids folk-rock band named the Four Lincolns released an album called *Laxadaisical*. Perhaps the band knew they were making a portmanteau pun (see PORTMANTEAU WORDS), but many of their fans surely didn’t. Folk-rock laxity.

LANGUAGE-CHANGE INDEX

1. **lacksadaisical* for *lackadaisical*: Stage 2

Current ratio (*lackadaisical* vs. **lacksadaisical*):
1,204:1

2. **laxadaisical* for *lackadaisical*: Stage 1

lackey (= a bootlicker, toady) has been the standard spelling since the mid-19th century. **Lacquey* is a variant.

Current ratio: 13:1

***lacrimose**. See **lachrymose**.

lacuna is a FORMAL WORD for *gap*—e.g.:

- “‘London Bridge’ . . . isn’t likely to answer the question, since it simply fills a literary *lacuna*.” Book Rev., “Celine Away,” *Village Voice*, 11 July 1995, at 12.
- “Female gymnasts inhabit a very strange and specific *lacuna* between girl and woman.” Jonathan Van Meter, “Shannon! Jaycie! Dominique! And Again!” *N.Y. Times*, 20 Oct. 1996, § 6, at 58.
- “These sorts of responses are an entirely understandable response to a social media environment that broadcasts failures of or *lacunas* in our legal and moral systems and encourages us to feel a jolt of fury with each and every outrage.” Alyssa Rosenberg, “Justice for Lions,” *Nat’l Post* (Can.), 31 July 2015, at A11.

The word has two plurals, *lacunae* and *lacunas*. Although *lacunas* might be thought preferable as the native-English plural, *lacunae* appears to be well established as a foreign plural. See PLURALS (B).

Current ratio: 16:1

lacy. So spelled—not **lacey*. For an example of this error, see **bassinets**.

Current ratio: 19:1

lade (= to load) is an ARCHAISM in all senses, except in shipping contexts. See **laden**.

laden. **A. As a Past Participle Equivalent to *loaded*.** *Laden* survives today as a participial adjective <a laden barge> and not as a past participle. (See IRREGULAR VERBS (B).) To use *laden* as a part of the verb phrase is to be guilty of ARCHAISM, although it is still used in shipping contexts <the ship was laden by union workers>. But sometimes, in literary contexts, *laden* is simply the right word <with rue my heart is laden>. See **lade**.

Although **ladenened* is permissible in Scottish English—since *laden* is the Scottish equivalent of *lade*, v.t. & v.i.—it is a solecism elsewhere. E.g.:

- “She stares out from the magazine cover, line-free, mascara-ladenened [read *laden*] and pouting, looking something like a teenage daughter who’s petulant after being asked to do the dishes.” Abigail Trafford, “Mythical Flauntin’ of Youth,” *Wash. Post*, 26 Nov. 1996, Health §, at Z6.
- “How would you like to be able to eat any fat-ladenened [read *laden*] goody you want . . . without gaining weight?” Bill Hendrick, “Gene May Be Key to Raising Metabolism,” *Atlanta J.-Const.*, 3 Mar. 1997, at C3.

Current ratio (*laden* vs. **ladenened*): 473:1

B. For *ridden*. *Ridden* is the more general term, meaning “infested with,” “full of,” or “dominated, harassed, or obsessed by.” *Laden* has not shed its strong connotation of “loaded down.” Hence a place might be *laden* with things if they had been stacked there; or, more plausibly, a truck or barge might be *laden* with goods. But figuratively, *laden* fails as an effective adjective if the original suggestion of loading is ignored. E.g.: “This winter she’s going to teach herself how to use the GIS computerized mapping system so she can map out *mosquito-laden* [read *mosquito-ridden*] areas and make it easier on the workers.” Pam Starr, “The Bug Lady: No One Knows Insects Like Dreda McCreary,” *Virginian-Pilot* (Norfolk), 15 Oct. 1997, at E1.

LANGUAGE-CHANGE INDEX

-*laden* for -*ridden* (in the sense “infested with”): Stage 2

ladies’ man; lady’s man. The phrase is commonly written both ways, but *ladies’ man* (the predominant form since the late 19th century) is more in keeping with the sense of *many* women. Some dictionaries seem to misdefine the phrase: “a man very fond of the company of women and very attentive to them” (*WNWCD*); “a man who shows a marked fondness for the company of women or is esp. attentive to women” (*W11*). The main element is missing there because such a man could still be so oafish as to seem repulsive to women. That is, a *ladies’ man* must be not only fond of women but also popular with them. See **lady**.

Current ratio: 4:1

lady. This word has become increasingly problematic. Though hardly anyone would object to it in the phrase *ladies and gentlemen* or on a restroom sign, most other uses of the term might invite disapproval—depending on the readers’ or listeners’ views about SEXISM. It isn’t a SKUNKED TERM, but it’s gradually becoming something like one. And this process has been occurring since at least the mid-20th century: “I don’t know any word that has been so beaten down in modern usage as ‘lady.’” Edward N. Teall, *Putting Words to Work* 286 (1940).

The linguist Cecily Raysor Hancock of Chicago observed in 1963 that Americans are divisible into three groups when it comes to using *lady*: (1) those who use *lady* in preference to *woman* when referring to female adults of any social class (a group that has steadily dwindled); (2) those who generally use *woman* in preference to *lady*, but who use *lady* in reference to social inferiors; and (3) those who use *woman* uniformly

regardless of social class or familiarity, except in a few set formulas such as *ladies and gentlemen*. See “*Lady and Woman*,” 38 *Am. Speech* 234–35 (1963). Hancock rightly notes that “the use of *lady* at present apparently gives more sociological information about its user than about the person described,” adding: “*woman* is probably the safer choice of the two.” *Ibid.* at 235.

lady’s man. See **ladies’ man**.

laesae majestas*; **laesae majestatis*. See **lese majesty.

Lafayette. The Marquis de Lafayette’s name was pronounced /lah-fay-et/. The name of the Louisiana city is /laf-ee-yet/.

laid; lain. See **lay**.

laissez-faire; *laisser-faire. The former spelling has long been standard. Some British publications, however, continue to use the outmoded spelling (*laisser*)—e.g.:

- “Should Hongkong’s *laissez-faire* [read *laissez-faire*] government do an about-face to build Hongkong Inc?” “Farewell to Adam Smith,” *Economist*, 30 Sept.–6 Oct. 1989, at 71.
- “This is bonkers, though par for the course for a Bush administration that is all for *laisser faire* [read *laissez-faire*] except when US companies whine about foreign competition.” Robert Peston, “The Stock Exchange Drops Its American Dream,” *Sunday Telegraph*, 13 Oct. 2002, at 3.

The phrase is pronounced /les-ay **fair**/—not /lah-zay/ or /lay-zay/.

Current ratio: 69:1

lam, on the. See **on the lam**.

lama; llama. A *lama* is a Buddhist priest in Tibet or Mongolia—Tibetan Buddhism also being known as Lamaism. A *llama* is the South American long-necked animal with thick wool-like hair.

lambaste; lambast. Although both spellings are well attested, *lambaste* is truer to the putative ETYMOLOGY (*lam* “to beat” + *baste* “to thrash”) and, in any event, has vastly predominated in AmE since the mid-20th century. *Lambast*, however, has been the usual form in BrE since the late 1960s. In World English today, *lambaste* predominates by a 3-to-1 ratio.

The word is pronounced /lam-**bayst**/, /**lam**-bast/, or /**lam**-bayst/. The second is the most frequent pronunciation; that explains, no doubt, why people have trouble with the spelling in AmE. The traditionally correct pronunciation—and the one with by far the most authority—is the first one listed.

LAMBDAICISM. See **PRONUNCIATION (C)**.

lament, v.t., should not be made intransitive by the addition of a preposition—e.g.:

- “They should be used to it by now, having *lamented over* [delete *over*] one-point defeats to both Kansas City and San Francisco.” Greg Pogue, “Seattle Surprise,” *Nashville Banner*, 4 Nov. 1996, at E1.
- “I *lamented over* [delete *over*] my lost opportunity to dissent.” Jon T. Ferrier, “Sounds of Jazz Leave Our Days,” *Grand Rapids Press*, 6 July 1997, at E1.
- “While Defenbaugh steadfastly defends the work of his task force, others, including conspiracy theorists in a number of books about the bombing, *lament over* [delete *over*] leads not followed.” Max B. Baker, “America Remembers the OKC Bombing 20 Years Later,” *Ft. Worth Star-Telegram*, 17 Apr. 2015, News §.

LANGUAGE-CHANGE INDEX

lament used intransitively <lamented over the loss>
instead of transitively <lamented the loss>:

Stage 1

Current ratio (*lamented the* vs.

**lamented over the*): 58:1

lamentable is pronounced either /**lam**-ən-tə-bəl/ or /**lā**-**men**-tə-bəl/. Traditionally, the first of these pronunciations has been considered the better one.

landowner has been written as one word in both AmE and BrE since the early 19th century. The same is true of *landownership*.

landward(s). See **DIRECTIONAL WORDS (A)**.

***laniard.** See **lanyard**.

lanolin (= a fatty substance in cosmetics and emollients) is the standard spelling in AmE and BrE alike. **Lanoline* is a variant.

Current ratio: 20:1

lanyard, a word referring to various types of cords or ropes, has been predominantly so spelled since the mid-19th century. **Laniard* is a variant spelling.

lapelled (= [of a coat or jacket] having a front that is joined to the collar and folded back on each side) is so spelled in AmE and BrE alike. Why is the final *-l-* doubled in AmE, though not in *leveled*? Because the final *-l-* in *lapelled* occurs in an accented syllable. See **SPELLING (B)**.

lapsable. So spelled—preferably not **lapsible*. See **-ABLE (A)**.

Current ratio: 8:1

lapsus linguae; lapsus calami. These **LATINISMS** are fancy ways of referring to slips of the tongue (*linguae*) or of the pen (*calami*). The phrase *lapsus linguae* /**lap**-səs **ling**-gwee/ is the more common one—e.g.: “In a *lapsus linguae*, Pam Weiger, a Fire Department spokeswoman, said, ‘We ended up transporting sick of them, I mean six of them, to Mount Vernon

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Hospital.” Frank Wolfe, “Students Take Ill at Mount Vernon,” *Wash. Times*, 18 June 1991, at B4.

As for *lapsus calami* (/lap-səs kal-ə-mɪ/), which means “a slip of the pen,” examples abound in this book, in entries such as **toe the line** (mistakenly written **tow the line*) and **row to hoe** (mistakenly written **road to hoe*).

On the Latinity of these phrases, see LATINISMS & SESQUIPEDALITY.

larceny. See **burglary**.

large, unlike *great*, is not a word that can be idiomatically coupled with other words denoting measure, such as *breadth*, *depth*, *distance*, *height*, *length*, *weight*, and *width*. But writers often misuse *large* when *great* would be the right word—e.g.:

- “About 46 percent of the state’s bridges are not wide or high enough, have lanes that are too narrow or can’t handle *large* [read *great*] weights or high speeds.” Mei-Ling Hopgood, “Missouri’s City Highways All Choked Up,” *St. Louis Post-Dispatch*, 6 Feb. 1997, at A1.
- “Every so often, gravity from a planet acts like a ‘sling-shot,’ Mumma said, hurtling a comet *large* [read *great*] distances from the sun.” Diedra Henderson, “Unlocking Comets’ Secrets,” *Seattle Times*, 18 Mar. 1997, at A12. (Because gravity is a property rather than an emanation, the phrase *the gravity of a planet* would be more logical in that sentence than *gravity from a planet*.)

LANGUAGE-CHANGE INDEX

large for *great* with words of measure <great distance>: Stage 1

large-sized; large-size, adj. This PHRASAL ADJECTIVE is usually redundant. The predominant form (twice as common) is *large-sized*. Although *large-sized apparel* is defensible, *large-sized business* is not.

largesse; largess. *Largesse* (= generous giving; munificence) has long been the standard spelling in English. The GALLICISM was first borrowed into Middle English and was fully anglicized as *largess* by the 16th century. AmE mostly stuck with that spelling through about 1950, while BrE had reverted to the Frenchified spelling *largesse* by 1900. Today *largesse* predominates in AmE as well as BrE. Although the preferred pronunciation is the anglicized /lahr-jes/, the word is often pronounced in the French way, that is, /lahr-zhes/.

larva (= a newly hatched insect) predominantly forms the plural *larvae* (/lahr-vee/) in AmE and BrE alike. Avoid pronouncing the plural form as /lahr-vi/ or /lahr-vay/.

Current ratio (*larvae* vs. *larvas*): 201:1

larynx /lar-ingks/ is sometimes, through METATHE-SIS, mispronounced /lar-ə-niks/ or /lahr-niks/. From the latter mispronunciation comes the inevitable misspelling—e.g.:

- “[Ken] Raabe [a puppeteer] uses an object called a swazle, a kind of small artificial *larynx* [read *larynx*] placed at the back of his throat, to make the traditional shrill, raspy

voice of Punch.” Nancy Maes, “Clowns at Custer’s Last Stand,” *Chicago Trib.*, 15 June 2001, at 35.

- “[Bob] Schwartz rarely takes his eyes (or his *larynx* [read *larynx*]) off New Mexico.” Jeff Commings, “Rush, Meet Bob,” *Albuquerque Trib.*, 26 Apr. 2002, at C3.

LANGUAGE-CHANGE INDEX

larynx misspelled and mispronounced **larynx*: Stage 1

Current ratio: 679:1

Current ratio (*larynxes* vs. *larynges* as pl.): 1:1

lasagna, denoting a popular Italian dish, is the standard spelling in AmE. *Lasagne* (the Italian plural) predominates in BrE.

Current ratio (*lasagna* vs. *lasagne*): 4:1

lasso. Pl. *lassos*, not **lassoes*. See PLURALS (D).

last analysis, in the. See **in the final analysis**.

last but not least. First and foremost, it needs to be said that this tired expression is best avoided. Second, please realize that *least* is the most emphatic word in the phrase, thereby suggesting the opposite of what is being asserted. Try *finally* instead.

last name. See NAMES (D).

last rites (= a sacrament in which a priest blesses and prays for a person who has fallen critically ill or been grievously injured) is occasionally misrendered **last rights*—e.g.: “Less than a year later, he would give her son, Albie, his *last rights* [read *last rites*] as he lay dying in a hallway.” Peter Gelzinis, “Charlestown’s Rev. Coyne Is Worthy of Name ‘Father,’” *Boston Herald*, 16 June 1996, at 16. Cf. **rite of passage**.

A former term for *last rites* is *extreme unction*, but the Roman Catholic Church changed the name in 1972 to shift the focus from dying to healing, spiritually and physically. Today the rite is called, variously, *sacrament of the sick*, *anointing of the sick*, and *sacrament of healing*.

LANGUAGE-CHANGE INDEX

**last rights* for *last rites*: Stage 1

Current ratio (*last rites* vs. **last rights*): 30:1

late. A. The late. This expression is elliptical for *lately* (i.e., recently) *deceased*. How long this can be used of a dead person depends on how recently that person died, but anything more than five years or so is going to strike most readers as odd (e.g., *the late John F. Kennedy*). Of course, there’s no absolute statute of limitations; the question is whether a fair number of reasonable readers would know or need to be reminded that the person has died. But the expression serves as more than just a reminder. It also offers a note of respect—and perhaps even a touch of sorrow. So in the fall of 1997 people said *the late Princess Diana* not because anybody needed to be reminded that she had died in August of that year—everyone knew it—but because people mourned her death. By the same token, a widowed spouse might continue to use *my late husband* or *my late wife*.

The late is also helpful in historical contexts to indicate that someone has recently died <the Civil Rights Act of 1964 was seen at the time as a tribute to the late John F. Kennedy>.

B. *Late residence.* The usage *his (or her) late residence*, common in obituaries from the late 20th century, was first mentioned in usage commentary in 1984. See David L. Gold, “Media Watch: *His Late Residence*,” 59 *Am. Speech* 96 (1984). But in fact the phrase dates back to the 18th century and was fairly common in the 19th. Because *late* means “recently deceased,” this is an odd instance of HYPALLAGE. It makes little sense. The best editorial practice is to let the context make clear that a decedent’s residence is being referred to—e.g.:

- “Born Jan. 21, 1938, in Chicago, she passed away Friday, March 28, 2008, at her *late residence* in Shorewood.” “Lucille K. Eakins” (obit.), *Daily Herald* (Arlington Heights, Ill.), 31 Mar. 2008, Bus. §, at 6.
- “A celebration of Frances’ life will be held at her *late residence*, 6545 Murano Way, Lakeworth, FL on Saturday, Apr. 26, 2008 from 1-5 p.m.” “Funeral Notices” (Frances (Sweeney) Foster), *Palm Beach Post*, 24 Apr. 2008, at B8.
- “Died May 26, 2008, peacefully, at Slieve Dhu Nursing Home. Funeral from her *late residence*, 11 Whiteforth Road, Aughlisnafin, Castlewellan, tomorrow (Wednesday) at 2.00 p.m. for service in Clough Non Subscribing Presbyterian Church, followed by interment in adjoining churchyard. Friends welcome to call at her *late residence*.” “Wilson, Sarah Jane (Sadie)” (obit.), *Belfast Telegraph* (Ireland), 27 May 2008.

later. A. Without Temporal Context. *Later* should not be used unless a proper time frame has already been established. E.g.: “As Salman Rushdie, *later the target of an Islamic fatwa calling for his death* [read *who was to become the target of an Islamic fatwa calling for his death*], stated in 1985, . . .”

B. *Later on.* The distinction between *later* and *later on* rests on two points: euphony and formality. Occasionally, *later on* simply sounds better in a sentence. It is always less formal—e.g.:

- “*Later on*, I realized it was a good thing I had paid Billy’s reputation that trite little compliment.” Larry McMurtry, *Anything for Billy* 14 (1988).
- “What you spend today sets the course for how much you’ll need *later on*.” Lisa Reilly Cullen, “Are You Where You Want to Be?” *Money*, Dec. 1997, at B1.

Cf. **early on**.

late residence. See **late (B)**.

lath; lathe. A *lath* /lath/ is a long narrow piece of wood used as an underlay for some other building material, such as plaster or tile. A *lathe* /layth/ is a machine that shapes wood or metal by having it rotated against a sharp tool within the machine.

LATINISMS. In the English language, Latin words and phrases typically fall into one of six categories:

(1) those that are now so common that they’re barely recognizable as Latin (*bonus, data, vice versa*); (2) those that are reduced to abbreviations in scholarly contexts (e.g., *i.e., ibid., id.*); (3) those used in JARGON of doctors, lawyers, and scientists (*metatarsus, habeas corpus, chlorella*); (4) the mottoes and maxims used especially in ceremonial contexts (*E pluribus unum, Sic transit gloria mundi*); (5) those that literate people know and occasionally find useful (*ipse dixit, non sequitur, rebus, mutatis mutandis*); and (6) the truly rare ones that characterize SESQUIPEDALITY (*ceteris paribus, hic et ubique, ignoratio elenchi*). Increasingly, the view among stylists is that unless you know that your audience is fairly erudite, categories 3 through 6 are dangerous territory.

For an interesting list of Latinate adjectives describing various animals, see ANIMAL ADJECTIVES. On whether to italicize words borrowed from Latin and other languages, see ITALICS (B). On pluralizing Latin terms, see PLURALS (B) & HYPERCORRECTION (A).

Latino; Latina. See **Hispanic**.

latter. See **former**.

latterly, an ARCHAISM characteristic of 19th-century prose, is essentially equivalent to *later* or *lately*. It occurs seldom in AmE but occasionally in BrE—e.g.:

- “*Latterly* he professed himself increasingly saddened by the manipulative nature of the business he had helped to create.” “Edward L. Bernays” (obit.), *Daily Telegraph*, 13 Mar. 1995, at 23.
- “In the early years, its work was mainly inspections of long-stay hospitals; *latterly*, it moved into thematic reviews of services.” David Brindle, “Demise of the Eyes,” *Guardian*, 2 Apr. 1997, at 6.

When the word does appear in AmE, it is usually in a literary context—e.g.: “A novelist himself, once a New York editor, formerly director of the Iowa Writers Workshop and *latterly* of the Napa Valley Writers’ Conference, these days Leggett lives and writes here in the Bay Area.” David Kipen, “Saroyan as Monstrous Narcissist,” *S.F. Chron.*, 10 Nov. 2002, Sunday Rev. §, at 1.

laudatory; *laudative; laudable. The first two both mean “expressing praise.” But **laudative* is a NEEDLESS VARIANT of *laudatory*, the much more common word. *Laudable*, in contrast, means “deserving praise.” The distinction is the same as that between *praiseworthy* (= *laudable*) and *praiseful* (= *laudatory*).

The misuse of *laudatory* for *laudable* is lamentably common—e.g.:

- “Indeed, like Nixon before him, a jaundiced view of Clinton and his motives causes many to oppose or at least look askance at even his most *laudatory* [read *laudable*] goals.” Jeff Rivers, “Cast Aside National Cynicism Left Over from Watergate,” *Hartford Courant*, 4 Aug. 1994, at A2.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “But for all its *laudatory* [read *laudable*] achievements, the council-manager model can be aloof, even distant, from the people who are paying for it.” “Government Merger,” *Herald-Sun* (Durham, N.C.), 8 Sept. 1994, at A12.
- “The New York legislation on self determination at the end of life is *laudatory* [read *laudable*] but insufficient.” Alan Pfeiffer, “Let Patient Decide When It’s Time to Die,” *Times Union* (Albany), 14 July 2015, at D2.

LANGUAGE-CHANGE INDEX

laudatory misused for *laudable*: Stage 2

Current ratio (*laudable goal* vs. **laudatory goal*): 39:1

launch has become a **VOGUE WORD** when used in the sense “to begin, initiate”—e.g.:

- “USAir Chairman Seth Schofield . . . is visiting Pittsburgh to *launch* a new service to Mexico City today.” Steve Creedy, “Travel Agents Slap Airlines over Fee Caps,” *Pitt. Post-Gaz.*, 15 Feb. 1995, at F1.
- “DuPage County is *launching* an innovative ‘last chance’ educational initiative for students expelled from school because of drug selling.” Casey Banas, “Last Chance Offered to Kids Facing Expulsion,” *Chicago Trib.*, 12 Feb. 1997, at D1.

The related noun <the first launch in California will be in San Diego> is much the same.

laundromat is sometimes misspelled **laundry mat*—e.g.:

- “Winkler got the idea for immortalizing T-shirts one day during the spin cycle at the *laundry mat* [read *laundromat*].” “Last-Minute Gifts Tip for Holiday Procrastinators,” *Virginian-Pilot & Ledger Star*, 22 Dec. 1996, at 6.
- “He followed the scent to the vent fan on the nearby *laundry mat* [read *laundromat*], then to the dryers inside where bulging pillow cases were tumbling.” R.K. Shull, “Waiting for the Smoke to Clear,” *Indianapolis News*, 19 July 1999, at C1.
- “Someone stole a car from a *laundry mat* [read *laundromat*].” “Police Log,” *Orlando Sentinel*, 2 Sept. 1999, at D10.
- “The Rizzo family returned to the *laundry mat* [read *laundromat*].” Alex Lizzi Jr., *Bonding the Rizzos* [read *Rizzos*] *Family Vacation* 100 (2007).

Although *laundromat* appears to be a **PORTMANTEAU WORD**, perhaps derived from *laundry* and *automat*, it is actually a servicemark for a brand of washing machines, and, briefly, a chain of do-it-yourself laundries.

LANGUAGE-CHANGE INDEX

**laundry mat* for *laundromat*: Stage 1

Current ratio (*laundromat* vs. **laundry mat*): 18:1

***lava bread.** See **laver bread**.

lavalier; ***lavalier**; ***lavalliere**; ***lavallière**. *Lavalier* is the standard spelling for the word meaning (1) “a microphone that is clipped to clothing and used typically in broadcast studios and theaters”; or (2) “a style of jewelry and clothing.” (The microphone was so named because it was originally hung around the neck like jewelry.) Although the term derives from the name of a French courtesan, Louise de la Vallière (1644–1710), the anglicized *lavalier* is pronounced

/lav-ə-**leer**/. The other three spellings are variant forms, the last two being overt **GALLICISMS** (pronounced /lah-vahl-**yair**/).

Current ratio (in order of headwords): 57:34:17:1

laver bread (= a Welsh dish consisting of seaweed that is boiled, dipped in oatmeal, and fried) is sometimes wrongly written **lava bread*, doubtless because one unfortunate but common pronunciation of *laver* is almost identical with that of *lava*. E.g.:

- “One specialty is *lava* [read *laver*] bread fried (really a form of seaweed).” “Amtrak’s Auto Train: English Breakfasts,” *Wash. Post*, 3 Sept. 1989, at E3.
- “We started with a trip to the Lleyn Peninsula in North Wales, dreaming of mountains and seascapes and *lava* [read *laver*] bread with dinner.” Mary Dejevsky, “Happiness Is Rediscovering Nationhood,” *Independent*, 9 Apr. 2010, Comment §, at 42.

The better pronunciation—the only one recognized in most current dictionaries—is /**lay**-vər/.

LANGUAGE-CHANGE INDEX

**lava bread* for *laver bread*: Stage 2

Current ratio (*laver bread* vs. **lava bread*): 4:1

lavish, vb. As a transitive verb, *lavish* takes a direct object, but it is traditionally a thing, not a person. That is, you lavish gifts on a person, not a person with gifts. But since the late 1970s, writers have engaged in **OBJECT-SHUFFLING** with this verb—e.g.:

- “The NCAA will announce Notre Dame’s first major rules infraction in the school’s history today, ending a two-year investigation into the relationship between players and former boosters who *lavished them with gifts, money and trips* [read *lavished gifts, money, and trips on them*], an NCAA source said.” Malcolm Moran, “No Luck: Notre Dame Faces Sanctions,” *Austin Am.-Statesman*, 17 Dec. 1999, at C4.
- “Mayor Willie Brown welcomed Philippine President Joseph Estrada with open arms Tuesday, *lavishing him with compliments* [read *lavishing compliments on him*] and encouraging him to maintain ties with the Bay Area.” Pia Sarkar, “Philippine 1st Couple to Get Royal Welcome,” *S.F. Examiner*, 26 July 2000, at A4.
- “The Bulls, shut out by other top free agents, could *lavish him with money* [read *lavish money on him*].” Ethan J. Skolnick, “New Era for Heat,” *Palm Beach Post*, 1 Aug. 2000, at C1.

Despite those desirable edits, this nontraditional usage does seem to give the language more versatility when the thing being lavished takes many words to express—e.g.: “She had *lavished him* with the adoration and protectiveness of a childless woman who has borrowed a precious gift, especially a gift from God.” Sharon Rab, “The Red Dress,” *Dayton Daily News*, 6 Aug. 2000, at C3. That sentence is particularly challenging to try to rewrite by using the traditional idiom. One solution would be to make it the idiomatic *lavished on him the adoration . . .* Another would be to replace *lavished* with another verb, such as *showered*: *She had showered him with the adoration and protectiveness of a childless woman who . . .* A third would be to allow this extension in the use of *lavish*. Linguistic

conservatives will prefer the first two solutions; liberals will be perfectly happy with the third.

LANGUAGE-CHANGE INDEX

Current ratio (*lavished gifts on him* vs.

**lavished him with gifts*): 1.2:1

lawful. See **legal**.

lawsuit. Journalists often misuse *lawsuit* (one word in both AmE and BrE) for *complaint* or *petition* (= the paper that is filed to start a lawsuit)—e.g.:

- “In its 18-page *lawsuit* [read *complaint*], Viacom-owned CBS alleged: “Celebrity” was consciously designed to mimic “Survivor” and unfairly trade on its success.” Meg James, “CBS Sues to Block New ABC Program,” *L.A. Times*, 7 Nov. 2002, Bus. §, pt. 3, at 3.
- “The allegations in his 144-page *lawsuit* [read *complaint*] read like a Robin Cook novel.” Lynne Tuohy, “Pfizer Trials Called Cruel, Immoral,” *Hartford Courant*, 6 Dec. 2002, at A1.
- “Defendants knew he couldn’t control his gambling addiction,” according to the 29-page *lawsuit* [read *complaint*].” Becky Yerak, “Gamblers Sue over Addiction,” *Detroit News*, 8 Dec. 2002, at D1.

The *lawsuit* is the whole process; the document (however many pages long) is only an instrumental part of it.

LANGUAGE-CHANGE INDEX

lawsuit misused for *complaint* or *petition*: Stage 1

lawyer; attorney; counsel; counselor. The two most common among these, *lawyer* and *attorney*, are not generally distinguished even by members of the legal profession—except perhaps that *lawyer* is often viewed as having negative connotations. So one frequently hears about *lawyer-bashing*, but only the tone-deaf write *attorney-bashing*—e.g.: “*Attorney-bashing* [read *Lawyer-bashing*] always will be a popular pastime.” Christopher Smith, “Injury Lawyer May Be Utah’s Best—Bar None,” *Salt Lake Trib.*, 7 Feb. 1994, at A1.

Technically, *lawyer* is the more general term, referring to one who practices law. *Attorney* literally means “someone who is designated to transact business for another.” An *attorney*—archaically apart from the phrases *power of attorney* and, less commonly, *attorney-in-fact*—may or may not be a lawyer. Hence Samuel Johnson’s statement that *attorney* “was anciently used for those who did any business for another; now only in law.” *A Dictionary of the English Language* (1755).

From the fact that an *attorney* is really an agent, Bernstein deduces that “a *lawyer* is an *attorney* only when he has a client. It may be that the desire of *lawyers* to appear to be making a go of their profession has accounted for their leaning toward the designation *attorney*.” Theodore M. Bernstein, *The Careful Writer* 60 (1965). Yet this distinction between *lawyer* and *attorney* is rarely, if ever, observed in practice.

In AmE, *counsel* and *counselor* are both, in one sense, general terms meaning “one who gives (legal) advice,” the latter being the more formal term. *Counsel* may refer to but one lawyer <opposing counsel says> or, as a plural, to more than one lawyer <opposing counsel say>. See **counsel (B)**.

lay; lie. A. The Distinction. Very simply, *lie* (= to recline, be situated) is intransitive—it can’t take a direct object <he lies on his bed>. But *lay* (= to put down, arrange) is always transitive—it needs a direct object <please lay the book on my desk>. The verbs are inflected as follows:

Verb	Present Tense	Past Tense	Past Participle	Present Participle
lay, v.t.	lay	laid	laid	laying
lie, v.i.	lie	lay	lain	lying

Because *lie* is intransitive, it has only an active voice <lie down for a while>. And because *lay* is transitive, it may be either active <he laid the blanket over her> or passive <the blanket was laid over her>. See **PAS-SIVE VOICE**.

To use *lay* without a direct object, in the sense of *lie*, is nonstandard <I want to lay down> <he was laying in the sun>. But this error is very common in speech—from the illiterate to the highly educated. In fact, some commentators believe that people make this mistake more often than any other in the English language. Others claim that it’s no longer a mistake—or even that it never was. But make no mistake: using these verbs correctly is a mark of refinement.

The most unusual of these inflected forms, of course, is *lain*, but most writers have little difficulty getting it right—e.g.:

- “Katrina Kuratli said she and her husband, Dan, had just *lain* down in their bedroom when the bomb went off around 10:45 p.m.” Mack Reed, “Pipe Bomb Rips Car, Jolts Simi Neighborhood,” *L.A. Times*, 30 Apr. 1994, at B9.
- “Prosecutors later claimed the witness had *lain* down next to two of the murder victims, expecting to die.” Tom Jackman, “Witness in Three Murder Cases Pleads Guilty to Conspiracy,” *Kansas City Star*, 28 June 1994, at B1.
- “Massive seed banks that have *lain* dormant for decades are expected to re-emerge from freshly exposed muck.” James F. McCarty, “Project Set to Restore Mentor Marsh,” *Plain Dealer* (Cleveland), 31 Aug. 2015, at A6.

See **lie & IRREGULAR VERBS**.

B. Lay for lie. This is one of the most widely known of all usage errors—e.g.:

- “Mr. Armstrong [debating against Alan Dershowitz] was not to be outdone . . . But Mr. Dershowitz did not *lay* [read *lie*] down.” William Glaberson, “Face to Face, 2 Lawyers Feud Away, Slap for Slap,” *N.Y. Times*, 19 Jan. 1991, at 15.
- “The girls were ordered to *lay* [read *lie*] face down on the floor and were told they would have their throats slit if they yelled.” “Girls’ Final Hours Detailed in Court,” *Amarillo Sunday News-Globe*, 15 May 1994, at A17.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “If you’ve got an extra \$79,800 *laying* [read *lying*] around you could become the proud owner of two vacant buildings on the southeast corner of the Canyon square.” Bill Rogers, “Buildings Priced at \$79,800,” *Canyon News* (Tex.), 30 Oct. 1994, at 1.
- “This Christmas give a gift that’s been *laying* [read *lying*] around for twelve years.” Advertisement for Glenlivet Scotch Whisky, *Atlantic Monthly*, Dec. 1994, at 13.
- “But Walters did not ask any questions, investigators said. He ordered the two to get out of the car and *lay* [read *lie*] on the ground, according to Strouse’s girlfriend.” Peter Fimrite, “Deadly End to Sunday Drive on Dusty, Rural Road,” *S.F. Chron.*, 23 May 1995, at A13.

Similarly, although a sickness can *lay you low*, if you’re in that position you’re *lying low*—e.g.: “Back when James A. Baker 3d was *lying low* over at the White House, the first invisible chief of staff, cynics in the West Wing said he was trying to avoid being tied too closely to a Presidential campaign that seemed headed for the political dump.” “Baker Takes New Role, Leading ‘Winnable’ Bid,” *N.Y. Times*, 31 Oct. 1992, at 8. But American journalists get it wrong as often as they get it right—e.g.:

- “Another reason I *laid low* [read *lay low*] was to be in a position to help a friend back out of what he now must know to be a dead end.” William Safire, “Buchanan’s Campaign,” *N.Y. Times*, 16 Dec. 1991, at A15.
- “A wan-sounding D’Amato said he has been *laying low* [read *lying low*], nursing a bad cold at home on Long Island, since Giuliani announced his endorsement of Cuomo.” Bob Liff & Charles V. Zehren, “D’Amato Tries to Hide from Spotlight,” *Newsday* (N.Y.), 27 Oct. 1994, at A25.
- “Lately allegedly told a killer to *lay low* [read *lie low*] after a homicide and tried to thwart a police investigation into the crime.” George Hunter & Holly Fournier, “Bond Lowered for Detroit Cop Facing Charges in Murder Plot,” *Detroit News*, 27 Aug. 2015, at A6.

Another common mistake is *laying in wait* for *lying in wait*—e.g.:

- “Police say several armed assailants may have been *laying* [read *lying*] in wait at East 39th Street and Park Avenue.” Erica Franklin, “14 Unsolved Murders Are Possibly Tied to Drug Sales,” *Indianapolis Star*, 11 Oct. 1994, at A1.
- “Dunlap has been accused of *laying* [read *lying*] in wait until closing time at the Chuck E Cheese restaurant, then systematically shooting the five employees still on duty.” Ginny McKibben, “Ex-Friend Links Dunlap to Burger King Robbery,” *Denver Post*, 1 Apr. 1995, at B4.

Some blame the confusion in part on the children’s prayer that begins, “Now I *lay* me down to sleep.” But there, *lay* is properly transitive (*me*, meaning “myself,” being its object). It is grammatically equivalent to “Now I *lie* down to sleep,” though metrically speaking the latter doesn’t have a prayer.

LANGUAGE-CHANGE INDEX

1. *lay* misused for *lie*: Stage 4

2. **lay low* for *lie low* (as a present-tense form): Stage 4

Current ratio (*to lie low* vs. **to lay low*): 1.2:1

3. **laid low* for *lay low* (as a past form): Stage 4
Current ratio (*they lay low* vs. **they laid low*): 1.8:1

C. *Laid* for Past-Tense *lay*. The *lay-for-lie* error also occurs with the past-tense forms—e.g.: “He *laid* [read *lay*] down flat on the ground and looked around for an object or landmark he might have missed from a higher angle.” “Pumpkin Place,” *Amarillo Daily News*, 4 Mar. 1996, at C1.

LANGUAGE-CHANGE INDEX

laid misused for past-tense *lay*: Stage 4

Current ratio (*he lay down* vs. **he laid down*): 9:1

D. *Laid* for *lain*. Not surprisingly, the same mistake occurs with the past participles as well—e.g.:

- “The players—performers—will take on a problem that has *laid* [read *lain*] dormant since Peter Ueberroth caved in to the umps.” Peter Gammons, “KC May Start Enjoying Some Royalties,” *Boston Globe*, 25 Nov. 1990, at 58.
- “Or the epilepsy might have *laid* [read *lain*] dormant, triggered by the ball’s blow, she says.” Susan H. Thompson, “Boy Loses Chunk of Brain, Regains His Life,” *Tampa Trib.*, 16 Sept. 1996, Baylife §, at 1.
- “Foes have lashed out with claims that the plan was hastily worked out over the past few weeks after the deregulation idea had *laid* [read *lain*] dormant for two years.” Dave Sheingold, “Landline Oversight Fading,” *N.J. Record*, 20 May 2015, at A1.

LANGUAGE-CHANGE INDEX

laid misused for past-participial *lain*: Stage 4

Current ratio (*had lain idle* vs. **had laid idle*): 29:1

E. *Lain* for the Past-Participial *laid*. This is a ghastly example of HYPERCORRECTION, that is, choosing the more far-fetched (and, as it happens, wrong) term in a contorted attempt to be correct—e.g.:

- “Earlier in the day, several people had ‘*lain hands*’ [read ‘*laid hands*’] on Zachary and prayed for him. This is common at the crusades, as many people seem to think that God has anointed them.” Mike Thomas, “The Power and the Glory,” *Orlando Sentinel*, 24 Nov. 1991, at 9.
- “But to me it seemed like the kind of thoughtless destructiveness that has *lain* [read *laid*] waste to much of the city.” Ed Zotti, “Supporters Fervent About Rogers Park’s Future,” *Chicago Enterprise*, May 1994, at 30.
- “The goal of the bill is to both avoid the pattern of attempted murder charges being pleaded down to misdemeanor offenses and to make sure the severity of the act is *lain* [read *laid*] out plainly.” Abigail Goldman, “Metro Keeps Close Tabs on Fury in the Home,” *Las Vegas Sun*, 18 Mar. 2009, Metro §, at 1.

Current ratio (*had laid the foundation* vs. **had lain the foundation*): 153:1

lay low. See **lie low**.

layman; layperson; lay person. *Layman*, the most common among these terms, is generally regarded as unexceptionable—in reference to members of both sexes, of course. E.g.:

- “James Wilkinson, the 55-year-old *layman* who carried the cross at the head of Princess Diana’s funeral procession, said he had never experienced anything like Saturday’s ceremony.” Mary Williams Walsh, “1961–1997,” *L.A. Times*, 7 Sept. 1997, at A22.

- “One of the hormones has been postulated to cause the post-prandial—in *layman’s* terms, after-meal—mechanism that brings on drowsiness.” Diane Lacey Allen, “Feeling Full,” *Ledger* (Lakeland, Fla.), 27 Nov. 1997, at D1.

Still, modern writers increasingly avoid *layman* on grounds of SEXISM.

Lay person (two words) dates from the early 18th century, but the one-word compound *layperson* is an Americanism dating from the early 1970s. Though much less common than *layman*, it frequently appears, especially today in the one-word form—e.g.:

- “Since [1979], the school’s principals have been *laypersons*, and most of the sisters have given up teaching duties.” George Morris, “Still Serving: Group of Sisters at St. Aloysius Has Seen Lots of Things Change,” *Advocate* (Baton Rouge), 2 Mar. 1997, at H1.
- “Some would require coverage for surgical procedures such as mastectomies or for emergency care in cases where a ‘prudent *layperson*’ would think it necessary.” Mary Agnes Carey, “Patients’ Rights Are Hot Item in Congress,” *St. Louis Post-Dispatch*, 25 Nov. 1997, at A4.
- “To the *layperson*, those numbers suggest that refineries are using low oil prices to gouge the public.” Whit Richardson, “Why Aren’t Gas Prices Lower? It’s Complicated,” *Portland Press Herald*, 23 Aug. 2015, at 1.

For the reasons for avoiding *layperson*, like all other words ending with the suffix *-person*, see SEXISM (C).

LANGUAGE-CHANGE INDEX
layperson for *layman*: Stage 4
Current ratio (*layman* vs. *layperson*): 4:1

lay off. See **fire**.

lay of the land; lie of the land. The first is the usual AmE form, the second the BrE, for this phrase meaning (1) lit., “the arrangement of an area’s terrain; topography”; or (2) fig., “the facts of a given situation; the current state of affairs.” *Lay of the land* was predominant in AmE by 1840, *lie of the land* in BrE by 1880.

lay waste. The traditional idiom is an unusual one: either *they laid waste the city* or (a variant form) *they laid the city waste*. *Lay* is the verb; *city* is the object; and *waste* is an adjective serving as an objective complement. The structure of *they laid waste the city* is like that of the unobjectionable *they laid bare the problems*.

In 1965, an academican polled about 100 college students in New York, only a quarter of whom preferred the traditional phrasing; half preferred the phrasing *laid waste to the city*. In that version, *lay* is the verb; *waste* is a noun serving as a direct object; and a prepositional phrase follows. The phrasing doesn’t make any literal sense.

A look at relative frequencies in 2003 suggested that in modern print sources, the version with the superfluous *to* outnumbered the one without it by a 3-to-1 ratio. Even *Newsweek* editors had adopted the preposition: “Old-time carpet-bombing *laid waste to*

great swaths of territory.” John Barry & Evan Thomas, “The Fog of Battle,” *Newsweek*, 30 Sept. 2002, at 36. It looked as if the new idiom was laying waste the old one—that is, laying waste *to* the old one. But by 2008 a more extensive linguistic corpus showed that the traditional transitive version had retained the lead by a 2-to-1 ratio.

lead > led > led. So inflected. The past tense of the verb *lead* (/leed/)—meaning “to guide or direct”—is *led*. But as a noun, *lead* (pronounced /led/) refers either to a metallic element or to a thin stick of marking substance in or for a pencil (though the graphite in pencils has not contained the metal lead for many years). Writers often mistake the past-tense spellings, as if this verb were analogous to *read-read*—e.g.:

- “Dr. Stewart, a co-author of the study, established her reputation in the field of radiation and health with her findings, published in 1956, that prenatal X-rays had *lead* [read *led*] to an increase in cancer deaths among children in Britain.” Matthew L. Wald, “Pioneer in Radiation Sees Risk Even in Small Doses,” *N.Y. Times*, 8 Dec. 1992, at A2.
- “Representative David E. Bonior, left, the Democratic minority whip who *lead* [read *led*] the all-night delay, rubbed his eyes at the end of a leadership caucus on several issues before the House.” “Irate Democrats Tie Up the House Till Daylight,” *N.Y. Times*, 30 June 1995, at A10 (photo caption).
- “After an upset win over No. 2 Stanford on Friday, Texas made it clear there would be no letdown against the Mustangs as Aldrich posted 10 kills and Doran *lead* [read *led*] the defense with 11 digs en route to claiming the first set in 15 minutes.” David Crabtree, “Horns Make Short Work of SMU,” *Austin Am.-Statesman*, 8 Sept. 1999, at C3.

See IRREGULAR VERBS. Cf. **mislead**.

LANGUAGE-CHANGE INDEX
led, the past tense, misspelled *lead*: Stage 2
Current ratio (*had led to the* vs. **had lead to the*): 117:1

leaf. Pl. *leaves*. See PLURALS (C).

leafletting; *leafletting. The spelling *leafletting* has been predominant in AmE and BrE alike since about 1960. **Leafletting* is a variant. See SPELLING (B).

Current ratio: 5:1

lean > leaned > leaned. The form **leant* /lent/ as a past tense and past participle is largely obsolete, though still appearing occasionally in BrE.

Current ratio: 20:1

leapt; leaped. Both are acceptable past-tense and past-participial forms for the verb *leap*. Because *leapt* is pronounced /lept/, the mistaken form **lept* is frequently encountered—e.g.:

- “John J. Sirica *lept* [read *leapt*] to his feet, shouting, ‘It ain’t fair. It ain’t fair!’” “Sirica, 88, Dies; Persistent Judge in Fall of Nixon,” *N.Y. Times*, 15 Aug. 1992, at 1, 11.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The booming, friendly Texas drawl didn’t just come across the telephone line, it *lept* [read *leapt*] across it and grabbed the person on the other end.” David Hanners, “LBJ Phone Conversations Provide Shadings of Epochal Era,” *Dallas Morning News*, 26 Sept. 1993, at A47.
- “Sharon Kelly . . . *lept* [read *leapt*] to her feet in joy when the award was announced.” Julie Irwin, “Five City Schools Share \$25,000 for Excellence,” *Cincinnati Enquirer*, 30 Oct. 1997, at C2.

Leapt, which used to be the more common form in 20th-century BrE (but not in the 19th century), is steadily being displaced by *leaped*. In frequency of use, the two forms are neck-and-neck in modern BrE print sources, but *leaped* has been predominant in AmE since the 18th century.

LANGUAGE-CHANGE INDEX
leapt misspelled **lept*: Stage 1

learned; learnt. In AmE, the past tense is *learned*; in BrE, it’s often *learnt*. To use *learnt* in AmE is an affectation.

As an adjective, *learned* has two syllables /lɔː-nəd/, and as a past-tense verb, one /lɔːnd/. The adjective means “possessing or showing broad or systematic knowledge; erudite.”

leasable. So spelled.

lease, vb.; let. *Let* (10th c.) is 300 years older than *lease* (13th c.) in the sense “to grant the temporary possession and use of (land, buildings, rooms, movable property) to another in return for rent or other consideration.” But both are well established, and they are equally good. As used by (real) estate agents in BrE, the term “To Let” is more common than the phrase “For Rent,” the usual term in AmE.

To say that one *leases* property nowadays does not tell the reader or listener whether one is lessor or lessee. From its first verbal use in the 13th century, *lease* meant “to grant the possession of,” but in the mid-19th century the word took on the additional sense “to take a lease of; to hold by a lease.” This ambiguity has made the preposition used important to clarity: the lessor *leases to* and the lessee *leases from*. See **rent**, vb.

***leasor; *leasee.** These are aberrations in Modern English for *lessor* and *lessee*. E.g.:

- “The city would require the *leasee* [read *lessee*] to construct at least 55,000 square feet of maintenance hangar space.” “Government Actions,” *Wash. Post*, 12 Apr. 1990, at V5.
- “The City Council repealed the archaic law that gave land *leasors* [read *lessors*] exclusive rights to the first 100 feet of water.” Scott Richardson, “McLean County Lakes Offer Hot Fishing Prospects,” *Pantagraph* (Bloomington, Ill.), 6 Mar. 1997, at B7.

See **lessor**.

LANGUAGE-CHANGE INDEX

Current ratio (*lessor* vs. **leasor*): 1,283:1
2. **leasee* for *lessee*: Stage 1
Current ratio (*the lessee must* vs. **the leasee must*): 103:1

***least worst.** This phrase, like its kissing cousin **least worse*, doesn’t make literal sense: it should be *least bad*. If you have several undesirable options with varying levels of undesirability, only one can be the *worst*. All the others are *less bad*, and the least undesirable is the *least bad*. With a superlative adverb such as *least*, it’s incorrect to use either a comparative or a superlative adjective: hence *bad* is correct.

In each of the following examples, the illogical phrase—most often it’s a spoken error, but sometimes (especially in BrE sources) it’s the writer’s fault—should be replaced by *least bad*. E.g.:

- “Lamar Alexander, trying to convince voters he was more than the ‘*least worse*’ [read ‘*least bad*’] choice, had to roll out a refreshed agenda.” Nancy Gibbs & Michael Duffy, “The Secret Test of New Hampshire,” *Time*, 26 Feb. 1996, at 20.
- “‘There’s no good solution,’ agreed Jason Catlett, chief executive of Junkbusters Corp., an antispam concern based in Green Brook, N.J. ‘It’s a matter of which is the *least worst* [read *least bad*]:’” Jared Sandberg, “Recipe for Halting Spread of ‘Spam’ Is Proving Elusive,” *Wall Street J.*, 13 June 1997, at B1.
- “It is difficult to say which is the *least worst* [read *least bad*] pairing.” Benedict Nightingale, “Where All Is for the Worst,” *Times* (London), 20 Aug. 1997, at 31.
- “The England–France ‘friendly’ at Twickenham, heralding the Rugby World Cup, seemed a so-so game in which the *least worst* [read *least bad*] team triumphs, sort of.” Peter McKay, “The England–France ‘Friendly’ at Twickenham,” *Daily Mail*, 17 Aug. 2015, at 17.

Cf. **worse comes to worst**. See COMPARATIVES AND SUPERLATIVES & ILLOGIC.

LANGUAGE-CHANGE INDEX
**least worst* or **least worse* for *least bad*: Stage 3
Current ratio (*least bad* vs. **least worst* vs. **least worse*): 22:9:1

leave alone; let alone. Traditionally, there has been a distinction: *leave me alone* means “leave me by myself (in solitude)”; *let me alone* means “stop bothering me.” But only extreme purists will fault someone who uses *leave alone* in the nonliteral sense. Today that phrase is far more common than *let alone*. E.g.:

- “Good Samaritan VanVelkinburg told them to *leave him alone* and go away.” Angela Cortez, “Kin, Friends Laud Samaritan,” *Denver Post*, 21 Nov. 1997, at A1.
- “And who wants to be thrown into a car-insurance pool with 80-year-olds from Miami? Just *leave me alone!*” Linda Stasi, “Drop Dead,” *Village Voice*, 2 Dec. 1997, at 20.

Before 1920, the collocation *let him alone* (or *let her alone*) appeared far more frequently in print. But that trend was reversed by about 1915 in BrE and 1930 in AmE.

Let alone is also used to mean “not to mention” or “much less” <he no longer drinks beer or wine, let alone bourbon or tequila>.

LANGUAGE-CHANGE INDEX
leave alone in nonliteral sense: Stage 5

lectureship; *lecturership. Even though **lecturership* is more logical (being analogous to *professorship* and *ambassadorship*, for example), it hasn’t established

itself as a standard term. The usual word is the age-old *lectureship*, which is now about 30 times as common in print sources—e.g.: “His extra-curricular activities include guest *lectureships* at Juilliard and charities like Paul Newman’s Hole in the Wall Camp for seriously ill children.” Joe Williams, “Busy Kevin Kline Makes Time for His Hometown,” *St. Louis Post-Dispatch*, 22 Nov. 2002, Mag. §, at F1.

Those who write **lecturership*—and today it is mostly confined to BrE—are likely to be thought pretentious. The following sentence suggests, no doubt unwittingly, that Oxford is a more pretentious place than Liverpool: “After a *lecturership* [read *lectureship*] at Merton College, Oxford, and an assistant *lectureship* at Liverpool University, Roberts was elected, aged 26, Professor of History at the Rhodes University College.” “Professor Michael Roberts” (obit.), *Daily Telegraph*, 25 Jan. 1997, at 13.

LANGUAGE-CHANGE INDEX

**lecturership* for *lectureship*: Stage 1

Current ratio (*lectureship* vs. **lecturership*): 30:1

lede, n. This bit of newspaper JARGON usually refers to the first paragraph of an article, the *lead*. Typically, for example, an editor may tell a reporter to “punch up the *lede*,” or a wire service may transmit a revised *lede* for a breaking story. It may also refer to the top story in an edition. Outside those contexts, though, the spelling is an aberration and *lead* is standard. When it is used in general writing, it should be labeled as newspaper jargon for the reader’s benefit—e.g.: “There are few worse sins in journalism than ‘burying the lede,’ and here I’m going to have to plead no contest.” Dwight Garner, “Cooking,” *N.Y. Times*, 8 Dec. 2002, § 7, at 50.

leery (= suspicious, wary) is the standard spelling. **Leary* is a variant. Though criticized as SLANG (from *leer*) in the 18th century, the word has long been respectable. *Leery* was the predominant spelling in AmE by 1900 and in BrE by 1910.

Current ratio: 32:1

leftward(s). See DIRECTIONAL WORDS (A).

legal; lawful; licit. *Legal* is the broadest term, meaning either (1) “of, relating to, or involving law, falling within the province of law,” or (2) “established, permitted, or not forbidden by law.” These two senses are used with about equal frequency.

Lawful and *licit* share sense 2 of *legal*: “according or not contrary to law, permitted by law.” *Lawful* is quite common <driving in a lawful manner>. The least frequent of these three terms is *licit* <licit acts> <the licit use of force>, which usually occurs in direct contrast to *illicit*.

Lawful should not be used in sense 1 of *legal*, as it sometimes is—e.g.: “The judgment must be affirmed if there is sufficient evidence to support it on any *lawful* [read *legal*] theory, and every fact issue sufficiently

raised by the evidence must be resolved in support of the judgment.” See **illegal**.

LEGALESE. Despite popular prejudices, not all uses of legal language are bad. But unnecessarily complex legal JARGON—or “legalese”—is widely viewed by legal scholars as the source of many problems: (1) it alienates people from their legal system; (2) it besots its users—namely, lawyers—who think they’re being more precise than they really are; and (3) it doesn’t communicate efficiently, even to other lawyers, despite occasional claims to the contrary. (See **OBSCURITY**.) For solid treatments, see *Garner’s Dictionary of Legal Usage* (3d ed. 2011); Bryan A. Garner, *Legal Writing in Plain English* (2013); Joseph Kimble, *Lifting the Fog of Legalese* (2006); David Mellinkoff, *The Language of the Law* (1963); and Richard C. Wydick, *Plain English for Lawyers* (5th ed. 2005). For a law dictionary that explains all the arcana, see *Black’s Law Dictionary* (10th ed. 2014).

legal holiday; bank holiday. A *legal holiday* is a day designated by law as a holiday, accompanied by the closing of most public offices and paid leave for most public employees. Observance of a legal holiday by the private sector is voluntary. A legal holiday may be established by the national government (e.g., July 4 as Independence Day) or a state government (e.g., March 2 as Texas Independence Day).

A *bank holiday* is a day designated by law for the closing of banks and paid leave for bank employees. *Bank holidays* are standardized in many countries, but are not observed in the United States.

legally. See SENTENCE ADVERBS.

legal separation. See **divorce** (c).

legation. See **embassy**.

legislator. In proper governmental terms, a governor is the executive, not a legislator: “Utah Gov. Mike Leavitt and other legislators [read *several legislators*] discuss their support for a balanced-budget amendment with reporters on Thursday.” “EPA Has Been Flexible on Missions, Official Says,” *Austin Am-Statesman*, 10 Feb. 1995, at A10 (photo caption). The caption-writer wasn’t observing the separation of the branches of government.

legitimacy; legitimation; *legitimization; *legitimatization. *Legitimacy* = the fact of being legitimate. *Legitimation* is the best word for the sense (1) “the action or process of rendering or authoritatively declaring (a person) legitimate”; or (2) “the action of making lawful; authorization” (*OED*). E.g.: “Both halves of the grand bargain outlined then—security and *legitimation* for Israel, land and power for Palestinians—are now in doubt.” Barton Gellman, “Israel–Palestinian Peace Process ‘Hanging by a Thin

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Thread;” *Pitt. Post-Gaz.*, 25 Mar. 1997, at A3. **Legitimization* and **legitimatization* have been NEEDLESS VARIANTS since they first appeared in the 19th century.

legitimate, vb. See **legitimize**.

***legitimatization**. See **legitimacy**.

***legitimize**. See **legitimize**.

***legitimization**. See **legitimacy**.

legitimize; **legitimate**, vb.; ***legitimize**. *Legitimate* is the oldest of these verbs, dating from 1531, but it's not the most frequent. *Legitimize* outnumbers the traditionally preferred *legitimate* by a large margin in modern print sources. It refers to establishing the legitimacy of anything or anyone (except with regard to parentage)—e.g.:

- “Joel Aranson . . . need only flash his ticket stub from Game 6 of the 1996 World Series to *legitimize* his friendship with Torres.” Tom Keegan, “Joe’s Brother Keeps on Tickin’,” *N.Y. Post*, 25 Oct. 2000, at 12.
- “If Bush scores a decisive Florida win, an eventual high court ruling in his favor could *legitimize* his claim on the presidency and shatter Gore’s White House dreams.” Andrew Miga, “Suddenly, All Eyes,” *Boston Herald*, 25 Nov. 2000, at 4.
- “What matters to the three is domestic power built upon a base of nationalism that they believe *legitimizes* their policies.” Tad Szulc, “Three Amigos Who Bear Close Watching,” *L.A. Times*, 24 Dec. 2000, at M2.

Legitimate, as a verb (/lə-**jit**-ə-mayt/), though given priority by most dictionaries and preferred by various authorities, is a NEEDLESS VARIANT in all but one sense: “to make an otherwise illegitimate child into a legitimate one.” E.g.:

- “Gober asked why Brown had not *legitimated* his 3-year-old daughter, Morgan.” Mark Bixler, “Judge Back in Spotlight,” *Atlanta J.-Const.*, 25 Jan. 1998, at C2.
- “Fathers of children born out of wedlock cannot categorically be held accountable for not *legitimizing* the child by marrying the expectant mother.” Wolfgang P. Hirczy de Mino, “From Bastardy to Equality,” *J. Comp. Family Studies*, 1 Apr. 2000, at 231.
- “Juvenile Court Judge Kenneth Turner . . . said his court in the past 35 years has *legitimated* 122,884 children.” Shirley Downing, “Push to Collect Support Comes to Shove,” *Commercial Appeal* (Memphis), 19 Nov. 2000, at B3.

This DIFFERENTIATION between *legitimate* and *legitimize* has become fairly well marked in recent years. We should encourage it.

**Legitimize* was formerly considered preferable to *legitimize* on principles of word formation. For example, both H.L. Mencken and G.H. Vallins used this longer form. Today the penultimate syllable would be dropped—e.g.:

- “His neologism . . . enters into sound idiom and is presently wholly *legitimized* [read *legitimized*].” H.L. Mencken, “The Nature of Slang” (1919), in *A Language Reader for Writers* 150, 156 (James R. Gaskin & Jack Suberman eds., 1966).
- “‘Nearby’ is, as yet, an unlawful union, but common usage is tending to *legitimatise* [read *legitimize*] it.” G.H. Vallins, *Good English: How to Write It* 196 (1951).

- “There is one idiom in which attraction *legitimizes* [read *legitimizes*], as it were, an otherwise false agreement.” G.H. Vallins, *Better English* 16 (4th ed. 1957).

Today, however, **legitimize* occurs quite rarely. It is a NEEDLESS VARIANT.

LANGUAGE-CHANGE INDEX

1. *legitimize*: Stage 5

 3. **legitimize* for *legitimize*: Stage 1
- Current ratio (*legitimized* vs. **legitimatized*): 54:1

leisure (= time spent in relaxation or at ease) is pronounced /lee-zhər/ in AmE or /lezh-ər/ in World English—but preferably not /lay-zhər/ anywhere.

leitmotif (= a recurrent musical or metaphorical theme associated throughout the work with a specific character or situation) is the standard spelling. **Leitmotiv*, though more faithful to the German loanword, is but a variant in English. That is, the word was anglicized to make it align with an older import into the English language: *motif*. In fact, though, the meaning of *leitmotif* (which smacks of SESQUIPEDALITY) is so close to that of *motif* that one wonders why it is ever needed. The pronunciation is /lɪt-moh-teef/. See GERMANICISMS.

lend > **lent** > **lent**. So inflected. **Lended* is an error that has occasionally appeared since the early 19th century—e.g.:

- “The \$27 black windbreakers emblazoned with ‘Crown Casting Co.’ *lended* [read *lent*] credibility in the final minutes before ‘Action!’” Ann E. Donlan, “54 Bad ‘Actors’ Answer Police ‘Casting Call,’” *Boston Herald*, 9 June 1997, at 5.
- “Kukoc *lended* [read *lent*] an assist on the boards with eight and scored 19 points.” Daryl Van Schouwen, “Energized Worm Back as Chairman of Boards,” *Chicago Sun-Times*, 27 Apr. 1998, at 7.
- “As cheesy as the acting was in *Resident Evil*, I thought it *lended* [read *lent*] a B-movie charm to the proceedings.” Jeff Kapalka, “Future Dreams and Nightmares from the Past,” *Syracuse Herald Am.*, 27 Sept. 1998, at 12.

See IRREGULAR VERBS & **loan**.

lesbian. See **gay (B)**.

lese majesty; *lèse majesté; *laesae majestatis; *leze majesty; *lèse majesty; *laesae majestas. The preferred form of this originally legal term—meaning “a crime against the state, esp. against the ruler” or “an attack on a custom or traditional belief”—is the anglicized *lese majesty*. The variant spellings should be avoided. In BrE, the phrase tends to be hyphenated; in AmE, it usually isn’t. E.g.:

- “Ad posters for the film fail to take into account Thai sensibilities by picturing Foster above the king. This is considered a great insult by Thais and a possible *lese majesty*. Thai royals must be pictured above commoners.” James East & Dana Harris, “Thailand Picks a Sword Fight with ‘Anna’ Pic,” *Hollywood Reporter*, 22 Nov. 1999, at 4.

- “[Bill] Richardson’s true *lese majesty*, however, was not his one-time no-show on a security question that within days was forgotten. It was his continuing opposition to congressional larding of pet projects into appropriations bills.” Robert Novaks, “Energy Secretary Feels Senators’ Wrath for Scorning Pork Legislation,” *Augusta Chron.*, 13 Sept. 2000, at A4.

The anglicized pronunciation is /leez **maj**-ə-steen/.

Current ratio (first four headwords): 26:13:11:1

less. A. And fewer. Strictly, *less* applies to singular nouns <less tonic water, please> or units of measure <less than six ounces of epoxy>. *Fewer* applies to plural nouns <fewer guests arrived than expected> or numbers of things <we have three fewer members this year>. The empirical evidence in print sources bears out the distinction: the collocation *fewer people* is about seven times as common in books published today as **less people*.

If you have trouble distinguishing the two words, try substituting a phrase. If “not as much [as]” fits, make it *less*. If “not as many [as]” is better, use *fewer*. See COUNT NOUNS AND MASS NOUNS & **fewer**.

The exception in using *fewer* occurs when count nouns essentially function as mass nouns because the units are so very numerous or they aren’t considered discrete items (the idea of individual units becomes meaningless). Hence *less* is used correctly with time and money: one isn’t, ordinarily, talking about the number of years or the number of dollars but rather the amount of time or the amount of money. E.g.:

- “On that mantra, Larry Clark has built a \$45 million-a-year company in *less* than five years.” Max Jarman, “Homebuilder on Fast-Grow Track,” *Ariz. Bus. Gaz.*, 30 Nov. 1995, at 17.
- “Okay, how about \$50 a month for such an apartment—*less* than two dollars a day?” J.A. Lobbia, “Getting Skewed on Rent,” *Village Voice*, 29 Apr. 1997, at 49.

Fewer, in fact, is incorrect when intended to refer to a period of time—e.g.: “You can run from sea level to the sky and back to earth in as fast as 45 minutes (so far), but even today, going round-trip in *fewer* [read *less*] than 60 minutes carries a special cachet.” Lew Freedman, “Their Own Mountain,” *Anchorage Daily News*, 29 June 1997, at D1. But if the units of time are thought of as wholes, and not by fractions, then *fewer* is called for <fewer days abroad> <fewer weeks spent apart>.

Hence we say *less documentation* but *fewer documents*; *less argumentation* but *fewer arguments*; *less whispering* but *fewer remarks*; *less ambiguity* but *fewer ambiguities*; *less of a burden* but *fewer burdens*; *less material* but *fewer items*; *less fattening* but *fewer calories*.

The degree to which *less* occurs where *fewer* would be the better word is a matter of some historical dispute. In 1969, a linguist reported that “the use of *less* in referring to discrete countables is very rare” in edited English. Louise Hanes, “*Less and Fewer*,” 44 *Am. Speech* 234, 235 (1969). But earlier that decade, another writer

had nearly called the usage standard American English: “Modern writers and contemporary educated speakers often ignore the distinction between *less* and *fewer*, and you will find *less* frequently used with plural nouns in current magazines, newspapers, and books, and will hear it even more frequently from the lips of educated people. Such being the case, *less* cannot realistically or effectively be restricted to singular nouns.” Norman Lewis, *Better English* 252 (rev. ed. 1961).

Although the modern evidence seems to suggest that Lewis was more accurate than Hanes in describing what you’ll find in edited English, fastidious writers and editors preserve the old distinction. But the loose usage crops up often—e.g.:

- “She says it, but fact is, she’s a linguist—a student of words. We need more of them, not *less* [read *fewer*]; more words, more students.” Lorene Cary, “As Plain as Black and White,” *Newsweek*, 29 June 1992, at 53.
- “There were *less* [read *fewer*] than 300,000 marriages in 1993, the lowest level since the second world war, leaving clerics with little to do on Saturday mornings but twiddle their thumbs.” Nick Gardner, “Secure Your Future by Tying the Knot,” *Sunday Times* (London), 6 Aug. 1995, § 5, at 5. (Why, with a number like 300,000, isn’t the idea of an individual increment meaningless? Because, although one might think of dollars in that light, one doesn’t think of marriages in that way.)
- “You will have *less* [read *fewer*] people to call and haunt about paying for their outfits and buying their accessories.” “Advice for the Bride,” *Boston Herald* (Mag.), 19 Oct. 1997, at 6.

The linguistic hegemony by which *less* has encroached on *fewer*’s territory is probably now irreversible. What has clinched this development is something as mundane as the express checkout lines in supermarkets. They’re typically bedecked with signs cautioning, “15 items or less.” These signs are all but ubiquitous in the United States. But the occasional more literate supermarket owner uses a different sign: “15 or fewer items.”

Finally, even with the strict usage, it’s sometimes a close call whether a thing is a mass noun or a count noun, and hence whether *less* or *fewer* is proper. Take, for example, a percentage: should it be *less than 10% of the homeowners were there* or *fewer than 10% of the homeowners were there*? One could argue that a percentage is something counted (i.e., 10 out of 100) and therefore requires *fewer*. One could also argue that a percentage is a collective mass noun (akin, e.g., to *money*), and so requires *less*. The latter is the better argument because most percentages aren’t whole numbers anyway. Even if it were a toss-up between the two theories, it’s sound to choose *less*, which is less formal in tone than *fewer*.

LANGUAGE-CHANGE INDEX

less for *fewer* in reference to a plural count noun: Stage 3

Current ratio (*fewer people* vs. **less people*): 7:1

B. One *less* or **one fewer*? If, in strict usage, *less* applies to singular nouns and *fewer* to plural nouns, the choice is clear: *one less golfer* on the course, not **one fewer golfer*. This is tricky only because *less* is

being applied to a singular count noun, whereas it usually applies to a mass noun. Burt Bacharach got it right in “One Less Bell to Answer” (1970). Since at least 1700, most published authors have gotten it right. And most contemporary writers get it right—e.g.:

- “I couldn’t care less that NFL players will receive *one less* game check.” “Capital-Journal,” *Topeka Capital-J.*, 16 Sept. 2001, at X2.
- “Some Middle Georgia cancer patients may have *one less* thing to worry about this time next year.” Charlie Lanter, “Pulaski Hospital to Build Cancer Treatment Center,” *Macon Telegraph*, 15 Nov. 2001, at 3.
- “Some industry observers worry about a deal that will lead to *one less* independent news organization.” Mark Kempner, “In a Merger, CNN, ABC May Shoot for the Stars,” *Atlanta J.-Const.*, 3 Nov. 2002, Bus. §, at 1.

Nearly one-tenth of the time, however, writers use **one fewer*, an awkward and unidiomatic phrase. One can’t help thinking that this is a kind of HYPERCORRECTION induced by underanalysis of the *less*-vs.-*fewer* question—e.g.:

- “But Boras points out that Park had only *one fewer* [read *less*] quality start than Randy Johnson and Curt Schilling of the Arizona Diamondbacks.” Jason Reid, “Silence Speaks Loudly to Park Baseball,” *L.A. Times*, 19 Nov. 2001, at D1.
- “In studies, women given the gel during open pelvic surgery had only *one fewer* [read *less*] internal scar but almost twice the risk of infection.” Luran Neergaard, “FDA Reverses Decision on Gel,” *State* (Columbia, S.C.), 20 Nov. 2001, at A8.
- “Energy Secretary Spencer Abraham . . . has *one fewer* [read *less*] hat than we said the other day.” Al Kamen, “Cheney Losing His Voice,” *Wash. Post*, 21 Nov. 2001, at A21.

Current ratio: 12:1

C. And *lesser*. *Lesser*, like *less*, refers to quantity, but is confined to use as an adjective before a singular noun and following an article <the lesser crime> or alone before a plural noun <lesser athletes>, thus performing a function no longer idiomatically possible with *less*. Dating from the 13th century, this formal usage allows *lesser* to act as an antonym of *greater*.

Occasionally, *lessor* (= landlord) is misused for *lesser*—e.g.:

- “The nuclear-arms race has produced 70,000 nuclear bombs by the United States and a *lessor* [read *lesser*] amount [read *number*] by the former U.S.S.R.” Letter of Minerva Rees Massen, “In the Wake of Hiroshima and Nagasaki,” *S.F. Chron.*, 5 Aug. 1995, at A20.
- “Washington residents pay 2.2 percent of the sticker price of a new car for the first two years, and then *lessor* [read *lesser*] amounts each year on a sliding scale.” Tom Koeninger, “License-Plate Cheats Cause Neighbors to Pay More Tax,” *Columbian* (Vancouver, Wash.), 6 Oct. 1996, at B9.

See **lessor**.

D. Adjective for Noun. As a noun, *less* means “a smaller amount” or “something not as important.” Occasionally, writers make it an adjective when it should be a noun—e.g.: “He wants business to make money and everyone to pay *less taxes* [read *less in taxes*].” “The New, Improved Powell,” *N.Y. Times*, 13 Sept. 1995, at 14.

lessor; lessee. *Landlord* and *tenant* are simpler equivalents that are more comprehensible to most people. For a mistake involving *lessor* and *lesser*, see **less (c)**. See also **lease & *leasor**.

lest. A. Sense. Because *lest* means “for fear that,” it should be followed by a negative idea. It isn’t equivalent with *in case*—one can’t rightly say, “She plans to take along a camera *lest* [read *in case*] she find a breathtaking view.” Indeed, the negative idea is overwhelming in modern usage—e.g.: “Its members would do well to study up, *lest* they find themselves met by a wall of suspicion, or worse yet indifference.” Betty Winston Baye, “Ralph Reed: The Black Messiah?” *Courier-J.* (Louisville), 20 Feb. 1997, at A11.

Some passages present close calls. Yearning for something that you’ve just discovered isn’t generally considered a negative thing unless you’ve just planned the opposite. In the following example, in which just that problem emerges, the probable sense is *or*, *or else*, or *because*: “If you’ve just remodeled your kitchen into a high-tech wonderland, do not read Viana La Place’s new book *lest* [read *or*, *or else*, or *because*] you might find yourself yearning for a serene, minimal kitchen like hers.” S. Irene Virbila, “Our Annual Cookbook Special,” *L.A. Times*, 12 Dec. 1996, at H11.

B. Mood Following. *Lest* is best followed by a verb in the SUBJUNCTIVE mood, not in the indicative, because *lest* points to something that is merely possible, not definite. E.g.:

- “*Lest* there be any doubt about the extent of the trouble, Archuletta points to the fact that most production companies now routinely include in their filming budgets some money to pay off harassers.” Cynthia H. Craft, “Acts of Extortion Steal the Scene from Film Crews,” *L.A. Times*, 15 Mar. 1995, at A1.
- “As with any spice, however, it shouldn’t be overheated *lest* it *burn*.” Ann Steiner, “Color from Paprika Gives Food a Boost,” *Houston Chron.*, 4 Dec. 1996, at 13.
- “The Bosnian Serb military leader is reportedly leery of leaving the self-proclaimed republic of Srpska, *lest* he be dragged off to The Hague where an international tribunal seeks to try him for crimes against humanity.” James Ledbetter, “Waiting for Radovan,” *Village Voice*, 11 Mar. 1997, at 34.

Occasionally, though, writers ill-advisedly use the indicative—e.g.: “Certain foreign policy experts urged . . . that the West shouldn’t press Mikhail Gorbachev too hard to liberate his dissidents *lest* it *makes it harder* [read *become harder*] for him to do other good things.” Suzanne Fields, “Trouble Ahead for Israel’s Labor Party,” *Wash. Times*, 16 Mar. 1995, at A19.

Idiomatically speaking, if a modal verb follows *lest*, it should be *might* (or perhaps *should*), not *will* or *would*—e.g.:

- “I feared for a fortnight to walk the streets of Seattle *lest* I *would* [delete *would*] be thwacked soundly about the head

and ears by a blackthorn cudgel.” Jon Hahn, “Ack! These Columns Really Stepped in It,” *Seattle Post-Intelligencer*, 29 Dec. 2001, at E2.

- “Other justices found it strange that judicial candidates could talk about old cases, but never current ones, *lest* it *would* [delete *would*] be regarded as prejudging a case.” Tom Webb, “Judicial Elections Argued,” *Pioneer Press* (St. Paul), 27 Mar. 2002, at A1.
- “Jonathan Clark nipped him at the wire, *lest* he *would* [read *should*] have three straight titles.” Dave Hickman, “Westfall Wraps Up Fourth Title with Final-Round 68,” *Charleston Gaz. & Daily Mail*, 29 June 2002, at B1.

-**LET.** See DIMINUTIVES (J).

let, v.t. See **lease**.

let. For the use of this word in opposite senses, see CONTRONYMS.

let alone. See **leave alone**.

let go. See **fire**.

let’s. A. Let’s you and I. First, think of *let’s*: *let us*. *Us* is in the objective case. Another form of the phrase (still in the objective case) would be *let you and me* (*you and me* agreeing with *us*). The construction *let you and I* is ungrammatical—and fairly rare.

But what about *let’s you and I*? That is, *let us, you and I*. This, too, is ungrammatical—*us* and *you and I* being in apposition. (See APPOSITIVES.) It’s an error of some literary standing. T.S. Eliot began “The Love Song of J. Alfred Prufrock” (1917) in this way: “Let us go then, you and I.” In that sentence, *go* is an infinitive without an express *to* (sometimes called a “bare infinitive”), and an infinitive has as its subject a pronoun (*us*) in the objective case—not the nominative case. Yet the appositive for *us*—namely, *you and I*—is in the nominative case. This is an oddity, but today *let’s you and I* [+ verb] is common in spoken and written English alike. H.W. Fowler might have called it a “sturdy indefensible”—e.g.:

- “This upcoming Father’s Day weekend, *let’s you and I* renew our commitments to our kids and be the dads we always intended to be.” Doug Hall & Russ Quaglia, “Dad’s Resolution,” *Seattle Post-Intelligencer*, 14 June 1999, at E2.
- “‘*Let’s you and I* think about it for a second,’ he said during lunchtime.” Cheryl Blackerby, “West Palm’s Sudden Fame Trumps Palm Beach,” *Palm Beach Post*, 18 Nov. 2000, at B1.
- “‘*Let’s you and I* be fair with one another.’” Jacob M. Schlesinger & Michael M. Phillips, “Surprising Choices,” *Wall Street J.*, 19 Mar. 2001, at A1 (quoting Senator Robert Byrd).

Nevertheless, in print sources that have appeared since 1900, the phrasing *let’s you and me* has predominated slightly over *let’s you and I*—so take heart if you prefer the more grammatically rigorous phrasing.

Current ratio: 1:1

B. *Let’s us. This phrase is nonstandard for *let’s*.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

C. **Let's don't*. This phrase is nonstandard for *let's not*.

leukemia (a type of blood cancer) is now the standard spelling in all varieties of World English. From about 1940 to 1970, **leukaemia* was standard BrE, but since 1970 *leukemia* has become predominant even there.

Current ratio: 5:1

levee. See *levy*, n.

level, vb., makes *leveled* and *leveling* in AmE, *levelled* and *levelling* in BrE. See SPELLING (B).

leverage, v.t. & v.i., is a mid-20th-century Americanism <a leveraged portfolio = one with a high amount of debt>. The term has definite meaning, but it may be characterized as a term used primarily by financial jargonmongers. See JARGON.

levy, n.; **levee**. *Levy* may act as a noun in two senses: (1) “the imposition of a fine or tax, or the fine or tax so imposed”; and (2) “the conscription of men for military service, or the troops so conscripted.” The plural is *levies*—e.g.: “During the housing boom, voters passed hundreds of open-space tax *levies* to control growth and sprawl.” Dennis Cauchon, “Officials Open Coffers for Open Space,” *USA Today*, 28 May 2008, at A3.

Levee, meanwhile, is the noun meaning “a river embankment; dike; pier.” In BrE, primarily, it also has the sense “a formal reception.” Occasionally *levee* is used as a verb, meaning “to provide with a levee (dike).” The plural is *levees*, but misspellings are common—e.g.: “Insurers are estimated to have paid as much as \$60 billion for damages caused by Hurricane Katrina, but about \$25 billion of that was considered the result of flooding when the *levies* [read *levees*] broke in New Orleans.” Randy Diamond, “Storm Model Raises Doubts,” *Palm Beach Post*, 4 May 2007, at A1.

Levee is fairly often misspelled *levy*—e.g.: “The *levy* [read *levee*] broke about five blocks away, split like a cheap pair of pants and turned an industrial canal into a raging wall of water.” Scott Ostler, “Football in New Orleans,” *S.F. Chron.*, 3 Dec. 2006, at C1.

LANGUAGE-CHANGE INDEX
levy misused for *levee*: Stage 1

levy, v.t., = (1) “to impose (as a fine or a tax) by legal sanction” <the court levied a fine of \$500>; (2) “to conscript for service in the military” <the troops were soon levied>; (3) “to wage (a war)” <the rebels then levied war against the government>; or (4) to take or seize (property) in execution of a judgment <the creditor may levy on the debtor’s assets>.

In sense 1, this verb is sometimes mangled through OBJECT-SHUFFLING: “He quit hours after the football program was *levied* with sanctions that included a two-year ban on post-season play, a loss of 10 scholarships for each of the next two recruiting classes, and removal from the Pac-10’s television revenue-sharing pool for 1993, costing the program an estimated \$1.4

million.” Jim Cour, “Coach Quits in Protest,” *Austin Am.-Statesman*, 23 Aug. 1993, at C1. A program (or person) is not *levied with* a penalty; rather, the penalty is *levied against* the program (or person).

The word is pronounced /le-vee/; it’s sometimes wrongly pronounced like the surname *Levy* (usually /lee-vee/).

lexicography; lexicology. *Lexicography* is the making of dictionaries; *lexicology* is the study of words and their origins, meanings, and uses.

***leze majesty**. See **lese majesty**.

liability. See **disability** (A).

liable (= subject to or exposed to) should not be used merely for *likely*. *Liable* best refers to something the occurrence of which risks being permanent or recurrent. E.g.:

- “What you don’t know is *liable* to hurt you—and your building.” Maureen Patterson, “See You in Court!” *Buildings*, Feb. 1997, at 48.
- “Taking away any function for more than a few days is *liable* to result in loss of that capability.” Richard J. Ham, “After the Diagnosis,” *Post Graduate Medicine*, June 1997, at 57.

In law, *liable* also means “responsible” or “subject to a penalty” <the landowner may be liable if someone is injured while on the land>.

Liable has three syllables (/lɪ-ə-bəl/), not two, and so is pronounced differently from *libel*.

liaise, v.i., is a BACK-FORMATION from *liaison*, meaning “to establish liaison” or “to act as a liaison officer” <diplomats who liaise with Soviet officials>. First used in the 1920s, this word is still stigmatized in some quarters as being cant or JARGON. It is pronounced /lee-ayz/. The word is more common in BrE than in AmE—e.g.:

- “The FA’s marketing and media team are here in force, *liaising* with sponsors such as Nationwide and Umbro.” Richard Williams, “Team England Thriving on an Army of Helpers,” *Guardian*, 14 June 2002, at 6.
- “The CCS had the ostensible aim of getting department heads together, *liaising* better with local authorities and business.” “Task of Ensuring That Cover Is More than Just a Front,” *Fin. Times*, 22 June 2002, at 4.
- “His possible dismissal attracted huge attention among West Bankers, many of whom regard him with distaste—partly because he has *liaised* with Israel and the CIA.” Phil Reeves, “Security Chiefs Refuse to Accept Dismissal by Arafat,” *Independent*, 4 July 2002, at 13.

The word occasionally crops up in AmE—e.g.: “For 10 to 20 hours during an average week, she’s the neighborhood’s chief advocate, cook and bottle-washer, *liaising* with the cops, cops, bureaucrats, and merchants who interact with her domain.” David Nyhan, “A Rare Natural Resource Known as Annisa,” *Boston Globe*, 21 Nov. 1999, at C4.

LANGUAGE-CHANGE INDEX
liaise as a word: Stage 5

liaison is pronounced either /lee-ay-zahn/ or /lee-ə-zahn/, the first being more common in both AmE and

BrE; /lay-ə-zahn/ is a mispronunciation. (See PRONUNCIATION (B).) The nontechnical senses of the word are (1) n., “an illicit love affair”; (2) n., “communication established for the promotion of mutual understanding; someone who establishes such communication”; and (3) adj., “acting as an intermediary” <liaison officer>.

The word is commonly misspelled **laison* and (especially) **liason*.

libel /lɪ-bəl/. Pronounce it carefully. The word is often mispronounced, through epenthesis, the way *liable* /lɪ-ə-bəl/ is pronounced. See PRONUNCIATION. For the sense of the word, see **defamation**.

liberty. See **freedom** (A).

libido. Although dictionaries once recorded /li-bɪ-doh/ as the preferred pronunciation, /li-bee-doh/ is now the established preference in AmE. The plural is *libidos*—not **libidoes*.

Current ratio (*libidos* vs. **libidoes*): 208:1

library is pronounced /lɪ-brer-ee/—not /lɪ-ber-ee/. See PRONUNCIATION (B).

licit. See **legal**.

licorice (/lik-ə-rish/) has been the standard spelling in AmE since about 1900. *Liquorice* has been the standard spelling in BrE since the 18th century. This word shouldn't be confused with its uncommon homophones, *lickerish* (= lascivious, lecherous) and *liquorish* (= tasting like liquor).

lie > lay > lain. So inflected (except when *lie* means “to utter a falsity”—see below). A murderer may *lie in wait*. Yesterday he *lay in wait*. And for several days he has *lain in wait*—e.g.: “The Ramseys say an intruder may have *lay* [read *lain*] in wait for hours before killing the 6-year-old beauty queen.” “Ramseys' Mission: Find the Killer,” *Austin Am.-Statesman*, 18 Mar. 2000, at B8. See IRREGULAR VERBS & **lay**.

In the sense of telling an untruth, the verb is inflected *lie > lied > lied*.

LANGUAGE-CHANGE INDEX

lay for past-participial *lain*: Stage 1

Current ratio (*had lain* vs. **had lay*): 91:1

liege, a term recorded in English from the 14th century, is a kind of CONTRONYM: it can denote either a medieval vassal sworn to allegiance to a feudal lord or the feudal lord to whom the vassal swears allegiance. In fuller phrasing, the vassal is a *liegeman*, the lord a *liege lord*. The main point of this entry, however, is to note the pronunciation: /leej/—not /leezh/. Cf. **siege**.

lie low; lay low. The latter phrase is common but loose. The two phrasings both appear in print, but the correct *lying low* is three times as common as *laying low*. See **lay** (B).

lien, n. (= a legal right or interest that a creditor has in another's property, lasting usu. until a debt that it secures is satisfied), is pronounced most properly /lee-ən/, or commonly /leen/ or /lin/.

lie of the land. See **lay of the land**.

lieu /loo/. See SPELLING (A).

life-and-death; *life-or-death. Though the sense is “relating to a matter of life or death,” idiom has long sanctioned *and* in this phrase, not *or*. *Life-and-death* has vastly predominated in print sources since the phrase became popular in the early 19th century. It still predominates—e.g.:

- “Easy's temperament lets him saunter his way into any number of *life-and-death* situations and barely break a sweat.” Adina Hoffman, “Denzel: So Noir and Yet So Far,” *Jerusalem Post*, 1 July 1996, Arts §, at 5.
- “It's a *life-and-death* issue, with the potential to affect any Canadian adults.” “Make Euthanasia an Election Issue,” *Alberni Valley Times* (Can.), 1 Sept. 2015, at A4.

