“Usage . . . is the surest pilot in speaking, and we should treat language as currency minted with the public stamp. But in all cases we have need of a critical judgment.”

—Quintilian, ca. A.D. 88

“Modern faults of usage have two causes: indifference or rebellious recklessness, spurning rules; and half study, which finds specious justification for forms that are not really sound.”

—Edward N. Teall, 1940

“To treat the sick, you must have a good knowledge of the healthy. But it is even better to know something about the disease. If the writer means to fight for the best possible use of language, he must be forever on his guard against the ailments that words are prone to.”

—Konstantin Fedin, ca. 1950

“Presumably a youngster should be able to distinguish between *good* and *well*, between *done* and *did*, and if youngsters do not learn this naturally, as those in literate homes do, they must be taught the usage in school. There is at least as much reason to teach them to say, ‘He invited Mary and me’ as there is to teach them how to brush their teeth, to shift gears, or to ride in an airplane.”

—Charlton Laird, 1970

“Language must take its place alongside diet, traffic safety, and the cost of living as something that everyone thinks about and talks about.”

—Dwight Bolinger, 1980

“Standard American English—the English of our dictionaries and grammar books—is a great, messy deluge of words, some of which overlap in meaning, many of which have multiple meanings, and many of which can be used as various parts of speech. . . . Everyone who chooses to use Standard English must make an endless series of decisions about the language, and thereby has a say in how it develops.”

—Barbara Wallraff, 2000

Preface to the Fourth Edition

With this new edition, Oxford University Press has decided to rename the book *Garner's Modern English Usage*—using *English* instead of *American*. That change restores what had been the idea behind the first edition. The implied global emphasis of *English* makes more sense today than ever before, given the book's broadly inclusive approach to World English, not just to American English and British English.

Through the Internet, we have access to the largest database for corpus linguistics ever compiled: the Google database of English-language books printed throughout the world. The use of big data in these pages doubtless makes *GMEU* the most thoroughly empirical work of its kind. I am grateful to the legal department of Google for arranging for me to be the first author explicitly licensed to reproduce results from the Google Ngram Viewer, which shows graphs depicting the relative frequency of specified sequences of words within the corpus of English-language books as compared with other sequences. From this big-data resource, it has become possible to calculate ratios on word frequency and phrase frequency in World English and in the two major subtypes: American English and British English. These ratios, found at the end of many entries, provide some fascinating data: the frequency of one form (the prevalent one) as contrasted with another (a variant).

Of course, the ngram data can hardly be viewed as infallible. There may be a false sense of precision in a ratio such as 4,376:1 (the idea that one word appears in print precisely 4,376 times for every one time that its variant appears). It may well be that the most current ratios available—for the year 2008—aren't as fully reliable as those for earlier years because the books having been scanned are a smaller proportion of the whole universe of candidates. (Still, the corpus includes 206,272 books just for 2008.) There may be other shortcomings. Nevertheless, on balance it seemed better to provide the data than not to, on the stipulation that readers mustn't view the ratios as immutable truth. Instead, these snapshots of the language, especially when viewed in their relationship to usage over time, can provide a sound basis for understanding linguistic developments and usage trends.

To arrive at accurate numbers, I used Google ngrams with contextualized searches within the 2012 Google corpus. The power of these ngrams would have astonished earlier lexicographers—just as it astonished me at first. They take much of the guesswork out of linguistic assessments of Standard Written English. Their reliability was confirmed to me time and again when I compared the results against other major corpora. We can now determine that the phrasal verb *to home in on* arose in English print about 1932. (The original metaphor related to homing pigeons.) We're also able to know that the variant form *to hone in on* emerged about seven years later and has never been as frequent a choice in published books. It now trails by a nearly 1.7-to-1 ratio.

That's in printed books throughout the English-speaking world. In British books, it's a 4-to-1 ratio. In American books, the ratio is 1.6 to 1. So in American English the variant has gained more ground. Anyone who attentively listens to American speech will notice that most people (perhaps 80%?) say *to hone in on*. Who are they? Mostly ordinary people. And who says *to home in on*? Mostly well-read people—subscribers to *The New York Review of Books*, *The New Yorker*, *The Atlantic Monthly*, or the like. That's supportable only by anecdotal evidence—one observer having tested this hypothesis on thousands of audiences over a 20-year period. Yes, the question fascinates me, and I've had the good fortune of being able to administer quizzes containing this issue to over 50,000 people on three continents. The evidence isn't entirely anecdotal, except that I've had to take people at their word about their reading habits.

The phrasing *to hone in on* began as a simple error—an example of WORD-SWAPPING, in which a term gets replaced by its near-homophone. Professional editors tend to stick to the original formulation, but in this instance the speech habits of English speakers, especially American ones, are increasingly at odds with what appears in well-edited English. At some point the editorial preference for the original phrasing (*to hone in on*) will probably shift. But we're not yet to that point.

Ascertaining the facts about usage with ngrams is trickier than it might seem: you can't just search *home in* vs. *hone in*. You'd get many false positives for every reference in English-language books to a *home in Malibu*, etc., with hundreds of thousands of misleading results, if not millions. So I contextualized the searches, usually by inflecting a verb: *homed in on* vs. *honed in on*. (Google ngrams allow you to use up to five consecutive words for the purpose of contextualizing.) In that search, we've inflected the verb and included a terminal preposition to achieve precise results. A little ingenuity was required to arrive at many of the ratios displayed throughout the text.

With some phrases, big-data research is exceedingly difficult. With *as such*, for example, its rightness depends entirely on what has been said in the preceding sentence: what is the antecedent of *such*? A Google ngram can't tell you that. So with some words and phrases for which useful ngram data couldn't be gathered, no comparative information could be supplied. Either the ratios wouldn't be meaningful (as with *shapable* [AmE] vs. *shapeable* [BrE], or *supervisorial* [one sense] and *supervisory* [different sense]), or else no suitable search could be framed (as with the adverbial forms *supplely* vs. *supply* [the latter, of course, being much more frequent as a noun or verb], or *solon* [as contrasted with what?]). A fair amount of thought went into these decisions throughout. Where ratios do appear, it should be clear to you what is being compared against what (prevalent form vs. variant)—for which you may need to read the words within the entry just above. Where desirable, the search terms are supplied within parentheses, as when a reader might have reasonable doubts about what's being compared.

One of the advantages of big data is that outlier instances become trivial. In saying that *Christmas bazaar* is standard and **Christmas bizarre* a solecism (marked here by the asterisk), it matters not that a certain writer might have written, "I thought Christmas bizarre that year." In the larger scheme of big data, that odd instance becomes unimportant as against the others in which writers have mistakenly used the noun phrase **Christmas bizarre* in place of the standard phrase to refer to a seasonal marketplace.

A pessimist might well wonder why it's useful to record a 25,000-to-1 ratio (a few such huge discrepancies in usage are noted). The answer is one that you could hardly appreciate until you're suddenly in an argument with someone who insists that the outlier usage is correct. One of the virtues of a reliable usage guide is to settle debates between language aficionados, or between editor and author. The empirical evidence here marshaled reduces the degree of opinion involved in such matters.

How you think about the ratios is central to decisions about good usage. The ngrams give you diachronic evidence of usage (over, let's say, the past 300 years). They also allow you to calculate ratios for any given year within the span, up to the year 2008. That's the most recent time for which reliable statistics are available. Hence all my mentions of the "current ratio" refer to materials published in 2008. The ratios show a snapshot of usage as it existed in that year.