LANGUAGE-CHANGE INDEX

**life-or-death* for *life-and-death*:

Stage 3

Current ratio (*life-and-death* vs. **life-or-death*): 2:1

lifelong; livelong. *Lifelong* = lasting for all or most of one's life <Seymour's lifelong dream was to conduct the New York Philharmonic>. *Livelong* = (of a time period, esp. a day or a night) whole, entire <“the eyes of Texas are upon you, all the livelong day”>. *Livelong* was once more prevalent than *lifelong*, especially during the early 19th century, but then the fortunes of these two words reversed about 1860. Since then, instances of *lifelong* have steadily risen in modern print sources. Confusion of these words isn't as uncommon as it ought to be—e.g.:

- “Born in Providence, a son of the late Peter Gomes and the late Mary Fortes, he had been a *livelong* [read *lifelong*] resident of Providence, moving to Brockton eight years ago.” “Late Obituary: Bernard D. ‘Chicken’ Fortes,” *Providence J.-Bull.*, 18 Jan. 1995, at C6.
- “Berning pursued a *livelong* [read *lifelong*] interest in the golf swing.” Larry Bohannon, “Making Ends Meet,” *Desert Sun* (Palm Springs), 12 Feb. 2002, at C8.
- “A native and *livelong* [read *lifelong*] resident of the Tampa area, he attended Riverview High School.” “McGowan, Mitchell Curtis” (obit.), *St. Petersburg Times*, 4 Sept. 2002, at B7.

LANGUAGE-CHANGE INDEX

livelong misused for *lifelong*: Stage 1

life-or-death*. See **life-and-death.

life-size, adj., has been the standard term from the beginning, in the first half of the 19th century. **Life-sized* is a NEEDLESS VARIANT.

Current ratio: 3:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

lifestyle. When this word was viewed as a NEOLOGISM—in the 1960s through the 1980s—it was often disparaged as an unnecessary innovation and as a VOGUE WORD. But today it seems serviceable as denoting a concept widely regarded as important.

LANGUAGE-CHANGE INDEX
lifestyle: Stage 5

lighted; lit. Both are standard past-tense and past-participial forms. The most traditional forms are *lighted* as an adjective <a lighted torch> and as a past participle <have you lighted the fire yet?>. *Lit* is unimpeachable as a past tense—e.g.: “He *lit* another cigarette, inhaling deeply as the executives ran through several more subjects.” Ken Auletta, “Beauty and the Beast,” *New Yorker*, 16 Dec. 2002, at 65, 67. See IRREGULAR VERBS.

Although *he lighted the fire* was the predominant phrase in print sources from 1700 to 1900, during the 20th century *he lit the fire* became predominant beginning about 1915. Let your ear guide you.

Current ratio (*he lit the* vs. *he lighted the*): 4:1

lightning; lightening. The first is the flashing phenomenon that occurs in an electrical storm. The second is the process of getting lighter, either in color or in weight. Sometimes, however, writers misuse *lightening* for *lightning*—e.g.: “After all, given the inroads the group made last year and absent a presidential *lightening* [read *lightning*] rod in the form of Ms. Showalter . . .” Courtney Leatherman, “From Insurgents to the Establishment,” *Chron. of Higher Educ.*, 17 Dec. 1999, at A18. The opposite error rarely if ever occurs.

LANGUAGE-CHANGE INDEX
lightning misspelled *lightening*: Stage 1

light-year; parsec. Despite their appearance, these terms measure distance, not time. A *light-year* is the distance that light travels in one year in a vacuum (about 5.88 trillion miles). Although some figurative uses accurately reflect distances <the next town seemed light-years away>, the popular mind makes the term refer to time—e.g.:

- “And needless to say, the special effects are *light years ahead* [read *way ahead*] of what Disney had in the ‘60s.” Dan Taylor, “Anastasia’ a Flub? ‘Flubber’ Fine Art?” *Press Democrat* (Santa Rosa), 7 Dec. 1997, at Q27.
- “Although it seems like *light years* [read *ages*] since Rick Pitino departed, and his name rarely comes up in interviews these days, O’Brien made reference to the former Celtics coach and president during Sunday’s postgame media conference.” Mark Cofman, “Anderson Having a Ball in Playoffs,” *Boston Herald*, 23 Apr. 2002, at 78.
- “*Light years* [read *long*] ago, while working late in a darkened computer lab at the University of Seattle, Joe Loughry became fascinated with the lights blinking on the face of his modem.” “Those Blinking Lights Could Be a Security Risk,” *Milwaukee J. Sentinel*, 21 May 2002, at E3.

Joan Baez misused the term in her 1975 ballad “Diamonds and Rust”: “And here I sit / Hand on the telephone / Hearing a voice I’d known / A couple of light

years ago / Heading straight for a fall.” It’s a lovely song but lousy science and loose usage.

A *parsec* has to do with *second*—not as a measure of time but as a measure of angle (circle = 360 degrees; 1 degree = 60 minutes; 1 minute = 60 seconds). A *parsec* is the distance that a star would be from the earth if its apparent position in the sky (its parallax, hence the *par* in *parsec*) shifted by one second of arc as the earth orbits the sun. It is equivalent to about 3.26 light-years. While *parsec* appears in print far less frequently than the better-known *light-year*, when used outside astronomy it is often used incorrectly. Even Han Solo (Harrison Ford) got it wrong in the original *Star Wars* movie when he bragged that his spaceship, the *Millennium Falcon*, “made the Kessel run in less than 12 parsecs.” The purported meaning of the word varies widely—e.g.:

- “Just what is a ‘Battle Droid with STAP,’ anyway? Apparently, it’s some kind of bad-guy robot on an upright, flying motorcycle. He was in your local Target and Toys ‘R’ Us stores for about a *parsec* [read *second*] before fans snatched them all up.” Hank Stuever, “Space Junk Clears Path for ‘Star Wars,’” *Dayton Daily News*, 22 Nov. 1998 (implying a very short time).
- “The Matrix: Hardware cinema blasted several *parsecs* [read *centuries*?] into the future with this endlessly ingenious sci-fi psych-out.” Bob Strauss, “A Pioneering Masterpiece,” *Daily News* (L.A.), 30 Dec. 1999 (implying a very long time).
- “‘Star Trek: Nemesis’ is better than the tepid ‘Star Trek: Insurrection’; falls short of ‘First Contact’ because the villain (Tom Hardy) couldn’t pick the lint off Borg Queen Alice Krige’s cape; and finishes *half a parsec* (a nose) [read *a nose*] ahead of ‘Generations.’” Arthur Salm, “Attack of the Clone,” *San Diego Union-Trib.*, 12 Dec. 2002, Entertainment §, at 14 (implying a very short distance).

Once again, these examples illustrate bad science and poor usage.

likable (= [of a person] pleasant to be with and easy to like) has been predominantly so spelled in AmE since the 1890s. The standard BrE spelling, *likeable*, was established in the 18th century. Cf. **livable & lovable**.

like. A. As a Preposition. The object of a preposition should be in the objective case—you say *They are very much like us*, not **They are very much like we*. When the second-person pronoun is used, no problem arises: “I, like you, believe that Mozart was the greatest composer of all time.” But apart from the second person (in which the form remains the same), writers often get confused on this point, as with first-person pronouns—e.g.:

- “She, like I [read *me*], instantly fell in love with his beautiful face, huge blue eyes, unusually soft fur, and gentle disposition.” Patricia Livingston, “New Cat Forced Out but Finds Nice Home,” *Times-Picayune* (New Orleans), 3 Feb. 2000, at B11. (A suggested improvement: *Like me, she instantly fell . . .*)
- “He, like I [read *me*], just can’t find any proof about the NHTSA’s cries that unhelmeted motorcyclists truly are an undue burden on society.” Letter of Donald Smith, “Helmet Law Will Not Solve Problem,” *Charleston Gaz.*, 22

Feb. 2000, at A4. (A suggested improvement: *Like me, he just can't find . . .*)

- “He, like I [read *me*], sees with abhorrence executions of innocent people,’ Mr. Smith said.” Sean Scully, “Senators Seek Greater Safeguards in Capital Cases,” *Wash. Times*, 8 June 2000, at A6 (quoting Senator Gordon H. Smith). (A suggested improvement: *Like me, he sees with abhorrence . . .*)

The same problem afflicts the third-person pronouns—e.g.:

- “We, like *they* [read *them*], thought we were the coolest things on the floor.” Rochelle Riley, “Reunion Means Remembering, Rejoicing,” *Fla. Today*, 22 Dec. 1998, at A12. (A suggested improvement: *Like them, we thought . . .*)
- “And we, like *they* [read *them*], do so at our peril.” Mike Pence, “Explaining the Appeal of *Titanic*,” *Saturday Evening Post*, 1 May 1999, at 40. (A suggested improvement: *And like them, we do so at our peril.*)
- “Let them say of us that we believed that we care and we—like *they* [read *them*—looked up to the next generation.” Tony Yapias, “Millard County Honors Veterans with Memorial,” *Salt Lake Trib.*, 5 Nov. 2000, at B10 (quoting Governor Mike Leavitt of Utah). (A suggested improvement: *Let them say of us that we cared and that, like them, we looked up to the next generation.*)

As all the parenthetical revisions suggest, the most natural solution is to open the clause with *like* and keep the subject and verb together (*Like me, he agrees*). The awkwardness in the original wordings results from the odd pairing of a nominative and an objective pronoun in what looks like a parallel construction (*He, like me, agrees*). See PRONOUNS (B).

LANGUAGE-CHANGE INDEX
Prepositional *like* introducing nominative pronoun: Stage 1

B. As a Conjunction. In traditional usage, *like* is a preposition that governs nouns and noun phrases, not a conjunction that governs verbs or clauses. Its function is adjectival, not adverbial. Hence one does not write, properly, **The story ended like it began*, but *The story ended as it began*. If we change the verbs to nouns, *like* is correct: “The story’s ending was like its beginning.” Frequently, then, *like* needs to be replaced by the proper conjunction *as* (or *as if*)—e.g.:

- “It looks *like* [read *as if*] the sales clerks are ahead of the hitters so far.” Dan O’Neill, “Morning Briefing,” *St. Louis Post-Dispatch*, 16 Mar. 1995, at D2.
- “*Like* [read *As*] I said: so far, so good.” John Naughton, “Television When Less Is More Desirable,” *Observer*, 16 July 1995, at 21.
- “Star-crossed lovers, they are—*like* [read *as*] in the play—sprung from two households, both alike in dignity.” Alisa Valdes, “Romeo & Juliet,” *Boston Globe*, 17 Oct. 1995, at 59.
- “And it looks *like* [read *as if*] local football teams will be just as good in 2015, maybe even better with a little luck.” Kevin Lytle, “Local High School Football Programs Are on the Rise,” *Ft. Collins Coloradoan*, 2 Sept. 2015, at D3.

This relatively simple precept is generally observed in writing, but has been increasingly flouted in American speech. Although examples of *like* used conjunctively can be found throughout the Middle English period, the usage was widely considered nonstandard from the 17th through the mid-20th centuries. Then defenders came along, raising it to the level of a standard CASUALISM—e.g.:

- “The use of *like* as a conjunction is a usage on the borderline of acceptability in American English.” Robert C. Pooley, *Teaching English Usage* 153 (1946).
- “Anyone who complains that its use as a conjunction is a corruption introduced by Winston cigarettes ought, in all fairness, to explain how Shakespeare, Keats, and the translators of the Authorized Version of the Bible came to be in the employ of the R.J. Reynolds Tobacco Company.” Bergen Evans, “Grammar for Today,” *Atlantic Monthly*, Mar. 1960, at 80, 81.
- “A colloquialism *like* as a conjunction may be, but indefensible it certainly is not. It is first of all a widespread custom of speech, it has arisen naturally and in the same way that *as* has, and unless one starts from the *a priori* position that there is only one legitimate form of expression for every idea in speech, it makes as strong a bid for favor as the conjunction *as*.” George Philip Krapp, *Modern English: Its Growth and Present Use* 271 (Albert H. Marckwardt ed., 2d ed. 1969).
- “It is a generally accepted fact that *like* is widely used as a subordinating conjunction in colloquial and popular speech and in writing that reflects colloquial usage.” C. Dale Whitman, “*Like* as a Conjunction,” 49 *Am. Speech* 156, 156–57 (1974).
- “In many kinds of written and spoken English *like* as a conjunction is struggling towards acceptable standard or neutral ground. It is not quite there yet. But the distributional patterns suggest that the long-standing resistance to this nippy little word is beginning to crumble as a new century approaches.” Robert W. Burchfield, *Points of View* 135 (1992).

Although this use of *like* can no longer be considered an outright solecism, as it once was, it hasn’t moved far from the borderline of acceptability. It is acceptable casual English; it isn’t yet in the category of unimpeachable English.

LANGUAGE-CHANGE INDEX
1. *like* as a conjunction: Stage 4
Current ratio (*as they do* vs. *like they do*): 14:1
2. *like* for *as if* or *as though*: Stage 4
Current ratio (*acts as if he* vs. *acts like he*): 1.2:1

C. As for *like*. This is a form of HYPERCORRECTION—trying so hard to avoid error that you end up falling into an opposite error. Ernest Gowers saw the problem: “A fashion seems to be growing, even among some good writers, to prefer *as to l.* not only, rightly, as a conjunction, but also, ill-advisedly, as a prepositional adjective” (*FMEU2* at 336). E.g.: “As [read *Like*] most people, I have been fortunate to have many mentors in

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

life.” John B. Simon, “Seymour F. Simon,” *CBA Record*, Oct. 1993, at 14. Cf. **in common with**.

LANGUAGE-CHANGE INDEX
as misused for the preposition *like*
<as you, I agree with that>: Stage 2

D. Overused. Like any other word, *like* can entangle a sentence if used indiscriminately—e.g.: “I have been buying most of my books from Barnes & Noble, whose two new superstores have come down on my old neighborhood shop *like* the Assyrians who came down *like* the wolf on the fold.” Victor Navasky, “Buying Books: Theory vs. Practice,” *N.Y. Times*, 20 June 1996, at A13. The two *like* phrases are especially jarring because they come at the end of an already involved sentence.

E. As a Vogue Word and Verbal Tic. California is often falsely and invidiously charged with popularizing *like* as a space-filler: “California’s biggest contribution to the American language is the use of the most versatile word ever—you guessed it, ‘like.’ Like, a word preceding every, like, noun and, like, verb, is almost the only description needed in a world where adjectives are, like, becoming a dying breed.” Mark Egan, “Like, the Language Has Lots of Baggage,” *Wash. Times*, 29 Sept. 1997, at A2.

In a 2008 study, a Midwestern teenager was asked why social networking was so important to her. She responded:

It sounds stupid and everything but like once you like get into it it’s really like addicting—just like everything. Like you have your song and like you write like all this stuff about yourself and like all my friends basically have it. So like we always like read each other’s pages and like call each other and like kind of, and like you put like 300 pictures up so . . . people’s pictures and stuff and comments.

Don Campbell, “Plugging In, Tuning Out,” *USA Today*, 10 Sept. 2008, at A11.

One is surprised only by the keenness of her first three words—that it sounds stupid.

Since the 1980s, *be like* has also been a low CASUALISM equivalent to *said* in relating a conversation, especially among juveniles—e.g.: “And I’m like, ‘Yes, I do.’ But he’s like, ‘No, you don’t.’ And so I’m like, ‘If you’re just going to contradict me, then . . .’” In teenagers, this usage is all but ubiquitous. In adults, it shows arrested development. Cf. BE-VERBS (c) & **go (B)**.

LANGUAGE-CHANGE INDEX
like as a spoken space-filler <I was, like,
ready an hour ago>: Stage 2

F. The likes of. Is *the likes of* (= people or things of the same type as) disparaging? The linguist Dwight Bolinger calls the phrase, which didn’t become widespread till the 19th century, “dysphemistic” (*Language: The Loaded Weapon* 122 (1980)). Sometimes it’s disparaging, but not always. In fact, it’s more commonly positive than negative:

- Positive: “We may be able to ring in the new year with a fireworks show *the likes of* which nobody’s seen for a century.” David Kipen, “A Literary Hodgepodge,” *S.F. Chron.*, 24 Dec. 2000, at 35.

- Positive: “The country vocalist evokes the spirits of powerhouses past (Kitty Wells and Patsy Cline) as well as the present-day *likes of* Patty Loveless and Mandy Barnett.” “Best of Song,” *People*, 25 Dec. 2000, at 35.
- Neutral or Ambiguous: “They’ll do floor exercises, uneven bars, rings and other things to songs by *the likes of* Christina Aguilera and the Backstreet Boys.” Scott Mervis, “Hot List,” *Pitt. Post-Gaz.*, 17 Nov. 2000, at 2.
- Negative: “This is similar to putting *the likes of* David Duke and Pat Buchanan in charge of affirmative action or anti-discrimination.” Letter of Chris Ahmed, “Israel Ties Strong,” *Atlanta J.-Const.*, 25 Oct. 2000, at A15.
- Negative: “The GIC buys health coverage for all state employees, retirees and their families, while occasionally fending off politically charged attacks by *the likes of* Joe Kennedy and Mark Montigny.” “Pols & Politics,” *Boston Herald*, 24 Dec. 2000, at 19.

But variations of the phrase, *so-and-so and his* [or *her*] *like* and *something-or-something and the like*, often have a more discernible tinge of negativity—e.g.:

- “Supporters of private accounts . . . mistakenly count Moynihan *and his like* as true allies in this cause.” Jack Kemp, “Move Ahead on Social Security Reform,” *San Diego Union-Trib.*, 10 Jan. 2001, at B8.
- “Jonathan Sacks *and his like* stand for exclusivity.” Graham Turner, “Jew Against Jew Is a Greater Threat,” *Daily Telegraph*, 12 Apr. 2001, at 24.
- “Steve Drowne *and his like*, the middle-of-the-road jockeys who take work where they can get it, can afford no such protest.” Alan Lee, “Jockeying for the Right to Have a Day Off,” *Times* (London), 4 June 2001, Sports §, at 6.

See **ilk (B)**.

G. Faulty Comparisons with *like*. See ILLOGIC (B).

likely. Traditionally, this word had to be preceded by a modifier such as *very* or *quite* <they will quite likely require additional supplies>. Today, however, it is common to use *likely* as an equivalent of *probably* and not to insist on the modifier <they will likely require additional supplies>. See **apt (B)**.

LANGUAGE-CHANGE INDEX
likely as an equivalent of *probably* (as in
We’ll likely be on time): Stage 5

likes of. See **like (F)**.

-LILY. See ADVERBS (B).

limbo. Pl. *limbos*. See PLURALS (D).

limit; limitation. A *limit* is whatever marks an end to something, as in *city limits* or *speed limit*. A *limitation* is the extent of one’s capacity or a constraint that voids, as in *physical limitations* or *statute of limitations*.

linchpin (= [1] a locking pin, as in an axle, or [2] anything crucial to holding the parts of something together), a term dating back to Middle English, is preferably (and predominantly) so spelled. **Lynchpin*, which falsely suggests an association with *lynch*, is a chiefly BrE variant.

Current ratio (*linchpin* vs. **lynchpin*): 3:1

line. See **stand in line; wait in line**.

lineage; linage. The first is a common term meaning “ancestry.” The second is (1) an uncommon term meaning “the number of lines of something (such as a newspaper article)”; or (2) a bowling term for the number of games played. Although most dictionaries give *lineage* as a variant of *linage*, *lineage* should certainly not be considered a NEEDLESS VARIANT given the DIFFERENTIATION just described.

Linage has two syllables: /li-nij/. *Lineage* has three: /lin-ee-ij/.

line-driven. See **drive**.

-LING. See DIMINUTIVES (K).

lingerie. This French word emerged in the English language in the 1830s as a word denoting linen clothes, and soon became a EUPHEMISM for women’s underwear. A true French pronunciation is difficult in English, since the first syllable is a French nasal with no precise equivalent in English. Although the French pronunciation is something like /la[n]-zhree/—and that is the approximate BrE pronunciation—the established AmE pronunciation is /lon-jə-ray/. No advertiser would consider affecting a French pronunciation for an American audience. See HYPERCORRECTION (K).

linguine; *linguini. This word, pronounced /ling-gwee-nee/, is predominantly spelled *linguine*—not **linguini*.

Current ratio: 2:1

linguist; linguistcian. *Linguist* = (1) a student of linguistics, or (2) a person fluent in many languages. Sense 1 is the specialist’s one; sense 2 is the popular one. The potential AMBIGUITY of the term has led to the coining of another term, *linguistcian*—“a rather self-conscious title which linguistics scholars themselves never use, but which is sometimes useful to help avoid confusing the two senses of ‘linguist.’” David Crystal, *Linguistics* 36 (1971). The *OED* dates *linguistcian* from 1895. Though comparatively rare, it does appear from time to time—e.g.:

- “The primary interest of the *linguistcian* . . . is the sound of a language.” Lincoln Barnett, *The Treasure of Our Tongue* 272 (1964).
- “[M]ost literary critics are not certain if the *linguisticians* can tell them anything about what makes literary text valuable.” Vasant Anant Shahane, *Focus on Forster’s Passage to India* 78 (1975).

linguistics; philology. Both, broadly speaking, refer to the study of language. But there are differences. *Linguistics* = the scientific study of language, comprising etymology, semantics, phonetics, morphology, grammar, and syntax. *Philology* = (1) literary or classical scholarship; or (2) a specialized branch of linguistics dealing with changes in language over time. In sense 2, *philology* is sometimes known as *classical* or *historical linguistics*.

Etymologically, *philology* denotes the love of ‘logos’ (speech, word, or reason). Since the English Renaissance, it has denoted the love of learning and literature—in a broad sense. Since the 18th century, it has also meant the humanistic study of language or languages, especially in a historical or comparative way. But the word has been very much out of academic fashion since about the mid-20th century.

lip-sync, vb.; lip-synch. To *lip-sync*, of course, is to move one’s lips silently in synchronization with recorded vocals, either one’s own or someone else’s. Although the dictionaries are split between the *sync* and *synch* forms, the slight leader in print is *lip-sync*. But this is true only for the uninflected form: *lip-synching*, *lip-synched*, and *lip-syncher* are far more prevalent than the anomalously formed *lip-syncing*, *lip-synced*, and *lip-syncer*. Oddly, however, the inflected forms of *sync* (when used alone) are more common than those of **synch*. In the interests of uniformity—to keep the language in some degree of harmony, if not *sync*—the *synching-synced* forms should be preferred in all derivative phrases. See **sync**. So *lip-sync* seems destined to prevail.

Occasionally people misunderstand the phrase and write **lip-sing*—e.g.: “This is where freshmen and seniors together do wacky performances and where teachers *lip sing* [read *lip-sync*] in front of the students,” Sullivan said.” Grace Camacho, “A Golden Birthday,” *Orange County Register*, 16 Nov. 2000, at 1.

LANGUAGE-CHANGE INDEX

**lip-sing* for *lip-sync*: Stage 2

liquefy. So spelled. **Liquify*, which predominated till about 1750, is now considered a misspelling. E.g.: “McClintock doesn’t want any news of the existence of the virus—a fast-acting strain that *liquifies* [read *liquefies*] internal organs and has a 100 percent mortality rate—to leak out.” James Verniere, “Germ of an Idea,” *Boston Herald*, 10 Mar. 1995, at S3. Cf. **rarefy** & **stupefy**. See **-FY**. See also SPELLING (A).

LANGUAGE-CHANGE INDEX

liquefy misspelled **liquify*: Stage 2

Current ratio: 8:1

liqueur. See **liquor**.

liquid. See **fluid**.

***liquify.** See **liquefy**.

liquor; liqueur. Although *liquor* /lik-ər/ is any alcoholic drink in BrE (including beer and wine), it is generally only a strong alcoholic drink in AmE (gin, vodka, rum, etc.). In all varieties of English, *liqueur* /li-kuur/ is a strong sweet alcoholic drink usually taken in a small quantity after a meal. *Liquor* often wrongly displaces *liqueur*—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The drinks group is to unveil a £25 million promotional campaign for Baileys—its biggest investment in the cream *liquor* [read *liqueur*] brand.” “Need to Know,” *Times* (London), 4 Nov. 2008, at 40.
- “So what exactly is a Bushwacker? It’s a milkshake mix, coffee *liquor* [read *liqueur*], chocolate *liquor* [read *liqueur*], and white rum, according to Carmichael.” Kevin Robinson, “Bushwacker Fest Cools Summer Heat,” *Pensacola News J.*, 4 Aug. 2013, at C10.
- “The new expanded dessert menu will include Sexy Bananas Foster, which is bananas caramelized with dark brown sugar, flambéed with rum and banana *liquor* [read *liqueur*], and served with a scoop of vanilla ice cream.” Laura McFarland, “The Cajun Experience Opens New Restaurant,” *Winchester Star* (Va.), 21 May 2014, Life §, at 4.

liquorice. See **licorice**.

lissome; lissom. See **lithe**.

listen; hear. To *listen* is to try to hear, especially in order to understand, appreciate, or identify something. To *hear* is simply to perceive with the ear, whether with effort or not.

Listserv. See **e-mail list**.

lit. See **lighted**.

litany; liturgy. Etymologically speaking, a *litany* is a series of prayers; a *liturgy* is the canon of a religious service. In addition, *litany* has taken on the extended sense “a long and often repetitive recitation or listing” <a litany of complaints>.

litchi. See **lychee**.

liter (the basic measure of liquid in the metric system) is so spelled in AmE, *litre* in BrE. See -ER (B). The AmE spelling became firmly established about 1900.

literally = (1) with truth to the letter; or (2) exactly; according to the strict sense of the word or words. *Literally* in the sense “truly, completely” is a SLIPSHOD EXTENSION. E.g.: “Behavioralists and postbehavioralists alike, *literally* or figuratively, learn what they know of science from the natural sciences, from the outside.” (Read: *Behavioralists and post-behavioralists alike learn what they know of science from the natural sciences, from the outside*.)

When *literally* is used figuratively—to mean “emphatically,” “metaphorically,” or the like—the word is stretched paper-thin (but not literally). E.g.:

- “When I got to practice, I was stunned by the overwhelming fear the press had of Lombardi . . . *literally* petrified. He held everyone at bay and did very few interviews.” Nick Canepa, “First Game Was a Battle of TV Aerials,” *San Diego Union-Trib.*, 28 Jan. 1988, Super Bowl §, at 22. (Because we know it is a metaphor, simply say: *When I got to practice, I was stunned that the press was overwhelmingly petrified by Lombardi. He held everyone at bay and did very few interviews*.)
- “His coaches said BYU threw a different look at the Aztecs than last November, when he *literally* [delete *literally*] bombed the Cougars for 52 points.” Tom Krasovic,

“Aztecs Thinking Aerial Route Is the Way to Go,” *San Diego Union-Trib.*, 22 Sept. 1992, at C1.

- “For Chip Sullivan, former club professional turned PGA Tour pro, life *literally* [delete *literally*] has been turned upside down.” Randy King, “PGA Life Different than [read *from*] Being Home on the Range,” *Roanoke Times*, 15 Jan. 1997, at B1. (On the use of *different* in that headline, see **different** (A).)

A *New Yorker* cartoon that appeared on 28 February 1977 (p. 54), by Lorenz, had this funny bit of dialogue: “Confound it, Hawkins, when I said I meant that literally, that was just a figure of speech.”

Although *W3* (1961) acknowledged that *literally* could be used to mean “in effect, virtually,” it didn’t record the complete reversal in sense that led *literally* to mean “metaphorically” or “figuratively.” This reversal appears to have been first recognized in the early 1970s. See “What Is *Literally* Literally?” 48 *Am. Speech* 210 (1973).

LANGUAGE-CHANGE INDEX

literally for *figuratively* <we’re literally toast>: Stage 3

LITERARY ALLUSION. An allusion, if it isn’t too arcane, can add substantially to the subtlety and effectiveness of writing. To work, the allusion should refer to a common body of literature with which every cultured person is familiar. Increasingly, though, there isn’t any such body of literature. Even Shakespeare’s *Hamlet* is hopelessly recondite to many modern readers. So it’s hard to bring off a good allusion if it doesn’t relate to current events or popular culture.

The effective writer is wary on the one hand of hackneyed allusions, and on the other hand of allusions so learned that they’re inaccessible to the average educated reader. The following Shakespearean allusion, with the word *heir*, is likely to befuddle many readers: “He worries about graffiti. He knows the recession has hit the buildings’ owner, so he worries about the paint job and *the thousand shocks a building is heir to* in a rough neighborhood where people have things besides architectural design on their minds.” Lawrence Christon, “A Lasting Imprint,” *L.A. Times*, 15 Oct. 1995, at E1. This passage alludes to Hamlet’s famous to-be-or-not-to-be soliloquy: “and the thousand natural shocks that flesh is heir to” (*Hamlet* 3.1.61–62). The allusion works well even for the reader who doesn’t recognize the Shakespearean echo. Ideally, the words in an allusion flatter those who recognize it while not bothering those who don’t.

Of course, if an allusion is worthwhile, then it’s worth getting right. Johnnie Cochran, the famous defense lawyer in the O.J. Simpson murder trial, referred to *Dr. Jekyll and Mr. Hyde*, but his memory of the plot failed him: “Eleanor Knowles Dugan is the first of several to point out that Johnnie Cochran got himself all upscrewed when he said, ‘The prosecution is trying to portray Fuhrman as Mr. Hyde but he’s really Dr. Jekyll.’ Jekyll was the good guy, Johnnie.” Herb Caen, “Is It Friday Yet?” *S.F. Chron.*, 15 Sept. 1995, at A20.

***literateur**. See **littérateur**.

literati, the Italian plural of *litterato* (“lettered person”), corresponding to the Latin *litteratus*, is established as a plural in English. The closest singular is the GALLICISM *littérateur* (= a literary person). Whoever misuses *literati* as a singular is indisputably not a *littérateur*—e.g.:

- “Among the more remarkable things about the guide is that Bartholomew, scarcely a *literati* [read a *littérateur*], never dreamed of writing it at all.” Charlie Meyers, “If Books Could Thrill,” *Denver Post*, 28 Jan. 1998, at D16.
- “In the entries . . . are gems of her novels, but the writings are not the self-conscious renderings of a *literati* [read a *littérateur*] writing for posterity.” Marcy Smith Rice, “Dawn Powell’s Time to Be Reborn,” *News & Observer* (Raleigh), 25 Oct. 1998, at G5.
- “He is a *literati* [read a *littérateur*], musician, bon vivant, surfer dude and fly fisherman.” Phil Richards, “Colts’ Debut: Indy’s Good Catch,” *Indianapolis Star*, 9 Sept. 2012, at A1.

See **littérateur**.

Some writers use *literati* as a mass noun and match it with a singular verb, as if it were equivalent to a word like *bourgeoisie* <the bourgeoisie holds these ideas dear>.

LANGUAGE-CHANGE INDEX

1. *literati* misused to refer to a single person: Stage 1
2. *literati* as a mass noun with a singular verb: Stage 2

literatim. See **verbatim**.

literature is pronounced /lit-ər-ə-čuur/—not /lit-ər-ə-tyoor/ (or /lit-ər-čuur/). See PRONUNCIATION (B).

lithe; **lissome**; **lissom**; ***lithesome**. *Lithe* = supple; flexible; limber. *Lissome* (sometimes spelled *lissom*, especially in BrE) is synonymous with *lithe*, except that *lissome* additionally suggests graceful movement <perhaps the most lissome ballet dancer in the troupe>. Although **lithesome* dates from the late 18th century and is illustrated in the *OED* with three examples from the 19th, it remains a NEEDLESS VARIANT of *lithe*.

litigator; **litigant**. When it originated in the late 19th century, *litigator* was a NEEDLESS VARIANT of *litigant*. But now those two terms have been differentiated. While a *litigant* is a party to a lawsuit, a *litigator* is a lawyer who conducts lawsuits. See DIFFERENTIATION.

litigious (= eager to resolve disagreements through lawsuits) is three syllables: /li-tij-əs/—not /li-tee-jəs/ or /li-tij-ee-əs/.

littérateur (= a literary person), a GALLICISM, is sometimes misspelled **literateur*—e.g.: “However, poets and *literateurs* [read *littérateurs*], unwilling or unable to risk all in writing a Homeric epic from scratch, soldier on with their translations of epic poetry.” Marshall de Bruhl, “La Victoria de Santa Anna,” *L.A. Times*, 9

Mar. 1997, Book Rev. §, at 6. Omitting the acute accent from the first -e- is acceptable. See **literati**.

LANGUAGE-CHANGE INDEX

littérateur misspelled **literateur*: Stage 1
Current ratio: 16:1

littler; **littlest**. These forms—the comparative and superlative for *little*—are perfectly good, although some writers have gotten the odd idea that they’re not.

liturgy. See **litany**.

livable (= [1] bearable, endurable, or [2] suitable to an agreeable arrangement in life), dating from the early 19th century, is predominantly so spelled in AmE and BrE alike. **Liveable* is a chiefly BrE variant. Cf. **likable** & **lovable**.

Current ratio (*livable* vs. **liveable*): 5:1

livelong. See **lifelong**.

liven (up). See **enliven** & PHRASAL VERBS.

living in sin. This phrase, which reached its zenith in the 19th century, is on the wane. Even the Church of England has proclaimed that *living in sin* is a “most unhelpful” way of describing unmarried couples who cohabit. The Church estimates that four out of five couples live together before marrying. A major Church report in 1995 therefore concluded that the phrase should be dropped. Ruth Gledhill, “‘Living in Sin’ Is No Longer Sinful, Says Church Report,” *Times* (London), 7 June 1995, at 1.

llama. See **lama**.

load, n.; lode. Although they have similar etymologies, their meanings have fully diverged. *Load* (in its basic senses) means “a quantity that can be carried at one time” or, by extension, “a burden” <a load of work> <a load off my mind>. *Lode* carries the narrow meaning “a deposit of ore,” as well as the figurative sense “a rich source or supply.”

The correct phrase, then, is *mother lode* (= an abundant supply), not **mother load*. Although dozens of headline writers have used *mother load* as a pun (usually in reference to pregnant women), some have fallen into true error—e.g.:

- “She worked as a computer programmer, but kept plugging away at the music. And finally, she hit the *mother load* [read *mother lode*].” Tony Kiss, “Messina Never Gave Up Dream of Music Career,” *Asheville Citizen-Times* (N.C.), 3 Nov. 1996, at F1.
- “This site is a *mother load* [read *mother lode*] of investing and financial planning information.” Ted Sickinger, “Web Review,” *Kansas City Star*, 6 Apr. 1997, at F23.

LANGUAGE-CHANGE INDEX

**mother load* for *mother lode*: Stage 1
Current ratio (*the mother lode* vs. **the mother load*): 11:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

load factor. See AIRLINESE.

***loadstar.** See **lodestar**.

loadstone. See **lodestone**.

loaf. Pl. *loaves*. See PLURALS (C).

loan; lend. In strict usage, *lend* is the verb and *loan* the noun. The verb *loan* has long been considered permissible, however, when used to denote the lending of money (as distinguished from the lending of things). But both types of *loaning* are common. In print sources from 1600 to the present day, the collocation *he lent* has predominated over *he loaned*—in AmE and BrE alike.

LANGUAGE-CHANGE INDEX

1. *loan* (money) for *lend* (money): Stage 5
Current ratio (*lend money* vs. *loan money*): 3:1

2. *loan* (a thing) for *lend* (a thing): Stage 4
Current ratio (*lend me a car* vs. **loan me a car*): 1.5:1

loathe; loath; *loth. *Loathe* (/loʊtʰ/) is the verb meaning “to abhor, detest.” *Loath* (/loʊtʰ/), with its NEEDLESS VARIANT **loth*, is an adjective meaning “reluctant.” The verb spelling is often wrongly used for the adjective—e.g.:

- “If you are at a dinner, sitting at the head table, you may be *loathe* [read *loath*] to stand up and walk away because you are on display up there.” Charles Osgood, *Osgood on Speaking* 80–81 (1988).
- “Even young fans, usually *loathe* [read *loath*] to adopt the musical tastes of their parents, are bewildered.” Edna Gundersen, “Pink Floyd’s Retrogressive Progression,” *USA Today*, 25 Apr. 1994, at D1.
- “They have done little but dither, insisting they are *loathe* [read *loath*] to interfere in the market.” Barbara Yaffe, “Sales Will Slow, but Prices Won’t Back Down,” *Vancouver Sun*, 1 Sept. 2015, at C1.

LANGUAGE-CHANGE INDEX

loathe for the adjective *loath*: Stage 2
Current ratio (*am loath to* vs. **am loathe to*): 7:1

loathsome. So spelled, even though the first syllable sounds like the verb rather than the adjective (see **loathe**). Perhaps as a result of the sound association, many writers err by writing **loathesome*—e.g.:

- “An array of *loathesome* [read *loathsome*] characters drifts through this anthropology of the urban undead.” Chris Kidler, “Tama Janowitz’s ‘A Certain Age,’” *Baltimore Sun*, 8 Aug. 1999, at F10.
- “Severed Fingers and Toes (Gasworks) are extremely *loathesome* [read *loathsome*]-looking gummy chews, available at party stores.” Charles Perry, “Extreme Treats,” *L.A. Times*, 27 Oct. 1999, at H1.
- “The characters we first meet in ‘Nurse Betty’ are terminally dim, risible or *loathesome* [read *loathsome*].” James Verniere, “Zellweger Is a Reason to Love ‘Nurse Betty,’” *Boston Herald*, 8 Sept. 2000, at S21.

LANGUAGE-CHANGE INDEX

loathsome misspelled **loathesome*: Stage 1

***lobbier.** See **lobbyist**.

lobby. The legislative senses derive ultimately from the architectural sense of the word. In 19th-century

AmE, *lobby* came to denote (through the linguistic process known as metonymy) the people who habitually haunt the lobby of a legislative chamber to carry on business with legislators and especially to influence their votes.

As a verb, *lobby* has come to mean: (1) to frequent legislative chambers for the purpose of influencing the members’ official business <the group lobbied against the proposed reforms>; or (2) to promote or oppose (a measure) by soliciting legislative votes <the organization lobbied a measure through the House>.

The agent noun is *lobbyist*, meaning “someone who lobbies.” The term originated during the American Civil War. See **lobbyist**.

lobbyist; *lobbyer; *lobbier. The second and third forms are NEEDLESS VARIANTS. See **lobby**.

Current ratio (in order of headwords): 3,751:2:1

location; locale; locality. All three terms are frequently used. They are generally equivalent, but only *locale* has the sense “the setting or scene of action or of a story.”

loc. cit. See *ibid.*

locution. See **elocution**.

lode. See **load**.

lodestar (= a guiding light or principle) is so spelled—not **loadstar*.

lodestone; loadstone. The term meaning “something that strongly attracts” is predominantly spelled *lodestone* in AmE and *loadstone* in BrE. The BrE spelling vastly predominated throughout the 18th and 19th centuries. In the mid-19th century, the word was respelled to make it correlate more strongly with its etymology (fr. the OE *lode*, meaning “way”) and with its cognate *lodestar*. During the 20th century, this respelled version surpassed *loadstone* in AmE and still might in BrE.

Cf. **lodestar**.

lodgment; lodgement. This word (denoting [1] accommodations, shelter, lodgings; [2] the placing of something or someone into a fixed or stationary position; or [3] a place where something is positioned) is predominantly spelled *lodgment* in AmE, *lodgement* in BrE. But the medial *-e-* seems to be dropping in frequency in BrE. See MUTE E.

LOGIC. See ILLOGIC.

logical fallacy. See **grammatical error**.

logically. See SENTENCE ADVERBS.

lollipop is the standard spelling. **Lollypop* is a variant.
Current ratio: 11:1

lone; alone. *Lone* comes before the noun, *alone* after. Misusing *alone* for *lone* is an odd error: “Anything we fully do is *an alone* [read *a lone*] journey.” Natalie

Goldberg, *Writing Down the Bones* 169 (1986). See POSTPOSITIVE ADJECTIVES.

LANGUAGE-CHANGE INDEX
alone misused for lone: Stage 1

long-lived, adj. The traditional AmE preference, both in this phrase and in *short-lived*, has been to pronounce the second syllable /lɪvd/, not /lɪvɪd/. (The sense is “having a long life,” and the past-participial form has been made from *live* [lɪf/], not the ordinary verb *live* [lɪv/].) But the predominant practice today—and the BrE preference—is /lɪvɪd/. The AmE tendency to make it a short *-i-* is perhaps explainable on the analogy of the ordinary word *lived*; the BrE tendency may be influenced additionally by the phrase *long live the Queen*.

long-standing, adj. So spelled (with the hyphen).

longtime, adj. So spelled (without the hyphen).

***look badly**. See **badly** (A).

look over. See **overlook**.

loom large. See **bulk large**.

loose, v.t.; **loosen**. See **lose** (A).

Lord, a traditional term for the Christian God, has come under attack: “Some U.S. churches are beginning to question the title of Lord for Jesus Christ, reports the *Washington Post*, noting that the word is laden with negative meaning; some groups are replacing the title with gender-neutral terms such as Redeemer, Comforter or Friend. Rev. James Crawford of Boston’s Old South Church said his United Church of Christ should be seeking ‘metaphors for Ultimate Reality that do not assume a cosmos or creation where . . . some male-like figure or being is in charge.’” “Religion Watch,” *Globe & Mail*, 24 Aug. 1993, at A16. Whether the term will continue to flourish or dwindle in use remains to be seen, but a long struggle seems assured. See **SEXISM**.

For more on the title in British nobility, see **Tennyson**.

Lord Tennyson. See **Tennyson**.

***Los Angelean**. See **Angeleno**.

lose. A. And **loose**, v.t.; **loosen**. *Lose*, v.t., = to suffer the deprivation of; to part with. *Loose* is both an adjective meaning “unfastened” and a verb meaning “to release; unfasten.” *Loosen* bears a similar meaning, but whereas *loose* generally refers to a complete release <loosing criminals on the community>, *loosen* generally refers to a partial release <loosening one’s belt>. Additionally, *loosen* is figurative more often than *loose* is.

Loose is sometimes misused for *lose*—e.g.: “The Imperial Irrigation District also stands to *loose* [read *lose*] about seven percent of its allotment.” Dean E.

Murphy, “California Water Users Miss Deadline on Pact for Sharing,” *N.Y. Times*, 1 Jan. 2003, at A11.

LANGUAGE-CHANGE INDEX
lose misspelled *loose*: Stage 1

B. Lose no time. The phrase *no time should be lost* is famously ambiguous, suggesting either that something is urgently needed or that it’s so futile that it’s not worth the effort. “Urgently needed” is the usual sense, but not without a potential MISCUE—e.g.: “The General Assembly last Friday overwhelmingly passed a bill abolishing parole and reforming sentencing in Virginia, fulfilling in part Gov. George Allen’s central campaign promise. The House and Senate, however, did not at the same time approve a funding mechanism to make the plan a reality. *No time should be lost on this*.” “Parole Abolition Passes,” *Virginian-Pilot & Ledger-Star* (Norfolk), 5 Oct. 1994, at A14.

C. Lose out. See PHRASAL VERBS.

lot. See a **lot**.

***loth**. See **loathe**.

lotus. Pl. *lotuses*. See PLURALS (A).

loudhailer (BrE for “a bullhorn”) is so spelled—not **loudhaler*. See **hale**.

Louisianian; ***Louisianan**. The first is standard and traditional. The second is a variant that has grown in popularity since the 1940s. See DENIZEN LABELS.

lour. See **lower**.

lovable (= worthy of or attracting love), dating from the Middle English period, has been predominantly so spelled in both AmE and BrE since the mid-19th century. **Loveable* is a variant spelling. Cf. **likable & livable**.

Current ratio: 6:1

lovelily. See ADVERBS (B).

low; **lowly**. Each can function as both adjective and adverb: *a low profile*; *the supplies ran low*; *a lowly peasant*; *soar lowly through the clouds*. Because of the potential ambiguity, ensure that either word’s meaning is clear from the context.

lower; **lour**, vb. *Lower*—as a virtual synonym of *glower* (= to scowl), and pronounced with the same vowel sounds /lɔw-ər/—is so spelled in most AmE dictionaries. It also means (of the sky or a storm) to be dark and menacing. *Lour*, the standard BrE spelling, is listed as a variant form. That’s unfortunate because the spelling *lower* is an instant and inevitable MISCUE. We’d be well advised to use *lour* instead, as the British do—e.g.:

- “The visceral shock of the *Scarpia* theme, hammered out *tutta forza* in the opening bar of the piece, was here

underlined by his *louring* presence—an ominous figure picked out of the darkness in an unforgiving shaft of light.” Edward Seckerson, “Leap in the Dark,” *Independent*, 16 Sept. 1994, at 23.

- “His first lead was in Terence Fisher’s “The Curse of the Werewolf” (1961), where his *louring* looks were seen to advantage.” W. Stephen Gilbert, “They Live Again,” *Observer*, 30 June 1996, at 6.
- “The chorus moves like zombies and wears meaningless Jeff Koons cartoon-character heads, as bully boys in uniforms threaten violence and avenging angels *lour* from the heavens.” Rupert Christiansen, “Tchaikovsky’s Magical Card Dealt with a Dead Hand,” *Daily Telegraph*, 8 June 2015, at 23.

low-key, adj., is the standard form. **Low-keyed* is a variant.

Current ratio: 22:1

lowly. See **low**.

lubricious; ***lubricous**. This term—meaning (1) “lecherous, lewd” <a man known for becoming lubricious while drinking>; (2) “tricky, shifty” <a lubricious character who repeatedly eluded questioning>; or (3) “physically slippery” <a lubricious pole>—is preferably spelled *lubricious*. This form more accurately suggests the corresponding noun, *lubricity*. **Lubricous*, the standard form till about 1920, is now a NEED-LESS VARIANT.

Current ratio: 10:1

Lucullan (= lavish, luxurious) has been the standard term since the 18th century. **Lucullian* and **Lucullean* are variant forms.

Current ratio (*Lucullan* vs. **Lucullian* vs. **Lucullean*): 9:2:1

luggage. See **baggage**.

Luna. See **earth**.

lunatic does not have the respectable medical background of words such as *moron* and *idiot*, once-technical terms that were lost to popular usage and abandoned. Its past lurks more in superstitious folklore: derived from *Luna*, it originally denoted someone whose mad behavior was governed by the phases of the moon. Those connotations have faded, however, and today the term merely denotes an insane person. It is useful in that sense, and also as an adjective <lunatic fringe>. But since it’s a term of opprobrium <are you some kind of lunatic?>, it should be used cautiously, if at all.

lunge, vb., traditionally makes the present participle *lunging* /lɒŋ-jɪŋ/, not **lungeing*. Cf. **tinge**.

Current ratio (*lunging at* vs. **lungeing at*): 132:1

lustful; **lusty**. *Lustful* is the narrower word, meaning “driven or excited by sexual lust” <long, lustful looks>. E.g.:

- “The only great sex I have had has been in a loving relationship. It’s still pretty *lustful*!” Lester Middlehurst, “Question of Sex,” *Daily Mail*, 6 Apr. 1996, at 45 (quoting Paul Carrack, the singer).

- “People of any sexual orientation can be violent or *lustful*.” “Breakthrough on TV as Nation Faces Gay, Lesbian Issues,” *USA Today*, 27 Mar. 1997, at A12.

Lusty is broader and typically lacks the other word’s sexual connotations; it means either “vigorous, robust, hearty” <a lusty appetite> or “spirited, enthusiastic” <a lusty performance of *The Tempest*>. E.g.:

- “He tries desperately to reclaim his character’s *lusty* youthful bravura.” Lucia Mauro, “Next Theatre Takes Bard on Stylish Romp,” *Chicago Sun-Times*, 3 Apr. 1997, Features §, at 34.
- “The 57-year-old Lovett and his ace collaborators . . . spent more than two hours showcasing their prodigious skills, blending gospel fervor with country’s endearing wit, the blues’ *lusty* urgency and folk’s spare, elegant beauty.” Preston Jones, “Review: Lyle Lovett and His Large Band at Bass Hall,” *Ft. Worth Star-Telegram*, 24 Aug. 2015, Entertainment §.

Sometimes writers misuse *lusty* for *lustful*—e.g.: “The affair included 400 e-mail communications, cyber sex and, finally, long and *lusty* [read *lustful*] phone calls.” Kathleen Kernicky, “Caught in the Net,” *Sun-Sentinel* (Ft. Lauderdale), 3 Nov. 1996, at E1.

LANGUAGE-CHANGE INDEX
lusty misused for *lustful*: Stage 2

lustrum (= half a decade; a five-year period) must be one of the most overlooked yet most potentially useful words in the English language. The standard plural is *lustra*, not **lustrums*.

lusty. See **lustful**.

lutenist; ***lutanist**. One might well simply choose to say *lute player*. But if one of the *-ist* forms is called for, make it *lutenist* (the predominant form since about 1850).

Current ratio: 5:1

luxurious; **luxuriant**. These two words long ago underwent DIFFERENTIATION. *Luxurious* = characteristic of luxury <luxurious hotel>. *Luxuriant* = growing abundantly; lush <luxuriant foliage>. Cf. **spartan**.

Each word is sometimes confused with the other. Most commonly, *luxurious* is wrongly used for *luxuriant*—e.g.:

- “But during December, holly’s *luxurious* [read *luxuriant*] leaves and brightly colored berries become all but indispensable.” Lindsay Bond Totten, “Christmastime Less Colorful Without Holly in the Garden,” *Chicago Sun-Times*, 23 Dec. 2001, at C5.
- “Streets and yards are densely covered with the vines and flowers and *luxurious* [read *luxuriant*] vegetation of many semi-tropical varieties.” Melinda Kanner, “Savannah After Midnight,” *Harv. Gay & Lesbian Rev.*, 1 May 2002, at 22.
- “Frida Kahlo . . . was so proud of her *luxurious* [read *luxuriant*] facial hair that she painted it right on to her self-portraits.” Stephanie Mencimer, “The Trouble with Frida Kahlo,” *Wash. Monthly*, 1 June 2002, at 26.

But the opposite error, *luxuriant* for *luxurious*, also sometimes occurs—e.g.: “The Hostess House has the feeling of a large, *luxuriant* [read *luxurious*] home with plush velvet furnishings, an oak dance floor, a large

fireplace and enclosed decks and patios.” Lori Taff, “Services Abound to Assist Party Planners,” *Columbian* (Vancouver, Wash.), 30 Apr. 1996, Special §, at 2. (On the use of *home* and *house*, see **house**.)

LANGUAGE-CHANGE INDEX

1. *luxurious* misused for *luxuriant*: Stage 2
2. *luxuriant* misused for *luxurious*: Stage 2

luxury (= a very great pleasure or comfort that isn’t absolutely required) is pronounced either /**luk**-zhə-ree/ or /**lug**-zhə-ree/.

lychee (the small round fruit of a Chinese tree of the soapberry family) is now predominantly so spelled in AmE and BrE alike—though the variant spelling

litchi (prevalent in AmE and BrE from 1930 to 1980) remains popular in many parts of the English-speaking world. **Lichi* is another variant spelling—one that has fallen out of favor since the early 20th century.

lyings-in. See PLURALS (G).

***lynchpin**. See **linchpin**.

lyricist; lyrist. A *lyricist* /**lir**-ə-sist/ writes lyrics. Eric Partridge erroneously called it a “rare word” (*U&A* at 176), but in fact it’s quite common.

A *lyrist* /**lir**-ist/ plays the lyre. Although *lyrist* has occasionally been used as a synonym for *lyricist*, in that sense it’s a NEEDLESS VARIANT.

M

ma’am. This contraction of *madam* can be found pretty much throughout the English-speaking world. But it especially characterizes Southern, Midwestern, and Western AmE on the one hand, and British aristocratic speech (but only in reference to royalty) on the other. E.g.:

- “Greetings *Ma’am*: The Queen, in the only public appearance on her 70th birthday, is given flowers at the Church of St. Mary Magdalen at Sandringham yesterday.” “70th Birthday Flowers for the Queen,” *Independent*, 22 Apr. 1996, at 5 (photo caption).
- “Yes, *ma’am*, the museum’s architect is Shreveport’s own, Mike McSwain.” “You’ll Find Van Cliburn on the Left, Just Past Elvis,” *Times* (Shreveport, La.), 27 Aug. 2015, at C10.

macabre is pronounced /mə-**kahb**-r[ə]/ or /mə-**kahb**/—preferably the former.

macaroni; ***maccaroni**. The first has been the preferred spelling since the 18th century.

Current ratio: 30:1

macerate (= [1] to cause to waste or wither away from lack of nourishment, or [2] to steep or soak [something] in fluid so as to soften and separate into component parts) is pronounced /**mas**-ə-rayt/—not /**may**-sə-rayt/.

machete is best pronounced /mə-**shet**-ee/ or /mə-**chet**-ee/.

Machiavellian; ***Machiavelian**. The first has been the preferred spelling since the 18th century.

Current ratio: 55:1

machination. The first syllable is more properly pronounced /mak/, not /mash/.

machismo /mah-**cheez**-moh/ (= the quality of being macho; exaggerated masculine pride) is sometimes

mispronounced /mah-**keez**-moh/. It’s acceptable to say the first syllable with a schwa sound (/mə-/). The anglicized /-chiz-/ for the second syllable is gaining acceptance.

macho (= aggressively manly), borrowed from Spanish in the early 20th century, is best reserved for adjectival uses <macho bluster> <macho posturing>. Although the word has come into use as a noun synonymous with *machismo*, the latter term is more appropriate for that sense. See **machismo**.

mackintosh; McIntosh; Macintosh. A *mackintosh* (often, in BrE, shortened to *mack*) is a waterproof raincoat. Although the inventor was Charles Macintosh, the 19th-century Scottish chemist, the garment’s name has come to be spelled differently, with the internal -k-. Some writers spell the word according to the man’s correct name—*macintosh*—but this remains a mere variant, and the chance of reverting to that spelling is probably long past. A *McIntosh* (also termed a *McIntosh red*) is a late-maturing apple known for its juiciness and tang. And of course, a *Macintosh* is a brand of personal computer. Orally, the three terms can be confusing: “I ate the only *McIntosh* I could find,” “I took my *mackintosh* with me,” etc. As one writer put it, “Even *Macintosh*, which once meant a type of raincoat [still does!] or a particular type of apple [ditto], now means something else to millions.” James Coates, “Its Future Uncertain as Buy-out Rumors Persist,” *Chicago Trib.*, 25 Jan. 1996, at N1.

MACRON. See DIACRITICAL MARKS.

mad. Although this word has various nuances, the two primary senses are (1) “demented, insane,” and (2) “angry.” Unfortunately, sense 2—though predating Shakespeare and actually used by him—became stigmatized during the early 20th century as somehow

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

substandard. The stigma should never have attached. The word is less formal than *angry*, *ireful*, *wrathful*, or **wroth*, but it's perfectly acceptable and has been for centuries.

***madamoiselle**. See **mademoiselle**.

madding crowd; ***maddening crowd**. By historical convention, *madding crowd* is the idiom, dating from the late 16th century. Unlike *maddening*, which describes the effect on the observer, *madding* (= frenzied) describes the crowd itself. Thomas Gray's "Elegy in a Country Churchyard" (1749) and Thomas Hardy's novel *Far from the Madding Crowd* (1874) helped establish this idiom, especially Gray's "far from the *madding crowd's* ignoble strife." In modern writing, *madding crowd* remains more than six times as common as its corrupted form.

But some writers get it wrong—e.g.:

- "Far from the *maddening* [read *madding*] crowd of shoppers and away from the tinsel and mistletoe, Grinches, apparently, are everywhere." Mike Pellegrini, "Bah! Humbug!" *Pitt. Post-Gaz.*, 22 Dec. 1996, at G9.
- "'Being typecast would bother me if my career weren't flourishing outside of the show,' the 47-year-old Williams says earnestly in a tiny office away from the *maddening crowd* [read *madding crowd*]." Joel Reese, "Here's the Story, of a Man Named Williams," *Chicago Daily Herald*, 13 Aug. 2002, Suburban Living §, at 1.

LANGUAGE-CHANGE INDEX

**maddening crowd* for *madding crowd*: Stage 2
Current ratio (*madding crowd* vs.
**maddening crowd*): 6:1

mademoiselle. So spelled. **Madamoiselle* is a frequent misspelling—e.g.:

- "Photo of Sherry Francis as Madame de Volanges, Mary Lilly as Madame La Marquise de Merteuil, Erica Welborn as *Madamoiselle* [read *Mademoiselle*] Cecile Volanges." "A Stitch in Time," *Sunday Advocate* (Baton Rouge) (Mag.), 24 Sept. 1995, at 14 (photo caption).
- "A few days later, *Madamoiselle* [read *Mademoiselle*] Agnes, a reporter for French television with a lot of *moxie* [read *moxie*], turned up at the Balenciaga show in a vintage embroidered shearling coat." Kate Betts, "The Trends That Just Blew In," *N.Y. Times*, 17 Feb. 2002, § 9, at 4.

The term is abbreviated *Mlle.* in the singular, *Mlles.* in the plural. In BrE, the period after the abbreviation is normally omitted.

maelstrom, originally a Dutch word referring to a grinding or turning stream, is frequently misspelled **maelstorm*—e.g.: "The *maelstorm* [read *maelstrom*] resulting from the refusal of Denver Nuggets basketball player Mahmoud Abdul-Rauf to stand for the national anthem has prompted some to wonder if the line between reverence and disrespect isn't . . . [hard] to delineate these days." Karen Crouse, "Degrees of Respect Vary in NHL Arenas," *Orange County Register*, 24 Mar. 1996, at C12.

LANGUAGE-CHANGE INDEX

maelstrom misspelled **maelstorm*: Stage 1
Current ratio: 1,375:1

Mafia; ***Maffia**. The latter—the Italian spelling—is merely a variant in English and ought to be avoided. The term is normally capitalized except when it refers figuratively to a non-Italian group <Chinese mafia>.

mafioso; **mafiosi**. A *mafioso* is a member of the Mafia, a secret criminal society. The Italian plural *mafiosi* is far more common than the anglicized **mafiosos*. The feminine form *mafiosa* is rarely seen.

Although *Mafia* is predominantly capitalized in modern print sources, *mafioso* traditionally isn't.

Magdalen(e). The (more famous) Oxford college is *Magdalen*; the Cambridge college is *Magdalene*. They're spelled differently but pronounced the same. Although the Magdalen Islands, in Quebec, have an intuitive English pronunciation (/mag-də-lən/), the colleges are both pronounced /mawd-lən/. In fact, that pronunciation gave rise to the English word *maudlin* (= excessively sentimental), from Mary Magdalene's traditional depiction as a sobbing penitent. Although her name is spelled with an *-e* on the end, the islands and the Oxford college omit it.

Magi (the three wise men who, according to the Bible, brought gifts to the baby Jesus) is pronounced /may-ji/ (rhymes with *pay by*)—not /maj-i/. The singular *Magus* /may-gəs/ is much less commonly encountered.

magic, adj.; **magical**. Native speakers of English don't have nearly as much trouble using these words appropriately as lexicographers have classifying the uses adequately. Both may mean either (1) "of, relating to, or involving mystical powers that allow impossible things to be accomplished," or (2) "of, relating to, or involving the performance of tricks for entertainment, esp. by sleight of hand." *Magic* tends to be used attributively as a means of identification <magic word> <magic spell>, while *magical* tends to be more descriptive <with magical speed> <a magical evening together>. Hence *magical* often means "enjoyable, exciting, or romantic in an unusual way" <what a magical vacation>. Only *magical* functions as a predicate adjective <the effect was magical> <the rescuer must have been magical>. In the predicate position, *magic* tends to be perceived as a noun <It was magic!>.

magisterial; **magistral**; ***magistratic**; ***magistratical**. Although *magisterial* carries connotations of nobility, command, and even dictatorialness, it is also the preferred adjective corresponding to the noun *magistrate*. In this latter sense, **magistratic* and **magistratical* are NEEDLESS VARIANTS. *Magistral* = (1) of a master or masters <an absolutely magistral work>; or (2) formulated by a physician <a magistral ointment>.

magistracy; ***magistrature**; ***magistrateship**. The first of these is the standard term either for the office, district, or power of a magistrate, or for a body of magistrates. **Magistrature* and **magistrateship* are NEEDLESS VARIANTS.

Current ratio (in order of headwords): 1,022:62:1

magistral. See **magisterial.**

***magistratic; *magistratical.** See **magisterial.**

***magistrature.** See **magistracy.**

Magna Carta. A. And *Magna Charta. The usual—and the better—form is *Magna Carta*. *Time* magazine used the variant spelling and found itself on the defensive: “We were unfairly reproved for our spelling of the document *Magna Charta* [Living, Nov. 11]. Although many publications use the more familiar *Magna Carta*, most dictionaries prefer the word we used, *charta*, from the Latin word for paper.” “Going by the Rules,” *Time*, 16 Dec. 1991, at 9. Which dictionaries? Not *W3*, *RH2*, *AHD*, *W11*, or the *OED*—the last of which shows that the great document was known exclusively as *Magna Carta* from the 13th to the 17th centuries. And the leading British textbooks on the subject, by W.S. McKechnie and J.C. Holt, use *Carta*. For the full history of the vicissitudes of the two spellings, see Bryan A. Garner, “A Lexicographic Look at *Magna Carta*,” in *Magna Carta: Muse and Mentor* 85 (Randy J. Holland ed., 2014).

And what about the *Time* editors’ argument that *charta* is the Latin word for “paper”? That argument is empty: *charta* and *carta* are variant forms bearing the same meaning in Latin.

Current ratio: 2:1

B. Article with. Traditionally, *Magna Carta* did not take a definite article: one said *Magna Carta*, not *the Magna Carta*. This traditional usage is still followed closely in London and, less rigorously, elsewhere in England—e.g.:

- “The Declaration of Arbroath was a century after *Magna Carta*: and the baronial limitations on kingship in the earlier document were also to filter down, to give all a dim sense of being ‘freemen.’” John Lloyd, “Brave Heart’s Campaign Trail,” *Fin. Times*, 4 Jan. 2003, Books §, at 5.
- “Although *Magna Carta* expressly forbids it, torture has often been a part of judicial procedures in England.” “The Sight of the Rack,” *Economist* (U.S. ed.), 11 Jan. 2003, Special Report §, at 1.
- “It was Wilberforce’s hatred that abolished slavery. It was hatred of fascism that won the war. It was hatred that forged the Health Service, marched for civil rights, wrote *Magna Carta*.” A.A. Gill, “The Red Lion,” *Sunday Times* (London), 26 Jan. 2003, Features §, at 48.

But writers outside England—even elsewhere in the U.K., in Commonwealth countries, and in former colonies, including the U.S.—rarely follow suit. E.g.:

- “There have been many detested monarchs from bad King John, despite the fact that he signed the *Magna Carta*, onwards.” Brian Meek, “Why They Still Long to Reign over Us,” *Herald* (Glasgow), 26 Nov. 2002, at 14.

- “It takes a long time for a culture of democracy to emerge. . . . Arguably, the British experience began with the *Magna Carta* in 1215.” Keith Suter, “Africa Sinks into Danger of No Return,” *Canberra Times*, 14 Jan. 2003, at A11.
- “They believe that the White House is trying to usurp their legislative power of the purse—a power, their staffers point out, that dates to the *Magna Carta*.” Michael Grunwald, “Washington’s Loudest Voice for Frugality,” *Wash. Post*, 20 Jan. 2003, at A1.

magnate; magnet. A *magnate* (/mag-nayt/) is a tycoon, a person who has grown rich in a field that is usually specified <oil magnate>. A *magnet* (/mag-net/) is a piece of metal that attracts iron and aligns with the earth’s north and south poles (or with another magnetic field).

Magnate is occasionally misspelled *magnet*, an unattractive error—e.g.:

- “He even adds appearances by railroad *magnet* [read *magnate*] James J. Hill and novelist Sinclair Lewis.” Jeremy C. Shea, “Browsing: Mysteries,” *St. Louis Post-Dispatch*, 26 Sept. 1999, at F10.
- “A sign outside the apartment building where Storm and Harrison live chronicles the history of Phillipsburg from 1654 . . . to 1887, when the town famous for its ‘beautiful architecture, excellent schools and churches’ attracted bankers, artisans and railroad *magnets* [read *magnates*] and South Main Street ‘was affectionately known as millionaire’s row.’” Nancy Averett, “Fire Damages Structure in P’burg Historic District,” *Morning Call* (Allentown, Pa.), 30 May 2000, at B1.
- “Railroad *magnet* [read *magnate*] Henry Flagler had hardly noticed the place when building the Florida East Coast Railroad southward in the 1890s to his new playground for the rich, Palm Beach.” Elliott Jones, “Creation of a Garden,” *Press J.* (Vero Beach, Fla.), 16 Nov. 2001, at C1.

Before the Gilded Age of the late 19th century, the terms *magnate* and *tycoon* both referred to prominent people in business and politics. In that era, however, the words were applied to super-rich industrialists such as Andrew Carnegie and John D. Rockefeller; the words suggest massive wealth and are still used more commonly with older industries. Hence it is more common today to read of a *railroad magnate* or an *oil tycoon* than a *software magnate* or a *telecom tycoon*.

main, adj. See **ADJECTIVES (B)**.

mainstream, v.t., is a jargonistic **VOGUE WORD**. It originated in the mid-1970s when Congress mandated that handicapped children be accommodated in regular classrooms. The following use is typical—e.g.: “Adrienne Lissner of St. Louis advocates *mainstreaming* autistic children in school.” Joan Little, “Dealing with the Myths and Reality of Autism,” *St. Louis Post-Dispatch*, 12 Jan. 1997, at C12. (A possible revision: *Adrienne Lissner of St. Louis advocates putting autistic children into regular classes*. Or: *Adrienne Lissner of St. Louis advocates keeping autistic children in regular schools*.)

In the 1980s the word came to be used more and more to denote the integration of any subculture into the main culture—e.g.:

- “It means Hispanics are *mainstreaming themselves* [read *moving into the mainstream*],” said Robin Rorapough, Texas director for the Clinton campaign.” Sam Attlesey, “Texas Politics,” *Dallas Morning News*, 22 Mar. 1992, at A46.
- “Borne up by popular culture, including the wildly successful ‘Friends’ sitcom, single momhood has been *mainstreamed*, even romanticized.” Tom Jackson, “Where, Oh Where, Is the New Virginity?” *Tampa Trib.*, 8 Dec. 2002, Pasco ed., at 1.
- “Other elements of black college subculture were *mainstreamed* by Spike Lee’s 1988 movie ‘School Daze’ and the 1987–93 TV sitcom ‘A Different World.’” Natalie Hopkinson, “Nick Cannon, Big Shot,” *Wash. Post*, 9 Jan. 2003, at C1.

See **FUNCTIONAL SHIFT (D)**.

majority. A. For *most*. When *most* will suffice, use it in place of *majority*—e.g.: “The *majority* [read *Most*] of the budget increase is due to the long-awaited expansion or replacement for city hall.” Dave Nicholson, “Public Hearings Set on Budget,” *Tampa Trib.*, 6 Sept. 1997, at 1. *Majority* is most helpful in discussing votes—e.g.: “And let’s not forget that a *majority* of Michigan voters approved term limits.” Joseph A. Morton, “Should Michigan Kill Term Limits?” *Detroit News*, 6 Sept. 1997, at C14.

B. Number. *Majority* is sometimes a **COLLECTIVE NOUN** that takes a singular verb, but sometimes (through **SYNESIS**) it’s a plural demanding a plural verb—e.g.:

- “But the clear *majority reach*, or at least attempt to reach, that level where quality dwells.” Jack Valenti, “Lights! Camera! Rhetoric!” *Wash. Post*, 4 Feb. 1996, at C4.
- “It is unwise, however, to become complacent, especially when the *majority seems* to have done just that.” “Insider Trading,” *Tulsa Trib. & Tulsa World*, 24 Aug. 1997, at E4.

Especially in the phrase *a majority of (people or things)*—with the *of*-phrase spelled out—the word *majority* is generally treated as a plural in both AmE and BrE. E.g.: “Since the *majority* of shops that will open tomorrow *were* also open last Sunday, most shoppers will be hard put to notice the difference that the law has made.” Tim Jackson, “Open All Hours (Well, Almost),” *Independent*, 27 Aug. 1994, at 11. Still, the sentence could be advantageously recast: *Since most shops that will open tomorrow were . . .*

C. And plurality. *Majority* and *plurality* are most often used in reference to elections and other types of surveys. A *majority* (sometimes termed an *absolute majority*, although there is no distinction) is either (1) a number of votes that is more than half the total <the referendum passed with a 53% majority>, or (2) the numerical spread by which the majority won <when Jeffords bolted, the Democrats took control of the Senate with a one-vote majority>. *Majority* is often used as an adjective to designate the bloc with the most votes or members <some committee members dissented from the majority report>.

In a contest with three or more candidates or questions, a *plurality* is either (1) the largest vote, or (2) the difference between the largest vote and the second-largest vote. It is often contrasted with a *majority* because a *plurality* may be smaller than 50% <Hirsch won a plurality in the first mayoral election, but third-party candidates drew off enough votes to deny her a majority and force a runoff>.

The terms *majority* and *plurality* are usually distinguished, so that the results of an election are announced as one or the other depending on whether one candidate or question won more than 50% of the vote. In this commonly observed distinction, a *plurality* is less than a *majority*. That can make a difference in the outcome (see the example in the paragraph above) or in the strength of the winner’s mandate. For example, a *plurality* opinion by the Supreme Court (i.e., one that is signed by fewer than five justices) may

carry less weight as precedent than a *majority* opinion. But if rules merely call for a *plurality* election, the distinction disappears: a *majority* is always a *plurality* as well.

majuscule. See **minuscule.**

make an attempt; make an effort; make efforts. These phrases are verbose for *try*—e.g.:

- “The association said that if a mass disaster occurs, it will *make efforts* [read *try*] to warn disaster victims that they may be approached by ‘parachute lawyers.’” “Arundel Digest,” *Capital* (Annapolis), 11 Jan. 1997, at C1.
- “Although Larson *makes an attempt* [read *tries*] to paint a psychological portrait of Holmes, his portrait of Burnham is as dry as fallen leaves in December.” Cathy Frisinger, “A Long-Winded Chicago Sage,” *Ft. Worth Star-Telegram*, 16 Feb. 2003, at D6.
- “Although Brown says her family generally avoids discussing the murders, they do *make an effort* [read *try*] to tell Sydney and Justin about Nicole.” Thomas Fields-Meyer et al., “O.J.’s Kids Now,” *People*, 17 Feb. 2003, at 69.

make-believe (the pretense that something unreal actually exists) is the standard term—**make-belief* being a variant. *Make-believe* can also be an adjective meaning “pretended or imaginary” <make-believe friends>.

Current ratio: 66:1

make do (= to manage with what happens to be available, however inadequate it may be) is distressingly often written **make due*, a blunder—e.g.:

- “The Bulls will have to *make due* [read *make do*] until Rodman returns to the lineup Saturday night.” Terry Armour, “Bulls Heed Call for All Rebounders,” *Chicago Trib.*, 12 Dec. 1996, Sports §, at 6.
- “The state is trying to *make due* [read *make do*] by asking the State Patrol to pay particular attention in the area to driving that can cause accidents.” Kery Murakami, “When a Single Driver Can Use HOV Lane,” *Seattle Post-Intelligencer*, 13 Jan. 2003, at B1.
- “As much as I treasure Roberto and the kids, living free of the hierarchy, we’re *making due* [read *making do*] with a loose network of other runaways, outcasts, antisocials.” Cynthia Leitich Smith, *Tantalize* 45 (2007).

For more on this type of verb, see PHRASAL VERBS.

**make due with*): 40:1

make efforts. See **make an attempt.**

make up. See **comprise (C).**

malaise (= a vague feeling of being slightly sick or unwell, often suggesting the onset of an illness), a GAL-LICISM first used in English in the mid-18th century, is preferably pronounced /mə-*layz*/, /mə-*lez*/, or /mal-*ayz*/—always with the accent on the second syllable. Avoid stressing the first syllable.

MALAPROPISMS are words that, because they are used incorrectly, produce a humorous effect. The term derives from the character Mrs. Malaprop in Richard Brinsley Sheridan’s play *The Rivals* (1775). Mrs. Malaprop loves big words, but she uses them ignorantly and creates hilarious solecisms and occasionally embarrassing double entendres. One of Mrs. Malaprop’s famous similes is *as headstrong as an allegory on the banks of the Nile*. Elsewhere, she refers to the *geometry of contagious countries*.

What most sources do not point out is that Sheridan borrowed the device from Shakespeare, who used it quite often for comic effect, always in the mouths of lower-class characters who are unsuccessfully aping the usage of their social and intellectual betters and saying something quite different (sometimes scandalously different) from what they meant to say. For example, Elbow, the incompetent constable in *Measure for Measure*, says of a bawdy house that it is “a respected [read *suspected*] house” (2.1.162). Several equally hilarious misusages—in this scene and others—have the judge standing bemused as both the accused and the accuser get their meanings tangled up.

A well-known example of a Shakespearean malapropism that skirts sacrilege is Bottom the Weaver’s garbled version of 1 Corinthians 2:9, delivered near the end of *A Midsummer Night’s Dream*: “The eye of man hath not heard, the ear of man hath not seen, man’s hand is not able to taste, his tongue to conceive, nor his heart to report, what my dream was” (4.1.211–14).

Modern examples aren’t hard to come by. One lawyer apparently mistook *meretricious* (= superficially attractive but false, like a prostitute) for *meritorious*, with embarrassing consequences: he asked a judge to rule favorably on his client’s “meretricious claim.” See **meretricious**. Similarly, Senator Sam Ervin recalled a lawyer who, in arguing that his client had been provoked by name-calling (*epithets*), said: “I hope that in passing sentence on my client upon his conviction for assault and battery, your honor will bear in mind that he was provoked to do so by the *epitaphs* hurled at him by the witness.” Paul R. Clancy, *Just a Country Lawyer* 121 (1974). See **epithet (B)**.

Other examples are *infinitesimal* (= very small) for *infinite* (= boundless), e.g.: *across the infinitesimal universe*; *nefarious* (= evil) for *multifarious* (= greatly varied), e.g.: *ties, shirts, shoes, belts, socks, and all the other nefarious parts of one’s wardrobe*; *voracity* (= greediness with food) for *veracity* (= truthfulness), e.g.: *How dare you attack my voracity!*; and *serial* for *surreal*, e.g.: *it was truly a serial experience*.

For yet other examples, see **advert**; **allusion (A)**; **apposition**; **attain**; **attribute**, v.t.; **beggar description**; **behest**; **climactic**; **confess (B)**; **deep-seated**; **disparaging**; **effrontery (A)**; **equivalent (B)**; **for all intents and purposes**; **gambit (B)**; **guerrilla**; **heart-rending**;

Hobson's choice (C); illicit; impotence (B); inclement; infest (B); infinitely (A); inhere (B); in lieu of (B); moot (C); odious; penile; perpetuate; perspicuous; pillar; *uncategorically; & *unmercilessly. Cf. WORD-SWAPPING.

male, adj.; **masculine**; **manly**; **manlike**; **mannish**. All these terms mean “of, relating to, or involving men,” but their uses can be finely distinguished. *Male* is the most neutral <male-pattern baldness>. *Masculine* shares this neutral sense <masculine traits>, but often suggests the positive qualities traditionally associated with men <his masculine confidence was no charade>. *Manly* carries the positive connotations of *masculine* <manly strength and vigor>. *Manlike* most often refers to nonhumans <a tribe of manlike apes>. *Mannish* typically has negative connotations, especially in reference to a woman <she had a mannish appearance>.

Although these terms bear interesting historical distinctions, in modern usage some of them—particularly *manly* and *mannish*—are considered politically incorrect: *manly* because it suggests that women don't possess the admirable qualities denoted, and *mannish* because it typically applies to women in a derogatory sense. Cf. **female**. See **SEXISM (C)**.

malefaction. See **malfeasance**.

malefactor has four syllables: /mal-ə-fak-tər/.

***malefeasance**. See **malfeasance**.

malevolent; maleficent. Whereas the former means “desirous of evil to others,” the latter means positively “hurtful or criminal to others.” Hence *malevolent* has to do with malicious desires and *maleficent* with malicious actions. Cf. **beneficent**.

Maleficent is pronounced /mə-**lef**-i-sənt/—not /mə-**lif**-ə-sənt/. Cf. **beneficent**.

malfeasance; *malfeazance; *malefeasance; misfeasance; malefaction. Because the words *malfeasance* and *misfeasance* are imprecise in AmE, we begin with the clear-cut BrE distinctions. In BrE, *malfeasance* refers to an unlawful or intentionally wrongful act, whereas *misfeasance* refers to an otherwise lawful act performed in a wrongful manner. **Malfeazance* and **malefeasance* are obsolete spellings of *malfeasance*.

In AmE, *malfeasance* has traditionally been associated with misconduct by a public official. But more and more it is used to denote wrongdoing by anyone in a position of trust—e.g.: “Lawyers, accountants, corporate consultants, executive recruiters and retired chief executives are selling themselves as experts on the federal law passed last year to crack down on corporate *malfeasance*.” Ameet Sachdev, “Corporate Governance Becomes Go-To Field,” *Chicago Trib.*, 20 Jan. 2003, Bus. §, at 1. See **malfeasant**.

Misfeasance is a more general word meaning “transgression, trespass”—e.g.:

- “As stated above, most of those who do not receive a high-quality education are members of minority groups

or come from low-income families. No nation in the 21st century will be able to sustain this type of educational *misfeasance* and expect to remain a leader among nations.” Mary H. Futrell et al., “Teaching the Children of a New America: The Challenge of Diversity,” *Phi Delta Kappan*, 1 Jan. 2003, at 381.

- “Kyle, 65, resigned the job of legislative auditor, the head of the principal agency ferreting out *misfeasance* in state and local governments.” Lanny Keller, “Running for Office Takes Different Kind of Skills,” *Advocate* (Baton Rouge), 23 Jan. 2003, at B9.

Misusage of *misfeasance*, as by referring to something of great seriousness, is relatively common—e.g.: “The death of children while under the supposed protection of the state is not only tragic but evidence of *misfeasance*.” Editorial, “Child Deaths Expose Systemic Failures,” *Indianapolis News*, 20 Feb. 2003, at A14. A child's death goes beyond being a mere transgression or trespass, even if it is the result of a public official's or agency's neglect in performing duties. The writer probably meant *malfeasance*.

Malefaction (= crime, offense) has become an ARCHAISM.

malfeasant, adj., corresponds to the noun *malfeasance*. See **malfeasance**.

***malfeazance**. See **malfeasance**.

MALFORMATIONS. See MORPHOLOGICAL DEFORMITIES.

malignancy; malignity. *Malignancy* = a cancerous tumor. The word is well known. *Malignity* = wicked or deep-rooted ill will or hatred; malignant feelings or actions. E.g.: “[Tom] Paulin is also famous for having led the attack on T.S. Eliot for his anti-Semitism—he argued in a passionate review of a book on the subject that you can't separate the poetry from the poet's *malignity*.” Judith Shulevitz, “Senescent Prejudices,” *N.Y. Times*, 12 Jan. 2003, § 7, at 23.

malignant. See **benign**.

mall. See **maul**.

malodorous. See **odorous**.

malpractice (= the failure of a usu. licensed professional to render competent services) is preferably pronounced /mal-**prak**-tis/—not /mal-**prak**-tis/.

maltreat. See **mistreat**.

mammilla /ma-**mil**-ə/ (= a female mammal's nipple) has been the standard spelling in AmE since about 1830. It was long the standard spelling in BrE as well, but beginning in the mid-1960s the variant spelling *mamilla* took hold in BrE. One might predict that this anomaly, based on a Latin diminutive spelling, won't last—given all the etymologically related words that double the *-m-* (*mamma*, *mammiferous*, *mammilate*, *mammography*, etc.). But a resolution in favor of *mammilla* in BrE may well take decades. The plural is *mammillae* /ma-**mil**-ee/.

-MAN. See SEXISM (C).

man. See SEXISM (C).

man and wife. Since the 1960s, this phrase has been steadily decreasing in frequency. The reason, presumably, is that it does not accord the woman an equal status—i.e., she is referred to only by her marital status. A more balanced phrasing is *husband and wife*. See SEXISM (E). Interestingly, the collocation *husband and wife* has predominated over *man and wife* in print sources since the mid-18th century.

mandatory; mandatary. *Mandatory* is the usual word, meaning “obligatory, compulsory.” *Mandatary* is much rarer; it’s either a noun meaning “a person or entity holding a mandate; an agent” or an adjective meaning “of, relating to, or involving an agency relationship.” For purposes of DIFFERENTIATION, *mandatory* should not be used as a noun where *mandatary* can work in its place.

mandolin. The stringed instrument is so spelled—not *mandoline*. A *mandoline* is a food-slicing device.

maneuver has been the predominant AmE spelling since the 1930s. *Manoeuvre* has always predominated in BrE.

mango. Pl. *mangoes*. See PLURALS (D).

mangy (= [1] suffering from the skin disease called mange; or [2] unhygienic, filthy) is so spelled—not **mangey*. E.g.: “Six years ago, [Michael] Cecchi, an actor, had rescued a *mangey* [read *mangy*] Luca from a kennel in New Jersey.” Alexandra Zissu, “After the Breakup, Here Comes the Joint-Custody Pet,” *N.Y. Times*, 22 Aug. 1999, § 9, at 1.

manic depression (dating from 1911), known also as *manic-depressive illness* (dating from 1951), denotes a mental disorder characterized by alternating episodes of depression and mania. By the late 20th century, the terms were seen by mental-health professionals as DYSPHEMISMS, perhaps because they had entered the popular consciousness and had begun appearing in nonclinical senses. Hence a new term was created in the late 1970s: *bipolar disorder*, in reference to the alternating extremes in mood. Today *bipolar disorder* is by far the most common term for the illness—so much so that it has entered everyday speech <he’s so bipolar!>. A new clinical term may one day be required if the term becomes widely abused.

manicure; pedicure. **A. Sense.** *Manicure* = (1) a cosmetic treatment or care for hands, esp. the fingernails; or (2) a person who provides such treatments or care. The second sense has been almost wholly replaced by *manicurist*.

B. As Verb. *Manicure* = (1) to give cosmetic treatments to another’s hands, esp. trimming, polishing, and grooming the fingernails; or (2) to trim closely and neatly; to make neat and attractive. In its second, extended sense, golf-course fairways, hedges, and the like are manicured.

C. And pedicure. As a noun, *pedicure* = (1) a cosmetic treatment or care for the feet, esp. the toenails; (2) the care or cosmetic treatment of an animal’s claws or hooves; (3) medical treatment of the feet for minor problems such as corns or bunions; or (4) a person who provides medical or cosmetic treatments for feet. It also has a verb sense (= to treat the feet cosmetically or surgically) and may be transitive or intransitive. It has been used since 1896, although it has never been as common as *manicure*.

Because *mani-* denotes something related to the hand, and *pedi-* to the foot, these terms are restricted to those specific body parts. Some writers misunderstand this. Hence:

Noun:

- “Webster pampers her feet with weekly *manicures* [read *pedicures*], moisturizers, and a pumice rock.” Luisa Yanez, “Fancy Footwork,” *Sun-Sentinel* (Ft. Lauderdale), 27 Feb. 1998, at B3.
- “Another girl fussed while giving her toenails a quick *manicure* [read *pedicure*].” Billy Sloan, “The Other Day I Could Feel My Eggs Ticking,” *Sunday Mail* (Scotland), 31 Oct. 1999, at 45.

Verb:

- “He’s started having a girl massage him and *manicure* [read *pedicure*] his toes.” Nigel Rosser, “Andrew’s Fixer,” *Evening Standard*, 22 Jan. 2001, at 10.
- “Female workers were subject to the sexual and other whims of the owner, who forced them to clip and *manicure* [read *pedicure*] his toenails, and watched them shower and lie in their cots.” Malia Zimmerman, “U.S. Probes American Samoan Firm,” *Wash. Times*, 30 Mar. 2001, at A14.

Past-participial adjective:

- “We wouldn’t want those *manicured* [read *pedicured*] toes to get dirty now, would we?” Jennifer D. Braun, “Canine Couture from the House of Poochie,” *Star-Ledger* (Newark), 16 July 2000, at 1.

LANGUAGE-CHANGE INDEX
manicure misused for *pedicure*: Stage 2

manifest, adj. See ADJECTIVES (B).

manifesto. Pl. *manifestos*—not **manifestoes*. See PLURALS (D).

Current ratio: 3:1

manifold; manyfold. *Manifold* (/man-ə-fohld/) means “many and varied” <the reasons are manifold>, or (as a noun) a multichannel air chamber such as the one in an automotive engine <exhaust manifold>. *Manyfold* (/men-ee-fohld/) applies to something multiplied many times <a manyfold increase>.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Manifold is occasionally misspelled with a *-y*—e.g.: “Concept cars, or dream cars, as they were once known, are wondrous and magical creations. The reason for their existence is *manyfold* [read *manifold*].” Arv Voss, “Chrysler’s Concept Cars Depict Real Intent,” *Wash. Times*, 19 Feb. 1999, at E4. (Given the automotive context, however, even the correct spelling would look odd there.)

LANGUAGE-CHANGE INDEX
manyfold misused for *manifold*: Stage 1

manikin; ***mannikin**; **mannequin**. The first and third forms, though etymologically the same, have undergone DIFFERENTIATION. *Manikin* = (1) a little man; a dwarf; or (2) a model showing the anatomical parts of the human body, used in medical training, art classes, and the like. (**Mannikin* is a variant spelling of the word.) *Mannequin* = a human-like model for displaying clothes and the like. Although sense 2 of *manikin* seems close to the sense of *mannequin*, the *manikin* is typically more anatomically correct—while *mannequins* often have exaggerated (or, sometimes, missing) features.

Current ratio (*manikin* vs. **mannikin*): 3:1

mankind. See **humankind**, **womankind** & **SEXISM** (C).

manly; **manlike**; **mannish**. See **male**.

manned flights. See **SEXISM** (C).

mannequin. See **manikin**.

manner, in a —. This phrase typifies a sluggish style. *In a professional manner* should be *professionally*; *in a rigid manner* should be *rigidly*; *in a childish manner* should be *childishly*. Good editors do not leave such phrases untouched.

Still, some phrases cannot be made into *-ly* adverbs: *in a Rambo-like manner*; *in a determined manner* (few editors would choose *determinedly*—see **-EDLY**); *in a hit-them-over-the-head manner*. In many such phrases, though, the word *way* would be an improvement over *manner*. See **ADVERBS**. Cf. **nature**.

manner born, to the. This Shakespearean phrase—meaning “accustomed from birth to a certain habit or custom”—first occurred in *Hamlet* (1603), when the melancholy protagonist bemoans the king’s drunken revelry: “Though I am a native here / And to the manner born, it is a custom / More honored in the breach than the observance.” 1.4.16–18. The phrase is sometimes misunderstood as **to the manor born*. This confused view of the text was persuasively refuted by the Evanses in 1957 (*DCAU* at 290).

But confusion in the popular mind was aggravated by a clever pun in the title of the BBC television series *To the Manor Born* (1979–1981), which ran frequently on American PBS stations. The actress Penelope Keith played an heiress who, having lived her entire life on an English manor that has been in the family for generations, is forced, through financial straits, to sell the manor to a supermarket magnate.

After she moves into a smaller house on the manor, the heiress and the businessman gradually fall in love and eventually marry.

Yet as one linguist has observed in reference to similar phrases, “what one generation says in game the next generation takes in earnest.” John Algeo, “Editor’s Note,” 54 *Am. Speech* 240 (1979). What begins as a pun can spread into genuine linguistic confusion—e.g.:

- “A few players seem to the English *manor* [read *manner*] born, and the rest at least have the general idea.” Richard Christiansen, “Wordplay a Little Wobbly in Challenging ‘Superman,’” *Chicago Trib.*, 16 Jan. 2001, at 2.
- “Many of the more than 100 designers who showcased their collections at the Bryant Park tents shared an affinity for military-themed outfits or upper-crust clothes cut to exude the aura of one clearly to the *manor* [read *manner*] born.” Cheryl Lu-Lien Tan, “Fashion Week Finishes in Style,” *Baltimore Sun*, 17 Feb. 2001, at E1.
- “If you were not to the *manor* [read *manner*] born, consider staying at a hotel where a guest can feel like a country squire.” Barrett J. Brunzman, “Virginia’s Vintages,” *Cincinnati Enquirer*, 18 Mar. 2001, at T3.

Sometimes it’s not clear whether the phrase is a pun or simply a blunder—e.g.: “She is landed gentry, so to speak; *to the manor born*, some would say.” Lynne Duke, “On the Inside Looking Out,” *Wash. Post*, 23 Apr. 2001, at C1. And sometimes it’s a lame pun at best—e.g.: “As befits a privy to the *manor born*, Berman’s stucco outhouse has a louvered cupola and plaster walls.” Marty Crisp, “Privy Preview,” *Lancaster New Era*, 1 Apr. 2001, at B1. In the last example just quoted, the phrase *to the manner born* wouldn’t really work, since the reference is obviously to real estate (in fact, a toilet)—not to human behavior or experience.

LANGUAGE-CHANGE INDEX

**to the manor born* for *to the manner born*: Stage 1

manner in which is often unnecessarily verbose for *how* or *way*—e.g.: “Those larger issues—the foreign money contributions, the conduit money, the virtual merging of Clinton campaign and Democratic Party coffers and the generally reckless *manner in which* [read *way*] the Democrats raised funds for the 1996 presidential campaign—continue to demand vigorous investigation and prosecution.” “An Independent Counsel?” *Wash. Post*, 26 Nov. 1997, at A18.

manoeuvre. See **maneuver**.

***manor born, to the**. See **manner born**.

manpower. See **SEXISM** (C).

mantle; **mantel**. *Mantle* means, among other things, “a loose robe.” It is frequently used in figurative senses <mantle of leadership> <mantle of greatness>. E.g.: “The tributes flowing in suggest a *mantle* of modern sainthood falling upon her.” Polly Toynebee, “Will Diana’s Ghost Haunt the Monarchy?” *San Diego Union-Trib.*, 7 Sept. 1997, at G6. The word frequently appears in the phrase *take on the mantle of* or *take up*

the mantle of (a predecessor, etc.). You can also just take the mantle, but the PHRASAL VERBS *take on* and *take up* appear more frequently.

Mantel is a very different word, meaning “a structure of wood or marble above or around a fireplace; a shelf.” E.g.: “Display some of your prized possessions on a shelf or on top of a *mantel* or windowsill.” Chris Casson Madden, “Wake Up a Drowsy Bedroom,” *San Diego Union-Trib.*, 7 Sept. 1997, at H19.

Each word is sometimes confused with the other—e.g.:

- “With key veterans like Byron Scott and Kenny Gattison gone from the inaugural season team, the *mantel* [read *mantle*] of leadership fell to Anthony and Edwards.” Gary Kingston, “Toothless Grizzlies Look for Leadership to Spark Next Season,” *Vancouver Sun*, 19 Apr. 1997, at C1.
- “That’s where he hopes to get that intercepted pass that will finally go on his *mantle* [read *mantel*].” Jonathan Jones, “Undrafted Rookie Dean Marlowe Trying to Latch on with Carolina Panthers,” *Charlotte Observer* (N.C.), 30 Aug. 2015, Sports §.

LANGUAGE-CHANGE INDEX

1. *mantle* misused for *mantel*: Stage 1
2. *mantel* misused for *mantle*: Stage 1

manuscript. Although the ETYMOLOGY of this term refers to a handwritten document [L. *manu-* “hand” + *script* “written”], today the term most frequently refers to a word-processed (or typewritten) document. Eric Partridge urged a bright-line distinction between a *manuscript* and a *typescript* (*U&A* at 179), but scholars and antiquarian booksellers are the only people who observe it, and today *typescript* is probably obsolescent.

The abbreviation *ms.* shouldn’t be written *Ms.*; nor should it be italicized. Pl. *mss.*

many; much. *Many* is used with count nouns (i.e., those that denote a number of discrete or separable entities). *Much* is used with mass nouns (i.e., those that refer to amounts as distinguished from numbers). Hence, *many people* but *much salt*. Here *much* is used incorrectly: “We do not have *much* [read *many*] facts here.” (Cf. *less* for *fewer*, noting that *less* is the correlative of *much*, whereas *fewer* is the correlative of *many*.) See COUNT NOUNS AND MASS NOUNS. See also **less (A)**.

Sometimes the writer must decide whether a word such as *data* is a count noun (as it traditionally has been) or a mass noun (as it has come to be). E.g.: “But *much* [read *many*?] of the data in present personnel files is highly subjective.” William O. Douglas, *Points of Rebellion* 21 (1970). Of course, the choice of the singular verb *is* shows that Justice Douglas considered *data* a mass noun—so *much* was the appropriate word. See **data**.

LANGUAGE-CHANGE INDEX
much misused for *many*: Stage 3

many a. This idiom requires a singular verb <many a new father has fretted about whether he is helping enough in caring for the newborn>. Essentially, because the idiom is distributive rather than aggregate in sense, the verb is singular.

But as H.W. Fowler pointed out in 1926 (*FMEU* at 343), writers sometimes incorrectly make the verb plural when using an inverted construction with *there*. The trouble is still with us—e.g.:

- “There *are* [read *is*] *many* a person I have met and worked with who simply deride themselves into taking some action.” Michael Dirda, “An Unnerving Tale of Spirit Visitations, Uncertainty, Dread and Premonitions of Regret,” *Wash. Post*, 31 Mar. 2002, Book World §, at 15. (A possible revision: *Many people I have met and worked with have simply derided themselves into taking some action.*)
- “I’m sure there *are* [read *is*] *many* a trader/producer who will feel relieved to see the meat futures close April 12.” Sue Martin, “Emotional Week in the Meat Futures Market,” *Grand Forks Herald*, 15 Apr. 2002, at A13.
- “There *have* [read *has*] been *many* a night on the Naples Naval Support Activity base that postal clerk chief John Mowry just can’t sleep.” Marc J. Spears, “Military Personnel Abroad Try to Keep Score,” *Denver Post*, 21 May 2002, at D1.

LANGUAGE-CHANGE INDEX

**there are many a person for there is many a person*: Stage 1

manyfold. See **manifold**.

maraschino is pronounced either /ma-rə-skee-noh/ or /ma-rə-shee-noh/. Although the first of those is more technically correct and is preferred by pronunciation authorities, the second predominates in AmE and must be accepted as standard.

mariage de convenance. See **marriage of convenience**.

marijuana; *marihuana. The former spelling now overwhelmingly predominates and should be preferred. Supreme Court Justice Lewis F. Powell, speaking in 1986 at a luncheon, stated: “The big problem we had in the Court this past Term was how to spell *marijuana*. We were about equally divided between a ‘j’ and an ‘h’ and since I was supposed to be the swing vote on the court, and just to show my impartiality, I added a footnote in a case . . . in which I spelled *marijuana* with a ‘j’ once and an ‘h’ in the same sentence.” Quoted in *ABA J.*, 1 Oct. 1986, at 34.

Current ratio: 40:1

marinade, n. & vb.; **marinate**, vb. Although *marinade* has been recorded as a verb as well as a noun, it’s predominantly a noun <he soaked the steak in a pineapple-sauce marinade>. When a verb is needed, *marinate* is better: it’s older and much more common <he marinated the steak overnight>.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

marked is pronounced /markt/, as one syllable. The pronunciation /**mar**-kəd/, in two syllables, is a vestige of the correct adverbial pronunciation /**mar**-kəd-lee/.

LANGUAGE-CHANGE INDEX

marked mispronounced /**mar**-kəd/ instead of /markt/: Stage 2

marriage; wedding. Although dictionaries such as the *OED* and *W2* suggest that one sense of *marriage* is “entry into wedlock,” in general usage today the word is gradually growing narrower in sense to refer exclusively to the ongoing relationship. The *wedding* is the ceremony that solemnizes the relationship. Hence using *marriage* in the older, broader sense can result in confusion. For example, the following sentence suggests that fewer than 300,000 married couples lived in Great Britain in 1993—an unlikely state of affairs for a country with more than 50 million people: “There were *less* [read *fewer*] than 300,000 *marriages* [read *weddings*] in 1993, the lowest level since the second world war, leaving clerics with little to do on Saturday mornings but twiddle their thumbs.” Nick Gardner, “Secure Your Future by Tying the Knot,” *Sunday Times* (London), 6 Aug. 1995, § 5, at 5. Although using *marriage* in this way is defensible, it is ill-advised. See **wed**.

marriage of convenience; *mariage de convenance. Since the 18th century, the anglicized version has always predominated over the GALLICISM. But it should be understood rightly: *marriage of convenience* is not “an ill-considered marriage that happens to be convenient to the parties involved,” but instead “a marriage contracted for social or financial advantages rather than out of mutual love.”

Current ratio: 23:1

married spouse. See **spouse**.

marshal, n. A. And martial, adj. *Marshal* = (1) a military officer; (2) a person performing duties, as a person in charge of ceremonies or an officer for a court; or (3) a law-enforcement officer. *Martial* = (1) of, relating to, or involving warfare; or (2) warlike.

These words are often confused in three contexts.

The first is *martial arts*, which is wrongly written **marshal arts*—e.g.:

- “Dr. Thompson’s curious blend of the *marshal arts* [read *martial-arts*] philosophy and tactical communication reflects his own hybrid background.” Kate Stone Lombardi, “Verbal Persuasion for Police,” *N.Y. Times*, 19 Mar. 1995, Westchester §, at 1.
- “Mestre Cafuringa has been hired to teach children how to express themselves through capoeira, a *marshal art* [read *martial art*] from Brazil.” Betty L. Martin, “Kids Learn Life Skills Through Art,” *Houston Chron.*, 20 June 2002, This Week §, at 1.
- “Artist Phyllis Parun will conduct a workshop in Taoist ink painting and poetry from 10 a.m. to 2 p.m. on Sunday at the Shaolin Do *marshal arts* [read *martial-arts*] studio.” *Times-Picayune* (New Orleans), 27 Sept. 2002, Lagniappe §, at 20.

The second is *court marshal* (= a judicial officer) for *court-martial* (= a military court)—e.g.: “We should be engaged in saving our at-risk young people, not rounding them up for *court-marshal* [read *court-martial*].” Arthur A. Jones & Robin Wiseman, “How Does the Chief Really Intend to Fight the Gang War?” *Daily News* (L.A.), 12 Jan. 2003, at V1. When the subject is a court officer rather than a military court, *court marshal* (with no hyphen) may be correct—e.g.: “‘They’re very thin,’ she confided to a *court marshal* as she filed out of the courtroom during the lunch break. ‘You can see the filling in them.’” Kim Martineau, “New Venue for Tombstone Feud,” *Hartford Courant*, 20 Nov. 2002, at B1. In other words, *marshal* as a noun is always a person. So in *court marshal*, *marshal* is the noun and *court* is adjectival. In *court-martial*, *court* is the noun and *martial* is a POSTPOSITIVE ADJECTIVE. See **court-martial (B)**.

The third is *martial law* (= military rule imposed by a country’s government under an asserted claim of necessity), which is incorrectly made **marshal law*, especially in loose uses of the term—e.g.: “Fourteen months later, the control board’s imposed system of *marshal* [read *martial*] law hasn’t made a marked difference.” Adrienne T. Washington, “Finally, a Court Puts Limits on D.C. Board,” *Wash. Times*, 9 Jan. 1998, at C2. This error was spread when a made-for-TV movie entitled *Marshal Law* was released in 1996: it was about a marshal who was ruthless with violent criminals. How many viewers caught the pun?

LANGUAGE-CHANGE INDEX

**marshal law* for *martial law*: Stage 1

Current ratio (*martial law* vs.

**marshal law*): 208:1

B. Spelling. *Marshal* is frequently misspelled **marshall*—e.g.: “Spokane Valley firefighters helped save 30 tons of the hay, but the loss still reached about \$12,000, said Kevin Miller, deputy fire *marshall* [read *marshal*] for Valley Fire.” “Haystack Fire Deemed Suspicious,” *Spokesman-Rev.* (Spokane), 16 Jan. 2003, at V11. The error is undoubtedly encouraged by the frequency of the proper name *Marshall*.

LANGUAGE-CHANGE INDEX

marshal as noun misspelled **marshall*: Stage 1

Current ratio (*fire marshal* vs. **fire marshall*): 14:1

marshal, v.t. (= to arrange in order), makes the past-tense and participial forms *marshaled* and *marshaling* in AmE, *marshalled* and *marshalling* in BrE. (See SPELLING (B).) But misspellings with the doubled *-l-* frequently occur in AmE—e.g.: “The picture did feature an intelligently *marshalled* [read *marshaled*] series of ’50s, ’60s and ’70s decor.” Henry Sheehan, “The ‘Other’ Awards,” *Orange County Register*, 26 Mar. 1995, at F14.

Although the inflected form is *marshalled* in BrE, the uninflected form is still *marshal*, as in AmE. But this, too, is subject to error—e.g.: “That means two large and one smaller country combining together can *marshall* [read *marshal*] the 23 votes needed to block

new proposals.” John Williams, “The Net Is Closing In,” *Daily Mirror*, 29 Mar. 1994, at 6.

Like the noun, the verb *marshal* is often misspelled **marshall*—e.g.: “Many in the crowds seemed underterred—even invigorated—by the steady and seemingly inexorable march toward a possible war, perhaps in a few weeks, as the United States and a few allies *marshall* [read *marshal*] troops, naval flotillas and air wings in a rapidly escalating mobilization in the Persian Gulf region.” Lynette Clemetson, “Thousands Converge in Capital to Protest Plans for War,” *N.Y. Times*, 19 Jan. 2003, § 1, at 12.

LANGUAGE-CHANGE INDEX

marshal as verb misspelled **marshall*: Stage 1

***marshal law**. See **marshal**, n. (A).

marshmallow is so spelled—not **marshmellow* (under the influence of the adjective *mellow*). But the misspelling is fairly common—e.g.: “Everything hinged on the *marshmellow-throwing* [read *marshmallow-throwing*] left arm of Brian Anderson, the Diamondbacks starter.” Lisa Olson, “D-Backs’ Shot Rests with Curt,” *Daily News* (N.Y.), 31 Oct. 2001, at 70.

LANGUAGE-CHANGE INDEX

marshmallow misspelled **marshmellow*: Stage 1

Current ratio: 422:1

marten; martin. A *marten* is an arboreal weasel-like mammal found in North American and Eurasia; it is hunted for its fur in many northern countries. A *martin* is a songbird of the swallow family, but it has a less strongly forked tail than most swallows.

martial, adj. See **marshal**, n.

martial law. See **marshal**, n. (A).

martin. See **marten**.

marvel, vb., makes *marveled* and *marveling* in AmE, *marvelled* and *marvelling* in BrE. See SPELLING (B).

marvelous; marvellous. The first is the AmE spelling (standard since about 1915); the second is BrE (standard since the 17th century).

masculine. See **male**.

MASCULINE AND FEMININE PRONOUNS. See SEXISM (B).

massacre, v.t., makes *massacring* (not **massacreing*)—e.g.: “If I were *massacring* English, he would grimace at my linguistic butchery, wouldn’t he?” “Interview with Czech Defector Ivo Moravec,” *Ottawa Citizen*, 16 Apr. 1997, at A17.

MASS NOUNS. See COUNT NOUNS AND MASS NOUNS.

master. Traditionally, *master* was used in reference to a boy up to the age of 12—especially in addressing an envelope. Today the practice has largely fallen into disuse, except in formal circumstances. The custom thrives chiefly in the southern United States, as this sampling illustrates:

- “I have loved receiving mail since I was a boy sitting on the front porch waiting for mailman Mike Houser. . . . I wondered why they [my correspondents] addressed me as ‘*master*,’ and it must have been when I was in college that I learned that this is a term used for a boy too young to be called ‘*mister*.’” Harold Julian, “Hail to the Mail,” *Knoxville News-Sentinel*, 21 May 2000, at E9.
- “Serving as honorary ring bearers were nephews of the bride, *Masters* Joseph Alexander and Jacob Thomas, twin sons of Destry and Dawn Hill Harding, and *Master* Jamie Nick Timmers of Druten, son of the groom.” “Celebrations—Timmers–Smith Wedding,” *Roanoke Times*, 11 Nov. 2001, Extra §, at 5.
- “*Master* Thomas Ray Kinard, infant, died November 29, 2001.” “Death Notices,” *Charlotte Observer*, 1 Dec. 2001, at B6.
- “Pages were *Master* Michael Owen Barry Jr., son of Mr. and Mrs. Barry; and *Master* John Villars Baus III, son of Mr. and Mrs. Baus Jr.” “Proteus Takes Trip to the Bayou to Inventory ‘Flora and Fauna,’” *Times-Picayune* (New Orleans), 12 Feb. 2002, Living §, at 2.

masterful; masterly. Traditionally, *masterful* has described a powerful, even bullying, superior; *masterly* has described the skill of a master of a profession or trade. A master craftsman is *masterly*; a boorish tyrant is *masterful*. Which is the correct term in the following sentence? “Though Britain’s Derek Jacobi looks about as much like Adolph Hitler as Archie Bunker, he evokes the Fuhrer with *masterful* verve.” Harry F. Waters, “Hitler, Göring, Speer and Co.,” *Newsweek*, 10 May 1982, at 65. (The actor is *masterly*; Hitler was *masterful*.)

Perhaps one reason the two words are so frequently confounded is that when an adverb for *masterly* is needed, *masterfully* seems more natural than *masterlily*. (See ADVERBS (B).) “He writes *masterfully*” strikes one as much less stilted than “He writes *masterlily*.” This problem with the adverbial form threatens to destroy a useful distinction between the two adjectival forms. So if an adverb is needed, try *in a masterly way*.

Oddly enough, though many today think of *masterly* as an unusual word, it was much more common than *masterful* until the mid-1980s, when it mysteriously fell into disfavor. The slide had begun in the 1970s. *Masterly* writers continue to like *masterly*.

LANGUAGE-CHANGE INDEX

masterful misused for *masterly*: Stage 4

1920 ratio (*masterly performance* vs.

masterful performance): 16:1

Current ratio (*masterly performance* vs.

masterful performance): 1:1.2

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

master's degree. So written.

MATCHING PARTS. See PARALLELISM.

materfamilias (= the mother of a family; a woman who heads a household) is pronounced /may-tər-fə-mil-ee-əs/. Pl. *matresfamilias*, the form **materfamilias* being virtually unknown. Both forms are rare. See PLURALS (A), (B).

material, n.; materiel. *Material* is the general word meaning “constituent substance or element” <raw materials>. *Materiel* (sometimes written the French way, *matériel*) means “the equipment and supplies used by an organization, esp. the military”; the term is often distinguished from *personnel*. *Materiel* is preferably pronounced /mə-teer-ee-el/.

materialize = (1) to assume a physical form <the ghost suddenly materialized>; (2) to come into existence <a new style of architecture materialized in the 19th century>; or (3) to appear suddenly <the waiter materialized at our table>. All three senses are standard. Sense 2 is now most widespread.

materiel. See **material**.

math; maths. The first is the standard shortened form of *mathematics* in AmE. The second is standard in BrE.

matinee (= a daytime movie showing or theater performance) is so written today, without the acute accent over the first *-e-*. See DIACRITICAL MARKS.

matrix. Pl. *matrices* or (much less commonly) *matrixes*. See PLURALS (B).

Current ratio: 32:1

matzo; *matzoh; *matzah; *matza; *matsah. The first is the standard spelling <matzo-ball soup>. The others are variant spellings.

Current ratio (*matzo ball* vs. **matzoh ball* vs. **matzah ball*): 8:4:1

maudlin. See **Magdalen**.

maul, n. & vb.; mall, n. *Maul* = (n.) a heavy mallet or hammer <they nailed down the railway ties by driving wedges with mauls>; or (vb.) (1) to injure by pounding <Ali mauled Foreman>; or (2) to injure by treating very roughly, often in a life-threatening way <the tiger had been mauling the trainer for 15 minutes before anyone noticed>. *Mall* = (1) the game of pall-mall (pronounced /pel-mel/), or the mallet used in that game; (2) a lane used for playing pall-mall; (3) any shaded walkway or promenade; or (4) a shopping center, usu. enclosed.

Although the first meanings listed for each term are related to each other, the two words have grown in radically different directions. Today the primary confusion—an outright mistake—is to use *mall* where the verb *maul* is intended. The error occurs especially in figurative uses—e.g.: “In girls Division 4, Ashley Harrison, Nichelle McRorie and Lacey Erickson scored as the Stingers malled [read mauled] the Tustin Cheetahs,

3–1.” Jason Thornbury, “Hat Trick Not Enough for United Sweetness,” *Orange County Register*, 19 Sept. 1996, Community §, at 14.

LANGUAGE-CHANGE INDEX
mall misused for *maul*: Stage 1

mausoleum (= a building containing a tomb or tombs) predominantly forms the plural *mausoleums* in all varieties of World English—though the variant **mausolea* appears from time to time in BrE.

Current ratio: 4:1

mauve (= a pale bluish purple color) is preferably pronounced /mohv/ (rhyming with *stove*)—not /mawv/.

maxilla (the jaw or jawbone) predominantly makes the Latinate plural *maxillae* (/mak-sil-ee/)—not **maxillas*.

Current ratio: 27:1

maximum, n. & adj.; maximal, adj. More and more frequently, *maximum* (like *minimum*) acts as its own adjective. E.g.:

- “When Janet sees bargains like that, she buys the *maximum* quantity the market allows and freezes it.” Marilee Spanjian, “Free Lunch? No, but It’s Close,” *Tennessean*, 25 Aug. 1997, at W1.
- “The officials can levy the *maximum* amount under the cap and refund taxes if budget projections remain intact.” Ted Gregory, “Township Gives Back Green for Holidays,” *Chicago Trib.*, 26 Nov. 1997, at D1.

Maximal usually means “the greatest possible” rather than merely “of, relating to, or constituting a maximum.” E.g.:

- “Hill says upgrades in both insulation and ventilation must be made for *maximal* effectiveness.” C.J. Autry, “Protect Your Home from Winter,” *Asheville Citizen-Times* (N.C.), 12 Jan. 1997, at G1.
- “Most women . . . may not know that, for *maximal* results, they need calcium and exercise in tandem.” Diane Guernsey, “In Your 40s,” *Town & Country*, Oct. 1997, at 208.

See **minimal**.

The plural of the noun *maximum* is either *maximums* or *maxima*, increasingly the former in AmE—e.g.:

- “These optional cash payments range from minimums of \$10–\$100 to annual *maximums* of \$100,000 or more in many cases.” Charles Carlson, “No-Fuss Investing,” *Baron’s*, 1 Dec. 1997, at 24.
- “The district has the region’s largest class sizes and is pressing up against state *maximums* in many grades.” “Many Changes in Store for New School Year,” *Wash. Post*, 31 Aug. 2015, at B2.

Yet *maxima* vastly predominates in AmE and BrE alike. See **minimum** & PLURALS (B).

Current ratio (*maxima* vs. *maximums* in World English): 10:1

may; might. These words occupy different places on a continuum of possibility. *May* expresses likelihood <we may go to the party>, while *might* expresses a stronger sense of doubt <we might be able to go if our appointment is canceled> or a contrary-to-fact hypothetical <we might have been able to go if George hadn’t gotten held up>.

Some sentences present close calls—e.g.: “If one of his coaches did something wrong, he says, he *may* [or *might*] be able to forgive.” Debra E. Blum, “Coaches as Role Models,” *Chron. of Higher Education*, 2 June 1995, at A35, A36. If that statement comes on the heels of alleged wrongdoing by a coach, then *may* is the better word. But if it’s a purely hypothetical question, *might* is preferable.

Difficulties are especially common in negative forms, in which *may not* can be misread as meaning “do not have permission” <you may not come with me>. If the writer is using a negative in supposing or hypothesizing or talking about future possibilities, the phrase should probably be *might not*—e.g.: “This myth assumes that the softness of the breasts in the very early postpartum period will last for three days; it *may* [read *might*] not.” Kathleen G. Auerbach, “Myths vs. Reality,” *Mothering*, 22 Dec. 1997, at 68.

Misusing *might* for *may* runs contrary to the tendency to suppress SUBJUNCTIVES in modern English. But it does occur—e.g.:

- “An American Eagle flight that crashed Tuesday killing 15 people apparently had an engine ‘flame-out’ and *might* [read *may*] have stalled in the minutes before it approached the Raleigh-Durham airport, the National Transportation Safety Board said late Wednesday.” Don Phillips, “Plane *Might* [read *May*] Have Stalled Before Crashing,” *Austin Am.-Statesman*, 15 Dec. 1994, at A1. (*Might* erroneously suggests that the stall didn’t happen; the probability is that it did.)
- “Power surges *might* [read *may*] have triggered outages for up to 2 million people.” Richard Cole, “Western Cities in the Dark After 8-State Mystery Blackout,” *Austin Am.-Statesman*, 15 Dec. 1994, at A6. (*Might* suggests that the outages didn’t occur; they did.)

For the distinction between *may* and *can*, see **can (A)**.

***may can**. See DOUBLE MODALS.

mayhem. **A. Senses.** *Mayhem* = (1) malicious injury to or maiming of a person, orig. so as to impair or destroy the victim’s capacity for self-defense; (2) violent and damaging action, violent destruction; or (3) rowdy confusion, disruption, chaos. Sense 3 is inappropriately attenuated because the word, strictly speaking, should involve some type of serious injury or damage—e.g.: “Dash Rip Rock calls New Orleans home, but band members don’t call their root-rock *mayhem* [read *clamor?* *rumpus?* *ruckus?* *tumult?*] anything other than rock ‘n’ roll.” Kenn Rodriguez, “Hard-to-Describe Sound of Country, Punk,” *Albuquerque J.*, 1 Dec. 1995, Venue §, at F22.

LANGUAGE-CHANGE INDEX
mayhem misused for *ruckus*: Stage 2

B. And *maim*, n. Though etymologically identical, *mayhem* and *maim* have undergone DIFFERENTIATION. In the best usage, *mayhem* refers to the

crime (sense 1 above) and *maim* to the type of injury required for the crime.

C. And **maihem*. This spelling amounts to nothing more than a NEEDLESS VARIANT. It has been so since the 18th century.

mayonnaise (the thick white sauce) is so spelled. See SPELLING (A). The word is preferably pronounced in three distinct syllables: either /**may**-ə-nayz/ or /may-ə-**nayz**/—not /**may**-nayz/ or /**man**-ayz/.

mayoralty (= a mayor’s office or term of office) is sometimes wrongly made **mayorality*—e.g.: “He recalled that early in his *mayorality* [read *mayoralty*], he spoke of New York as the financial capital of the world.” Beth Piskora, “Rudy Says, ‘Ask the Pope,’” *N.Y. Post*, 1 July 2001, at 63.

When pronouncing the word, make it four syllables (not three), with stress on the first: /**may**-ər-əl-tee/. The corresponding adjective is *mayoral* /**may**-ər-əl/, not /may-**or**-əl/.

LANGUAGE-CHANGE INDEX
**mayorality* for *mayoralty*: Stage 1

**mayorality*): 112:1

***may should**. See DOUBLE MODALS.

***may supposed to**. See DOUBLE MODALS.

***may used to**. See DOUBLE MODALS.

***may will**. See DOUBLE MODALS.

McIntosh. See **mackintosh**.

me; I. See FIRST PERSON & PRONOUNS (A), (B).

meager; meagre. The first has been the AmE spelling since about 1915; the second has been standard in BrE since the 17th century. See -ER (B).

mealy-mouthed, adj., is so written, with a hyphen. In less than one-third of the instances in modern print sources, the word is written solid: **meallymouthed*. This solid spelling has been pretty steadily on the rise since about 1800.

mean, adj., = (1) small; (2) cruel; (3) ignoble; (4) stingy; or (5) average. Readers today often misunderstand sense 1, believing that a *mean-spirited* person is malevolent, evil, or malicious—e.g.: “His stunts ranged from sophomoric—punching holes in Styrofoam coffee cups—to *mean-spirited* [read *malicious*]—calling up the wives of fellow cops and in an uncannily realistic feminine voice pretending to be their husband’s mistress.” Todd Lighty, “Former Cop Crossed Line, Destroyed It,” *Chicago Trib.*, 19 Jan. 2003, News §, at 18. Actually, a *mean-spirited* person merely has a small spirit, a petty mind—e.g.: “Yet, more and more, voyeuristic, fundamentally *mean-spirited* shows like

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

this appear to be the wave of the future in TV. Say it ain't so, Joe." Noel Houston, "This 'Joe' Ain't Shoeless, Just Soulless," *Newsday* (N.Y.), 20 Jan. 2003, at B2.

LANGUAGE-CHANGE INDEX

mean-spirited in the sense "malicious": Stage 3

mean, n.; **median**. Please distinguish between these two words. The *mean* (also called the *arithmetic* [/arith-met-ik/] *mean*) is what is usually understood by the term *average*: the sum of a set of values divided by the number of elements in the set. The *median* is the point in a series of numbers above which is half the series and below which is the other half. Selectively using one or the other is a common way to make statistics lie. The *median* income among an unemployed person, a burger-flipper making minimum wage, and Bill Gates may be \$17,000, but the *mean* salary would make some less-critical readers think they were all multimillionaires.

meaningful has followed the way of its semantic cousin, *significant*, and become a VOGUE WORD—e.g.:

- "To a significant extent, a *meaningful* childhood requires *meaningful* time with parents and other caring adults." "Childhood Cherished," *Christian Science Monitor*, 21 Dec. 2000, at 10. (Notice the *significant* that opens this sentence.)
- "We make little effort to conserve or save energy, and we still fail to produce *meaningful* amounts of solar, wind and geothermal energy." Jonathan Marshall, "Sun Power," *Ariz. Republic*, 30 Mar. 2001, at 2.
- "We'll have an opportunity to shift a *meaningful* degree of authority back to parents and communities." John Boemer, "Empower Parents and Kids," *Wash. Times*, 22 May 2001, at A19.
- "A typical parent and child engage in *meaningful* conversation for only 20 minutes a week." Rob Breznsky, "Free Will Astrology," *Village Voice*, 29 May 2001, at 22.

Because of this indiscriminate overuse, *meaningful* is fast becoming meaningless.

mean-spirited; meanspirited. The hyphenated form is standard. Some make it a solid word—e.g.: "Ms. Phillips is accustomed to being called *meanspirited*." Anita Gates, "Return to L.A.," *N.Y. Times*, 18 Feb. 1996, § 7, at 21. But the hyphenated form remains more than seven times as common in print as the solid form. See **mean**, adj.

meantime; meanwhile. People use *in the meantime* and *meanwhile* to perform essentially the same adverbial function. **In the meanwhile* is unidiomatic. Because *meanwhile* saves two words, professional editors often prefer it—e.g.:

- "Three other Palestinians were killed as they tried to cross the Gaza border with Israel. *Meanwhile*, the Israeli army said attacks have declined since Arafat's cease-fire call two weeks ago." "What's News," *Wall Street J.*, 31 Dec. 2001, at A1.
- "The full story of the Enron debacle . . . will take months to emerge. *In the meantime* [read *Meanwhile*], no one disagrees with Bernardino's diagnosis that there's a crisis in accounting." Jeremy Kahn, "One Plus One Makes What?" *Fortune*, 7 Jan. 2002, at 88.

Both *meanwhile* and *meantime* can be used alone, though the former more naturally so <meanwhile, they saw Jan approaching the 18th green>.

Meanwhile, *meantime* at the head of a sentence is nontraditional and not fully idiomatic—e.g.: "The bonds are no longer traded and the stock is delisted. *Meantime* [read *Meanwhile*], Ross and Zell learned a tough lesson." Kerry A. Dolan & Luisa Kroll, "Sweet and Sour," *Forbes*, 7 Jan. 2002, at 1.

measles is sometimes misspelled **measels*—e.g.: "Proximity to children also exposes teachers to the gamut of childhood illnesses, including chicken pox and *measels* [read *measles*]. And then there is head lice." Gary White, "A Virus for the Teacher," *Ledger* (Lakeland, Fla.), 16 Oct. 2002, at D1.

LANGUAGE-CHANGE INDEX

measles misspelled **measels*: Stage 1
Current ratio: 980:1

measure, n. & vb., is pronounced to rhyme with *pleasure*—hence /mezʰ-ər/—not /may-zhər/.

***meat out**. See **mete out**.

meatus /mee-ay-təs/ (= a passage or opening leading to the interior of the body) is a fourth-declension noun in Latin: hence the Latinate plural does not change its form—*meatus*. The anglicized plural *meatuses* is sometimes encountered—as is the mistaken form **meati*. Even in medical journals, one can imagine that it's less confusing to refer to *two meatuses* than to *two meatus*.

Current ratio (*two meatus* vs. **two meati* vs. *two meatuses*): 2:1.1:1

medal, vb. Although the *OED* records *medal* as a verb in a transitive sense—"to decorate or honour with a medal; to confer a medal upon"—the modern trend is to use the word intransitively, as by saying that an athlete *medaled* in an event. In this sense, it is roughly equivalent to *place*. A headline: "Golfer Gonzales *Medals* at Ivy Championships," *Harvard Univ. Gaz.*, 30 Apr. 1998, at 7.

Medal, vb., makes *medaled* and *medaling* in AmE, *medalled* and *medalling* in BrE. See SPELLING (B).

media; medium. Strictly speaking, the first is the plural of the second <the media were overreacting>. But *media*—as a shortened form of *communications media*—is increasingly used as a mass noun <the media was overreacting>—especially in a collocation such as *social media* <social media is an especially important aspect of medium marketing>. While that usage still makes some squeamish, it must be accepted as standard. In modern print sources, the phrasing *the media is* is somewhat more prevalent than *the media are*. See COUNT NOUNS AND MASS NOUNS & SOCIAL MEDIA. Cf. **criterion & phenomenon**.

But it's still possible (and preferable) to draw the line at **medias*, a double plural that has recently raised its ugly head—e.g.:

- “He is one of just a few actors to appear in the same role in all three *medias* [read *media*]*—stage, TV and screen.*” Crosby Day, “Stewart Delights in ‘Harvey,’” *Orlando Sentinel*, 31 Mar. 1996, at 49.
- “LinkedIn is one of the best but least understood social *medias* in today’s business marketplace.” “Local Business Calendar,” *Worcester Telegram & Gaz.*, 30 Aug. 2015, News §, at 2. (A possible revision: *LinkedIn is one of the most useful but least understood social-media platforms in today’s business marketplace.*)

Mediums is the correct plural when the sense of *medium* is “a clairvoyant or spiritualist”—e.g.:

- “Contact is initiated by the deceased, and no psychics, *mediums* or devices are involved.” Kim Gilmore, “Workshop Discusses Messages from the Dead,” *St. Petersburg Times*, 14 Oct. 1996, Citrus Times §, at 1.
- “Now, with us as witnesses, Carol was about to perform what is known as ‘channeling’—a technique commonly used by many psychics and *mediums*.” Chris Morton & Ceri Louise Thomas, “Secret of the Crystal Skulls: Day Two,” *Daily Mail*, 4 Nov. 1997, at 28.

It is also normal in a collocation such as *happy mediums*. E.g.: “This no doubt is the case with almost all happy *mediums*.” Charles Macomb Flandrau, *Prejudices* 167 (1911).

Otherwise, the form should be avoided in favor of *media*—e.g.:

- “Reporters for printed *mediums* [read *media*] also focus criticism on television for using all-purpose experts to express an opinion on a wide variety of subjects.” Charles Rothfeld, “On Legal Pundits and How They Got That Way,” *N.Y. Times*, 4 May 1990, at B10.
- “The message of the Mona Lisa is transmitted through all three *mediums* [read *media*].” Sean Hall, *This Means This This Means That: A User’s Guide to Semiotics* 40 (2d ed. 2012).

LANGUAGE-CHANGE INDEX

1. *media* as a mass noun: Stage 5
2. **medias* as a plural for *media*: Stage 1
3. *mediums* in reference to spiritualists: Stage 5
4. *mediums* misused for *media*: Stage 3

median; medium. These words occasionally get confounded in two ways. First, *medium* (= mid-range) sometimes displaces *median* (= midpoint) in SET PHRASES such as *median income*—e.g.: “The gap between the *medium* [read *median*] incomes of white families versus black families is wide.” Les Payne, “What Would King Say?” *Newsday* (N.Y.), 19 Jan. 2003, at A28. Second, *medium* is sometimes substituted for *median* in its physical manifestation as a roadway divider—e.g.: “Angela carries the greatest guilt, seeing this truck driver’s face as he flew over the highway *medium* [read *median*], and the faces of the drivers in the oncoming cars. If he had not swerved to miss her, she would be the one in the obituary.” Adair Lara, “Fellow Drivers Are Not Your Enemies,”

S.F. Chron., 19 Mar. 1996, at E8. For more on *median*, see **mean**, n.

LANGUAGE-CHANGE INDEX

medium misused for *median*: Stage 1
Current ratio (*median income* vs. **medium income*): 21:1

***medias.** See **media**.

mediation. See **arbitration (B)**.

medicable (= treatable, curable) is the correct form—not **medicable*. See -ABLE (D) & -ATABLE.

medical; medicinal. The first applies to all aspects of a physician’s practice, the second only to what is associated with medicines.

medical marijuana; *medicinal marijuana. The former is the more common phrase for the use of the *Cannabis sativa* plant to ease the symptoms of some medical conditions (such as AIDS) or treatment (such as chemotherapy). It is found more than eight times as often as **medicinal marijuana* in World English print sources, and three to four times as often in legal sources. Since *medical marijuana* is the plainer, simpler, and shorter phrase, **medicinal marijuana* should be considered a NEEDLESS VARIANT. See **marijuana**.

***medicable.** See **medicable**.

***medicinal marijuana.** See **medical marijuana**.

medicine; medication; medicament. *Medication* has traditionally meant “the action of treating medically,” but in the mid-20th century it came to have the sense “a medicinal substance, medicament” (a sense recorded in W2 [1934] but not in the second edition of the OED [1989]). Because *medicine* and *drug* are both available, careful writers tend to avoid *medication* in this sense. But their refined style is lost on the great mass of speakers and writers who refer to *new medications* and being *on medication*.

Medicine and *medicament* are essentially synonymous in the sense today given to *medication*. *Medicament* is little used in AmE.

medieval; *mediaeval. *Medieval* (= of, relating to, or involving the Middle Ages) has been the predominant spelling in AmE since the 1920s and in BrE since the 1930s. **Mediaeval*, the standard until the shift occurred, is now a mere variant. *Medieval* is preferably pronounced /med-ee-vəl/ (three syllables), /med-i-ee-vəl/, or /meed-i-ee-vəl/. The last two (four-syllable) pronunciations are arguably pedantic. Avoid /mid-/ in the first syllable.

Current ratio: 9:1

medium. See **media & median**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

medley (= a mixture) is sometimes confused with—and, through METATHESIS, pronounced like—*melody* (= a tune). The error is especially common with a dish that became popular in the late 20th century: *fruit medley*. E.g.:

- “The menu includes a Caesar salad, Jamaican jerk chicken, Caribbean pasta with shrimp sauce, tropical fruit *melody* [read *medley*], steamed vegetables, island peach crepes, tea and coffee.” Kathryn Straach, “Name Your Vehicle for Texas Victuals,” *Dallas Morning News*, 8 June 1997, at G7.
- “Customers can choose from a variety of favorites including English toffee, fruit *melody* [read *medley*], red apple caramels, hand-dipped chocolate covered pretzels in milk chocolate or dark chocolate.” Kim Mikus, “Sister Working Hard to Ensure Quality of Chocolate Gift Baskets,” *Daily Herald* (Arlington Heights, Ill.), 25 Sept. 2001, at 1.

LANGUAGE-CHANGE INDEX

**fruit melody* for *fruit medley*: Stage 1

***meet out**. See **mete out**.

meet up with. See PHRASAL VERBS.

***meld together** is a fairly common REDUNDANCY that originated in the 1950s and has since steadily spread.

mélée (= [1] group hand-to-hand fighting, or [2] mass confusion and struggle), a GALLICISM borrowed into English in the 17th century, has lost one DIACRITICAL MARK but retained another: originally *mêlée*, it is now usually written *mélée* or just *melee*. In BrE it is pronounced /**mel**-ay/, but in AmE it is usually either /**may**-lay/ or /**may**-lay/.

***meliorate**. See **ameliorate**.

melody. See **medley**.

melt > **meltd** > **meltd**. *Molten* is now only a past-participial adjective <molten lava>. It shouldn't be used as a verb, even within JARGON-ridden specialties—e.g.: “This segregation behavior and the phase separation seem to imply that the equiaxed zone was *molten* [read *meltd*] during welding and then resolidified.” Kamal K. Soni et al., “SIMS Imaging of Al-Li Alloy Welds,” *Advanced Materials & Processes*, 1 Apr. 1996, at 35. See IRREGULAR VERBS (B).

LANGUAGE-CHANGE INDEX

molten for past-participial *meltd*: Stage 1

Current ratio (*had meltd* vs. **had molten*): 219:1

meme, n. A *meme* (/meem/) is a type of behavior or an idea that becomes widely mimicked or adopted by others within a culture or subculture; esp., a humorous video, phrase, illustration, or other symbol or depiction that is suddenly and widely spread by and mimicked or parodied on the Internet. The NEOLOGISM arose in the 1970s, as a shortening of Greek *miméme* (“same, alike”).

memento. So spelled—not **momento*. The misspelling, which has lurked in the language since the 17th century, was never widely used until the late 20th century. The ETYMOLOGY has to do with the Latin

verb *meminisse* “to remember.” It has nothing to do with *moment*. Yet in both AmE and BrE, *memento* outranges **momento* by only a 2-to-1 margin. Pl. *mementos*. See PLURALS (D). The word is pronounced /mə-**men**-toh/—not /moh-**men**-toh/.

memorandums; memoranda. *Memorandum* is always the singular noun. Either *memorandums* or *memoranda* is correct as a plural. Shakespeare used *memorandums* (*Henry IV, Part 1* 3.3.158). One nice thing about *memorandums* is that it will help curb the tendency to misuse *memoranda* as a singular, as in the erroneous phrasing **This memoranda is late*. But the plural *memoranda* has been far more common than *memorandums* in print sources since the early 19th century.

Current ratio (*memoranda* vs. *memorandums*): 8:1

memoriam, in. See **in memoriam**.

ménage; manège. Both are French loanwords, hence GALLICISMS. The first refers to the management of one's household. The second refers to the care and feeding of one's horses.

mendacity; mendicity; mendicancy. *Mendacity*, the most common of these terms, denotes deceptiveness or lying—e.g.: “The word classicism has connotations of formal logic and balance, and to apply it to the dog's breakfast of impressionist clichés in this concert was an act of intellectual *mendacity*, a cynical willingness to play on the layman's uninformed stereotypes.” Kyle Gann, “Gentrification: Uptown Makes a House Call,” *Village Voice*, 8 Apr. 1997, at 66. The corresponding adjective is *mendacious* (= lying, untruthful).

Mendicity is beggarliness—e.g.: “For Alexander it was just another day in the 1995 campaign, a marathon of *mendicity* that will do much to determine which G.O.P. hopefuls will survive to compete in the 1996 campaign. . . . [H]e needs to raise \$20 million by the end of this year.” Michael Duffy, “The Money Chase,” *Time*, 13 Mar. 1995, at 93. Many cities in England have “mendicity societies,” which look after the poor. The more concrete synonym, which is slightly more common, is *mendicancy*—which more closely corresponds to the adjective and noun *mendicant* (= [adj.] begging; [n.] beggar). *Mendicancy* suggests the begging of a friar or monk who has taken a vow of poverty; *mendicity*, by contrast, suggests a less virtuous type of begging.

menstruation (= the monthly discharge of blood from the uterus of a fertile but nonpregnant female primate) is pronounced /men-stroo-**ay**-shən/—not /men-**stray**-shən/ (a mispronunciation resulting from syncope) or /men-i-**stray**-shən/ (a mispronunciation caused by epenthesis plus syncope).

menstruum (= a solvent, esp. one used for extracting a drug from a plant) forms the plural *menstrua*—or sometimes *menstruums*. See PLURALS (B).

Current ratio (*menstrua* vs. *menstruums*): 5:1

mental attitude is a common REDUNDANCY that arose in the late 19th century. The phrase might have made good sense when it was common to think of a person's *physical attitude* (i.e., posture and carriage), but those days are no more. E.g.: "Positive *mental attitude* [read *attitude*] will be the topic addressed by former University of Tennessee basketball coach Ray Mears." "State Mental Health Consumers' Group Meets Here Saturday," *Knoxville News-Sentinel*, 17 Apr. 1997, at B4.

mentee (= protégé; a person who has a mentor) arose in the mid-1960s to correspond to *mentor* (which itself dates from the mid-1700s). The main oddity about the pair is that unlike most pairs ending in *-or* and *-ee*, these are not from a verb stem. That is, almost every other pair derives from a verb—*grantor-grantee*, *licensor-licensee*, *mortgagor-mortgagee*, and so on. But there is no verb **to ment*, and *mentor* derives from the eponym *Mentor*, the name of a guide or adviser in Homer's *Odyssey*. Yet the *mentor-mentee* correlatives have become established as VOGUE WORDS, especially in education and business—e.g.:

- "One major candidate from a major university had an extremely distinguished sponsor who was apparently intent on emphasizing his special closeness to the *mentee*." David Damrosch, "Mentors and Tormentors in Doctoral Education," *Chron. of Higher Educ.*, 17 Nov. 2000, at B24.
- "But Spane has managed to fashion a flip-flop in their mentor-*mentee* relationship." Linda Helsler, "Client Turns Teacher for Mentor," *Ariz. Republic*, 13 Dec. 2000, at 1.
- "Mentors and *mentees* should talk on the phone at least once a week and get together at least once a month." "Mentors Needed for Teens in Phillipsburg," *Star-Ledger* (Newark), 11 Jan. 2001, at 3.

The alternative term, *protégé*, may sound affected, but *mentee* is hardly an improvement.

mentor (= an experienced person who tutors and helps a less experienced person) is preferably pronounced /*mən-tər*/, but the overpronounced /*mən-tor*/ is probably dominant today in AmE.

meow; ***miaow**; ***miaou**; ***miaul**; ***meou**. According to a solid majority of dictionaries, the standard word for a cat's sound is *meow*. Some cats, presumably ill trained, use variant pronunciations. See **mewl**.

Current ratio (in order of headwords): 295:33:3:2:1

Mephistophelean; **Mephistophelian**. The first, which is not quite as common (but nearly!), should be preferred for the same reasons that *Shakespearean* is preferred. It is pronounced /*mə-fis-tə-fee-lee-ən*/ or /*mef-is-tə-fee-lee-ən*/. See **Euclidean** & **Shakespearean**.

Current ratio (*Mephistophelian* vs. *Mephistophelean*): 1.2:1

mercantile (= involving trade and commerce) is most traditionally pronounced /*mər-kən-tl*/ in BrE and

/*mər-kən-til*/ in AmE—but since the early 20th century /*mər-kən-teel*/ has become the standard AmE pronunciation.

Mercedes-Benz. The plural is *Mercedes-Benzenes*, but some writers wrongly leave off the *-es*—e.g.: "And last week that élite group of electors arrived at the Hong Kong Convention Center in a procession of Rolls-Royces and *Mercedes-Benz* [read *Mercedes-Benzenes*] to cast their ballots for a winner anointed long before." Sandra Burton, "Beijing's Capitalist," *Time*, 23 Dec. 1996, at 47.

But what if the name is shortened, as it so frequently is, to *Mercedes*? The plural is then *Mercedeses*—e.g.: "He is so wild about his car, Young says, that sometimes when he stops other *Mercedeses* along the highway, 'I check the interiors, the dash.'" Laura Blumenfeld, "Gentlemen, Start Your Imaginations," *Wash. Post*, 30 Dec. 1996, at D1. Although it is true that many people say *Mercedes* as a plural, this usage flouts the age-old rule for pluralizing names. See PLURALS (F).

merchandise; ***merchandize**. The first is standard. The second is a misbegotten verb and noun. **Merchandize* emerged as a variant of *merchandise* in both the noun and verb senses during the 17th century and flourished until the mid-19th century. Today, it's an anomaly as either part of speech—e.g.: "The goal should be to make it harder for criminals to pay or receive money for stolen *merchandize* [read *merchandise*], he said." Jaikumar Vijayan, "The Identity Underworld," *Christian Science Monitor*, 6 May 2015. See -IZE.

Current ratio: 41:1

mercifully. See SENTENCE ADVERBS.

mercilessly. See ***unmercilessly**.

mercy killing. See **euthanasia (A)**.

meretricious (= alluring by false show) has not lost its strong etymological connection with the Latin word for "prostitute" (*meretrix*). A *meretricious marriage* is one that involves either unlawful sexual connection or lack of capacity on the part of one party. Outside law, though, the word is typically figurative, meaning "tawdry and showy without substance or merit"—e.g.: "Of course, there's also another reason to spurn some of these costly new mansions. . . . They look like starter homes on steroids, like Disney cartoons, like health clubs and encyclopedias of kitsch. We're talking bad taste. Tacky, gross, ostentatious, *meretricious*, vulgar, fake, phony, dreadful." Colin Campbell, "Historic Real Estate Market Exists Far Afield," *Atlanta J.-Const.*, 27 Nov. 2001, at B3.

merge together, a REDUNDANCY dating from the early 19th century, is a blemish. See **together**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

meridiem; meridian. See **a.m.**

meringue. So spelled. See SPELLING (A).

Meritage. “Some people find the word ‘Meritage’ meritorious. Others find it meretricious. But most people have no idea what it means.” John Kessler, “Drinkers Confused over ‘Meritage’ Label,” *Denver Post*, 8 June 1994, at E1. Dictionaries provide little help: as of late 2015, few major dictionaries had an entry on the term—which has an interesting history.

In 1987, California winemakers sponsored an international contest to create an upscale term for a table wine blended from two or more Bordeaux varietals grown in the United States. A California grocery-store wine buyer won the contest with *Meritage*, a PORTMANTEAU WORD formed by combining *merit* with *heritage*. The word rhymes with *heritage*; it’s pronounced /**mer**-ə-tij/. Yet many wine enthusiasts mistakenly give it a Frenchified pronunciation (/mer-i-**tahzh**/), which has become lamentably widespread. The term isn’t a GALLICISM at all.

The wine producers trademarked the term, which is now available only to members of the Meritage Association. To qualify as a Meritage under current guidelines, a wine must:

- Be a blend of two or more U.S.-grown Bordeaux grape varieties (meaning, for red wines, cabernet franc, cabernet sauvignon, carmenere, gros verdot, malbec, merlot, petit verdot, and St. Macaire; and for white wines, sauvignon blanc, sauvignon vert, and semillon). No variety can make up more than 90% of the final combination.
- Be bottled and produced by a U.S. winery from grapes that carry a U.S. appellation.
- Be the winery’s best wine of its type.
- Be limited to 25,000 cases per vintage.

What’s the reason for all this? Under U.S. law, a varietal such as cabernet sauvignon must have at least 75% of that one grape. Blended table wines, a fine tradition in Bordeaux, have traditionally been snubbed by American wine-lovers, like mutts at dog shows. Hence the idea to fabricate a fancy new name for good blends. It was a clever stroke to choose a linguistic blend (another term for a portmanteau word). The marketing ploy has worked: since 1988, Meritage wines have grown more and more successful (and more and more expensive). To help keep prices reasonable, insist on the unpretentious pronunciation rhyming with *heritage*. With the faux-French affectation, things will surely get out of hand. Cf. **claret**.

mesalliance; misalliance. *Mesalliance*, a GALLICISM, means “a marriage with a social inferior; a morganatic marriage.” *Misalliance* is best kept distinct in the sense (1) “an improper alliance,” or (2) “a marriage in which the partners are ill suited for each other.” A *mesalliance* (either /may-zə-**lɪ**-ənts/ or /may-zahl-**yahns**/) may be a happy marriage, but a *misalliance* (/mis-ə-**lɪ**-ənts/) never is.

Messrs. is the abbreviation for *messieurs*, the plural of the French *monsieur*. In English it acts as the plural of *Mr.* The female equivalent is *mesdames* (*Mmes.*).

metal for *mettle* (= natural temperament; courage) is a blunder—e.g.: “We have yet to test the *metal* [read *mettle*] of our response capabilities.” “Coordinators Rank Top Challenging Issues,” *Emergency Mgmt. Update* (Va. Dep’t of Emergency Servs.), Jan. 1995, at 1.

LANGUAGE-CHANGE INDEX
metal misused for *mettle*: Stage 1
 Current ratio (*test their mettle* vs.
 **test their metal*): 22:1

METAPHORS. A. Generally. A *metaphor* is a figure of speech in which one thing is called by the name of something else, or is said to be that other thing. Unlike *similes*, which use *like* or *as*, metaphorical comparisons are implicit—not explicit. Skillful use of metaphor is one of the highest attainments of writing; graceless and even aesthetically offensive use of metaphors is one of the commonest scourges of writing.

Although a graphic phrase often lends both force and compactness to writing, it must seem contextually agreeable. That is, speaking technically, the *vehicle* of the metaphor (i.e., the literal sense of the metaphorical language) must accord with the *tenor* of the metaphor (i.e., the ultimate, metaphorical sense), which is to say that the means must fit the end. To illustrate the distinction between the vehicle and the tenor of a metaphor, in the statement *that essay is a patchwork quilt without discernible design*, the makeup of the essay is the tenor, and the quilt is the vehicle. It is the comparison of the tenor with the vehicle that makes or breaks a metaphor.

A writer would be ill-advised, for example, to use rustic metaphors in a discussion of the problems of air pollution, which is essentially a problem of the bigger cities and outlying areas. Doing that mismatches the vehicle with the tenor.

B. Mixed Metaphors. The most embarrassing problem with metaphors occurs when one metaphor crowds another. It can happen with CLICHÉS—e.g.:

- “It’s on a day like this that the cream really rises to the crop.” (This mingles *the cream rises to the top* with *the cream of the crop*.)
- “He’s really got his hands cut out for him.” (This mingles *he’s got his hands full* with *he’s got his work cut out for him*.)
- “This will separate the men from the chaff.” (This mingles *separate the men from the boys* with *separate the wheat from the chaff*.)
- “It will take someone willing to pick up the gauntlet and run with it.” (This mingles *pick up the gauntlet* with *pick up the ball and run with it*.)
- “From now on, I am watching everything you do with a fine-toothed comb.” (*Watching everything you do* isn’t something that can occur with a *fine-toothed comb*.)

The purpose of an image is to fix the idea in the reader’s or hearer’s mind. If jarringly disparate images appear together, the audience is left confused or sometimes laughing, at the writer’s expense.

The following classic example comes from a speech by Boyle Roche in the Irish Parliament, delivered in about 1790: “Mr. Speaker, I smell a rat. I see him floating

in the air. But mark me, sir, I will nip him in the bud.” Perhaps the supreme example of the comic misuse of metaphor occurred in the speech of a scientist who referred to “a virgin field pregnant with possibilities.”

C. Dormant Metaphors. Dormant metaphors sometimes come alive in contexts in which the user had no intention of reviving them. In the following examples, *progeny*, *outpouring*, and *behind their backs* are dormant metaphors that, in most contexts, don’t suggest their literal meanings. But when they’re used with certain concrete terms, the results can be jarring—e.g.:

- “This Note examines the doctrine set forth in *Roe v. Wade* and its *progeny*.” “Potential Fathers and Abortion,” 55 *Brooklyn L. Rev.* 1359, 1363 (1990). (*Roe v. Wade*, of course, legalized abortion.)
- “The slayings also have generated an *outpouring of hand wringing* from Canada’s commentators.” Anne Swardson, “In Canada, It Takes Only Two Deaths,” *Wash. Post* (Nat’l Weekly ed.), 18–24 Apr. 1994, at 17. (Hand-wringing can’t be poured.)
- “But managers at Hyland Hills have found that, for whatever reasons, more and more young skiers are *smoking behind their backs*. And they are worried that others are setting a bad example.” Barbara Lloyd, “Ski Area Cracks Down on Smoking,” *N.Y. Times*, 25 Jan. 1996, at B13. (It’s a fire hazard to smoke behind your back.)

Yet another pitfall for the unwary is the CLICHÉ-metaphor that the writer renders incorrectly, as by writing **taxed to the breaking point* instead of *stretched to the breaking point*. See SET PHRASES.

METATHESIS. This term refers to the transposition of letters or sounds in a word or phrase. Historical examples abound (e.g., the modern words *bird* and *third* from Old English *bridd* and *thridda*). But modern examples—such as *ax* for *ask* (typical of modern DIALECT, but with historical antecedents), **irrelevant* for *irrelevant*, **prodigy* for *prodigy*, and the like—are to be avoided in STANDARD ENGLISH. For entries discussing various modern examples, see **anemone**, **calvary**, **chaise longue**, **diminution**, **irrelevant**, **jodhpur**, **medley**, **nuclear** & **relevant**. See also **quick** (B).

meteor. See **meteoroid**.

meteoric rise. This phrase is another example of how idiom trumps logic. Meteors always fall toward the earth. They never actually rise, and even their apparent path is as likely to be falling toward the horizon as rising away from it. Still, the idiom *meteoric rise* is about 30 times as common in print as *meteoric fall*. In fact, it’s so much more common that *meteoric* standing alone is now understood to signify quick success—e.g.: “The last time the IRL produced a *meteoric* star of Hornish’s caliber, the driver was Tony Stewart.” Ed Hinton, “Driver Dust-ups Good Box Office,” *Chicago Trib.*, 30 Mar. 2002, Sports §, at 11. A word-frequency graph for the phrase from 1900 to 2000 shows an almost straight-line upward trend—in other words, the very thing commonly denoted by the phrase.

meteoroid; meteor; meteorite. The headwords are listed in astronomical order. That is, a *meteoroid* (a piece of rock or metal traveling through space) becomes a *meteor* if it enters the earth’s atmosphere and a *meteorite* when it hits the earth’s surface.

The adjective *meteoric* means not only “of, relating to, or involving meteors” but also “resembling a meteor in speed or sudden brilliance” <a meteoric rise to stardom>.

meteorologist (= a professional student of weather), a nonsexist equivalent to the old-fashioned term *weatherman*, is pronounced /mee-tee-ə-rol-ə-jist/, in six syllables—not /mee-tə-rol-ə-jist/. Meteorologists often mispronounce the word themselves—as daily newscasts throughout the United States will bear out.

mete out, v.t. (*mete* from an Old English word for “measure”), is the correct phrase, not **meet out* or **meat out*—e.g.:

- “He said, ‘It’s not a matter of enforcement, but a problem of *meating out* [read *meting out*] justice’ in dealing with juveniles.” Mark J. Bell, “Mall Developers Coming to City,” *Intelligencer* (Wheeling, W. Va.), 1 Apr. 1992, Bus. §, at 1.
- “Given this standard, no international court would *meet out* [read *mete out*] justice any Westerner would recognize as such.” Donald Devine, “All for a World Court?” *Wash. Times*, 7 Dec. 1999, at A16.
- “If indeed it turns out that Enron’s managers were engaged in shabby financial practices then shame on them and let the law *meet out* [read *mete out*] its punishments.” Terrence L. Barnich, “Free Markets and the Fall of Enron,” *Chicago Trib.*, 2 Dec. 2001, Commentary §, at 21.

This phrase is also sometimes incorrectly written **meter out*—e.g.: “The coach has *metered out* [read *meted out*] discipline with all the predictable consistency of spilled mercury, having no hard-and-fast punishment standards.” Nick Horvath Jr., “Don’t Turn That Page,” *Patriot-News* (Harrisburg), 25 Oct. 2000, at C1.

LANGUAGE-CHANGE INDEX

1. **meat out* for *mete out*: Stage 1
2. **meet out* for *mete out*: Stage 1
3. **meter out* for *mete out*: Stage 1

methinks (= it seems to me) is an ever-popular ARCHAISM, thanks to Shakespeare: “The lady doth protest too much, methinks” (*Hamlet* 3.2.230). Note, however, that Shakespeare put *methinks* at the end of the line, not at the beginning. The following, then, is something of a misquotation—and there are countless others like it: “*Methinks* Scott Hicks protests too much about the ‘Shine’ backlash.” Paul Willistein, “Oscars Declare Their ‘Independents,’” *Morning Call* (Allentown, Pa.), 23 Mar. 1997, at F1.

Methinks also appears frequently without the accompanying “protest too much” language—e.g.:

- “The problem—*methinks* it obvious—was in Foxborough.” Michael Madden, “Olson Couldn’t Get Out of Spotlight,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

So She'll Get Out of Country," *Boston Globe*, 26 May 1991, Sports §, at 44.

- "Methinks he'll have quite a lot of people keeping him company when that day comes." Sean Kilfeather, "Slipped DISC at the Mansion House," *Irish Times*, 5 June 1993, Weekend Sport §, at 17.
- "Tracking the source of this one could be a Nile-esque expedition, but *methinks* the answer lies in one body who wanted to hype King of the Hill." David Holthouse, "Surf the Jungle Telegraph Debris," *Anchorage Daily News*, 7 Apr. 1995, Weekend §, at 25.
- "Methinks that those making the fuss over our excellent dinner of calamari and lasagna would object if planning commission members were found to be members of the Rhododendron Society." Letter of Neil M. Ridgeley, "How Did We Become the 'Gang' of Seven?" *Baltimore Sun*, 23 Mar. 1997, at B4.

methodology, strictly speaking, means "the science or study of method." But it is now widely used as an equivalent of *method* or *methods*—e.g.:

- "Defenders of *scientific methodology* [read either *scientific methods* or *the scientific method*] were urged to counter-attack against faith healing, astrology, religious fundamentalism and paranormal charlatanism." Malcolm W. Browne, "Scientists Deplore Flight from Reason," *N.Y. Times*, 6 June 1995, at C1.
- "Some Fulton commissioners, guided by the grumbling of employees who did not get raises, complained about the study's *methodology* [read *method* or *methods*] and results." Carlos Campos, "County Medical Examiner Plans to Retire," *Atlanta J.-Const.*, 5 June 1997, at E12.
- "This means that if this survey were repeated using the same questions and the same *methodology* [read *methods*], 19 times out of 20, the findings would not vary from the percentages shown here by more than plus or minus 4.9 percentage points." Jennifer Jacobs, "Many Endorse Roundup Plan," *Des Moines Register*, 2 Sept. 2015, at A1.

Prefer *method* or *methods* whenever you can.

LANGUAGE-CHANGE INDEX
methodology for *method*: Stage 5

metropolis. Pl. *metropolises*—preferably not **metropoles* /mi-**trɒp**-ə-leez/.

Current ratio: 3:1

metrosexual, n. & adj., is a PORTMANTEAU WORD made by combining *metropolitan* with *heterosexual*. The term refers to a probably heterosexual man who takes pains to present an upscale dapper appearance through fastidious clothing selections and impeccable grooming as evidenced, for example, by eyebrow-plucking, waxing of the trunk, and highlighting of the hair. A metrosexual is thought to have many of the habits and sensibilities of a sophisticated urban gay man. Coined in 1991, the term has risen steadily in use in AmE and BrE alike.

mettle. See **metal**.

mewl; mew; meow. *Mewl*, a verb only, means "to cry like a baby; whimper." *Mew* and *meow* each mean (1) n., "the sound a cat makes," or (2) vb., "to make this sound." But because *mew* also has other, unrelated meanings—and because *meow* is more popularly

associated with cats—*meow* might be the better spelling for these senses. (For some variant spellings of *meow*, see **meow**.)

Unless you want to emphasize the crying sound in a cat's voice, *mewl* should yield to *meow* in feline contexts. In these sentences, however, *mewl* seems right:

- "Suddenly we hear the whirring refrigerator in the kitchen, a cat *mewling* in the alley." Lisa Sack, "Don't Touch That Dial," *Village Voice*, 18 Oct. 1994, at 87.
- "Of course, it's hard not to notice a cat who starts *mewling* and ramming your bedroom door with her head at 6 every morning." Ray Recchi, "A Vacation Is Nice," *Sun-Sentinel* (Ft. Lauderdale), 1 July 1997, at E1.

Mexican-American. See **Hispanic**.

***miaow**; ***miaou**; ***miaul**. See **meow & mewl**.

miasma. Pl. *miasmas*—preferably not **miasmata* (the Greek plural that predominated in English-language contexts till about 1900). See PLURALS (B).

mic. See **mike**.

mice. See **mouse**.

mice type. This JARGON refers to the fine print in an advertisement, warranty, or other document, specifically copy that takes away what the big headline promises—e.g.:

- "Fine print cost Jeffrey Vigneault \$500. Vigneault . . . shelled out \$3,500 in December 2000 for a Power Mac computer, attracted by its prowess for video and promise of a \$500 rebate from Apple. He sent in his paperwork three weeks later, and faster than you can say 'Steve Jobs,' it was rejected: He'd missed the deadline, a relative speck at the bottom of the form, buried amid 20 lines of what advertisers, regulators, and consumer advocates call 'mice type.'" "Buyer Beware," *Consumer Reports*, Jan. 2002, at 15.
- "Whenever I get these solicitations, I immediately turn to the 'mice type.' That's where you find the 'gotchas,' the information the companies don't want to tell you." Clark Howard, "Zero-Percent Cards Hide the 'Gotchas,'" *Atlanta J.-Const.*, 17 June 2006, at FE5.

Michigander; Michiganian; *Michiganite. By popular consensus, *Michigander* is the predominant form, appearing more than three times as often in print as *Michiganian* (the form once decreed by state statute). **Michiganite* is a rare variant used by the U.S. Government Printing Office. See DENIZEN LABELS.

Current ratio (in order of headwords): 20:6:1

microbrewery; craft brewery. *Microbrewery* is the predominant term for a small, usually local beer-maker, appearing in print about 60 times as often as the more upscale term *craft brewery*. Oddly, though, in 2015 the Associated Press preferred *craft brewery* in its influential *Stylebook*, explaining that it's more descriptive. Whether this stylistic endorsement will have much impact on actual usage remains to be seen.

mid; midst. See **amid**.

Middle West; Middle Western. See **Midwest**.

midnight. See **a.m.** (c).

Midwest; Midwestern; Middle West; Middle Western. The one-word forms, which have eclipsed the two-word forms in popularity, should now be considered standard. Of course, a difficulty with geographic terms such as these is where to draw their boundaries: in Wichita Falls, Texas, there's a school called "Midwestern University." This despite the ordinary understanding that the Midwest's most southwestern state is Kansas.

midwife, v.t.; *midwife. The first is the standard form for the verb as well as the noun—e.g.:

- "The milling district of Minneapolis . . . *midwived* [read *midwifed*] some of its most prominent companies." Steve Brandt, "Reclaiming Mill City's River Roots," *Star Trib.* (Minneapolis), 18 Dec. 1996, at B1.
- "Welles *midwived* [read *midwifed*] the notion that you do not have to know much about the film process to make a good, even a great film." Neil Norma, "What If . . .," *Evening Standard*, 14 Apr. 1997, at 23.

LANGUAGE-CHANGE INDEX

**midwived* for *midwifed*: Stage 1

Current ratio (*midwifed* vs. **midwived*): 5:1

midwifery (= the skill or work of a specially trained nurse who helps in childbirth) is predominantly pronounced /mid-wif-ə-ree/ or /mid-wif-ree/ in BrE, but /mid-wif-ə-ree/ or /mid-wif-ree/ in AmE. Yet as Elster notes, the most traditional 18th- and 19th-century pronunciations had an initial syllable stress: /mid-wif-ree/ or /mid-wif-ə-ree/. *BBBM* at 314.

mien (= demeanor, appearance, bearing) often carries connotations of formidableness <his imposing mien>. The word is pronounced /meen/.

might. See **may** & **SUBJUNCTIVES**.

***might can.** See **DOUBLE MODALS**.

***might could.** See **DOUBLE MODALS**.

***might had better.** See **DOUBLE MODALS**.

***might ought.** See **DOUBLE MODALS**.

***might should have**, a dialectal subjunctive, is much less common than the equally poor **might could*. But it occasionally appears in print—e.g.: "He *might should have* [read *might have* or *should have*] considered it, given the Tigers' meek at-bats during the first seven innings, despite finishing with 12 hits." Kirk Bohls, "Redman Strikes Down Auburn," *Austin Am.-Statesman*, 5 June 1994, at E8. See **DOUBLE MODALS**.

LANGUAGE-CHANGE INDEX

**might should have* for *might have* or *should have*:

Stage 1

***might supposed to.** See **DOUBLE MODALS**.

***might've used to.** See **DOUBLE MODALS**.

***might would.** See **DOUBLE MODALS**.

mighty. In AmE, this word can function as (1) an attributive noun <the meek and the mighty alike>; (2) an adjective <the mighty river overswelled its banks>; or (3) an adverbial intensifier <she felt mighty proud>. Sense 3 is largely confined to the South and Southwest.

mike; mic. As a shortened form of *microphone*, both *mike* and *mic* are used in AmE and BrE alike—but *mike* in this sense has traditionally predominated. The standard form in dictionaries such as *AHD*, *W11*, and *WNWCD* is *mike*. But whereas *mike* more immediately suggests the pronunciation, *mic* more immediately suggests the longer form. Still, *mic* looks as if it's pronounced "mick" and therefore probably leads to misreadings of its own. *Newsweek*, like many other publications, uses the standard form—e.g.:

- "White House officials see House Speaker-to-be Newt Gingrich as a formidable foe—not the least because of his discipline before an open *mike*." "On Message," *Newsweek*, 28 Nov. 1994, at 6.
- "And he needs to establish some distance between himself and the ever-present *mike*, as well as himself and the ever-present crowd." Meg Greenfield, "Dole's Problem," *Newsweek*, 3 June 1996, at 82.

The spelling *mic*, endorsed in 2010 by the Associated Press but not yet listed in most dictionaries, is also common—e.g.:

- "The sound of the *mic* [read *mike*] is warm, not the tinny, junky sound you'd expect from an inexpensive *mic* [read *mike*]." "Videotests," *Video Mag.*, Apr. 1994, at 22.
- "He's hosting the weekly open-*mic* [read -*mike*] shows, 8 p.m. Tuesday at the Grey Eagle Tavern and Music Hall." Tony Kiss, "Entertainment This Week," *Asheville Citizen-Times* (N.C.), 1 Jan. 1995, at L1.
- "Every night has a theme, from killer reggae on Sundays to open *mic* [read *mike*] on Thursdays." Kristine Eco & Melissa Bauer, "Java Talk," *Sun-Sentinel* (Ft. Lauderdale), 18 Sept. 1996, at 12.

This spelling (*mic*) seems to be a holdover from port labels on old stereos and tape players. Yet people had long since decided that the pronunciation spelling *mike*, which dates from the 1920s, was more sensible and convenient. After all, the verb uses **micced* and **miccing* present serious problems; *miked* and *miking* have no such problems.

Current ratio (*open mike* vs. *open mic*): 1:1

mileage is the standard spelling in AmE and BrE alike. **Milage* is a variant.

Current ratio: 237:1

milieu (/meel-yuu/ or /mil-yuu/) is sometimes misspelled **mileau*—e.g.: "Morton was a pianist, composer and band leader who emerged from the New Orleans jazz *mileau* [read *milieu*] to become one of the most famous musicians in America during the 1920s." Iris Fanger, "Actor's Right at Home in 'Jelly'

Role,” *Boston Herald*, 23 Feb. 1996, at S12. The plural *milius* is preferable to *milieux*. See PLURALS (B).

LANGUAGE-CHANGE INDEX
milieu misspelled **mileau*: Stage 1
Current ratio: 1,757:1

militate. See **mitigate**.

***milктоast**. See **milquetoast**.

millenarian (= someone who believes in a thousand-year age of blessedness beginning with the second coming of Christ) is so spelled despite the *nn* in *millennium*. The difference in spelling relates to ETYMOLOGY: like the adjective *millenary*, the term *millenarian* derives from the Latin term *milleni* “a thousand each.” An arcane synonym for *millenarian* is *chiliast* (/kil-ee-ast/), from the Greek term *chilioi* “a thousand.” Hence a thousand-year period is known not only as a *millennium* (fr. L. *mille* “a thousand”) but also as a *chiliad* (/kil-ee-ad/). These are words for only the heartiest vocabularians.

millennium [L. *mille* “thousand” + *annus* “year”] forms two plurals: *millennia* and *millenniums*. The predominant plural is *millennia* in AmE and BrE alike. See PLURALS (B). Although *millenniums* was the predominant plural in print sources from about 1850 to 1935, a major reversal of fortune occurred in the 1930s and 1940s: the Latinate plural *millennia* gained ascendancy in both AmE and BrE. Today it predominates in World English by a 19-to-1 ratio (17-to-1 in AmE).

A few major AmE publications continue to use *-iums*. E.g.:

- “For decades, La Selva, a lush, dripping jungle filled with towering trees and swinging vines, has served as the quintessential example of the pristine rain forest, untouched and unchanged for *millenniums*.” Carol K. Yoon, “Rain Forests Seen as Shaped by Human Hand,” *N.Y. Times*, 27 July 1993, at B5.
- “Abruptly, the two sexes—who had gone for *millenniums* without exchanging any more than the few grunts required for courtship—were expected to entertain each other with witty repartee over dinner.” Barbara Ehrenreich, “Burt, Loni and Our Way of Life,” *Time*, 20 Sept. 1993, at 92.
- “I reminded him that for *millenniums*, Europe has brimmed with white people who have hated and fought each other.” Dawn M. Turner, “White Separatist Echoes Trump,” *Chicago Trib.*, 1 Sept. 2015, at 3.

The spelling of the word shouldn’t be any mystery: “*Millennium* has been spelled *millennium* for about a millennium. It links the Latin *mille* (thousand) and *annus* (year) When *annus* bonds with another word, the *a* becomes an *e*.” Barry Newman, “Mil(l)-en(n)ium,” 13 *English Today* 17, 18 (1997). But the word is commonly misspelled in all sorts of ways, as Newman’s article details.

The word is especially often deprived of one *-n*- and misspelled **millenium*—e.g.: “Does anybody really think a new TSU athletic director will be selected and in place before the next *millenium* [read *millennium*]?”

David Climer, “Molasses Moves Faster than TSU,” *Tennessean*, 3 Sept. 1997, at C1. In fact, this misspelling has even found its way into proper names, such as the hotel that (until 11 Sept. 2001) was across the street from the World Trade Center in New York City, and also the car manufactured by Mazda (both spelled “Millenium”). Perhaps that should be called not a proper name but an improper name. See SPELLING (A).

LANGUAGE-CHANGE INDEX
millennium misspelled **millenium*: Stage 1
Current ratio: 39:1

milliard. See **billion**.

millionaire is so spelled—not, like *questionnaire*, with *-nn-*. But writers frequently get it wrong—e.g.: “Riordan, a 66-year-old *millionnaire* [read *millionaire*] who works for \$1 a year, was elected the year after the 1992 riots, promising to ‘turn the city around.’” Jonathan T. Lovitt, “Riordan Re-elected Mayor in L.A.,” *USA Today*, 9 Apr. 1997, at A3. For another word susceptible to this problem—*doctrinaire*—see **doctrinal**. Cf. **questionnaire**.

LANGUAGE-CHANGE INDEX
millionaire misspelled **millionnaire*: Stage 1
Current ratio: 58:1

millipede has been the standard spelling since about 1875. **Millepede* is a variant.

Current ratio: 43:1

milquetoast (= a weak, timid person who is easily led) is the standard spelling. Even though the name derives from Harold T. Webster’s early-20th-century comic strip *The Timid Soul*, in which the character is named Caspar Milquetoast, the word has been so fully assimilated that the *m-* shouldn’t be capitalized. **Milktoast* is a variant spelling, not recommended.

Current ratio: 27:1

mimic, v.t., makes *mimicked* and *mimicking*. Cf. **panic** & **picnic**.

minable is the standard spelling in AmE, *mineable* in BrE. See MUTE E.

Current ratio (*mineable* vs. *minable* in World English): 1.3:1

mineralogy (= the scientific study of minerals) is pronounced /min-ə-ral-ə-jee/—not /-rahl-ə-jee/. Cf. **genealogy**.

***minify**. See **minimize** (B).

minima. See **minimum**.

minimal; minimum, adj. Both words are used adjectivally. *Minimal* is always an adjective, and *minimum* is used as an attributive adjective in phrases such as *minimum wage*. The words mostly overlap, but in one sense there is a distinction: *minimal* may or may not be absolute, but *minimum* always is. *Minimum* = the least possible, practical, legal, etc. <the minimum age to serve as President is 35>. *Minimal* = (1) the least; or

(2) few, little <win with minimal effort> <enact over minimal opposition>. Some authorities object to the use of *minimal* in a nonabsolute sense; presumably if they had their way a *minimalist* musical composition would consist of one note played one time on one instrument. Cf. **maximum**.

LANGUAGE-CHANGE INDEX
minimal in reference to a small amount (e.g., a *minimal amount of salt*): Stage 5

***minimalize**. See **minimize** (c).

minimize. **A. Meanings.** In best usage, *minimize* means “to keep (something) to a minimum”—e.g.: “To *minimize* its exposure to the failings of any one technology, the agency has long relied on a ‘layered’ system of diverse detectors, from software for spotting anomalies in shipping manifests to X-ray scanners.” David Stipp, “Detecting the Danger Within,” *Fortune*, 17 Feb. 2003, at 104.

But the word is also used to mean “to misrepresent (something) as less significant than it really is; to belittle or degrade”—e.g.: “Mr. Kelly sought to *minimize* differences between Mr. Roh and the administration on North Korea and other issues, suggesting that those differences might have been unfairly magnified during the heat of the campaign.” Howard W. French, “Seoul May Loosen Its Ties to U.S.,” *N.Y. Times*, 20 Dec. 2002, at A1. Some authorities have criticized use of *minimize* in the latter sense. Among them is Theodore Bernstein, who was an assistant managing editor of *The New York Times*. But as this citation from the same newspaper suggests, the new sense is thoroughly ingrained in our usage today. It has become standard.

LANGUAGE-CHANGE INDEX
minimize in the sense “to play down” (as in *In the news conference, the officials minimized their role in the decision*): Stage 5

B. And *minify. Both H.W. Fowler and Eric Partridge considered **minify* a NEEDLESS VARIANT of *minimize* (FMEU1 at 355–56; U&A at 186). But Theodore Bernstein liked the term as an alternative to *minimize* in the second sense discussed in (A): “The word is not used as much as it should be, but let us not *minify* it.” Bernstein, *The Careful Writer* 278 (1965). Too late. Current ratio: 1,945:1

C. And *minimalize. **Minimalize* is a NONWORD bearing an extra syllable—e.g.:

- “Paperwork has been *minimalized* [read *minimized*].” David Fettig, “Drive to Improve Cash Flow Yields Productivity Gains,” *Fedgazette*, Apr. 1995, at 1.
- “TV director Brian Large *minimalizes* [read *minimizes*] the damage by relying on closeups.” Jeff Bradley, “PBS’s ‘Cosi’ Showcases Mezzo Cecilia Bartoli,” *Denver Post*, 28 Dec. 1996, at E10.
- “Insufficient technology and bandwidth shuts down teacher/student computer access and *minimalizes* [read

minimizes] the education during excessive testing.” Cindi Andrews, “Common Core Test Flaws Are Obvious,” *Cincinnati Enquirer*, 8 Mar. 2015, at F4.

LANGUAGE-CHANGE INDEX
 **minimalize* for *minimize*: Stage 1
 Current ratio (*minimized* vs. **minimalized*): 302:1

minimum, n. The predominant plural is *minima*, but few aside from scientists use it—e.g.: “The maxima of one fringe pattern will be superimposed on the *minima* of the other, and vice versa.” Andreas Maurer, “Cardboard Double-Star Interferometer,” *Sky & Telescope*, Mar. 1997, at 91. The form *minimums*, though not recorded in many dictionaries, has been on the rise since the 1940s and ought to be accepted as standard. It’s now fairly common—e.g.:

- “New Jersey’s requirements were already higher than the new *minimums*.” Karen W. Arenson, “Standard for Equivalency Degree Is Raised,” *N.Y. Times*, 9 Apr. 1997, at B10.
- “Often, governments set the *minimums* below subsistence levels to attract foreign investment, the critics said.” William Branigan, “Clinton, Garment Makers Hail Accord on Sweatshops,” *Wash. Post*, 15 Apr. 1997, at A10.
- “Although credit card companies might scream loudest for their money, they can wait—although paying the *minimums* on the cards is far preferable to not paying at all.” Gregory Karp, “How to Survive Job Loss,” *Chicago Trib.*, 31 Aug. 2015, Bus. §, at 1.

Cf. **maximum**. See PLURALS (B).

LANGUAGE-CHANGE INDEX
minimums as a plural: Stage 5
 Current ratio (*minima* vs. *minimums*): 4:1

***miniscule**. See **minuscule**.

minister, vb. See **administer**.

minor, adj. See ADJECTIVES (B).

***minor woman**—an odd combination of EUPHEMISM, MISCUE, and OXYMORON—displaces a more natural wording such as *girl*, *female minor*, or, if the sex of the person is obvious, *minor*. E.g.: “His reference to a ‘mature’ woman means he does not favor the right of a *minor woman* [read *minor*] to choose to have an abortion without parental or judicial consent.” Susan Yoachum, “Wilson Campaign Sticks to Familiar Topics,” *S.F. Chron.*, 2 Nov. 1990, at A21.

minuscule. So spelled, not **miniscule*. The word derives from the word *minus*; it has nothing to do with the prefix *mini-*. But the misspelling has spread since about 1950—e.g.:

- “Mouth hanging open, Harry saw that the little square for June thirteenth seemed to have turned into a *minuscule* [read *minuscule*] television screen.” J.K. Rowling, *Harry Potter and the Chamber of Secrets* 242 (Am. ed. 1999).
- “Even as some people questioned the practical effect of saving such a *minuscule* [read *minuscule*] portion of the

state budget, they were mostly willing to forgo cynicism.” Kathleen Burge, “Forgoing of Salaries Gets Mixed Reviews,” *Boston Globe*, 2 Jan. 2003, at B5.