For those wishing to replicate my research results, the "smoothing" for the ngrams was set at 3, the database was English worldwide, and the year was 2008 (unless specified otherwise). Simply use the Google search engine to find "Ngram Viewer," and you'll soon discover the many delights that ngrams have to offer.

Let me illustrate the lexicographic utility of big data by citing what is in itself a point of only slight importance. When did the standard *hark back* start morphing into **hearken back*? (Again, the asterisk marks a nonrecommended variant.) According to

Webster's Dictionary of English Usage (1989)—and repeated in its update of 2002—the variant just doesn't appear in BrE: “We have no evidence that *hearken back* is establishing itself in British use, though it has occasional use in the U.S.” That statement is an extrapolation based on the impressive Merriam-Webster lexicographic files compiled over the years through its reading program.

But with a few seconds of research using ngrams, it's possible to see that the variant **hearken back* first appeared in published British books in 1860 and occurred in other British writing throughout the 20th century. It didn't appear in American books with any appreciable frequency until 1887. In both varieties of English it began increasingly significantly about 1960. In 1989, when *Webster's Dictionary of English Usage* was first published, the phrase *hark back* outranged **hearken back* in AmE by a 10-to-1 ratio, and in BrE by a 28-to-1 ratio. So the inroads have indeed been greater on the American side. It's also possible now to see that **harken back* occurred more frequently in print than **hearken back* from 1965 to 2000 in AmE, and from 1985 to 2000 in BrE—but only during those periods. In any event, both **hearken back* and **harken back* are variant phrases that have never seriously rivaled the standard phrase (*hark back*) in Standard Written English.

So the earlier usage commentators cited negatively by Merriam-Webster—Theodore Bernstein (1970) and Roy Copperud (1980)—were actually correct in their editorial recommendations against the variants. “They think it must be a mistake,” intones the Merriam-Webster book. Well, yes. A variant newcomer that's just a by-form of an established term is going to be viewed as an editorial mistake. When Bernstein and Copperud were writing, it was probably a Stage 1 misuse, possibly Stage 2. The fact that Merriam-Webster's files contained a few instances of the linguistic interlopers hardly confirmed their full acceptability. In fairness, though, the Merriam-Webster editors were trying to extrapolate from the relatively sparse evidence they had.

Let's consider another simple yet even more obscure example: is the word for a wheelbarrow or dumpcart designed for farm use spelled *tumbrel* or *tumbril*? The word dates from the 14th century in English. The *OED* and most other dictionaries record the primary entry under *tumbrel*, and that was indeed the predominant spelling through the 18th century. But beginning about 1800, the spelling *tumbril* began to dominate. By 1830, its prevalence as the leading form in print sources was unquestioned, and the *-el* spelling has never again seriously rivaled the *-il* spelling. We know this from Google ngrams. Yet the dictionaries would lead you to conclude otherwise. This is an infinitesimal microcosm of the valuable information now available to us all.

It's interesting to speculate about why the change from *tumbrel* to *tumbril* occurred when it did, at the beginning of the 19th century. The fourth edition of a dictionary called *The Complete Farmer*, published in the 1790s, lists only the spelling *tumbrel* and defines it as “a dung-cart.” There must be clues elsewhere.

The 1938 edition of the *Funk & Wagnalls New Standard Dictionary of the English Language* lists as one meaning of *tumbrel*: “A type of cart in which victims were carried to the guillotine during the first French Revolution [1787]: an erroneous use.” *Webster's Second New International Dictionary* (1934) contains a similar definition (it's missing from the *OED*). Mentions of the word *tumbrel* spiked in the late 1780s and 1790s. The switch to the spelling *tumbril* occurred in 1800 in AmE and in the early 1820s in BrE. Could it be that farmers, especially those who wrote about farm-related subjects, wished to avoid, in their ordinary mentions of dumpcarts, associations with the bloody guillotines of revolutionary France and therefore chose the other spelling? That's just speculation. But such little discoveries hold the possibility of many new avenues of research.

Hark back and *tumbril* are just two tiny instances. Multiply those by 5,000 (for a usage guide)—or, ultimately, by a million (for a truly unabridged English dictionary). The degree of ascertainable knowledge about the language is greater than ever before.

In the past, lexicographers (including me) were playing a guessing game: presented with seven instances, four of them going one way and three another, the dictionary-writer would have to make an educated guess about what forms predominated in print. Their evidence was scanty and often unrepresentative. Now lots of guesswork has been eliminated by the powerful tool of big data; lexicography is being revolutionized. Certainly this book has been revolutionized. Every page has been reworked or confirmed by using the extraordinary help of big data.

Mind you, from its very inception in the late 1990s, this book has made copious use of many linguistic corpora. It's just that the corpus now available is incomparably more vast than what was available when the previous editions were written.

Have my editorial recommendations changed because of big data? Yes—a few of them. But on the whole, ngrams have borne out the overwhelming majority of judgments expressed in my earlier usage books. Used carefully, with sophistication, the ngrams allow much greater certainty about usage: dates, changes over time during the full period of Modern English, relative frequencies, and geographic limitations. These possibilities make it an exciting time to be a lexicographer.

One recurrent finding bears note. All varieties of English are powerfully influenced by American English. When my late friend Robert W. Burchfield was editor in chief of the *Oxford English Dictionary Supplement* in the 1970s, he noted that the center of gravity for the English language had shifted to North America. He was right. Again and again, one sees British English and World English following the lead of American usage, often with a lag time of 10 to 50 years. You'll see this trend noted in many entries throughout the book—but of course it's hardly a universal rule.

In this new edition, I've used the same basic techniques and sensibilities that I've always used: given the evidence that I have before me, what judgments would such eminent predecessors such as H.W. Fowler and Theodore Bernstein have made? That's what guides me. But you can read more about that in the rest of the front matter, if you care to—and as I'd encourage you to.

Bryan A. Garner
Dallas, Texas
15 November 2015

Preface to the First Edition

Not long ago, while I was standing at a rental-car counter in Austin, a young clerk told me that a free upgrade to a Cadillac might be available. She would have to see whether any Cadillacs were on the lot just then.

Two minutes passed as she typed, got on the telephone, twirled her hair around her index finger, and then typed some more. Finally, I said, “Can I get the upgrade?”

“You mean, ‘May I get the upgrade?’” she responded.

I thought I had imagined it. “What?”

“You said, ‘*Can* I get the upgrade.’ What you mean is, ‘*May* I get the upgrade.’”

As it happens, I had been working on the manuscript for this book only minutes before, so I couldn’t help thinking how surreal the experience was. I felt a twinge of indignation on the one hand—the kind that almost anyone feels when corrected. But I also thought that her remark was charming in a way. She was doing her best to uphold good English.

But she was wrong, and I gently told her so: “I’m not asking for your permission. I want to know whether you have a Cadillac on the lot. I want to know whether it’s physically possible for me to drive one of them. So: ‘*Can* I get the upgrade.’”

“Oh, I guess you’re right,” she said with resignation.

Experiences like that one give me hope: they show that some people still care about what happens to our language, however misplaced their concern might occasionally be.

The State of the Language

Do I contend that the language is decaying? That it was once in a pristine state and has been sliding ever since? That the glory days are over?