- “Consider Iowa, with only a *miniscule* [read *minuscule*] African-American population.” Abigail Thernstrom & Stephen Thernstrom, “Racial Gerrymandering Is Unnecessary,” *Wall Street J.*, 11 Nov. 2008, at A20.

See SPELLING (A). Even so, the correct spelling has always vastly predominated in print sources.

The counterpart—a rarity—is *majuscule*. Today that term is used only in printing, to denote a capital letter.

In both AmE and BrE, *minuscule* is now pronounced /**min**-ə-skyool/—though before the 1960s the standard pronunciation stressed the second syllable: /mi-**nəs**-kyool/. Avoid /**min**-yə-skyool/.

LANGUAGE-CHANGE INDEX

minuscule misspelled **miniscule*: Stage 4

Current ratio: 2:1

minutia (= a trivial detail; a trifling matter) is the singular of the plural *minutiae*. Though much less common than the plural, *minutia* is hardly unknown. Unfortunately, it is almost always misused for the plural—e.g.:

- “But his first response when asked about vulnerabilities is to pull from his suit jacket pocket one of the approximately 4,000 small spiral notebooks he has filled with the *minutia* [read *minutiae*] of his days since 1974.” George F. Will, “A Cassandra Candidacy?” *Wash. Post*, 12 Jan. 2003, at B7.
- “I won’t bore you with the *minutia* [read *minutiae*], but I will say that as our ‘to do’ list has grown longer our tempers have grown shorter.” Winda Bennett, “Leap of a Lifetime,” *Seattle Post-Intelligencer*, 13 Jan. 2003, at C1.
- “In life, that translates into them being mired in personal *minutia* [read *minutiae*], focusing on their real or imagined minor physical faults.” Bryan Rourke, “When You Can’t See Face Value,” *Providence J.-Bull.*, 21 Jan. 2003, at E1.

The phrases should be *lost in the minutiae*, *statistical minutiae*, and *day-to-day minutiae*—never *minutia*. But occasionally *minutia* is the right word—e.g.: “With audio commentary by Tsiaras . . . , no *minutia* is left unexamined (body donor Jernigan is a near perfect specimen, save one missing testicle).” Ty Burr & Kipp Cheng, “The Week,” *Entertainment Weekly*, 21 Mar. 1997, at 78.

The plural is often mispronounced as if it were the singular word (/mi-**n**[y]oo-shee-ə/ or, less good, /mi-**n**[y]oo-shə/). But the traditional and most proper pronunciation of *minutiae* is /mi-**n**[y]oo-shee-ee/.

LANGUAGE-CHANGE INDEX

minutia for the plural *minutiae*: Stage 2

Current ratio (*lost in the minutiae* vs.

**lost in the minutia*): 5:1

Mirandize, vb. Since the 1970s, *Mirandize* (= to read an arrestee his rights under *Miranda v. Arizona*, 384 U.S. 436 [1966]) has become common as police-officer SLANG in the United States. It’s therefore becoming common generally—e.g.: “They are read their rights (*mirandized*) and interrogated.” Robin T. Lakoff, *Talking Power: The Politics of Language in Our Lives* 87

(1990). The word has even started taking on extended senses—e.g.: “So since I would be popping antibiotics from hours before the operation until a week or more after, everyone *Mirandized* me about the, oh by the way, if you happen to, be sure to, etc.” Samantha Bennett, “Toothless Wisdom,” *Pitt. Post-Gaz.*, 29 July 1997, at C2.

Some believe this NEOLOGISM to be a blemish in place of another phrasing, such as *to read* (an arrestee) *his Miranda rights*. Only 23% of the usage panelists for the *Harper Dictionary of Contemporary Usage* (2d ed. 1985) considered the word “a useful addition to the language.” The other 77% disapproved. (See -IZE.) Given its precipitate rise in popularity since about 1985, the word seems destined to lose its objectionableness as long as *Miranda* remains good law.

mirror is pronounced /**mir**-ər/ or /**meer**-ər/—not /**mir**-ə/ or, worse, /**meer**/. See PRONUNCIATION (B), (C).

misalliance. See **mesalliance**.

misappropriate. See **appropriate** (A).

misbelief. See **disbelief**.

miscellaneous must be followed by a plural COUNT NOUN; it does not work with an abstract mass noun. Though one might refer to *miscellaneous languages* (and thereby include Chinese, English, French, Thai, and Vietnamese), it makes no sense to write *miscellaneous contract language*, as in Mark M. Grossman, *The Question of Arbitrability* 57 (1984) (section title). Exceptions are SET PHRASES such as *miscellaneous shower* and *miscellaneous income*.

mischievous /**mis**-chə-vəs/ is so spelled. **Mischievous* is an impishly common misspelling and mispronunciation /**mis**-chee-vee-əs/—e.g.:

- “I could not imagine them driving, getting mouthy, moody or *mischievous* [read *mischievous*], let alone going to drinking parties at the homes of friends whose parents were out of town.” Eleanor Mallet, “The Tranquility of School Age,” *Plain Dealer* (Cleveland), 25 Feb. 1995, at E1.
- “Mayan Indians considered this place hell’s fun house, inhabited by *mischievous* [read *mischievous*] gods who had to be soothed with heaping food bowls and the occasional human sacrifice.” Judith Wynn, “Lodge Guests Settle In Among Tropical Wildlife,” *Boston Herald*, 26 Dec. 2002, at 38.

See PRONUNCIATION (B). Cf. **grievous**.

LANGUAGE-CHANGE INDEX

mischievous misspelled or mispronounced

**mischievius*: Stage 2

Current ratio: 383:1

MISCUES. A miscue is an inadvertent misdirection that causes the reader to proceed momentarily with an incorrect assumption about how—in mechanics or in sense—a sentence or passage will end. The misdirection is not serious enough to cause a true ambiguity because, on reflection, the reader can figure out the meaning. Thus:

The court decided the question did not need to be addressed.

The mere omission of *that* after the verb *decided* induces the reader to believe that *the question* is the direct object—that is, to believe (if only for an immeasurably short moment) that the court decided the question. In fact, of course, the court decided not to decide the question. See (F).

Miscues are of innumerable varieties; the only consistent cure is for the editor or self-editor to develop a keen empathy for the reader. Part of what the editor or self-editor must do, then, is to approach the text as a stranger might. Further, though, a good edit must involve the kind of skeptical reading in which one imagines how one reader in ten might misread the sentence.

Following are discussions of six of the most common causes of miscues.

A. Unintended Word Association. Sometimes two words in a passage seem to go together—because they frequently *do* go together—but in the particular instance aren't intended to. This commonly occurs in two ways.

First, a word appearing late in a passage sometimes seems to echo an earlier word to which it really has no relation. For example, in the final clause of the following passage, *barred* suggests some relation to *disbarred* in the opening sentence: "In 1948 he was found guilty of unprofessional conduct and *disbarred* for three years by a federal judge. The decision was appealed and reversed three years later. In 1958 Fisher, a thin-faced, thinning-haired socialite, was censured by the Illinois Supreme Court for actions against clients—but the Chicago Bar Association had asked that he be *barred* from practice for five years." Murray T. Bloom, *The Trouble with Lawyers* 158 (1970).

Second, readers can be misled into WORD-SWAPPING. For example, the phrase *visual imagery* suggests picturesqueness (as opposed to picaresqueness) in the following sentence: "Given the rich *visual imagery* of Cervantes's *picaresque* romance, this is certainly a production that can appeal to both deaf and hearing audiences." Graham Hassell, "New Tilt at Old Tale with Signs of Enchantment," *Evening Standard*, 12 Oct. 1995, at 46. (To eliminate the miscue, replace *picaresque* with some other word such as *comic* or *panoramic*. See **picaresque**.) Similarly, the phrase *army regimen* suggests *regiment* (= a military unit): "She shows Rabin, full of grandfatherly pride at the family's third generation of warriors for Israel, his prime ministerial curiosity about how the *army regimen* had changed since his day." Judith Dunford, "Good-Bye, Grandpa," *Chicago Sun-Times*, 5 May 1996, at 14. Cf. **calvary**.

In the following examples, some interesting things occur on first reading. Clothes are laid down, flattery induces a woman to have sex, fans are kept from going, and somebody engages in murderous attacks:

- "The Tudor justices enforced laws against Roman Catholic recusants, regulations *laying down the clothes* people might wear and the price they should pay for them." Alan Harding, *A Social History of English Law* 72 (1966). (Did 16th-century judges mandate nudity for Roman Catholics?)
- "Flattery induced a woman to submit to intercourse by pretending to perform a surgical operation. He was convicted of rape." Glanville Williams, *Textbook of Criminal Law* 514 (1978). (A man named Flattery committed a crime, but his name suggests the wife he might have used in committing it. The miscue might be removed by referring to *Mr. Flattery* instead of *Flattery*.)
- "Texas and Dallas officials said they would be disappointed to lose the game and said they were taking steps in an attempt to *keep fans from* both schools *going to Dallas*." Arnold Hamilton, "Moving of Game Is Urged," *Dallas Morning News*, 12 Aug. 1993, at A1. (*Keep* means "retain" in that sentence, but the proximity of *from* makes it read as if it meant "prevent.")
- "Small-minded, episodic *murder attacks* the basis of our taken-for-granted values so fundamentally that it generates anxiety." David Canter, "Anxious, Appalled . . . but Still Drawn to Horror," *Sunday Times* (London), 13 Mar. 1994, at 4–6. (It looks on first reading as if the noun phrase *murder attacks* is the subject, but *murder* is the subject and *attacks* is the verb.)

B. Misplaced Modifiers. When modifying words are separated from the words they modify, readers have a hard time processing the information. Indeed, they are likely to attach the modifying language first to a nearby word or phrase—e.g.:

- "The 39-year-old San Francisco artist has beaten the odds against him by living—no, thriving—with the virus that causes AIDS for 14 years." Christine Gorman, "Are Some People Immune to AIDS?" *Time*, 22 Mar. 1993, at 49. (Does the virus cause AIDS for 14 years?)
- "Both died in an apartment Dr. Kevorkian was leasing after inhaling carbon monoxide." "Kevorkian Victory: 3d Judge Says Suicide Law Is Unconstitutional," *N.Y. Times*, 28 Jan. 1994, at A9. (This word order has Dr. Kevorkian inhaling carbon monoxide and then leasing an apartment.)
- "On November 6, 1908, most historians agree that either a company of Bolivian cavalry, or four local police officers from el pueblo de la San Vicente, . . . shot Butch [Cassidy] and the [Sundance] Kid to death when they were discovered to be in possession of a stolen mule." J. Lee Butts, *Texas Bad Girls* 112 (2001). (This seems to say that the historians reached an agreement on November 6, 1908, not that they agree about the events of that date. A possible rewrite: *Most historians agree that on November 6, 1908 . . .*)

C. Clear Referents. When a word such as a pronoun points back to an antecedent or some other referent, the true referent should generally be the closest appropriate word—e.g.:

- "Until recently, the inns showed themselves particularly ill-equipped to handle the overseas students, including many Africans and such future statesmen as Mr. Nehru, who by 1960 made up two thirds of all those called to the

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

English bar.” Alan Harding, *A Social History of English Law* 389 (1966). (This sentence involves a REMOTE RELATIVE that makes Mr. Nehru sound like a very big man indeed.)

- “There are various reasons that juries hang, some better than others.” Robin T. Lakoff, *Talking Power: The Politics of Language in Our Lives* 126 (1990). (The writer means *some reasons*, not *some juries*, but some readers will not see this immediately.)
- “They [judicial appointments] are often given to those with political connections, which may handicap women.” “A Woman’s Place Is in the Law,” *Globe & Mail* (Toronto), 24 Aug. 1993, at A14. (Political connections may handicap women? No: The fact that judicial appointments are often given to those with political connections may handicap women. The *which* has a vague referent in the quoted sentence.)

Proximity isn’t the only signal of what referent a word is pointing to, though. Number and gender are often clear signals <my briefcase and my friends were right at the door when I left, but I still forgot to bring it with me>. Case may also matter, but it can’t sort out a hopeless sentence: in “the boys were rude to the girls because they didn’t like them,” the fact that *boys* and *they* are nominative while *girls* and *them* are objective does not make the meaning of the sentence clear. The syntactic strength of the referent also bears on clarity. Subjects and objects of main verbs make the strongest referents, while objects of prepositions, even if closer to the referring word, are usually weaker.

The only way to avoid these ambiguities is to read copy carefully and repeatedly. Reading aloud is also helpful.

D. Failure to Hyphenate Phrasal Adjectives. Forgetting to put hyphens in PHRASAL ADJECTIVES frequently leads to miscues. For example, does the phrase *popular music critic* refer to a critic in popular music or to a sociable music critic? If it’s a critic of popular music, the phrase should be *popular-music critic*. See PUNCTUATION (j).

E. Misleading Phraseology. *Emigrate from* and *immigrate to* are the idioms, and sometimes the blunder **emigrate into* or **immigrate from* appears. Here, there is no blunder, but the phrase beginning with *emigrate* might at first appear to be one: “International agreements signed by virtually every state have recognized the right to emigrate as a fundamental right on which limitations can be imposed only under exceptional circumstances. These agreements have woven the right to *emigrate into* the fabric of international law.” Jeffrey Barist et al., “Who May Leave: A Review of Soviet Practice,” 15 *Hofstra L. Rev.* 381, 394 (1987). See **immigrate**.

Some writers omit a needed object, leaving readers to deduce an incorrect one. For example, according to the following sentence, with whom did Nicole Simpson talk? “Nicole Simpson talked about her troubles with O.J. only ‘when she was having a really bad day.’” Christine Spolar & Lloyd Grove, “Nicole and O.J.: Scenes from a Volatile Relationship,” *Wash. Post*, 24 June 1994, at A1, A23. The writer means to

say, “Nicole Simpson talked *to friends* about her troubles with O.J.,” but as written the sentence looks as if it might be, “Nicole Simpson talked *with O.J.* about her troubles.” The original might have been improved merely by inserting *to friends* after *talked*.

Sometimes, as in the following example, the confusing syntax results from a preposition—e.g.:

- “Here there is no problem in using blanks for which of several payment plans the borrower wants to use.” Barbara Child, *Drafting Legal Documents* 138 (2d ed. 1992). (For appears to have a single-word object [*which*], as opposed to a phrasal object [*which of several payment plans*].)
- “An FBI agent, Douglas Deedrick, said hairs resembling Simpson’s were present at the crime scene—on the bloodied shirt of victim Ronald Goldman and on a knit cap found by Goldman’s feet.” Larry Reibstein, “The Simpson Strategy,” *Newsweek*, 10 July 1995, at 47. (The phrase *found by* suggests we’re about to learn who [*Goldman’s feet?*] found the knit cap. To prevent the miscue, the writer should have said *near* or *beside* instead of *by*.)

Yet again, the first word in an adverbial phrase (*up the coast of New England*) sometimes seems to be part of a verb (*blew up*): “The storm also blew up the coast of New England.” John J. Goldman, “Northeast Slammed by Storm; 7 Killed,” *Austin Am.-Statesman*, 12 Dec. 1992, at A1.

F. Ill-Advisedly Deleted *that*. The widespread but largely unfounded prejudice against *that* leads many writers to omit it when it is necessary—e.g.:

- “Following comments from the public, the council decided the issue needed further study by a committee of citizens and private haulers.” Ann Marie Halal, “San Diego Addresses Crusade,” *Waste News*, 23 Dec. 1996, at 14. (Insert *that* after *decided*.)
- “Commissioner Karen Sonleitner pointed out any policy changes approved after Sept. 1 could be subject to the state’s Property Rights Act.” Tara Trower, “Travis Debates Regulations for Flood Plain,” *Austin Am.-Statesman*, 30 July 1997, at B2. (Insert *that* after *pointed out*.)
- “Skinner said he believes many prisoners contract AIDS behind bars.” Tim Novak, “Prisons Hit by Soaring AIDS Costs,” *Chicago Sun-Times*, 3 Nov. 1997, at 1. (Insert *that* after *believes*.)

See **that (b)**.

***misdoubt**, vb., is an archaic variant—and now a NEEDLESS VARIANT—of the verb *doubt*. **Misdoubt* can also mean “to fear, suspect,” but this sense too should be avoided because it can lead to some awkward double negatives—e.g.: “I misdoubt the ladies won’t like it” (*SOED*). See NEGATIVES (A). The word has steadily waned since 1900.

misfeasance. See **malfeasance**.

mishap should refer to a minor accident, not one in which people are killed. Yet this error is common—e.g.:

- “U.S. *News & World Report* magazine notes this week that 1,144 people died in train *mishaps* [read *accidents*] last year.” Rod Watson, “Private Sector vs. Government in Valujet Crash,” *Buffalo News*, 23 May 1996, at B3.
- “On a single Sunday afternoon last August, three people died as a result of Jet Ski *mishaps* [read *accidents*] in

Southampton, N.Y.” Alexandra Alger, “Here They Come Again,” *Forbes*, 3 June 1996, at 182.

- “Miscellaneous *mishaps* [read *incidents*—such as motorcycle accidents, falls and drownings—account for a handful of deaths each year.” Bob von Sternberg, “Every Other Day, an American Cop Dies in the Line of Duty,” *Star Trib.* (Minneapolis), 4 Aug. 2002, at A1.

When government agencies use the word for tragic accidents, the reader suspects a deliberate attempt to soften the edges—e.g.:

- “Major accidents are known in the military as Class A *mishaps* if they cause death, permanent injury or at least \$1 million in losses.” Alan C. Miller & Kevin Sack, “Far from Battlefield, Marines Lose One-Third of Harrier Fleet,” *L.A. Times*, 15 Dec. 2002, News §, at 1.
- “NASA also has its own *Mishap* Investigation Team.” Carl Hulse, “Critics Seek a Broader Shuttle Panel,” *N.Y. Times*, 5 Feb. 2003, at A23.

LANGUAGE-CHANGE INDEX

mishap misused in reference to a major accident:
Stage 1

misinformation. See **disinformation.**

mislead > **misled** > **misled.** As with the verb *lead*, the past forms of *mislead* are sometimes mistakenly rendered—e.g.:

- “Don’t be *mislead* [read *misled*] by the inflated score.” Jason Cohn, “Joseph Weathers Attack Until Toronto Storms to 7–4 Victory,” *Toronto Star*, 14 Dec. 2000, Sports §, at 1.
- “It is important that the voting public not be *mislead* [read *misled*].” Rosalie Pedalino Porter, “Debate on Bilingual Education Should Correct Misconceptions,” *Telegram & Gaz.* (Worcester, Mass.), 2 Sept. 2001, at C2.
- “Hay said many small business customers have complained that they were *mislead* [read *misled*] by telemarketers for NOS.” “Hay Plans to Contest Company’s Actions,” *Las Vegas Rev.-J.*, 11 July 2002, at D2.

Cf. **lead.**

LANGUAGE-CHANGE INDEX

mislead misused for the past-tense *misled*: Stage 1
Current ratio (*were misled* by vs.
**were mislead* by): 49:1

misnomer. Speakers and writers frequently misuse this word, meaning “an inappropriate name,” to mean “a popular misconception”—e.g.: “The last I remember, only 7 percent of Division I programs operate in the black. The common *misnomer* [read *misunderstanding*] is that people see this as a multi-million-dollar business.” “College Arena a Marketplace,” *Times Union* (Albany), 24 Dec. 2000, at C1 (quoting Syracuse assistant athletic director Michael Veley). Oddly enough, this mistake is itself a kind of misnomer based on a misconception.

Although the error is less common in edited text, it does surface—e.g.:

- “The idea is to break down the stigmas, myths and *misnomers* [read *misunderstanding*] surrounding suicide by showing teens and others that death is never a solution to a problem.” Eric Bradley, “Group Looks to Prevent Teen Suicide,” *Oshkosh Northwestern*, 13 Sept. 2002, at A1.
- “The old theory that was heard at UW for years is that the school needs a big-name coach. That’s really a *misnomer* [read *misconception*] because UW usually has succeeded in developing its own big-name coach.” Larry Birleffi, “Choosing Coach Requires Work,” *Wyo. Trib.-Eagle* (Cheyenne), 21 Nov. 2002, at B2.

Typically, when the term is used correctly it will accompany a misleading word or title, often in quotation marks—e.g.: “Old countries are sometimes world-weary and cynical, urging a ‘realism’ that is sometimes a *misnomer* for the moral corruption they know so very well.” Richard Cohen, “Nobel Winners and Losers,” *Wash. Post*, 15 Oct. 2002, at A19.

MISPLACED MODIFIERS. See **DANGLERS, ILLOGIC (C)** & **MISCUES (B).**

misquote. See **quote.**

misremember means “to remember incorrectly,” not “to forget.” E.g.: “In the first group, children affirmed about 15 percent of the false allegations of wrongdoing—bad enough for those who think that children never lie, *misremember* or make things up.” Carol Tavris, “Day-Care Witch Hunt Tests Massachusetts Justice,” *Tulsa Trib. & Tulsa World*, 24 Apr. 1997, at A15. As the following quotation suggests, *misremember* is often a **EUPHEMISM** for *lie*—e.g.: “Despite the fact many of our respondents had a tendency to, let us say, *misremember*, other poll questions suggest some are more likely to have voted than others.” John Ibbitson, “Election Polls Bring Out the ‘Best’ in Some People,” *Ottawa Citizen*, 1 Oct. 1994, at B2.

missing, to go. See **go missing.**

***missis.** See **missus.**

***Missouran.** See **Missourian.**

Missouri. The pronunciation of this state name has provoked much strife. Although most Americans say /mi-**zuur**-ee/, many Missourians say /mi-**zuur**-ə/. In and around St. Louis, many say /ee/, but /ə/ has traditionally predominated in other parts of the state. Both pronunciations are standard. Yet it is a telling point that politicians running for statewide office are careful to say /ə/—to seem folksy and avoid sounding like an auslander. (Cf. **Nevada.**) But interestingly, the final-syllable /ə/ pronunciation seems to be for

insiders only—all non-Missourians being expected to say /ee/.

The information in the preceding paragraph is the result of my frequent travel during two decades through different parts of the state, in the course of which I have routinely quizzed locals and polled lawyer-audiences in seminars that I've taught—including all 180+ lawyers in the state attorney general's office and all the state appellate judges. The results, strongly favoring /mi-**zuur**-ə/ for native Missourians outside St. Louis, are essentially the same as those in Allen Walker Read's study, "The Pronunciation of the Word 'Missouri,'" 8 *Am. Speech* 22–36 (Winter 1933). For a very different view, insisting that /mi-**zuur**-ee/ is preferred throughout the state, see Charles Harrington Elster, *BBBM* at 319–22.

An early commentator, the noted linguist E.H. Sturtevant, attributed the final-syllable /-ə/ to HYPER-CORRECTION. It's a surprising but quite plausible argument: "In the dialect of Missouri and the neighboring states, final *a* in such words as 'America,' 'Arizona,' 'Nevada,' becomes *y*—'Americy,' 'Arizony,' 'Nevady.' All educated people in that region carefully correct this vulgarism out of their speech; and many of them carry the correction too far and say 'Missoura,' 'praira,' etc." E.H. Sturtevant, *Linguistic Change* 79 (1917).

Missourian; ***Missouran**. The newspaper in Columbia, Missouri, is called *The Missourian*. And interestingly, even though most people in Columbia pronounce the name of their state /mi-**zuur**-ə/, they pronounce the name of their newspaper /mi-**zuur**-ee-ən/. In fact, Missourian informants say that the four-syllable pronunciation is universal within the state. See DENIZEN LABELS.

missus (from *Mrs.*) has been the standard spelling since the 17th century. **Missis* is a variant.

Current ratio: 4:1

mistake > **mistook** > **mistaken**. Mercifully, the correct forms are seldom mistaken, though indeed they sometimes are—e.g.: "Finally, Fly almost *mistaked* [read *mistook*] El Sid Fernandez for a bat when he showed up in Sarasota at 225, down 40 from fightin' weight." "Caught on the Fly," *Phoenix Gaz.*, 15 Apr. 1995, at D2. See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

**mistaked* for *mistook*: Stage 1

Current ratio (*mistook* vs. **mistaked*): 3,496:1

mistreat; **maltreat**. Most usage critics have differentiated between these terms. "To *mistreat*," say the Evanses, "is to treat badly or wrongly. The word suggests a deviation from some accepted norm of treatment and a deviation always towards the bad. To *maltreat*, to abuse, to handle roughly or cruelly, is to

mistreat in a special way. The words are often used interchangeably (Horwill believes that Americans prefer *mistreat* and English *maltreat*), but *maltreat* is usually restricted to the rougher forms of mistreating" (*DCAU* at 302). From 1700 to about 1960, *maltreat* was the more common term in all varieties of English. But *mistreat* overtook it in frequency about 1960.

mistrustful. See **distrustful**.

misusage (= [1] maltreatment; or [2] the incorrect use of language) is increasingly misused for *misuse*, n. (= unauthorized use; misapplication)—e.g.: "It monitors and analyzes companies' telecommunications networks to measure call traffic and to find *misusage* [read *misuse*] of the systems." Maria Carlino, "AAC de Latinoamerica Inc.," *J. of Commerce*, 13 Oct. 1995, at A5. Cf. **usage**.

LANGUAGE-CHANGE INDEX

misusage misused for *misuse*: Stage 2

miter; **mitre**. The first is the AmE spelling; the second is BrE. See -ER (B).

mitigable. So formed—not **mitigatable*. See -ATABLE. Current ratio: 14:1

mitigate; **militate**. *Mitigate* = to make less severe or intense <the new drug mitigates the patient's discomfort>. *Militate* = to exert a strong influence <Harry's conflicting schedule militates against an October 17 meeting>.

**Mitigate against* for *militate against* is an error that emerged about 1900 and spread precipitately from 1950. Edmund Wilson called it "William Faulkner's favorite error." *The Bit Between My Teeth* 570 (1965). Faulkner's failings aside, the error is surprisingly common—e.g.:

- "Together we will surely arrive at the means to end the many obstacles that appear to *mitigate* [read *militate*] against our success." Chelsea Quinn Yarbro, *Darker Jewels* 295 (1993).
- "In general, the speed of mass communication *mitigates* [read *militates*] against exploring an issue carefully as people's attention span decreases in correlation with shorter, rapid-fire presentation." Barry R. McCaffrey, "Perspective on Illegal Drugs," *L.A. Times*, 2 Jan. 1997, at B7.
- "It is the one thing that most *mitigates* [read *militates*] against the Patriots winning their last two games." Ron Borges, "Two-Game Series for Patriots," *Boston Globe*, 18 Dec. 2002, at E1.

Today, *mitigate* is almost invariably transitive, a synonym of *alleviate*. (The *OED* recognizes an intransitive sense, meaning "to grow milder or less severe," but labels it rare. Even that label is generous.) Using it with *against* is nonstandard—e.g.: "The show's excellent 57-page guide *mitigates against* [read *mitigates*] its density, as does the curators' healthy respect for the impact of real things." Roberta Smith, "Icy Genius with a Taste for Order," *N.Y. Times*, 29 Nov. 2002, at E37.

Militate against—as well as its antonym *militate in favor of* or *militate for*—is perfectly acceptable. E.g.:

- “The campaign he ran *militates against* the historic presidency he would like to lead.” Jonathan Rauch, “Self-Inflicted Budget Woes,” *U.S. News & World Rep.*, 18 Nov. 1996, at 94.
- “Two things *militate in favor of* a deal.” “Turkish Tangle,” *Fin. Times*, 27 Feb. 1996, at 15.

But **militate toward* is unidiomatic.

LANGUAGE-CHANGE INDEX

Current ratio (*militate against* vs.
**mitigate against*): 3:1

mitre. See **miter.**

mnemonic; pneumonic. *Mnemonic* (= [1] of, relating to, or involving memory; or [2] esp., designed to assist memorization) is the more common word, often in the phrase *mnemonic device* or an equivalent—e.g.: “Heck, use the book to create a lesson and ask kids to come up with rhymes or alliterative phrases for all their vocabulary words. Poetry and song are the best *mnemonic* tools.” David Ross, “Some Odds and Ends, Mostly Ends,” *Press-Telegram* (Long Beach), 25 Nov. 2000, Lifestyle §, at 4. The word derives from the Greek term *mnemon* (= memory). As more than one wit has pointed out, the word’s spelling should be easier to memorize.

Pneumonic (= [1] of, relating to, or involving pneumonia; or [2] of, relating to, or involving the lungs)—e.g.:

- Sense 1: “Their excited breaths were agitated [by] their bronchitic and *pneumonic* coughs.” Nelsy Rodriguez, “St. Nick Tours JFK Hospital,” *Desert Sun* (Palm Springs), 20 Dec. 2006, at B1.
- Sense 2: “The plot unfolds like this: A terrorist releases an airborne or ‘weaponized’ form of *pneumonic* plague in the Metrodome during a game with 43,000 in attendance.” Maura Lerner, “Drill Covers ‘What-If’s’ of Health Disaster,” *Star Trib.* (Minneapolis), 17 May 2007, at B3.

The word derives from the Greek term *pneumon* (= lung).

The two words are similarly pronounced, with only the vowel sound in the first syllable differing. *Mnemonic* is pronounced /ni-**mahn**-ik/ (not /mi-**nahn**-ik/); *pneumonic* is pronounced /noo-**mahn**-ik/.

Perhaps because the pronunciations are so close, *pneumonic* occasionally displaces *mnemonic*—e.g.:

- “‘When I grew up in Minneapolis, the weather ball was quite a deal,’ [Ethan P.] Seltzer says. ‘There was this little jingle that went with it and that you could use like a *pneumonic* [read *mnemonic*] device to figure out what the weather ball was telling you.’” Spencer Heinz, “Planet Portland: A Simple Pleasure Blinks On in Tricolor,” *Oregonian* (Portland), 14 Dec. 2006, Metro §, at 7.
- “Eric Jensen, a San Diego-based advocate whose work has been adopted across the country, thinks of it as ‘ESP’—*pneumonic* [read *mnemonic*] devices are key in brain-based teaching—or ‘engagement of strategies that are based on principles of brain research.’” Erika Hobbs,

“How Was School Engaging?” *Orlando Sentinel*, 7 Jan. 2007, at B1.

- “Use *pneumonics* [read *mnemonics*]: Tuesday is trash day; Wednesday is watering day.” Amara Willey, “Fresh Start,” *Courier News* (Bridgewater, N.J.), 1 Apr. 2007, Features §, at 2.

An even stranger error is confusing *pneumonic* and *pneumatic* (= of, relating to, or involving gas, esp. air pressure)—e.g.: “They purchased casters with eight large *pneumonic* [read *pneumatic*] tires. Meyer said the air-filled tires did the trick and made Santa’s ride better.” Karla Breister, “Club Lends Santa a Hand,” *Reporter* (Fond du Lac, Wis.), 31 Dec. 2006, at C3.

LANGUAGE-CHANGE INDEX

**pneumonic device*): 125:1
2. *pneumonic* misused for *pneumatic*: Stage 1

M.O. See **modus operandi.**

mobile, adj. & n.; **Mobile.** As an adjective, *mobile* means “movable” and is pronounced /**moh**-bal/ in AmE—BrE and Canadian speakers preferring /**moh**-bil/. As a noun referring to a sculpture or decoration consisting of small objects tied to wires or strings and hung up so that the objects can be set into motion by air currents, *mobile* is pronounced /**moh**-beel/ in AmE but /**moh**-bil/ in BrE (as with the adjective). The proper noun denoting the city in Alabama (*Mobile*) is pronounced /**moh**-beel/ (as locals say it)—not /**moh**-beel/.

moccasin. So spelled. See SPELLING (A).

mode; module. There must be something in the root: these words, like *modality*, are inflated VOGUE WORDS.

In proper usage, *mode* means “manner,” and *module* means “a unit of size.” President George H.W. Bush often entered the “*mode mode*,” as when he told a crowd in Los Angeles: “I am not here in the *mode* of politics, I am not here in the *mode* of partisanship, I am not here in the *mode* of blame. I am here to learn from the community.” Quoted in Robert B. Gunnison & Susan Yoachim, “Bush Visits Riot Zone,” *S.F. Chron.*, 8 May 1992, at A1. Such talk proved fruitful for Russell Baker’s lively column in *The New York Times*:

President Bush says he is about to enter “campaign mode.” Does this mean America will then have president *à la mode*? Absolutely not. Do you think the President is a slice of pie?

This is the same answer I had from Mr. Bush’s mode handler . . . The mode Mr. Bush will enter is not a desert, but a new technological product of the space program. Space-news fans will have noticed that multitudes of modes pour out of NASA press releases.

There is launch mode, re-entry mode, recapture-the-lost-satellite mode, two-hour-snooze mode, expense-account-dinner mode and dozens more, including

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Washington-by-night mode. A typical Washington-by-night mode is entered when two variously sexed Government employees finish a two-bottle dinner and one says, "Let's not go back to the Pentagon, let's go to your place."

The mode has recently been joined by the module, which is hard to distinguish from the old-fashioned model except that the "e" is misplaced and a "u" is thrown in for reasons NASA would rather not talk about. It seems pretty obvious though that NASA had an embarrassing excess of "u's" stockpiled and wanted to get rid of some before the press began fuming about "u"-gate.

Why doesn't Mr. Bush enter one of the new-fangled modules? Too risky. Since modules are much newer than modes, the Secret Service refuses to let Mr. Bush enter one until the manufacturers use stronger materials for holding the things together.

Russell Baker, "In the Mode Mood," *N.Y. Times*, 15 Aug. 1992, at 15.

model, vb., makes *modeled* and *modeling* in AmE, *modelled* and *modelling* in BrE. See SPELLING (B).

***mode of operandi**. See **modus operandi**.

modern-day, a phrase that spread dramatically after 1950, is invariably inferior to *modern*—e.g.:

- "[In] Walt Disney's syndicated kid show 'Gargoyles,' . . . animated 1,000-year-old stone creatures are transplanted to *modern-day* [read *modern*] Manhattan to ward off evil-doers." Cathy Hainer, "Good-Guy Gargoyles Ringing Up Big Sales," *USA Today*, 17 Mar. 1995, at D1.
- "These *modern-day* [read *modern*] pioneers are the home-school parents." Joe Rohner, "Free-Market Principles Should Apply to Education as Well," *Idaho Statesman*, 19 Apr. 1995, at A9.

modernity (= the quality of being modern) is preferably pronounced /mə-**dər**-ni-tee/ or /mah-**dər**-ni-tee/—but not /**dair**/ in the second syllable.

modernly (= in modern times), formerly common as a SENTENCE ADVERB, is accurately described by the *OED* as being "now rare." Today (not to say modernly), it can usually be replaced by *today* or *now*—e.g.: "Brick sidewalks line the legendary Great Stage Road, *modernly* [read *now*] known as Main Street." Joanne Anderson, "Jonesborough, Tenn., Is the Town," *Roanoke Times*, 25 Sept. 1994, at F8.

module. See **mode**.

modus operandi (= a method of operating; a manner of procedure) is often just a fancy substitute for *method*. Yet it is well established. But the plural form—*modi operandi*—is fairly rare. See PLURALS (B). The abbreviation *M.O.* is popular with police detectives.

The phrase is sometimes misrendered **mode of operandi*—e.g.:

- "As companies evolve from control and command as their primary *modes of operandi* [read *modus operandi*], they become more open to new ways of working." Tom McWhinnie et al., "Companies Wise to Consider Day Care Options," *Seattle Post-Intelligencer*, 23 Oct. 1995, at B5.

- "Marshall (1–2) gets that chance and what is becoming a regular *mode of operandi* [read *modus operandi*], so will numerous other MAC teams." "Herd Eye Kansas St.," *Lancaster Eagle-Gaz.*, 17 Sept. 2003, at B1.

LANGUAGE-CHANGE INDEX

**mode of operandi* for *modus operandi*: Stage 1

Mohammed. See **Muhammad**.

Mohave; Mojave. The former is the traditional spelling for the American Indian people; the latter is the spelling for the desert in Southern California. Today, however, there is a decided tendency to use *Mojave* for both. Cf. **Navajo**.

***Mohican; Mohegan**. See **Mahican**.

Mojave. See **Mohave**.

mold; mould. For all three meanings (hollow container, growth of fungal hyphae, soft loose earth), *mold* is standard in AmE, *mould* in BrE.

molest. While the traditional meaning of the word is "to interfere maliciously" and the connotations have almost always been negative, this word did not denote sexual assault until recently. Despite being a EUPHEMISM originally, it has become a fairly harsh word. Today it would confuse most readers if used in its original sense, with no sexual aggression implied.

molten. See **melt**.

momenta. See **momentum**.

momentarily. Strictly speaking, this word means "for a moment," not "in a moment." But the latter sense is now widespread, and the word has therefore become occasionally ambiguous—e.g.: "I'll be able to talk with you *momentarily*." When the latter sense is meant, it is much clearer to say, "I'll be able to talk with you in a moment." Cf. **presently**.

LANGUAGE-CHANGE INDEX

momentarily in the sense "in a moment": Stage 4

***momento**. See **memento**.

momentum. Pl. *momentums* or *momenta*. Though one might understandably consider the latter a pretension, in fact it has always predominated in print sources—e.g.: "Heisenberg proposes that these 'particles' are in reality a field of potential masses and *momenta*." Karen G. Evans, "Chaos as Opportunity," *Pub. Admin. Rev.*, Sept.–Oct. 1996, at 491. See PLURALS (B).

Current ratio (*momenta* vs. *momentums*): 21:1

Monacan; Monegasque. For a citizen of Monaco, the first has long been the standard term; the second is a colorful variant that arose in the 19th century; though common, it has never really predominated in usage. See DENIZEN LABELS.

monarchical; *monarchic; *monarchial; monarchal. *Monarchical* (= of, relating to, or characteristic of a monarchy) is the standard form. It predominates

in modern usage by a 6-to-1 ratio over **monarchic*, and by a 17-to-1 ratio over **monarchial*. Both of those terms are NEEDLESS VARIANTS. But *monarchal* (= of, relating to, or characteristic of a monarch), the least frequent of these words, is different because it relates to the person and not to the institution.

MONDEGREENS. A mondegreen is a misheard lyric, saying, catchphrase, or slogan. The word was coined by the Scottish writer Sylvia Wright in a 1954 article in *Harper's Magazine*. There she wrote that, as a child, she had misinterpreted the lyrics of a Scottish ballad called "The Bonny Earl of Moray." One of the lines in the song is this: "They hae slain the Earl o' Moray and laid him on the green." She had thought it went, "They hae slain the Earl o' Moray and Lady Mondegreen."

Indeed, many mondegreens are essentially children's misinterpretations. Consider the examples just from the Christmas season. A child sings "Silent Night" in this way: "Holy imbecile, tender and mild." Of course, the actual words are "Holy infant, so tender and mild." In the same song, "Christ the sailor is born" is a mangled version of "Christ, the Savior, is born." And "round yon Virgin" can mistakenly become "round John Virgin." In "The Twelve Days of Christmas," some have interpreted the true love's gift of the first day as being "a part-red gingerbread tree" instead of "a partridge in a pear tree." In "Jingle Bells": "Bells on cocktails ring, making sparers bright"—a metamorphosis of "Bells on bobtail ring, making spirits bright." And in "Rudolph, the Red-Nosed Reindeer," some have thought that there's a tenth reindeer: "Olive, the other reindeer" (for "All of the other reindeer").

Many mondegreens occur in transcribed speech. A secretary or court reporter doesn't quite hear the words and comes up with a plausible guess. "Attorney and notary public" becomes "attorney and not a republic." "County surveyor" becomes "Countess of Ayr." "Juxtaposition" becomes "jock strap position."

Perhaps the most interesting of all, though, are those that result from listening to songs. Often the lyrics aren't readily available to listeners, and often the lyrics are sung a little indistinctly. So listeners create their own plausible versions, some of which in sheer creativity rival the originals—e.g.:

- "A girl with kaleidoscope eyes." (Beatles)
"A girl with colitis goes by."
- "A Merry Conceit." (Folk tune)
"American Seat"
- "Don't it make my brown eyes blue." (Crystal Gayle)
"Donuts make my brown eyes blue."
- "Gladly, the Cross I'd Bear." (Name of hymn)
"Gladly, the Cross-Eyed Bear."
- "Lead On, O King Eternal." (Hymn title)
"Lead On, O Kinky Turtle."
- "Livin' is easy with eyes closed." (Beatles)
"Livin' is easy with nice clothes."

- "Revved up like a deuce, another runner in the night." (Manfred Mann adapting Bruce Springsteen)
"Wrapped up like a douche in the middle of the night."
- "Scuse me while I kiss the sky." (Jimi Hendrix)
"Scuse me while I kiss this guy."
- "Secret Agent Man." (Johnny Rivers)
"Secret Asian Man."
- "She's got a ticket to ride." (Beatles)
"She's got a tick in her eye."
- "Somewhere over the rainbow, way up high." ("Somewhere Over the Rainbow")
"Somewhere over the rainbow, weigh a pie."
- "The answer, my friends, is blowin' in the wind." (Bob Dylan)
"The ants are my friends, it's blowin' in the wind."
- "There's a bad moon on the rise." (Creedence Clearwater Revival)
"There's a bathroom on the right."

Sometimes a misheard phrase does more than just confuse the listening public. In 1979, Bonnie Raitt recorded Jackson Browne's lovelorn song "Sleep's Dark and Silent Gate." As Browne composed the song, one line goes: "I found my love too late." But Raitt sang this line differently: "I found my love today." So Raitt's version is (unwittingly?) less forlorn than Browne's.

There are websites and books devoted to collecting interesting and humorous mondegreens (many of which, unfortunately, are implausible attempts at humor rather than actual misunderstandings). The leading books on the subject are by Gavin Edwards (including *'Scuse Me While I Kiss This Guy* [1995], *He's Got the Whole World in His Pants* [1996], *When a Man Loves a Walnut* [1997], and *Deck the Halls with Buddy Holly* [1998]), Martin Toseland (*The Ants Are My Friends: Misheard Lyrics, Malapropisms, Eggcorns, and Other Linguistic Gaffes* [2007]), and J. A. Wines (*Mondegreens: A Book of Mishearings* [2007]). There are also websites that list mondegreens and make musical lyrics widely available. It is easier than ever to verify a lyric that one might be unsure of.

Although mondegreens were much written about in the late 20th century, only two major dictionaries as of 2015 had recorded the word *mondegreen*. This is an indication not of the word's feebleness, but of lexicographic oversight. Many journalists had discussed mondegreens at length, often season after season: for example, Margie Boulé in the *Oregonian* (Portland); Jon Carroll in the *San Francisco Chronicle*; Philip Howard in *The Times* (London); Richard Lederer in the *Patriot Ledger* (Quincy, Mass.); William Safire and Jack Rosenthal in *The New York Times*; Elizabeth Weise in *USA Today*. By the turn of the 21st century, there were hundreds of published references to mondegreens. There's no doubting the utility and widespread currency of the word—or its legitimacy.

Some of the bungles collected in this book are essentially mondegreens: **beckon call* for *beck and*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

call; **for all intensive purposes for for all intents and purposes*; **hone in for home in*; and **to the manor born for to the manner born*.

Monegasque. See **Monacan**.

monetize; ***monetarize**. *Monetize* = (1) to put (coins or currency) into circulation as money; (2) to give fixed value as currency; or (3) to purchase (debt), thereby freeing up moneys that would otherwise be used to service the debt. **Monetarize* is a NEEDLESS VARIANT that occurs most commonly in senses 2 and 3—e.g.:

- Sense 2: “A new approach will enable us to take into account social values without forcing ourselves to *monetarize* [read *monetize*] values [that] intrinsically cannot be evaluated in dollar or peso terms.” Larry R. Kohler, “Introduction to the Issues,” *Ecumenical Rev.*, 1 July 1996, at 279.
- Sense 3: “No single jurist could . . . limit the rate at which Washington prints currency or *monetarizes* [read *monetizes*] its debt.” “No Automatic Pay Raises,” *Las Vegas Rev.-J.*, 16 Dec. 1994, at B16.

LANGUAGE-CHANGE INDEX

**monetarize* for *monetize*: Stage 1

Current ratio (*monetize* vs. **monetarize*): 45:1

moneyed; ***monied**. The first is standard—e.g.:

- “There is a spot of trouble here in Cheever country [Greenwich, Conn.], the suburban promised land where *moneyed* executives ride the train to Manhattan.” Blaine Harden, “Nonresident Sues Over Park Access Litigation,” *L.A. Times*, 7 Sept. 1997, at A12.
- “Bailey came from a *moneyed* family.” Jeffrey Toobin, “Candide,” *New Yorker*, 16 Dec. 2002, at 42, 44.

Cf. **honeyed**.

Current ratio: 3:1

moneys; ***monies**. The first is the more logical and the editorially preferred form, but **monies* is a frequent variant. Their history is interesting. **Monies* (an archaic plural similar to **attornies*) was prevalent from 1750 to 1850. *Moneys* swelled into predominance from 1850 until 1975—at one point during that period achieving a 7-to-1 advantage in comparative word frequency. Although 20th-century usage authorities almost unanimously recommended *moneys* (and thought the question settled), in 1970 or so the two forms once again became close contenders—to the dismay of many traditionalists. See PLURALS (E).

But why do we need a plural at all? Why doesn't the COLLECTIVE NOUN *money* suffice? The answer lies in idiom. While *money* generally functions in collective senses <we made a lot of money on that deal>, *moneys* is frequently used, especially in financial and legal contexts, to denote “discrete sums of money” or “funds” <many federal and state moneys were budgeted for the disaster relief>.

Current ratio: 1:1.5

mongolism; **mongoloid**. See **Down syndrome**.

mongoose forms the plural *mongooses*, not **mongeese*. But the mistaken form is hardly unknown—e.g.:

“They joined Pruno, Yorick and Tucky, along with a pair of *mongeese* [read *mongooses*], two guinea pigs, an assortment of snakes and a barfing crane named (what else?) Ichabod.” Bill Ruehlmann, “Heartwarming Tale of Living Like Animals,” *Virginian-Pilot & Ledger Star* (Norfolk), 9 Mar. 1997, at J3.

LANGUAGE-CHANGE INDEX

**mongeese* for *mongooses*: Stage 1

Current ratio (*mongooses* vs. **mongeese*): 26:1

***monied**. See **moneyed**.

***monies**. See **moneys**.

moniker; ***monicker**. *Moniker* outnumbers the variant **monicker* by a huge margin. If either form can be called etymologically superior, it's *moniker*, since the word seems to derive from the Irish term *munnik*.

Current ratio: 56:1

monition. See **admonition** (A).

monitory; **monitorial**. See **admonitory**.

monologue (= a speech or skit delivered by a single performer) is the standard spelling. **Monolog* is a variant. The agent noun is *monologist* /**mon**-ə-lawg-ist/, preferably not **monologist* /mə-**nol**-ə-jist/, the former being slightly more common—e.g.: “Then in 1986, a friend took him to see a performance by *monologist* Spalding Gray, and it turned out to be a revelation.” Jan Breslauer, “It All Adds Up Now,” *L.A. Times*, 17 Aug. 1997, at 49.

monotonous; **monotonic**. Although these terms have an overlapping sense—“having little or no variation in tone”—they have undergone substantial DIFFERENTIATION. *Monotonous* is now predominantly figurative, meaning “tediously lacking in variety; uninteresting because unvarying.” *Monotonic* should be reserved for the literal sense “of, relating to, or consisting of a single tone.”

Monseigneur (= a French title given to someone of high birth or rank, or an important church officeholder) forms the plural *Messeigneurs*—preferably not **Monseigneurs*. The term is used before a title of office or rank <Monseigneur the Prince>, never before a personal name. It is pronounced /mahn-sen-**yuur**/.

Current ratio (*Messeigneurs* vs.

**Monseigneurs*): 13:1

monsieur /mə-**syuu**/ (the French equivalent of *Mr.* or *Sir*) forms the plural *messieurs* (/mes-[y]ə**rz** or may-**syuu**/). The term is abbreviated *M.* (singular) or *MM.* (plural).

Monsignor /mon-**seen**-yər/ (= a title given to certain dignitaries within the Roman Catholic Church) forms the plural *Monsignori* or (less frequently) *Monsignors*.

Current ratio: 2:1

mooch (= [1] to beg, cadge; or [2] to steal, filch) is the standard spelling <he mooched off me for two years!>.

**Mouch* is a variant form prone to MISCUES.

Current ratio: 25:1

moon. See **earth.**

moot. A. As an Adjective. The *OED* lists only the sense “that can be argued; debatable; not decided, doubtful.” Hence a *moot point* was classically seen as one that is arguable. A *moot case* was a hypothetical case proposed for discussion in a “moot” of law students (i.e., the word was once a noun). In U.S. law schools, students practice arguing hypothetical cases before appellate courts in *moot court*.

From that sense of *moot* derived the extended sense “of no practical importance; hypothetical; academic.” This shift in meaning occurred about 1900 <because the question has already become moot, we need not decide it>. Today, in AmE, that is the predominant sense of *moot*. Theodore M. Bernstein and other writers have called this sense of the word incorrect, but it is now a *fait accompli*, especially in the SET PHRASE *moot point*. To use *moot* in the sense “open to argument” in modern AmE is to create an ambiguity and to confuse readers. In BrE, the transformation in sense has been slower, and *moot* in its older sense retains vitality.

LANGUAGE-CHANGE INDEX

moot in the sense “of no significance”: Stage 5

B. As a Verb. Historically, the verb *moot* meant “to raise or bring forward (a point, question, candidate, etc.) for discussion.” That sense was formerly common in AmE but today is current mostly in BrE—e.g.:

- “Air New Zealand and Brierley Investments, a significant shareholder in Air NZ, have been *mooted* as potential buyers.” Nikki Tait, “News Chief Plans Talks on Future of Ansett,” *Fin. Times*, 5 Apr. 1995, at 33.
- “Swanson was created by Rambert’s current artistic director Christopher Bruce back in the 1980s, long before he was *mooted* as saviour of the ailing company.” Jenny Gilbert, “Bussell and Guillem Slug It Out,” *Independent*, 30 Mar. 1997, at 13.

In American legal usage, a new sense of *moot* has taken hold: “to render (a question) moot or of no practical significance” (*Black’s Law Dictionary* 1161 [10th ed. 2014]). E.g.: “A challenge to an abortion statute will be *mooted* after nine months by the birth of the child.” William M. Landes & Richard A. Posner, “The Economics of Anticipatory Adjudication,” *J. Legal Studies* 683, 717 (1994).

C. Confused with *mute*. Sometimes the phrase **mute point* is used as a not-so-clever pun—e.g.:

- “If money talks, then gender equity is becoming a *mute point* among Idaho high school basketball coaches.” Stephen Dodge, “Boys, Girls Coaches Receive Equal Pay,” *Idaho Statesman*, 9 Jan. 1995, at C2.
- “A *mute point*: Big question at practice Monday was whether Michael Jordan is happy. It’s not known because he’s still not talking.” Sam Smith, “Ankle Better, Longley Hopes to Play in Game 5,” *Chicago Trib.*, 16 May 1995, at N10.
- “Whether he was going to talk to the media has turned from a *mute point* to a moot one, at least in Vancouver.” Gary Kingston, “No National Debt Owed by Caps,” *Vancouver Sun*, 25 Aug. 2015, at F1.

But in many other instances, no pun is in sight. It’s simply a MALAPROPISM that spread in the late 20th century—e.g.:

- “In a separate development that could make the dispute a *mute* [read *moot*] point, the Canon building and nearby properties have been sold to Federated Department Stores, which plans to erect Bloomingdale’s West Coast flagship store on the Canon block.” Don Shirley, “Shakespeare’s Vows to Remain at Canon,” *L.A. Times*, 18 Feb. 1995, at F16.
- “Authority members agreed that the penalty for a corporation that purchases open market securities after entering into a Slugs subscription—a sixth-month ban on purchasing Slugs—is a *mute* [read *moot*] point since the corporation that issued the bonds is defunct as well.” Angela Shah, “Texas Public Finance Agency Close to Defeating Super Collider Debt,” *Bond Buyer*, 18 May 1995, at 24.
- “Petrie said these scenarios are *mute* [read *moot*] points: ‘The likelihood of KMart going bankrupt is minuscule.’” Paul Gargaro, “As KMart Woes Go . . .,” *Crain’s Detroit Bus.*, 20 Nov. 1995, at 2.

Even the verb *moot* is susceptible to this confusion—e.g.: “But Gramley believes such a range would *mute* [read *moot*] the point of having a numerical target.” “Congress May Redefine Fed’s Job to New Focus on ‘Price Stability,’” *Investor’s Bus. Daily*, 22 Sept. 1995, at B1.

LANGUAGE-CHANGE INDEX

**mute point* for *moot point*: Stage 1

morale; moral, n. H.W. Fowler spent a page and a half discussing the difficulties with these words (*FMEUI* at 361–62), but today problems are rarely encountered. *Morale* = the mental or emotional condition of a person or group, esp. as exhibited by confidence, discipline, or zeal; spirit. *Moral* = (1) the lesson of a fable, story, etc.; or (2) (pl.) principles of right and wrong. For more on *morals*, see **ethics (B)**.

moratorium. Both *moratoriums* and *moratoria* are fairly common plurals. On the reasons for preferring the native plural *moratoriums*, see PLURALS (B). But the fact is that *moratoria* has always appeared more frequently in post-1900 print sources. Before that, the words weren’t used much.

Current ratio (*moratoria* vs. *moratoriums*): 2:1

more; most. See COMPARATIVES AND SUPERLATIVES & all (C).

more difficult than necessary. For an odd error, see **possible (B)**.

more honored in the breach. See **breach, more honored in the.**

more important(ly). As an introductory phrase, *more important* as a sentence-starter has historically been considered an elliptical form of “What is more important . . .,” and hence the *-ly* form is sometimes thought to be the less desirable. From 1850 to 1950, *more important* appeared frequently in print sources

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

as a sentence-starter. Beginning in 1950, *more importantly* also began appearing frequently—and by 2000 it was rivaling the *-ly* form. For now, the two coexist in literary language, but momentum seems to be on the side of the *-ly* form—which now predominates by a 2-to-1 ratio in BrE (it's 1-to-1 in AmE).

Three points militate against the position that the *-ly* form is undesirable. First, if we may begin a sentence “*Importantly*, the production appeared first off Broadway . . .,” we ought to be able to begin it, “*More importantly*, . . .” See SENTENCE ADVERBS.

Second, the ellipsis does not work with analogous phrases, such as *more notable* and *more interesting*. Both of those phrases require an *-ly* adverb—e.g.:

- “*More notably*, the Dust Brothers are responsible for the production of Beck’s Grammy-winning album, ‘Odelay.” Josh Newman, “Group’s Career Is Sweet,” *Grand Rapids Press*, 24 July 1997, at D13.
- “*More interestingly*, the robot’s untimely end touched all sorts of people with no involvement in the project.” “Strange Kindness and Familiar Robots,” *Globe & Mail* (Toronto), 6 Aug. 2015, at A10.

And third, if the position is changed from the beginning of the sentence in any significant way, the usual ellipsis becomes unidiomatic and *-ly* is quite acceptable—e.g.: “Shrage believes that the strategy should not be to reverse the intermarriage rate, as some activists argue, but to make sure that intermarried couples embrace Judaism and, *more importantly*, commit to raising their children as Jews.” Diego Ribadeneira, “Jewish Community Flourishing, New Report Says,” *St. Louis Post-Dispatch*, 6 Sept. 1997, at 32.

The criticism of *more importantly* and *most importantly* has always been rather muted and obscure, and today it has dwindled to something less than muted and obscure. So writers needn’t fear any criticism for using the *-ly* forms; if they encounter any, it’s easily dismissed as picayunish pedantry. See **importantly**.

LANGUAGE-CHANGE INDEX
more importantly for (*what is*)
more important: Stage 5

more perfect. This phrase appears in the preamble to the U.S. Constitution: “We the People of the United States, in Order to form a *more perfect* Union.” Some critics object that *perfect*, as an absolute quality, should not take a comparative adjective. The answer to those critics is an old one: “It is pedantic to object to the colloquial use of such expressions as ‘more universal’ [and] ‘more perfect’ . . . Of course, superficially viewed, these expressions are incorrect, as there cannot be degrees of universality or of perfection . . . ; yet what is really meant by ‘more perfect’; for example, is ‘more nearly perfect.’” Harry T. Peck, “What Is Good English?” in *What Is Good English? and Other Essays* 3, 16–17 (1899). See ADJECTIVES (B).

Although we tend to think of the phrase as having been coined for the Constitution, in fact it was in general currency during the 17th century. Its idiomatic standing was never questioned until the 19th century.

***more possible.** See ADJECTIVES (B).

***more preferable.** See ADJECTIVES (B) & **preferable**.

***more . . . rather than.** See **rather** (c).

mores (= the customs, social behaviors, and moral values of a given society or subset of it) is preferably pronounced /*mor*-ayz/ or /*maw*-rayz/—not /*moh*-rays/ or /*morz*/.

more so. Two words, not one.

more than. See **over** (A) & SUBJECT-VERB AGREEMENT (i).

more . . . than. A. Parallel Constructions. To maintain parallel phrasing with this construction, it’s often important to repeat the preposition. Here, for example, the second *by* is necessary to clarity: “What saddens Ms. Showalter is her conviction that the Allbucks and thousands like them would stand a better chance of obtaining cures if they could accept that their symptoms would be treated *more effectively by* psychotherapy *than by* endless inconclusive medical tests [that] encourage paranoia while obfuscating science.” John Carlin, “It’s All in the Mind, Bud,” *Independent*, 27 Apr. 1997, at 18. See PARALLELISM.

B. *More . . . than all. See **all** (d).

***more unique.** See ADJECTIVES (B).

moribund (= dying) does not mean “dead.” Yet many writers misuse the word in this way—e.g.: “If Brian O’Neill’s controversial proposal to end the fight over the Boundary Waters Canoe Wilderness isn’t *totally moribund* [read a *dead letter* or *quite dead*], it’s clearly in deep trouble.” Dean Rebuffoni, “Embattled BWCA Plan Has Led to More Proposals,” *Star Trib.* (Minneapolis), 4 Dec. 1996, at B1.

LANGUAGE-CHANGE INDEX
moribund used to mean “dead” instead of “dying”:
 Stage 2

***morning dove.** See **mourning dove**.

MORPHOLOGICAL DEFORMITIES are words derived from other languages, usually Latin or Greek, whose morphemes are so put together as to clash with the lending or borrowing language’s principles of word-formation. In some philologists’ view, one does not combine the inseparable particle *dis-* with nouns to form English verbs (e.g., *dismember*) because it is impermissible by Latin morphology. In Latin, *dis-* was joined only with verbs to form privative verbs (e.g., *disentitle*, *disregard*).

But all this is irrelevant. What is permissible in another language has no bearing on what is permissible in ours (splitting infinitives, for example, or ending sentences with prepositions)—and there’s no tenable reason why it should. It’s preposterous to contend that Latin morphology should govern English morphology—as preposterous as suggesting that modern law should conform to Roman law.

Modern English contains any number of examples of putatively ill-formed words made up of classical morphemes:

asylee
 breathalyzer
 deflation
 drunkometer
 homophobe
 prosumerism (a PORTMANTEAU WORD from
pro-consumerism)
 simulcast
 speedometer
 stagflation
 teletype
 urinalysis
 workaholic

Our playfulness and inventiveness with morphemes like these are what makes English such a vital language. Gone are the days when H.W. Fowler's words had any hope of resonating: "Word-making, like other manufactures, should be done by those who know how to do it; others should neither attempt it for themselves, nor assist the deplorable activities of amateurs by giving currency to fresh coinages before there has been time to test them" (*FMEU1* at 241). No doubt the apathy that even most educated Americans feel about this issue results largely from the stubborn monolingualism rampant in the United States. Cf. HYBRIDS.

mortgagor; ***mortgager**. *Mortgagor* has always been the standard spelling. **Mortgager* is a variant. See -ER (A).
 Current ratio: 69:1

mortise (= a hole or groove put into wood or stone for making a joint) is the standard spelling in AmE and BrE alike. **Mortice* is a variant.
 Current ratio: 7:1

Moscow (the Russian city), an exonym for *Moskva* /*mæsk-və*/, is legitimately pronounced either /*mos-koh*/ or /*mos-kow*/.

Moslem. See **Muslim**.

mosquito. Pl. *mosquitoes*. See PLURALS (D).

most—in the sense "quite, very"—is an established CASUALISM. Today it is STANDARD ENGLISH, though less formal than *quite*—e.g.:

- "Cerulli's findings are *most* inauspicious for the banking industry." "Can US Bank Funds Survive?" *Retail Banker Int'l*, 7 Mar. 1995, at 4.
- "The shredded lamb, encased in a flaky crust, was seasoned deliciously and was *most* enjoyable." Pat Bruno, "A Field Day," *Chicago Sun-Times*, 21 Nov. 1997, at 32.

See **very** (A). See also COMPARATIVES AND SUPERLATIVES & **all** (c).

***most especially** is redundant for *especially*—e.g.: "Stendhal's imaginative relation to his protagonists, *most especially* [read *especially*] to Julien, . . . is inseparable from a consideration of the kind of narrator or dramatized persona he invents to serve as his intermediary." Robert Alter, *A Lion for Love* 191 (1979) (biography of Stendhal).

most important(ly). See **more important(ly)**.

***most number of things**. This phrasing is incorrect for *most things* or (more verbosely) *greatest number of things* or *highest number of things*—e.g.:

- "The team had the *most number of* [read *most*] wins in the history of the school with a 15–1 record." Harper Mar, "Grimsley Swimmer Places in Pan Am Games," *News & Record* (Greensboro), 26 Mar. 1995, at 6.
- "The party winning the *most number of* [read *most*] seats traditionally gets the first crack to form the government." Loh Hui Yin, "Markets, Business Root for Democrat Win in Thai Polls," *Bus. Times*, 16 Nov. 1996, at 4.
- "There's surely a place for them in the record books for *most number of* [read *most*] past members." John Meagher, "In the Court of King Richard, Folk Royal," *Irish Independent*, 29 Aug. 2015, at 16.

Grammatically, *most* does not properly modify a singular COUNT NOUN such as *number*. In fact, the incorrectness of the phrasing is highlighted when the comparative is substituted for the superlative: you can't say **more number of things*, etc.

LANGUAGE-CHANGE INDEX

**most number of* for *greatest number of*: Stage 1
 Current ratio (*greatest number of* vs.
 **most number of*): 19:1

mother lode. See **load**.

motion. See **resolution**.

motion seconded. This parliamentary idiom has recently become mangled, through sound association, into the phrase **notion seconded*. Perhaps the phrase needed is *notion confirmed*—e.g.:

- "Common Cause asked the House ethics committee to investigate Rostenkowski. A *New York Times* editorial *seconded that notion* [read *approved that idea?*] and urged House Democrats to 'call on Mr. Rostenkowski to step aside as chairman.'" Peter Carlson, "Dan Rostenkowski Goes Down in History," *Wash. Post* (Mag.), 17 Oct. 1993, at 35.
- "Hamister says he believes in fan-friendly ownership, that he'll be out and about, attentive and accountable. Berman, who has the majority financial stake, *seconded the notion* [read *agreed*]." Todd Berman, "Sabres Deal Brings Out Kid in Berman," *Buffalo News*, 22 Nov. 2002, at B1.
- "Teresinski said Scott's location and small user base have always made the town's participation in the authority problematic—a *notion seconded* [read *notion confirmed*] by others close to the project." Peter Rebhahn, "Scott May Leave Water Authority," *Green Bay Press-Gaz.*, 14 Jan. 2003, at B1.

No doubt part of the blame goes to Smokey Robinson and the Miracles for the 1967 hit "I Second That Emotion."

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

motto. Pl. *motatoes*. See PLURALS (D).

***mouch.** See **mooch**.

mould. See **mold**.

mourning dove; mourning warbler. The *mourning dove*, a grayish-brown medium-sized bird common throughout North and Central America, is said to be so called because its plaintive sound suggests grieving. The *mourning warbler*, a small species of songbird found in eastern and central North American forests, is said to be so called because its dark breast suggests one in mourning (the *OED* quotes the *Atlantic Monthly* from 1866 to say that ornithologists were evoking the dark breast). In neither name does the etymology have anything to do with the AM (hence it's not **morning dove* or **morning warbler*)—e.g.:

- “The abundance of woods and dead trees, he said, *have* [read *has*] brought the sightings of more cardinals and *morning* [read *mourning*] doves.” Maureen Costello, “Guardian of the Land,” *Boston Globe*, 21 Jan. 2001, *Globe West* §, at 1.
- “*Morning* [read *Mourning*] doves coo and sea gulls circle.” Darragh Johnson, “The Man Behind the Speedo,” *Wash. Post*, 1 Mar. 2001, at T12.
- “He’s constantly revising his routines, and is quite proud of his white *morning* [read *mourning*] doves (part of a classic appearing-disappearing trick that has become a staple in his show).” Miriam Di Nunzio, “Berwyn Teen Makes TV Magic,” *Chicago Sun-Times*, 16 Mar. 2001, *Weekend Plus* §, at 10.

LANGUAGE-CHANGE INDEX

**morning dove* for *mourning dove*: Stage 1

Current ratio (*mourning dove* vs.

**morning dove*): 11:1

mouse. The plural of this word, in reference to small rodents, is (of course) *mice*. In reference to computer gadgets, usage has changed rapidly. Many usagists in the late 1990s recommended *mouses* over *mice* (on the analogy of *louse*, which forms *louses* in reference to cads but *lice* in reference to insects). As recently as 2007, the *Associated Press Stylebook*, which most newspapers follow, was silent on the issue, and *mouses* prevailed—e.g.: “[Mark] Bolger said Microsoft has found that surface computing is more intuitive than computer *mouses*, which require training.” Howard Wolinsky, “At Your Fingertips; Finally, a Real Hands-on Computer,” *Chicago Sun-Times*, 25 Oct. 2007, *Fin.* §, at 49. But in 2008, the *AP Stylebook* recommended the form *mice*, which had already become standard in commerce—e.g.: “In March, the EPA fined a Southern California company, IOGEAR, \$208,000 for making unsubstantiated antimicrobial claims about its nanosilver-coated computer *mice* and keyboards.” Margaret Woodbury, “The Allure of Nanosilver,” *L.A. Times*, 4 Aug. 2008, *Health* §, at F3. See PLURALS (H). Any real debate seems now at an end: the collocation *computer mice* is eight times more common in print than **computer mouses*. Those who advocated *mouses* analogized valiantly, but they should concede their editorial loss and move on. See **snoot**.

***mousey.** See **mousy**.

moustache. See **mustache**.

mousy (= [1] of, like, or involving a mouse or mice, or [2] timorous, meek, nervous, and drab) has been the predominant spelling in AmE and BrE alike since about 1900—**mousey* being a variant.

Current ratio: 6:1

mouthful. Pl. *mouthfuls*. See PLURALS (G).

movable has been predominantly so spelled in AmE since about 1840 and in BrE since about 1870. *Moveable* is a variant spelling. See MUTE E.

Current ratio: 3:1

mow > mowed > mowed. The past-participial *mown* is best reserved for adjective uses—e.g.: “You can practically smell the *mown* outfield grass and taste the dirty-water hot dogs.” Don Mayhew, “Opening Day Hits,” *Fresno Bee*, 1 Apr. 1997, at E1. See IRREGULAR VERBS (B).

Current ratio (*has mowed* vs. **has mown*): 2:1

Mr.; Mrs.; Ms. In AmE, the first two terms are considered abbreviations, so they have a period at the end. *Ms.* originated in the 1950s as a blend of *Mrs.* and *Miss*. American dictionaries do not define *Ms.* as an abbreviation or contraction, but it is written with a period anyway to conform to the style of *Mr.* and *Mrs.*

Because contracted abbreviations (with letters deleted from the middle of the word) don’t take a period in BrE, British writers use these three forms without a period <Mr Whitaker> <Mrs Kerr> <Ms Denning>.

ms. See **manuscript**.

Ms. See SEXISM (E) & **Mr**.

much. See **many**.

much less. This phrase requires the writer to put the less rigorous word first, the more rigorous last. But here they’re reversed: “Recent history amply illustrates the difficulties in *adapting*, *much less surviving* [read *surviving*, *much less adapting*].” Shelley von Strunckel, “What the Stars Say About Them,” *Sunday Times* (London), 18 June 1995, *Style* §, at 36. Surviving is easier than surviving and adapting. Therefore, the phrasing in the original is illogical. Fowler recommends *let alone* as a less troublesome substitute. See ILLOGIC.

***muchly** is nowadays considered a jocular NON-WORD—though several centuries ago it was not so stigmatized. *Much* is the preferred form in all adverbial contexts. But **muchly* occasionally finds its way into print—e.g.:

- “More of this would have been *muchly* [read *much*] appreciated.” Jennifer Barrs, “Roy Clark Still Strong on Strings,” *Tampa Trib.*, 1 Mar. 1996, *Florida/Metro* §, at 4.
- “*Thanks muchly* [read *Thank you*] to Rafael Palmeiro, whom the Cubs traded because he showed little power potential.” Bob Verdi, “Ah, a Ballpark with Warmth—and

People,” *Chicago Trib.*, 11 Sept. 1996, Sports §, at 1. (For more on *thanks much*, see **thank you**.)

- “Merl is survived by his father and one brother, both named Sam. He’s already *muchly* [read *deeply* or *sorely*] missed.” Vic Fleming, “Man of His Words,” *Ark. Democrat-Gaz.*, 28 Aug. 2015, at 17.

For other adverbs with a superfluous *-ly*, see ADVERBS (C).

LANGUAGE-CHANGE INDEX

**muchly* for *much*: Stage 1

Current ratio (*much appreciated* vs.

**muchly appreciated*): 2,534:1

much-needed is often used nonsensically. That is, it’s common to read about **much-needed voids* and **much-needed gaps*, when the true reference is to voids or gaps that need to be filled—e.g.: “He said the four division chairmen will fill a *much-needed gap* that occurs when a committee chairman takes the floor to push a certain bill.” Frank Phillips, “Finneran Plans Bigger Bonuses for Four Allies,” *Boston Globe*, 27 Mar. 1997, at A1. If the gap is much needed, then the division chairs will spoil things by filling it. See ILLOGIC.

mucus, n.; **mucous**, adj. These two ought to be kept separate, *mucus* for the slimy substance and *mucous* for the adjective describing whatever contains or secretes mucus. So **mucus membrane* is a mistake—e.g.: “If a person already has herpes, chlamydia, gonorrhea, or syphilis and is exposed to HIV, he or she is more likely to contract the virus because of openings in the *mucus* [read *mucous*] membranes and skin.” “Increased Research Leads to Dramatic Declines in Sexually Transmitted Diseases,” *USA Today* (Mag.), Feb. 1995, at 11.

In medical literature, *mucous ball* and *mucus ball* are about equally common. This is a closer case than *mucous membrane*, however, because *mucus ball* is a ball of mucus, and the noun is justifiably used in an attributive sense—e.g.: “Over the ensuing six months, there has been no further problem with *mucus balls*, his level of dyspnea, or edema.” Edward M. Harrow et al., “Respiratory Failure and Cor Pulmonale Associated with Tracheal Muroid Accumulation [etc.],” *Chest*, Feb. 1992, at 580. But the best course, outside medical literature, might be to find a EUPHEMISM.

LANGUAGE-CHANGE INDEX

**mucus membrane* for *mucous membrane*: Stage 1

Current ratio (*mucous membrane* vs.

**mucus membrane*): 31:1

Muhammad; Mohammed; Mahomet; Muhammed. How do you spell the name of the founder of Islam (who lived from 570 to 632)? The spelling *Mahomet* predominated from 1600 till about 1880, when *Mohammed* became predominant throughout the English-speaking world. The retransliterated *Muhammad* overtook all rivals about 1945 and is now standard.

Current ratio (in order of headwords): 25:11:2:1

multiply is an adverb /*məl-ti-plee/* as well as a verb /*məl-ti-plit/*. Because the word is ordinarily a verb, the adverbial use can give rise to MISCUES—e.g.: “The St. Christopher-Otilie Residential Treatment Center [is] a home for *multiply* handicapped children.” Joe Krupinski & Mike Candel, “High School Notebook,” *Newsday* (N.Y.), 30 Nov. 1994, at A66. But writers can arrange the sentence parts to ensure that the word is read correctly—e.g.: “Buying toys for a severely or *multiply* handicapped child can be difficult.” Andale Gross, “Learning to Fit the Toys to the Child,” *Kansas City Star*, 10 Dec. 1994, Olathe §, at 3. Putting *multiply* on a parallel course with *severely* minimizes the possibility of a reader miscue.

murder. A. And homicide; manslaughter; man-killing. *Homicide* is the killing of another human being; it is the general legal term. (See **homicide**.) *Murder* is the unlawful killing of a human being with malice aforethought. It is the most heinous kind of criminal homicide. At common law, *murder* was not subdivided; but in most American jurisdictions statutes have created *first-degree murder*, *second-degree murder*, and *third-degree murder* (in descending order of reprehensibility). Indeed, *second-degree murder* is the same as common-law murder, as defined above. *First-degree murder*, a statutory crime, is the common-law crime of murder with an added element (such as arson, rape, robbery, burglary, larceny, or kidnapping) that aggravates the crime.

Manslaughter, which has a lower degree than *murder*, is homicide committed without malice aforethought.

Man-killing is a nonlegal synonym for *homicide*, used sometimes of nonhuman killers <man-killing isn’t something tigers do unless they’re physically provoked or very hungry>. But it’s a sexist term: see SEXISM (C).

B. Unintentional murder. This phrase may strike some readers as an OXYMORON, but it has been fairly widespread since the late 18th century. E.g.:

- “On Tuesday, the [California Supreme Court], in a major break with a 4-year-old precedent, ruled that a killer can be executed for an *unintentional murder*.” “Calif. Death Sentence Upheld,” *L.A. Times*, 15 Oct. 1987, § 1, at 1.
- “One of McDonagh’s gifts is knowing that the darker the subtext, the more outrageous the lines can be, because what would ordinarily seem offensive becomes significant in light of a true disaster: the *unintentional murder* of a child.” John Anderson, “Bumbling Hit Men Score Bulls-Eye in Darkly Droll ‘Bruges,’” *Wash. Post*, 8 Feb. 2008, at C6.

And it is entirely proper to speak of an *unintentional murder*, as when someone, for no good reason, shoots a gun into an occupied room and kills somebody inside. But traditionally, intent is the very distinction between murder and manslaughter, so unless this is a legal term of art you are stuck with, use *unintentional killing* instead.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

murex (= a flesh-eating snail abounding in tropical seas) traditionally formed the plural *murices*. But since the late 1940s in AmE and the early 1970s in BrE, *murexes* has become predominant in English-language print sources.

murk, n.; **murky**, adj. These are preferably so spelled. **Mirk* and **mirky* are variant spellings.

Current ratio (*murk* vs. **mirk*): 7:1

Current ratio (*murky* vs. **mirky*): 577:1

Muslim; Moslem. Both terms mean “a follower of Islam” and appear in English-language works from the 15th century on. *Moslem* was the standard spelling until the 1940s, when *Muslim* became predominant in World English. Curiously, BrE and AmE lagged behind the shift. *Muslim* became predominant in BrE about ten years later. *Muslim* overtook *Moslem* in AmE in 1963, possibly influenced by the prominence of the *Black Muslims*, an alternative name for the Nation of Islam, during the civil-rights movement. Worldwide, *Muslim* is now 20 times as common as *Moslem*.

mustache; moustache; mustachio. A latent DIFFERENTIATION has begun to take hold. *Mustachio*, tinged with ARCHAISM, has come to suggest a large, bushy mustache. E.g.: “In Italian *baffi* means handlebar mustache; George’s own substantial *mustachio* is insured by Lloyd’s of London.” Don Freeman, “If Only George Could Give Those Cigars Away,” *San Diego Union-Trib.*, 20 Jan. 1995, at E2.

Sometimes, too, *mustachio* has come to mean “one side of a big mustache.” Though the dictionaries have been slow to recognize this sense, it is fairly common—e.g.:

- “Back in Toronto in the 1880s, he cultivated a southwestern appearance, with free-falling *mustachios* and the sort of long linen duster favoured by drovers and outlaws.” Douglas Fetherling, “Bob Bob Bobbin’ Along,” *Saturday Night*, Sept. 1996, at 87.
- “A villain named Hurwitz Murkowski (hiss) ties Smokey Bear to the tracks, twirls his waxed *mustachios* and then, with a snarl, yelps, ‘Curses, foiled again!’ (huzzah)” “White Hats to the Rescue,” *S.F. Examiner*, 7 Oct. 1996, at A16.
- “I can picture Monsieur Henny, twirling his *mustachios* and flashing his cleaver as he gestures to his display of lapin, before helping Mme. Wells select the best one.” Tucker Shaw, “The Fixer,” *Denver Post*, 19 Jan. 2011, at D1.

The corresponding adjectives are *mustached* (generic) and *mustachioed* (for the big ones). Although *mustachioed* is most commonly mentioned as the adjective, *mustached* is common and entirely respectable—e.g.: “Handsome, *mustached*, expensively suited, he can’t move without conjuring up images of Johnnie Cochran.” Lloyd Rose, “‘Chicago’: Going Gangbusters Again,” *Wash. Post*, 18 Apr. 1997, at C1.

Moustache is the BrE spelling of *mustache*, predominant there since about 1830. *Mustache* has predominated in AmE since about 1940.

***must could have.** See DOUBLE MODALS.

muster. See **pass muster.**

mutatis mutandis (= the necessary changes having been made; taking into consideration or allowing for the changes that must be made) might seem a useful LATINISM in some literary contexts, since the English equivalents are wordier. But in most actual uses of the phrase, it can be simplified. The phrase is hardly needed for a straightforward comparison in which readers are sure to know that two things aren’t identical—e.g.:

- “The anti-smoking movement affords a recipe for success that, *mutatis mutandis*, [delete the phrase and the commas] can be useful to many other social movements.” Peter L. Berger, “Furtive Smokers,” *News & Record* (Greensboro), 7 Aug. 1994, at F1.
- “Hughes’s Harlem has pimps and number-runners and illegitimate babies and alcohol and marijuana—but none of these things, *mutatis mutandis*, is unknown in ‘polite society,’ as both Hughes and his readers are well aware.” Helen Vendler, “The Unweary Blues,” *New Republic*, 6 Mar. 1995, at 37. (A possible revision: *but all these things have their equivalents in ‘polite society’ . . .*)
- “If ‘Pink Flamingos’ offered a geeky, low-rent version of ‘The Godfather,’ the movie’s narrative structure is, *mutatis mutandis*, the same as ‘Star Wars.’” J. Hoberman, “The Naked & the Dead,” *Village Voice*, 15 Apr. 1997, at 67. (A possible revision: *is similar to that of ‘Star Wars.’*)

Sometimes the phrase is entirely superfluous. In the following sentence, its purpose seems to be to impress, and the writer (ironically) becomes less intelligible with its use: “So, if one can use ‘yellow’ and ‘good’ intelligently and intelligibly—if others can understand what one means by them—then, for practical purposes, both words, *mutatis mutandis*, are meaningful.” John Hill, “Can We Talk About Ethics Anymore?” *J. Bus. Ethics*, Aug. 1995, at 585. Cf. **ceteris paribus**. See SESQUIPEDALITY.

mute. See **moot (c).**

MUTE E. In English, a verb’s unsounded final *-e* is ordinarily dropped before the *-ing* and *-ed* inflections: *create, creating, created; rate, rating, rated; share, sharing, shared*. Exceptions to this rule are verbs ending in *-ee*, *-ye*, and *-oe*; these do not drop the *-e* before *-ing*, but they do drop it before *-ed*: *agree, agreeing, agreed; dye, dyeing, dyed; hoe, hoeing, hoed*.

The suffix *-able* often causes doubt when it is appended to a base ending in a mute *-e*. Usually, the *-e* is dropped when *-able* is added, but a number of exceptions exist in BrE (e.g., *hateable, hireable, mineable, nameable, rateable, ropeable, saleable, sizeable, unshakeable*). See **-ABLE (E)**. Oddly, though, the spellings *livable* and *movable* predominate in BrE. For all these *-able* adjectives—apart from *hateable, nameable, and ropeable*—AmE drops the medial *-e*.

Although the general rule in AmE is to drop the *-e* before a vowel, the almost universal exception to this rule is to keep the *-e* if needed to indicate the soft sound of a preceding *-g-* or *-c-*, as in *change, changeable; hinge, hingeing; trace, traceable*. Yet even

this exception to the rule is not uniform: *lunge* yields *lunging*, and *impinge* yields *impinging*. A less common exception retains the mute *-e* to distinguish a word from another with a like spelling, as in *dye*, *dyeing*. Because the given form of a word when inflected is easily forgotten and often the subject of disagreement even among lexicographers, the best course is to keep an up-to-date and reliable dictionary at hand.

One other difference between AmE and BrE is noteworthy: in AmE, the mute *-e* is dropped after *-dg-* in words such as *acknowledgment*, *fledgling*, and *judgment*, whereas the *-e* is typically retained in BrE (*acknowledgement*, *fledgeling*, and *judgement*). Even so, British legal writers usually prefer the spelling *judgment*. See **judgment** (A).

***mute point**. See **moot**.

mutual. A. And common. It's possible to refer to a couple's *mutual* devotion, but not their *mutual* devotion to their children. The reason is that whatever is *mutual* is reciprocal—it's directed by each toward the other. E.g.: "So consider the matter a quid pro quo, a *mutual* exchange of affection between Zereoue and Mountaineer fandom." Michael Dobie, "More-Famous Amos," *Newsday* (N.Y.), 14 Nov. 1997, at A103.

But when the sense is "shared by two or more," then the word is *common*—not *mutual*. *Friend in common* has traditionally been thought preferable to *mutual friend*, although the latter has stuck because of Dickens's novel (the title to which, it is sometimes observed, comes from a sentence mouthed by an illiterate character). Some careful writers continue to use *friend in common*. But *mutual friend* has in fact predominated since the 18th century—today by a 60-to-1 ratio.

LANGUAGE-CHANGE INDEX
mutual friend for *friend in common*: Stage 5

B. In Redundancies. *Mutual* creates any number of redundancies. E.g.: "The 25-page motion . . . claims that multimillion-dollar misstatements are strewn along a Symington paper trail that consists of a series of *mutually contradictory* [read *contradictory* or *inconsistent*] financial statements." Jerry Kammer & Pat Flannery, "Judge Asked to Rule Symington Lied on Financial Statement," *Ariz. Republic*, 22 Mar. 1997, at B5. Some of the more common prolixities with this word are **mutual agreement* and **mutual cooperation*. Cf. **together**.

Redundancies are especially common when *mutual* appears with *both*—e.g.: "And Hongkong, he adds, will be there to serve China to the *mutual benefit of both parties involved* [read *mutual benefit of the parties* or *benefit of both parties*]." Rahita Elias, "A Tough Act to Follow for HK's New Port Development Board Chief," *Bus. Times*, 17 Oct. 1996, Shipping Times §, at 1.

The phrasing **mutual . . . each other* is a fairly common redundancy—e.g.:

- "They have a deep, *mutual respect for each other* [read *mutual respect*] even when they bump heads over draft picks." Mike Preston, "Savage Finds Diamonds in the Rough," *Baltimore Sun*, 18 Jan. 2001, at D1.
- "My father was a Roman Catholic and my mother a Protestant and . . . they had a *mutual respect for each other's religion* [read *respected each other's religion*]." Dale Turner, "The Simple Favor of an Introduction Can Change a Life," *Seattle Times*, 20 Jan. 2001, at A11.

See **reciprocity** & REDUNDANCY.

my and your house. See POSSESSIVES (E).

Myanmarese; Myanmaran. See **Burmese**.

my bad. This low colloquialism gained popularity in the mid-1980s, apparently growing out of American sports SLANG and meaning "Sorry, my mistake." It was well enough established by 1986 to be listed in a collection of campus slang published by the University of North Carolina, and it soon became a staple in pop culture. The phrase now seems to be on the wane.

myriad is more concise as an adjective <myriad drugs> than as a noun <a myriad of drugs>. Here the shorter use is illustrated:

- "June 1996: Telectronics resumes production after wrangling over *myriad* legal and manufacturing issues." Al Lewis, "Pacemaker Firm Pulls Plug," *Rocky Mountain News* (Denver), 14 Dec. 1996, at B1.
- "Back when we still thought America was a melting pot instead of a collection of hyphens, the crux of combining *myriad* nationalities into one was in that oath." Pat Truly, "The Choice All Immigrants Must Make," *Baltimore Sun*, 14 Jan. 1997, at A9.
- "That color change prompted some to erroneously fear the rocket exploded, when they were actually witnessing a second-stage ignition of additional boosters, according to *myriad* media reports." Adam Linhardt, "Early Risers Catch Glimpse of Rocket," *Key West Citizen*, 3 Sept. 2015, at A1.

But the mere fact that the adjective is handier than the noun doesn't mean the latter is substandard. The noun (ca. 1555) has been with us more than 200 years longer than the adjective (ca. 1791), and the choice is a question of style, not correctness. Yet in print sources since 1850, the shorter adjectival use has been much more frequent.

Current ratio (*myriad reasons* vs. *a myriad of reasons*): 1.2:1

myself is best used either reflexively <I have decided to exclude myself from consideration> or intensively <I myself have seen that> <I've done that myself>. The word shouldn't appear as a substitute for *I* or *me* <my wife and myself were delighted to see you>. Using it that way, as an "untriggered reflexive," is

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

thought somehow to be modest, as if the reference were less direct. Yet it's no less direct, and the user may unconsciously cause the reader or listener to assume an intended jocularly, or that the user is somewhat doltish. E.g.:

- “Those ins and outs are largely a self-learning process, though knowing the experience of someone like *myself* [read *me*] might make the learning shorter, easier, and a lot less painful.” Mark H. McCormack, *What They Don't Teach You at Harvard Business School* xii (1984).
- “The exclusion of women and women's concerns is self-defeating. For instance, *myself and other women in Hollywood* [read *many women in Hollywood, including me,*] would deliver millions of dollars of profit to the film industry if we could make films and television shows about the lives of real women.” Rita Mae Brown, “In Flight from the Female,” *L.A. Times*, 22 Oct. 1989, Book Rev. §, at 4.
- “A number of readers, like *myself* [read *me*], will doubtless feel that this exposure has given them a clear professional sense of Rogers.” Michael Patrick Gillespie, “A Composition of Place,” *Irish Lit. Supp.*, Fall 2015, at 27.

See PRONOUNS (E) & FIRST PERSON. Cf. **I personally**.

LANGUAGE-CHANGE INDEX

1. *myself* for *me* <He was an avid golfer like myself>: Stage 3
2. *myself* for *me* in a compound predicate <Give it to John or myself>: Stage 2

mystical; **mystic**, adj. These words, about equally common, have long been regarded as more or less

interchangeable. Margaret Nicholson suggested that “*mystical*, not *mystic*, is now used in reference to theological mysticism” (*DAEU* at 356). But that doesn't appear to be true: in 1992, for example, David S. Ariel published a book entitled *The Mystic Quest: An Introduction to Jewish Mysticism*. Further, *mystical* appears predominantly in nontheological contexts.

Perhaps the best thing that might be said is that euphony should govern the choice of term—e.g.:

- “A maverick, however, he hewed to a poetic surrealism despite the polemics of abstraction that surrounded him, using figurative elements to evoke the mythic and the *mystical*.” Grace Glueck, “Art in Review,” *N.Y. Times*, 6 June 1997, at C22.
- “The chords of memory are not *mystic* anymore.” Leon Wieseltier, “Immemorial,” *New Republic*, 9 June 1997, at 50.
- “They are awestruck to finally enter this *mystic* fraternity.” Bryan Hendricks, “Fowl Ball!” *Ark. Democrat-Gaz.*, 16 Aug. 2015, Sports §, at 32.
- “Her recent poetry is more political, but also more *mystical*, and less interested in women's issues.” Sarah Berry, “Medbh McGuckian's Ex-Centric Obscurity,” *Irish Lit. Supp.*, Fall 2015, at 19.

Since 1600 or so, *mystical* has prevailed over *mystic* in frequency of use in English-language print sources—with the exception of the period from 1870 to 1930 (a *mystic* period).

N

Nabokov, Vladimir (1899–1977). How do you pronounce the writer's name? It's /vɪ-**d**eem-ər/ (rhyming with *redeemer*) /**nab**-ə-kawf/ (rhyming with *have a cough*). According to Justice Ruth Bader Ginsburg, who studied closely with Nabokov as her teacher at Cornell, that's how the man pronounced his own name. See Bryan A. Garner, Interview with Justice Ginsburg, 10 *Scribes J. Legal Writing* 133, 135 (2010).

naiad (/nəɪ-ad/ or /nɪ-ad/) = a river nymph. This permissibly forms the Greek plural *naiades* /nəɪ-ə-deez/—even in English-language contexts—but *naiads* (/nəɪ-adz/ or /nɪ-adz/) has always predominated. For the principles governing foreign plurals, see PLURALS (B).

Current ratio (*naiads* vs. *naiades*): 21:1

naive; ***naive**; **naif**; ***naïf**. The standard adjective is *naive* (without a diaeresis), the standard noun *naif* (again, no diaeresis). The others are variant forms. *Naive* (= amusingly ingenuous) is sometimes misused for the noun *naif* (= a naive person)—e.g.: “But you are not a political *naive* [read *naif*].” A.M. Rosenthal, “Arianna, Go Home!” *N.Y. Times*, 20 June 1995, at A15 (addressing Arianna Stassinopoulos Huffington). Maybe the author thought that, because he was addressing a woman, he should feminize the form. But in English, *naif* is not considered sex-specific.

The adjective is pronounced /nah-eev/, the noun /nah-eef/.

LANGUAGE-CHANGE INDEX

naive misused as a noun for *naif*: Stage 1

naiveté; ***naivete**; ***naïveté**; **naivety**; ***naiveness**. The first of these—a half-GALLICISM that keeps the accent but loses the diaeresis—is the standard form in AmE. Avoid the variants. The word is pronounced /nah-eev-tay/ or /nah-ee-və-tay/.

Naivety, which is chiefly BrE, is pronounced /nah-eev-tee/ or /nah-ee-və-tee/.

**Naiveness* is an artless anglicization created by simple, unaffected people deficient in worldly wisdom and informed judgment.

nameable. So spelled in both AmE and BrE—not **namable*. See MUTE E.

Current ratio: 4:1

named for; **named after**; **named from**. *Named for* means “to be named in honor of (someone or something)” <the Nobel Prize was named for Swedish scientist Alfred Nobel>—e.g.: “Saturday's ceremony preceded the Albany Alligators–Fort Worth Cats game at the Paul Eames Sports Complex, *named for* Paul in honor of his decades of work on behalf

of baseball and youth sports in Albany.” Tim Tucker, “It’s a Golden Play at the Plate,” *Atlanta J.-Const.*, 24 July 2001, at E2.

Named after means that a person’s or thing’s name was given to another person or a place after the name-sake was born or achieved fame. It does not necessarily connote an honor, but it may—e.g.: “Bradlee seemed to be betting Mrs. Graham’s newspaper on the reporting of a couple of then obscure, young city-desk reporters, Bob Woodward and Carl Bernstein, who were in turn relying on anonymous sources, chiefly one *named after* a porn movie, ‘Deep Throat.’” Evan Thomas, “An American Original; Katharine Graham 1917–2001,” *Newsweek*, 30 July 2001, at 42.

Named from (the least prevalent phrasing) applies to things, not people, and means that a name was inspired by something else that isn’t necessarily well known or worthy of honor. In some contexts, it signals an implicit memorialization of a predecessor that bore the same name—e.g.: “A new development called Lost Creek proposed by Don Simon Homes in Madison near the town of Blooming Grove has all of its streets *named from* Beatles’ song titles.” George Hesselberg, “Where the Streets Have Odd Names,” *Wis. State J.*, 15 July 2001, at G1. See **eponymous**.

namely is generally preferable to *viz.* or *to wit*. But often all three expressions can be avoided—e.g.: “There’s a big, juicy, column-ready event hanging out there, *namely* the Microsoft CEO summit.” Kevin Maney, “Computer Spins Technology Tale,” *USA Today*, 15 May 1997, at B5. (A possible revision: *There’s a big, juicy, column-ready event hanging out there: the Microsoft CEO summit.*) See **viz.** & **to(-)wit**.

Namely is customarily followed by a comma, as are equivalent terms such as *to wit*, *for example*, and *that is*. But writers increasingly skip the comma after this single-word introduction—e.g.: “[Meyer] Schapiro’s understanding of Romanesque art is based on an essential belief about humankind, *namely* [read *namely*,] that individuality—the sense of it, the yearning for it, the struggle for it—is quite simply the core of the human.” Jed Perl, “The Varieties of Artistic Experience,” *New Republic*, 30 Oct. 2006, at 23.

This type of phrase or clause specifies, clarifies, or gives one or more examples of what preceded. Because it’s nonrestrictive, it should be set off from the sentence. Not doing so usually results in a sentence that’s tough to get through—e.g.: “That’s tricky when some *signals namely equity markets* [read *signals, namely, equity markets*,] hitting new highs are bullish.” Jon Birger, “Can the Economy Survive the Housing Bust?” *Fortune*, 13 Nov. 2006, at 189 (*namely, equity markets* might also be set off by em-dashes or parentheses).

NAMES. A. Capitalization. Many complex rules govern the capitalization of names—too many to cover

here. But a few especially important ones merit mention. First, names that are proper nouns—such as names of people, places, books, articles, and the like—are capitalized <President Ronald Reagan> <Atlanta, Georgia> <*Gone with the Wind*>. That’s the rule that everybody knows. Second, when a name such as *Hockaday School* is reduced to a shortened form (the *School*) after the first reference, even the common noun *school* may be capitalized because it’s a short-form proper noun. This practice is common for in-house publications such as annual reports. And in legal writing, a statute is commonly referred to as *the Act* after the first reference, and the court one is addressing is always *the Court*. Keep in mind, though, that in most prose the practice can get out of hand: “[D]o not capitalize a short form unless it clearly warrants the importance, distinction, or emphasis that capitalization conveys.” *Gregg Reference Manual* Rule 310 (10th ed. 2004). And third, when a name for some idiosyncratic reason isn’t usually capitalized <k.d. lang>, the first letter must be capitalized when it begins a sentence <K.d. lang sang a few of her hit songs>. (Some editors would write her name K.D. Lang regardless of her preference for lowercase. Cf. **Cummings**.) For a full coverage of the many complexities of capitalizing names, see *The Chicago Manual of Style*. See CAPITALIZATION (A).

B. Jr.; Sr.; III; etc. There are four traditional rules about the use of these labels—most of them forgotten in modern usage though scattered throughout etiquette books.

First, a father should not adopt the *Sr.* label, nor should others refer to him that way without good reason. That’s what the etiquette mavens have long said—e.g.:

- “A gentleman who represents the head of the senior branch of his family is privileged to use a card engraved simply, ‘Mr. Brown.’” 1 *Correct Social Usage* 212 (1907) (suggesting that ‘Mr. Henry A. Brown Sr.’ does not properly exist).
- “Senior cannot be used with a man’s name. No matter how famous the son, he is junior to his father as long as his father is alive.” Millicent Fenwick, *Vogue’s Book of Etiquette* 557 (1948).
- “‘Senior’ is never used after a man’s name.” Nancy Loughridge, *Dictionary of Etiquette* 105 (1955).
- “A man never uses ‘Sr.’, though on occasion it is correct for others to add ‘senior’ to the name of the older man when referring to him (though not when addressing a letter to him) if confusion with his son would otherwise result.” Llewellyn Miller, *The Encyclopedia of Etiquette* 393 (1967).

Second, a son drops *Jr.* when his father dies (with exceptions noted below). Again, that’s what the experts have consistently said—e.g.:

- “At the death of his father, he is no longer junior.” Margery Wilson, *Pocket Book of Etiquette* 105 (1937).
- “A man is ‘Mark Strand Jr.’ only while his father is alive and, of course, he bears his father’s exact name.” Nancy Loughridge, *Dictionary of Etiquette* 105 (1955).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Names are traditionally numbered only among the living.” Judith Martin, *Miss Manners’ Guide for the Turn-of-the-Millennium* 60 (1990).

Even modern newspapers agree: “Normally, when a father dies, the son drops the ‘Jr.’” “Racing Family Tries to Shake Grief,” *Rock Hill Herald*, 26 Feb. 2001, at A1.

This rule was once widely followed. There were, for example, father-and-son Oliver Wendell Holmeses. As soon as the father (the poet) died in 1894, the son (the jurist) dropped *Jr.* despite his father’s great renown. (And, of course, during his lifetime the poet never used *Sr.* on his name.) As a more modern example, the actor Jason Robards dropped *Jr.* after his father, a stage actor, died in 1963.

There are two exceptions to the second rule: (1) If the deceased father was quite famous, the son may retain *Jr.*: “The rule that a man does not continue to use ‘Jr.’ after the death of his father is correctly disregarded if the older man was extremely prominent and continues to be mentioned frequently in the press and elsewhere after his death. In such case, the son properly continues to use ‘Jr.’ to avoid confusion.” Llewellyn Miller, *The Encyclopedia of Etiquette* 393 (1967). There are good examples, such as Frank Sinatra Jr. and Hank Williams Jr. (they rightly kept their labels). (2) Some authorities have suggested that a son who earns a title should not use *Jr.*, presumably because the differentiating label that *Jr.* represents then becomes unnecessary: “A son who acquires a title (‘Dr.’, ‘Colonel,’ ‘Rabbi,’ for example) drops ‘Jr.’ unless his father also has the same title as well as the same name.” Llewellyn Miller, *The Encyclopedia of Etiquette* 393 (1967).

Today, these first two rules are frequently ignored. Many men seem to become *Jr.* for life (e.g., William F. Buckley Jr.). And some fathers do adopt *Sr.* Perhaps the niceties are lost as fewer and fewer sons are named after their fathers; the convention is certainly much rarer than it was in the early 20th century. In 2000, the advice columnist Abigail Van Buren repeated the customary guidance about dropping *Jr.* on the father’s death but added that “if you desire, there is nothing illegal or improper about retaining the ‘Jr.’” Abigail Van Buren, “Dear Abby,” *Charleston Gaz.*, 22 June 2000, at D3. One etiquette book adds that a son’s retaining the *Jr.* after his father dies “helps to differentiate between his wife and his mother if the latter is still living and does not wish to be known as ‘Mrs. Jones, Sr.’” Elizabeth L. Post, *Emily Post’s Etiquette* 26 (1992). This approach certainly makes good sense. Perhaps the new convention is to keep *Jr.* to honor the father.

Even if a “Jr.” drops the label, there’s some evidence that others won’t—e.g.: “Edwin Llwyd Ecclestone was a ‘Jr.’ for most of his life, but he dropped the ‘Jr.’ from his name after his father’s death in 1981 and can’t understand why people and the press don’t honor that.” “The Power Hitter E. Llwyd Ecclestone Born March 8, 1936,” *Palm Beach Post*, 19 Dec. 1999, Special §, at 98.

Third, *Jr.* and *Sr.* aren’t used unless the names are identical—forename, middle name, and surname. So the second Bush president (George W. Bush) is not a junior, the father’s name being George Herbert Walker Bush. But some journalists, especially in Great Britain, use *Jr.* and *Sr.* as a kind of loose shorthand—e.g.: “George Bush Sr [said it] in his campaign for the US presidency in 1988.” Philip Howard, “Who Said That?” *Times* (London), 23 Mar. 2001, § 2, at 5. (Of course, the British, as in that example, omit any period after *Sr.* because it is a contracted abbreviation. See **Mr.**)

Many American writers use *Sr.* to distinguish an older man, especially a father, with the same name, even if the younger man does not use *Jr.*—e.g.: “Stacy Keach Sr., a character actor, director and producer who was also the father of actor *Stacy Keach* and director James Keach, died Thursday at Providence-St. Joseph Medical Center in Burbank, Calif.” “Stacy Keach Sr.” (obit.), *Dallas Morning News*, 15 Feb. 2003, at A39.

Fourth, when a male shares a name with both his living father and his living grandfather, he is called “3rd” or “III.” (The Arabic numeral appears less pretentious.) If the grandfather dies first among the three, the grandson becomes “Jr.” If the father dies before the grandfather, the grandson stays “3rd.” When both the father and grandfather have died, the grandson drops all distinguishing labels. So getting into “5th,” “6th,” and so on isn’t yet possible—though medical breakthroughs may one day result in such longevity. Kings and queens, by the way, aren’t subject to this rule.

Finally, there’s the question of punctuation. *Jr.* and *Sr.*, which are increasingly used restrictively, may appear with no comma—e.g.: “Louis V. Gerstner Jr., the new chairman of I.B.M., began his campaign yesterday to revive the world’s largest computer maker by announcing an \$8.9 billion program to cut the company’s costs sharply.” Steve Lohr, “I.B.M. Chief Making Drastic New Cuts; 60,000 Jobs to Go,” *N.Y. Times*, 28 July 1993, at A1. Journalistic stylebooks—such as the AP’s and the UPI’s—prefer this approach, probably because newspapers generally disfavor optional commas.

And the comma-less *Jr.* has logic on its side. That’s why E.B. White was persuaded to change the text of *The Elements of Style*. The first and second editions had said: “The abbreviations *etc.* and *jr.* are parenthetical and are always to be so regarded. *James Wright, Jr.*” *Elements of Style* at 3 (1959; 2d ed. 1972). The text changed in the third edition, however, after Thomas B. Lemann of New Orleans prompted White: “Although *Junior*, with its abbreviation *Jr.*, has commonly been regarded as parenthetical, logic suggests that it is, in fact, restrictive and therefore not in need of a comma. *James Wright Jr.*” *Elements of Style* at 3 (3d ed. 1979).

But in the mid-1990s, the president of the American Law Institute, Charles Alan Wright, canvassed the views of 25 eminent lawyers and judges who bore the abbreviation at the ends of their names. They

unanimously stated a preference for the comma. That's the traditional approach.

Both forms are correct. Besides logic, the comma-less form probably has the future on its side; for one thing, it makes possessives possible (*John Jones Jr.'s book*). The with-comma form has recent (not ancient) tradition on its side. Posterity will be eager to discover, no doubt, how this earth-shattering dilemma is resolved in the decades ahead. One consideration that militates in favor of the comma-less form is that, in a sentence, one comma begets another: "John Jones, Jr. was elected" seems to be telling Jones that Jr. was elected. With a comma before *Jr.*, another is needed after: "John Jones, Jr., was elected."

C. Pronunciation of Foreign Names. As the international lingua franca, English has achieved a greater degree of eclecticism than any other language in history. It has borrowed words from most other major languages, often copiously. It has almost universally anglicized its borrowings—using English phonemes (speech sounds) to approximate the sound of a word in the language of the word's origin. The English word *ketchup*, for example, derives from the Cantonese term *k'ē chap*, which is not authentically pronounceable with English phonemes. No sensible speaker of Cantonese, when visiting the United States, would object that Americans "mispronounce" *ketchup*, any more than a sensible American would object that Thais, when speaking Thai, say something like /kəhm-pyoo-tuu-[-ə]/ for *computer* or /a-pən/ for *apple* (both of which are Thai borrowings from English).

A borrowing language, in other words, makes loanwords more native—more pronounceable—by using the closest available phonemes. What results, when the usage becomes widespread, is a "correct" pronunciation in the borrowing language. A speaker striving to be correct shouldn't reach for an affected pronunciation using foreign phonemes unavailable to other speakers of the borrowing language.

Four major principles follow from this line of reasoning.

(1) *If a name is well known to the English-speaking world, use the pronunciation most common among speakers of English.* Trying to outdo one's neighbors with "correct" pronunciations of foreign names is a silly affectation. It may be good German to say *Bach* with a guttural end (/bahkh/), but it isn't good English. And when the German composer's name appears in an English sentence, it should be a simple /bahk/. Examples abound:

- Barcelona (/bah-rə-sə-**loh**-nə/, not /bah-r-thə-**loh**-nə/)
- Budapest (/boō-də-pest/, not /boō-də-pesht/)
- Caracas (/kə-**rahk**-əs/, not /kə-[d]ahk-əs/)
- Cuba (/kyoo-bə/, not /koo-bə/)
- Hawaii (/hə-**wi**-ee/, not /hə-**vi**-ee/)
- Mexico (/mek-si-koh/, not /me-hee-koh/)

- Moscow (/mos-koh/ or /mos-kow/, not /mōsk-vəh/)
- Paris (/pair-is/, not /pah-ree/)
- Salzburg (/sahlts-bərg/, not /zahlz-boorg/)
- Van Gogh (/van goh/, not /van gok/)

(2) *When pronouncing foreign names that aren't well known, use English phonemes that most nearly approximate those in the original language—and avoid un-English phonemes.* It is hard for most Americans to say the name of the Czech composer Leos Janacek in a way that's satisfactory to a native speaker of the Czech language. (It's hard enough to get the DIACRITICAL MARKS right: Leoš Janáček.) A simple /lay-ohs yah-**nah**-chek/ is as close as most English speakers will ever get. And besides, most speakers of English would put the main accent on the first syllable: /yah-nah-chek/. That's about as close as anyone needs to get in an English-language context. Likewise, Hispanic names such as *Herrera* and *Guatemala* needn't—and shouldn't—be given hispanicized pronunciations with rolled r's and guttural g's.

On the other hand, Americans are fully capable of saying /ee/ and /i/, so we shouldn't have the trouble that we do with the German *ei* (/i/) and *ie* (/ee/). Perhaps the problem comes from inconsistently pronounced names such as Einstein (/in-stīn/) and Goldstein (/gohld-stēn/). Chess Grandmaster Jacques Mieses liked to tell a story about an American who addressed him saying, "Are you Mister Meises [mīstər mī-zəz/]? "No," came the reply, "I am Meister Mieses [mīz-tər mee-zəz/]."

Sometimes, though, the choices aren't so stark. After the terrorist acts of 11 September 2001, the group al-Qaeda came to be well known. Some speakers of Arabic criticized American television commentators for saying /al-**kī**-də/ or /al-**kay**-də/, insisting that it should be /al-kah-ee-də/. But English isn't hospitable to this separation of the middle syllables: it collapses the two into a diphthong. Hence /al-**kī**-də/ (the preferable pronunciation) or /al-**kay**-də/.

(3) *Avoid chauvinistic distortions of foreign names that are fully pronounceable with English phonemes.* It's fairly common to call enemies by distorted names. But this isn't an endearing quality of Americans or any other speakers of English. A few examples of distorted pronunciations come readily to mind (last in each list):

- Arab (/ar-əb/, not /ay-rab/)
- Begin, Menachem (/mi-**nahk**-əm bay-gin/, not /bee-gin/)
- Gandhi (/gahn-dee/, not /gan-dee/)
- Hiroshima (/hi-roh-**shee**-mə/, not /hi-**roh**-shi-mə/)
- Hussein, Saddam (/sə-**dahm** hoo-sayn/, not /sad-əm/)
- Iran (/i-**rahn**/, not /i-**ran**/)
- Iraq (/i-**rahk**/, not /i-**rak**/)
- Italian (/i-**tal**-yən/, not /i-**tal**-yən/)
- Milosevic (/mi-**loh**-sə-vich/, not /mi-**loh**-sə-vik/)
- Vietnam (/vee-ət-**nahm**/, not /vee-ət-**nam**/)

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

(4) *Within the English-speaking world, follow local preferences for place names.* This is a slightly weaker principle than the others. For example, with *Hawaii* it yields to #1. (See **Hawaii (C)**.) Many names are pronounced idiosyncratically in different locales:

- Berlin (Germany): /bər-lin/
Berlin (New Hampshire): /bər-lən/
- Cairo (Egypt): /kɪ-roh/
Cairo (Illinois): /kay-roh/
- DeKalb County (Illinois): /de-kalb/
DeKalb County (Georgia): /de-kab/
- Edinburg (Texas): /ed-in-bərg/
Edinburgh (Scotland): /ed-in-bər-ə/
- Humble (Texas): /əm-bəl/ (see **humble**)
- Lima (Peru): /lee-mə/
Lima (Ohio): /li-mə/
- Mexia (Texas): /mə-hay-ə/
- Milan (Italy): /mi-lahn/ or /mee-lahn/
Milan (Michigan): /mi-lan/
- Palestine (historic): /pal-ə-stɪn/
Palestine (Texas): /pal-ə-steen/
- Pedernales (Texas): /pər-di-nal-əs/ (see **METHATHESIS**)

D. Names with Particles. Many names contain particle prefixes such as *al*, *d'*, *de*, *della*, *der*, *du*, *el*, *la*, *mac*, *ten*, *ter*, *van*, and *von*. If a prefix has been compounded with the remainder of the surname, the correct form takes little thought <Lafarge> <Debussy> <Vandergriff>. But things can become more complicated with proper names having separate particles. When used with a person's full name or with a title, the particle is retained as part of the surname <Count von Zeppelin> <Princess Marie de Bourbon> <Justice van Zandt> <Professor Ahmad al-Hariq> <Mrs. La Ruiz>. By contrast, when the surname is used alone, whether the particle remains depends on the name's origin, the particle's function (that is, whether it's a preposition, an article, or an expression of descent), and certain customary usages.

In Romance languages (such as French, Spanish, Italian, and Portuguese), particles that are also prepositions meaning "of," "from," or "at" are not capitalized. If the main part of the surname is a single syllable, the preposition is retained when the surname is used alone—hence *Charles de Gaulle* becomes *de Gaulle* and *Pierre de Weck* becomes *de Weck*. If a surname is longer than one syllable, the preposition is usually dropped—hence *Simon de Montfort* becomes *Montfort* and *Eduardo de Carvalho* becomes *Carvalho*. When *d'* is used, it is normally retained, regardless of the length of the surname—e.g., *Jean d'Arc* becomes *d'Arc* and *Tullio d'Attore* becomes *d'Attore*. All other particles are always capitalized and are retained in the surname—so *John Dos Passos* becomes *Dos Passos*, *Jacques La Motte* becomes *La Motte*, and *Georges Des Périers* becomes *Des Périers*. If a name contains a preposition plus another particle, the preposition remains lowercase and is dropped when the surname stands alone—e.g., *Françoise de La Tour* yields *La Tour* and *Tomas de La Ruiz* yields *La Ruiz*. The one exception to lowercasing prepositions occurs when a preposition has been compounded with the remainder of the name, as in *Claude Debussy* (*Debussy*) and *Henri Darnley* (*Darnley*).

Exceptions abound when names with Romance-language particles appear in anglicized forms. For example, *la*, *le*, and *les* are very rarely contracted to *l'* in French, but the contraction appears frequently in anglicized French names—e.g., *Philip L'Estrange* (instead of *le Estrange*) and *Charles L'Alique* (instead of *le Alique*). Most particles are lowercase, and they are usually retained when the surname is used alone <della Francesca> <de la Renta> <du Maurier>. This is so even if the main surname has more than one syllable <de Havilland> <de Tonnancour>. Sometimes the prepositions are capitalized <Luca Della Robbia> <Thomas D'Avenant>, sometimes not <Cecil B. de Mille> <Juan de Las Casas>. Anglicized names may not have a space between the particle and the main surname. And the particle may or may not be capitalized, while the main name is always capitalized <LeTourneau> <DeLaRosa> <deNiverville>. See **De Quincey**.

In German, a particle in a surname always contains a preposition, usually *von*; occasionally, the Flemish preposition *van* appears. Sometimes an article will appear with the preposition <von dem> <von der>. Particles are never capitalized and are always dropped when the surname stands alone—hence *Manfred von Richthofen* becomes *Richthofen*, *Gerhard von der Burg* becomes *Burg*, and *Ludwig van Beethoven* becomes *Beethoven*. When anglicized, the particles in German names are ordinarily (but not always) lowercase <Klaus von Bülow> <Wernher Von Braun> and are usually retained—so *Friedrich von Steuben* becomes *von Steuben* and *Erich von Stroheim* becomes *von Stroheim*. The person's own preference, which shouldn't be hard to determine, is the ultimate guide.

The most common particle in Dutch and Flemish surnames is the preposition *van*, sometimes coupled with an article <van der> <van de>; other common particles are *ten* and *ter*. A particle is never dropped when the surname stands alone, even if the particle means "of" or "from"—so *Vincent van Gogh* becomes *van Gogh*, *Jan ten Broeck* becomes *ten Broeck*, and *Roger van der Weyden* becomes *van der Weyden*. Capitalization of particles differs depending on whether the named person is Dutch or Flemish. In a Dutch name, the particle is usually capitalized only if it follows a title and there is no intervening personal name or initial <Prof. Van Leeuwenhoek> <Prof. H. J. van Leeuwenhoek>. But in Flemish names, the first particle is always capitalized unless the person is explicitly noble; then it is lowercase <Prof. Van de Waele> <Baron van de Waele>. When anglicized, the particle *van* is often capitalized; a conjoined article may or may not be <Martin Van Buren> <Erik Van den Broeck> <Peter Van Der Water>. It is also common to see surnames of Dutch and Flemish derivation compounded in myriad ways—e.g., *van der Bild* becomes *Vanderbild*, *van Brugh* becomes *Vanbrugh*, and *van de Kieft* becomes *Vande Kieft*. Again, hew to the person's preference.

Arabic surnames often have particles, such as articles or words that express a relationship; these include *Abu* (father of), *Abd* (servant of), *Abdel*,

Abdul (worshiper of), *ad*, *al*, *an*, *ar*, *bin* (son of), *bint* (daughter of), *el*, *ibn* (son of), and *umm* (mother of). Note that some Arabic prefixes are always capitalized; some require hyphens. All particles are capitalized when the surname stands alone—hence *Noor al Hussein* becomes *Al Hussein*, *Ahmad el-Ahmiad* becomes *El-Ahmiad*, and *Jasmine umm Kulthum* becomes *Umm Kulthum*. As a rule, particles are retained <bin Laden>, but there are exceptions, usually in the names of well-known people—e.g., *Anwar al-Sadat* becomes *Sadat*, *Hafez al-Assad* becomes *Assad*, and *Zine el-Abidine Ben-Ali* becomes *Ben-Ali*.

Celtic names are often preceded by *à*, *ab*, *ap*, *Fitz*, *M'*, *Mac*, *Mc*, or *O*, all of which express descent. The particle is always retained with the surname. Except for the Welsh particles *ab* and *ap* <ab Llewellyn> <ap Rhys> and the Irish particle *à* <à Broin>, a particle should be capitalized when the surname stands alone <Fitz Simmons> <MacHeath>. In Irish usage, a space always follows the Irish particle *O* or *à* <O Reilly> <à Colm>, but anglicized versions of *O* are customarily followed by an apostrophe and no space <O'Brien>. The particles *Mac*, *Mc*, and *M'* are used in both Scottish and Irish surnames, traditionally with no space between the particle and the rest of the name <MacDonald> <McAlister> <M'Naughton>. There can be more than one version of a name depending on whether the particle has been absorbed <MacPherson> <Macpherson> <McPherson>. The same is true of *Fitz* <Fitz Patrick> <Fitzpatrick>. The Welsh particles *ab* and *ap* usually have a space separating them from the rest of the surname <ab Eynon> <ap Rhodri>, but there is a trend toward eliminating the space <apEvans> <apRoberts>.

Some surnames in English and Romance languages take the form of saints' names <Charles St. John> <Georges Saint Sebastien> <Phillipe San Pedro> <Camille Saint-Saëns> <Carlos Santo Domingo>; the correct spelling depends on the established usage or the name holder's preference. The *saint* particle is always retained and capitalized as part of the surname—e.g., *Yves St. Laurent* becomes *St. Laurent* and *Camille Sainte-Beuve* becomes *Sainte-Beuve*. But if the surname also contains a particle, that particle is dropped when the surname is used alone—e.g., *José de San Martín* becomes *San Martín* and *Francesco da San Germano* becomes *San Germano*.

Some names were anglicized long ago and won't be familiar if the anglicized form isn't used. On the other hand, a name that is written other than by the appropriate convention can tag the writer as careless or biased. Care is required.

A final note: despite the myriad conventions here discussed, every lowercase particle gets capitalized at the beginning of a sentence—e.g., *Bin Laden ranted about . . .*, *D'Arc presented a problem . . .*, *De la Renta's fashion show was . . .*, *De Mille's final epic demonstrated . . .* See (A).

E. British Practices with American Place Names.

British writers do a strange thing with American place names: they use the adjectival form ending in *-n* where Americans wouldn't change the name at all. Hence the British might refer to Bill Clinton's *Arkansan property*, as opposed to his *Arkansas property*. And notice what British writers do in the following examples—wrongly from the American's perspective:

- “He died Friday night at his *Californian* [read *California*] ranch in Big Sur.” Clive Cookson, “Linus Pauling: Leader in Chemistry,” *Fin. Times*, 22 Aug. 1994, at 4.
- Peter Tory, “Delicious *Texan* [read *Texas*] Recipe for Criminal Appetites,” *Daily Express* (London), 26 Aug. 1994, at 9.

F. Proper Names as Adjectives. See ADJECTIVES (D).

G. Pluralizing Proper Names. See PLURALS (F).

H. Names for Place Residents and Natives. See DENIZEN LABELS.

I. Other Sources. For good general studies, see Justin Kaplan & Anne Bernays, *The Language of Names* (1997), and Elsdon C. Smith, *Treasury of Name Lore* (1967). For books on how proper names have become everyday words, see Eugene Ehrlich, *What's in a Name?* (1999); Andrew Sholl, *Wellingtons, Watts & Windsor* (1997); and Rosie Boycott, *Batty, Bloomers and Boycott* (1983). For a source on possessive phrases made from proper names (e.g., *Achilles' heel*, *Adam's rib*, *Halley's comet*), see Dorothy Rose Blumberg, *Whose What?* (1969).

nankeen (= a type of cotton cloth) is the standard spelling in AmE and BrE alike. **Nankin* is a variant.

Current ratio: 8:1

nanny (= a nursemaid) is the standard spelling. **Nannie* is a primarily BrE variant (yet uncommon even there).

Current ratio: 435:1

naphtha. A. Misspelled. *Naphtha* /naf-thə/ (= a liquid distilled from petroleum and used as a solvent or fuel) is sometimes misspelled (and mispronounced) **naphtha*—e.g.:

- “The facility would produce about 20,000 barrels per day of distillates and *naphtha* [read *naphtha*] and be scheduled for startup in 2002.” “Phillips Eyes Qatar Plant,” *Tulsa World*, 17 July 1997, at E1.
- “The facility, which will employ oil- and *naphtha* [read *naphtha*]-burning generators and perhaps one that burns coal, is planned for a 17-acre parcel in Puhi.” Joan Conrow, “New Kauai Power Plant Would Double Capacity,” *Honolulu Star-Bull.*, 2 Aug. 1997, at A4.
- “The fire erupted on the barge carrying *naphtha* [read *naphtha*].” “Barges Collide; Fire Is Extinguished,” *San Antonio Express-News*, 21 July 2015, Metro §, at 7.

LANGUAGE-CHANGE INDEX
naphtha misspelled and
mispronounced **naphtha*: Stage 1

Current ratio: 18:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. Long Form: *naphthalene*; **naphthaline*; **naphthalin*. The first is the standard spelling in AmE and BrE alike. The others are variant forms.

***napsack**. See **knapsack**.

narcissism (= excessive interest in oneself; self-love) is the standard term. **Narcism* is a NEEDLESS VARIANT that appeared sporadically from about 1920 to 1960.

Current ratio: 559:1

narcissus. Since about 1870, the predominant plural has been the Latin *narcissi*, not the native plural **narcissuses* (which is excessively sibilant)—e.g.:

- “All my laboriously naturalized daffodils and *narcissi* will gradually emerge in my absence.” Maxine Kumin, “Florida Spring Has Her Missing Mud Season,” *Star Trib.* (Minneapolis), 23 Mar. 1995, at A15.
- “And I wanted to see the dwarf *narcissi* dance around the koi pond.” Irene Virag, “Living Color,” *Newsday* (N.Y.), 6 Apr. 1997, at E9.

But from 1800 to 1860, the homegrown plural was the more common of the two. See **PLURALS** (B).

Current ratio (*narcissi* vs. **narcissuses*): 9:1

narrator; ***narrater**. The first is the standard form, the second a variant to be avoided.

Current ratio: 41,805:1

nary a (= not a; not one; no) was long considered dialectal AmE dating from the 18th century. In fact, though, it appears today in highly literate writing—e.g.:

- “There’s *nary a* decorated interior these days that isn’t testimony to a flurry of veneer-stripping, sanding and hand-rubbing.” Stephanie Gutmann, “Rusticated,” *New Republic*, 3 Apr. 1995, at 14.
- “The settlement ended a sex discrimination suit filed in April 2002 by three female employees after a yearlong campaign by the employee union to get coverage had received *nary a* word from company officials.” *Columbia Journalism Rev.*, Mar. 2003, at 9.
- “The Canadian Museum of Civilization, after a promising start under new management in 1998, has yet to move away from the bland exhibits of a previous era, when *nary a* dark shadow was to be seen.” Victor Suthren, “A Museum of Tolerance,” *Maclean’s*, 17 Mar. 2003, at 42.

The expression grew in prevalence and stature beginning about 1850.

national; **federal**. In a nation with a federal system of government, these two terms might seem interchangeable. But the founders of the United States carefully distinguished them—particularly James Madison, who wrote:

[T]he Constitution is to be founded on the assent and ratification of the people of America, given by deputies elected for the special purpose; but, on the other [hand], . . . this assent and ratification is to be given by the people, not as individuals composing one entire nation, but as composing the distinct and independent States to which they respectively belong. It is to be the assent and ratification of the several States, derived from the supreme

authority in each State—the authority of the people themselves. The act, therefore, establishing the Constitution will not be a *national* but a *federal* act.

The Federalist No. 39, at 243 (James Madison)

(Clinton Rossiter ed., 1961).

So as Madison explained, the foundation of the Constitution is *federal*; the operation of governmental powers under the Constitution is *national*; and the method of introducing amendments is *mixed*. *Ibid.* at 246.

Native American. The term *Native American* proliferated in the 1970s to denote groups served by the federal Bureau of Indian Affairs: American Indians as well as the Eskimos and Aleuts of Alaska. Later, the term was interpreted as including Native Hawaiians (see **Hawaiian**) and Pacific Islanders, and it fell into disfavor among some Indian and Alaskan groups, who came to prefer *American Indian* and *Alaska Native*. Yet views are unpredictable: some consider *Native American* more respectful than *American Indian*.

As an equivalent to *American Indian*, the phrase *Native American* was long thought to be a 20th-century innovation. See *Second Barnhart Dictionary of New English* 316 (1980); Sidney I. Landau, “*Native American*,” 69 *Am. Speech* 202 (1994). In fact, the phrase *Native American*—though it proliferated in the early and mid-1970s—dates back to at least 1737 in this sense. See Fred Shapiro, “Computer-Assisted Evidence for the Antiquity of the Term *Native American*,” 76 *Am. Speech* 109 (2001). And it made literal sense (for the most part) in 1737, since at that time most people who had been born in the New World were indigenous—not of European descent.

By the 19th century, when the term *Native American* was fairly common, it had become ambiguous, since it often referred to any person born in the United States, whether of indigenous or of European descent. Here, in a mid-20th-century passage, it refers to place of birth: “Dr. Flesch . . . was born in Vienna, but writes more like a *native American* than do most native Americans; in fact, he teaches the natives how to write like natives; it is always amazing to recall that he came to America as lately as the 1930’s.” Gorham Munson, *The Written Word* 196 (rev. ed. 1949).

The phrase *indigenous American*, which is more logically and etymologically correct, does have some support—e.g.:

- “He alleged he and other American Indians were being illegally excluded from serving as jurors in San Juan County, where more than half the residents are descended from *indigenous Americans*.” Dawn House, “Jury Still Out on Navajos’ Role in Utah Courts,” *Salt Lake Trib.*, 7 Feb. 2001, at D2.
- “Hundreds of high schools and colleges have dropped their Indian symbols over the past 30 years as many *indigenous American* groups and their members have called for sports teams to drop the names.” David McKay Wilson, “Rules Due on School Mascots,” *J. News* (Westchester Co., N.Y.), 3 June 2002, at B1.
- “Bartolome de Las Casas . . . preached justice for *indigenous Americans* in the 16th century.” Stephanie Nichols,

“Shrine Will Promote Understanding,” *Commercial Appeal* (Memphis), 8 Aug. 2002, Neighbors §, at 2.

Not surprisingly, the synonymous phrase *autochthonous American* has never caught on.

***native-born citizen.** This phrase, though it has been fairly common since the 19th century, reeks of REDUNDANCY—e.g.: “Some immigrants come to America as boat people, dirt poor and speaking no English, and within a decade are part of the professional class—suggesting that any poor *native-born* [read *native*] citizen has only his own sloth to blame.” Robert Kuttner, “The Delusion of a Classless America,” *San Diego Union-Trib.*, 29 July 1997, at B7.

The modern temptation to brace the adjective *native* may come from two sources. First, in American law, the noun *native* has come to mean either (1) “a person born in the country”; or (2) “a person born outside the country of parents who are (at the time of the birth) citizens of that country and who are not permanently residing elsewhere.” Sense 2 represents a slide in meaning, but the writer quoted above could not possibly have wanted to protect against that extended meaning. Second, the phrase *Native American*, meaning *American Indian*, has recently popularized a secondary meaning of *native*, one having to do with heritage and not with birthplace: “one of the original or usual inhabitants of a country, as distinguished from strangers or foreigners; now *esp.* one belonging to a non-European race in a country in which Europeans hold political power” (*OED*).

LANGUAGE-CHANGE INDEX

**native-born citizen* for *native citizen*: Stage 4
Current ratio (*native citizen* vs. **native-born citizen*):
1.3:1

natural child is a EUPHEMISM for *bastard*, *illegitimate child*, or *nonmarital child*. But the phrase is nearly meaningless, all children being natural. See **illegitimate child**.

nature, of a —. Good editors routinely revise this stilted phrase, which takes four words to do the work of one. If, for example, you can say that someone is *of a generous nature*, you can invariably say that the person is simply *generous*. Cf. **manner**.

naught; nought. These are different spellings of the same word, meaning “nothing.” By convention, *nought*—especially in BrE—has come to signify the number zero (0). *Naught* is conventionally used in all nonmathematical contexts in which “nothing” is meant, usually accompanied by some form of *come* or *go*—e.g.:

- “Fujimori’s dramatic bid to move the hostage impasse off dead center by seeking Cuba’s assistance apparently came to *naught*, but he deserves credit for the effort.” “Heading for Havana?” *Pitt. Post-Gaz.*, 5 Mar. 1997, at A10.

- “Rodriguez’ efforts went for *naught*.” Gary Brooks, “Sanders’ Woes Continue,” *News Trib.* (Tacoma), 19 Apr. 1997, at C1.

See **aught (B) & dreadnought**.

Sometimes *nought* ill-advisedly appears where the conventional word would be *naught*—e.g.:

- “Plans to sell a large portion of Meador Park to the owner of the Battlefield Mall came to *nought* [read *naught*] last week.” Clarissa A. Franch, “Simon DeBartolo Declines to Purchase Meador Park,” *Springfield Bus. J.* (Mo.), 21 Oct. 1996, at 3.
- “But all of Henry’s machinations to get a male heir came to *nought* [read *naught*].” Peggy Brown, “Heirs to the Crown,” *Newsday* (N.Y.), 9 Sept. 1997, at A30.

LANGUAGE-CHANGE INDEX

**came to nought* for *came to naught*:
Stage 1
Current ratio (*came to naught* vs.
**came to nought*): 5:1

nausea (= the feeling one has just before vomiting) is pronounced /**naw**-zee-ə/, /**naw**-zhə/, or /**naw**-shə/. The corresponding verb is *nauseate* /**naw**-zee-əyt/.

nauseous (= inducing nausea) for *nauseated* (= experiencing nausea) is becoming so common that to call it an error is to exaggerate. Even so, careful writers tend to be sickened by the slippage and to follow the traditional distinction in formal writing. That is, what is *nauseous* makes one feel *nauseated*—e.g.: “No one in Mrs. Thompson’s crew would ever be so *nauseous* as to try to get everybody to pray aloud or form a prayer circle, but you can still tell what they’re all doing.” David Foster Wallace, “The View from Mrs. Thompson’s,” in *Consider the Lobster* 140 (2006). Through 2008, the U.S. Supreme Court, in its seven uses of either word, had maintained a perfect record—e.g.: “It is made up entirely of repetitive descriptions of physical, sexual conduct, ‘clinically’ explicit and offensive to the point of being *nauseous*; there is only the most tenuous plot.” *Kaplan v. California*, 413 U.S. 115, 116–17 (1973).

But other writers have spread the peccadillo, especially since the late 20th century—e.g.:

- “At first, she didn’t worry too much when she felt *nauseous* [read *nauseated*] and had a few more headaches than usual.” Laura Bendix, “Factory Stores Workers Worry About Illnesses,” *Santa Fe New Mexican*, 12 May 1995, at A1.
- “He takes \$30,000 worth of AIDS-related drugs a year, which leave him horribly *nauseous* [read *nauseated*].” Dave Saltonstall, “Cops Clip 61 at Pot Rally,” *Daily News* (N.Y.), 4 May 1997, at 6.

Nauseous is pronounced /**naw**-shəs/.

LANGUAGE-CHANGE INDEX

nauseous misused for *nauseated*: Stage 4
1940 ratio (*felt nauseated* vs. *felt nauseous*): 9:1
Current ratio: 1:1.5

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

nautilus (the mollusk with a spiral shell) has traditionally formed the plural *nautili* (/nawt-i-li/), but since about 1970 *nautilus* has been strongly predominant in AmE. In BrE and in World English, the two plurals have been locked in close competition since about 1920.

Navajo; ***Navaho**. Although **Navaho* was the predominant spelling as recently as the mid-1960s, today *Navajo* is standard. That's probably because it more closely resembles the Spanish etymon, *navajó*. Cf. **Mohave**.

Navajo has three plurals: *Navajos* (best), *Navaja* (second best), and **Navajoes* (not best at all). See PLURALS (D).

Current ratio (*Navajo* vs. **Navaho*): 13:1

Current ratio (*Navajos* vs. **Navajoes*): 25:1

naval; **navel**. *Naval*, adj., = of, relating to, or involving ships or a navy. *Navel*, n., = belly button. The correct phrase is *navel orange*, which has a navel-like depression at the top. But the mistaken phrase **naval orange* is fairly common—e.g.:

- “Riverside, home of the *naval* [read *navel*] orange, celebrates its orange history with a ‘gourmet grove’ of orange delicacies.” Mary Frances Smith, “Festivals, Feasts & Fairs,” *L.A. Times*, 7 Apr. 1996, at 3.
- “Sun Pacific, the largest *naval orange* [read *navel-orange*] grower in California and largest kiwi grower in the United States, is exporting half the oranges it normally ships because of the port impasse.” Peter Fimrite, “Hard-Hit Citrus Growers Crushed by Port Dispute,” *S.F. Chron.*, 14 Feb. 2015, at A1.

LANGUAGE-CHANGE INDEX

**naval orange* for *navel orange*: Stage 1

Current ratio (*navel orange* vs.

**naval orange*): 22:1

nave. See **knave**.

Nazi (= [1] an adherent to the tenets of Adolf Hitler's National Socialist Party in Germany (1933–1945), or [2] someone who exercises authority with excessive strictness and cruelty) is pronounced /naht-see/ or (in old-fashioned films, etc.) /nat-see/—but never /nah-zee/ or /naz-ee/.

N.B. is the abbreviation for the Latin *nota bene* (= note well; take notice).

né. See **née**.

Neanderthal (= [1] a hominid that lived some 30,000 to 200,000 years ago, [2] a big, ugly, and stupid man, or [3] a person with backward ideas and resolute opposition to change) is a technical term in sense 1 and a disparaging label in senses 2 and 3. The word is predominantly pronounced /nee-an-dər-thawl/ in AmE and /nee-an-dər-tawl/ in BrE. The latter is a slightly anglicized version of the German place name for which the species was named. Many American scientists have adopted this pronunciation perhaps to dissociate themselves from the derogatory connotations of senses 2 and 3.

Neapolitan. As a noun, *Neapolitan* denotes an inhabitant of Naples, Italy. (See DENIZEN LABELS.) As an adjective, it identifies the noun it goes with as being from or connected with Naples. *Neapolitan* ice cream, with layers of different flavors (commonly chocolate, vanilla, and strawberry), originated in the 19th century, supposedly in Naples. The word is pronounced /nee-ə-pahl-i-tən/, not /nee-ah-/ or /nee-oh-/.

The term is misspelled **Neopolitan* surprisingly often—e.g.:

- “‘Italian,’ once a derogatory ethnic label, is now understood to have emerged as a social construct derived from many regional identities—*Neopolitan* [read *Neapolitan*], Calabrian, Sicilian—that once characterized early immigration from Italy to the United States.” Alex P. Oberle & Daniel D. Arreola, “Resurgent Mexican Phoenix,” *Geographical Rev.*, 1 Apr. 2008, at 171.
- “That classic *Neopolitan* [read *Neapolitan*] ice-cream trio is delicious on the eye, too.” “Color My Wedding,” *Brides*, Sept.–Oct. 2008, at 140.
- “It was not unlike floating through an enormous block of *Neopolitan* [read *Neapolitan*] ice cream.” Helen Olsson, “Nebraska, with a Paddle,” *N.Y. Times*, 3 Oct. 2008, at F1.

LANGUAGE-CHANGE INDEX

Neapolitan misspelled **Neopolitan*: Stage 1

Current ratio: 68:1

near should not be used adverbially in place of *nearly*. That use of the word is dialectal—e.g.: “It’s long all right, but not *near* [read *nearly*] as long as the money shadow Tiger figures to cast by the time he’s ready for the rocking chair alongside the 19th hole.” Peter Finney, “Year One: A Gauge into Woods’ Future,” *Times-Picayune* (New Orleans), 27 Aug. 1997, at D1. See DIALECT.

LANGUAGE-CHANGE INDEX

near misused for the adverb *nearly*: Stage 1

Current ratio (*not nearly* as vs. **not near* as): 40:1

nebula /neb-yə-lə/ (= an interstellar cloud consisting of gas and dust sometimes visible in the night sky) has two plurals, *nebulae* and *nebulas*. Although many dictionaries record only the Latinate plural (-ae), the -as form isn’t uncommon—e.g.: “Designer Tony Walton’s fiber-optic light backdrops created *nebulas* and fountains of colored lights to show off the dancers.” Maggie Hall, “Miami’s ‘Jewels’ Is a Gem of a Show,” *Tampa Trib.*, 19 Apr. 1995, Metro §, at 6. Still, *nebulae* (/neb-yə-lee/) has been strongly predominant since the word came into use in the 1700s. See PLURALS (B).

Current ratio (*nebulae* vs. *nebulas*): 9:1

necessary; **necessitous**. *Necessary*, the more common word, means “essential.” *Necessitous* = placed or living in a condition of necessity or poverty; hard up; needy. One of the most famous statements using the word was Franklin Delano Roosevelt’s: “As President Roosevelt said in justifying his bill of rights, ‘*necessitous* men are not free men.’” “Constitutional Amendments,” *L.A. Times*, 4 July 1995, at B8.

necessitarianism. See **fatalism**.

necessitate (= to make necessary) is often inferior to *require*—e.g.: “A bored tunnel also *necessitates* [read *requires*] deeper stations, which cost more to build and ventilate.” Mei-Ling Hopgood, “When the Tracks Meet the Trees,” *St. Louis Post-Dispatch*, 24 Aug. 1997, at B1. Yet *require* isn’t always a satisfactory substitute—e.g.: “Early-season struggles could *necessitate* a change.” Mark Didtler, “USF Starts, and So Does Barnhardt,” *Orlando Sentinel*, 6 Sept. 1997, at B4. What explains the difference? *Necessitate* sounds less rigid and absolute than *require*.

necessitous. See **necessary**.

neck-and-neck. This metaphorical phrase, from horse racing, is sometimes wrongly written **neck-in-neck*—e.g.: “The top contenders in both the Republican Senate primary and the Democratic race for governor are *neck-in-neck* [read *neck-and-neck*] in the latest polls.” Richard L. Berke, “With 3 Primaries Tuesday, Michigan Voters Go Fishing,” *N.Y. Times*, 1 Aug. 1994, at A7. The mistaken form doubtless results from the common pronunciation, as if it were *neck-’n-neck*.

LANGUAGE-CHANGE INDEX

**neck-in-neck* for *neck-and-neck*: Stage 1
Current ratio (*neck-and-neck* vs. **neck-in-neck*): 23:1

neckwear (= clothing worn about the neck) is sometimes misspelled **neckware*, on the false analogy of *hardware* or *software*—e.g.:

- “Ms. Keys, 31, had been a *neckware* [read *neckwear*] designer, concentrating on women’s scarves, when someone gave her husband a fancy-looking Italian tie.” James Barron, “Oh, to Be Sneaky and Well Dressed,” *N.Y. Times*, 1 Sept. 1996, § 1, at 47.
- “Dean Mullin, owner of Knotz Apparel Corp., a New Hope *neckware* [read *neckwear*] and graphic design company, said HPNet called him Tuesday.” John Wilen, “ISP Abandons Clients to Move West, Fast,” *Phil. Bus. J.*, 28 Mar. 1997, at 9.
- “After her stellar performance Sunday in the women’s slopestyle competition, she has a new piece of *neckware* [read *neckwear*]: an Olympic gold medal.” Rick Maese, “Anderson Rides ‘Good Vibes’ to Snowboarding Gold,” *Wash. Post*, 10 Feb. 2014, at D7.

LANGUAGE-CHANGE INDEX

**neckware* for *neckwear*: Stage 1
Current ratio (*neckwear* vs. **neckware*): 30:1

nectarous; ***nectareous**; ***nectarean**; ***nectareal**. Though all these adjectives are infrequent, the first is standard. The others are NEEDLESS VARIANTS.

Current ratio (in order of headwords): 99:94:50:1

née; **né**. This GALLICISM (meaning “born”) denotes a person’s original name. The feminine form, *née*, often precedes a married woman’s maiden name <Mrs. David Smith (*née* Mary Jones)>. Either form (*né* is masculine) may also follow a changed name, such as a pen name

<Mark Twain (*né* Samuel Clemens)> or a screen name <Marilyn Monroe (*née* Norma Jean Baker)>.

In AmE, the accent mark is often omitted. But especially in the uncommon masculine form, the two characters are apt to be mistaken as a typographical error—so the accent is recommended. See DIACRITICAL MARKS.

The two forms are pronounced the same: /nay/.

The feminine form is often misapplied to men’s names—e.g.:

- “The movement’s founding troika—Ed ‘Big Daddy’ Roth, Von Dutch (*nee* [read *né*] Kenneth Howard) and Robert Williams—started out, back in the ’50s, as hot-rod enthusiasts who worked on cars instead of canvas, proudly raising middle fingers to snobby high-art aficionadas.” Jessica Dawson, “Second Childhood: The Mechanics of ‘Low Brow,’” *Wash. Post*, 19 July 2001, at C5.
 - “Benjamin Graham (*nee* [read *né*] Grossbaum), father of modern security analysis, mentor of Warren Buffett.” Jason Grunberg & Cybele Weisser, “Give Us Your (Moderately) Poor,” *Money*, 1 Aug. 2001, at 24.
- By SLIPSHOD EXTENSION, *nee* is used to mean “formerly” and applied to nonliving objects—e.g.:
- “Sporting News Radio, *nee* [read *formerly*] One on One, now mostly exists as a promotional tool for everything Sporting News, from the weekly magazine to its website.” Phil Mushnick, “All Ads, All the Time,” *N.Y. Post*, 22 July 2001, at 94.
 - “If the Bayer (*nee* [read *formerly*] Alcoa) sign hadn’t been on Mount Washington all these years, we would be just as well without it.” Editorial, “Lighting Their Ire: Signs on Buildings Bring Out the Art Critic in Everyone,” *Pitt. Post-Gaz.*, 22 July 2001, at E3.

LANGUAGE-CHANGE INDEX

1. *née* for *né* in reference to a man: Stage 3
2. *née* for *formerly* in reference to an inanimate object: Stage 1

needle in a haystack; **needle in a bottle of hay**. Although the latter expression looks odd to most people, it’s the older one. The word *bottle* is used there in the sense “bundle”—a sense that is now obsolete (except in the expression). The phrase *needle in a haystack* predominates in modern usage.

Current ratio (*needle in a haystack* vs. *needle in a bottle of hay*): 43:1

NEEDLESS VARIANTS, two or more forms of the same word without nuance or DIFFERENTIATION—and seemingly without even hope for either—teem in the English language. They’re especially common in the outer reaches of the language—in technical vocabulary. Unfortunately, the unnecessary coexistence of variant forms (e.g., adjectives ending in *-tive* and *-tory*) leads not to precision in technical writing but to uncertainties about authorial intention. The trusting reader silently thinks, “The writer used *investigative*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

on the previous page but now has pressed *investigatory* into service—is a distinction intended?”

“It is a source not of strength,” wrote H.W. Fowler, “but of weakness, that there should be two names for the same thing [by-forms differing merely in suffix or in some such minor point], because the reasonable assumption is that two words mean two things, and confusion results when they do not” (*FMEU1* at 373). The confusion is perhaps greatest when the writer who is fond of **INELEGANT VARIATION** discovers the boundless mutations of form that exist in unabridged dictionaries: *submission* will appear in one sentence, **submittal* in the next; *quantify* on one page, **quantitate* on the next; and so on.

“On the other hand,” Fowler advises us, “it may be much too hastily assumed that two words do mean the same thing; they may, for instance, denote the same object without meaning the same thing if they imply that the aspect from which it is regarded is different, or are appropriate in different mouths, or differ in rhythmic value or in some other matter that may escape a cursory examination” (*FMEU1* at 373). Hence the nonlawyer should not jump to assume that *necessaries* is uncalled for in place of *necessities*; that *acquittance* has no place alongside *acquittal*; that *recusancy* is yet another needless variant of *recusal*; that *burglarize* is as good for a British audience as it is for an American one; and so forth.

Any number of entries throughout this work attempt to ferret out and discriminate between cognate words with established or emerging distinctions and those that seem, at present, to have neither. To the extent possible, words and phrases rightly classifiable as needless variants ought to be dropped from the language.

negative, in the. See **affirmative, in the.**

NEGATIVES. A. Negative Prefixes. The primary negative (or “privative”) prefixes in English are *in-* (assimilated in many words to *il-*, *im-*, *ir-*), *un-*, *non-*, *anti-*, and *a-*. For purposes of simple negation, *in-* is the most particularized of these prefixes, since it generally goes only with certain Latin derivatives (e.g., *inaccessible*, *inarticulate*, *intolerant*). *Un-* usually precedes most other adjectives, including Latin derivatives ending in *-ed* (e.g., *undiluted*, *unexhausted*, *unsaturated*). *Non-* is the broadest of the prefixes, since it may precede virtually any word. It often contrasts with *in-* or *un-* in expressing a nongradable contrast, rather than the opposite end of a scale—e.g.: *nonscientific* (= concerned with a field other than science) as opposed to *unscientific* (= not in accordance with scientific principles). *Anti-*, of course, has the special sense “against.” *A-* (= not, without) appears mostly but not exclusively with Greek derivatives (e.g., *theist/atheist*, *symmetrical/asymmetrical*) and scientific terminology (e.g., *mitosis/amitosis*). Because this prefix is easily confused with the defunct Old English prefix *a-* (which is not a negative), it is best kept to established pairings.

As a general rule, try to find the most suitable particularized prefix—and if no other is really suitable, try *non-*.

But consistency is often difficult to find with particular roots. For example, *unsaturated fats* has the corresponding noun *nonsaturation*, not **unsaturation*. Likewise, we have *indubitable* but *undoubted*, *irresolute* but *unresolved*, *irrespective* but *unrespected*. From a typographical standpoint, negative prefixes cause trouble with **PHRASAL ADJECTIVES**, as in *uncross-examined witness*. Wordings that are less compressed are usually preferable; hence *a witness who wasn't cross-examined*.

With few exceptions, the prefix *non-* does not take a hyphen unless it is attached to a proper noun, as with *non-European*. See **PUNCTUATION (J)**.

B. Not un-; not in-. Double negatives such as *not untimely* are often needlessly used in place of more straightforward wordings such as *timely*. When the negatives serve no such identifiable purpose, they ought to be avoided. To say, for example, that the point is *not uninteresting* or that somebody's writing is *not unintelligible* is probably to engage in a time-wasting rhetorical flourish.

This type of litotes (the negation of an opposite) often makes language convoluted. George Orwell ridiculed it with this example: “A not unblack dog was chasing a not unsmall rabbit across a not ungreen field.” “Politics and the English Language” (1946), in *4 Collected Essays, Journalism and Letters of George Orwell* 127, 138 n.1 (1968).

C. Periphrastic Negatives. Generally *we disagree* is preferable to *we do not agree*—except that the latter may be slightly more emphatic. Directness is better than indirectness; hence *violate* rather than *fail to comply with*; *violate* rather than *do not adhere to*, and the like. See **PERIPHRAISIS**.

D. Not . . . all. On the problems caused by this phrasing, see **all (B)**.

neglectful; *neglective. The latter has always been a **NEEDLESS VARIANT** that is rare or obsolete.

Current ratio: 486:1

negligee; *negligée; *negligé; *négligé. Some will say that it's good in any form. But in fact *negligee* is standard. The other three are variants—**négligé* being a **GALLICISM**.

negligence; *negligency. The latter has always been a **NEEDLESS VARIANT**.

Current ratio: 6,196:1

negligible. So spelled—not **negligeable*. See **-ABLE (A)**.

negotiate (= to discuss [something] for the purpose of reaching a bargain or other agreement) is preferably pronounced /nə-**goh**-shee-ayt/, not /nə-**goh**-see-ayt/.

neither. A. Pronunciation. In AmE generally, /**nee-thər**/ is the traditionally preferred pronunciation; /**ni-thər**/ is a mildly pretentious variant in most

parts of the country. But in BrE, /ni-θər/ is usual. Cf. **either (A)**.

B. Number. As a pronoun, *neither* is construed as a singular. That is, it should take a singular verb, and any word for which *neither* is an antecedent should also be singular. Hence *neither of the offers was a good one* is grammatically better than **neither of the offers were good ones*. E.g.:

- “The fact is that *neither* of these men *were* [read *was*] an expert on language.” John McWhorter, *The Word on the Street* 63 (1998).
- “Two new research papers add to the debate. *Neither dispute* [read *Neither disputes*] the idea that evolution plays a role in shaping behavior, but *they* [read *both*] question the evidence that jealousy evolved differently in men and women.” Erica Goode, “Jealous? Sexes Wired Differently, Psychologist Claims,” *San Diego Union-Trib.*, 16 Oct. 2002, at F1.

But often it’s not that simple. In the first example below, the plural *themselves* is necessary to avoid an awkward or sexist construction (though it would be better to recast the sentence). In the second and third examples, however, there is no danger of **SEXISM** because the company isn’t mixed—and therefore the singular would be the better choice. E.g.:

- “Even though I was the first born (a common entrepreneurial trait), *neither* of my parents worked for *themselves*, and that was a strike against me.” Teresa Burney, “Need Job Advice? Break Out the Chivas (Disc, That Is),” *St. Petersburg Times*, 9 June 1996, at G1. (A suggested revision: *neither of my parents was self-employed*.)
- “*Neither* of these two men placed *themselves* [read *himself*] into the police and fire retirement system.” Letter of William Blake Brandywine, “Letters to the Editor—Portsmouth,” *Virginian-Pilot* (Norfolk), 17 Nov. 1996, Portsmouth Currents §, at 6.
- “Defense attorneys said *neither* of the women had acknowledged *their* [read *her*] pregnancy to *themselves* [read *herself*] or anyone else and said both were distraught and irrational facing the moment of birth.” Pat Wiedenkeller, “Pregnancy, Denial, Tragedy,” *Newsday* (N.Y.), 21 Nov. 1996, at A27.

LANGUAGE-CHANGE INDEX
neither as a pronoun erroneously construed
 with a plural verb: Stage 3
 Current ratio (*Neither of them is vs.*
**Neither of them are*): 5:1

C. Beginning Sentences with. It is permissible to begin a sentence with *neither*—just as it is with *nor*—when embarking on yet another negative subject. E.g.:

- “*Neither* must we suppose that the size of the book makes any difference: big books are not necessarily scholarly, nor small ones superficial.” Frank Wilson Cheney Hersey, *English Composition* 9 (1921).
- “*Neither* are they outraged at themselves for playing racial politics by insidiously implying, or outright accusing, every black Clinton Cabinet member of being either

a crook or incompetent, or both.” Letter of Thomas E. Davis, “GOP Expresses Outrage, but Its Conduct Is Outrageous,” *Nashville Banner*, 2 July 1996, at A4.

See **nor (A)**.

neither . . . nor. A. Singular or Plural Verb. This construction takes a singular verb when the alternatives are singular or when the second alternative is singular—e.g.:

- “*Neither* the radiator *nor* the water pump *leak* [read *leaks*].” Ray Magliozzi & Tom Magliozzi, “Duplicate Cars Means Customer Pays More for Name,” *Amarillo Daily News*, 21 Aug. 1993, at B5.
- “*Neither* the Health Department *nor* the governor’s office *were* [read *was*] aware of the changes until the governor received the bills, along with hundreds of others, the following week.” Russell Garland, “Plummer Bill Proves Perils of Last-Minute Legislation,” *Providence J.-Bull.*, 21 July 1997, at A1.
- “*Neither* Haley *nor* Rowell *were* [read *was*] charged with setting the Macedonia fire.” “Prosecutor Drops Kevorkian Case,” *St. Louis Post-Dispatch*, 2 Aug. 1997, at 25.
- “But *neither* the airlines *nor* the FAA *were* [read *was*] willing to adopt bag-matching domestically.” Holman W. Jenkins Jr., “Airport Security Is Better than You Think,” *Wall Street J.*, 2 Jan. 2002, at A19.

Cf. **either (D)**.

Moreover, the traditional position is that the verb should precisely match the form mandated by the second of the alternatives. E.g.: “*Neither* Barton *nor* I *am* saying that equities aren’t a great long-term place to be.” Robert Farrell, as quoted in “Can Stocks Still Rise?” *Fortune*, 18 Aug. 1997, at 68. But in fact, this “rule” has almost never been followed in actual practice when the second element is first person (thereby mandating *am*). As an empirical matter, **neither he nor I am* has never been as common in print as **neither he nor I are*. Both are editorially subpar. Yet apart from *am* constructions, there are several possible variations, among them these:

Neither you nor he *is* right.
 Neither I nor she *is* right.
 Neither he nor you *are* right.
 Neither I nor you *are* right.

As we have already seen, errors frequently occur—e.g.: “Neither you nor I *is* likely to change the world.” Jefferson D. Bates, *Writing with Precision* 82 (rev. ed. 1988). Because any choice there is likely to sound wrong, it’s a good idea to write around the problem instead. Reversing the order of the elements would improve the sound of the sentence: *Neither I nor you are likely . . .* or better yet *Neither one of us is likely . . .* See PREVENTIVE GRAMMAR.

Of course, when both alternatives are plural, the verb is plural—e.g.: “*Neither those goals nor the overall themes* of the conference *fit* the extremist image conjured up by some critics of the gathering, like Senators

Bob Dole and Phil Gramm.” “A China Agenda for Mrs. Clinton,” *N.Y. Times*, 30 Aug. 1995, at A14.

LANGUAGE-CHANGE INDEX

neither . . . *nor* with singular alternatives erroneously paired with a plural verb: Stage 3

B. Number of Elements. These CORRELATIVE CONJUNCTIONS best frame only two elements, not more. Though it’s possible to find modern and historical examples of *neither* . . . *nor* with more than two elements, these are unfashionable constructions. When three or more are involved, it’s better not to say **They considered neither x, y, nor z*. Instead, say *They didn’t consider x, y, or z*. Or it’s permissible to use a second *nor* emphatically in framing three elements: *They considered neither x, nor y, nor z*. Cf. **either** (B).

LANGUAGE-CHANGE INDEX

neither . . . *nor* with more than two elements: Stage 3

C. Parallelism. Not only should there be just two elements, but also the elements should match each other syntactically. (See PARALLELISM.) E.g.:

- “At the same time, many of Aristide’s followers express concern that some ex-members of the army and its paramilitary allies who carried out a campaign of terror here have *neither been disarmed nor brought* [read *been neither disarmed nor brought*] to justice.” Douglas Farah, “Aristide: U.S. Occupation of Haiti a ‘Great Success,’” *Wash. Post*, 31 Mar. 1995, at A1.
- “But Indonesia’s ongoing record of improving the quality of life for all East Timorese should *neither be overlooked nor undone* [read *be neither overlooked nor undone*] by those who seek to exploit historical divisions among the East Timorese people for political gain.” Letter of D. Budiman, “Indonesian Government Brooks No Room for Divisive Terrorists,” *Wash. Times*, 17 Dec. 1997, at A20.
- “Secret Service spokesman Jim Makin said Merletti intended *neither to offend nor infringe* [read *neither to offend nor to infringe*] on agents’ free-speech rights.” “After JFK Tell-All, Agents Told to Zip It,” *Chicago Sun-Times*, 19 Dec. 1997, at 37.

D. *Neither . . . or. This phrasing is either a serious grammatical lapse or a serious typographical error—e.g.:

- “Practically speaking, though, language is *neither* a mirror or [read *nor*] a prison.” Dennis Baron, *Declining Grammar and Other Essays on the English Vocabulary* 4 (1989).
- “The arrangement has worked because *neither* Fennig or [read *nor*] Hmiel *seem* [read *seems*] bent on grabbing glory or control for *themselves* [read *himself*].” Bob Zeller, “Martin Stays Patient in Midst of Drought,” *News & Record* (Greensboro), 4 May 1997, at C1.
- “*Neither* lineups of movies or [read *nor*] celebrity guests are announced until one day before the festival begins.” Steve Persall, “Almost Heaven: Telluride Film Festival,” *Tampa Bay Times*, 3 Sept. 2015, at W15.

LANGUAGE-CHANGE INDEX

**neither* . . . *or* for *neither* . . . *nor*: Stage 2

NEOLOGISMS, or invented words, are to be used carefully and self-consciously. Usually they demand an explanation or justification, since the English language is already well stocked. New words must fill demonstrable voids to survive, and each year a few

good ones get added to the language. Some become VOGUE WORDS; others are slow to achieve acceptance; still others, denoting scientific innovations, might never become widely known. Fortunately, lexicographers monitor new entrants into the language and periodically publish compilations such as these: John Ayto, *20th Century Words* (1999); Stuart Berg Flexner & Anne H. Soukhanov, *Speaking Freely* (1997); Sara Tulloch, *The Oxford Dictionary of New Words* (1991); John Algeo, *Fifty Years Among the New Words* (1991).

It is sobering to record what the greatest of late-20th-century lexicographers said about the slow acceptance of new words: “It usually takes slightly more than a century for a word to reach such a state of maturity that it is not recognizably or instinctively felt to be a newcomer.” Robert W. Burchfield, *Points of View* 103 (1992).

Yet the explosion of electronic media in the second half of the 20th century has compressed time, and the standards for “maturity” are dropping. For whatever reason, we seem perfectly comfortable today with terms such as *workaholic* (1971), *talk radio* (1972), *couch potato* (1973), *PC* (a personal computer in the 1980s, political correctness in the 1990s), *sound bite* (1980), and terms from the 1950s and 1960s such as *do-it-yourself*, *glitch*, *mall*, *meritocracy*, *middle management*, *nitty-gritty*, and *prime time*. For an excellent discussion about speculating on the success of neologisms, see Allan Metcalf, *Predicting New Words* (2002).

Neologism is pronounced /nee-**ahl**-ə-jiz-əm/—not /nee-ə-**loh**-jiz-əm/ or /nee-uh-**lawg**-iz-əm/.

neologist; ***neologizer**. The first is standard, the second a NEEDLESS VARIANT. E.g.: “Sir Thomas Elyot, the great *neologizer* [read *neologist*], deliberately set out to improve and promote English by introducing new words into the language.” Ronald Wardhaugh, *Proper English: Myths and Misunderstandings About Language* 76 (1999).

Current ratio: 11:1

neonaticide. See **infanticide**.

***Neopolitan**. See **Neapolitan**.

nephew; **niece**. Legally speaking, are the children of a spouse’s siblings one’s *nephews* and *nieces*? No: it’s only by courtesy that they’re so called.

nepotism is best reserved for the sense “bestowal of official favors upon members of one’s family,” and not attenuated to refer to friends or political connections. The root sense of *nepot-* in Latin is “nephew, grandson.”

nerve-racking (= exasperating) is so spelled—not **nerve-wracking*. See **rack**.

Current ratio: 1.4:1

Netherlands, the; Kingdom of the Netherlands; Holland; Dutch; The Hague. **A. Generally.** The European country is called *the Netherlands*. The Netherlands—together with Aruba, Curaçao, and St.

Maarten—makes up the *Kingdom of the Netherlands*. In 2010, Bonaire, St. Eustatius, and Saba became special municipalities of the Netherlands. Strictly speaking, *Holland* refers to two coastal provinces of the Netherlands (North Holland and South Holland), and not to the country's ten other provinces. Still, *Holland* is commonly used to refer to the Netherlands as a whole. The people, language, and culture are called *Dutch*. Although the country's capital is Amsterdam, its government is located in The Hague.

B. Capitalization, Number, and Possessive Form.

The article *the* is not capitalized in *the Netherlands* (though it always is in *The Hague*). The country's name is plural in form but grammatically singular. This means that it takes a singular verb <the Netherlands is home to the International Court of Justice> but forms a plural possessive <the Netherlands' population is over 16 million>.

C. Denizens. The predominant noun for a citizen of the Netherlands has consistently been *Hollander* from 1680 to the present day. *Netherlander*, an alternative term, was common in the mid-1600s but fell into relative decline. **Netherlandian* is a NEEDLESS VARIANT. See DENIZEN LABELS.

Current ratio (*Hollanders* vs. *Netherlanders*): 3:1
 Current ratio (*Netherlander* vs. **Netherlandian*): 231:1

neurofibroma. See **neuroma**.

neurological; *neurologic. Although some doctors use the shorter form, it's a NEEDLESS VARIANT that occurs in print much less frequently than the longer form—e.g.: “Treatment of RSDS begins with a prompt and serious attempt to find the nerve lesion, using available *neurologic* [read *neurological*] examinations.” Allen Douma, “Pain Syndrome Can Be Difficult to Beat and to Understand,” *Chicago Trib.*, 16 Dec. 2001, Health & Fam. §, at 8.

Current ratio: 2:1

neuroma; neurofibroma. These synonyms denote a usually benign tumor formed on a nerve-cell sheath. The first has consistently been used more frequently in English-language print sources than the second. Although the standard plurals before 1940 were **neuromata* and **neurofibromata*, usage shifted in the mid-20th century toward the anglicized plurals *neuromas* and *neurofibromas*, first in AmE and then in BrE.

Nevada is pronounced /nə-**vad**-ə/ inside the state but /nə-**vah**-də/ throughout much of the rest of the country—perhaps on the analogy of *enchilada* and names such as *Estrada* and *Prada*. Given the sovereign right of citizens to choose how their place names are pronounced, the short *a* in /nə-**vad**-ə/ should be preferred.

One is tempted to say that /nə-**vah**-də/ is incorrect, since the native people's preference ought to be determinative—but things are not so simple. Many highly refined people throughout the U.S. believe that /**vah**/ is the better pronunciation. Given this circumstance, one can only conclude that both pronunciations are acceptable. But if you're in the state, you'd be wise to say /**vad**/. Cf. **Missouri**.

never expected. Eric Partridge criticized this phrase as “incorrect—or, at best, loose—for *expected never*” (*U&A* at 202). But in fact the two phrases don't mean precisely the same thing. Idiomatically, it's quite proper to say that you *never expected* something that simply didn't enter your mind. But to say that you *expected never* means that you thought about it seriously and were skeptical. Imagine how the following passage would change if *never expected* were changed to *expected never* (with the necessary adjustments in syntax made): “Laloo *never expected* the Rapid Action Force to surround the chief minister's residence on that fateful Friday afternoon. He *never expected* to be told to resign by 3 p.m. or face dismissal. He *never expected* to be confronted by his children in tears. And, most important, he *never expected* the administration to cut itself off from him.” Swapan Dasgupta & Farzand Ahmed, “The Education of Rabri Devi,” *India Today*, 11 Aug. 1997, at 18.

nevertheless. See ***but nevertheless**.

New Hampshireite; *New Hampshireite; New Hampshireman. The first is standard; the second is a variant spelling (not nearly as common); the third, with its *-man* suffix, is a form that some find objectionable as being tinged with SEXISM. See DENIZEN LABELS.

***new innovation.** Because an *innovation* is something new or different, the phrase **new innovation* is redundant—e.g.:

- “To work, a sequel must return you to the familiar but then lead you into new territory. There have to be new developments, in terms of the narrative and characterization, and it must include *new innovations* [read *innovations*] in terms of structure or setting.” Jane Roscoe, “With Right Stuff, Sequels Top Originals,” *Newsday* (N.Y.), 29 May 2001, at A27.
- “*Totally new innovations* [read *Innovations* or perhaps *Notable or Remarkable innovations*] also were apparent at NeoCon, especially in floor coverings.” Lisa Skolnik, “For Office or Home, Mixing It Up Is the Way to Go,” *Chicago Trib.*, 24 June 2001, H&G §, at 1.

See REDUNDANCY.

New Jerseyan; New Jerseyite. The first is standard; the second is a variant used by the U.S. Government Printing Office. Although the *-ite* form predominated until the 1980s, the *-an* form is now significantly more common. See DENIZEN LABELS.

Current ratio: 2:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

New Orleanian; ***New Orleansian**. The first is standard; the second is a fairly rare variant that many New Orleanians consider erroneous. Even though /leenz/ isn't an accepted pronunciation of the final syllable of the city's name (see **New Orleans**), *New Orleanian* is pronounced /noo ohr-lee-nee-ən/. See DENIZEN LABELS.

Current ratio: 196:1

New Orleans is acceptably pronounced either /noo or-lee-ənz/ or /noo or-lənz/. Some natives say /noo orl-γənz/, /nahr-lənz/, or /naw-lənz/. Avoid /noo or-leenz/.

news. For most of its life, *news* was used as both a singular and a plural. It was only in the 19th century that the singular became the exclusively standard usage. The word continues to be regarded as singular—e.g.:

- “By now, such good *news* has become commonplace.” Tom Saler, “Earnings Help Explain the Bull’s Endurance,” *Milwaukee J. Sentinel*, 4 Aug. 1997, at 13.
- “Since *news* has come out of the medical-device manufacturer’s generosity, some 800 requests for assistance have flooded in.” Steve Cranford, “James Question on NB’s Tax Deal,” *Bus. J.* (Charlotte), 8 Sept. 1997, at 1.

newsstand. So spelled—not **newstand*.

nexus. The acceptable plural forms are *nexus* (English) and *nexus* (Latin). Naturally, the English form is preferable—e.g.: “The *nexus* of activity for both rooms are the counters where the marijuana is dispensed.” Glen Martin, “The Tokin’ Joint,” *S.F. Chron.*, 24 Aug. 1997, at Z1. Some writers have betrayed their ignorance of Latin by writing **nexi*, as if it were a second-declension noun. (Actually, because *nexus* is a fourth-declension noun, it doesn’t change its form in the plural.) In Latin, **nexi* refers to people who have been reduced to quasi-slavery for debt! Cf. **apparatus** & **prospectus**. See HYPERCORRECTION (A) & PLURALS (B).

nice = (1) subtle, precise <a nice question> <a nice distinction>; or (2) good, attractive, agreeable, pleasant <they’re nice people> <it’s a nice vacation package>. Although purists formerly objected to sense 2, it’s now universally accepted among reputable critics. Still, the word is so vague in that sense—as a generalized expression of approval—that stylists work to find a more concrete term to express their meaning.

nicety = (1) scrupulousness, fastidiousness, accuracy; (2) subtlety, difficulty, the quality of requiring a high level of precision; or (3) something elegant or refined; a luxury. Sense 3 is attested from the 15th to the 20th centuries <clean linen and other niceties of apparel> and has continued into the 21st. Given the primacy of senses 1 and 2, though, one wonders whether *luxuries* might not be a better word than *niceties* in the following sentences:

- “Prior proposed certain *niceties* for the remodeled spa, including fancy ceiling tiles, nameplates labeling each

room after mesquites, creosotes and other ‘healing powers of the desert’ and a slight aroma of herbs and oils.” Melissa Prentice, “Westward Look’s New Spa Wants Its Clients to Relax,” *Ariz. Daily Star*, 4 Dec. 1996, at E6.

- “For luminaries like . . . Barbra Streisand and others, there are certain *niceties* that the studios will automatically provide.” Dan Cox, “They Asked for What?” *Newsday* (N.Y.), 8 July 1997, at B7.
- “Findings like those cast [early childhood family education] not as a *nicety* for the affluent or a leg up for the poor, but as an essential component of general public education.” Editorial, “ECFE Cuts Are a Step Backward,” *Star Trib.* (Minneapolis), 27 Mar. 2003, at A22.

niche is best pronounced /nich/. The pronunciation, predominant in AmE, has led to the phonetic misspellings **nitche* and **nitch*—e.g.:

- “Bob said they are planning on more servicing and looking for a *nitche* [read *niche*] that others can’t [fill].” Joan Pritchard, “Zide Brothers Travel American Way with Sporting Goods,” *Parkersburg News* (W. Va.), 27 Nov. 1994, at 1.
- “Others, like Ken Hammond and John Carter, have found their *nitch* [read *niche*] in the International and American Leagues after initial lucrative stints in the NHL.” Buzz Gray, “Hockey Purgatory,” *Times Union* (Albany), 15 Jan. 1995, at D1.
- “He found his *nitch* [read *niche*] as a field engineer, he says.” Carol Humphreys, “New England Feast in South Laguna,” *Orange County Register*, 18 Aug. 1997, at E1.

Although the pronunciation /neesh/ is heard among educated speakers, many consider it a pretentious de-anglicization of a word that has been anglicized since the 1700s. See PRONUNCIATION (D).

LANGUAGE-CHANGE INDEX

niche misspelled **nitch* or **nitche*: Stage 1

***nicknack**. See **knickknack**.

nictitate (= to wink or blink rapidly) is the standard form. (**Nictate* is a NEEDLESS VARIANT.) This word verges ON SESQUIPEDALITY.

nidus /nɪ-dəs/ (= a nest or breeding place), a Latinate technical term, conventionally forms the plural *nidi* /nɪ-dɪ/—not *niduses*. The related term *nidology* denotes the study of birds’ nests.

niece. See **nephew**.

Nietzsche. So spelled—though often misspelled **Nietsche*. The name is pronounced /neet-chə/—not /neetsh/ or /neet-chee/.

Niger (the African country) has the anglicized pronunciation /nɪ-jər/, which is preferred in English-language contexts. Locals mostly use the Frenchified pronunciation /nee-zhair/.

niggardly (= grudging, stingy) derives from an Old Norse word (*hnöggr* “covetous, stingy”); it has nothing to do with the racial slur that it sounds similar to. E.g.: “A tall, heavy-set, good-looking Irishman, he was never *niggardly* about attorney fees.” Murray T. Bloom, *The Trouble with Lawyers* 272 (1970). Even so, prudent

speakers and writers have come to shun it just to avoid misunderstandings. The word has been in decline in English-language print sources since 1950.

Unfortunately, the word itself is sometimes misspelled because of such misunderstandings—e.g.: “Mr. Graham carries a reputation for being *niggeredly* [read *niggardly*] but he insists there is a difference between shrewd investment and frivolous spending.” “Soccer: No Denying Graham’s Right to Title,” *Daily Telegraph*, 13 May 1991, at 35.

nightie (= a woman’s or child’s nightgown), a DIMINUTIVE dating from the late 19th century, has been predominantly so spelled in AmE since about 1915 and in BrE since about 1955. **Nighty* is a variant spelling.

Current ratio: 4:1

nihilism is pronounced /nɪ-ə-li-zəm/ or /nee-ə-li-zəm/. The *-h-* is silent.

nimbus has two plurals, *nimbuses* and *nimbi*, which are about equally common. *Nimbuses* might be considered preferable as the anglicized plural—e.g.: “Happy faces and halos (she calls them *nimbuses*) are parts of her visual vocabulary.” Donald Miller, “Welcome the Mystery,” *Pitt. Post-Gaz.*, 31 Mar. 1995, Weekend Mag. §, at 2. See PLURALS (B).

nimrod. According to all the standard dictionaries—such as *W11* and the *SOED*—this word means “a skillful hunter.” The term derives from the name of a king of Shinar (Nimrod), who is described in Genesis as a mighty hunter. And the word is often used in this traditional sense—e.g.: “Some sportsmen, of course, would say Mealey has a fatal flaw . . . *Nimrods* and anglers believe he’s too cozy with groups as varied as ranchers, miners, loggers and even environmentalists.” D.F. Oliveria, “Unattended Youngsters at Great Risk in the Water,” *Spokesman Rev.* (Spokane), 5 Aug. 1997, at B4.