No, I don’t. In many ways, writing today is better than ever. Our best journalists today are as talented a group as has ever worked in the language.

But a great deal of mediocre writing appears in print nowadays, and both written and oral assaults on the language do seem to come at high velocities. The speed comes from mass communications. Turn on the TV and listen to commentators on football, tennis, or golf, and you’ll be treated to the heights of inarticulacy. Then imagine all the millions of viewers whose linguistic perceptions are affected by this blather.

There are good, clarifying forces at work on the language. There are also bad, obscuring forces at work. One language, many realities.

The reality I care about most is that some people still want to use the language well. They want to write effectively; they want to speak effectively. They want their language to be graceful at times and powerful at times. They want to understand how to use words well, how to manipulate sentences, and how to move about in the language without seeming to flail. They want good grammar, but they want more: they want rhetoric in the traditional sense. That is, they want to use language deftly so that it’s fit for their purposes.

This book is for them.

First Principles

Before going any further, I should explain my approach. That’s an unusual thing for the author of a usage dictionary to do—unprecedented, as far as I know. But a guide to good writing is only as good as the principles on which it’s based. And users should naturally be interested in those principles. So, in the interests of full disclosure, here are the ten critical points that, after years of working on usage problems, I’ve settled on:

1. **Purpose.** The purpose of a usage dictionary is to help writers, editors, and speakers use the language effectively: to help them sound grammatical but relaxed, refined but natural, correct but unpedantic.
2. **Realism.** To guide users helpfully, recommendations on usage must be genuinely plausible. They must recognize the language as it currently stands, encourage reasonable approaches to editorial problems, and avoid refighting battles that were long ago lost.
3. **Linguistic Simplicity.** If the same idea can be expressed in a simple way or in a complex way, the simple way is better—and, paradoxically, it will typically lead readers to conclude that the writer is smarter.
4. **Readers' Reactions.** Generally, writing is good if readers find it easy to follow; writing is bad if readers find it hard to follow.
5. **Tightness.** Omitting needless words is important. As long as it's accurate, the briefest way of phrasing an idea is usually best because the brevity enhances speed, clarity, and impact.
6. **Word-Judging.** A word or phrase is somewhat undesirable if it has any one of the following characteristics, and is worse if it has two or more:
 - (a) it sounds newfangled;
 - (b) it defies logic;
 - (c) it threatens to displace an established expression (but hasn't yet done so);
 - (d) it originated in a misunderstanding of a word or its etymology;
 - (e) it blurs a useful distinction.
7. **Differentiation.** If related words—especially those differing only in the suffix—begin to take on different senses, it's wise to encourage the latent distinctions when they're first emerging and then to follow them once they're established.
8. **Needless Variants.** Having two or more variant forms of a word is undesirable unless each one signals a distinct meaning.
9. **Conservatism.** If two constructions are current, and one of them has been widely condemned by authorities whose values are in line with those outlined in #6, the other construction is better.
10. **Actual Usage.** In the end, the actual usage of educated speakers and writers is the overarching criterion for correctness. But while actual usage can trump the other factors, it isn't the only consideration.

Reasonable though these points may seem to the professional writer or editor, they're likely to induce hissy fits among modern linguists, for whom #10 is the only valid concern (and only after deleting the word *educated*). The problem for professional writers and editors is that they can't wait idly to see what direction the language takes. Writers and editors, in fact, influence that direction: they must make decisions.

And a good usage dictionary should help in those decisions. H.W. Fowler's groundbreaking *Dictionary of Modern English Usage* did that in 1926 and for generations after; Theodore M. Bernstein's book *The Careful Writer* did it in 1965; and Wilson Follett's *Modern American Usage* did it in 1966. That has traditionally been the job of the usage dictionary: to help writers and editors solve editorial predicaments.

The State of the Genre

Somewhere along the line, though, usage dictionaries got hijacked by the descriptive linguists, who observe language scientifically. For the pure descriptivist, it's impermissible to say that one form of language is any better than another: as long as a native speaker says it, it's okay—and anyone who takes a contrary stand is a dunderhead. That has become something of a dogma among professional linguists.

Essentially, descriptivists and prescriptivists are approaching different problems. Descriptivists want to record language as it's actually used, and they perform a useful

function—though their audience is generally limited to those willing to pore through vast tomes of dry-as-dust research. Prescriptivists—not all of them, perhaps, but enlightened ones—want to figure out the most effective uses of language, both grammatically and rhetorically. Their editorial advice should accord with the predominant practices of the best writers and editors.

For the pure descriptivist, it's silly to say that *infer* shouldn't be "misused" for *imply*. Presumably, it's also silly to say that *Hobson's choice* is the correct phrase and that *Hobbesian choice* is an ignorant error, because much evidence can be found for the latter. Likewise, we shouldn't prohibit any other example of what is here called WORD-SWAPPING. The extreme view is that even spell-checkers are a bad force because they ensure uniformity and stifle linguistic experimentation in spelling.¹

Although there's little new to be said about this debate, this book does something quite new: it gathers reams of current linguistic evidence to show the many confusions into which writers fall. And they're constantly falling into them. As Joseph Epstein, the longtime editor of *The American Scholar*, has observed, "The English language is one vast San Andreas fault, where things are slipping and sliding every moment."² English usage is so challenging that even experienced writers need guidance now and then.

Quotations and Citations

This book contains thousands of quotations from published sources. Most are from newspapers, but many are from books and scholarly journals. These quotations came to my hand in various ways.

First, they came from my own reading. For many years, I've traveled a good deal, and whenever I go somewhere I make a point of reading and marking at least one local newspaper, usually more. When I return, I enter those sentences into my database.

Second, I have dozens of allies—members of the H.W. Fowler Society, an informal organization I founded—who send me clippings from newspapers. These Fowlerians, who are spread throughout the English-speaking world, have contributed enormously to the book with hundreds of examples.

Third, I've supplemented entries with examples gleaned from two online databases: NEXIS and WESTLAW. For two decades, they have provided full-text searchability for millions of published documents—a luxury that earlier lexicographers never enjoyed.

But before delving further into online sources, I should address a question that many readers will wonder about. Should I really name names? Should I give full citations in the way that I do? Won't it mortify a journalist to find some badly written sentence frozen in a reference book for all the world to see?

Well, I hope it isn't mortifying, and for me it's nothing new. I used the technique in the second edition of my *Dictionary of Modern Legal Usage* (1995). The citations appear for three reasons. First, they show that the examples are real, not fabricated. Second, they show the great variety of evidence on which the judgments in this book are based. And third, they're lexicographically noteworthy: they reflect how the language is being used in our culture in our time.

I have tried to be dispassionate in choosing examples. More of them come from my favorite newspaper, *The New York Times*, than from any other source: nearly 400 of the some 5,600 illustrative quotations. But a glance at the text will show that they're from all over the country. And many are British.

¹See Sidney Landau, "Of Lexicography, Computers, and Norms," 64 *Am. Speech* 162, 163 (1989) ("I detest even the idea of spelling-correction programs. If they do not serve any heuristic purpose, they are pernicious by artificially limiting the range of spelling choices We thus artificially limit language change . . . and push all our students toward a common center of officially endorsed usages.").

²Joseph Epstein, "Mr. Fowler, He Live," *Weekly Standard*, 20 Jan. 1997, at 29.

Why should British quotations be included, given that this is a dictionary of *American* usage? Most often the reason is that it seems useful to record differences and similarities between British and American English. It's sometimes surprising to learn that a given error occurs much more frequently in British English (see, for example, **hark back (B)**).

Yet the book is American, both in its scope and in its point of view. During the mid-20th century, the English language's center of gravity shifted from England to the United States. And with that shift comes a certain responsibility on the part of those who speak and write American English.

Lexicographic Methods

It's fair to say that the guidance given here is based on a greater corpus of current published writings than any usage guide ever before published. For contemporary usage, the files of our greatest dictionary makers pale in comparison with the full-text search capabilities now provided by NEXIS and WESTLAW. So the prescriptive approach here is leavened by a thorough canvassing of actual usage in modern edited prose.

When I say, then, that *ethicist* is 400 times more common than *ethician*, I have searched vast databases of newspapers and journals to arrive at this round figure. As for those particular terms, the NEXIS databases (as of December 1997) contain 10,138 published documents in which *ethicist* appears, but only 25 documents in which *ethician* appears. (The ratio in WESTLAW's "allnews" database is 7,400 to 6.) So much for the dictionaries that give the main listing under *ethician*. They're out of step: the compilers might have 5 or 10 citation slips in their files, but that's a paltry number when compared with mountains of evidence that the searching of reliable databases can unearth. [Fourth-edition update: Google's ngrams show that the ratio in English-language books as of 2008 was 148 to 1.]

And when I say that *self-deprecating* (traditionally viewed as incorrect) is 50 times as common as *self-depreciating* (traditionally viewed as correct), I have searched those same databases to give this conservative figure. From 1980 to 1997, *self-deprecating* appeared in 16,040 NEXIS sources, and *self-depreciating* in only 353. (The ratio in WESTLAW is 9,860 to 159.) So much for the usage books that continue to recommend *self-depreciating*: that battle is lost. [Fourth-edition update: Google's ngrams show that the ratio in English-language books as of 2008 was 23 to 1.]

In this respect—the consideration of voluminous linguistic evidence to back up judgment calls—this book represents a radical departure from most other usage dictionaries.

Value Judgments

As you might already suspect, I don't shy away from making judgments. I can't imagine that most readers would want me to. Linguists don't like it, of course, because judgment involves subjectivity. It isn't scientific. But rhetoric and usage, in the view of most professional writers, aren't scientific endeavors. You don't want dispassionate descriptions; you want sound guidance. And that requires judgment.

Essentially, the ideal usage commentator needs to be both a scholar and a critic. The poet Robert Bridges knew that, when it comes to language, value judgments are crucial:

Scientific philologists will often argue that phonetic decay is a natural process, which has always been at work, and has actually produced the very forms of speech that we value most highly; and that it is therefore a squeamish pedantry to quarrel with it at any particular stage, or to wish to interfere with it, or even to speak of decay or corruption of language, for that these very terms beg the question, and are only the particular prejudice of particular persons at a particular

time. But this scientific reasoning is aesthetic nonsense. It is absurd to pretend that no results of natural laws should be disapproved of because it is possible to show that they obey the same laws as the processes of which we approve. The filthiest things in nature are as natural as the loveliest: and in art also the worst is as natural as the best: while the good needs not only effort but sympathetic intelligence to attain and preserve it. It is an aesthetic and not a scientific question.³

At the same time, though, aesthetic judgments aren't enough. Bridges overstated the case: when we analyze language, scientific concerns should certainly enter the equation. But he was right, in this little-known passage, to skewer the doctrine on which descriptivism is largely based:

[I]t is no fancy to see a beauty in human speech, and to prefer one [form of] language to another on account of such beauty, and to distinguish the qualities that make the beauty. Learning that forbids such an attitude is contemptible.⁴

Yet this willingness to judge should be tempered by scholarship. H.W. Fowler best embodied the qualities of the scholar-critic. He was a lexicographer, true, but he was also a literary critic. He wasn't exclusively one or the other. His interests were those of the professional editor more than those of the professional linguist. He shared that quality with Theodore Bernstein and Wilson Follett, but he knew more about linguistics than either of those writers. That knowledge was something he had in common with Bergen Evans, but he had better literary and editorial judgment than Evans, and he was confident in exercising that judgment. No one else has quite matched Fowler's blend of interests and talents: though not infallible, he was the most formidable prescriptive grammarian of the 20th century.

The touchstone for commenting on usage, then, is a mixture of scholarship and criticism. Whether I've reached it or not, that has been my goal.

An Autobiographical Note

What possesses someone to write a dictionary of usage? People frequently ask me that question about my *Dictionary of Modern Legal Usage*. I'll try to give an answer.

I realized early—at the age of 15—that my primary intellectual interest was the use of the English language. The interest might be partly genetic. My grandfather, Frank Garner of Amarillo, had more than a passing interest in language. This was magnified three or four times in my father, Gary T. Garner of Canyon, a true language aficionado. And then, as my father tells it, his interest seemed to be magnified a hundredfold in me. It became an all-consuming passion.

This passion has taken various forms at different times in my life. When I was 15 it consisted primarily in building my vocabulary. Then I discovered general semantics—the works of S.I. Hayakawa, Wendell Johnson, Stuart Chase, and Alfred Korzybski. Because I grew up in a university town—small though it was—these and other books were readily accessible. I read everything I could find on the subject.

Then, on a wintry evening while visiting New Mexico at the age of 16, I discovered Eric Partridge's *Usage and Abusage*. I was enthralled. Never had I held a more exciting book. I spent hours reading his advice on the effective use of words and his essays on everything from Johnsonese to précis writing. He kept mentioning another author, by the name of Fowler, so when I got back to Texas I sought out Fowler's *Modern English Usage*. And that book turned out to be even better.

Suffice it to say that by the time I was 18, I had committed to memory most of Fowler, Partridge, and their successors: the Evanses, Bernstein, Follett, and Copperud.

³Robert Bridges, *A Tract on the Present State of English Pronunciation* 15–16 (1913).

⁴*Id.* at 16.

I knew where they differed, and I came to form opinions about whose positions were soundest on all sorts of questions. I knew the work of those writers then better than I do today.

Yet my linguistic influences weren't just in books. Dr. Pat Sullivan of the English Department at West Texas A&M encouraged me from a very early age; from him I learned both transformational and traditional grammar. And my brother's godfather, Professor Alan M.F. Gunn of the English Department at Texas Tech University, nurtured my literary interests during his twice-yearly visits with our family.

College presented a wealth of opportunities. While at the University of Texas, I studied the history of the English language (in the English Department) and the Latin and Greek element in English (in the Classics Department), as well as Latin and French. Though I never mastered Old English, I acquired a passing knowledge of the Middle English of Chaucer and Gower. Two summers at Oxford University—where I studied Chaucer and T.S. Eliot—deepened my appreciation of how language and literature intersect. It was at Oxford that I first got to know Robert W. Burchfield, the editor of the *Supplement to the Oxford English Dictionary* (then underway), and Christopher Ricks, one of the great modern literary critics.

While at Texas and Oxford, I attended many lectures by noted linguists (who, not being positive influences, shouldn't be named). The second most bothersome thing, in my view at the time, was that they were dogmatically descriptive in their approach. The most bothersome thing was that they didn't write well: their offerings were dreary gruel. If you doubt this, go pick up any journal of linguistics. Ask yourself whether the articles are well written. If you haven't looked at one in a while, you'll be shocked.