In late-20th-century SLANG, though, the word came to mean “a simpleton; dunderhead; blockhead”—e.g.:

- “Hey all you mack daddies (cool guys) out there: if you don’t want to sound like a *nimrod* (geek) on your next trip to kili cali (Southern California), don’t get all petro (worried).” “New in Paperback,” *Wash. Post*, 20 July 1997, at X12.
- “Thus we wind up with the tableau of several hundred more or less disgruntled *nimrods* trudging along like cattle through a process that is at best inefficient, at worst absurd.” Charlie Meyers, “Waiting, Waiting in Line for Leftovers,” *Denver Post*, 15 Aug. 1997, at D4.
- “Before they know it, they’ve become the sort of uptight *nimrod* who writes passive-aggressive tweets to their rail operator whenever they fail to get a seat in the mornings.” Stuart Heritage, “I Can’t Afford to Bring Up a Child in the Capital,” *Guardian*, 1 Oct. 2014, at 5.

Though this sense isn’t recorded in most standard dictionaries, it certainly exists and is well known among

the generations that grew up watching Bugs Bunny—who used the term snidely in reference to the hunter Elmer Fudd. For now, this usage remains slang. But it surely threatens to kill off the hunter sense. For the fascinating origins of this slang meaning, see p. xlix.

LANGUAGE-CHANGE INDEX
nimrod in the sense “simpleton”: Stage 5

***nitch(e)**. See **niche**.

nitroglycerin; ***nitroglycerine**. The first is the standard spelling in AmE and BrE alike.

Current ratio: 3:1

no. Pl. *noes*, preferably not **nos*. See PLURALS (D). Cf. **yes**.

nobody. See **no one** & PRONOUNS (D).

no-brainer (= a solution or course of action so obviously right that it needn’t be thought about much) is AmE SLANG dating from the 1950s. It surged into popularity in the mid-1980s and has since become something of a VOGUE WORD not only in AmE but in World English as well.

no doubt. See ***doubtlessly**.

Noel; **Noël**; **Nowell**. The song “The First Noel” has been traced back to a book of English carols dated 1833, with the spelling *Nowell*. Although the song is known to have originated in rural western England, the composer is unknown. The song title was spelled *nowell* through most of the 19th century, and this spelling made perfect sense. According to the *OED*, *nowell* is “a word shouted or sung as an expression of joy, originally to commemorate the birth of Christ”; it dates, somewhat surprisingly, from the 1300s. Chaucer used it in “The Franklin’s Tale”: “And *nowel* crieth every lusty [i.e., joyful] man.” The word fell into disuse in the 16th century.

Sometime after the song’s early-19th-century debut, probably in the late 19th or early 20th century, someone “corrected” the spelling of the song title (and verses) to *noel*, which is a French word meaning “a Christmas carol.” To make it even more Frenchified, some writers gave it a diaeresis (*noël*). Although this word is recorded in the English language from 1811, the *OED* contains only three illustrative quotations.

Most American adults who came of age in the 20th century are familiar with the spelling “The First Noel” and with front-yard Christmas signs that spell out *Noel* (or *Noël*). Yet many hymnals, such as the Episcopal Hymnal, consistently use the original spelling. This one makes more historical sense for two reasons. First, the song is English, not French. Second, the traditional English meaning is more in line with what most people intend today: someone with a Christmas display that says “Noel” probably doesn’t mean “a

Christmas carol,” but instead something like “Christ is born!” Yet *noel* is the predominant form and will probably remain so, apart from a few stalwart hymnals and songbooks.

no expense has been spared (= somebody has spent a lot of money) is both hackneyed and crass. It’s typically the sort of phrase one expects to hear from a social climber. Cf. **no object**.

no fewer. See **no less (A)**.

no holds barred. The METAPHOR comes from wrestling: in some matches, no wrestling holds are illegal. When used as a PHRASAL ADJECTIVE, of course, it is hyphenated <a no-holds-barred matchup>.

Some writers, though, misunderstand the phrase and write **no-holes-barred*—e.g.:

- “Preaching what he calls a message of self-help and self-love to the black man, Farrakhan’s in-your-face, *no-holes-barred* [read *no-holds-barred*] approach has been condemned by Vice President Al Gore and members of Congress.” Robbie Morganfield, “Farrakhan Urges End to ‘Tide of Violence,’” *Houston Chron.*, 12 Apr. 1994, at A1.
- “The party has long needed an open and *no-holes-barred* [read *no-holds-barred*] debate on the subject.” “An Election with the Wrong Candidates,” *Independent*, 1 July 1995, at 16.
- “If Phil Mickelson is ever going to win a major—or even the ‘fifth major’ they are playing at TPC Sawgrass this week—he will not do it backing down from his *no-holes-barred* [read *no-holds-barred*] style of play.” Hank Gola, *Daily News* (N.Y.), 23 Mar. 2003, at 50.

LANGUAGE-CHANGE INDEX

**no holes barred* for *no holds barred*: Stage 1

Current ratio (*no holds barred* vs.

**no holes barred*): 74:1

noisome is often misconstrued as meaning “noisy; loud; clamorous.” In fact, it means “noxious; malodorous.” (Cf. **fulsome**.) The word is related etymologically to *annoy*.

LANGUAGE-CHANGE INDEX

noisome in the sense “noisy”: Stage 3

no less. A. And no fewer. The phrase *no less*, like *less*, preferably refers to amounts or to mass nouns, not countable numbers. *No fewer* is the better phrase when discussing numbers of things. (See **less (A)**.) But many good writers nod on this point—e.g.:

- “In this annual, there are *no less* [read *no fewer*] than five painters banking on wax for beauty.” Regina Hackett, “A Chance to Shine in Bellevue,” *Seattle Post-Intelligencer*, 19 July 1997, at C1.
- “Chinese officials . . . have issued *no less* [read *no fewer*] than three condemnations of the congressman’s trip.” “Back from Tibet,” *Wash. Times*, 30 Aug. 1997, at A15.
- “During his career he had *no less* [read *no fewer*] than 43 fellow Corsicans as generals in his army.” Christopher McCooley, “A Hike Through the Scented Corsican Hills,” *Fin. Times*, 6 Sept. 1997, at 17.

When the sense is *nothing short of*, that phrase (or *nothing less than*) typically improves the sentence—e.g.: “Among the local newspapers, ‘The Hartford

Daily Courant’ proclaimed that *no less than* [read *nothing short of*] an ‘orthographical mania’ was afoot in Hartford because a competing spelling bee was scheduled on the same spring night.” Joe Duffy, “Twain Floored by ‘Spelling Epidemic,’” *Hartford Courant*, 31 Aug. 1997, at H1.

LANGUAGE-CHANGE INDEX

no less for *no fewer* in reference to

a count noun: Stage 4

B. And not less. *No less* connotes surprise <he weighs no less than 300 pounds>. The phrasing in the example expresses astonishment that he weighs so much. *Not less* is more clinical and dispassionate <he weighs not less than 300 pounds>. That example states matter-of-factly that he weighs at least that much and maybe more.

no longer requires oxygen. This bit of medical JARGON is a peculiar brand of ILLOGIC. The true sense, of course, is that the patient no longer requires *supplementary oxygen*—e.g.: “Since the operation, he says, he’s put on more than 10 pounds of muscle, *no longer requires oxygen* [insert *supplementary* before *oxygen*], and feels liberated to do practically whatever he wants.” Joe Rojas-Burke, “Health Plan OKs Tests for Teen,” *Oregonian* (Portland), 15 June 2000, at A1. The phrase is, however, perfectly proper when used by morticians.

nom de plume; nom de guerre. See **pseudonym**.

nomenclature (= a formal system of naming things, esp. in science and allied disciplines) is pronounced /**noh**-mən-klay-chər/ in AmE and /**noh-men**-klə-chər/ in BrE.

nominal = in name only, but not in reality. The *nominal* head of a university department is one whose power is questionable; *nominal* is a put-down word. By extension, what is *nominal* may be real but not significant <the popular incumbent faced only nominal opposition>, so the word has taken on the sense of “very little.”

In grammar, *nominal* has an additional meaning: “of, relating to, or functioning as a noun” <a nominal clause>—though *noun* is often its own adjective <a noun clause>. And in this context *nominal* can itself be a noun, denoting a word or group of words functioning as a noun.

NOMINALIZATIONS. See ZOMBIE NOUNS.

NOMINATIVE ABSOLUTES. See ABSOLUTE CONSTRUCTIONS.

NOMINATIVE AND OBJECTIVE CASES. See PRONOUNS (A), (B).

no more than; not more than. The first is the more natural idiom—and historically by far the more common one. Cf. **no less (B)**.

Current ratio: 3:1

NON-. See NEGATIVES (A).

nonage (= the period of someone's minority or youth) is pronounced /**non**-ij/ in AmE and /**noh**-nij/ in BrE.

nonbelief. See **disbelief**.

nonbeliever. See **atheist**.

noncomparable. See **incomparable**.

NONCOMPARABLE ADJECTIVES. See **ADJECTIVES (B)**.

nonconstitutional; unconstitutional. These terms have distinct meanings. *Nonconstitutional* = of, relating to, or involving some legal basis or principle other than those of the U.S. Constitution <a nonconstitutional doctrine>. *Unconstitutional* (the more familiar word) = in violation of, or not in accordance with, principles found in the U.S. Constitution <an unconstitutional and therefore void statute>. See **constitutional**.

none = (1) not one; or (2) not any. Hence it may correctly take either a singular or a plural verb. To decide which to use, substitute the phrases to see which fits the meaning of the sentence: *not one is* or *not any are*. E.g.:

- "Sexton stressed—several times—that all the meats are farm-raised and USDA-approved and *none are* endangered." Bob Walter, "Buffalo Bob's Food Business Takes Walk on the Wild Side," *Sacramento Bee*, 1 Sept. 1997, at B4.
- "There are many lessons that society can learn from Mother Teresa's life But *none is* as powerful as the lessons that Mother Teresa said she learned from the poor." "A Powerful Voice," *Orlando Sentinel*, 6 Sept. 1997,

at A18.

Generally speaking, *none is* is the more emphatic way of expressing an idea. But it's also the less common way, particularly in educated speech, and it therefore sounds somewhat stilted. The problem is exacerbated by the unfortunate fact that some stylists and publications insist that *none* is always singular, even in the most awkward constructions. Cf. **no one**.

LANGUAGE-CHANGE INDEX
none in the sense "not any," with a plural verb: Stage 5
 Current ratio (*none is* vs. *none are*): 1.5:1
 Current ratio (*none of them is* vs. *none of them are*): 1:1

noneconomic. See **uneconomical**.

***nonenforceable**. See **unenforceable**.

nonessential; inessential; unessential. Although most American dictionaries list *unessential* as the usual term, it is the least common of these words (and has been since about 1940). *Inessential* is somewhat more common, but *nonessential* is by far the most common <nonessential computer storage>. *Nonessential* has predominated in print since about 1940.

Current ratio (in order of headwords): 3:1:1

nonesuch; nonsuch. The first spelling is etymologically superior, the word being a combination of *none* and *such*. *Nonsuch* is a chiefly BrE variant. Regardless of spelling, the first syllable is pronounced /nən/.

Nonesuch functions both as a noun (= a person or thing without equal) and as an adjective (= unparalleled, incomparable).

Current ratio: 2:1

nonetheless. One word in AmE, three (frequently) in BrE.

Current ratio (one word vs. three words): 6:1

nonexpert, adj. See **inexpert**.

nonincentive. See **disincentive**.

nonmarital child. See **illegitimate child**.

nonmaterial. See **immaterial**.

nonorganic food. See **organic**.

nonplus, the verb meaning "to baffle or confound unexpectedly," preferably makes *nonplussed* and *nonplussing* in AmE and BrE alike, because the second syllable is stressed. (See **SPELLING (B)**.) But the variant **nonplused* appears in some American writing—e.g.:

- "Betancourt looks *nonplused* [read *nonplussed*]." Barbara Peters Smith, "Legislating, Up Close," *Ledger* (Lakeland, Fla.), 19 Apr. 1995, at A7.
- "Almost daily, we were *nonplused* [read *nonplussed*] by the breaking revelations during the testimony." "The Wonder of Welfare Fraud," *L.A. Times*, 13 Apr. 1997, at B7.
- "Everything about her was otherworldly and astonishing: Her eyes were big and brown, her nose was tiny and upturned, and her mouth was set in a *nonplused* [read *nonplussed*] purl." Curtis Sittenfeld, "Bad Latch," *Wash. Post*, 9 Aug. 2015, at A15.

Since the 1990s there has arisen a mystifying notion that *nonplussed* is essentially synonymous with its near-antonym *unfazed*. That is a nonplussing misperception.

LANGUAGE-CHANGE INDEX
 1. *nonplussed* misspelled **nonplused*: Stage 1
 Current ratio (*nonplussed* vs. **nonplused*): 9:1
 2. *nonplussed* as meaning "unfazed": Stage 2

nonprofit; not-for-profit. The first is more common, but the second is increasingly used in AmE for greater accuracy. The phrase *nonprofit corporation* misleadingly suggests that the corporation makes no profits, but such a corporation actually does earn profits and then applies them to charitable purposes. *Not-for-profit* is thought to reveal more accurately that the purpose is not for private gain, though indeed the organization may profit. The hyphenated form of the word, **non-profit*, which sometimes appears in corporate literature and in unedited copy, is always ill-advised. See **NEGATIVES (A)**.

nonresponsive. See **unresponsive.**

NONRESTRICTIVE RELATIVE PRONOUNS. See **that (A).**

non sequitur (= [1] a conclusion that does not follow from the premises; or [2] a statement or response that is unrelated to the one before it) means, in Latin, “it does not follow.” The phrase should be spelled as two words, not hyphenated or spelled as one word; and because it has been fully naturalized, it should not be italicized. The phrase is frequently misspelled *-tor*, *-tar*, or *-ter* in the last syllable—e.g.: “The second half was almost a complete *non-sequitor* [read *non sequitur*], musically: The Marcia Ball Band from New Orleans.” Barbara Zuck, “Booming Cannons and Brass Kick Off Lancaster Festival,” *Columbus Dispatch*, 20 July 1995, at G7.

In the following sentence, the phrase is not only misspelled but also misused because the idea of something following (or not following) something else is missing: “To compare the suffering of Americans of Japanese ancestry to the suffering of the European Jews is a *non sequitor* [read *non sequitur*].” “The Manzanar Lesson,” *Press-Enterprise* (Riverside, Cal.), 30 Sept. 1996, at A9. A non sequitur, strictly speaking, must be a conclusion that does not follow from the premises. A mere inaccurate or exaggerated comparison—as in the example just quoted—isn’t a non sequitur.

LANGUAGE-CHANGE INDEX
non sequitur misspelled **non sequitor*: Stage 1

nonsuch. See **nonesuch.**

NON-U. See CLASS DISTINCTIONS.

NONWORDS. H.W. Fowler’s formidable American precursor, Richard Grant White, wrote incisively about words that aren’t legitimate words:

[A]s there are books that are not books, so there are words that are not words. Most of them are usurpers, interlopers, or vulgar pretenders; some are deformed creatures, with only half a life in them; but some of them are legitimate enough in their pretensions, although oppressive, intolerable, useless. Words that are not words sometimes die spontaneously; but many linger, living a precarious life on the outskirts of society, uncertain of their position, and cause great discomfort to all right-thinking, straightforward people.

Words and Their Uses 184 (rev. ed. 1899).

His polemical tone and hyperbole were characteristic and purposeful.

Among the words that he labeled nonwords are three that might still be considered so: **enthused*, **experimentalize*, **preventative*. But with most of the others he mentioned, he proved anything but prophetic—they’re now standard: *accountable*, *answerable*, *controversialist*, *conversationalist*, *donate*, *exponential*, *jeopardize*, *practitioner*, *presidential*, *reliable*, *tangential*. The lesson is that in any age, stigmatizing words is a tough business—no matter how good the arguments against them might be.

This book contains entries on dozens of terms that might be considered nonwords by White’s standards. Among the more prominent ones are these (each of which is treated separately in this book):

- *affrontery (see **effrontery (B)**)
- *analyzation (see **analysis**)
- *annoyment (see **annoyance**)
- *discomforture (see **discomfit (D)**)
- *dispersement (see **disburse**)
- *doubtlessly
- *fastly
- *forebearance (see **forbearance**)
- *furtherest
- *ilily (see **ill**)
- *impropriety
- *inclimate (see **inclement**)
- *inexpense
- *inimicable
- *intervent
- *irregardless
- *muchly
- *optimize
- *paralyzation
- *preplan
- *propriety
- *quelch
- *seldomly (see **seldom**)
- *thusly (see **thus (B)**)
- *uncategorically
- *unmercilessly
- *unrelentlessly

The term *nonword* might appear to be a nonword itself because until recently it did not appear in most dictionaries. Today that has changed, though: *W11*, for example, defines it as “a word that has no meaning, is not known to exist, or is disapproved,” and dates it from 1961. It also appears in *RH2* and the *OED*.

no object. This phrase, literally speaking, should mean “not a goal; not something considered worth achieving.” In fact, though, writers use it to mean “no obstacle” or “no objection”—e.g.:

- “Culpin sees teleworking as capable of making a great contribution to economic growth in a global marketplace where distance is *no object* [read *is irrelevant* or *is no obstacle*].” Claire Gooding, “The Ups and Downs of Teleworking,” *Fin. Times*, 5 Apr. 1995, at xviii.
- “If you would love a fast, handsome car, and if money is *no object* [read *no obstacle*], take a close look at the 911.” Richard Truett, “Staying True to Form,” *Fresno Bee*, 4 May 1996, at D1.
- “But if size is *no object* [read *not an objection* or *of no concern*], take heart that in the heat of competition, one can purchase superior 2-megapixel cameras from the major brands for less than \$200.” Stephen Williams, “Marketplace Reflections On a Grab Bag of Trends,” *Newsday* (N.Y.), 24 Dec. 2002, at A42.

The nonsense of the phrase is apparent especially in the following example, in which *object* bears a double sense, through ZEUGMA: “So now it’s on to Florida and the Marlins, where money is *no object* but winning is.” Patrick Zier, “Leyland Must Produce,” *Ledger* (Lakeland, Fla.), 30 Mar. 1997, at C1. In that sentence,

seemingly, money is no object (= no obstacle) but winning is an object (= a goal); hence *object* means different things with the different subjects. And strictly speaking, the final word (*is*) should be followed by *one* to counteract the fact that the entire phrase (*no object*) seems to carry over as UNDERSTOOD WORDS—not just the noun *object*. Cf. **no expense has been spared**.

noon. See **a.m.** (c).

no one; nobody. *No one* is more common than *nobody*. In AmE, both terms are treated as singular nouns and therefore as singular antecedents <no one in his right mind would care>. But today, as indefinite pronouns, they're often treated as plural to avoid SEXISM—e.g.:

- “Yes, Germany was ringed by enemies, but this was just the right time for a bold move, the fuhrer figured. *No one* in their right mind would expect it.” James Kindall, “The Battle of the Bulge,” *Newsday* (N.Y.), 15 Dec. 1994, at B3.
- “The narrator promises us early that *no one* gets killed, but they get really nasty boo-boos.” Louis B. Parks, “AAA-a-a-a-a-ah!: ‘George’ is Fun for Everybody,” *Houston Chron.*, 16 July 1997, at 1.
- “It seems they're charging roughly the same amount, and no one wants to lower their fees.” Jim Dillon, “ATM Fees Increasingly Attacked,” *Dayton Daily News*, 3 Aug. 1997, at B7.

Fewer readers than ever seem to be bothered by this type of construction. My informal surveys suggest that 10–20% of a wide readership would think that such a construction lessens the writer's credibility. That's enough to give any serious writer pause. Although the usage seems inevitable in the long run, careful writers of AmE will probably wait until the opposition dwindles even further. In 2008, *no one . . . his* constructions still greatly outnumbered *no one . . . their* constructions in print sources. See CONCORD, PRONOUNS (D) & SEXISM (B). Cf. **none**.

In BrE it is especially common for *no one* and *nobody* to act as antecedents of indeterminate number—e.g.: “How the Elizabethans reacted is, alas, unknown, since *nobody* thought Shakespeare's plays important enough to bother recording their impressions.” John Carey, “Stages of Hatred,” *Sunday Times* (London), 4 Oct. 1992, § 6, at 8.

LANGUAGE-CHANGE INDEX
no one or *nobody* . . . *their*: Stage 4

no one, not even [+ pl. n.]. When this phrasing precedes the verb, it leads to constructions that are either clumsy or ungrammatical. The merely clumsy constructions get the grammar right, with a singular verb—e.g.:

- “*No one*, not even the prosecutors, was sure Boria would give the same version of events she had given to two grand juries.” Juan Gonzalez, “Her Bravery Shatters Blue Wall,” *Daily News* (N.Y.), 27 Sept. 1996, at 21.

- “She is a nobody, the girl or guy that *no one*, not even the teachers, likes.” Kristi Wright, “In the Dollhouse,” *Omaha World-Herald*, 1 Oct. 1996, at 35.

The ungrammatical constructions botch the SUBJECT-VERB AGREEMENT, which in modern English is a more serious type of CONCORD than noun-pronoun agreement (see **no one**). E.g.:

- “*No one*, not even the Orioles, were [read was] supposed to match Boston's awesome run-scoring machine.” Bob Klapisch, “Sox Arrive . . . with Holes,” *Record* (N.J.), 1 July 1996, Sports §, at 1.
- “But *no one*, not even the wireless providers, know [read knows] what the future will look like.” Debra Sparks, “Hold That Call,” *Fin. World*, 12 Aug. 1996, at 33.

Which number to use becomes obvious if you mentally move the phrase to the end of the sentence <no one knows what the future will look like, not even the wireless providers>.

***no other . . . except**. See **other** (B).

no other . . . than. See **other** (B).

***no place**. This dialectal word, answering to the standard *anyplace*, was fairly common in the 18th century, but it became stigmatized by the mid-19th century. Although it was moderately on the rise in print sources during the 1980s and 1990s, it remains non-standard for *nowhere* or *no place*—e.g.: “As the Joads' plight continues to worsen there's no work, no food, *no place* [read *nowhere* or *no place*] decent to live.” Doug Mason, “Power of Steinbeck's Book Evident on Stage,” *Knoxville News-Sentinel*, 4 Feb. 1995, at B6. Cf. ***anyplace** & **someplace**.

LANGUAGE-CHANGE INDEX
**no place* for *nowhere*: Stage 2
Current ratio (*nowhere* vs. **no place*): 706:1

no problem. See **thank you** (B).

no pun intended. See WORD PATRONAGE.

nor. A. Beginning a Sentence. *Nor*, like *neither*, may begin a sentence. It must follow either an express NEGATIVE or an idea that is negative in sense <This is not economical. *Nor* is it entirely satisfactory . . . >. E.g.:

- “The uttering of a word is not a consequence of the uttering of a noise, whether physical or otherwise. *Nor* is the uttering of words with a certain meaning a consequence of uttering the words.” J.L. Austin, *How to Do Things with Words* 114 (1965).
- “Walter did not begrudge his son such precautions. *Nor*, for his part, had Peter protested his father's trading the townhouse on Blake Street for a corrodé.” Candace Robb, *The Riddle of St. Leonard's* 19 (large-print ed. 1997).
- “None of that mattered to Judge James P. Kleinberg in Santa Clara. *Nor* did extensive government-sponsored studies showing that the best thing to do with lead paint is to leave it right where it is.” Daniel Fisher, “Public Nuisances,” *Forbes*, 7 Sept. 2015, at 50.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

In this construction, of course, the word *nor* needn't follow a *neither*. See **neither (c)**. See also **also not**.

B. For or. When the negative of a clause or phrase has appeared at the outset of an enumeration, and a disjunctive conjunction is needed, *or* is generally better than *nor*. The initial negative carries through to all the enumerated elements—e.g.:

- “There have been *no* bombings *nor* [read *or*] armed attacks by one side against the other.” William D. Montalbano, “Links to IRA Seen in Rash of Violence in Northern Ireland,” *L.A. Times*, 12 Jan. 1996, at 1.
- “This is *no* longer practical *nor* [read *or*] desirable.” Helene Crane, “Overcoming Fear of Fear,” *Calgary Herald*, 1 June 1996, at A9.
- “The road has *no* sidewalks, shoulders, *nor* [read *or*] crossing guard. There is no other route to school” Charles T. Bowen, “A Chance to Impact New Schools,” *Tampa Trib.*, 3 Aug. 1997, at 1. (On the use of *impact* in that title, see **impact**.)

Sometimes the best solution is to replace *nor* with *and no*—e.g.:

- “Although he has almost *no* name recognition *nor* [read *and no*] political cash, Unruhe appears undaunted.” Carlos V. Lozano, “23rd Congressional District,” *L.A. Times*, 30 Oct. 1996, at B1.
- “Florida, with its large elderly population, has *no* income *nor* [read *no* income tax *and no*] estate tax.” Sonya Zalubowski, “With Taxes on Homes Going Through the Roof, We Need Solution,” *Oregonian* (Portland), 31 Oct. 1996, at 2.

See **not (b)**.

nor'easter. This CASUALISM denotes a storm that brings high winds and rain or snow to the upper Atlantic Coast. The storm is so named because although the cyclonic storm itself moves northeasterly up the coast, the inland winds on its west side blow from out of the northeast.

While the folksy pronunciation might evoke images of a Yankee seafarer in some, the contracted term is neither authentic nor accurate. New Englanders tend to drop their *r* sounds and are more likely to pronounce *nor'easter* as /naw-**thees**-təl/. As *Boston Globe* wordsmith Jan Freeman noted, “The facts, however, have not slowed the advance of *nor'easter*. Even in print, where it's probably less common than in speech, it has practically routed *northeaster* in the past quarter-century or so. . . . [I]t would take a mighty wind, at this point, to blow *nor'easter* back into oblivion.”

The style guides at *The New York Times* and the *Boston Globe* ban the contracted form. But it is now established.

normality; *normalcy. The first has long been considered superior to the second—and it is more than twice as common in modern print sources. Born in the mid-19th century and later popularized by President Warren G. Harding, **normalcy* has never been accepted as standard by the best writing authorities. It still occurs less frequently than *normality*, and it ought to be treated as a NEEDLESS VARIANT. Careful editors continue to prefer *normality*—e.g.: “Set to emerge officially from the University of Chicago next week,

the landmark study, called the ‘National Health and Social Life Survey,’ shatters many preconceptions in its attempts to define *normality*.” Peter Gorner, “Sex Study Shatters Kinky Assumptions,” *Chicago Trib.*, 6 Oct. 1994, § 1, at 1.

LANGUAGE-CHANGE INDEX

Current ratio (*normality* vs. **normalcy*): 2:1

north; northward(s); northerly. See DIRECTIONAL WORDS.

***nosey.** See **nosy**.

no sooner . . . than; *no sooner . . . when. The first phrasing is better because *sooner* is a comparative that should take the word *than*, not *when*. Although the correct phrasing is vastly predominant, the loose phrasing is lamentably common—e.g.:

- “*No sooner* did he hear a description of the suspects’ car *when* [read *than*] he saw the car himself.” Paul Sullivan, “Tommy Tajima, at 47, Newspaper Photographer,” *Boston Herald*, 22 Dec. 1999, at 39.
- “He had *no sooner* gotten into the 1996 Mercury Sable *when* [read *than*] he saw a police car chasing them down Old Highway 441.” Frank Stanfield, “Man Convicted in Bank Heist,” *Orlando Sentinel*, 10 Nov. 2000, at 2.
- “*So no sooner* had he arrived in Mykonos *when* [read *than*] he headed back to Santorini.” Nancy Cooren Guerin, “Love Means Going the Extra Mile,” *Times Union* (Albany), 6 Dec. 2000, at F3.

LANGUAGE-CHANGE INDEX

**no sooner . . . when* for *no sooner . . . than*: Stage 3

nostalgia /nah-stal-jə/—not /nah-stahl-jə/ or /nah-stal-jee-ə/.

nostrum (/nos-trəm/ or /nohs-trəm/), meaning either “a quack medicine” or “a panacea,” forms the plural *nostrums*, not **nostra*—e.g.: “If it wants to move into the global economy, [India] must give up many of the *nostrums*, such as the need to preserve small businesses, [that] are deeply enshrined in its social policy.” Peter Montagnon, “Old Protectionism Restricts Progress,” *Fin. Times*, 19 Nov. 1996, at 4. See PLURALS (b). Cf. **rostrum**.

nosy (= unduly inquisitive; prying) has been the standard spelling since about 1950 in AmE and BrE alike. **Nosey*, once the predominant form, is now a variant.

Current ratio: 3:1

not. A. Placement of. When used in a construction with *all* or *every*, *not* is usually best placed just before that word. E.g.:

- “But *every* team *does not* expect more. Kansas does.” Jonathan Feigen, “College Basketball Preview,” *Houston Chron.*, 10 Nov. 1996, at 21. (A possible revision: *But not every team expects more. Kansas does.*)
- “While *every* letter *cannot* be answered, your stories may be used in future columns.” Eileen Ogintz, “Children Connect on a Caribbean Cruise,” *News & Observer* (Raleigh), 31 Aug. 1997, at H7. (A possible revision: *While not every letter can be answered . . .*) See **all (b)**.

B. Not . . . nor. This construction should usually (when short phrases or clauses are involved) be *not . . . or*. E.g.:

- “As parents, we need to encourage our children to focus on our inner character, *not* on our superficial traits, *nor* on marketing-driven peer expectations.” Ellen J. Dewey, “Dispelling a Myth,” *Lancaster New Era*, 17 Aug. 1997, at P3. (A possible revision: *As parents, we need to encourage our children to focus on our inner character, not on our superficial traits or on marketing-driven peer expectations.*)
- “The Ramona trial . . . did *not* reunite the Ramonas, *nor* did it convince Steph Ramona that she may have been wrong.” Ann Rule, “Recalling an Elusive Past,” *Wash. Post*, 7 Sept. 1997, Book World §, at 6. (A possible revision: *The Ramona trial did not reunite the Ramonas or even convince Steph Ramona that she might have been wrong.*) See **nor (B)**.
- “The shooter was *not* a convicted felon *nor* does it appear his mental health history would have triggered sufficient alarm.” “The Parkers’ ‘Sound Cause,’” *Baltimore Sun*, 3 Sept. 2015, at A16. (A possible revision: *The shooter did not have a prior felony conviction or a mental-health history that would have triggered sufficient alarm.*)

C. In Typos. *Not* is a ready source of trouble. Sometimes it becomes *now*, and sometimes it drops completely from the sentence. This tendency helps explain why some newspapers use CONTRACTIONS such as *shouldn’t* and *wouldn’t*: the negative is unlikely to get dropped. See **not guilty (A)**.

D. Not [this] but [that]. This construction sometimes leads to MISCUES if the negative isn’t well placed—e.g.: “The dungeon is the center of a debate over *not* the effectiveness of pedagogic hard labor *but* the race of the punished and the race of the punishers.” Jon D. Hull, “Do Teachers Punish According to Race?” *Time*, 4 Apr. 1994, at 30. (A possible revision: *The dungeon is the center of a debate not over the effectiveness of pedagogic hard labor but over the race of the punished and the race of the punishers.*)

E. Not only . . . but also. See **not only . . . but also**.

notable. See **noticeable**.

not all. See **all (B)**.

not all that. See **all that**.

notarize, originally an Americanism dating from the 1920s, is now commonplace in AmE and BrE alike—e.g.: “Patrick Henry Talbert, a minister who *notarizes* some Greater Ministries documents, has been sued twice in the past three years by people claiming he bilked them of their investments.” Michael Fechter, “IRS Probes Ministry’s Gift Program,” *Tampa Trib.*, 25 Aug. 1997, at 1.

notary public. Pl. *notaries public*—not **notary publics*. E.g.: “County Clerk Mary Jo Brogato said *notary publics* [read *notaries public*] should call the office at 881-1626 before picking up their commissions in

Independence.” “Metro Digest: Independence,” *Kansas City Star*, 28 July 1997, at B2. See **PLURALS (G)** & **POSTPOSITIVE ADJECTIVES**.

not guilty. A. And innocent. It used to be that only journalists made the mistake of writing *plead innocent* rather than *plead not guilty*, but now this phrase has made it even into judges’ writing. Lawyers should avoid the phrase, since there is no such thing as a plea of innocent. Journalists, on the other hand, avoid *not guilty* merely because *not* might get accidentally dropped or changed to *now*:

Many newspapers—and it tends to drive lawyers a little crazy—but many newspapers insist on saying that a defendant “pleaded innocent”; they will not report that he or she “pleaded not guilty.” I’ve gone to clients for many years and said, “That’s wrong. People don’t plead innocent; they are not found innocent. They plead and are found ‘not guilty.’” Now I realize that newspaper writers live in perpetual fear of the word *not* either being dropped by a printer or being changed from *not* to *now*. Therefore, whenever possible, they shy away from the word *not*, even at the expense of strict accuracy. . . .

The lesson is simply this: Before you dismiss others’ workmanship, do understand why they have said what they have said; there may be a good reason for it.

Robert Sack, “Hearing Myself Think:
Some Thoughts on Legal Prose,”
4 *Scribes J. Legal Writing* 93, 98–99 (1993).

Fair enough. But writers who do have enough time for careful proofreading shouldn’t sacrifice accuracy in this way.

Strictly speaking, *not guilty* and *innocent* aren’t quite synonymous. To be *innocent* is to be blameless. To be *not guilty* is to have been exonerated by a jury of a crime charged—regardless of actual blame. So in a sentence such as the following one, many can’t help thinking that the writer is blurring a distinction—e.g.: “A San Francisco jury found him *innocent* [read *not*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

guilty] of the charge in 1988.” Robert Hilburn, “Way Beyond Center Field,” *L.A. Times*, 4 May 1997, at 5.

LANGUAGE-CHANGE INDEX
plead innocent for plead not guilty: Stage 4

B. *Not guilty beyond a reasonable doubt. This phrasing is ambiguous. The standard by which a jury decides criminal charges is this: a defendant is guilty only if the evidence shows, beyond a reasonable doubt, that he or she committed the crime. Otherwise, the defendant is not guilty. So we say that a defendant was not found *guilty beyond a reasonable doubt*.

But it doesn't follow that we should also say that a defendant was found **not guilty beyond a reasonable doubt*. Is that *not guilty (beyond a reasonable doubt)* or *not guilty-beyond-a-reasonable-doubt*? The latter idea makes more sense—e.g.: “The question is whether a judge can reach a contrary conclusion on the second charge—deciding that though a defendant was *not guilty beyond a reasonable doubt*, he nonetheless probably committed the crime.” “High Court's High-handed Decision,” *Chicago Trib.*, 26 Jan. 1997, at 20.

Yet many readers will misconstrue the phrase. Regardless of the writer's intention, some will think of **not guilty beyond a reasonable doubt* as a strong vindication—rather than as the slight vindication it is (we, the jury, had the slightest bit of reasonable doubt, so we had to find the defendant not guilty). The writer might have gotten it right in the following sentence, but nonlawyers are likely to be misled: “When you know all the facts [of the O.J. Simpson case], you'll see that the prosecutors failed to meet their burden of proof, and how, contrary to the court of public opinion, the jury arrived at their verdict of 'not guilty beyond a reasonable doubt.'” Patricia A. Jones, “Uncensored: Authors Answer Questions Left with Simpson Verdict,” *Tulsa World*, 1 Dec. 1996, at G5.

If somebody is found not guilty, say *not guilty*. Omit the standard (*beyond a reasonable doubt*) to prevent a MISCUE.

***not hardly.** This robust barbarism is fine if your purpose is to show DIALECT, but it doesn't otherwise belong in the serious writer's toolbox—e.g.:

- “Is there a more logical place for Moorpark than the Marmonte League? *Not hardly*. [Read *Hardly*.] But logic often has nothing to do with it.” Paige A. Leech, “Time to Get Real on Realignment,” *L.A. Times*, 16 Feb. 1997, at C10.
- “End of the problem? *Not hardly*. [Read *Hardly*.] In February, the state filed criminal charges.” Jerry Spangler, “Fight Brews over Out-of-State Spirits,” *Deseret News* (Salt Lake City), 29 July 1997, at B4.
- “Liberal alarmist hype? *Not hardly*. [Read *Hardly*.]” Cy Wood, “Indescribably Inane,” *Valley Times-News* (Lanett, Ala.), 6 Aug. 2015, News §, at 4.

LANGUAGE-CHANGE INDEX
*not hardly for hardly: Stage 1
Current ratio (*can hardly* vs. **can't hardly*): 98:1

noticeable; notable; noteworthy; noted. These words overlap to a degree. *Noticeable* = easily seen or noticed (as, e.g., scars)—the word is generally confined to

physical senses. *Notable* = (1) prominent; excellent <notable books of the season>; or (2) easily seen or noticed (applied to qualities as well as to material things) <her notable industriousness>. *Noteworthy* = worthy of notice or observation; remarkable <a noteworthy commencement address>. *Noted* = famous; celebrated; well known <a noted biographer>.

It is worth noting that a noted or notable person may not be noticeable; that a noticeable person may not be at all notable or noted; but that noteworthy achievements may lead one to become noted or notable—and perhaps, after some media attention, even noticeable.

On *noticeable* as a frequently misspelled word, see SPELLING (A).

no time should be lost. See **lose (B)**.

not in-. See NEGATIVES (B).

not in a position to. This phrase is often wordy for *cannot*, *can't*, *could not*, or the like—e.g.: “Granted, we're talking about hockey players, who, unlike their basketball and football counterparts, usually *are not in a position to* [read *can't*] reap immediate financial rewards if they leave early.” Michael Hunt, “Bound by a Common Goal,” *Milwaukee J. Sentinel*, 27 Mar. 1997, Sports §, at 1.

***notion seconded.** See **motion seconded**.

not less. See **no less (B)**.

not more than. See **no more than**.

not only . . . but also. These CORRELATIVE CONJUNCTIONS must frame syntactically identical sentence parts—e.g.:

- “Many board games, electronic toys and computer programs *are not only enjoyable but also provide* [read *not only are enjoyable but also provide*] educational benefits.” Jeffrey L. Derevensky & Rina Gupta, “Christmas Without Elmo,” *Montreal Gaz.*, 19 Dec. 1996, at B3. (In that revision, the conjunctions frame two verb phrases. Another possible revision: *Many board games, electronic toys, and computer games are not only enjoyable but also educational*. The conjunctions frame two adjectives.)
- “It *not only* will save construction costs *but also* the cost of land acquisition and demolition.” Donna Leslie, “Stadium Belongs on the Riverfront,” *Cincinnati Enquirer*, 23 Nov. 1997, at D3. (A possible revision: *It will save not only construction costs but also the cost of land acquisition and demolition*. The conjunctions correctly frame two noun phrases.)
- “These foundation-like funds are useful *not only* for small donors *but also* for big donors who don't want to hassle with the red tape.” Susan Lee, “Loosen Up a Bit, Folks,” *Forbes*, 15 Dec. 1997, at 64. (The conjunctions frame two for-phrases.)

See PARALLELISM.

One common issue in *not only* constructions is whether it's permissible to omit the *also* after *but*. The answer is yes, the result being a CASUALISM—e.g.:

- “Commissioner Pete Rozelle assured Harris County officials that if they made some \$67 million in improvements,

the Astrodome would be *not only* adequate *but* worthy of a Super Bowl.” “NFL Inadequacies,” *Houston Chron.*, 6 Sept. 1995, at A20.

- “[Perret] seeks to secure Grant’s reputation *not only* as a successful general *but* as a military genius.” Eric Foner, “The Very Good Soldier,” *N.Y. Times*, 7 Sept. 1997, § 7, at 13.

So how do you decide whether to include *also* (which will always result in a correct construction)? It’s merely a matter of euphony and formality: let your ear and your sense of natural idiom help you decide in a given sentence.

Another way to complete the construction is *not only . . . but . . . as well*. But a writer who uses this phrasing should not add *also*, which is redundant with *as well*—e.g.: “Feminist methods and insights [must] be adopted *not only* by female scholars, *but also* by males *as well*.” J.M. Balkin, “Turandot’s Victory,” 2 *Yale J. Law & Humanities* 299, 302 (1990). In that sentence, *also* should have been omitted.

No comma is usually needed between the *not only* and *but also* elements, and—as the last citation above shows—to put one in merely introduces an awkward break.

notorious may mean either “infamous” (the usual sense) <a notorious killer> or “famous” (an archaic sense). The word’s negative connotations are firmly established in modern usage. Yet the corresponding noun, *notoriety*, is more neutral <achieved notoriety by saving several lives>. Gradually, though, the noun is becoming tinged with the unpleasant connotations of its adjectival form <achieved notoriety for drug-peddling charges>.

not proven. See **proved**.

Notre Dame, University of. The predominant pronunciation among stuffed shirts is /noh-trə **dahm**/ (which, however, is the correct pronunciation for the Paris cathedral). The predominant pronunciation among university officials and alumni is /noh-trə **daym**/. The predominant pronunciation among all other Americans is /noh-tər **daym**/.

not un-. See **NEGATIVES (B)**.

notwithstanding is a **FORMAL WORD** used in the sense “despite,” “in spite of,” or “although.” In general English-language contexts, it has experienced a steady decline in use since about 1760. E.g.: “*Notwithstanding* an outpouring of editorial opinion on either side of this issue, there are no easy answers.” Richard Baum, “Perspective on China,” *L.A. Times*, 30 Nov. 1997, at M5.

The question that literalists ask is, What doesn’t withstand what else? Is the outpouring of opinion “not *withstanding*” (i.e., subordinated to) the lack of easy answers, or is the lack of easy answers “not *withstanding*” (subordinated to) the outpouring of

editorial opinion? Because the former is the correct reading, some believe that *notwithstanding* should be sent to the end of the phrase in which it appears: *The family’s objection to the marriage notwithstanding*, as opposed to *Notwithstanding the family’s objection to the marriage*.

But the literalist argument is very much in vain, as the *OED* attests with a 14th-century example of *notwithstanding* as a sentence-starter. This usage has been constant from the 1300s to the present day. In fact, the construction with *notwithstanding* following the noun first appeared more than a century later, and has never been as frequent. The *Century Dictionary* explains: “As the noun usually follows [the word *notwithstanding*], the [word] came to be regarded as a prep. (as also with *during*, ppr.), and is now usually so construed.” 3 *Century Dictionary and Cyclopedia* 4029 (1914). The word is not a **DANGLER** because it does not function as a participle.

nought. See **naught**.

NOUN PLAGUE is Wilson Follett’s term for the piling up of nouns to modify other nouns (*MAU* at 229). When a sentence has more than two nouns in a row, it generally becomes much less readable. The following sentence is badly constructed because of the noun-upon-noun syndrome, which (sadly) is more common now than in Follett’s day: “Consumers complained to their congressmen about *the National Highway Traffic Safety Administration’s automobile seat belt ‘interlock’ rule*.” One can hardly make it to the **SENTENCE END** to discover that we’re talking about a rule. (Even worse, many writers today would leave off the possessive after *Administration*.) In the interest of plague control, the following rewrite is advisable: *the ‘interlock’ rule applied to automotive seat belts by the National Highway Traffic Safety Administration*. A few prepositional phrases and an adjective (*automotive*) do the job.

Readability typically plummets when three words that are ordinarily nouns follow in succession, although exceptions such as *fidelity life insurance* certainly exist. But the plague is unendurable when four nouns appear consecutively, as when writers refer to a **participation program principal category* or the **retiree benefit explanation procedure*. Occasionally one encounters even longer strings: in 1997, a major national bank circulated a form entitled *Government Securities Dealership Customer Account Information Form*—which might be something of a record.

It is true, of course, that noun-stacking really involves making all but the last noun into adjectives. But the problem is that many readers will think that they’ve hit upon the noun when they’re still reading adjectives. Hence a **MISCUE** occurs. For more on the use of nouns as adjectives, see **FUNCTIONAL VARIATION (B)**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Finally, it is worth cautioning against loading a single statement with too many abstract nouns ending in *-tion*. The effect isn't pleasing:

- "Police must [study] . . . how to defuse volatile *situations* and how to instruct victims on *prosecution* and *protection options* the law provides." Jim Nichols, "Domestic Violence Cases Soar in Medina," *Plain Dealer* (Cleveland), 30 Dec. 1993, at B1.
- "This work led to a *consideration* of additional important attributes of *information* and *communication* media within *organizations*." Ralph H. Sprague, "Electronic Document Management," *MIS Q.*, Mar. 1995, at 29.
- "All of the 'classic' *assumptions* that are at the basis of the terms 'culture' and 'intercultural differences' find *expression* in this *intervention*. That is why the *situation* at the Center is not a *question* of organizational change." Micha Popper, "The Glorious Failure," 33 *J. Applied Behavioral Science* 27 (1997).

For more on words ending in *-tion*, see ZOMBIE NOUNS. See also SOUND OF PROSE.

NOUNS AS ADJECTIVES. See FUNCTIONAL SHIFT (B).

NOUNS AS VERBS. See FUNCTIONAL SHIFT (D).

no use. Eric Partridge labeled this "incorrect—or, at best, colloquial—for *of no use*" (*U&A* at 203). Yet *it's no use* has greatly outranked *it's of no use* in print sources since about 1830. Today many readers and listeners would consider *no use* colloquial, but the following examples certainly aren't incorrect:

- "There's *no use* crying about it." Dana Parsons, "Apocalypse When?" *L.A. Times*, 27 Aug. 1995, at B1.
- "It is *no use* comparing this city to others, because there is no other city in the world like it." Dennis Duggan, "The Battle in Defense of Hearth and Home," *Newsday* (N.Y.), 8 May 1997, at A8.
- "But it's *no use*." George Howe Colt, "The Strange Allure of Disasters," *Life*, June 1997, at 58.
- "She knows it's *no use* forcing the feisty elders of Ferry County." Erica Curless, "The Fire Ain't Going to Get Us," *Spokesman-Rev.* (Spokane), 3 Sept. 2015, at A1.

The longer phrase, *of no use*, would be of no use in any of these citations unless the sentences were rearranged—and made slightly longer.

nouveau riche. A. Generally. *Nouveau riche* (= [1] a newly rich person; or [2] newly rich people collectively) is sometimes misspelled **nouveau rich*—e.g.: "It will be for Deng's heirs to deal with problems such as the widening gap between China's *nouveau rich* [read *nouveau riche*] and rural poor." James Cox, "Deng Xiaoping: 1904–1997," *USA Today*, 20 Feb. 1997, at A1.

The phrase keeps the French plural *nouveaux riches*, as it has since it was first used in the 1790s. But some mistakenly write **nouveau riches* or even (as a plural) **nouveau rich*—e.g.:

- "But the customers here are China's *nouveau riches* [read *nouveaux riches*] from one of the wealthiest of the Middle Kingdom's southern cities." Keith B. Richburg, "China Attracts Western Retailers Willing to Learn Its Ways," *L.A. Times*, 16 Feb. 1997, at D15.
- "Even for those *nouveau rich* [read *nouveaux riches*] with the spare change and audacity to have their own personal

guard posted at the entrance, it still takes a moment." "Back Porch," *S.F. Examiner*, 22 Dec. 1996, at E3.

See PLURALS (B).

Some writers seem to believe that the phrase refers not to people but to newfound wealth—e.g.:

- "Unlike Donald Trump and his ilk, [Ralph] Lauren spends his *nouveaux riches* [read *newfound wealth*] with old-money restraint." Claudia Glenn Dowling, "He Has Fame, Fortune, Family, and His Health," *Life*, May 1989, at 136.
- "The Victorians couldn't blow their bucks on big-screen TVs. Instead, their *nouveau riches* [read *newfound wealth*, or merely *wealth*] went toward embellishing their houses." M.J. McAteer, "A Touch of Class," *Wash. Post*, 16 Apr. 1997, at D9.

The singular and plural forms are pronounced /noo-voh **reesh**/.

LANGUAGE-CHANGE INDEX

1. **nouveau rich* for *nouveau riche*: Stage 1
Current ratio (*nouveau riche* vs. **nouveau rich*): 50:1
2. **nouveau riches* as a plural for *nouveaux riches*: Stage 1
Current ratio (*nouveaux riches* vs. **nouveau riches*): 17:1
3. *nouveau riche* in reference to newfound wealth: Stage 1

B. And Its Near-Synonyms: *parvenu*; *arriviste*.

The GALLICISMS *parvenu* (/pahr-və-noo/) and *arriviste* (/ah-ree-veest/) are synonymous, meaning "a person who is newly rich; an upstart." *Arriviste* can also refer to someone who has recently acquired power or success that isn't necessarily monetary.

Although *nouveau riche* is by far the most widespread of these terms, the others are hardly uncommon—e.g.:

- "Movie stars and chief executives sipped champagne and knocked mallets with the likes of Prince Charles and Princess Michael of Kent at snobby residential polo clubs. The *parvenus* and wannabes followed at slightly less exclusive clubs." June Fletcher, "Equestrian Communities Hitting Stride Again in the '90s," *Salt Lake Trib.*, 21 July 1996, at G4.
- "Even the models, draped in wide stripes and emergency colors, are posed to look like vogue-ish, fad-worn *arrivistes*, sporting smiles of complete incomprehension." Jeff Danziger, "A Catalog of Horrors," *Wall Street J.*, 8 Nov. 1996, at A18.
- "Like any subculture, WAGS have their own hierarchy, with wives ruling the roost and mere girlfriends seen as gold-digging *parvenus*." Kevin McDonough, "Lives of Jocks Fascinate Fans of 2 Reality Shows," *Commercial Appeal* (Memphis), 18 Aug. 2015, at 5.
- "The people at the *arriviste* tech companies sometimes consult with him to see what the neighbourhood wants." Alec Scott, "Medium Rare," *Globe & Mail* (Toronto), 1 Sept. 2015, at L1.

But *parvenu* and *arriviste* are uncommon enough that they smack of SESQUIPEDALITY.

novella forms the plural *novellas* or (less good) **novelle*. See PLURALS (B).

Current ratio: 5:1

novelty does not mean “an extreme rarity.” Rather, it denotes something new (and possibly rare). In the sentence “Mother–son incest is so rare as to be regarded as a *novelty*,” the writer could have better written, “Mother–son incest is an extreme *rarity*.” *Oedipus Rex* belies any claim that incest might have to novelty. And the connotations of *novelty* are positive, so linking it to something as negative as incest makes this use even stranger (but not more novel).

novitiate; *noviciate. This word—meaning (1) “the period during which a person is a novice”; (2) “a building where novices are housed”; or (3) “a novice”—is preferably spelled *novitiate*. **Noviciate* is a variant spelling that was common from only about 1750 to 1850.

The word is sometimes misspelled **novitate*—e.g.: “Last year the case was transferred to the Diocese of Allentown, since that is where Cizek was born and where he is buried at the Jesuit *novitate* [read *novitiate*].” Anne Rodgers-Melnick, “Journey Toward Sainthood Long, Complex,” *Pitt. Post-Gaz.*, 14 Sept. 1997, at A11.

Current ratio (*novitiate* vs. **noviciate*): 17:1

now. People go to great lengths to use genteelisms instead of this simple, straightforward word—especially *at the present time* and *at this time*. For a fairly common misspelling involving *now*, see **know**. See at **the present time & at this time**.

Nowell. See **Noel**.

nowhere; *nowheres. The first is standard. The second is a dialectal word. See DIALECT. Cf. **anywhere**.

LANGUAGE-CHANGE INDEX

**nowheres* for *nowhere*: Stage 1

Current ratio (*nowhere* vs. **nowheres*): 412:1

nowhere near as is a CASUALISM for *not nearly as*. During the 20th century, it became fairly common in both AmE and BrE—e.g.:

- “Admittedly, Tony Blair is *nowhere near as* [or *not nearly as*] terrifying as Mrs. T.” Nicholas Lloyd, “Spin Doctors in Overdose,” *Times* (London), 6 Aug. 1997, at 21.
- “The technology, which is *nowhere near as* [or *not nearly as*] sophisticated as a flux generator bomb, could easily move from law enforcement to the criminal and terrorist population.” “Cyber Terrorism,” *Am. Banker*, 8 Sept. 1997, at 43.

no worries. This Australianism, meaning “no problem” or “don’t worry,” appeared first in the mid-1960s. The OED records a singular use from Sydney in 1965: “*No worry* . . . it’s amazing what a few schooners of jolly does for a bloke.” The *Australian National Dictionary* records the plural *no worries* in a 1967 book by J. Hibberd entitled *White with Wire Wheels*: “‘Well. How was she?’ . . . ‘Who, Sue? No worries.’” Other uses are attested from the late 1960s to the mid-1980s.

The actor and writer Paul Hogan popularized the phrase outside Australia in his *Crocodile Dundee* movies (the memorable one of 1986, the less memorable sequel of 1988, and the wholly forgettable second sequel of 2001). Hogan’s catchphrase was *No worries, mate*. The wide appeal of those movies made the phrase something of a vogue expression, sometimes with and sometimes without *mate* tacked on the end. In many examples, American and British writers make clear that the phrase is an Australianism—e.g.:

- “Not since John McEnroe was thrown out five years ago had the laid-back, *no-worries-mate* Australian Open rocked the way it did Monday.” “Australian Fans Rock, but Agassi Still Rolls,” *Wash. Post*, 24 Jan. 1995, at C7.
- “[I]t would be scarcely worth turning up to play against a team that includes Wallaby full-back Mat Rogers, living personification of that ubiquitous Aussie catchphrase, ‘*no worries, mate*.’” Huw Richards, “Rogers Learns to Handle the Pressure,” *Fin. Times*, 20 Nov. 2003, at 16.
- “‘*No worries*,’ said Lonie, an Australian who was the only non-Californian signed by Tedford.” Jay Heater, “Cal Didn’t Venture Far in Finding Strong Recruiting Class,” *San Jose Mercury News*, 5 Feb. 2004, Sports §, at 3.

But beginning about the year 2000, the expression had spread into mainstream AmE without any hint of its foreignness. The phrase now commonly appears without any reference to Australia at all, as in the title of Chris Tomasson’s March 2004 article: “No Ball? No Basket? *No Worries*,” *Rocky Mountain News* (Denver), 19 Mar. 2004, at C7. Sometimes the phrase is part of the syntax <they had no worries about the weather that afternoon>, but often it’s a catchphrase used as an INCOMPLETE SENTENCE (and this is the quintessential Australianism)—e.g.:

- “Rachel McQuillan joined the million-dollar club more than four years ago, an elite group mostly occupied by players known by their first names. And she owns an Olympic bronze medal in doubles from Barcelona in 1992. *No worries, right?*” Lisa Dillman, “First Round Is All Good for Lucky Loser Tennis,” *L.A. Times*, 9 Mar. 2001, at D9.
- “Jimmy, my man. You had Wisconsin Parrotheads worried there for a while. Up until this week, Jimmy Buffett had not penciled in any dates for a concert. . . . [H]e promised he’d be coming back. And indeed he is. . . . See? *No worries*.” Rob Thomas, “Gotta-Have-It List,” *Wis. State J.*, 18 Mar. 2004, Rhythm §, at 2.
- “Once at the arena, UW players shot around for an hour, with maybe 150 people watching and cheering on their various shooting and dunking contests. Still, the UAB press lingers. *No worries*.” Dan Raley, “Tempo to Tell Tale in Huskies’ NCAA Opener,” *Seattle Post-Intelligencer*, 19 Mar. 2004, at C1.

nuance. Although in French this word is spoken with stress on the second syllable, in English the best (and commonest) pronunciation is /n[y]oo-ahnts/.

nuclear. In standard AmE, this word is pronounced /n[y]oo-klee-ər/—not /n[y]oo-kyə-lər/, a “spectacular

blunder” (in Burchfield’s words) induced by false analogy with words such as *muscular*, *spectacular*, and *vernacular*. Though politicians and other educated people have had difficulty saying the word correctly, if you can do it you should. See PRONUNCIATION (B). Cf. METATHESIS & DIALECT.

William Safire has suggested that because Presidents Eisenhower, Carter, Clinton, and Bush (George W.) have used the mistaken pronunciation, speechwriters begin printing *new-clear* in place of this word in the versions of speeches that presidents read. “On Language,” 20 May 2001, § 7, at 24, 26. Not a bad idea.

In 2012, in a public forum, I asked Andrew Card—President George W. Bush’s chief of staff—whether the pronunciation of *nuclear* had ever been discussed in his presence in the Oval Office. His entirely serious answer: “Endlessly.”

LANGUAGE-CHANGE INDEX

nuclear mispronounced /**noo**-kyə-lər/: Stage 2

nucleus. In traditional senses, the plural is *nuclei*—not *nucleuses*. E.g.:

- “He said the genetic therapy company scientists hope to target the mutation by injecting a small molecule made of DNA, the basic material of all cell *nucleuses* [read *nuclei*].” Mark Guidera, “Oncor to Develop Gene Therapy for Obesity,” *Baltimore Sun*, 26 Mar. 1996, at C2.
- “[For DNA testing to work,] there have to be cell *nuclei* present, and hair that has been pulled away from its roots doesn’t contain any *nuclei*.” Laurie P. Cohen, “Inside the Cell,” *Wall Street J.*, 19 Dec. 1997, at A1.
- “He said there are no queen bees or larvae in either of the *nucleuses* [read *nuclei*], rendering them useless.” W.T. Eckert, “Beekeeper Allegedly Stings Clients,” *Journal* (Ogdensburg, N.Y.), 2 Sept. 2014, News §, at 3.

But in sports talk—in which *nucleus* means “a core of strong players on a team”—*nucleuses* is standard. E.g.:

- “The Islanders, with two potential lottery picks in the 1997 draft, plus one of the better young *nucleuses* in the National Hockey League, could afford to surrender the five No. 1 draft picks required to sign either Sakic or Forsberg.” Eric Duhatschek, “Cash Crunch,” *Calgary Herald*, 15 Feb. 1997, at D4.
- “Christie Burden, Megan Frank and Latoya Robinson all started a year ago and along with Selwyn make for one of the best—if not tallest—*nucleuses* around.” Michael S. Snyder, “Strongest in Decades,” *Sun-Sentinel* (Ft. Lauderdale), 19 Nov. 1997, at 22.
- “Clearly, *nucleuses* win games, not just one player.” Benjamin Hochman, “LeBron’s Legacy Could Be on Line,” *Denver Post*, 30 May 2013, at B1.

See PLURALS (B).

Current ratio (*nuclei* vs. *nucleuses*): 1,223:1

nuke, v.t., is a slangy word that means not only “to attack with nuclear weapons” but also “to destroy, demolish” or “to microwave (food).” The following examples illustrate the three senses:

- “I don’t think I’ve watched my video of the movie ‘Fail Safe,’ in which New York City gets *nuked*, more than 30 or 40 times.” Mike Royko, “Read On, Gluttons for Punishment,” *Chicago Trib.*, 12 Mar. 1987, at C3.

- “Jordan *nuked* the Knicks . . . and settled the double-teaming controversy, too.” “Eastern Lowlights Make for Strange Playoff Race,” *Commercial Appeal* (Memphis), 2 Apr. 1995, at D8.
- “Remember this the next time you rip open a freshly *nuked* bag of microwave popcorn: You’re really getting a whiff of rotten eggs.” “Popping-Good Smell Is Old Eggs,” *Daily News* (L.A.), 31 Mar. 1997, at L2.

See SLANG.

***numbedness**. See **numbness**.

number. See **amount**.

number of. **A. A number of**. Some pedants think that correctness dictates *a number of people is*. One critic, for example, refers to “the growing habit of using plural verbs with singular nouns,” adding: “‘A number of voters were unhappy’ illustrates the offense.” F. Thomas Trotter, “Out on the Campaign Trail, English Grammar Trampled,” *Nashville Banner*, 12 Sept. 1996, at A13.

But *a number of* is quite correctly paired with a plural noun and a plural verb, as in *there are a number of reasons*—e.g.:

- “But when asked, a surprising *number* of Cubans *seem* not to know exactly what it is they should be celebrating on December 25.” Pascal Fletcher, “Mixed Blessings for Castro’s Christmas Decree,” *Fin. Times*, 20 Dec. 1997, at 3.
- “Although most Jefferson scholars have considered the rumor unlikely, a gradually increasing *number*—including late historians Page Smith and Fawn Brodie—*have* given credence to the Hemings story.” Barbra Murray, “Clearing the Heirs,” *U.S. News & World Rep.*, 22 Dec. 1997, at 54.
- “A *number* of clubs, particularly on the continent, *operate* with a head coach and a technical director who plays a major role in talent spotting.” “Tim: Buck Stops with Me Over Signings,” *Birmingham Mail* (U.K.), 3 Sept. 2015, Sports §, at 64.

This construction is correct because of the linguistic principle known as SYNESIS, which allows some constructions to control properties such as number according to their meaning rather than strict syntactical rules. Since the meaning of *a number of things* is *many things* (or *several things*), and since *some things* is plural, the verb must be plural.

The question becomes a close one, however, when an adjective precedes *number* <a significant number of them [is] [are]>. Because the adjective emphasizes *number* as a noun, some writers make the verb singular—e.g.:

- “What matters more than this . . . is that there *is* abroad in the world these days *a substantial number of* groups and individuals whose varied labors make inevitable a deepening sense of self.” Wendell Johnson, *Verbal Man: The Enchantment of Words* 123 (1956; repr. 1965).
- “There *is a substantial number* (perhaps on the order of fifty) of standard verbs ending in *-en* that have been formed from adjectives.” Robert W. Burchfield, *Points of View* 91 (1992).

But these writers are strongly outnumbered by those who, even with the qualifying adjective, see the idiom as being *a number of*, necessitating a plural verb.

Linguistic authorities have a long tradition of preferring the plural here—e.g.:

- “As the Greeks understood, there *are an infinite number* of degrees of simplicity, ranging from the simple colloquial to the simple grand.” A.R. Orage, *Readers and Writers (1917–1921)* 76 (1922; repr. 1969).
- “As everybody knows, there *are a vast number* of words in the language . . . which were deliberately coined to imitate a sound.” Guy N. Pocock, “Sound and Sense,” in *Foundations of English Style* 180, 182 (Paul M. Fulcher ed., 1927).
- “As men are now constituted, there *are a great number* who ever come to feel this surrender to be a sacrifice.” Otto Jespersen, *Mankind, Nation, and Individual from a Linguistic Point of View* 117 (1946).
- “We know, for example, that there *are a significant number* of differences.” Albert Marckwardt, “Regional and Social Variations” (1958), in *A Language Reader for Writers* 65, 70 (James R. Gaskin & Jack Suberman eds., 1966).
- “There *are still a large number* of unanswered questions about this grammar-building activity.” Graham Wilson, Foreword, *A Linguistics Reader* xxii (Graham Wilson ed., 1967).
- “A *large number* of our teachers of English *have* had such a meager scientific training that they cannot give their students what they need.” George Curme (as quoted in James Sledd, “Grammar or Gramarye?” in *A Linguistics Reader* 125, 135 (Graham Wilson ed., 1967)).
- “There *have been an almost infinite number* of studies.” Earl W. Buxton, *Looking at Language* v (M.H. Scargill & P.G. Penner eds., 1969).
- “There *are a remarkable number* of words in standard English that are very easy to confuse.” David Crystal, *Who Cares About English Usage?* 11 (1984).
- “There *are a surprising number* of words that seem to us perfectly innocent and acceptable . . . which at one time or another were anathema in usage circles.” Dennis Baron, *Declining Grammar* 92 (1989).

Few usage critics have ever discussed this particular point. One who did, G.H. Vallins, labeled those who insisted on the singular “purists” (a derogatory term in his mind). (See Vallins, *Good English: How to Write It* 17 [1951].) Better to stick with the plural.

LANGUAGE-CHANGE INDEX
a number of with plural noun and plural verb: Stage 5
 Current ratio (*a number of them were* vs.
 **a number of them was*): 82:1

B. The number of. When the phrase is used with the definite article *the*, everything changes. Now, instead of talking about the multiple things, we’re talking about the number itself, which is singular <the number of students planning to attend college is steadily rising>.

C. With most. See ***most number of things**.

NUMBERS. See **NUMERALS**.

numbness; *numbedness. The latter is a NEEDLESS VARIANT.

Current ratio: 9,252:1

numbskull. See **numskull**.

NUMERALS. A. General Guidance in Using. The best practice is to spell out all numbers ten and below and to use numerals for numbers 11 and above. This “rule” has five exceptions:

1. If numbers recur throughout the text or are being used for calculations—that is, if the context is technical or quasi-mathematical—then numerals are usual.
2. Approximations are usually spelled out (*about two hundred years ago*).
3. In units of measure, words substitute for rows of zeros where possible (*\$10 million, \$3 billion*), and numerals are used (*3 inches, age 24, 3:15 PM*).
4. Percentages may be spelled out (*eight percent*) or written as numerals (*8 percent or 8%*).
5. Numbers that begin sentences must always be spelled out. (See (B).)

B. Not Beginning Sentences with. It is generally considered stylistically poor to begin a sentence—or a paragraph—with a numeral <2002 was a good year for new mystery novels>. Some periodicals, such as *The New Yorker*, would make that sentence begin *Two thousand two was . . .* But most writers and editors would probably begin the sentence some other way, as by writing, *In 2002, no fewer than 3,700 mystery novels were published*. Sometimes the revision requires significant reworking of the sentence—e.g.: “1942 saw the publication of the first major dictionary of its kind.” Robert Allen, “The Big Four,” *12 English Today* 41, 41 (1996). (A suggested revision: *In 1942, the first major dictionary of its kind was published*. [On the change of the zombie noun *publication* to the passive-voice was *published*, see the final paragraph of ZOMBIE NOUNS.]) More often, especially with years, the problem can be fixed simply by beginning the sentence with *The year*. So that quotation could also be fixed by starting the sentence with *The year 1942 saw*.

Numbers other than years present more problems. Generally, it is acceptable to simply spell out the number rather than using a numeral. That’s no problem with small numbers—most styles call for spelling out small numbers anyway. The trouble comes with larger numbers, and the larger the number, the more troubling it can be. But the rule of reason applies here. When the number can be expressed briefly, or when precision is not an issue, simply write out the number <A hundred years ago we didn’t have these problems>. But rather than writing *Thirty-four thousand eight hundred seventy-one people voted for the bond issue*, it’s better to reword the sentence: *Nearly 35,000 people . . .*

C. Round Numbers. Except when writing checks or other negotiable instruments, omit double zeros after a decimal: *\$400* is better form than *\$400.00*.

D. Decades. As late as the 1970s, editors regularly changed *1970s* to *1970’s*. More recently, the tendency is to omit the apostrophe. That cleaner style should be encouraged, though *The New York Times* and some

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

other newspapers still use the apostrophe. See DATES (D) & PUNCTUATION (A).

E. Votes and Scores. The preferred method for reporting votes and scores is to use numerals separated by an en-dash <a 5–4 decision> <the Cowboys won 38–3>. This method, which gives the reader more speed than spelling out the numbers, is standard today.

F. Cardinal and Ordinal. A *cardinal number* expresses amount (e.g., *one, two, three*). An *ordinal number* expresses place in a series (e.g., *first, second, third*). Occasionally, cardinal numbers are mistakenly used for ordinal numbers—e.g.: “It wasn’t really a ballet class. It was more of a modern dance class, sort of an introduction to ballet,” Roy explained with the weariness of someone reciting a response for the *ump-teenth million* [read *umpteenth-millionth*] time.” Randy Riggs, “Roy: Building a Better Linebacker Through Ballet,” *Austin Am.-Statesman*, 24 Aug. 1995, at D8.

G. Repetition. The repetition of numbers by spelling them out and then using numerals typifies LEGALISE and should never be used outside legal drafting <the sum of forty-one dollars and thirty-seven cents (\$41.37)>. Even in modern legal documents it is largely uncalled for—the convention harks back to the days of legal scribes, who doubled words and numerals to prevent fraudulent alterations (words controlled over numerals). See Bryan A. Garner, *Legal Writing in Plain English* 115–16 (2001). Occasionally, the redundant convention can be seen in informal situations where it is unintentionally funny <they have two (2) children, a son age thirteen (13) and a daughter age seven (7)>.

H. In Names. See NAMES (B).

numerical; numeric. These words overlap when they mean “of, relating to, or involving numerals” <numerical display> <numeric keypad>. But *numerical* is the broader (and more common) term, with the additional meaning of “mathematical” <numerical analysis> <numerical advantage>. When the sense of “numeral” involved is a measurement rather than a symbol, *numerical* is the better choice—e.g.: “These reputed traditional families registered an increase of 5.7 percent during the 1990s, in contrast to *numeric* [read *numerical*] decreases during the previous two decades.” William H. Frey, “Married with Children,” *American Demographics*, Mar. 2003, at 2.

NUMERICAL PREFIXES. English is a major debtor to the world’s other languages, especially to Latin and Greek. The extent of borrowing from the classical languages is mind-boggling. One of the early editors of the *OED*, the great Henry Bradley, put it this way: “The Latin element in modern English is so great that there would be no difficulty in writing hundreds of consecutive pages in which the proportion of words of native English and French etymology, excluding particles, pronouns, and auxiliary and substantive verbs, would not exceed five per cent of the whole.” Henry Bradley, *The Making of English* 94 (1904; repr. 1951).

Among the combining forms that we have inherited are those relating to numbers. Especially in technical contexts, the English language can express numerical relationships through words formed from classical elements. Anyone who takes the time to learn these elements will understand many otherwise unfamiliar words on sight. What follows is a list of the classically derived prefixes that make up English words, with some representative examples. Among these words are several HYBRIDS and MORPHOLOGICAL DEFORMITIES (e.g., *kilowatt, milliwatt, monokini*), but most have been devised with some attention to word-formation principles.

one

uni- (Latin)
unicellular
unicorn
unicycle
unilateral
unique
unit
mono- (Greek)
monodactylous
monogamy
monoglot
monogram
monokini

novennial	myriogram
<i>ennea-</i> (Greek)	myriotheism
ennead	

numerous is often just an inflated equivalent of *many*—e.g.: “Exhibits in the two-story Virginia Room provide an overview of the *numerous* [read *many*] Civil War battles fought in Virginia.” Randy Mink, “Shenandoah Valley Abounds in Hospitality,” *Denver Post*, 18 May 1997, at T1. Avoid it.

numismatist (= a coin collector) is pronounced /n[y]oo-**mis**-mə-tist/ or /n[y]oo-**miz**-mə-tist/—not /n[y]oo-miz-**mat**-ist/. The most common cognates are the adjective *numismatic* /n[y]oo-miz-**mat**-ik/ and the noun *numismatics* /n[y]oo-miz-**mat**-iks/ (avoid the erroneous /n[y]oo-**miz**-mə-tiks/). *Numismatics* is plural in form but singular in construction <numismatics is a terrific hobby for those with a historical bent>.

numskull (= a dolt or dunce) was long the standard spelling (from about 1770 till 2000). *Numbskull*, though an etymologically accurate spelling, was long considered a variant. But it has become more frequent in print sources since 2000.

Current ratio (*numbskull* vs. *numskull*): 1.1:1

nuptial; nuptials. Although *nuptial* is in good use as an adjective, the noun *nuptials* (= wedding) is generally a pomposity to be avoided. It should be left to its ineradicable place in newspaper reports of weddings, where grubstreet hacks engage in (not to say become engaged to) INELEGANT VARIATION.

Nuptial is pronounced /nəp-shəl/—not /nəp-shə-wəl/ or (worse) /-chə-/. See **prenuptial**.

***nurseling**. See **nursling**.

nursing one’s wounds. Occasionally, by MALAPROP-ISM, the phrase is mangled into **nurturing one’s wounds*, as if wounds were to be cultivated and developed further—e.g.: “The other young women *nurtured* [read *nursed*] his wounds and cooled his skin with sponges soaked in a special herbal solution.” Lawrence Patrick, *Inner Journey* 26 (2003).

LANGUAGE-CHANGE INDEX

**nurturing wounds* for *nursing wounds*: Stage 1

nursling (= [1] a baby still being nursed; or [2] anything that is being cared for tenderly) has been the standard spelling since the 18th century. **Nurseling* is a variant.

Current ratio: 10:1

nurturance looks like a NEEDLESS VARIANT of *nurture*, but the words have diverged in their connotations. Whereas *nurture* means either “upbringing” or “food,” *nurturance*—a 20th-century NEOLOGISM dating from 1938—means “attentive care; emotional and physical nourishment.” If this DIFFERENTIATION persists, then *nurturance* will earn a permanent position in the language. For now, it remains relatively uncommon—e.g.:

- “Moral *nurturance* comes next, linking self-discipline to self-reliance.” Paul Rosenberg, “Examining Morals in

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Politics and the Media," *Christian Science Monitor*, 10 June 1996, Features §, at 14.

- "Bailey sets four criteria he says are essential to proper human development: safety, wellness, *nurturance* and stimulation." "Is Smart Start Getting the Critical Look It Deserves?" *News & Observer* (Raleigh), 24 Mar. 1997, at A8.
- "He makes it clear that like the environment, the protection, maintenance and *nurturance* of our libraries is a cause so worthy it is beyond debate." Charlotte Duggan,

"Save Our Stacks," *Winnipeg Free Press*, 30 May 2015, at A1.

***nurturing one's wounds**. See **nursing one's wounds**.

Nutmegger; Connecticut. The first is the standard name for someone who hails from or lives in Connecticut. The second is a less common equivalent. See DENIZEN LABELS.

Current ratio: 5:1

O

O; Oh. Although the distinction isn't always observed, there is one: *O* denotes either a wish or a classically stylized address <Praise the Lord, O Jerusalem—Psalm 147>, while *Oh* expresses a range of emotions from sorrow to pain to shock to longing to momentary hesitation <Oh! You frightened me!> <Oh? You want me to get that?>. *O* is always capitalized, comes just before a noun, and is usually not followed by any punctuation—e.g.: "O Dionysus, it would be so humiliating to have a seizure now!" Gillian Bradshaw, *Cleopatra's Heir* 379 (2002).

Oh may be lowercase if it occurs in midsentence and is always set off by commas inside a sentence <I was just thinking that, oh, I miss my home>.

oaf. Pl. *oafs*. See PLURALS (C).

oasis forms the plural *oases*—not **oasises*.

oats, sowing wild. See **sow (B)**.

obligato (= a musical accompaniment traditionally viewed as obligatory in performing a piece) has been predominantly so spelled since 1880—when **obligato* became just a variant spelling. Pl. *obligatos*. See PLURALS (B) & SPELLING (A).

obeisance (= a strong respect for and deference to another) is preferably pronounced /oh-bay-sən[t]s/—though /oh-bee-sən[t]s/ is also acceptable.

obelisk (= a stone pillar erected usu. as a memorial) is preferably pronounced /ob-ə-lisk/—not /oh-bə-lisk/.

obfuscate (= to render [a subject] impenetrable to understanding, esp. by means of incomprehensible language) is preferably pronounced /ob-fəs-kayt/—not /ob-fyoo-skayt/. Before the 20th century, the traditional pronunciation was /ob-fəs-kayt/.

object, no. See **no object**.

objectify; objectivize. *Objectify*, dating from the mid-19th century, means either (1) "to make into an object," or (2) "to render objective." *Objectivize*, dating from the late 19th century, means "to render objective." It would be convenient for the words to undergo DIFFERENTIATION, so that *objectify* would be confined to its sense 1, while *objectivize* would preempt *objectify* in the latter's sense 2. See **reify**.

objectionable; objectional. *Objectionable* (= open to objection; unacceptable; offensive) is the ordinary word. *Objectional* (= of, relating to, or like an objection), a rare word, is frequently misused for *objectionable*—e.g.:

- "Two Vista High School students . . . were suspended for publishing an underground newspaper that school officials said was *objectional* [read *objectionable*] and contained sexually explicit material." "Student Paper Suit," *San Diego Union-Trib.*, 20 Feb. 1985, at B2.
- "The plan is *objectional* [read *objectionable*] to some because it envisions free-standing retail businesses along Crabapple Road, which residents want to keep residential." Diane R. Stepp, "City Council Action," *Atlanta J.-Const.*, 15 Sept. 1994, at H4.
- "Stull has drawn attention to many *objectional* [read *objectionable*] aspects of the meat and poultry industries." Barb Shelly, "Pink Slime' Product of Cheap-Beef Economy," *Tulsa World*, 13 Apr. 2012, at A19.

LANGUAGE-CHANGE INDEX
objectional misused for *objectionable*:
Stage 1

objectivize. See **objectify**.

OBJECT-SHUFFLING. This term describes what unwary writers often do with verbs that require an indirect as well as a direct object. E.g.: "He continued the medicine a few days longer, and then *substituted the penicillin with tetracycline* [read *substituted tetracycline for the penicillin* or *replaced the penicillin with tetracycline*]." This use of *substitute* for *replace*, resulting from a confusion over the type of object that each verb may take, is labeled "incorrect" in the *OED*.

Unfortunately, there is no simple rule for determining which verbs are reversible and which are not. (See ERGATIVE VERBS.) One must rely on a sensitivity to idiom and a knowledge of what type of subject acts upon what type of object with certain verbs. It is perfectly legitimate, for example, either to *inspire* a person *with* courage or to *inspire* courage *in* a person; but the switch does not work with similar words such as *instill* and *inculcate*. Good teachers *instill* or *inculcate values into* students, but cannot properly be said to **instill students with values* or to **inculcate students with values*. See **inculcate**. For additional examples, see **arrogate, cite, impart, inflict & levy**.

obligatory; obligative. The general term is *obligatory* (= required, mandatory). *Obligative* is a grammatical term for the mood of verbs expressing obligation or necessity.

oblivious has traditionally taken the preposition *of* in its strictest (an increasingly rare) sense of “forgetful” <an oblivious dotage> <oblivious of her pending appointment>. The more popular meaning of *oblivious* today is “unmindful; unaware; unobservant”; this construction typically (but not always) uses the preposition *to* <oblivious to signs of a financial disaster>. *Oblivious of* was the predominant phrasing in English language print sources till about 1968, when it was overtaken by *oblivious to*.

Although *to* is now the more common mate of *oblivious*, some fastidious speakers and writers continue to use *of*, regardless of whether the meaning is “forgetful” or “unaware”—e.g.: “He confesses that he was *oblivious to* [or *oblivious of*] his son, and the evidence he supplies is persuasive.” Malcolm Jones Jr., “The Man Who Sired a Monster,” *Newsweek*, 7 Mar. 1994, at 67. Both prepositions are standard.

LANGUAGE-CHANGE INDEX

oblivious to for *oblivious of*: Stage 5

1934 ratio (*oblivious of* vs. *oblivious to*): 2:1

Current ratio (*oblivious to* vs. *oblivious of*): 4:1

OBSCURITY, generally speaking, is a serious literary offense. Simple ideas are often made needlessly difficult, and difficult ideas are often made much more difficult than they need to be.

Obscurity has myriad causes, most of them rooted in imprecise thought or lack of consideration for the reader. The following examples are winners of a “Bad Writing Contest” held in New Zealand in 1997. All three are by English professors—the first two American and the third British:

- “The visual is *essentially* pornographic, which is to say that it has its end in rapt mindless fascination; thinking about its attributes becomes an adjunct to that, if it is unwilling to betray its object; while the most austere films necessarily draw their energy from the attempt to repress their own excess (rather than from the more thankless effort to discipline the viewer).” Fredric Jameson, *Signatures of the Visible* 1 (1992).
- “If such a sublime cyborg would insinuate the future as post-Fordist subject, his palpably masochistic locations as ecstatic agent of the sublime superstate need to be decoded as the ‘now all-but-unreadable DNA’ of the fast deindustrializing Detroit, just as his RoboCop-like strategy of carceral negotiation and street control remains the tirelessly American one of inflicting regeneration through violence upon the racially heteroglossic wilds and others of the inner city.” Rob Wilson’s essay in an anthology entitled *The Administration of Aesthetics* (1994) (as quoted in Ray Lilley, “No Contest: English Professors Are Worst Writers on Campus,” *Sacramento Bee*, 18 May 1997, at A13).

- “The lure of imaginary totality is momentarily frozen before the dialectic of desire hastens on within symbolic chains.” Frederick Botting, *Making Monstrous: Frankenstein, Criticism, Theory* (1991) (as quoted in Lilley).

One might try to defend this obtuseness on grounds that the subjects are metaphysical, but the defense will be to little avail.

Things have gotten so bad in some fields that even the experts sometimes can’t distinguish brilliance from gibberish. For example, in 2002 *The New York Times* reported that two French physicists (twin brothers named Bogdanov) had attracted a great deal of attention to their theory about what preceded the Big Bang. Here’s a sample of their prose: “Then we suggest that the (pre-)spacetime is in thermodynamic equilibrium at the Planck-scale and is therefore subject to the KMS condition.” According to one editor of a professional journal—a journal in which their work was published before the editors had “raised their standards”—the paper was “essentially impossible to read, like ‘Finnegans Wake.’” While a professor in France and another in Boston called the Bogdanovs’ work potentially valuable, a professor in New York called it “nonsense” and another in Santa Barbara called it “nutty.” The New York professor, a physicist at Columbia University, said: “Scientifically, it’s clearly more or less complete nonsense, but these days that doesn’t much distinguish it from a lot of the rest of the literature.” The Bogdanovs defended themselves by saying, “Nonsense in the morning may make sense in the evening or the following day.” For a full account of the affair, see Dennis Overbye, “Are They a) Geniuses or b) Jokers?” *N.Y. Times*, 9 Nov. 2002, at A19. This tale illustrates the beauty of obscurity: it’s all but impossible to judge its content.

The root of the problem is largely psychological: “Most obscurity, I suspect, comes not so much from incompetence as from ambition—the ambition to be admired for depth of sense, or pomp of sound, or wealth of ornament.” F.L. Lucas, *Style* 74 (1962). More bluntly still: “The truth is that many writers today of mediocre talent, or no talent at all, cultivate a studied obscurity that only too often deceives the critics, who tend to be afraid that behind the smoke-screen of words they are missing the effectual fire, and so for safety’s sake give honour where no honour is due.” G.H. Vallins, *The Best English* 106 (1960).

Excessive treatment of details often leads either to this substantive emptiness or to a self-defeating accuracy, in which it’s difficult for the reader to discern the major points because of the cascading minutiae. In writing of this kind, sentences are often so heavily qualified that they become unreadable. Edgar Allan Poe put the point well: “In one case out of a hundred a point is excessively discussed because it is obscure; in the ninety-nine remaining it is obscure

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

because excessively discussed” (as quoted in Ashbel G. Gulliver, *Cases on Future Interests* 13 [1959]).

A final point. If you’re going to be obscure, don’t promise simplicity. Calling your message easy and direct when it isn’t will engender resentment in your readers. Consider this opening sentence from an article on healthcare law: “The message of this article is simple and straightforward: If you represent non-integrated provider-controlled contracting networks purporting to operate as messenger arrangements but which in actuality are fixing prices, the time has come to fix them so they comply with section 1 of the Sherman Act.” Jeff Miles, “Ticking Antitrust Time Bombs: A Message to Messed-Up Messenger Models,” *Health Lawyers News*, Nov. 2002, at 5. Now try rereading it slowly to see if you can make out any glimmer of a point. Guess what. The healthcare lawyers who sent it to me as an example of poor prose didn’t understand it either.

For more on different types and causes of obscurity, see ABBREVIATIONS (C), ABSTRACTITIS, AIRLINESE, BUREAUCRATESE, COMMERCIALESE, COMPUTERESE, JARGON, LEGALESE, OFFICIALESE & WOOL-LINESS. For the antidote, see PLAIN LANGUAGE.

obsequies; obsequious. These words are unrelated in meaning. *Obsequies* (/ob-si-kweez/), the plural noun (the singular *obsequy* is rare), is a FORMAL WORD for *funeral*. *Obsequious*, the adjective, means “overeager to please or agree with powerful people.” It is pronounced /əb-see-kwee-əs/ or /ob-see-kwee-əs/.

observance; observation. The DIFFERENTIATION between these two words is complete. *Observance* = the act of heeding or obeying; an instance of following a custom or rule; a ritual. *Observation* = scrutiny; study; a judgment or inference from what one has seen.

obsess. This verb can be either intransitive <Philip obsessed about his lost love> or transitive—although the latter appears usually in the passive voice <Sylvia was obsessed with the idea>. Only rarely does *obsess* appear as an active transitive verb—e.g.: “Striving to decipher Picasso’s ambiguous blend of fierce misogyny and gaga woman-worship, Mailer ventures that women *obsessed* him because they were ‘the last available manifestation of that Creator whose secrets he had hoped to capture.’” Francine du Plessix Gray, “Stud Wars,” *L.A. Times Book Rev.*, 15 Oct. 1995, at 1, 15.

obsessive; obsessional. Except in the psychological term *obsessional neurosis*, *obsessional* is a NEEDLESS VARIANT.

obsolete; obsolescent. See **archaic**.

obstetric; *obstetrical. The more common, and the preferred, form is *obstetric*. The longer form held sway from about 1910 to 1958 but was then superseded.