At any rate, I gravitated away from the Linguistics Department and toward English and Classics. I ended up writing a thesis on the Latin influences in Shakespeare's language, excerpts from which made their way into learned journals. My mentors were John W. Velz, a Shakespearean of the first rank, and Thomas Cable, whose history of the English language (with Albert Baugh) is a classic.

Velz made many suggestions about what to publish, and where. As a 22-year-old budding scholar, I was honored to have an article published alongside one by Velz himself in an issue of *Shakespeare Studies*. Unfortunately, that very article of mine contains a linguistic gaffe that has found its way into the pages of this book: see **bequest**.

In any event, by the time I was an undergraduate—emboldened by Professor Velz's assurances that my work was worthy of publication—I knew that I would one day write a book in my favorite genre: a dictionary of usage.

This one is my second. The first, *Modern Legal Usage*, I wrote between 1981 and 1986; the first edition was published by Oxford University Press in 1987. In 1991, Oxford asked me to undertake this book, and I finished it at the beginning of 1998.

It is the product of a warped sense of fun: the idea that there's nothing more delightful than passing the hours chasing down linguistic problems in dictionaries and other reference books.

You know my approach. You know my influences. Discount the advice as you think advisable. No usage critic is infallible—certainly not I. But be assured that I have tried to know the literature in the field, to examine great quantities of linguistic evidence, and to use my best judgment as a professional writer and editor.

Acknowledgments

As with each previous edition of this book, I've been fortunate to have help from many quarters. At LawProse, Inc., my colleagues Karolyne H.C. Garner, Jeff Newman, Tiger Jackson, Becky R. McDaniel, Ryden McComas Anderson, and John S. Adams have provided invaluable help in suggesting and researching entries, finding illustrative examples, calculating and verifying ratios of frequency, and proofreading the manuscript. Others who performed valuable tasks were my project assistants, Mia Taylor and Esther Lee, and the Garner Law Scholars at two law schools: at Southern Methodist University School of Law, Jessica L. Kirk and William K. Knisley; and at Texas Tech University School of Law, Elizabeth Nanez.

At Oxford University Press, Casper Grathwohl, Damon Zucca, and Maxwell Sinsheimer provided valuable insights at many steps in the evolution of this new edition. At the composition house in Cleveland, Jeff Lachina and his staff produced beautifully set, accurate page proofs that made the final product clean and readable. Special thanks go to Chris Black, who managed the prepress operation with remarkable deftness.

I've had excellent suggestions along the way from any number of readers—thousands of them, in fact. Among the most prolific contributors were the late Sheridan Baker, Robert Ballou, Isabel Barzun, Charles Harrington Elster, Alexandra B. Garner, Caroline B. Garner, Gary T. Garner, Shmuel Gerber, Mark Halpern, Joseph Kimble, Karen Larsen, Nicholas Lemann, Thomas B. Lemann, Karen Magnuson, Jonathan McCall, John E. McIntyre, Brian Melendez, Alison Parker, Sir Christopher Ricks, Justice Antonin Scalia, Merrie Spaeth, Randall Tietjen, John R. Trimble, the late John W. Velz, Edward T. Wahl, Richard S. Walinski, Barbara Wallraff, Jeffrey S. Westbrook, and the late Charles Alan Wright. At Google, Jon Orwant (the deviser of Google's ngrams) and Darryl Chiang (of the legal department) proved enormously helpful.

It has been gratifying over the years to hear from so many people who are interested in English usage. This new edition has benefited from their support and enthusiasm.

B.A.G.

List of Essay Entries

This book contains essentially two types of entries: (1) word entries, which discuss a particular word or set of words; and (2) essay entries, which address larger questions of usage and style. For ease of reference, the essay entries—which appear throughout the book in small capitals—are listed below.

l	<i>as in lever, pill</i>	z	<i>as in zone, please</i>
m	<i>as in muck, drum</i>	zh	<i>as in measure, vision</i>

Key to the Language-Change Index

Stage 1: A new form emerges as an innovation (or a dialectal form persists) among a small minority of the language community, perhaps displacing a traditional usage.

Stage 2: The form spreads to a significant fraction of the language community but remains unacceptable in standard usage.

Stage 3: The form becomes commonplace even among many well-educated people but is still avoided in careful usage.

Stage 4: The form becomes virtually universal but is opposed on cogent grounds by a few linguistic stalwarts (die-hard snoots). See the entry for **snoot**, p. 756.

Stage 5: The form is universally accepted (not counting pseudo-snoot eccentrics).

Expressions that are invariably poor usage are marked with an asterisk (*). For a more expansive explanation of the index, see pp. l–li.

If the index were not measuring change, but instead were expressing static linguistic phenomena, many serviceable analogies would come to mind. I list ten of them here simply to help readers envision the levels of acceptability intended to be conveyed by the idea of stages. We begin with the notation that appears at the bottom of each right-hand page, and then have the ten analogies.

Literal Shorthand

- Stage 4: Peccadillo
- Stage 5: Virtue

Parliamentary-Discipline Analogy

- Stage 1: Expulsion
- Stage 2: Censure
- Stage 3: Reprimand
- Stage 4: Warning
- Stage 5: No action

Making Peace in the Language Wars

Bryan A. Garner

“This battle between linguistic radicals and linguistic conservatives continues unabated.”

—Robert W. Burchfield

Shortly after the first edition of my *Modern American Usage* appeared in 1998, a British reviewer—the noted linguist Tom McArthur—remarked about it: “Henry Watson Fowler, it would appear, is alive and well and living in Texas.”¹ This might have seemed like the highest praise possible. After all, in the American press in the 1980s and 1990s, Fowler had been hailed as “immortal” (*Fortune*), “urbane” (*Boston Globe*), and even “saintly” (*L.A. Times*). Meanwhile, his 1926 *Dictionary of Modern English Usage* had been called “classic” (*New York Times*) and “indispensable” (*Christian Science Monitor*)—“one of the great works in and of the language” (*L.A. Times*).

But McArthur didn’t intend much, if any, praise in his comment. Fowler, you see, was a prescriptivist: he issued judgments about linguistic choices.² McArthur, like almost every other linguist, is a descriptivist: he mostly disclaims making judgments about linguistic choices.³ And the describers and the prescribers (if I may call them that) haven’t been on speaking terms for a very long time.

The Wars

Prescribers seek to guide users of a language—including native speakers—on how to handle words as effectively as possible. Describers seek to discover the facts of how native speakers actually use their language. An outsider might think that these are complementary goals. In fact, though, insiders typically view them as incompatible. And the battles have been unpleasant, despite being mostly invisible (or irrelevant) outside academic linguistic circles. Hence David Foster Wallace’s apt query: “Did you know that probing the seamy underbelly of U.S. lexicography reveals ideological strife and controversy and intrigue and nastiness and fervor on a nearly hanging-chad scale?”⁴

Prescribers like to lambaste their adversaries for their amoral permissiveness:

- **1952:** “Some of the vigilantes who used to waylay your themes to flog each dangling participle and lynch every run-on sentence now seem to be looking for a chance to lay the language on your doorstep like a foundling and run like hell before you can catch them and ask them how to rear the brat. They’re convinced that it’s healthy, that it will grow up very well-adjusted provided it’s never spanked or threatened or fussed over. They’re perfectly willing to furnish you with its past history, and even help you keep records on its day-to-day development, but they’ll only tell you what it has done, not what it should or should not do. The English grammar textbook of

³See “Descriptive and Prescriptive Grammar,” in *The Oxford Companion to the English Language* 286 (Tom McArthur ed., 1992) (“A *descriptive grammar* is an account of a language that seeks to describe how it is used objectively, accurately, systematically, and comprehensively.”).

⁴David Foster Wallace, “Tense Present: Democracy, English, and the Wars over Usage,” *Harper’s Magazine*, Apr. 2001, at 39, 40.

the future may approach its subject in the same spirit in which the Kinsey report tackled sex.”⁵

- **1965:** “The ideal philologist regards the ‘misuse’ of language as a psychiatrist regards murder: just one more phenomenon of human behaviour.”⁶
- **1967:** “The linguisticists . . . are urgently, even fanatically, storming the classroom in order to persuade the old-fashioned grammar teacher that she, too, should be dispassionate in her attitude toward language so that the attitude of linguisticism can prevail: let her just accept the view that there are merely ‘different’ levels of usage—not ‘good’ and ‘bad,’ ‘acceptable’ and ‘unacceptable’—and all will be well.”⁷
- **2000:** “Modern-day linguists who insist on a ‘nonjudgmental’ approach to language like to belittle Fowler. They are fools.”⁸

Describers, meanwhile, like to denounce prescribers as priggish, often ignorant, authoritarians prepared to fight to the death over nonissues such as split infinitives and terminal prepositions:

- **1960:** “Should one say ‘None of them is ready’ or ‘None of them are ready’?
“The prescriptive grammarians are emphatic that it should be singular. The Latinists point out that *nemo*, the Latin equivalent, is singular. The logicians triumphantly point out that *none* can’t be more than one and hence can’t be plural.
“The linguist knows that he hears ‘None of them are ready’ every day, from people of all social positions, geographical areas, and degrees of education.”⁹
- **1970:** “Those who fancy themselves preservers of standards in language, most of whom would hotly deny the appellation ‘purist,’ believe quite sincerely that their stand is highly traditional and regard as dangerous subversives those scholars who devote themselves to the objective description of their first-hand observations. Many who righteously maintain that split infinitives and terminal prepositions are cardinal sins regard themselves as forward-looking men of liberal temperament . . .”¹⁰
- **1982:** “The eighteenth-century grammars, and more importantly the views of language and class which underpinned them, continue to terrorize English speech.”¹¹
- **1999:** “There is hardly any other area in life in which people so badly informed can actually be proud of their ignorance while still proclaiming themselves to be guardians of truth and saviors of others from error.”¹²

At least one describer, Edward Finegan, has conceded that “linguists have not afforded the guardians [i.e., prescribers] a fair hearing,” adding that “this imbalance is exacerbated by the bad press the guardians have in turn inflicted on linguists, a bad press that has bruised the credibility of the linguistics profession.”¹³ Indeed, the Lin-

guistic Society of America long ago conceded what remains true today: “a fair portion of highly educated laymen see in linguistics the great enemy of all they hold dear.”¹⁴

In short, there’s long been bad blood between the two camps. It continues to this day. Even when contemporary describers propose a rapprochement, it typically consists simply in having prescribers concede the error of their ways. For example, in their new *Cambridge Grammar of the English Language* (2002), Rodney Huddleston and Geoffrey K. Pullum airily note that “although descriptive grammars and prescriptive usage manuals differ in the range of topics they treat, there is no reason in principle why they should not agree on what they say about the topics they both treat.”¹⁵ That might seem like a promising statement, but in fact it’s disingenuous—rather like a warring spouse who quarrelsomely proposes a “reconciliation” by insisting that all the fault lies with the other side. For in the very next sentence, we find our two conciliators claiming that prescribers (1) overrely on personal taste; (2) confuse informality with ungrammaticality; and (3) appeal to “certain invalid arguments”¹⁶ (unspecified). That’s it. In their view, it’s all the fault of prescribers.

But the fault lies at least equally at the feet of the describers, many of whom (1) insist that their methods are the only valid ones; (2) disclaim any interest in promoting the careful use of language, often denouncing anyone who seeks to do so; and (3) believe that native speakers of English can’t make a mistake and that usage guides are therefore superfluous.

You may think that’s just hyperbole. Sadly, it isn’t. True enough, there may not be such a thing as a “pure describer,” since every commentator has at least some predilections about usage, however covert. But many describers also dogmatically oppose value judgments about language. That in itself is a value judgment—and a very odd one, in the eyes of ordinary people. Here’s a sampling of what “pure describers” have said in the literature:

Lakoff: “For change that comes spontaneously from below, or within, our policy should be, Let your language alone, and leave its speakers alone!”¹⁷

McWhorter: “*Descriptive* grammar . . . has nothing to do with the rather surreal notion of telling people what they *should* say. The other grammar, which is about counterintuitive, party-pooing bizarrerie, . . . is called *prescriptive* grammar and is neither taught to nor discussed by linguists, except as the persistent little scourge that seems to have gotten hold of the Anglophone world.”¹⁸

Trudgill: “Language change cannot be halted. Nor should the worriers feel obliged to try to halt it. Languages are self-regulating systems which can be left to take care of themselves.”¹⁹

These writers see language as if it were merely a series of events to be duly recorded. They don’t see it—or don’t want to see it—as the product of human conduct and human decision, or its use as a skill that can either be left rudimentary or be honed.

Meanwhile, describers themselves write exclusively in Standard English. If it’s really a matter of complete indifference to them, why don’t they occasionally *flout* (or should that be *flaunt*?) the rules of grammar and usage? Their writing could *militate* (or is it

mitigate?) in favor of linguistic mutations if they would allow themselves to be *unconscious* (*unconscionable?*) in their *use* (*usage?*) of words, as they seemingly want everyone else to be. But they don't do this. They write by all the rules that they tell everyone else not to worry about. Despite their protestations, their own words show that correctness is valued in the real world.

Why should linguists believe—as many certainly do—that language, of all human tools, is uniquely incapable of being misused or abused? Why should language alone be immune to ignorant or careless handling? It's hard to imagine professionals in any other field of human endeavor making an analogous argument.

One surprising aspect of descriptivist doctrine is that it's essentially anti-education: teaching people about good usage, the argument goes, interferes with the natural, unconscious forces of language, so leave speakers alone. This doctrine relieves English teachers of the responsibility to teach standard English. And it dooms us all to the dialect of the households in which we've grown up. One result is rigidified social strata. After all, you're unlikely to gain any responsible position—such as that of a linguistics professor—if you can't speak and write standard English. So much for egalitarianism.