Current ratio: 3:1

obstinacy, not **obstinance*, is the noun corresponding to *obstinate* (= stubborn)—e.g.: “Gundolf informed George that he had chided Rausch for his *obstinance* [read *obstinacy*].” Robert E. Norton, *Secret Germany* 419 (2002).

LANGUAGE-CHANGE INDEX

**obstinance* for *obstinacy*: Stage 1

Current ratio (*obstinacy* vs. **obstinance*): 155:1

obstructive; *obstructional; *obstructionary. The second and third are NEEDLESS VARIANTS.

obtain. See **attain**.

obtainment; *obtention; *obtainance; *obtainal. What noun corresponds to the verb *obtain*? Though none of these four is common, *obtainment* is the most natural and the most frequent. The others are NEEDLESS VARIANTS. Of course, the gerund *obtaining* is always available for use, and it’s more frequent than *obtainment*.

Current ratio (in order of headwords): 382:275:2:1

obtrusive. See **intrusive**.

obverse, n. See **converse, n.**

obviate. Some modern dictionaries define *obviate* as meaning “to make unnecessary.” And some writers actually use the word this way—e.g.: “Volunteering does not, I repeat does not, *obviate* government’s role in providing social services.” Betty Winston Baye, “Volunteers Won’t Be Enough,” *Courier-J.* (Louisville), 1 May 1997, at A13.

But that definition is unduly restrictive. In fact, the *OED* doesn’t even list this sense. *Obviate* more usually means “to meet and dispose of or do away with (a thing); to prevent by anticipatory measures” (*OED*). E.g.:

- “Human influence is a natural part of planetary evolution that might need to be tempered but certainly not *obviated*.” “Environment: Facing Facts,” *Richmond Times-Dispatch*, 6 Dec. 1995, at A10.
- “Mr. Kasparov said he had missed the draw because the computer had played so brilliantly that he thought it would have *obviated* the possibility of the draw known as perpetual check.” Bruce Weber, “Kasparov Sings the Deep Blues,” *Int’l Herald Trib.*, 13 May 1997, at 1.
- “I am also aware that if I capitulate, ceding my claim without contesting the other claim, I will raise the very suspicions I am seeking to *obviate*.” Chelsea Quinn Yarbro, *Communion Blood* 23 (1999).

See **circumvent**. Cf. **vitiate**.

In the sense “to make unnecessary,” *obviate* often appears correctly in the phrase *obviate the necessity of or need for*. These phrases are not redundancies, for the true sense of *obviate the necessity* is “to prevent the necessity (from arising),” hence to make unnecessary—e.g.: “Not insignificantly, it may also *obviate the need for* some government tuition aid.” John Kolbe, “Small Steps Creating Tax Revolution,” *Ariz. Republic*, 4 May 1997, at H5.

Obviate is sometimes misunderstood as meaning “to make obvious”—e.g.: “This is just another study *obviating* the obvious.” Gregory Stanford, “Surprise! Safety Net Does Work,” *Milwaukee J. Sentinel*, 8 Dec. 1996, Crossroads §, at 3. (A possible revision: *This is just another study making obvious things obvious*. Or: *This is just another study making obvious things more obvious*.)

obviously, like other dogmatic words (*clearly*, *undeniably*, *undoubtedly*), is one that writers tend to rely on when they’re dealing with difficult, doubtful propositions. Be wary of it. See **very** & WEASEL WORDS. Cf. **clearly**.

Occam’s razor; Ockham’s razor. In the 14th century, William of Ockham (1285–1349), an Englishman, wrote a book entitled *Commentary on the Sentences*. In it, he devised what is now known as *Occam’s razor* (the preferred spelling): *Entia non sunt multiplicanda praeter necessitatem* (lit., “entities are not to be multiplied beyond necessity”). In plain English, this means that the simplest of competing theories is preferable to the more complex ones, or that the parts of an argument should never be multiplied any more than necessary. Although many philosophers still use *Ockham*, the spelling *Occam* appears more than twice as often in modern print sources. Another term for *Occam’s razor* is the *law of parsimony*.

Current ratio (*Occam’s razor* vs. *Ockham’s razor*): 2:1

occupant; occupier. Although both refer to a person who occupies a particular place, AmE greatly prefers *occupant* for most purposes, while BrE distinguishes between the words based on time. In BrE, *occupant* connotes a short-term stay, whether in a taxi, a theater seat, or a hotel room <that room’s occupant will check out on Friday>; *occupier* connotes a long-term resident or tenant <my uncle has been the sole occupier since the house was built> or an occupying military force <the occupier of France during World War II>. E.g.: “While at first these unions were formed with the blessing of the *occupier*, they could be transformed into spaces of resistance against that *occupier* . . .” *Japan as the Occupier and the Occupied* 79 (Christine de Matos & Mark E. Caprio eds., 2015).

occurred. So spelled. But **occured* is a common misspelling—one of the most common, in fact, in the language. See SPELLING (B).

Current ratio: 272:1

occurrence. So spelled. Various misspellings (such as **occurence* and **occurance*) are fairly common. (See SPELLING (A).) The word’s first syllable is best pronounced /ə-/ , not /oh-/.

oceanic (= of, relating to, or involving one or more oceans) is pronounced /oh-shee-an-ik/—not /oh-see-an-ik/.

ochlocracy. See GOVERNMENTAL FORMS.

ochre; *ocher. Meaning “a clay from which a dark-yellow pigment is produced,” **ocher* is usually so spelled in AmE dictionaries. *Ochre* is the spelling found in BrE dictionaries. But American writers have long used both spellings, and since the late 18th century they have always preferred *ochre*. It’s now twice as common as **ocher*. See -ER (B).

Current ratio (AmE): 2:1

Current ratio (World English): 4:1

-**OCK**. See DIMINUTIVES (L).

Ockham’s razor. See **Occam’s razor**.

octet (= [1] a group of eight, esp. of musicians; or [2] a musical composition for eight musicians) is the standard spelling in AmE and BrE alike. **Octette* is a variant.

Current ratio: 268:1

octopus. Because this word is actually of Greek origin—not Latin—the classical plural is *octopodes* /ok-**top**-ə-deez/, not **octopi*. But the standard plural in AmE and BrE alike is *octopuses*—which has vastly predominated in print sources since the early 20th century. Still, some writers mistakenly use the supposed Latin plural—e.g.:

- “Winnik did a column on the sex life of *octopi* [read *octopuses*], but it’s not the kind of thing that should be in a family newspaper.” Bob Krauss, “Our Honolulu,” *Honolulu Advertiser*, 5 Feb. 2003, at 1.
- “Had he won the thing after having won last week at the Bob Hope, the fans would have tossed hats or *octopi* [read *octopuses*] onto the 18th green.” Scott Ostler, “Bank Shot Is Given Hole New Meaning,” *S.F. Chron.*, 10 Feb. 2003, at C1.
- “Mr. Cranston concentrates on one class of marine mollusk: cephalopods. That means *octopi* [read *octopuses*], nautili, cuttlefish, and squid.” Anita Gates, “Cuttlefish and *Octopi* [read *Octopuses*, even though it spoils the rhyme] and Squid, Oh My!” *N.Y. Times*, 17 Dec. 2005, at A30.

See PLURALS (B) & HYPERCORRECTION (A). Since 1900, *octopuses* has greatly predominated in English-language print sources.

Occasionally the pedantic *octopodes* appears, but it is relatively rare—e.g.: “The baby octopus salad, made with finger-sized *octopodes*, whole and purplish, were marinated in a tasty, sesame oil dressing and lightly sprinkled with sesame seeds.” Rose Kim, “Food Day,” *Newsday* (N.Y.), 19 Oct. 2001, at B23.

LANGUAGE-CHANGE INDEX

**octopi* for *octopuses*: Stage 3

Current ratio (*octopuses* vs. **octopi*): 3:1

ocular is turgid for *visual* or *with one’s eyes* <ocular inspection>. The word is sometimes misspelled **occular*.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

oculist; oculoartist. See **ophthalmologist**.

odalisque (= [1] a female slave or concubine in a harem; or [2] an exotic, sexy woman, esp. a reclining nude as a theme in a painting) is the standard spelling. **Odalisk* is a variant. The word is pronounced /oh-də-lisk/. See SPELLING (A).

Current ratio: 13:1

oddly. See SENTENCE ADVERBS.

odds. *Odds are* is a familiar locution. But when *odds* is separated from the verb, a mistake in SUBJECT-VERB AGREEMENT often appears—e.g.:

- “The *odds* that a woman might have more than one *is* [read *are*] extremely low.” Sandra Coney, “Full Cancer Evaluation—Now,” *Sunday Star-Times*, 16 May 1999, at C4.
- “The *odds* of hitting all six numbers *is* [read *are*] one in 18 million.” Harrison Sheppard, “Lotto Number: \$56 Million,” *Daily News* (L.A.), 17 Aug. 1999, at N4.
- “The *odds* of an instrument being contaminated *is* [read *are*] slight to begin with.” Sandi Doughton, “Clinic Warns of Infection Risk,” *Seattle Times*, 27 Aug. 2015, at A1. (On the failure to use a possessive before the gerund *being* in that example, see FUSED PARTICIPLES.)

LANGUAGE-CHANGE INDEX

**odds . . . is*: Stage 1

***odiferous.** See **odorous**.

odious (= hateful, repulsive) derives from *odium* (= hatred; the reproach that attaches to an act that people despise). E.g.: “The other problem with this legislative effort is that it came about in reaction to citizen disgust with an earlier, more *odious* plan advanced by Rep. Kay O’Connor of Olathe—who has espoused using state tax money to support private education vouchers.” Laura Scott, “Cramped View of ‘The Basics,’” *Kansas City Star*, 4 Mar. 1997, at C6.

Odious has nothing to do with *odor*—the extended sense of “repulsive” means repulsion based on hatred, not on stench. But some writers, mistakenly believing that it does, commit a MALAPROPISM—e.g.:

- “They were impassable in spring and unbearable in summer (largely due to *odious* [read *odorous* or *malodorous*] horse effluence).” John Clayton, “Roll the Snow, Stick the Gum, and ??? the Cats,” *Union Leader* (Manchester, N.H.), 15 Jan. 1996, at A1.
- “The oil business has pretty much dried up in Luling, where empty stores dot the main street. What remains is the pall of an *odious* [read a *malodorous*] smell from the natural gas flared off when pressure builds inside the wells.” Philip Hersh, “‘In This Day . . . Why Are We Dying?’” *Chicago Trib.*, 2 Sept. 2001, News §, at 1.
- “As I walk closer to the baths I notice that they are filled with excrement. The stench is *odious* [read *nauseating*].” Patti Thorn, “Incest and Empathy: A Counselor’s Tale,” *Rocky Mountain News* (Denver), 16 Nov. 2002, at D7.

See **odorous**.

LANGUAGE-CHANGE INDEX
odious in olfactory sense: Stage 1

odor (= a smell) is so spelled in AmE, *odour* in BrE. The AmE spelling took hold in the early 1840s. The corresponding adjective is *odorous* in all varieties of World English. See -OR; -OUR.

odorous; odoriferous; malodorous. In practice, *odorous* (= having a pronounced odor) is neutral in connotation <an odorous bouquet> <an odorous locker room>. Although in 1957 the Evanses insisted that *odorous* be “strictly confined to pleasant fragrances” (*DCAU* at 333), today it is used with a negative sense about twice as often as a positive one. *Malodorous* carries even stronger negative connotations <a malodorous bathroom>. *Odoriferous*, a frequently misused term, has historically had positive connotations in the sense “fragrant” <odoriferous rose gardens>. It shouldn’t be used in reference to foul odors—e.g.: “The only thing that gave him trouble was finding a toad; the rest of the stuff, though mostly nasty and *odoriferous* [read *odorous* or *malodorous*], was obtained with little difficulty.” Theodore R. Cogswell, “The Wall Around the World” (1953), in *The Mammoth Book of Fantasy* 1, 12 (Mike Ashley ed., 2001).

**Odiferous* is an erroneous shortening of *odoriferous* that sprang up about 1920. It’s often misused for *odorous* or *malodorous*—e.g.: “I was in the Texas Panhandle, typically maligned for its harsh weather, *odiferous* [read *malodorous*] feedlots, and dull, wind-whipped landscape—flat as a tortilla and practically treeless.” Joe Nick Patowski, “Grand Canyons,” *Texas Monthly*, Aug. 1997, at 130. Only someone familiar with garlic plants knows whether the odor in the following example is nice or foul (probably the latter): “They are underplanted with useful plants ranging from fragrant peppermint to *odiferous* [read *malodorous*, *odorous*, or *odoriferous*] garlic chives.” Rosemary Herbert, “New England Gardening,” *Boston Herald*, 3 Aug. 1997, at 53.

Just as *odious* (= offensive) is sometimes misused to describe a foul smell, so *odoriferous* is sometimes misused to mean “corrupt” or at least “suspicious”—e.g.: “There does seem to be something *odoriferous* underfoot.” Kathleen Parker, “American Fatwa Coming to a Bookstore Near You,” *Orlando Sentinel*, 29 Dec. 2002, at G3. Unfortunately, the use is common enough that at least one dictionary (*W11*) lists “morally offensive” as an alternative definition of *odoriferous*. In one sense that’s understandable, because corruption and bad smells have always been associated (the usage passes the sniff test). But in a larger sense it’s unfortunate, since we can’t clearly distinguish all the *odor* words we already have—and it just continues the degeneration of the word’s connotations. It would be far better to think of this loose extension as an ineffectual METAPHOR rather than as a definition. See **odious**.

Current ratio (*odoriferous* vs. **odiferous*): 5:1

oenology. See **enology**.

-OES. See **PLURALS** (D).

of. A. Signaling Verbosity. However innocuous it may appear, the word *of* is, in anything other than small doses, among the surest indications of flabby writing. Some fear that *of* and its resulting flabbiness are spreading: “Clearly, *of* is now something more than a mere preposition. It’s a virus.” “All About Of,” *N.Y. Times*, 8 Mar. 1992, at 14. The only suitable vaccination is to cultivate a hardy skepticism about its utility in any given context. If it proves itself, fine. Often, though, it will merely breed verbosity—e.g.:

- “In spite *of* the fact that a great percentage *of* the media coverage *of* Muslims mainly targets the negative actions *of* some splinter groups and several individuals, there are still a shrinking number *of* people who are still under the false impression that Al-Islam is a ‘bloody and dangerous religion,’ as the Bishop puts it.” Frederick Qasim Khan, “Muslims Do Not Denounce Christians,” *Call & Post* (Cleveland), 4 Jan. 1996, at A5. (A possible revision: *Because the media frequently put Muslims in a negative light, some continue to believe that Al-Islam is a “bloody and dangerous religion,” as the Bishop puts it.* [Five *ofs* to none; 56 words to 28; and heightened logic in the revision.])
- “By the mid-1980s, many *of* these politicians were seen as a big part *of* the problem not only in terms *of* poor economic performance but also in terms *of* political authoritarianism.” Julius E. Nyang Oro, “Critical Notes on Political Liberalization in Africa,” *J. Asian & Afr. Studies*, 1 June 1996, at 112. (A possible revision: *By the mid-1980s, many of these politicians were seen as having contributed to the problem both through poor economic performance and through political authoritarianism.* [Four *ofs* to one; 32 words to 25.])
- “In light *of* the high number *of* requests from retail investors, the Treasury can expect to top the million mark in terms *of* numbers *of* small shareholders participating in the privatization.” Deborah Ball, “Telecom IPO in Italy Has Strong Start,” *Wall Street J. Europe*, 21 Oct. 1997, at 13. (A possible revision: *Given the high demand from retail investors, the Treasury can expect that more than a million small shareholders will participate in the privatization.* [Four *ofs* to none; 31 words to 23.])

As the examples illustrate, reducing the *ofs* can, even at the sentence level, make the prose much more brisk and readable. See **PREPOSITIONS** (A).

B. Intrusive of. The word *of* often intrudes where it doesn’t idiomatically belong, as in **not that big of a deal* (read *not that big a deal*), **not too smart of a student* (read *not too smart a student*), **somewhat of an abstract idea* (read *a somewhat abstract idea*), etc. E.g.: “Spurs guard Mario Elie doesn’t seem to think the Spurs will have *that difficult of a time* [read *a difficult time*] handling the Knicks in these Finals.” “Elie Attacks,” *Fla. Today*, 17 June 1999, at C2. Cf. **all** (A), **as . . . as** (D) & **too** (C).

For the opposite tendency—omitting a necessary *of*—see **couple** (c).

C. Superfluous in Dates. *December of 1987* should be *December 1987*. See **DATES** (B).

D. For have. Because the spoken *have* (especially in a contraction) is often identical in sound with *of* (<I should’ve done it>), semiliterate writers have taken to writing **should of*, **could of*, and **would of* (aka **shoullda*, **coulda*, and **woulda*). But the word is *have*, or a contraction ending in *’ve*, and it should be written so. This error has typified uneducated usage since about the time of World War I. Instances of it are legion—e.g.:

- “‘He may *of* [read *have*] been otherwise occupied by his other legal troubles,’ Lanza said. ‘Other than that, I don’t know.’” Jack Sherzer, “Spotz Suit Against Officers Dismissed,” *Harrisburg Patriot*, 1 Aug. 1996, at B4 (quoting David J. Lanza, who can’t be faulted for the mistranscription).
- “Humans are great with second-guessing and hindsight, but the truth is that we only know this reality and not the one that might *of* [read *have*] been.” Richard Kohn, “Politics Is Harmful to Heroes’ Health,” *News & Record* (Greensboro), 23 Aug. 1998, at F3.
- “When it turned out Watson was up north, he changed his story, admitted he might *of* [read *have*] done the job himself, called it self-defense.” Peter Matthiessen, “The Killing of the Warden,” *Audubon*, 1 Nov. 1998, at 36.
- “Not bad, but I could *of* [read *have*] eaten three of them.” Steve Hopkins, “Kiwi Blokes Like ‘Em Extra Large,” *New Truth & TV Extra*, 24 Nov. 2000, at 9.
- “Beethoven never would *of* [read *have*] made the cut either.” Letter of Elizabeth A. Pickett, *Hartford Courant*, 2 Dec. 2000, at A14.

of misused for *have*: Stage 1

E. Of a . . . nature. See **nature**.

F. Of-genitive vs. Possessive. See **of** (A) & **POSSESSIVES** (H).

***of a.** The collocation [adj.] + *of a* + [noun] is unrefined usage. See **of** (B).

off. See ***off of**.

off-color (= [1] varying from a given color; or [2] in poor taste; risqué) is the standard term. **Off-colored* is a variant form with nothing to recommend it.

Current ratio: 21:1

offence. See **offense**.

offendable; *offendible. The former is standard, the latter a variant spelling. See -**ABLE** (A).

offense; offence. The first has been the AmE spelling since about 1910; the second has always been standard BrE. In AmE and BrE alike, the word is preferably accented on the second syllable: /ə-**fɛn**[t]s/. Unfortunately, because athletes and sports announcers put the accent on the first syllable (/ɒf-**ɛn**[t]s/), many American speakers have adopted this pronunciation

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

even in the word's legal sense. The sound of it puts the literate person's teeth on edge. Cf. **defense**.

In BrE, and to a lesser extent in AmE, lawyers commonly distinguish *crimes* (at common law) from *offenses* (created by statute). It is common in both speech communities to use *offense* for less serious infractions and *crime* for more serious ones. Lawyers would not speak of the "offense" of murder. Nor would they refer to the "crime" of parking a car in the wrong place.

LANGUAGE-CHANGE INDEX

offhand, adj.; ***offhanded**. Although *offhand* (not **offhanded*) is the standard adjective, *offhandedly* is the standard adverb—in AmE and BrE alike.

Current ratio (*offhand* vs. **offhanded*): 12:1

office, vb., has become a commonplace expression in the American business world, but not among fastidious users of language. Although *office* is recorded as a verb from the 16th century, the new vogue began in the Southwest during the 1980s within the oil-and-gas industry. Gradually it has spread to other fields and has started to overrun the country. No one seems to *have an office* anymore; instead, everyone *offices*. E.g.:

- "Officing in Irvine, Calif., Carlisle will be responsible for business development in the eleven western states." *Oil & Gas J.*, 25 July 1983, at 172.
- "The Uptown area is most attractive to prospective tenants wanting the lure of downtown without the high costs associated with *officing* there." Anne Belli, "Uptown Looking Up," *Dallas Bus. J.*, 2 May 1988, at A18.
- "A few months ago, Tali Blumrosen and Chris Pierini formed a new PR firm, B&P, *officing* out of their homes." Maxine Mesinger, "Life's a Party for Birthday Trio," *Houston Chron.*, 25 Sept. 1996, Houston §, at 1.
- "Officed at the corporate location today, she began her career across the street in bookkeeping using a crank adding machine." Rosemary Horvath, "Business Milestone," *Sentinel-Standard* (Ionia, Mich.), 29 Nov. 2014, Mich. News §, at 1.

This is a classic example of the issue discussed under FUNCTIONAL SHIFT (A), (D).

LANGUAGE-CHANGE INDEX

office as a verb: Stage 3

OFFICIALESE = the language of officialdom, characterized by bureaucratic turgidity and insubstantial fustian; inflated language that could be readily translated into simpler terms. E.g.: "To promote the successful completion of our customary mid-diurnal paradigm regarding the procurement of necessary nutritional supplementation and the advancement

of the contemporaneous, spontaneous, and coterminous interdialoguing of affiliated human-services assets, the present contingent should initiate both direct and lateral movements as appropriate to minimize and at the end of the day eliminate the physical separation between the target population and the aliment-preparation and -dispensation facilities." As translated: "Let's talk over lunch."

Officialese is governed by four essential rules. First, use as many words as possible. Second, if a longer word (e.g., *utilize*) and a shorter word (e.g., *use*) are both available, choose the longer. Third, use circumlocutions whenever possible. Fourth, use cumbersome connectives when possible (*as to*, *with regard to*, *in connection with*, *in the event of*, etc.).

Among the linguistically unsophisticated, puffed-up language seems more impressive. Hence police officers never *get out of their cars*; instead, they *exit their vehicles*. They never *smell* anything; rather, they *detect it by inhalation*. They *proceed* to a residence and *observe* the suspect *partaking of food*. They never *arrest a person*; rather, they *apprehend an individual*. Rather than *sending* papers to each other, officials *transmit* them (by hand-delivery, not by fax). And among lawyers, rather than *suing*, one *institutes legal proceedings against* or *brings an action against*. For sound guidance on how to avoid officialese, see Ernest Gowers, *The Complete Plain Words* (2d ed. 1973); J.R. Masterson & W.B. Phillips, *Federal Prose: How to Write in and/or for Washington* (1948). See OBSCURITY. Cf. BUREAUCRATESE.

officiate. The verb, meaning "to perform the duties of an official," has traditionally been intransitive—that is, it doesn't take a direct object; instead, it has a preposition after it. A priest *officiates at* a wedding, and a referee *officiates at* a sports event. Only up to the early 1700s was the word ever transitive, and then only rarely. But this usage is now undergoing something of a resurgence. One sees it most often in the PASSIVE VOICE—e.g.:

- "A memorial Mass *was officiated* [read *was led*] by Rev. Nathanael Foshage on Wednesday, Sept. 26 at St. Michael's Catholic Church in Delta." "Allinson" (obit.), *Chicago Trib.*, 27 Sept. 2001, at 7. [Or read: *The Rev. Nathanael Foshage officiated at the memorial mass on Wednesday . . .*] (On the use of *Rev.* in the original sentence, see **Reverend**.)
- "The ceremony *was officiated* by Rabbi Sherwin Wine." Nancy Chipman Powers, "Three New Rabbis Share Secular Humanist Heritage," *Detroit Free Press*, 5 Dec. 2001, at B2. [Read *Rabbi Sherwin Wine officiated at the ceremony*.]
- "The game *was officiated* very tightly." David Steinle, "Belaire, Capitol in Final," *Advocate* (Baton Rouge), 15 Dec. 2001, at D9. [Read *The referees officiated over the game very tightly*.]

Some writers attempt to preserve intransitivity by writing *was officiated at*—e.g.: "Limbaugh—a conservative of such clout that his 1994 marriage to third wife Marta Fitzgerald *was officiated at* by Justice Clarence Thomas—is determined to stay on the air." Lori Rozsa, "Rush Limbaugh Reveals He Is Going Deaf,"

People, 22 Oct. 2001, at 60. But the passive form necessarily means that the verb is being used transitively: to say that *Justice Thomas officiated at the wedding* can't properly be rendered as *the wedding was officiated at by Justice Thomas*. See ERGATIVE VERBS.

officious. In Samuel Johnson's day, *officious* had positive connotations ("eager to please"). Today, however, it means "meddlesome; interfering with what is not one's concern." E.g.: "Over the years, the most *officious* and obnoxious customs officials I encountered were those in India." Thomas Sowell, "On Busybodies, Young 'Adults' and Self-Respect," *Atlanta J.-Const.*, 6 Sept. 1995, at A10.

In the context of diplomacy, the word has a strangely different sense: "having an extraneous relation to official matters or duties; having the character of a friendly communication, or informal action, on the part of a government or its official representatives" (*OED*) <an officious communication>.

The word has been subjected to SLIPSHOD EXTENSION. Some mistakenly think it means "official-looking"—e.g.: "He still lived in the same old dormitory, but in a bigger and more *officious* room." Still others take it to mean "official-sounding" or merely "official"—e.g.:

- "A dead person is the 'decedent' in the *officious lingo* [read *jargon*] of the medical examiner, for example, and ballistics experts often refer to 'the signature of the weapon.'" Phil Reisman, "Firsthand Look at the Ease of Getting an Indictment," *J. News* (Westchester Co., N.Y.), 9 Jan. 2003, at B1.
- "In an *officious-sounding* [read *official-sounding*] voice, he warns victims they've ignored multiple summonses for jury duty." Dan Casey, "'Jury Duty' Scam Targets Unwary Residents," *Roanoke Times*, 8 Jan. 2015, at B1.

LANGUAGE-CHANGE INDEX
officious in the sense "official-looking": Stage 3

offing, in the. This is the correct, idiomatic phrase meaning "likely to occur soon"—not **on the offing*.

***off of** is idiomatically inferior to *off* without the preposition—e.g.:

- "It wasn't as though Porch was looking for a tall bridge to jump *off of* [read *off*] after last week's loss." Brian J. French, "Porch Makes Amends for Fumble, Carries the Tribe Past Boston U," *Virginian-Pilot & Ledger Star* (Norfolk), 28 Sept. 1997, at C5.
- "As I raked, I knew all the leaves and the people that had planted the trees they fell *off of* [read *off*]." Adyne Wakefield, "Raking Up the Past as Winter Nears," *Oregonian* (Portland), 21 Nov. 1997, at D19.
- "When Witty arrived at UC in 2010, the Bearcats were coming *off of* [read *off*] their glorious Sugar Bowl season (12–1) under Brian Kelly." Tom Groeschel, "UC Yearns to Be Back in Top 25," *Cincinnati Enquirer*, 3 Sept. 2015, at C8.

In print sources since 1500, the collocation *off the* has been in constant use, while **off of the* occurs only seldom. Cf. **outside**.

LANGUAGE-CHANGE INDEX

**off of* for *off*: Stage 3

Current ratio (*off the* vs. **off of the*): 42:1

offspring (= one or more children or descendants) is either singular or—more commonly—plural <many parents aren't teaching their offspring these days>. There is no plural form **offsprings*, but this escapes some writers. E.g.: "And with three horses—his mare and two *offsprings* [read *offspring*]—at nearby Crestwood Farm, he is well on his way." Mark Woods, "Hard-Hitting Cat Has Soft Spot for Horses," *Courier-J.* (Louisville), 11 Sept. 1997, at C1.

LANGUAGE-CHANGE INDEX

**offsprings* for plural *offspring*: Stage 1

Current ratio (*several offspring* vs.

**several offsprings*): 72:1

***oft.** See **often (B)**.

often. A. Pronunciation. The educated pronunciation is /*of-ən*/, but the less adept say /*of-tən*/. To put it another way, the silent-*t* pronunciation is U; the spoken-*t* pronunciation is distinctly non-U. (See CLASS DISTINCTIONS & PRONUNCIATION (B).) Similar words with a silent -*t* are *chasten*, *fasten*, *hasten*, *listen*, *soften*, and *whistle*.

LANGUAGE-CHANGE INDEX

often pronounced /*of-tən*/: Stage 4

B. And oftentimes; *oft; *ofttimes. *Oftentimes* is a common synonym of *often*; it often seems to add weight and perhaps quaintness to a pronouncement. The second and third are literary ARCHAISMS and NEEDLESS VARIANTS. Substituting *often* is almost always (not merely often) better—e.g.:

- "Bessette and Gleason know that *oftentimes* [read *often*] it's the little things they do that make the most difference." Ashley Clemente-Tolins, "The Night Shift," *Oregonian* (Portland), 21 Dec. 1995, at 1.
- "Although she *oft* [read *often*] made it to the lane, Sadler (7 points on 2-for-13 shooting) was usually greeted by Hillwood's Latonia Clay, a 5-11 center with a penchant for altering shots." Jeff Pearlman, "Szamier Smooths Out Hillwood's 49–36 Romp," *Tennessean*, 10 Jan. 1996, at C4.
- "Smoke and smells from nearby concession stands *ofttimes* [read *often*] wafted over the courts." Frederick C. Klein, "Plenty of Lunch Seating, but U.S. Open Stadium Isn't All for the Masses," *Wall Street J.*, 29 Aug. 1997, at B4.

About the only time *oft* is justified is when it's part of a PHRASAL ADJECTIVE <an oft-quoted passage>. Cf. **once & then (A)**.

***ofttimes.** See **often (B)**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

ogle (= to stare in a flirtatious or sexually suggestive way) is preferably pronounced /**oh**-gəl/—not /**ah**-gəl/ or /**aw**-gəl/.

ogreish (= rather like an ogre) is the standard spelling in AmE and BrE alike. **Ogrish* is a variant.

Oh. See **O**.

***oinology.** See **enology**.

okay; OK; O.K. Each of these is okay. Although *OK* predominates in highly informal contexts, *okay* has an advantage in edited English: it more easily lends itself to cognate forms such as *okays*, *okayer*, *okaying*, and *okayed*. The term is a **CASUALISM** in any event, but *okay* is slightly more dressed up than *OK*. Some purists prefer *OK* simply because it's the original form. It is, after all, the most successful Americanism ever—perhaps the best-known word on the planet.

A few publications, such as *The New Yorker*, prefer the periods—e.g.: “It's O.K. Take your time.” Arthur Miller, “The Bare Manuscript,” *New Yorker*, 16 Dec. 2002, at 82, 91. For more on the presence or absence of periods, see **ABBREVIATIONS (A)**.

okina. For a brief discussion of this **DIACRITICAL MARK** in Hawaiian English, see **Hawaii (B)**.

Oklahoma Citian; *Oklahoma Cityan. The first is the standard spelling; the second is a variant. See **DENIZEN LABELS**. Cf. **Kansas Citian; Twin Citian**.

Oklahoman; *Oklahomian; Okie. The first is standard; the second is a **NEEDLESS VARIANT** that rarely appears in print; the third is a common **CASUALISM** considered derogatory by many Oklahomans. See **DENIZEN LABELS**.

ol. See **olde**.

old adage. See **adage**.

olde; ole; ol. These affected variants of *old* come in two distinct flavors. *Olde* is a 20th-century invention intended to mimic Old English <Ye Olde Pub>. The spurious coinage has become tediously popular in an age of mass-produced quaintness. The spuriousness is compounded in the example above when *ye* is pronounced as it is spelled. The first letter of the authentic Middle English term was a *thorn*, identical in form to the letter *y* but pronounced with a voiced *th*, as in *this*.

By contrast, *ole* and *ol* are 19th-century inventions used mostly in dialogue to signify **DIALECT** <Grand Ole Opry> <Bubba's a good ol' boy>.

The spelling *olde* is distinctly out of place when used in a rural rather than Old World context—e.g.: “Texas *Olde* [read *Ol* or *Ole*] Time Fiddlers Jam.” “Best Bets,” *Austin Am.-Statesman*, 19 July 2002, at E2.

olden. Apart from the **SET PHRASES** *olden times* and the *olden days*, this adjective doesn't generally appear in good writing (except in that of Shakespeare and his contemporaries). Today, the word describes itself: it's a creaky **ARCHAISM**.

older; oldest. See **elder**.

ole. See **olde**.

oligarchy. See **GOVERNMENTAL FORMS**.

oligopoly; oligopsony. The former denotes control or domination of a market by a few large sellers; the latter, control or domination of a market by a few large customers.

ombudsman; ombuds; *ombudsperson. *Ombudsman* = (1) an official appointed to receive, investigate, and report on private citizens' complaints about the government; or (2) a similar appointee in a nongovernmental organization. Originally a Swedish word denoting a commissioner, *ombudsman* spread throughout the world during the mid-20th century as governments and other institutions saw the wisdom of having such an official. Though the word entered the English language only as recently as the mid-1950s, it has caught on remarkably well.

But despite its prevalence throughout the English-speaking world, this word might prove to have a short life span. Because of the *-man* suffix, many writers consider it sexist. (See **SEXISM (C)**.) Some have taken to lopping off the suffix, and though the word *ombuds* looks distinctly un-English and remains unrecorded in most English dictionaries, it is surprisingly common—e.g.: “To resolve disputes with managers, lab employees can go to the *ombuds* office, where a neutral mediator tries to facilitate resolutions informally and confidentially.” Adam Rankin, “Lab Vows to Win Worker Trust,” *Albuquerque Trib.*, 28 Jan. 2003, at D3.

Several writers have tried **ombudsperson*, but that coinage should be allowed to wither. Others have experimented with *ombuds officer*, which at least satisfies one's desire to have a word that looks as if it denotes a person—e.g.: “Columbia University last week named its first ‘*ombuds officer*’ as a reference point on campus for people who have grievances within the university and are looking for options to deal with them.” “Campus Life: Columbia,” *N.Y. Times*, 14 July 1991, § 1, pt. 2, at 31.

In 2008, *ombudsman* remained more than ten times as common in print sources as its rivals.

Current ratio (*ombudsman* vs. *ombuds* vs. **ombudsperson*): 12:1.5:1

omelet; omelette. American dictionary publishers are in step with current usage, which prefers *omelet* to *omelette* by a 2-to-1 ratio. But in BrE, *omelette* is about 3 times more common.

omissible. So spelled—not **omissable*. (See **-ABLE (A)**.) **Omittable* is a **NEEDLESS VARIANT**.

Current ratio (*omissible* vs. **omittable* vs. **omissable*): 39:3:1

on; upon. These synonyms are used in virtually the same ways. The distinctions are primarily in tone and

connotation. *On*, the more usual word since the mid-18th century, is generally preferable: it's better to write *put the groceries on the counter* than *put the groceries upon the counter*. But *upon* is the better word for introducing a condition or event—e.g.: *Upon receiving the survey, you should fill it out completely*. See **upon**.

on behalf of. See **behalf**.

onboard; on board. As an adjective, *onboard* is a closed compound <an onboard navigation system>. As an adverbial phrase, *on board* remains a preposition with its object <loading cargo on board>. Writers occasionally flounder—e.g.: “The man had brought nothing *onboard* [read *on board*], the movie screen wasn't working, and apparently all he could do for entertainment was tap on the window and sing to himself.” Joshua Kurlantzick, “The Agony and Ecstasy of 18 Hours in the Air,” *N.Y. Times*, 2 July 2006, § 5, at 3. Cf. **online**. See also **aboard**.

once. By convention, *once* isn't hyphenated either adverbially <a once powerful monarch> or adjectivally <the once and future king>. Cf. **often (B)** & **then (A)**.

once in a while. So written. The phrase is occasionally disfigured into a MONDEGREEN—e.g.:

- “The recipes are usually interesting, and I may even try one *once and while* [read *once in a while*].” Dan Macdonald, “Ingenuity in Kitchen Can Stop the Tears,” *Fla. Times-Union*, 22 July 1999, at F1.
- “The father said he could not ask for anything more out of his son. Except maybe for letting the old man make a better-tasting omelet every *once and while* [read *once in a while*].” Tom Reed, “Fraternal Instinct,” *Akron Beacon J.*, 17 Aug. 2001, at E7.
- “*Once in while* [read *Once in a while*], I'll part with some [buttery caramel corn] for special friends.” Kathie Jenkins, “Better than Store-Bought,” *Pioneer Press* (St. Paul), 7 Dec. 2001, at F3.

For the mistake of writing **ever once in a while* for *every once in a while*, see **ever (B)**.

LANGUAGE-CHANGE INDEX

1. **once and while* for *once in a while*: Stage 1
Current ratio (*once in a while* vs. **once and while*): 1,482:1
2. **once in while* for *once in a while*: Stage 1
Current ratio (*once in a while* vs. **once in while*): 199:1

one. A. The Overdone *one*. In AmE, *one* (= any person indefinitely) is extremely formal. To most American speakers, it seems bookish and pedantic. It's rare to find anyone who goes this far, especially in speech: “So if *one* does *one's* best, *one* recognizes that sometimes *one's* best is not going to bring all of the changes that *one* would hope for, but it doesn't mean there hasn't been progress.” Bob Krueger (interviewed by Diane Jennings, *Dallas Morning News*, 31 Dec. 1995,

at J1). For ordinary purposes, *you* is a better, more relaxed choice. The passage above, for example, might have read: *So if you do your best, you recognize that sometimes your best isn't going to bring all the changes that you would hope for, but it doesn't mean there hasn't been progress*. See **you**.

One can only sympathize with the student whose essay was revised by a teacher to read this way: “Does *one* ever feel bereft when *one* picks up *one's* chips to light *one's* fire for *one's* evening meal? Or when *one* washes *one's* milk pail before milking *one's* cow? *One* would fancy not.” In discussing this editorial travesty, a linguist asks: “Is it possible that the impeccable ‘*one*’ can be overdone? *One* fancies, from this illustration and others that *one* knows, that it can.” Dora Jean Ashe, “One Can Use an Indefinite ‘You’ Occasionally, Can't You?” in *A Linguistics Reader* 63, 64 (Graham Wilson ed., 1967).

Or as another linguist wryly put it: “One has only to listen to *one's* pseudo-educated and superprecise friends to get *one's* ear full.” Lodwick Hartley, “Provocative Pronouns for Precise People” (1959), in *A Language Reader for Writers* 107, 108 (James R. Gaskin & Jack Suberman eds., 1966).

B. *One . . . he*. This expression, though historically condemned as inferior to *one . . . one*, actually predominates in AmE usage. But its future probably isn't bright: *one . . . he* bothers strict grammarians as being less than fully grammatical, and it bothers other readers as being sexist. See **SEXISM (B)**. So it should probably be improved—e.g.:

- “When *one* is writing exposition, surely *he* should not indulge himself in poetic prose.” Leo Kirschbaum, “Style” (1961), in *Perspectives on Style* 56, 61 (Frederick Candalaria ed., 1968). (A possible revision: *Surely a person writing exposition should not indulge in poetic prose*.)
- “*One* does not sacrifice *his* individuality by using such means of communication.” Ellsworth Barnard, *English for Everybody* 35 (1979). (A possible revision: *You don't sacrifice your individuality by using such means of communication*.)
- “I hate it when the rock stars of *my* youth die. Not only does it draw *one* uncomfortably close to *his* own mortality, but a little piece of *yourself* goes toes up with them.” Buddy Blue, “A Spoonful-Sized Tribute to a Supersized Talent,” *San Diego Union-Trib.*, 26 Dec. 2002, Mag. §, at 14. (Why not just stick with the **FIRST PERSON** throughout? Touching all three bases—first [*my*], second [*yourself*], and third [*his*]*—is impressive, but it's no home run*.)

See **you**.

LANGUAGE-CHANGE INDEX

one . . . he: Stage 4

C. *One* [+ name]. Using *one* as an adjective before a proper name, as in “*one* Howard James,” is a pretentious legalism with a valid pedigree in English, but generally without justification in modern prose. It might even hint at biblical echoing, for the *OED* quotes from the Bible: “and of *one* Jesus, which was

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

dead, whom Paul affirmed to be alive” (Acts 25:19). Today, however, the word *one* usually looks askance at any name following it. But occasionally it can be neutral in connotation, when the writer wants to hint that the person named is not someone the reader is probably familiar with <at the table were Madonna, Elton John, and one Harold Pfister of Des Plaines>.

one and one (is) (are). See SUBJECT-VERB AGREEMENT (G).

one and the same, a phrase dating from the 16th century, is occasionally misrendered **one in the same*.

one . . . he. See **one (B)**.

180-degree turnaround; *360-degree turnaround.

In nontechnical contexts, when you use measurements of geometric degrees, you’ll probably want either *90 degrees* (a right angle, as for a left- or right-hand turn) or *180 degrees* (a complete turnaround). The phrase *360 degrees* refers to a full-circle turn <a 360-degree skid> or a panorama—e.g.: “On the fourth floor, windows provide a *360-degree* view of the treetops.” Ruth Ryon, “Living Above It All in Converted Water Tower,” *L.A. Times*, 6 Apr. 2003, at K14. To turn 360 degrees is to be facing the same direction you started with.

By contrast, *180 degrees* from one direction is the opposite direction. In the common idiom, to make a *180-degree turnaround* is to change circumstances completely—e.g.: “NBC’s *180-degree* turn between Sunday, when it defended [Peter] Arnett’s decision to grant the Iraqi TV interview, and yesterday, when he was fired, was an eyebrow-raiser.” Melanie McFarland, *Seattle Post-Intelligencer*, 1 Apr. 2003, at E1.

Sometimes writers turn the idiom too far, referring absurdly to a **360-degree turnaround*, which would logically denote “full circle” or (to change the geometrical metaphor) “back to square one”—e.g.:

- “[Christina] Aguilera, when she wasn’t dressed as a wannabe New Orleans hooker for the ‘Lady Marmalade’ performance, did a *360-degree* [read *180-degree*] turn from last year’s Grammy fashion fiasco.” Monica L. Haynes, “O J-Lo, Where Art Thou?” *Pitt. Post-Gaz.*, 28 Feb. 2002, at D1.
- “For many rock fans, the ‘alternative rock’ music scene out there today is quite disappointing—the music sounds too manufactured and fake and isn’t very original. The Used is a *360-degree* [read *180-degree*] turn from all of this.” Melissa Ortiz, “A Utah Alternative,” *Buffalo News*, 13 Nov. 2002, at N4.
- “[Joe] McCarthy, arguably the top boys basketball player in the 1A North Star League, has done a *360-degree* [read *180-degree*] turnaround since arriving in Clark Fork in November 2000.” Greg Lee, “New Spin on Life,” *Spokesman Rev.* (Spokane), 16 Jan. 2003, at C1.

See ILLOGIC.

**360-degree turnaround* for *180-degree turnaround*:

Stage 1

Current ratio (*180-degree turnaround* vs.

**360-degree turnaround*): 13:1

one in [number] is; *one in [number] are. In this construction, a singular verb is required because *one* is the subject. But writers frequently get it wrong—e.g.:

- “Only one in five *believe* [read *believes*] that their parents had more fun as teenagers than they are experiencing now.” Bob Dart, “A New National Study of Teen Attitudes Reveals a Remarkably Gloomy View,” *Chicago Trib.*, 3 Aug. 1988, Style §, at 12. (In this sentence the words *their* and *they* also create a number problem. See CONCORD (B) & PRONOUNS (D).)
- “Research has found that only one in six *think* [read *thinks*] that political agreement is important for a successful marriage.” Cherrill Hicks, “How on Earth Can You Live with a Tory?” *Independent*, 22 Mar. 1992, at 24.
- “One in six *think* [read *thinks*] motor insurance companies are not doing enough to combat crime, while 53% similarly accuse car manufacturers.” “Car Stolen Every Two Minutes, Says RAC,” *Herald* (Glasgow), 11 Jan. 1994, at 5.
- “A CBS-*New York Times* poll of 867 adults found only one in five *believe* [read *believes*] the Clintons did anything wrong in Whitewater.” “The Polls,” *Dayton Daily News*, 13 Mar. 1994, at A3.
- “Nearly one in two Brazilian women of childbearing age *have* [read *has*] been sterilized, according to a 2001 government survey.” John Jeter, “Infertile Ground Is Sown in Brazil,” *Wash. Post*, 11 June 2004, at A14.

The same holds true when the construction is *one of five*, etc. See SUBJECT-VERB AGREEMENT (K).

**one in three believe* for *one in three believes*: Stage 2

***one in the same.** See **one and the same**.

one less. See **fewer**.

one of [number]. See **one in [number] is**.

one of the [+ pl. n.] who (or that). This construction requires a plural verb in the relative clause, not a singular one. After the *who* or *that*, the verb should be plural because *who* or *that* is the subject, and it takes its number from the plural noun to which *who* or *that* refers—e.g.:

- “*One of the most insidious perils that waylay* the modern literary life is an exaggerated success at the outset of a career.” Edmund Gosse, “Making a Name in Literature” (1889), in *A Reader for Writers* 86, 97 (William Targ ed., 1951).
- “When we look at living creatures from an outward point of view, *one of the first things that strike us* is that they are a bundle of habits.” William James, *Habit* 3 (1890; repr. 1914).
- “This is *one of those spurious truisms that are* not intelligently believed by anyone.” Henry Bradley, “Spoken and Written English” (1913), in *The Collected Papers of Henry Bradley* 168, 168 (1928; repr. 1970).
- “It is *one of the colloquial terms that worry me*.” Anthony Burgess, *A Mouthful of Air* 23 (1992).

The reason for this construction becomes apparent when we reword any of those sentences: “Of the insidious perils that waylay the modern literary life, this is one.” / “Of the first things that strike us, one is that . . .” / “Of those spurious truisms that are not intelligently believed by anyone, this is one.” / “Of the colloquial terms that worry me, this is one.”

Yet many writers erroneously believe that *one* is the (singular) subject—e.g.:

- “*One of the things that is very interesting to know is how you are feeling inside.*” Gertrude Stein, “Poetry and Grammar” (1935), in *Perspectives on Style* 44, 45 (Frederick Candelaria ed., 1968). (A possible revision: *One thing that is very interesting to know is how you are feeling inside.*)
- “‘Very’ is *one of the words that contributes* [read *contribute*] to flabby writing.” Lester S. King, *Why Not Say It Clearly* 55 (1978).
- “Social class is *one of the extralinguistic factors that often shows* [read *show*] a correlation with language variation.” Ronald K.S. Macaulay, *Locating Dialect in Discourse* 13 (1991).
- “‘Chemistry’ is *one of those words that always makes* [read *make*] me a little suspicious.” Ron Hoff, *I Can See You Naked* 95 (1992).
- “[David] Frum is *one of those who has* [read *have*] undergone a conversion (or two).” Patricia Cohen, “Conservative Thinkers Think Again,” *N.Y. Times*, 20 July 2008, at WK3.

As the following quotations illustrate, British writers have just as much trouble with this phrasing as Americans—e.g.:

- “*One of the words that dangles* [read *dangle*] to worst purpose is *because* after a negative statement.” Basil Cottle, *The Plight of English* 87 (1975).
- “Here we have *one of those* packagings that *decays* [read *decay*] with time rather faster than the contents.” Christopher Hitchens, *For the Sake of Argument* 280 (1993).
- “Bulkiness is *one of the things that makes* [read *make*] them costly.” “The Different Engine,” *Economist*, 5 Feb. 1994, at 85.
- “At moments like these I am *one of those people who finds* [read *find*] refuge in that lame line: ‘I don’t know much about art, but I know what I like.’” Nicholas Woodsworth, “A Week in the Louvre,” *Fin. Times* (Weekend ed.), 6–7 Aug. 1994, § II, at 1.
- “It is clearly *one of those words which has* [read *that have*] become a marker for intellectual unreliability.” Minette Marrin, “Bish Talks Bosh,” *Sunday Telegraph*, 11 June 1995, at 31. (In that sentence, a *marker* should be *markers*.)
- “I’ve just completed *one of those loathsome but entirely necessary tasks which serves* [read *that serve*] as a reminder of just how unnecessary a lot of our exchanges with our fellow human beings are.” Jonathan Ross, “The Past Is All in the Cards,” *Sunday Times* (London), 18 June 1995, Style §, at 2. (For the reason for changing *which* to *that* in the last two sentences, see **that** (A).)

So how adamant should we be about observing this distinction? The great linguist Otto Jespersen was unbudgeable: “It is not proof of logical or grammatical narrowmindedness to set oneself against expressions

such as ‘he is one of the kindest men that has ever lived,’ instead of ‘that have ever lived.’ One can be the enemy of pedantry without surrendering one’s liking for clear logic.” *Mankind, Nation, and Individual from a Linguistic Point of View* 106–07 (1946). The grammarian Wilson Follett was even more resolute: “Let three thousand say *one of those who believes* while only three say *those who believe*; and as long as the three thousand do not also say *we believe*, *you believe*, *they believe*, the three thousand will be wrong from the only point of view that is relevant here, the point of view of form” (MAU at 24). But Follett’s position won’t hold up if the tide of usage is so strongly against this linguistic nicety as he hypothetically posits. The tide isn’t nearly so strong. And yet this is one of the grammatical points that trip (not *trips!*) up even the “experts” (see the quotations in the second paragraph above).

The linguist Dwight Bolinger gave up on the traditional usage back in 1980: “I believe that the question is no longer an issue in American English—that, for better or worse, it is close to being decided in favor of the singular.” “Progress Report on *One of Those Who Is . . .*,” 55 *Am. Speech* 288, 288 (1980). To some, that announcement was probably welcome news; to others, it amounted to a rash surrender.

For the traditionalist, perhaps the most sensible course is to prefer the traditional usage in your own writing, to adhere to it when editing or correcting others’ work, but not to despair unduly as the age-old preference continues eroding.

LANGUAGE-CHANGE INDEX

**one of the few that is* for *one of the few that are*:

Stage 4

Current ratio (*one of those who are* vs.

**one of those who is*): 9:1

onerous (= burdensome) for *heinous* (= shockingly evil; abominable) is an occasional error—e.g.:

- “We can all take pride in the fact that this *onerous* [read *heinous*] crime was ferreted out and nipped before it could destroy the neighborhood.” Letter of Albert P. Johnson, “Community Activist Remembered,” *St. Petersburg Times*, 23 Jan. 1988, at 2.
- “There can’t be any of this revolving-door justice where penalties for *onerous* [read *heinous*] crimes are reduced to tut-tutting, decorated cells and a few years.” “Murder, They Wrote,” *Toronto Sun*, 2 Sept. 1995, Editorial §, at 1.
- “Because Saudi Arabia has the most *onerous* [read *heinous*] violations among the 15 countries cited, the report said, the U.S. government needs to get serious about pressuring the desert kingdom to reform.” Julia Duin, “Saudis Top Violators of Religious Rights,” *Wash. Times*, 14 May 2003, at A1.

The word is pronounced either /**on**-ər-əs/ (like *honor us*) or /**oh**-nər-əs/ (like *owner us*).

LANGUAGE-CHANGE INDEX

onerous misused for *heinous*: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

***onery**. See **ornery**.

oneself; ***one's self**. *Oneself* became the predominant spelling of the reflexive pronoun about 1900. **One's self* is an archaic variant that was already becoming old-fashioned when this passage was written: "The first and probably the most important one is production discipline, making *one's self* [read *oneself*] write whether one feels like it or not. The second is revision discipline; the third, rejection-slip discipline." Anne Hamilton, *How to Revise Your Own Stories* vii (1946). By the late 20th century, the two-word version had become distinctly nonstandard and pedantic-looking. Yet it still appears occasionally—e.g.:

- "Going to work for *one's self* [read *oneself*] often proved the only solution to bridging gaps in a work record." Mary Agria, "Flexibility Is Key for Working at Home," *Telegraph Herald* (Dubuque), 22 Sept. 1996, at D3.
- "Talk about hard to look at *one's self* [read *oneself*]." Bob Petrie, "Teen Scenes Allow Art to Imitate Life," *Ariz. Republic*, 10 Apr. 1997, Gilbert §, at EV1.
- "One Web site even suggests mailing a valentine to *one's self* [read *oneself*] as a kind of affirmation." Mark Woolsey, "Valentine's Isn't Hearts, Flowers for Everyone," *Atlanta J.-Const.*, 13 Feb. 2003, N. Fulton §, at 4.

The two-word construction is correct, however, when referring to one's *self* in a psychological or spiritual sense—e.g.: "The desire to pass on something of *one's self*, whether genetically in offspring, materially in prized possessions or inheritance, or spiritually in writing, art or music, is a near universal human inclination." Philip Chard, "Time Does Its Best to Erase Our Legacies," *Milwaukee J. Sentinel*, 11 Feb. 2003, at F1.

Current ratio: 7:1

one-time, an ambiguous term that can mean either "former" <a one-time professional wrestler> or "occurring only once" <a one-time opportunity>, is generally so hyphenated. AmE has moved toward solidifying the word—as given in *W11*—but the process is slow.

***one . . . you**. This shift from third person to second is even worse than *one . . . he*. (See **one (B)**.) Typically the best solution is to prefer *you* over *one*—e.g.:

- "One hears—and if *you* are like me, *you* acquiesce in—many complaints about the decline of civility in Western society." Clifford Orwin, "Civility," 60 *Am. Scholar* 553, 553 (1991). (A possible revision: *You hear—and if you are like me, you acquiesce in—many complaints . . .*)
- "But actually, no other act is stronger than saying *you* are wrong about something to God, to another human being, [and] to *one's self* [read *yourself*]." Carol McGraw, "Yom Kippur Brings 'Another Chance,'" *Orange County Register*, 22 Sept. 1996, at B6. (For more on the spelling **one's self*, see **oneself**.)

online; **on-line**. Although *on-line* (with the hyphen) remains common for references to being connected to the Internet, the hyphen is probably doomed to disappear. The closed form is already predominant, whether the word is used as an adjective or an adverb—e.g.:

- Adjective: "Besides, all these hip Web savants were smugly pronouncing that *online* journalism was the future." Rem Reider, "At the Crossroads," *Am. Journalism Rev.*, Mar. 2001, at 6.
- Adverb: "Go *online*. Hundreds of restaurants are listed at www.opentable.com." Erica Marcus, "Advice for Making This a Valentine's Day Dinner to Remember," *Newsday* (N.Y.), 12 Feb. 2003, at B16.

In JARGON, the phrase *on line* (unhyphenated) has been extended to mean "into service" <the new power plant will be coming on line in June>, and the corresponding adjective is *solid* <an online power plant>.

Current ratio: 12:1

on line, stand. See **stand in line**.

only. A. Placement. *Only* is perhaps the most frequently misplaced of all English words. Its best placement is precisely before the words intended to be limited. The more words separating *only* from its correct position, the more awkward the sentence; and such a separation can lead to ambiguities. (Cf. **just & solely**.) Yet the strong tendency in AmE is to stick *only* right before the verb or verb phrase regardless of the ILLOGIC—e.g.:

- "The prosecution was hindered from seeking a conviction on attempted manslaughter charges because Seles elected not to testify at the hearing and *only provided her medical records shortly before* [read *provided her medical records only shortly before*] the trial was to begin." Cindy Shmerler, "WTA Still Working for Harsher Sentence," *USA Today*, 28 Apr. 1994, at C11.
- "So far, the county proposes that PDA [planned-development agriculture] *only be allowed for about* [read *be allowed for only about*] 15 areas in the eastern county." Dale White, "Instead of Homes on Huge Lots, Houses Could Be Clustered Around Open Land," *Sarasota Herald-Trib.*, 19 Nov. 1997, at B1.
- "In the U.S., boys *only seem to go for girl heroes when* [read *seem to go for girl heroes only when*] they are teamed up with male partners, as in the Power Rangers." Philip Murphy, "Kidvid Producers Cautiously Optimistic," *Variety*, 1 Dec. 1997, at 70.
- "You'd *only* need an apostrophe if you used a noun after the possessive." Mary Newton Bruder, *The Grammar Lady* 106 (2000). [A suggested revision: *You'd need an apostrophe only if you used a noun after the possessive.*]

The great H.W. Fowler was surprisingly permissive on this point back in 1926: "There is an orthodox position for the adverb, easily determined in case of need; to choose another position that may spoil or obscure the meaning is bad; but a change of position that has no such effect except technically is both justified by historical & colloquial usage & often demanded by rhetorical needs" (*FMEUI* at 405–06). The problem with Fowler's view is that what is merely "technically" obscure for one person may for another person be a full-fledged ambiguity.

Fowler's American contemporary, John F. Genung, was more sensible in his approach (writing somewhat earlier): "Capable of being either an adjective or an adverb, [*only*] can modify almost any part of speech; so if not placed immediately before the word

(or phrase) to which it belongs its force is liable to be stolen by what comes between.” *Outlines of Rhetoric* 71 (1893).

More than a century before Genung and Fowler wrote those passages, the rhetorician Hugh Blair summed up the rationale for being careful about placing *only* and similar words. It holds true even today: “The fact is, with respect to such adverbs as *only, wholly, at least*, and the rest of that tribe, that in common discourse, the tone and emphasis we use in pronouncing them generally serves to show their reference, and to make the meaning clear; and hence, we acquire a habit of throwing them in loosely in the course of a period [i.e., a sentence]. But in writing, where a man speaks to the eye, and not to the ear, he ought to be more accurate; and so to connect those adverbs with the words which they qualify, as to put his meaning out of doubt upon the first inspection.” Hugh Blair, *Lectures on Rhetoric and Belles Lettres* vol. 1, at 245 (1783; 11th ed. 1809).

LANGUAGE-CHANGE INDEX
only separated from the word it limits: Stage 3

B. In Doublespeak. A paltering *only* sometimes reflects DOUBLESPEAK. Consider the signs that, beginning in the mid-1990s, appeared at American Airlines gates throughout the United States: *Beverages only in main cabin*. The airline is saying that while first-class passengers will get both meals and drinks, coach-class passengers will get only drinks. If the sign read *Meals only in first class*, the syntax would work pretty well, but the majority of passengers (in coach) would be miffed. If it said *No meals in coach class*, the sense of upset would only intensify. If it said *Only beverages in coach class*, the sense would be right—but once again the coach passengers might feel as if they were being shorted. So the sign-writers changed *coach class* to *main cabin* (a kind of EUPHEMISM) and then worded the sign as if it were an honor being bestowed: *Prizes only for the winners. Jackpots only for the lucky few. Beverages only in main cabin*. It sounds as if everyone else on board must do without: no drinks for those in the cockpit or in first class. But of course that isn’t so. First-class passengers don’t complain about the sign because they know they’ll be fed and get all the drinks they reasonably want. Coach passengers don’t complain because they don’t think through what the sign really means. See AIRLINESE.

C. As Noncomparable Adjective. See ADJECTIVES (B).

D. And sole. See sole.

only if. See if (B).

onomatopoeic; *onomatopoetic. The first is now standard for the adjective corresponding to *onomatopoeia* (= the formation or use of a word that sounds like the action or object it denotes); the second is a

NEEDLESS VARIANT that confusingly suggests an inherent linkage with poetry. Since about 1950, the *-poeic* form has outnumbered the *-poetic* form by a wide margin—e.g.:

- “A vast number of words in the language—*onomatopoeic* words they are called—... were deliberately coined to imitate a sound.” Guy N. Pocock, “Sound and Sense,” in *Foundations of English Style* 180, 182 (Paul M. Fulcher ed., 1927).
- “The Italian playwright and performer Dario Fo has a similar routine, called Grummelot, an *onomatopoeic* babble that communicates the sense of a speech through rhythm and tone rather than words.” Ryan McKittrick, “Archimedes’ an Inventive Play on Words,” *Boston Globe*, 7 Dec. 2001, at D3.
- “Ever since Eric Clapton and Jimi Hendrix popularized the wah-wah pedal—a foot-operated device that derives its *onomatopoeic* name from the reverber sound it creates—guitarists have used their toes to do more than tap along to the beat.” “Horizons’ Wah-Wah Rings,” *Christian Science Monitor*, 8 May 2008, Innovation §, at 14.

One historian of the English language has suggested *echoic* as a simpler substitute: “One theory is that words imitated natural sounds, such as the cries of animals or the noises made by rapidly moving or colliding objects. Words that had this origin are sometimes said to be *onomatopoetic*, but the term *echoic* is to be preferred as being shorter, easier to spell, and more obviously descriptive of what is intended.” G.L. Brook, *A History of the English Language* 17 (1958).

Onomatopoeic is pronounced /on-ə-mat-ə-**pee**-ik/. Take care not to use the sloppy pronunciation /on-ə-mon-ə-**pee**-ik/.

Current ratio: 3:1

on the contrary. See contrary (B).

on the grounds that. See because (D).

on the lam (= on the run from law-enforcement authorities) began as American SLANG. Although the expression has been traced back to the late 19th century, its precise origin remains obscure. The phrase didn’t become common till about 1930. It is fairly widespread today—e.g.:

- “A former Bank of the Desert loan officer, who has been *on the lam* since May, was arrested in Las Vegas this week on federal bank fraud and money-laundering charges.” Don McAuliffe, “Former Desert Bank Executive Arrested,” *Press-Enterprise* (Riverside, Cal.), 28 Aug. 1999, at D3.
- “Grauman was *on the lam* after escaping from both the South Dakota prison and a jail in Wyoming.” “Escapee Charged with Murder,” *Rocky Mountain News* (Denver), 15 June 2000, at A33.
- “He fled after the conviction, living *on the lam* for six months before being arrested in Las Vegas and sentenced to 30 years in prison.” James C. McKinley Jr., “Jamiel A. Chagra, 63, Drug King, Dies,” *N.Y. Times*, 29 July 2008, at B6.

Occasionally the phrase is mistakenly made **on the lamb*—e.g.: “The owner of a local clothing company

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

the eye, although *ophthalmologist* is now much more usual than *oculist*. An *ophthalmologist* may perform intraocular surgery as well as other procedures and may prescribe drugs and glasses or contact lenses. An *optometrist* is a doctor trained in a school of optometry (an O.D.) and is licensed to examine the eyes, diagnose problems, and prescribe drugs, glasses, and contact lenses—and may even perform minor surgical procedures. An *optician* makes or sells lenses and, like a pharmacist, fills prescriptions (for glasses). Finally, an *ocularist* makes, colors, and fits artificial eyes.

Ophthalmologist is pronounced /of-thə[l]-mɒl-ə-jɪst/—not /op-thə[l]-mɒl-ə-jɪst/. See PRONUNCIATION (D).

LANGUAGE-CHANGE INDEX
ophthalmologist mispronounced /op-thə[l]/
instead of /of-thə[l]/: Stage 4

ophthalmology is sometimes misspelled **ophthamology*, **ophthalmology*, or **ophthamology*. Pronouncing the /l/ in the second syllable is more cultivated than not pronouncing it. To omit it is to invite the first and third of the misspellings just noted.

opine. A. Generally. *Opine* today often connotes the forming of a judgment on insufficient grounds. It can suggest the giving of an idle or facetious opinion—e.g.: “At Boardinghouse, a South Shore shop catering exclusively to snowboarders, the young staffers on duty *opined* that skiers are as doomed as the dinosaurs.” Glen Martin, “Ski Season Coasts In,” *S.F. Chron.*, 1 Dec. 1997, at A1.

The word can carry many nuances. Sometimes *opine* seems intended to cheapen the opinion given—e.g.:

- “The couple . . . were often berated on Boston radio shows as greedy careerists who had entrusted their sons to an inexperienced sitter in order to save a few dollars. (Apparently the parents didn’t want a kid, *opined* one talk show caller. ‘Now they don’t have a kid.’)” Bill Hewitt et al., “Murder or Not?” *People*, 17 Nov. 1997, at 54.
- “According to Benson, education is not a state responsibility but is ‘the responsibility of the local people.’ He *opines* that is ‘what it says in the (New Hampshire) constitution.” Alf E. Jacobson, “Benson Is Wrong,” *Union Leader* (Manchester, N.H.), 3 Feb. 2003, at A8.

Often the word suggests mild ridicule (as in the first example below), folksiness (as in the second), or jocularity (as in the third)—e.g.:

- “‘I think there’s a real nobility to public service,’ *opines* Ben [Affleck] ever-so-Kennedyesquely in the March [*Vanity Fair*].” Gayle Fee & Laura Raposa, “Affleck on a Roll to Congress?” *Boston Herald*, 4 Feb. 2003, News §, at 16.
- “Of the [con men], Huck *opines* that ‘they’ve got more schemes than a possum has ticks.’” Ivan M. Lincoln, “Buoyant, Moving ‘Big River’ Docks at Hale Centre,” *Deseret News* (Salt Lake City), 4 Feb. 2003, at C6.
- “‘Matrimony’ proudly tromps through a musical wilderness of pain and suffering. But not without a high level of

humor. Musselwhite *opines*, ‘life will be better when you’re not in it.’” Richard L. Eldredge, *Atlanta J.-Const.*, 11 Feb. 2003, at E9.

The word is also used in the sense “to express or pronounce a formal or authoritative opinion” (*OED*). Although the *OED* calls this sense rare, it’s anything but rare in AmE. In law, it routinely denotes the testimony of an expert witness. It is also fairly common elsewhere—e.g.: “When Intel Chief Executive Craig Barrett visited the ancient Chinese city of Xi’an last spring, thousands of students at Xi’an University packed a hall to hear him *opine* about the future of technology.” Ted Sickinger, “State Must Risk to Keep Tech Edge,” *Oregonian* (Portland), 4 Feb. 2003, at A1.

Since the word sometimes implies authoritative-ness, sometimes disingenuousness, and sometimes ridicule, it’s perfect for denoting political spin control—e.g.: “Almost as the applause still echoed, the audience practically sprinted out to parse, *opine* and analyze beneath the bright television lights set up in a marble chamber near the House floor.” Bob Dart, “State of the Union,” *Atlanta J.-Const.*, 29 Jan. 2003, at A6.

B. And **opinion*, vb. When used as a verb, *opinion* is at best a NEEDLESS VARIANT of *opine*, at worst a NON-WORD. E.g.:

- “The court *opinioned* [read *opined*] that people ‘might resist’ joining the guerrillas.” Stephen F. Gold, “A Travesty of Justice,” *Christian Science Monitor*, 3 Mar. 1992, at 18.
- “In the same edition, E.J. Montini *opinioned* [read *opined*] that there are far worse things than flag burning to worry about.” “Worse Things to Worry About,” *Ariz. Republic*, 15 Mar. 1995, at B8.
- “One poster helpfully linked to the Dec. 9 Dallas Morning News, in which columnist Rod Dreher *opinioned* [read *opined* or *wrote*] that ‘Alberto Gonzales, the bumblefutz U.S. attorney general who defenestrated himself from the Department of Justice . . . , is surely the Texan of the Year.’” Linda P. Campbell, “Objection! Objection! Law,” *Ft. Worth Star-Telegram*, 27 Dec. 2007, at B13.

LANGUAGE-CHANGE INDEX
**opinioned* for *opined*: Stage 1

opossum; possum. *Opossum* (/ə-**pos**-əm/), long said to be standard, has never been as common in AmE or BrE as *possum*. The colloquially shortened form of this Algonquian term, *possum*, is more than twice as common in journalistic sources, and it is even more common in speech (because of the unaccented first syllable of *opossum*). *Possum* quite rightly appears in the CASUALISM *play possum* (= to play dead or pretend to be asleep). It also appears in DIALECT and in literary rendering of dialect. While *possum* is generally thought to be Southern dialect, in fact it is seen throughout the English-speaking world—e.g.:

- “Today, the eighth-grader at the Williams School in New London owns about 200 dummies. These include Freddy, a *possum* who tries to cross the road.” Joanna Mechlinski,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

“Look Who’s Not Talking,” *Hartford Courant*, 3 Feb. 2003, at D3.

- “Ryan knew they were animal tracks—raccoons, *possum*, squirrels, birds.” Denis Hamill, “No Furr-giving Ryan’s Cat Lady,” *Daily News* (N.Y.), 4 Feb. 2003, Suburban §, at 3.
- “But, he said, the feed and chickens can attract coyotes, *possums* and rats.” Deana Poole, “Fans of Pet Chickens Plead for Zoning Change,” *Olympian* (Olympia, Wash.), 4 Feb. 2003, at B1.
- “We raised chickens and ducks; the yard was host to quail, mourning doves, snakes, *possums* and a variety of other creatures.” Jon Love, “Kindness Cuts Across Borders,” *Fresno Bee* (South Valley ed.), 7 Feb. 2003, at 13.
- “Months later, amid an otherwise subdued dawning, a *possum* brought us both out of bed as he stalked across our deck.” Neil Morgan, “It Was High Noon at Night in Cuyamacas,” *San Diego Union-Trib.*, 9 Feb. 2003, at B2.

The misspellings **opposum* and **opposum* have arisen doubtless from the influence of *opposite*—e.g.:

- “The ratlike *opposum* [read *opossum*] is prevalent in the area.” Tom Long, “Time to Stock Up, Bed Down for Winter,” *Boston Globe*, 2 Nov. 1994, at 77.
- “There seem to be enough people who are interested in studying the 48 discrete movements between an *opposum’s* [read *opossum’s*] slow-walk and its bound.” Barbara Stewart, “Work on the Wild Side,” *N.Y. Times*, 7 Apr. 1996, N.J. §, at 4.

LANGUAGE-CHANGE INDEX

1. *possum* for *opossum*: Stage 5
Current ratio (*possums* vs. *opossums*): 1.2:1
2. *opossum* misspelled **opposum* or **opposum*: Stage 1
Current ratio (*opossum* vs. **opposum* vs. **opposum*): 129:1:1

opportunistic; opportune. *Opportunistic* describes someone who is motivated by expediency and self-interest—e.g.: “Everybody—greedy players, lying owners, feeble commissioner, slimy lawyers, *opportunistic* Congressmen—pretends to tell us the precise nature of baseball’s labor problems.” Bob Hunter, “Steinbrenner Spends to Win, but Won’t Hide His Intentions,” *Columbus Dispatch*, 19 July 2002, at C3.

Opportune describes something that is convenient, fit, suitable, appropriate, or well-timed—e.g.: “This would be an *opportune* time for a Latino candidate to run for the City Council.” Sam McManis, “Latinos Lack Political Pull in Concord,” *S.F. Chron.*, 9 Aug. 2002, Contra Costa §, at 1.

But *opportunistic* is now sometimes misused to mean *opportune*—e.g.:

- “At a crucial and *opportunistic* [read *opportune*] moment, he [Emperor Hirohito of Japan] risked his throne to bring his people’s suffering to an end.” E. Barry Keehn, “The Emperor’s Mask After the War,” *San Diego Union-Trib.*, 24 Sept. 2000, Books §, at 1.
- “Now is the most *opportunistic* [read *opportune*] time for this type of product.” Cecile B. Corral, “Suppliers Hope Retailers Get the ‘Basic’ Idea,” *Home Textiles Today*, 26 Nov. 2001, at 13.
- “Some of Stuckey’s more exciting plays couldn’t have come at more *opportunistic* [read *opportune*] times.” Chris

Hughes, “Stuckey Will Leave Large Legacy at Northside,” *Macon Telegraph*, 14 June 2002, at C1.

LANGUAGE-CHANGE INDEX

opportunistic misused for *opportune*: Stage 1

opposition. For an odd misusage, see **apposition**.

oppress; repress. *Oppress* = to subject (a person or a people) to inhumane or other unfair treatment; to persecute. *Repress* = (1) to keep under control; (2) to reduce (people) to subjection; (3) to inhibit or restrain; or (4) to suppress. The negative connotations of *oppress* are greater than those of *repress*.

oppressible. So spelled—preferably not *oppressable* (which has become common since about 2000). See -ABLE (A).

oppugn. See **impugn** (A).

opt (= to choose or decide) is usually followed by *for* or *to*—e.g.:

- “Few women have *opted* for careers in mathematics, engineering and the natural sciences.” Mike Bowler, “In Math, Women a Plus,” *Baltimore Sun*, 4 Oct. 1995, at B2.
- “After being left off the postseason roster in a decision manager Mike Hargrove called ‘very difficult,’ Winfield *opted* to sit in the dugout and travel on the road.” John Giannone, “‘Peeved’ Winnie Along for Ride,” *Daily News* (N.Y.), 4 Oct. 1995, at 56.

Readers may find *opt for* (a CASUALISM) a bit too jaunty for some contexts.

The phrase *opt between* is unusual and unnecessary—e.g.: “For one thing, a patient choosing medical care doesn’t have the leisure, knowledge or power enjoyed by a consumer *opting* [read *choosing*] between a Big Mac and a Whopper.” “Why Wait for Hillary?” *Newsweek*, 28 June 1993, at 38, 40. That example illustrates INELEGANT VARIATION, from an ill-founded fear of repeating the verb *choose*.

Opt out (*of*), meaning “to choose not to participate [in],” is a bit of LEGALESE that has entrenched itself in the public consciousness through class-action lawsuits, contracts, and governmental regulations—e.g.:

- “Roughly \$5.2 million will be distributed by formula among the settlement class members, unless they *opt out*.” Ken Harney, “Some Reverse Mortgages Are Perilous for the Unwary,” *Baltimore Sun*, 9 Feb. 2003, at L1.
- “Under a new set of rules drafted by the Environmental Protection Agency, the businesses could *opt out* of the current requirement to reduce toxic fumes from their plants to the maximum extent possible.” Gary Polakovic, “EPA Plans to Relax Toxic Emission Standards,” *L.A. Times*, 11 Feb. 2003, News §, at 18.
- “McGrady and Hill can *opt out* of their deals after the 2004–05 season. Rivers is signed through the 2005–06 season.” Jerry Brewer, “Magic Miscalculations,” *Orlando Sentinel*, 11 Feb. 2003, at D1.

***ophthalmology.** See **ophthalmology**.

optician. See **ophthalmologist**.

optimize (= to make the best use of) is the word, not **optimize*—e.g.: “Insulin dosage was *optimized* [read *optimized*] by the study physician.” Julio Wainstein et al., “The Use of Continuous Insulin Delivery Systems in Severely Insulin-Resistant Patients,” *Diabetes Care* 1297 (1 July 2001). See NONWORDS.

LANGUAGE-CHANGE INDEX

**optimize* for *optimize*: Stage 1

Current ratio (*optimized* vs. **optimized*): 7,885:1

optimum. *Optimum* is the noun, but *optimal* is—optimally speaking—the better adjective. Hence the phrase should be *optimal advantage*, not **optimum advantage*. The reason is that there’s no need for *optimal* if we use *optimum* both as a noun and as an adjective. It serves the principle of DIFFERENTIATION to distinguish between the two forms. But the adjectival *optimum* seems to be edging out *optimal* in practice, and the latter may one day be just a NEEDLESS VARIANT.

optometrist. See **ophthalmologist**.

opt out. See **opt**.

opus. Pl. *opuses*—preferably not *opera* (except in references to operatic works). See PLURALS (B).

opusculum; opuscule; *opuscle. Although the Latin *opusculum* (= a minor literary or musical work) was long ago anglicized to *opuscule*, the latter has never occurred as frequently in English-language print sources as the former. And although one might expect *opuscules* to be more convenient to readers of English than the plural *opuscula*, in fact the more bookish term has predominated in all varieties of English. **Opuscle* is a variant form. For nonscholars, of course, all these terms are hopelessly pedantic.

-OR; -ER. See -ER (A).

-OR; -OUR. Although all agent nouns except *saviour* (BrE) take *-or* in both AmE and BrE (e.g., *actor*, *investor*), the general distinction is that of the other nouns that end in either of these forms, AmE nouns tend to be spelled *-or*, and BrE nouns *-our*. That distinction occurs primarily in abstract nouns. Hence the British write *behaviour*, *colour*, *flavour*, and *humour*, whereas Americans write *behavior*, *color*, *flavor*, and *humor*. The following words, however, end in *-or* on both sides of the Atlantic: *error*, *horror*, *languor*, *liquor*, *pallor*, *squalor*, *stupor*, *terror*, *torpor*, and *tremor*. *Glamour* is the primary exception to the *-or* rule in AmE.

In BrE, nouns ending in *-our* change to *-or* before the suffixes *-ation*, *-iferous*, *-ific*, *-ize*, and *-ous* (e.g., *coloration*, *honorific*). But *-our* keeps the *-u-* before *-able*, *-er*, *-ful*, *-ism*, *-ist*, *-ite*, and *-less* (e.g., *honourable*, *labourer*, *colourful*). At least one British writer has suggested that BrE would be better off hastening

toward the AmE spellings. G.H. Vallins refers to the “slow process in English (we have *terror*, *horror*, *governor*, all of which were once spelt with a *u*),” adding that this process “merely needs quickening up by a few journalists and novelists with confidence and vigour enough to defy convention.” G.H. Vallins, *Better English* 116 (4th ed. 1957). (Make that *vigor*, G.H.!) See **Labour Party**.

or. See **and/or**.

oral. See **aural & verbal**.

orangey (= suggestive of an orange—the fruit or the color) has been the standard spelling since the early 1970s. **Orangy* is a variant.

orangutan; *orangutang; *orang-utan; *orangoutan; *orangoutang. The spelling of this word—deriving from the Malay term *oran utan* (“forest man”)—has been settled since about 1950: *orangutan*. The others are variant spellings. The standard AmE pronunciation is /ə-**rang**-[g]ə-tan/. But the other pronunciation (/ə-**rang**-[g]ə-tang/) remains quite common, possibly because the reduplicative rhyme makes the word easier to say.

orate, a BACK-FORMATION from *oration*, was once widely considered objectionable or merely humorous. But it has almost completely lost this stigma. It sometimes suggests that the speaker is pompous, but the word itself no longer strikes most readers or listeners as being facetious—e.g.:

- “Whether he was *orating* from the House dais or taking an operatic pie in the face at the Bushnell, Weicker thrived on center stage.” Michele Jacklin, “Weicker Leaves Office as He Governed: On His Own Terms,” *Hartford Courant*, 1 Jan. 1995, at A1.
- “Helping inestimably to evoke the era are Charles Corcoran’s effective set and Jill Nagel’s sound design, which subtly adds echo to Roosevelt’s voice as he *orates* from a small balcony.” Andy Webster, “The Amazing Adventures of a Gregarious Dissident,” *N.Y. Times*, 16 May 2008, at E3.

For the misuse of *perorate* for *orate*, see **perorate**.

orchestrate, in nonmusical contexts, is a CLICHÉ and a VOGUE WORD. But it is arguably useful in indicating that an (apparently spontaneous) event was clandestinely arranged beforehand. Cf. **choreograph**.

order of protection. See **protective order**.

ordinal numbers. See **cardinal numbers & NUMERALS** (F).

ordinance; ordnance; ordonnance. *Ordinance* (= a municipal [i.e., city] law) is common in AmE but rare in BrE, where *byelaw* serves this purpose. *Ordnance* =

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

military supplies; cannon; artillery. *Ordonnance* = the ordering of parts in a whole; arrangement.

Occasionally *ordnance* is misused for *ordinance*—e.g.:

- “His municipal government adopted its own standards in May 1994 as a city *ordnance* [read *ordinance*].” Kevin Petrie, “TCI Promises Cities Better Service Record,” *Denver Bus. J.*, 19 Apr. 1996, at A9.
- “He said noise and parking are addressed specifically by city *ordnances* [read *ordinances*].” Martin Luttrell, “Bands Might Not Play On,” *Worcester Telegram & Gaz.*, 16 Jan. 2006, at B1.

The opposite error, *ordinance* for *ordnance*, also occurs—e.g.:

- “It coordinates civilian organizations clearing mines and unexploded *ordinance* [read *ordnance*] across Kosovo.” Carlotta Gall, “U.N. Aide in Kosovo Faults NATO on Unexploded Bombs,” *N.Y. Times*, 23 May 2000, at A3.
- “There are a number of unexploded small *ordinance* [read *ordnance*] scattered about the entire island.” Andrew Doughty & Harriett Friedman, *Maui Revealed* 141 (2001).
- “They are reluctant veterans of detonating unexploded *ordinance* [read *ordnance*].” Amy Waldman, “A Nation Challenged,” *N.Y. Times*, 23 Nov. 2001, at B4.

LANGUAGE-CHANGE INDEX

1. *ordnance* misused for *ordinance*: Stage 1
2. *ordinance* misused for *ordnance*: Stage 1

Oregon. Some natives of the state insist on a long medial *-e-*: /**or-ee-gən**/. Others, though, are perfectly happy putting a short vowel or schwa in the middle syllable: /**or-i-gən**/ or /**or-ə-gən**/. No full-blooded Oregonian (/or-i-**goh**-nee-ən/), though, countenances rhyming the last syllable with *gone*. It's *gun*, not *gone*.

organdy (= a sheer cotton or silk fabric) has been the standard spelling since the late 1930s. **Organdie* is a variant.

organic. This adjective traditionally means (to a chemist) “carbon-based” or (to a physician) “of, relating to, or involving a body organ.” Purists may object to its odd extensions in reference to plant foods that are grown without chemicals, pesticides, or genetic manipulation, but the phrase is here to stay—it's even codified in federal law. The phrase **inorganic food*, strictly speaking, an OXYMORON, since all foods contain carbon. Use *nonorganic food* instead.

orient; *orientate. The latter is a NEEDLESS VARIANT of *orient*, which means “to get one's bearings or sense of direction”—e.g.: “It's doubly daunting for foreign players trying to *orientate* [read *orient*] themselves to the USA.” Chris Colston, “For Some, a World of Change,” *USA Today*, 22 Jan. 2008, at C5.

The longer variant (a BACK-FORMATION from *orientation*) is more common in BrE than in AmE—e.g.:

- “Not everyone, even in *market-orientated* [read *market-oriented*] America, is wholly happy with what is happening.” *Sunday Times* (London), 11 Dec. 1988, at H1.

- “‘Vampires aren't very *family orientated* [read *family-oriented*].’” Terry Pratchett, *Carpe Jugulum* 151 (1998).
- “As excited as she had been to be reunited with Connor, she had felt *disorientated* [read *disoriented*] by leaving the Vampire ship—and her friends there—so precipitately.” Justin Somper, *Vampirates: Tide of Terror* 79–80 (2007).

Cf. **disorient.**

LANGUAGE-CHANGE INDEX

- **orientate* for *orient*: Stage 2
- Current ratio (*oriented* vs. **orientated*): 22:1

ornery (= recalcitrant; mean-spirited) is the standard spelling of this word, which is pronounced /**or-nə-ree**/. **Onery* is a variant spelling influenced by the dialectal pronunciation /**on**-[ə]-ree/. Interestingly, *ornery* was originally an alteration of the word *ordinary*, but today (of course) it no longer bears that sense. See DIALECT.

Current ratio: 37:1

orphan. See **widow.**

orphanhood; *orphanicy; *orphanom. The first is the usual word, the other two being NEEDLESS VARIANTS.

orthopedics (= the branch of medicine dealing with correcting problems with bones and muscles) is so spelled in AmE, *orthopaedics* in BrE. The divergence in spelling occurred in the first decade of the 20th century.

orthoscopic. See **arthroscopic.**

-os. See PLURALS (D).

ostensible; ostensive. *Ostensible* (the usual term) = seeming; apparent <her ostensible opinion isn't supported by her actions>. *Ostensive* = clearly displaying; directly demonstrative <his behavior was ostensive of his debased character>. Though some dictionaries sanction the usage, it's an error to use *ostensive* synonymously with *ostensible*—e.g.:

- “His main effort, and the *ostensive* [read *ostensible*] purpose of this book, is a description of a tour of Vietnam he took in 1993.” “Jill Ker Conway Recalls ‘Future of a Woman Alone in the 1950s,’” *Roanoke Times*, 26 Feb. 1995, Book §, at 6.
- “The convention's charge is to select three candidates, *ostensively* [read *ostensibly*] to help the governor make a final selection for the board.” “The School Convention Worked,” *Baltimore Sun*, 27 June 1995, at A10.
- “The fun—and there is quite a bit to be had—derives in part from the over-the-top performance by Sizemore and the sometimes painfully ordinary ‘insights’ of the *ostensive* [read *ostensible*] geniuses, but the film is surprisingly free of cant.” Philip Martin, “Review: The Genius Club,” *Ark. Dem.-Gaz.*, 1 Feb. 2008, Moviestyle §, at 1.

LANGUAGE-CHANGE INDEX

- ostensive* misused for *ostensible*: Stage 1

osteopathy. *Osteopathy* is the drug-free alternative-medicine discipline that focuses on treating muscular and skeletal problems primarily by using noninvasive manual therapies. In the United States, *osteopathic*

medicine is distinct. Its practitioners are *osteopathic physicians*, who must be fully trained as medical doctors and receive specialized training in the musculoskeletal system to earn the degree Doctor of Osteopathic Medicine, or D.O. In much of the rest of the world, an *osteopath* is not a physician but a person specially trained only in treating musculoskeletal conditions through manual techniques, such as applying pressure to or moving muscles and bones.