I'm mostly in the prescriptive camp (although, as I'll explain in a moment, I'm a kind of descriptive prescriber). The prescriptive camp explicitly values linguistic decisions and informed standards of correctness. It's a Fowlerian sensibility that Sir Ernest Gowers summed up as having five bases: “first the careful choice of precise words, second the avoidance of all affectations, third the orderly and coherent arrangement of words, fourth the strict observance of what is for the time being established idiom, and fifth the systematization of spelling and pronunciation.”²⁰ Gowers and I are hardly alone among Fowler's successors:

Pei: “Don't be afraid to exercise your power of choice. If you prefer ‘telephone’ to ‘phone,’ or ‘greatly’ to ‘very much,’ don't be afraid to use them. It's your language as much as anyone else's. At the same time, try to have a good reason for your choice, because language is one of the finest products of man's intelligence, and should be intelligently employed and intelligently changed.”²¹

Safire: “Some of the interest in the world of words comes from people who like to put less-educated people down—Language Snobs, who give good usage a bad name. Others enjoy letting off steam in a form of mock-anger, treating their peeves as pets. But most of the interest, I think, comes from a search for standards and values. We resent fog-giness; we resist manipulation by spokesmen who use loaded words and catch phrases; we wonder if, in language, we can find a few of the old moorings. We are not groping for the bygone, we are reaching for a firm foothold in fundamentals.”²²

Marenbon: “It is far easier to destroy a standard language than to create one. A standard language requires a body of speakers who have been trained to distinguish correct constructions from incorrect ones, usual forms from those which are unusual and carry with them special implications. Such training is neither short nor easy; and it is unrealistic to expect that English teachers can give it to their pupils if, along with teaching standard English (as one form of the language, appropriate for certain occasions), they are expected to encourage speech and

²⁰Sir Ernest Gowers, “H.W. Fowler: The Man and His Teaching,” Presidential Address to the English Association, July 1957, at 14.

²¹Mario Pei, *All About Language* 9 (1954).

²²William Safire, *On Language* xv (1980).

writing in dialect and to attend to the multiplicity of other tasks with which modern educationalists have burdened them. By devaluing standard English, the new orthodoxy is destroying it.”²³

Prescribers want to evaluate linguistic change as it occurs. They endorse the changes they consider fortunate and resist the ones they consider unfortunate—often with little success in the long run.

Explaining the Rift

The opposing views aren't easily reconciled. Prescribers like established forms in grammar and word choice. They encourage precision and discourage letting one word usurp another's meaning (*infer–imply*, *lay–lie*, *like–as*). They dislike the indiscriminate use of two forms, especially opposed forms, for one meaning (*categorically–uncategorically*, *couldn't care less–could care less*, *regardless–irregardless*). They value consistency and historical continuity (preferring *home in* over *hone in*, *just deserts* over *just desserts*, and *slough off* over *sluff off*).

Describers, meanwhile, remind us that linguistic change is a fact of life—and conclude that it's therefore not worth opposing. As one has asked: “If language is going to keep changing anyway—and it is—what is the use of posting the little rules and making people uncomfortable only to see them eventually blown away by the wind?”²⁴ Another prominent describer has even seemed to tout mass heedlessness: “The inert ignorance of the uneducated about their language . . . indeed has had a profound and on the whole a progressive effect on language, manifesting itself in an almost miraculously intricate and regular operation of known laws of linguistic behavior.”²⁵ Perhaps because that view involves a value judgment (ignorance is progressive), some describers disclaim it in favor of a value-neutral and all but valueless position, such as this: “The most sensible view about any language is that it changes. It neither regresses nor progresses.”²⁶

In one of the most mind-blowing descriptivist passages ever penned, Donald J. Lloyd talked about linguistic change by allusively adopting a notoriously invidious view of rape: “There is no point in tiresome carping about usage; the best thing is to relax and enjoy it.”²⁷

Yet not all describers endorse fatalistic or optimistic views of change. Dwight L. Bolinger, a describer with impeccable credentials, has staked a position that most prescribers would find satisfactory: “If rules are to be broken, it is better done from knowledge than from ignorance, even when ignorance ultimately decides the issue.”²⁸ Another, the Oxford professor Jean Aitchison, concedes that “language change . . . may, in certain circumstances, be socially undesirable.”²⁹

²³John Marenbon, *Proper English?* 252–53 (Tony Crowley ed., 1991).

²⁴John McWhorter, *The Word on the Street* 85 (1998). But see Peter Farb, *Word Play* 84 (1974) (“One justification sometimes heard for freedom in breaking the rules of the language game is that languages change with time anyway. But that argument is beside the point. Even though the rules may change tomorrow, they are still binding while they are in force today.”).

²⁵John S. Kenyon, “Ignorance Builds Language” (1938), in *A Language Reader for Writers* 175, 176 (James R. Gaskin & Jack Suberman eds., 1966).

²⁷Donald J. Lloyd, “Snobs, Slobs and the English Language,” in *A Linguistics Reader* 99, 102 (Graham Wilson ed., 1967).

²⁸Dwight L. Bolinger, *Language: The Loaded Weapon* 55 (1980). Cf. Louis Foley, *Beneath the Crust of Words* 83 (1928) (“Ignorance has had considerable effect in the development of language. Many changes which have been made in the forms, uses, and meanings of words would certainly not have occurred if the language had been used only by those who knew it thoroughly.”).

²⁹Jean Aitchison, *Language Change: Progress or Decay?* 260 (3d ed. 2001).

One major difference between the prescriber and the describer, and their views toward change, has to do with the relative immediacy of linguistic perspective. The prescriber cares about how language is used here and now. The describer views language more distantly, observing that linguistic change is inevitable. After all, Latin evolved into French, Italian, and other Romance languages—and the French, Italians, and others haven't been adversely affected by linguistic evolution. This is like a geographer arguing that seismic disruptions along the San Andreas Fault hardly matter in the larger scheme of things, since continents and seas will come and go: in the history of the earth, an earthquake in Los Angeles doesn't amount geographically to a blip on the big screen. But of course earthquakes do matter to the people who experience them. And how language is used today—here and now—does matter to people who speak it, hear it, write it, and read it. Invoking the inevitability of linguistic drift doesn't help someone who is unsure about how to say *irrevocable*, what preposition to use after *oblivious*, or whether the verb after *a number of people* should be singular or plural. The linguistic choice that a speaker or writer makes will affect how others react. Linguists may take the long view, but good usage depends on the here and now.

Because usage constantly evolves, so must judgments about usage. Much of what Theodore Bernstein, an eminent *New York Times* editor, said in 1965 about the careful writer³⁰ endures to this day; some of it doesn't. That's the way usage is. The test of good usage has little to do with what endures, although good usage is fairly stable and tends to endure. It has more to do with what works for today's readership, distracting as few readers as possible. It's a test of credibility among contemporaries. Good usage reflects how a careful writer of today approaches linguistic questions.

One common tack of describers is to question all the assumptions about what is meant by "careful writers,"³¹ "the best writers,"³² or "respected people"³³—the abstractions that prescribers postulate for establishing a standard of good usage. When it's impossible to identify exactly who these people are, describers claim victory by concluding that no such standard exists.³⁴

But this idea that "careful writers" (etc.) are unidentifiable is a fallacious position for two reasons.

First, we say that usage is judged good not because the *best writers* employ it, but because it helps writers use words successfully.³⁵ Likewise, we say that apples are healthy not because wise people eat them, but because of their observable effects on the human body. The fact that we eat apples doesn't make them "good food."

³⁰See Theodore M. Bernstein, *The Careful Writer* (1965).

³¹William Strunk Jr. & E.B. White, *The Elements of Style* 59 (3d ed. 1979) ("The careful writer, watchful for small conveniences, goes *which*-hunting, removes the defining *whiches*, and by so doing improves his work."); Maxine Hairston, *Successful Writing* 118 (2d ed. 1986) ("Although the verb *to be* in all its forms (*is, am, was, were, will be, have been*, and so on) remains the central verb in our language, careful writers use it sparingly").