Osteopathy is pronounced /os-tee-**op**-ə-thee/—not /os-tee-ə-path-ee/.

ostler. See **hostler**.

other. A. *Other . . . other than. Repeating *other* in this way is a fairly common REDUNDANCY—e.g.: “The fractional approach typically does not integrate with any *other* type of social insurance program *other than* Social Security.” Carolyn M. Burton et al., “Disability Insurance with Social Integration,” *J. Am. Soc’y of CLU & ChFC*, Sept. 1995, at 56. Either one of the *others* should be dropped.

LANGUAGE-CHANGE INDEX
**other . . . other than*: Stage 1

B. No other . . . than. This phrase often gets mangled into **no other . . . except*, which is a piece of ILLOGIC. The correction is typically *no . . . other than*—e.g.:

- “The Bruce Willis supernatural thriller has grossed \$20 million for the fifth consecutive weekend, accomplishing what *no other film has done except ‘Titanic’* [read *what no film other than ‘Titanic’ has done or no film has done except ‘Titanic’*].” Robert W. Welkos, “Weekend Box Office,” *L.A. Times*, 8 Sept. 1999, at F3.
- “Some people may believe we will have *no other choice except* [read *no other choice than*] light rail.” Jay Tibshraeny, “Chandler to Study Transit Woes, Options,” *Ariz. Republic*, 21 Feb. 2001, at 4.
- “He desires *no other woman except* [read *no woman other than or no other woman than*] his absent fiancée.” Loren King, “Rohmer Films, in Focus at Brattle, More than Just Talk,” *Boston Globe*, 23 Feb. 2001, at D5.

Very occasionally, the *no other . . . except* phrasing is actually correct—e.g.: “Vojtas has testified repeatedly that he earned less than \$50,000 a year as a police officer and that he had *no other* source of income *except* for gifts from his mother.” Bruce Keidan, “Brentwood Drops Vojtas Appeal,” *Pitt. Post-Gaz.*, 10 Feb. 2001, at A1. Here the word *other* refers to something already mentioned (the \$50,000 salary), as opposed to referring to something in a yet-to-be-completed *than*-clause.

LANGUAGE-CHANGE INDEX
**no other . . . except* for *no other . . . than*: Stage 1
Current ratio (*no other person than* vs. **no other person except*): 10:1

C. And otherwise. See **otherwise (A)**.

otherwise. A. And other. Pedants insist that *other* is the adjective, *otherwise* the adverb—and that it’s wrong to use *otherwise* as an alternative to an adjective <no real impact, substantial or otherwise>. Wilson Follett believed that “to pronounce this *otherwise* inadmissible would be to fly in the face of a strongly established usage. But usage, which can allow it on sufferance, cannot prevent it from being rejected by more exact writers” (*MAU* at 242–43). In fact, though, this usage is so strongly established that—to most educated speakers—*other* would sound incorrect. E.g.: “Cowboys simply aren’t cowboys—urban or *otherwise*—without a pair of boots between them and the ground.” Dan R. Barber, “Boot Bonanza,” *Dallas Morning News*, 11 Sept. 1997, at A33.

Of course, *otherwise* often functions adverbially as well—e.g.: “Paul Sanchez . . . said his business has been booming, financially and *otherwise*.” David Snyder, “Vendors Confident Fair Will Be Successful,” *Albuquerque Trib.*, 5 Sept. 1997, at A8.

B. As a Conjunction Meaning “or else.” This slipshod usage, which leads to RUN-ON SENTENCES, occurs primarily in BrE. *Otherwise* shouldn’t connect two clauses in a compound sentence—e.g.:

- “It’s got to be attractive, *otherwise* people won’t go there.” George Martin, “Why My Montserrat Is More than Just a Home for Retired Rockers,” *Evening Standard*, 11 Sept. 1997, at 23. (Put a period or semicolon after *attractive* and a comma after *otherwise*. Or else change *otherwise* to *or else*.)
- “The alliance needs to receive clearance from London, Washington and Brussels by November *otherwise* BA and American may not be able to launch joint services in time for next summer’s timetable.” Michael Harrison, “Brussels Urged to Relax Stance on BA Alliance,” *Independent*, 12 Sept. 1997, at 21. (Put a period or semicolon after *November* and a comma after *otherwise*. Or else change *otherwise* to *or else*.)
- “But they cannot afford to do this, since they must believe that their view is correct, *otherwise* why would they be bothering to put it forward.” Richard J. Evans, “Bound by the Web of Facts,” *Fin. Times*, 13 Sept. 1997, at 4. (Put a period or semicolon after *correct* and a comma after *otherwise*.)

In each of those sentences, a period or semicolon should precede *otherwise*; after *otherwise*, the comma is optional but preferred.

otiose (= unneeded; not useful) is a word used more by literary critics than by other writers. You might say that the word itself is otiose—e.g.: “*Otiose* happens to be a word whose meaning the formidable William F. Buckley Jr. once confessed kept escaping him. Does the rather plain context of [Niall] Ferguson’s passage warrant ransacking the language for a term so arcane that it baffles a Buckley?” Frederic Morton, “Dynasty:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The House of Rothschild,” *L.A. Times*, 21 Nov. 1999, Book §, at 4. It appears much more commonly in BrE than in AmE—e.g.:

- “The question is *otiose*; they won’t touch those things because they are politically dangerous.” Richard Hoggart, “A Charge Too Far,” *Observer*, 8 Dec. 1996, at 25.
- “Commentary on this novel seems *otiose*, after the recent brouhaha” “Journey with the Goods,” *Guardian*, 20 Mar. 1997, Features §, at T15.
- “This set turns out to be a plea against pandering to stereotypes, against one generation preaching to another, against modern-day mediocrity in all its *otiose* reality-TV, electronic-tablet, Coke Light forms.” Mark Monahan, “Comedy,” *Daily Telegraph*, 22 Aug. 2015, at 19.

An alternative definition (“idle, at leisure”) is labeled archaic in *NOAD*. It’s certainly rare.

The preferred pronunciation in AmE is /**oh**-sheeh-ohs/. The BrE pronunciation /**oh**-tee-ohs/ sounds affected here.

otolaryngology; otorhinolaryngology. These are essentially synonymous words denoting the medical field dealing with the ears, nose, and throat. The *-rhino-* version manages to work in explicit reference to the nose, but the resulting word is downright proctological. So the shorter form, which is more widespread in medicine, is preferable. But most people don’t say *otolaryngologist*; they say *ear, nose, and throat specialist*.

The words are pronounced as follows: *otolaryngology* /**oh**-toh-ler-in-**gol**-ə-jeel/; *otorhinolaryngology* /**oh**-toh-**rr**-noh-ler-in-**gol**-ə-jeel/.

Current ratio (in order of headwords): 5:1

ought. **A. Infinitive Following.** *Ought* (an old past tense and past participle of *owe*, now a modal auxiliary verb) should always be followed by a full infinitive, whether the phrase is *ought to* or *ought not to*—e.g.:

- “Clinton to this day insists his day-and-night shakedown of contributors constituted, at one and the same time, action that *ought to be* illegal, but an innocent exercise in democracy and the free play of ideas.” John Hall, “Few Mourn End of Thompson’s Hearings, and That Is a Shame,” *Richmond Times-Dispatch*, 6 Nov. 1997, at A9.
- “Editors *ought not to have been* so thin-skinned when asked to participate in the recent forums.” William McGaughey Jr., “Star Tribune Should’ve Taken Part in Media and Public Forums,” *Star Trib.* (Minneapolis), 22 Nov. 1997, at A23.
- “Cats *ought not to be* let out at night in a coyote’s range.” “Cape Elizabeth Coyotes,” *Portland Press Herald*, 1 Dec. 1997, at A4.

As if striving to earn some type of scholastic badge, some writers omit the particle *to*, especially when the expression is in the negative or interrogative. But there is no warrant for the bare infinitive—e.g.:

- “A postmodern view of organizational culture argues that we *ought not think* [read *ought not to think* or *should not think*] of socialization as a series of social acquisitions that occur in unchanging contexts.” William G. Tierney, “Organizational Socialization in Higher Education,” *J. Higher Educ.*, 1 Jan. 1997, at 1.

- “But what happened in southwest Iowa *ought not be* [read *ought not to be* or *shouldn’t be*] repeated.” “Human Factor Needed in Redistricting,” *Omaha World-Herald*, 28 Nov. 1997, at 28.
- “The service area’s outgoing board *ought not do* [read *ought not to do* or *shouldn’t do*] anything in its final month to earn even greater opprobrium.” “Distrust in Kearns,” *Salt Lake Trib.*, 1 Dec. 1997, at A10.

LANGUAGE-CHANGE INDEX

**ought not be* for *ought not to be*: Stage 2

Current ratio (*ought not to be* vs. **ought not be*): 13:1

B. And should. *Ought* should be reserved for expressions of necessity, duty, or obligation; *should*, the slightly weaker but more usual word, especially in speech, expresses appropriateness, suitability, or fittingness.

C. *Had ought. This phrasing is nonstandard in place of *ought*—e.g.:

- “You *had ought* [read *ought*] to see some of the aeroplanes travel here and see some of the battles in the clouds.” Norm Maves Jr., “Rats the Size of Half-Grown Mules Visit Trenches,” *Oregonian* (Portland), 8 Nov. 1994, at B1.
- “I shall now inform readers of The Press-Enterprise of a high-class, real keen, really cool culture and entertainment institution that they *had ought* [read *ought*] to know about and go to some time.” T.E. Foreman, “Bowled Over by Hollywood Amphitheater,” *Press-Enterprise* (Riverside, Cal.), 17 Sept. 1995, at E2.
- “If anything, the players *had ought* [read *ought*] to go on strike.” Zac Gershberg, “The Sordid Business of Football,” *Idaho State J.*, 7 Sept. 2014, at 15.

See DOUBLE MODALS.

LANGUAGE-CHANGE INDEX

**had ought* for *ought*: Stage 1

D. Oughtn’t. This quaint CONTRACTION sometimes appears. The same principles govern its use as those governing *ought*. That is, it should be followed by the full infinitive, not a bare infinitive—e.g.:

- “Kennedy and his top aides scratched their heads at the revelation, wondering if something *oughtn’t* to be done.” Paul Berman, “The Patriot,” *L.A. Times*, 2 July 2000, Book §, at 9.
- “It *oughtn’t* [read *oughtn’t to*] be allowed to sit in a vault, or even in a glass case in a museum.” Joseph Epstein, “The Master’s Ring,” *Commentary*, 1 Oct. 2000, at 49, 56.
- “Well, they *oughtn’t* to try it with ‘Crime in Suburbia.’” Marc Mohan, “Crime and Punishment in Suburbia,” *Oregonian* (Portland), 5 Jan. 2001, at 33.

Most writers would use the far more natural word *shouldn’t*.

E. *Ought to could. See DOUBLE MODALS.

F. Confused with *ought*. See **ought (c)**.

-OUR. See **-OR**.

ours, an absolute possessive, is sometimes wrongly written **our’s*—e.g.:

- “‘We don’t have nearly the physical challenge here that we had there,’ Barnett conceded. ‘*Our’s* [read *Ours*] is more mental.’” B.G. Brooks, “Back in Focus,” *Rocky Mountain News* (Denver), 29 Aug. 1999, at N10.

- “Our selectmen are bypassing the intent of federal law for cases such as *our’s* [read *ours*] because they think that in being more accommodating to Massport, they will somehow win special relief” Lori Eggert, “Bedford Town Meaning to Air Participation in FAA Suit,” *Boston Globe*, 14 Jan. 2001, Northwest Weekly §, at 5.
- “‘*Our’s* [read *Ours*] is a good market,’ Embry said of the Tri-County Area.” Steve Tarter, “Home Sales Hit New High,” *Peoria J. Star*, 13 Feb. 2001, at C1.

See POSSESSIVES (c).

LANGUAGE-CHANGE INDEX

**our’s* for *ours*: Stage 1

Current ratio (*ours* vs. **our’s*): 555:1

ourself; ourselves; *theirself. *Ourself* is technically ill formed, since *our* is plural and *self* is singular. In the preferred form, *ourselves*, both parts are plural. *Ourself* is established, though, in the editorial or royal style—e.g.: “You’d be surprised how hard it is to write a column from the shower. *We’ve* been stuck in here, hosing *ourself* down, since watching Michael Jackson creep the hell out of the entire country.” Tim Goodman, “Jackson Show Is Over, but He’s Still Creeping Us Out,” *S.F. Chron.*, 12 Feb. 2003, at D1. But **theirself* for *themselves*, increasingly common since 1900, is indefensible (see SEXISM (b)).

out. A. As an Unnecessary Particle in Phrasal Verbs.

Out is usually superfluous in phrases such as **calculate out*, **cancel out*, **distribute out*, **segregate out*, and **separate out*. (Colloquially, it occurs in *figure out*, *lose out*, *make out*, *test out*, *try out*, and *work out*.) See PHRASAL VERBS.

But sometimes *out* is quite necessary—e.g.: “At the time of the crash, the FAA said potentially explosive sparks had been ‘*designed out*’ of all big-jet fuel tanks.” Robert Davis, “FAA Agrees to Fuel-Tank Changes,” *USA Today*, 4 Dec. 1997, at A4. The phrase *design out* (= to rid of [an undesirable characteristic]) is common in patent contexts.

B. As a Noun. This usage <she was looking for an out> is a CASUALISM.

outbid > outbid > outbid. So inflected. **Outbidden* is an error confined mostly to BrE and Australian English—e.g.: “They admit to feeling plenty of pressure to find their dream home in the current market, having been *outbidden* [read *outbid*] on numerous occasions.” Andrew Carswell, “House Price Frenzy,” *Daily Telegraph*, 2 Oct. 2013, at 15.

outdoor(s); out-of-door(s). *Outdoor* is the better, more economical choice for the adjective <outdoor activities>. *Out-of-door* is a formal and awkward equivalent <an out-of-door affair>, and *out-of-doors* is even creakier.

Outdoors and *out-of-doors* are both adverbs. Once again, *outdoors* is the better choice.

And, of course, *outdoors* is also a noun <the great outdoors>.

out loud. See **aloud**.

out-of-door(s). See **outdoor(s)**.

out of sync. See **sync**.

outside does not need *of*—hence *outside the house*, not **outside of the house*. E.g.: “Italian goods have done well *outside of* [read *outside*] the Continent because the lira has fallen 15% vs. the U.S. dollar in the past year.” James C. Cooper & Kathleen Madigan, “Sprinting Toward Entry in the EMU,” *BusinessWeek*, 15 Sept. 1997, at 31. In modern print sources, the collocation *outside the* occurs about five times as often as **outside of the*. See **of (b)**. Cf. ***off of**.

When **outside of* appears in the sense *apart from* or *aside from*, either of those phrases would be more serviceable—e.g.: “*Outside of* [read *Apart from* or *Aside from*] economies of scale in purchasing and merged back-room operations, Pillowtex reaps Fieldcrest’s well-known brands in sheets, comforters, [and] towels.” Jennifer Steinhauer, “Pillowtex to Acquire Fieldcrest for \$400 Million,” *N.Y. Times*, 12 Sept. 1997, at D6.

LANGUAGE-CHANGE INDEX

**outside of* for *outside*: Stage 4

Current ratio (*outside the* vs. **outside of the*): 5:1

outsized; outsize, adj. The first is standard AmE. The second is standard BrE.

Current ratio (*outsized head* vs. *outsize head* in AmE): 3:1

Current ratio (*outsize head* vs. *outsized head* in BrE): 1.3:1

outward(s). See **DIRECTIONAL WORDS (A)**.

ova. See **ovum**.

over. A. For more than. In one of its uses, the prepositional *over* is interchangeable with *more than* <over 600 people were there>—and this has been so for more than 600 years. The charge that *over* is inferior to *more than* is a baseless crotchet. E.g.:

- “Reagan won the election by *over* a million votes.” Gerard De Groot, “Reagan’s Rise,” *History Today*, Sept. 1995, at 31.
- “He breaks off . . . from reporting the injustices inflicted on Beethoven’s Fifth Symphony (well *over* a hundred pages) to voice vigorous approval of Carlos Kleiber.” Paul Griffiths, “What’s the Score?” *N.Y. Times*, 24 Aug. 1997, § 7, at 11. Cf. **above (A)**.

In 2014 even the Associated Press came around, finally sanctioning *over* “in all uses to indicate greater numerical value.” One curmudgeonly copyeditor snapped back: “More than my dead body!”

LANGUAGE-CHANGE INDEX

over in the sense “more than”: Stage 5

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. Over- as a Combining Form. See **overly*.

overall is a VOGUE WORD, often a lame SENTENCE ADVERB. Many sentences would read better without it—e.g.:

- “Overall, *Wada* [read *Wada*] says Toyota has doubled its engineering output over the past four years.” Alex Taylor III, “How Toyota Defies Gravity,” *Fortune*, 8 Dec. 1997, at 100.
- “Overall, *Berea’s statistics* [read *Berea’s statistics*] speak worlds about the demand for affordable higher education; this year, the college accepted only 22 percent of its applicants.” Tamar Lewin, “With No Frills or Tuition, a College Draws Attention,” *N.Y. Times*, 21 July 2008, at A12.

overarching /oh-vər-ahr-ching/. The *-ch-* is sometimes mispronounced with a /k/ sound.

overdo; overdue. The first is the verb (= to do too much), the second the adjective (= past due, late). But the two are sometimes confounded—e.g.:

- “If you have blue eyes, bring them out. But when you do, don’t *overdue* [read *overdo*] it with too much makeup or jewelry.” “By Design,” *L.A. Times*, 16 June 1994, at E3 (quoting Homer Prefontaine).
- “The Izod Center—eaten alive by the Xanadu mess at the Meadowlands—needs millions in long-*overdo* [read *overdue*] improvements for it to continue as a viable home.” Steve Politi, “It’s Time to Bring Nets to Newark,” *Star-Ledger* (Newark), 2 May 2008, at 31.

LANGUAGE-CHANGE INDEX

1. *overdo* misused for *overdue*: Stage 1
 2. *overdue* misused for *overdo*: Stage 1
- Current ratio (*overdo them* vs. **overdue them*): 59:1

overestimate. See **underestimate**.

overflow > overflowed > overflowed. Some writers mistakenly use *overflowed* as the past participle of *overflow*—e.g.:

- “But water has *overflowed* [read *overflowed*] the levee at least four times since it was built.” Missy Baxter, “Levee Project Halted After Flood Proves New Wall Would Have Failed,” *Courier-J.* (Louisville), 14 Apr. 1997, at B2.
- “Though waste was found in a lagoon at the farm, some waste had *overflowed* [read *overflowed*] at a lift station designed to pump it from four hog houses to the lagoon.” Hannah Mitchell, “Hog Waste Feared Leaking into River,” *Morning Star* (Wilmington, N.C.), 10 July 1997, at B1.

See IRREGULAR VERBS (D). For a short, interesting study of this term, see Ann Eljenholm Nichols, “The Past Participle of ‘Overflow’: ‘Overflowed’ or ‘Overflowed,’” 41 *Am. Speech* 52 (Feb. 1966).

LANGUAGE-CHANGE INDEX

overflowed misused for *overflowed* as past participle of *overflow*: Stage 1

Current ratio (*overflowed its banks* vs. **overflowed its banks*): 44:1

overfly > overflew > overflown. Oddly, this verb dates from the 14th century. Though never common, it’s become more so in the age of flight—e.g.: “It’ll be

the first time the shuttle crew has *overflown* the heartland since the 2003 Columbia tragedy.” Mark Carreau, “Shuttle Begins Journey Home,” *Houston Chron.*, 6 Nov. 2007, at A4.

overlay; overlie. To *overlay* is to spread (something) on top of; to *overspread* <she intended to overlay the culture plates with bacteria>. To *overlie* is either to lie above <the preserve overlies vast oil deposits> or to smother by lying on <ash from an eruption would overlie valuable winery fields>.

As with *lay* and *lie*, the most common error is to use *overlay* when the proper word is *overlie*. One signal of the misuse is putting the present participle *overlaying* at the beginning of the sentence—e.g.:

- “*Overlaying* [read *Overlying*] all this was a perfectionism so intense that it was difficult to get products out of the lab, let alone to market.” Betsy Morris, “Big Blue,” *Fortune*, 14 Apr. 1997, at 68, 71.
- “*Overlaying* [read *Overlying*] these hypernaturalistic scenes are evocations of the slain woman’s spirit intoning nonsense rhymes in a high girlish voice.” Stephen Holden, “Deadliness of Military Life,” *N.Y. Times*, 2 May 1997, at C33.
- “*Overlaying* [read *Overlying*] all of [delete *of*] this is the recent Supreme Court ruling upholding Obamacare exchanges.” “Upheaval in Health Care Hitting Region,” *Beaumont Enterprise* (Tex.), 2 July 2015, at 6.

See **lay**.

LANGUAGE-CHANGE INDEX

overlay misused for *overlie*: Stage 3

overlook; oversee; look over. To *overlook* is to neglect or disregard. To *oversee* is to supervise or superintend. To *look over* is to examine.

Although historically *overlook* bore the meanings of *oversee* and *look over* (see *OED*), the word has narrowed its sense in STANDARD ENGLISH. Today it’s sloppy to use it interchangeably with *oversee*—e.g.: “It will improve the quality of the water,” said Mark Norton, who *overlooks* [read *oversees*] projects for a joint powers agency.” Vanessa Colon, “Underwater Propellers to Save Fish,” *Press-Enterprise* (Riverside, Cal.), 31 Jan. 2003, at B1. See **oversight**.

LANGUAGE-CHANGE INDEX

overlook misused for *oversee*: Stage 2

***overly.** Although it’s old, dating from about the 12th century, **overly* was never much used until about 1950. It is almost always unnecessary because *over-* may be prefixed at will: *overbroad*, *overrefined*, *overoptimistic*, *overripe*, etc. When *overly* is not unnecessary, it’s merely ugly. Some authorities consider **overly* semiliterate, although the editors of the Merriam-Webster dictionaries have used it in a number of definitions. Certainly this adverb should be avoided whenever possible, though admittedly *over-* as a prefix sometimes just doesn’t sound right (*overburdensome*). Yet it usually serves well—e.g.: “To supporters, Duke’s initiative was a worthy, if *overly ambitious* [read *overambitious*], effort.” Peter Applebome, “Duke Learns of Pitfalls in Promise of Hiring More Black Professors,” *N.Y. Times*, 19 Sept. 1993, at

1. When *over-* is awkward or ugly-sounding, another word is invariably at the ready—e.g.:

- “Hence the UN inspectors were not *overly* [read *especially*] skeptical when they started their work of scrutinizing Iraq’s arsenal of weapons of mass destruction.” “Saddam’s UN Nemesis,” *Boston Globe*, 8 June 1997, at D6.
- “There are certain things that are correct in one context but *overly* [read *unduly*] formal or stuffy in another.” Mary Newton Brudner, *The Grammar Lady* 6 (2000).
- “The harsher attacks create some risk for McCain, analysts say, because he may come off as *overly* [read *too*] negative.” Jill Zuckman, “McCain Ad Fights Rival’s Celebrity Head-On,” *Chicago Trib.*, 31 July 2008, News §, at 1.

LANGUAGE-CHANGE INDEX

**overly* instead of *unduly* or the prefix *over-*: Stage 4
Current ratio (*overeager* vs.
**overly eager*): 3:1

oversea(s), adj. The standard form is *overseas* <we didn’t send brochures to overseas clients>. **Oversea* is a variant form.

Current ratio: 106:1

oversee. See **overlook**.

oversight. **A. As a Noun.** *Oversight* = (1) an unintentional error; or (2) intentional and watchful supervision. For sense 2, *oversight* is an unfortunate choice of word: *supervision* is preferable, or perhaps even *monitoring*. Indeed, *administrative oversight* sounds less like a responsibility than a bureaucratic botch. See **CONTRONYMS**.

B. As a Jargonistic Verb. In some fields, people have begun using *oversight* as a verb in place of *oversee*—or, more often, **oversighting* in place of *overseeing* or the simple *oversight* itself. The usage is common in Australia, but elsewhere it occurs primarily in speech—e.g.:

- “The whole company is reviewing and *oversighting* [read *overseeing*] what is going on at the Zion station,” Reed said at a meeting.” Robert Enstad, “Edison Says It’s Fixing Zion Plan,” *Chicago Trib.*, 1 Feb. 1991, at C4 (quoting a utility company’s senior vice president).
- “Of that 66 percent, there’re likely to be a whole lot who voted to put [Tom] Udall into Congress, and they might be very annoyed over Congress wasting its time in such *oversighting* [read *oversight*]!” Letter of William R. Dales, “Phone Taps OK,” *Santa Fe New Mexican*, 16 May 2006, at A5.
- “The investigative mechanism of Congress will be brought to bear fully on Iraq. Because that’s the mechanism by which Democrats tell their activists they’re dealing with Iraq: ‘Hey, we’re investigating. We’re *oversighting* [read *overseeing*] them.’” Bill Steigerwald, “Now Come the Dems” (interview with reporter Major Garrett), *Pitt. Trib.-Rev.*, 6 Jan. 2007.

See **JARGON & overlook**.

LANGUAGE-CHANGE INDEX

**oversighting* for *overseeing*: Stage 1

oversized; ***oversize**, adj. The first is standard <an oversized box>. The second is a **NEEDLESS VARIANT**.

Current ratio (*oversized engine* vs.
**oversize engine*): 3:1

OVERSTATEMENT. In persuasive or even polemical prose, such words as *clearly*, *patently*, *obviously*, and *indisputably* generally weaken rather than strengthen the statements they preface. They have been debased by overuse. Critics have noted that a writer who begins a sentence with one of these words is likely to be stating something questionable. See **clearly & SENTENCE ADVERBS**.

Unconscious overstatement is also a problem. It is never good to overstate one’s case, even in minor, unconscious ways, since doing so will make the writing less credible. Unless the purpose is to be humorous or satirical, good writers avoid exaggeration.

overthrow, n.; ***overthrowal**. The latter, a **NEEDLESS VARIANT** that cropped up in the 1830s and has persisted, isn’t recorded in most dictionaries. But it does, unfortunately, occur—e.g.:

- “The military says more than 2,000 people had been killed in insurgency-related incidents since the February *overthrowal* [read *overthrow*] of President Ferdinand Marcos.” “Philippine Rebel Leader in Favor of Peace Talks,” *Chicago Trib.*, 13 Nov. 1986, at C4.
- “It was just completed at the time of his *overthrowal* [read *overthrow*] and death in 1989, and the present Parliament uses it now.” Elizabeth Shannon, “Flair, Mystery Fill Romania,” *Boston Globe*, 7 Mar. 1999, at M5.

LANGUAGE-CHANGE INDEX

**overthrowal* for the noun *overthrow*: Stage 1
Current ratio (*the overthrow of* vs.
**the overthrowal of*): 1,028:1

overweening (= presumptuous, arrogant, or immoderate) is so spelled—but the misspelling **overweaning* is common. The word derives from the Old English verb *wenan*, meaning “to hope or believe.” It has nothing to do with the verb *to wean* (see **wean**). E.g.:

- “Bush has a certain self-confidence, as one Democrat put it, so that he doesn’t exude an *overweaning* [read *overweening*] need to fill up every corner of every room with his magnificent presence, or be right all the time.” Carolyn Lochhead, “The Name of the Game,” *S.F. Chron.*, 12 Feb. 2001, at A25.
- “The law of averages trumped Rivera’s *overweaning* [read *overweening*] pride.” Stephen Cannella, “Inside Baseball,” *Sports Illustrated*, 23 Apr. 2001, at 78.

The word is sometimes misused for *overwhelming*. Jacques Barzun cites the example of a suggestion “greeted with *overweaning* [read *overwhelming*] disapproval.” *Simple and Direct* 30 (1975).

LANGUAGE-CHANGE INDEX

1. *overweaning* misspelled **overweaning*: Stage 1
2. *overweaning* misused to mean “overwhelming”: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

ovum (= the female reproductive cell; egg cell) forms the plural *ova*—not **ovums*. See PLURALS (B).

Current ratio: 644:1

owing, adj.; **owed**. Although *owing* in the sense of *owed* is an old and established usage (<\$45 was owing on the bill>), the more logical course is simply to write *owed* where one means *owed*. That's precisely what most writers and editors do today: beginning about 1970, the collocation *amount owed to* overtook *amount owing to* in frequency of use in print sources. The active participle may sometimes cause MISCUES—e.g.:

- "I examine company reports for details of money *owing from* [read *owed by*] customers." Kevin Goldstein-Jackson, "Can You Trust the Accounts?" *Fin. Times*, 22 Feb. 1997, at 2.
- "Taxpayers who owe taxes for 1996 still have to pay the balance *owing* [read *owed*] by April 30." Michael Kane, "Fewer than Half Have Yet to File," *Vancouver Sun*, 26 Apr. 1997, at H1.

See PASSIVE VOICE.

Current ratio (*amount owed to* vs. **amount owing to*): 3:1

owing to (= because of) is an acceptable dangling modifier now primarily confined to BrE—e.g.: "Prolonged rain in the West Country has caused today's meeting at Newton Abbot to be abandoned *owing to* waterlogging." "Racing: Newton Abbot Off Due to Waterlogging," *Independent*, 2 Dec. 1997, at 29.

Yet it does occur in AmE—e.g.:

- "There's a great deal of humor in the story, *owing to* the ironic distance that this method of telling lends to the tale." Marion Garmel, "Scrooge's Timeless Tale at IRT Showcases Strong Ensemble Work," *Indianapolis Star*, 2 Dec. 1997, at E3.
- "*Owing to* years of screaming at each other across the newsroom of the Washington Post, hosts Tony Kornheiser and Mike Wilbon have the same comic timing as Bob Hope and Bing Crosby." David Barron, "A Look at Best of Sports TV as 2002 Ends," *Houston Chron.*, 30 Dec. 2002, Sports §, at 7.
- "The stalking, which continues sporadically today, is at once bizarre, terrifying and, *owing to* Paul's deep pockets, maddeningly relentless and difficult to trace, according to the book." Andy Newman, "Stalked: A Decade on the Run," *N.Y. Times*, 31 July 2008, at G1.

Cf. **due to**. See DANGLERS (E).

OXFORD COMMA. See PUNCTUATION (D).

oxidize, oddly, forms the noun *oxidation*, not **oxidization*. But some writers mistakenly use the longer form—e.g.:

- "While the shelving wasn't in danger of collapsing, it was expanding as it rusted—a natural result of *oxidization* [read *oxidation*]." J. Linn Allen, "Prudential Face Lift Draws Some Frowns," *Chicago Trib.*, 21 Dec. 1996, at 1.
- "Beans or tomatoes . . . are quite acidic and may turn black when *oxidization* [read *oxidation*] occurs from an improperly seasoned pan." Sylvia Carter, "Cast Iron, the Metal of a Good Cook," *Newsday* (N.Y.), 19 Feb. 1997, at B19.

- "Grapes were left on the vine for too long and then once picked weren't chilled long enough, resulting in *oxidization* [read *oxidation*]." "Scottish Wine Still Needs Refining," *Winnipeg Free Press*, 25 July 2015, at D14.

Meanwhile, **oxidate* is a NEEDLESS VARIANT of *oxidize*.

LANGUAGE-CHANGE INDEX

1. **oxidization* for *oxidation*: Stage 1

Current ratio (*oxidation* vs. **oxidization*): 178:1

2. **oxidate* for *oxidize*: Stage 1

Current ratio (*oxidize* vs. **oxidate*): 129:1

OXYMORONS. **A. Generally**. This term, originally a Greek word meaning "keenly foolish" or "sharply dull," denotes an immediate contradiction in terminology. Thus:

amateur expert	intense apathy
baby grand	mandatory choice
build down	nonworking mother
conspicuous absence	organized mess
exact estimate	pretty ugly
executive secretary	standard deviation
found missing	sure bet

Among language aficionados, collecting and inventing cynical oxymorons is a parlor game; they enjoy phrases that seem to imply contradictions, such as *military intelligence*, *legal brief*, and *greater Cleveland* (this last being quite unfair to a great city).

Writers sometimes use oxymorons to good effect—e.g.: "And there was, moreover, an irresponsibly giddy antigovernment fervor among the more *sophomoric House freshmen*." Joe Klein, "The Unabomber and the Left," *Newsweek*, 22 Apr. 1996, at 39. The main thing to avoid is seemingly unconscious incongruity such as **increasingly less* or **advancing backwards*.

B. Plural. Although most dictionaries list only the Greek plural *oxymora*, Margaret Nicholson listed *oxymorons* first in 1957 (*DAEU* at 403). In fact, *oxymorons* is now about six times as common as *oxymora* in print sources, and it ought to be accepted as standard—e.g.: "*Oxymorons*, like beauty, seem to be in the eye of the beholder." Mary Newton Bruder, *The Grammar Lady* 166 (2000). See PLURALS (B).

Today, *oxymora* looks pedantic—e.g.:

- "If time is money, then Florida's 'toll-free' consumer hot lines are *oxymora* [read *oxymorons*]." "State Tries to Make Its Hot Lines More Efficient, Less Expensive," *Orlando Sentinel*, 23 Oct. 1995, at C1.
- "During a fall month of a Major League Baseball season, former catcher/manager Yogi Berra, the king of *oxymora* [read *oxymorons*], once noted that it was getting 'later earlier.'" "July Was 2nd Driest on Record," *Indianapolis Star*, 6 Aug. 1997, at B4.
- "Add this to your list of government *oxymora* [read *oxymorons*]: Priority Mail." Rick Brooks, "Priority Mail Fails Test of Time," *Times Union* (Albany), 30 May 2002, at A1.

LANGUAGE-CHANGE INDEX

Current ratio (*oxymorons* vs. *oxymora*): 6:1

P

pabulum; pablum. *Pabulum* /**pab**-yə-ləm/ = (1) food, nourishment; (2) nourishment for the mind; or (3) a soft, bland cereal for babies. *Pablum*, with a capital *P*, is a trademark for a brand of the cereal *pabulum* (sense 3). The lowercase *pablum* (formed through syncope) has taken on the figurative sense “bland, trite, or simplistic writing or ideas”—e.g.: “Still, the raw charm of her pipes is strong enough to turn *pablum* such as ‘Just Missed the Train’ and Ms. Warren’s ‘Some Kind of Miracle’ into pure ear candy.” Thor Christensen, “A Voice Carries Only So Far,” *Dallas Morning News*, 20 Apr. 2003, at G12. *Pabulum* sometimes carries this meaning also, but in modern print sources *pablum* outnumbered it by more than two to one in this sense—e.g.: “With ‘Butterfly,’ Carey moves further away from the gorgeously sung pop *pablum* . . . and into her role as the Barbra Streisand of her generation.” Michael Corcoran, “Mariah Carey Takes Flight on ‘Butterfly,’” *Austin Am.-Statesman*, 16 Sept. 1997, at E1. Other than that one use, however, the longer word has always appeared much more frequently in print.

pace, prep. (/pay-see/ or /pah-chay/), is a LATINISM meaning originally “with peace to,” and today “with all due respect to.” It is used most often when the writer expresses a contrary position—e.g.:

- “Pace Mr. Spalding, the church’s traditional condemnation of abortion is constant and unchanging.” Letter of Brian J. Shanley, “Constant on Abortion,” *Wash. Post*, 14 Feb. 1995, at A14.
- “[Visual artistry] shouldn’t even try [to do what a novel does], Henry James says in the preface to ‘The Golden Bowl’ (incidentally, a novel that—pace Ms. Ozick—I’m about to make into a film, my third joyful encounter with Henry James).” Letter of James Ivory, “Novels on Film,” *N.Y. Times*, 19 Jan. 1997, § 2, at 6.
- “A democracy, pace Mr Salmond, is a permanent discussion, an endless negotiation.” Chris Deerin, “Salmond Called it a ‘Dark Star’ but London Is a Beacon That Befits Us All,” *Scottish Daily Mail*, 26 May 2014, at 14.

The word was at its literary height in 1900; it has since become much less frequent in print.

pacifist; *pacifistic; passivist. *Pacifist* (= one opposed to war or other physical conflict) is the established form. Etymologists formerly argued that **pacifistic* is the better-formed word, but it’s no picnic to pronounce—which is probably why today it’s no more than a NEEDLESS VARIANT. Although R.W. Burchfield says that “the shorter form is now the only one in use” (*FMEU3* at 566), the longer form is lamentably common in AmE—e.g.: “And then there are the *pacifistics* [read *pacifists*], groups like the historic American Friends Service Committee founded by Quakers in

1917, which plans to host an exhibit called ‘The Costs of War,’ detailing how the \$720 million spent each day on the war could be spent on education and housing.” Colleen O’Connor, “Activists to Color Democratic Convention,” *Houston Chron.*, 22 June 2008, at A19.

The term *passivist* (= one with a passive attitude or way of life) is usually set against *activist*—e.g.:

- “Sitting-in seems more *passivist* than activist, but activism can apparently take many shapes, including simple relentlessness.” Russell Baker, “Activism Epidemic!” *N.Y. Times*, 28 June 1994, at A17.
- “McCain also seems stunningly unaware that the justices he simplistically lauds as ‘judicial *passivists*’ are nothing of the sort.” Geoffrey R. Stone, “McCain’s Justice: Conservative Activism Gone Wild,” *Chicago Trib.*, 7 May 2008, at C23.

LANGUAGE-CHANGE INDEX

**pacifist* for *pacifist*: Stage 1

Current ratio (*pacifist* vs. **pacifistic*): 104:1

paean. A. And *pean; paeon; peon. A *paean* (/pee-in/) is a joyous tribute. (**Pean* is a variant spelling.) A *paeon* (/pee-in/ or /pee-ahn/) is a four-syllable metrical foot in classical or English prosody. The two words have a common origin (the Greek word *paion*) and came into English at about the same time—1589 and 1603, respectively—but have been differentiated almost all that time. (See DIFFERENTIATION.) A *peon* (/pee-ahn/) is a low-level worker or drudge, especially one held in compulsory servitude. There are two plurals: *peons* (preferred) and **peones* (/pay-oh-neeZ/—a Portuguese plural). See PLURALS (A).

B. *Paeon of praise. Because a *paean* is specifically a song of praise or thanksgiving, the phrase **paeon of praise* is a REDUNDANCY intended perhaps to provide contextual clues to those with an etiolated vocabulary—e.g.: “She recited a moving *paean of praise* [read *paean*] when the order ‘Pour le Mérite’ was conferred on me.” Dietrich Fischer-Dieskau, *Reverberations* 313 (Ruth Hein trans., 1989).

***paederast.** See **pederast.**

paella (the Spanish dish made with rice, meats, and vegetables) is pronounced /pah-ay-yə/ or /pɪ-el-ə/.

pail. For the mistaken phrase **beyond the pail*, see **pale.**

pailful. Pl. *pailfuls*. See PLURALS (G).

pair. A. Plural Form. The preferred plural of *pair* is *pairs*—a choice that became predominant by 1850, when the matter should have been settled. In non-standard usage, *pair* often appears as a plural—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

“The ASU outburst matched a 9-year-old record set ironically enough by Miami when Greg Ellena and Rusty DeBold hit two apiece in a five-homer game against Stanford in 1985. In addition to Cruz’s and Williamson’s *pair* [read *pairs*], Todd Cady hit a solo shot—his 11th—for the team’s first run.” Kirk Bohls, “Devils Oust Miami,” *Austin Am.-Statesman*, 8 June 1994, at E1.

LANGUAGE-CHANGE INDEX

pair as a plural for *pairs*: Stage 3

Current ratio (*two pairs* vs. *two pair*): 6:1

B. *Pair of twins*. Is it right to speak of a *pair of twins*—that is, does this phrase denote two people or four? Because twins are always two per birth, a pair of twins is two people. (Shoes also come in pairs, and a pair of shoes is two—not four—shoes.) Four twins are two pairs of twins. But the redundant phrase *pair of twins* can be found in print sources fairly steadily from 1800 to the present day.

pajamas; pyjamas. The former is the AmE spelling, the latter BrE. The word is best pronounced /pə-**jah**-məz/, not /pə-**jam**-əz/.

pale, beyond the. This phrase, which means “bizarre, outside the bounds of civilized behavior,” derives from the legal sense of *pale* from English history (“a district or territory within specific bounds, or subject to a particular jurisdiction”). In medieval Ireland, the district around Dublin, settled by the English and considered a law-abiding area, was known as the *Pale* or *within the Pale*. The land beyond that area was characterized as wild “bandit country.” Today, whatever is *beyond the pale* is a forbidden area or subject.

Modern writers occasionally mangle the phrase by writing **beyond the pail* instead of *pale*, a blunder that spread especially after 1950. E.g.:

- “To have a panel of citizens and the Commonwealth’s Attorney . . . call for the board members’ resignations with such harsh and demeaning language, however, is beyond the *pail* [read *pale*].” “School Board Members’ Resignation Letters,” *Virginian-Pilot & Ledger Star* (Norfolk), 10 Mar. 1996, at 7.
- “Justice [William] Brennan, who authored the opinion in *Roth* that placed obscenity *beyond the pail* [read *beyond the pale*] of First Amendment protection, now dissented.” John E. Semouche, *Censoring Sex* 45 (2007). (Here, though, *beyond the pale* would also be inappropriate, unless you consider the First Amendment “outside the bounds of civilized behavior.”)

LANGUAGE-CHANGE INDEX

**beyond the pail* for *beyond the pale*: Stage 1

Current ratio (*beyond the pale* vs.

**beyond the pail*): 398:1

palette; palate; pallet. *Palette* (= [1] a board used by artists for mixing colors; or [2] a set or range of colors) is sometimes misused for its homophone *palate* (= [1] the roof of the mouth; or [2] the sense of taste). It’s an exquisite solecism, if there is such a thing:

- “When Ginny Lang moves from Georgetown to Los Angeles, one of the places she will miss most is Sugar’s, a

Georgetown convenience store that for 50 years has served a range of tastes, from sophisticated *palettes* [read *palates*] to the junk food preferences of college students.” Tara Stevens, “A Stool at Sugar’s Is a Special Spot in Georgetown,” *Wash. Post*, 27 Sept. 1984, at D1.

- “Dr. Bill Magee, a plastic surgeon and founder of Operation Smile, was there and fixed the cleft *palette* [read *palate*] of the girl, Meng Fang.” Mya Frazier, “Doctor Learns of Love Through Chinese Man’s Travails,” *Columbus Dispatch*, 24 June 1995, at C5.

LANGUAGE-CHANGE INDEX

palette misused for *palate*: Stage 1

pall; pallor. *Pall* = (1) a piece of cloth draped over a coffin or tomb, or (2) a shortened form of *pallium*, a robe worn by a bishop or by a monarch at a coronation. It is sense 1 that appears figuratively in the SET PHRASE *to cast a pall over* (a situation), meaning to have a sense of gloom and defeat settle in. *Pallor* = paleness of face, esp. a deathly lack of color.

Both words suggest that things aren’t right. But there the difference ends: a *pallor* is a paleness in the face, while a *pall* is something that causes gloom. Only a *pall*, not a *pallor*, is cast or hung. One grows pallid at the thought of these misuses:

- “In fact, a *pallor* [read *pall*] hung over the Coming Out Week activities at the University of Minnesota, said Kjersten Reich, 20, of the Queer Student Cultural Center.” Rosalind Bentley, “Many Say Shepard Symbolizes Struggle of Gays and Lesbians,” *Star Trib.* (Minneapolis), 14 Oct. 1998, at A1.
- “The strong-arm tactics cast a *pallor* [read *pall*] over the once-lustrous Espy name.” Charles Whitaker, “Mike Espy: Bruised but Unbowed,” *Ebony*, 1 Apr. 1999, at 98.
- “Commerce students said the noontime fights cast a *pallor* [read *pall*] on the rest of the day.” Mary Ellen O’Shea, “5 Arrested at Commerce After Fights,” *Springfield Union-News*, 19 Oct. 2002, at B1.

LANGUAGE-CHANGE INDEX

pallor misused for *pall*: Stage 1

palmetto. Pl. *palmettos*—not **palmettoes*. See PLURALS (D).

Current ratio: 9:1

palomino. So spelled. See SPELLING (A).

palpable (lit., “touchable”) = tangible; apparent. There is nothing wrong with using this word in figurative senses <palpable weaknesses in the argument>, as it has been used since at least the 15th century.

What is nonsensical, however, is to say that the *level* of frustration, tension, etc. is palpable—e.g.:

- “While Tyagachev and his colleagues conveyed a degree of ambiguity about what could force the delegation to leave before the closing ceremony or to boycott the Athens Games, *their level of frustration and anger was palpable* [read *their frustration and anger was palpable*].” Michael Janofsky, “Russians Threaten to Pull Out of Games,” *N.Y. Times*, 22 Feb. 2002, at D1.
- “When they share a scene, *the energy level is palpable* [read *the energy is palpable*].” David Bianculli, “Net Goes 0 for 2,” *Daily News* (N.Y.), 24 Sept. 2002, at 79.
- “Even in America’s heartland, far from the sniper and terrorist attacks, *the anxiety level* [omit *level*] is *palpable*.”

Kay Lazar, "Anxiety Gripping the U.S. Despite Drop in Violence," *Boston Herald*, 27 Oct. 2002, News §, at 8.

The word is occasionally confused with *palatable* (= [of food or drink] tasty; or [of a situation] acceptable)—e.g.: "As a foreigner, especially having come from the relative political docility of Australia, this tension was *palatable* [read *palpable*], almost like he could smell it coming from the fear of the populace." Gregory Paul Broadbent, *On the Obsidian Sea* 263 (2014).

pamphlet. This word is pronounced with the *-ph-* as if it were an *-f-*: /pam-flæt/. Many people incorrectly say /pam-plæt/. See PRONUNCIATION (B), (F).

panache (= admirable flair, verve, and style) is preferably pronounced /pə-nash/—not /pə-nahsh/.

pandemic = (of a disease) prevalent over the whole of a country or continent, or over the whole world. The word is usually an adjective but may be used as a noun—e.g.: "The 1918 flu *pandemic* killed 20 million." Shannon Brownlee, "The Disease Busters," *U.S. News & World Rep.*, 27 Mar. 1995, at 48. Cf. **epidemic**.

pander. The oldest use of this word—dating from about 1530—is as a noun meaning "a go-between in a sexual rendezvous; procurer." The sense was long ago extended to "someone who caters to others' base desires."

By the 1600s, the word had come to be a verb meaning (1) "to act as a go-between in a sexual rendezvous," or (2) "to exploit the weaknesses of others." Sense 2 is now more common—e.g.:

- "While the mayor will *pander* to almost any group when the time and place are right, he has made surprisingly few efforts to ingratiate himself in the city's black communities." Joseph Dolman, "Police Scandal Is About Power, Rather than Race," *Newsday* (N.Y.), 21 Aug. 1997, at A54.
- "Talk shows like Sally, Ricki Lake, Jerry Springer and Jenny Jones generally *pander* to the worst in our natures, parading a sideshow of freaks and social misfits before the cameras." Michael Storey, "Rosie Swaps Places with Sally," *Ark. Democrat-Gaz.*, 9 Sept. 1997, at E3.

The word still sometimes appears as a noun, but now the verb has become so widespread that few consider the word a noun. Meanwhile, in the mid-19th century, the noun *panderer* sprang up. It has now gone far toward displacing the noun *pander*—e.g.:

- "Even the O.J. saga, which already has set the standard for future tabloid *panderers*, is beginning to wane on the gawk-o-meter." Steve Otto, "Bizarre World Helps Create Sick Humor," *Tampa Trib.*, 29 Nov. 1994, Metro §, at 1.
- "During his three-decade career, Bowie has been both a bold explorer and a sad *panderer*." Richard Cromelin, "Bowie Gives a Focused Show in Intimate Small-Club Setting," *L.A. Times*, 12 Sept. 1997, at F20.
- "Don't expect the weak-kneed *panderers* to actually solve tough problems or work to make life better for

Alabamians." "Alabama Legislators Fail to Reflect Will of the People," *Birmingham News* (Ala.), 7 Aug. 2015, at A8.

panegyric (= a rapturous encomium) is pronounced /pan-i-jir-ik/—not /pan-i-jī-rik/.

panel, vb., makes *paneled* and *paneling* in AmE, *panelled* and *panelling* in BrE. See SPELLING (B).

panic, v.i., makes *panicked* and *panicking*. Usually intransitive, *panic* can also be a transitive verb meaning "to affect with panic"—e.g.: "British director Bernard Rose will try to *panic* audiences with a new fiend known as 'Candyman.'" "Sweet Terror," *Wash. Times*, 11 Oct. 1992, at D1. Cf. **mimic** & **picnic**.

pants; pant. Clothing retailers lack standardization when referring to trousers. Neiman Marcus uses *pant*—"9H. Women's Pant 305.00." Bloomingdale's uses *pants*—"E. Clam Digger Pants." And Silhouettes alternates (without any apparent reason) between *pant* and *pants*.

This inconsistency has been around for a long time. The *OED* quotes A.L. Hench from 1936 as follows: "For six or seven years now, I have been hearing clothes dealers speak of a pair of pants as 'a fine pant.' The reasoning seems to be that if a pile of pairs of pants is *pants*, then one pair is a *pant*."

Pant may appear to be a false singular of *pants* or even a BACK-FORMATION. But both words are actually abbreviations of *pantaloons*, and have been so used since the late 19th century when H.A. Shands noted that in Mississippi, "They say: 'I have a pant that I can sell you,' etc. Of course, *pants* is a well-known abbreviation, but I think *pant* is rather a new word."

papal (= of, relating to, or involving the Pope) is pronounced /pap-pəl/—not /pap-əl/.

paparazzi (= photographers who follow celebrities, often aggressively, in hopes of snapping candid photos) is a plural; *paparazzo* is the singular. Originally Italian—invented for Federico Fellini's film *La Dolce Vita* (1960)—the term first surfaced in English in the mid-1960s. Unfortunately, because the singular form is so rare, some writers have begun using the misbegotten double plural **paparazzis*—e.g.:

- "The *paparazzis* [read *paparazzi*] even left the Clintons to find her [Princess Diana] on the Vineyard." J.M. Lawrence, "From Tonya to O.J.," *Boston Herald*, 25 Dec. 1994, at 25.
- "*Paparazzis* [read *Paparazzi*]. Seven-foot Oscar statues. And local actor Ben Tyler announced guests' names as they walked down the red carpet." Kathy Shocket, "Stars Shine on Hollywood Night," *Ariz. Republic*, 12 May 1997, at C1.
- "We would feel fully entitled to turn around and reject a new framework, on the grounds that we did not hack phones, or pay *paparazzis* [read *paparazzi*], or bribe public servants." "A Royal Charter Alone Will Not Restore Trust," *Independent*, 18 Mar. 2013, at 14.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

On 31 August 1997, the day Princess Diana died after a car crash while being chased by paparazzi, many television commentators used the incorrect form—no doubt spreading the mistake among millions of viewers. See SPELLING (A).

LANGUAGE-CHANGE INDEX

**paparazzis* for the plural *paparazzi*: Stage 1

paperwork. One word.

papier-mâché. So spelled—not **paper-mâché* or **paper-mache*. E.g.: “This morning, when the gates open at 8 a.m., the lifesized *paper-mache* [read *papier-mâché*] band will start to play with the flick of a switch in the Circus Museum.” Kate Gurnett, “Altamont Fair Awaits August Crowds,” *Times Union* (Albany), 14 Aug. 1995, at B1. Although American dictionaries spell the phrase with the DIACRITICAL MARKS, it’s often spelled without the circumflex over the *-a-*.

Even so, the phrase is best pronounced /pay-pər-mə-**shay**/—not /pah-pyay-/ or /pap-yay-/.

LANGUAGE-CHANGE INDEX

papier-mâché misspelled **paper-mâché* or **paper-mache*: Stage 1

papilla (= a nipple-like projection such as a tastebud) is pronounced /pə-**pil**-ə/—the plural being *papillae* /pə-**pil**-ee/.

paprika (the piquant red powdered spice) is pronounced /pa-**pree**-kə/ or /pə-**pree**-kə/ in AmE or /**pap**-ri-kə/ sometimes in BrE.

papyrus /pa-**pi**-rəs/ (= [1] a tall sedge native to northern Africa, [2] the pith of this plant made into paper-like writing material, or [3] a manuscript written on this material) overwhelmingly makes the plural *papyri* /pa-**pi**-ri/—not *papyruses*.

par. See **subpar**.

***parachronism.** See **anachronism**.

paradigm. **A. Sense.** *Paradigm* = (1) an example, pattern; (2) a pattern of grammatical changes within a language; (3) a theoretical framework; or (4) a prevailing attitude, esp. within education or scholarship.

B. Plural. The preferred plural is *paradigms*, as opposed to **paradigmata*. See PLURALS (B).

C. For *paragon*. The term *paragon* (= a model of perfection) is sometimes displaced by *paradigm*, especially in the phrase *paragon of virtue*—e.g.:

- “A person might be called a *paradigm* [read *paragon*] of virtue if *their* [read *his* or *her*] behaviour is to be emulated.” Alexander Bird, *Philosophy of Science* 276 (1998).
- “Mr. McCain, once regarded as a *paradigm* [read *paragon*] of virtue and accessibility by many in the media who follow him, also is facing criticism.” Ralph Z. Hallow, “McCain’s Shining Star Dims Republicans,” *Wash. Times*, 11 Jan. 2000, at A1.
- “Swans were long held out as the *paradigm* [read *paragon*] of virtue, but it turns out they aren’t all that faithful either.” Stephanie Brenowitz, “A Biological Explanation for Infidelity,” *Columbus Dispatch*, 12 Aug. 2001, at F7.

D. Pronunciation. *Paradigm* is pronounced /pər-ə-dɪm/—though it was /**par**-ə-dim/ in both AmE and BrE through the early 20th century.

LANGUAGE-CHANGE INDEX

paradigm misused for *paragon*: Stage 1

paradox. A *paradox* is a seeming contradiction or a statement that appears on its face to be contrary to reason, but whose incongruity sometimes resolves itself on closer analysis—e.g.: “What explains this poor-in-wealth, rich-in-health mystery? That’s exactly what Hayes-Bautista hopes to discover and what health experts have dubbed the ‘Latino epidemiological *paradox*.’” Yvette Cabrera, “Latina Mothers Poor in Wealth, Rich in Health,” *Milwaukee J. Sentinel*, 11 Aug. 2002, Lifestyle §, at L3.

In strict usage, a *paradox* is not an unresolvable problem—e.g.: “Two months shy of kicking off its 2002 campaign, United Way of South Hampton Roads officials are faced with the *paradox* [read *problem*] of a bad economy. Community needs rise. And too often, donations go down.” Janie Bryant, “Economy, Scandal May Affect Fund-raising in the Region,” *Virginian-Pilot* (Norfolk), 19 July 2002, at B4.

Nor is it an incongruous situation—e.g.: “The Texas prison system doesn’t provide inmates with condoms, but it still wants its 143,000 prisoners to be as educated as possible about AIDS. If there is a *paradox* [read *an inconsistency*] there, no one mentioned it at the Darrington Prison Unit, where 128 convicts from 16 state prison units gathered to get the latest information about AIDS and other infectious diseases.” Steve Olafson, “Inmates Learn About AIDS at First Conference of Its Kind,” *Houston Chron.*, 18 July 2002, at A27.

And since a *paradox* is an *apparent* contradiction, the phrase **apparent paradox* is a REDUNDANCY—e.g.: “And how does one solve the Democratic Party’s *apparent paradox* [read *paradox*] that a Republican flying the Stars and Bars is explicitly wrong while a Democrat doing the same is implicitly okay?” Editorial, “Paradox,” *Richmond Times-Dispatch*, 20 July 2002, at A8.

paradoxically. See SENTENCE ADVERBS.

paragon. See **paradigm** (C).

paralipsis; *paralepsis; *paraleipsis. Although the more classical spelling **paraleipsis* predominated until about 1960, *paralipsis* has become standard among rhetoricians since that time. **Paralepsis* is the second most common spelling. Let’s not fully discuss the degree to which **paraleipsis* has fallen into disfavor. For the meaning of this rare term, see p. 1019.

Current ratio (in order of headwords): 3:2:1

parallel, vb. makes *paralleled* and *paralleling* in AmE and BrE alike—not **paralleled* and **parallelling*. See SPELLING (B).

PARALLELISM. A. Generally. *Parallelism*—the matching of sentence parts for logical balance—helps satisfy

every reader's innate craving for order and rhythm. In a list, for example, you might have noun + noun + noun, or verb + verb + verb, or adjective + adjective + adjective. By phrasing parallel ideas in parallel grammatical constructions, you show the reader how one idea relates to another. You supply correspondences. Stylists have long emphasized the importance of matching phrase to like phrase:

- "One of the first requisites for the writing of good clean sentences is to have acquired the art of enumeration, that is, of stringing together three or four words or phrases of identical grammatical value without going wrong." H.W. Fowler, *FMEUI* at 142.
- "Everyone who tries to write—at least, everyone not afflicted with what is sometimes called a tin ear—has a degree of natural instinct for putting like thoughts into like constructions. Some have the instinct in *excelsis*. . . . [But] most of us possess the instinct for matching parts in no more than a variable and inferior degree and must strengthen it by self-discipline and taking thought." Wilson Follett, *MAU* at 211.
- "How do you make ideas parallel? In a series, all the items should be alike, whether all nouns, all gerunds, all infinitives, all phrases or all clauses. If a series of verbs is used, they should all be in the same tense, voice and mood. Subjects of parallel clauses should be in the same person and number. When two phrasal prepositions or conjunctions are used together, both need to be present in their entirety." Brian S. Brooks & James L. Pinson, *Working with Words* 73 (2d ed. 1993).
- "No long complex sentence will hold up without parallel construction. Paralleling can be very simple. Any word will seek its own kind, noun to noun, adjective to adjective, infinitive to infinitive." Sheridan Baker, *The Practical Stylist* 101 (8th ed. 1998).

B. Parts of Speech. With CORRELATIVE CONJUNCTIONS and with lists (even short ones), noun should be matched with noun, adjective with adjective, adverb with adverb, etc. Avoid mixtures—e.g.:

- "The poem is derivative, ceremonial, and *an elegy* [read *elegiacal*]." D.S. Brewer, *Chaucer* 44 (2d ed. 1960). (Another possible revision: *The poem is a derivative and ceremonial elegy*. The original list consisted of adjective + adjective + noun.)
- "John Baker is conservative and *a traditionalist*." Murray Teigh Bloom, *The Trouble with Lawyers* 223 (1970). (A possible revision: *John Baker is conservative and traditional*. Or: *John Baker is a conservative and a traditionalist*. The original list consisted of adjective + noun.)
- "Webb, who batted .104 last season, had two doubles, three walks and *scored three times* [read *and three runs*]." Rick Cantu, "Freshman Sits in Driver's Seat as Longhorns Cruise," *Austin Am.-Statesman*, 5 Feb. 1995, at E1, E8. (The original list consisted of noun + noun + verb phrase.)
- "Her French-Canadian husband, Jean Marc, 50, was *gentle, generous and a millionaire* [read *a gentle, generous millionaire*]." Adam Fresco & Ian Cobain, "Weetabix Wife Lived a Life of Novel Charm," *Times* (London), 23 Mar. 2001, at 5. (The original list consisted of adjective + adjective + noun.)

A clear thinker presents lists logically so that grammatical and commonsense relationships are clear.

C. Phrases and Clauses. One of the most common mistakes in falling into a nonparallel construction involves mixing phrases and clauses by introducing a verb late in the game. "Orthopedic surgeons study for four years in a college or university, four years in an orthopedic residency program and may have one optional year of specialized education." "Podiatry vs. Orthopedics," *USA Today*, 14 Apr. 2003, at D7. The writer follows two *four years* phrases with the clause *may have one optional year of specialized education*. Worse, the first two elements are objects of the shared preposition *for*, a job that the *may have* clause can't serve. A suggested revision: *Orthopedic surgeons study for four years in a college or university and four years in an orthopedic residency program; they may have one optional year of specialized education*.

D. Content. To the true stylist, mere grammatical parallelism isn't enough: the grammar should match the ideas. That is, you should strive for notional parallelism. It seems obvious that you shouldn't say that someone is *hungry, tall, and Italian*. But subtler problems arise: "The poetic opening stiffens, dreamily relaxes, then mightily reclinches: an instability of mood and texture both *symptomatic* of the mature Schubert and *disorienting* to generations of frustrated admirers, beginning with Robert Schumann." Joseph Horowitz, "A Symphony Is Where You Find It," *N.Y. Times*, 24 May 1992, § 2, at 1. Although both *symptomatic* and *disorienting* begin adjective phrases, the ideas expressed aren't coordinate. A possible revision: *The poetic opening stiffens, dreamily relaxes, and then mightily reclinches. The instability of mood and texture—symptomatic of the mature Schubert—has been disorienting to generations of frustrated admirers, beginning with Robert Schumann*. The revision subordinates one phrase (*symptomatic*) to the other (*disorienting*), so that frustrated readers themselves aren't disoriented by writing that is symptomatically unparallel.

paralyse. See **paralyze**.

paralysis; *paralyzation. The first is standard. The second is a NONWORD that arose in the 19th century and today appears with some frequency—e.g.:

- "Part 1 includes a special-effects shot depicting the *paralyzation* [read *paralysis*] of New York City." Tom Shales, "Doomsday: The Miniseries," *Wash. Post*, 7 May 1994, at G1.
- "Already, *paralyzation* [read *paralysis*] of arterial expressways running through the Kobe area from Tokyo and Nagoya to Hiroshima and Fukuoka was beginning to take a toll." Sam Jameson, "Criticism of Quake Response Rises in Japan," *L.A. Times*, 19 Jan. 1995, at A1.
- "A federal appeals court tossed out his conviction, calling the *paralyzation* [read *paralysis*] 'shocking to the

Current ratio (*paralysis* vs.

**paralyzation*): 959:1

paralyze; paralyse. The first is the AmE spelling; the second is the predominant BrE spelling.

parameters. A. Generally. Technical contexts aside, this jargonistic VOGUE WORD is not used by those with a heightened sensitivity to language. To begin with, only a specialist in mathematics or computing knows precisely what it means: elsewhere it is a mush word. Second, when it does have a discernible meaning, it is usurping the place of a far simpler and more straightforward term, such as *boundaries*, *limits*, or *guidelines*. Although this 20th-century VOGUE WORD abounds in AmE, it doesn't occur in the best writing—e.g.:

- “Similarly, his [Frank Zappa’s] music broke down barriers even as it expanded *parameters*.” Harry Sumrall, “Mother of Invention,” *Austin Am.-Statesman*, 18 May 1995, Entertainment §, at 13. (How could it not expand “parameters” if it is breaking down barriers? A possible revision: delete *even as it expanded parameters*.)
- “In March, school board members set *parameters* [read *guidelines*] for the search, saying they would consider only those with superintendent experience and a doctorate.” Forrest White, “Schools Superintendent Job Draws 38 Applications,” *Post & Courier* (Charleston, S.C.), 30 Apr. 1997, at B4.
- “At 14 months, babies already know a lot about the *parameters* [read *limits*] of their safe little world.” Elisabeth Kallik Dyssegard, “The Danes Call It Fresh Air,” *N.Y. Times*, 17 May 1997, § 1, at 19.

Rarely is the word used in the singular, but it does occur: “How many corporations inhabit a world so neat that one *parameter* can summarize it?” “The Limitations of WACC,” *Harv. Bus. Rev.*, May–June 1997, at 136.

B. And perimeter. Sometimes *perimeter*, the meaning of which has influenced the senses of *parameter*, is used ostensibly so that the writer can sidestep any criticisms for the use of *parameter*. Although this usage makes literal sense, a clearer expression is available—e.g.: “Some of the nation’s foremost experts in medicine, law and politics will discuss the 25th Amendment to the U.S. Constitution, which *sets perimeters for* [read *establishes procedures in the event of*] presidential disability and [determines] when the president must transfer power to the vice president.” “Wake Forest Forum Features Address by President Ford,” *News & Record* (Greensboro), 10 Nov. 1995, at B2. And in any event, *perimeter* is best left to physical senses <the fort’s perimeter>.

LANGUAGE-CHANGE INDEX

1. *parameters* for the idea of limits, guidelines, or characteristics: Stage 4
2. *perimeters* for the same idea: Stage 1

paramount means “superior to all others” or “most important”—not merely “important.” E.g.: “It is *extremely paramount* [read *extremely important* or *paramount*] that effective deployment of sworn deputies must begin with the distribution of these workers on a proportionate-need basis.” Letter of Michael J. Robinson, “Sheriff’s Defeatist Attitude Is a Cop-Out,” *St. Petersburg Times*, 13 Sept. 1989, at 2. See **tantamount** & ADJECTIVES (B). Cf. **penultimate**.

LANGUAGE-CHANGE INDEX

paramount in the sense “important” (rather than “most important”): Stage 2

paramountcy is the noun corresponding to the adjective *paramount*. It’s not often seen but quite proper—e.g.: “Deng Xiaoping the economic pragmatist was always shadowed by Deng Xiaoping the political ideologue, who asserted, at every critical juncture, the *paramountcy* of the Chinese Communist Party in his nation’s affairs.” Frank Viviano, “China’s Supreme Leader Dies,” *S.F. Chron.*, 20 Feb. 1997, at A1. **Paramountcy* is a variant spelling to be avoided.

A more familiar word, such as *supremacy* or *preeminence*, will almost always be a better choice.

Current ratio (*paramountcy* vs. **paramountcy*): 70:1

***paramutual; *paramutuel.** See **parimutuel**.

paraphrase, n. & vb., is sometimes misspelled **paraphraze*.

paraplegic (= someone who is immobile from the waist down) has four syllables: /par-ə-**plee**-jik/—not /par-ə-pə-**lee**-jik/ (with an epenthetic schwa).

parasitic (= [1] living on other organisms, as a parasite does, or [2] fawning for favors; sycophantic) is the predominant form of the word in all varieties of World English. **Parasitical* is a NEEDLESS VARIANT.

parasol. So spelled. See SPELLING (A).

parcel, vb., makes *parceled* and *parceling* in AmE, *parcelled* and *parcelling* in BrE. See SPELLING (B).

pardon, v.t. See **commute** (B).

pardon me. See **excuse me**.

paren. This CASUALISM for *parenthesis*, based on the term’s long-standing abbreviation, is gaining in popularity—e.g.:

- “As far as I know, I’m the first one who did colon, minus, *paren*.” Katie Hafner, “Emoticon at Age 20 Continues to Stir :-),” *Chicago Trib.*, 23 Sept. 2002, Bus. §, at 4 (quoting Scott E. Fahlman of Carnegie Mellon University).
- “Besides singing, my favorite thing to do is to connect people for business, romance, or just because,” Manisha Shahane wrote to me. Perhaps it was her final earnest set of *parens* that grabbed my attention: “(Ask anyone who knows me!).” Kristen Paulson, “The Single File,” *Boston Globe*, 12 Dec. 2002, Cal. §, at 8.

Part of the reason for this trend may be that the singular (*paren*) and the plural (*parens*) are formed

according to the regular manner—whereas *parenthesis* gives some speakers and writers trouble in its various uses. See **parenthesis**.

parental (= of, relating to, or involving being a parent and esp. being responsible for a child's safety and development) is pronounced /pə-**ren**-təl/—not /**par**-ən-təl/.

PARENTHESES. See **parenthesis** & **PUNCTUATION** (K).

parenthesis /pə-**ren**-thə-sis/, the singular noun, forms the plural *parentheses* /pə-**ren**-thə-seez/. But because the plural is more common than the singular, some speakers use the mistaken **BACK-FORMATION** **parenthese* (wrongly pronounced /pə-**ren**-thə-see/). The error occurs occasionally in writing as well as in speech.

LANGUAGE-CHANGE INDEX

**parenthese* as false singular in place of *parenthesis*: Stage 1

Current ratio (*parenthesis* vs. **parenthese*): 155:1

parenting; grandparenting. *Parenting*, a **VOGUE WORD** meaning “the raising of a child by its parents,” is a fairly recent coinage: *W11* dates it from 1958. It began as **JARGON** used by psychologists, sociologists, and self-help practitioners, but spread into the general language during the 1980s. Its relative *grandparenting* is much rarer—e.g.: “*Grandparenting Styles Differ*,” *Charleston Daily Mail*, 10 Oct. 1995, at A8.

Of course, the gerund *parenting* implies a verb, but that form appears less often than the noun. It's more jarring, and there's usually a handy and simple substitute—e.g.:

- “The group says other clients are trying to have babies that will genetically match children they have already *parented* [read *given birth to*] and lost.” “Cloning Facts,” *Denver Post*, 29 Dec. 2002, at A6.
- “He admits that marriage isn't the silver bullet for social ills but observes that *well-parented* [read *well-reared*] kids often cause less crime or other problems, thus costing society and the government less money.” Abraham McLaughlin, *Christian Science Monitor*, 13 Jan. 2003, USA §, at 1.
- “This legislation is a slap in the face to them and to hundreds like them across Iowa who are *parenting* [read *raising children*] and *foster-parenting* [read *providing foster homes*], with all of the challenges and little of the recognition that ‘traditional’ couples receive.” Letter of Heather L. Adams, “No Evidence for Adoption Ban,” *Des Moines Register*, 17 Feb. 2003, at A10.

LANGUAGE-CHANGE INDEX

parenting in the sense “child-rearing”: Stage 4

parimutuel, n., = a form of gambling in which those who have bet on winning numbers share in the total stakes, after deduction of a management fee. The word is borrowed from French, in which *pari mutuel* means “mutual stake.” The word is sometimes misspelled **paramutual*, **paramutuel*, or **parimutual*—e.g.:

- “Between 1984 and 1994 the annual amount bet on legalized gaming—including casinos, lotteries, *parimutual*

[read *parimutuel*] betting and sports books—jumped by 137%.” “Taking a Hard Look at Gambling,” *L.A. Times*, 5 Mar. 1996, at B6.

- “These bets—like those at the *paramutual* [read *parimutuel*] windows—are based on bloodlines, sires, dams and history of siblings.” Bruce A. Scruton, “How Much for That Horse?” *Times Union* (Albany), 7 Aug. 1996, at C1.
- “Alamo Downs: Originally a well-known horse-racing track that turned to motor sports when Texas outlawed *paramutuel* [read *parimutuel*] wagering.” Bruce Mabrito, “S.A.-Area Motor Sports,” *San Antonio Express-News*, 7 July 2015, Metro §, at 4.

LANGUAGE-CHANGE INDEX

parimutuel misspelled in various ways: Stage 1

Parisian (= a citizen or resident of Paris) is pronounced /pə-**rizh**-ən/ or /pə-**ree**-zhən/ in AmE but /pə-**riz**-ee-ən/ in BrE.

parley; parlay. A. As Nouns. A *parley* (/pahr-lee/) is a discussion of disputed matters, especially a negotiation between warring parties to end hostilities. A *parlay* (/pahr-lay/) is a series of all-or-nothing wagers made in hopes of eventually accumulating large winnings.

Each word is sometimes misused for the other—e.g.:

- “Tickets can also be earned when you cash an Action Cash voucher, make a \$10 *parley* [read *parlay*] bet in the sports book, or play live bingo or in the pit.” Dave Zweifel, “Jerry's Nugget Celebrating 40th Anniversary with Give-aways,” *Las Vegas Rev.-J.*, 8 Oct. 2004, at J8.
- “What was that the sources were saying Friday about an ‘enormous breakthrough’ in the Yahoo-Microsoft negotiations? Obviously what they meant to say was ‘enormous breakdown.’ Steve ‘Not A Dime More’ Ballmer and Jerry ‘Not A Dime Less’ Yang held one last *parlay* [read *parley*] on Saturday, and as dawn broke Sunday, the Yahoo generals looked out from their battlements on a dusty, empty field, tents and equipment abandoned—no giant wooden horse, no nothing.” John Murrell, “Good Morning Silicon Valley,” *San Jose Mercury News*, 30 Mar. 2007, at C3.

B. As Verbs. *Parley* = (1) to discuss differences of opinions, or (2) to negotiate an agreement or settlement, esp. an end to a war. *Parlay* = (1) to repeatedly wager the original stake plus the accumulated winnings, or (2) in an extended sense, to use something on which to build momentum or to use as a foundation.

Although misuses are rare, they do occur—e.g.:

- “Edwards, whose popularity had been sinking badly in the polls since his 1991 victory over David Duke, now stands ready to *parley* [read *parlay*] his casino winnings into a credible bid for re-election in 1995.” Jack Wardlaw & Peter Nicholas, “Breaking Casino Impasse May Help Edwards in '95,” *Times-Picayune* (New Orleans), 29 Aug. 1993, at A1.
- “How can we possibly be so deluded as to think such negotiations this time will not produce results akin to those of previous efforts to *parlay* [read *parley*] with

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

other totalitarians: confirming their contempt for Western interlocutors, reinforcing the despots' sense of inevitable victory and encouraging more aggressive behavior by the latter to achieve that outcome on an accelerated basis?" Frank J. Gaffney Jr., "What Were They Thinking?" *Wash. Times*, 10 July 2007, at A14.

LANGUAGE-CHANGE INDEX

1. *parley* misused for *parlay*: Stage 1
2. *parlay* misused for *parley*: Stage 1

Parliament. The definite article (*the*) is unnecessary before this word when it is used as a proper noun (i.e., in reference to a particular parliament) <Parliament voted to make such conduct illegal>. Cf. **Congress**.

parliamentary need not be capitalized unless one is referring to the doings of a particular parliament. Unlike *congressional*, which should not be capitalized, *parliamentary* as a lowercase adjective has other senses, most commonly in denoting procedural rules for governing meetings. So there may be more justification for the uppercase *Parliamentary* than an uppercase *Congressional*. See **congressional**.

parochial = (1) of or related to a church parish; or (2) confined in range or outlook. The *OED* dates sense 1 to Chaucer in the early 15th century, and it is still current—e.g.: "It took less than a year for Algene Patrick to learn all she needed to know about William H. Brazier Elementary School . . . The grandmother decided enough was enough, and she put Lawrensha in *parochial* school." Elizabeth Weiss Green, "Grade School Goes Corporate," *U.S. News & World Rep.*, 7 May 2007, at 50.

But the figurative sense 2, in use since the 1850s, is unobjectionable—e.g.:

- "Financially the United States heretofore has been *parochial*. Unlike England, Scotland, Germany, France, Canada, and South Africa, we have not had tremendously powerful banking organizations." Susan Adams, "90 Years Ago in Forbes," *Forbes*, 7 May 2007, at 38.
- "[B]efore the Giuliani campaign got off the ground, many Republican operatives believed that a major liability for the candidate would be his dependence on this closed circle of *parochial* advisers, none of whom is experienced in national elections." Thomas B. Edsall, "Party Boy," *New Republic*, 21 May 2007, at 26.
- "[David Buss] was accused of being *parochial*: Though the surveys had been distributed in 37 countries, his critics argued that the populations surveyed were still mostly Western or Westernized." Karen Olsson, "Human Mate Selection Is a Many-Splendored Thing," *Texas Monthly*, June 2007, at 138.

paroxysm (= a sudden spasm or attack of pain, coughing, shaking, etc.) is preferably pronounced /**par**-ək-siz-əm/, not /pə-**rok**-siz-əm/.

parricide; patricide. *Parricide*, the more usual word, means (1) "the murder of one's own father"; or (2) "someone who murders his or her own father." Sense 1: "According to Mones, there are about 300 *parricide* cases a year in the United States. . . . About 70 percent

of all *parricides* involve adolescent boys killing a father." Regina Brett, "Defense of Abused Teen in His Father's Slaying Made Ohio Court History," *Buffalo News*, 21 Apr. 1997, at C1. Sense 2: "The contention that quadriplegia is 'punishment enough'—like the *parricide's* claim that he deserves mercy as an orphan—is one addressed to the sentencing court's discretion alone." *United States ex rel. Villa v. Fairman*, 810 F.2d 715, 717–18 (7th Cir. 1987).

It is also used in extended senses, such as "the murder of the ruler of a country" and "the murder of a close relative." These are not examples of SLIPSHOD EXTENSION, however, for even the Latin etymon (*parricida*) was used in these senses. See -CIDE.

Patricide is a NEEDLESS VARIANT.

parsec. See **light-year**.

parsimony, law of. See **Occam's razor**.

part. See **portion**.

partake is construed with either *in* or *of* in the sense "to take part or share in some action or condition; to participate." *In* is the more common preposition in this sense—e.g.: "From 5 to 5:30 p.m., members will meet and *partake in* a wine and cheese reception." Joan Szeplowski, "Town 'N' Country," *Tampa Trib.*, 10 Sept. 1997, at 4.

Of is the correct preposition when the sense is "to receive, get, or have a share or portion *of*"—e.g.: "So should one *partake of* Chinese cuisine, British history and Clint Eastwood?" T. Collins, "Carryout, Videos Make Dating Like Staying Home," *Courier-J.* (Louisville), 12 Sept. 1997, at W27. All in all, the collocation *partake of* has always been more prevalent than *partake in*.

partially. A. And partly. Whenever either word can suffice in a given context, *partly* is the better choice. *Partially* occasionally causes ambiguity because of its other sense "in a manner exhibiting favoritism." E.g.: "The case was *partially* heard on May 31, 1995." Lydia Barbara Bashwiner, "Aubrey Family-Member Rule Is Applied Prospectively Only," *N.J. Lawyer*, 24 Feb. 1997, at 36. But aren't cases supposed to be heard *impartially*?

The first edition of *AHD* (1969) notes that *partly*, which has wider application, "is the choice when stress is laid on the part (in contrast to the whole), when the reference is to physical things, and when the sense is equivalent to *in part, to some extent*" <partly to blame> <a partly finished building>. "*Partially* is especially applicable to conditions or states in the sense of *to a certain degree*; as the equivalent of *incomplete*, it indirectly stresses the whole" (*AHD*) <partially dependent> <partially contributory>. The third edition (1992) dropped this helpful distinction.

Another way of thinking about the distinction is that *partly* deals with a part, while *partially* deals with the whole, but only to a partial extent or degree.

B. As an antonym of impartially. Often this usage causes no real ambiguity—e.g.:

- “The EU, by considering the unilateral application of Greek South Cyprus for membership, has acted *partially*.” Letter of Hakki Muftuzade, “EU Has Only Stirred the Cyprus Pot,” *Wall Street J. Europe*, 15 Feb. 2000, at 11.
- “Ruddock has handled a difficult portfolio with a deal of success. But his copious interventions have allowed media criticism that he might have acted *partially*.” Tony Harris, “Public Interest, or Private?” *Australian Fin. Rev.*, 6 Feb. 2001, at 42.

But sometimes it can cause real confusion—e.g.:

- “The other 37 decisions were decided *partially* [read *partly?* *tendentiously?*] in favor of the patients.” “Protecting Patients,” *Dallas Morning News*, 22 July 1999, at A26.
- “Blayney concedes that some planners’ anti-annuity bias may be *partially* [read *partly?* *unfairly?*] based on self-interest.” Mary Beth Franklin, “Steady Flow of Income,” *Kiplinger’s Personal Finance*, 1 Oct. 2001, at 102.
- “A world *very partially* [read *only partly?* *cliquishly?*] unified by technology still has no collective consciousness or collective solidarity.” Stanley Hoffmann, “Clash of Globalizations,” *Foreign Affairs*, 1 July 2002, at 104.

participatory; ***participative**. The latter is a NEED-LESS VARIANT.

Current ratio: 6:1

PARTICLES IN NAMES. See NAMES (D).

parti-colored (= many-colored, multihued) is the correct form. But **party-colored* is a fairly common misspelling, perhaps from the festiveness suggested by the word’s meaning—e.g.: “The lawn grows lush and is bordered by . . . scattered groupings of annuals such as *party-colored* [read *parti-colored*] seed dahlias.” Kym Pokorny, “Presidential Bouquet,” *Oregonian* (Portland), 18 Aug. 1996, at L11. See ETYMOLOGY (D).

**Parti-color*, adj., is a NEEDLESS VARIANT.

LANGUAGE-CHANGE INDEX

parti-colored misspelled **party-colored*: Stage 3

Current ratio: 3:1

particular (= of, relating to, or involving a single person or thing) is pronounced /pər-**tik**-yə-lər/—not /pə-**tik**-lər/. The adverb *particularly* has five distinct syllables: /pər-**tik**-yə-lər-lee/—though in DIALECT it can be shortened to three (/pə-**tik**-lee/). For more on the adverb, see the next entry.

particularly. The phrase *and particularly* is usually unnecessary for *particularly*—e.g.: “But the law, *and particularly* [read *particularly*] its quota system, has been sharply criticized by the Council of Europe and other Western organizations that Latvia hopes to join someday.” Alessandra Stanley, “Divided Latvians Awaiting Clinton,” *N.Y. Times*, 6 July 1994, at A1, A5. Once the *and* is deleted, the reader is comfortable with the phrase *particularly its quota system* as a mere APPOSITIVE—and is comfortable with the singular verb.

partisan; **partizan**. The first is the preferred spelling in both AmE and BrE. Although the term denotes “someone who takes part or sides with another,” it has connotations of “a blind, prejudiced, unreasoning, or fanatical adherent” (*OED*).

Current ratio: 76:1

partition is often mispronounced as if it were *petition*.

partly. See **partially**.

party is a legalism that is unjustified when it merely replaces *person*. If used as an elliptical form of *party to the contract* or *party to the lawsuit*, *party* is quite acceptable as a term of art. E.g.: “Either *party* may enforce the terms of this contract, and in the event that either *party* must use attorneys to effect such enforcements, then such expenses and other fees may be charged against the other *party*.” Fred Rodell’s quip is worth remembering: “Only The Law insists on making a ‘party’ out of a single person.” Rodell, *Woe Unto You, Lawyers!* 28 (1939; repr. 1980).

The word has become something of a popularized technicality on restaurant waiting lists <the Butterworth party>—a usage so convenient and so commonplace now that any objection is bootless.

***party-colored**. See **parti-colored**.

parvenu. See **nouveau riche** (B).

passable; **passible**. *Passable* = (1) capable of being passed, open; or (2) acceptable. *Passible* (a rare term) = feeling; susceptible to pain or suffering. The primary error is to misuse *passible* for *passable*, especially in sense 2—e.g.: “They get *passible* [read *passable*] fake identification like driver’s licenses in the border states and then look for work.” Jack Sherzer, “Company Is Fined \$150,000,” *Patriot & Evening News* (Harrisburg), 29 Mar. 1996, at B4. See -ABLE (A). Cf. **impassible**.

LANGUAGE-CHANGE INDEX

passible misused for *passable*: Stage 1

passage. See **voyage**.

pass away. This phrase—sometimes shortened to *pass* <she passed last week>—is the most common EUPHEMISM for *die*. Characteristic of non-U speech, it was most common during the Victorian era. See CLASS DISTINCTIONS.

passcode. See **password**.

passed is sometimes misused for *past*—e.g.: “He said that in addition to the organizers’ decision to exclude the openly homosexual group from the parade, ‘there have been other efforts as well to eliminate some of the other excesses associated with the parade, the drinking and rowdy behavior present in years *passed* [read *past*].” Pam Belluck, “Irish March Stars Cardinal O’Connor,” *N.Y. Times*, 18 Mar. 1995, at 16.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The opposite error also occurs—e.g.: “Before you know it, thirty minutes has *past* [read *passed*], and you are done.” Carter G. Phillips, *Advocacy Before the United States Supreme Court*, 15 T.M. Cooley L. Rev. 177, 190 (1988). See **past**.

1. *passed* misused for *past*: Stage 1
2. *past* misused for *passed*: Stage 1

passerby. Pl. *passersby*—not **passerbys*. See PLURALS (G).

Current ratio: 199:1

passible. See **passable**.

passim (lit., “throughout”) is used in citing an authority in a general way and indicates that the point at hand is treated throughout the work. It’s a fairly erudite citation signal—e.g.: “There is a curious reluctance on the author’s part to let go of linear frameworks—from ‘differentiation to integration’ (p. 13), ‘dependence to interdependence’ (p. 19), ‘childhood to maturity’ (p. 25), and on to ever-higher ‘states of consciousness’ (*passim*).” Michael Edwards, “Popular Development: Rethinking the Theory and Practice of Development,” *J. Dev. Studies*, Apr. 1997, at 581.

PASSIVE VOICE. A. Generally. Many writers talk about passive voice without knowing exactly what it is. In fact, many think that any BE-VERB signals passive voice, as in:

The quotation is applicable to this point.

But that sentence is actually in active voice—even though it’s badly in need of editing. Most professional editors would change *is applicable* to *applies*, but they wouldn’t call it “passive” because it’s not. It’s just a flabby *be*-verb.