³²William Strunk Jr. & E.B. White, *The Elements of Style* 72 (3d ed. 1979) ("It is no sign of weakness or defeat that your manuscript ends up in need of major surgery. This is a common occurrence in all writing, and among the best writers."); Thomas R. Lounsbury, *The Standard of Usage in English* vi (1908) ("The best, and indeed the only proper, usage is the usage of the best."); John F. Genung, *Outlines of Rhetoric* 9 (1893) ("A most valuable habit to cultivate . . . is the habit of observing words, especially as seen in the pages of the best writers; of tracing fine shades of meaning, and noting how suggestive, or felicitous, or accurately chosen they are. It is by keeping their sense for words alert and refined that good writers constantly enlarge and enrich their vocabulary."); Brainerd Kellogg, *A Text-Book on Rhetoric* 17 (1881) ("Rhetoric . . . has only *usage* as authority for what it teaches—the usage of the best writers and speakers. And this is variable, changing from generation to generation.").

³³Bergen Evans & Cornelia Evans, *A Dictionary of Contemporary American Usage* v (1957) ("Respectable English . . . means the kind of English that is used by the most respected people, the sort of English that will make readers or listeners regard you as an educated person.").

³⁴For a splendid example of this specious approach, see John Algeo, "What Makes Good English Good?" in *The Legacy of Language: A Tribute to Charlton Laird* 122–23 (Phillip C. Boardman ed., 1987).

³⁵I owe this argument to I.A. Richards, *The Philosophy of Rhetoric* 52 (1936).

Second, the *careful writer* may exist for the language in the same sense as the *reasonable person* exists for law, or (in other fields) the *average voter* or the *typical consumer*: it's a pragmatic construct that allows for assessing and predicting behavior. The careful writer is essentially good usage anthropomorphized. It's irrelevant that you can't point to a particular person as a "careful writer," just as it's irrelevant to the law that no one is on every occasion a "reasonable person." This doesn't mean that a real standard doesn't exist. Even Richard W. Bailey of Michigan, a thoroughgoing describer, acknowledges that the linguistic standard exists: "Linguists who pretend that there is no consensus about the elite forms of English confuse their egalitarian ideals with the social reality that surrounds them."³⁶

Still another difference between the camps is that describers want comprehensive descriptions of languages, while prescribers unapologetically treat only a selective set of linguistic problems. Describers have been known to criticize prescribers for this selectivity: "The normative tradition focuses on just a few dots in the vast and complex universe of the English language."³⁷ Because describers are "scientists" who seek to record and catalogue all the observable linguistic phenomena they can, they will go into great detail about matters that have minimal interest to everyone else—for example, why in English we don't say *House brick built is*. Prescribers, by contrast, who write for a wide audience, deal mostly with issues that can taunt even seasoned writers—to take examples from just one small span of entries from this book, the difference between *hearty* and *hardy*; whether the correct form is *harebrained* or *hairbrained*; or whether the predominant phrase is *hark back*, *harken back*, or *hearken back* (perhaps *harp back*?). So prescribers tend to assume that their readers already have some competence with the language.

Yet another major difference has to do with the use of evidence. Describers have always tried to amass linguistic evidence—the more the better. Prescribers are often content to issue their opinions *ex cathedra*. In fact, inadequate consideration of linguistic evidence has traditionally been the prescribers' greatest vulnerability. But the better prescribers, such as H.W. Fowler and Eric Partridge, have closely considered the facts underpinning their judgments. In this book, I've taken the descriptivist tack of citing voluminous evidence—perhaps more than some readers might think necessary. But those readers should consider how useful it is to see the contextual use of words, not in made-up examples but in published passages.³⁸

While prescribers view language as involving a multitude of decisions, describers often discuss language as if its use were all a matter of instinct. "To a linguist or psycholinguist," writes Steven Pinker of MIT, "language is like the song of the humpback whale."³⁹ He tenaciously pursues this odd comparison, ridiculing prescribers as if they were essentially the same as naturalists claiming that "chickadees' nests are incorrectly constructed, pandas hold bamboo in the wrong paw, the song of the humpback whale contains several well-known errors, and monkeys' cries have been in a state of chaos

³⁶Richard W. Bailey, "Whose Usage? Fred Newton Scott and the Standard of Speech," in *Centennial Usage Studies* 1 (Greta D. Little & Michael Montgomery eds., 1994).

³⁷Sidney Greenbaum, "Current Usage and the Experimenter," 51 *Am. Speech* 163, 163 (1976). See also Sidney Greenbaum, *Good English and the Grammarian* 33 (1988) ("From a descriptive stance, normative rules seem trivial in that they affect relatively little of the language"). Cf. John Algeo, "Grammatical Usage: Modern Shibboleths," in *James B. McMillan: Essays in Linguistics by His Friends and Colleagues* 53, 61 (James C. Raymond & I. Willis Russell eds., 1977) (stating that usage books "address themselves mainly to an inherited list of problems rather than to real issues in contemporary English").

³⁸Cf. Samuel Johnson, Preface, *A Dictionary of the English Language* (1755) ("Authorities will sometimes seem to have been accumulated without necessity or use, and perhaps some will be found, which might, without loss, have been omitted. But a work of this kind is not hastily to be charged with superfluities: those quotations, which to careless or unskilful perusers appear only to repeat the same sense, will often exhibit, to a more accurate examiner, diversities of signification, or, at least, afford different shades of the same meaning").

³⁹Steven Pinker, *The Language Instinct* 370 (1994).

and degeneration for hundreds of years.”⁴⁰ He caps it off with this: “Isn’t the song of the humpback whale whatever the humpback whale decides to sing?”⁴¹

The analogy is deeply fallacious in all sorts of ways. First, although the capacity for language may indeed be instinctive—and Pinker makes a good case for this in his book—the specifics of any given language (for example, why we call one object a *hat* and another a *table*) aren’t instinctive at all. Words are arbitrary symbols that are learned, and there are lots of nuances. Second, human beings must make myriad decisions when forming sentences and paragraphs, whereas other animals aren’t known to make the same kinds of decisions in following their instincts. Third, Pinker’s line of reasoning would eliminate any means for judging the effectiveness of human expression. Yet we all know—and Pinker knows very well—that some human beings communicate more effectively than others.

So much for the describers’ misplaced scientism: it can lead to astounding instances of muddled thought.

Reconciling the Camps

A greater sense of balance and impartiality—of where the truth lies—could end the age-old debate between describers and prescribers, if only both sides would acknowledge certain principles. More about these in a moment.

First, I should declare that I am a prescriber who uses descriptivist methods—in effect, a descriptive prescriber. I don’t doubt the value of descriptive linguistics—up to the point at which describers dogmatically refuse to acknowledge the value of prescriptivism. Each side in this age-old debate should acknowledge the value of the other.

Before stating three principles that might allow for this reconciliation, I should draw attention to the danger of acknowledging my prescriptive tendencies. I may be playing into describers’ hands by adopting this inflammatory label. Maybe I should instead take a lesson from D.J. Enright: “Many people without the benefit (as they see it) of a decent education still *want* to know how to use words. And since prescriptivism is the only brake we have on the accelerating spread of chaos, let’s find some other name for it, one less reminiscent of the National Health Service.”⁴² Yet no new label readily suggests itself. Besides, changing the label probably won’t change the reality.

Now to the fundamental principles.

1. *Linguistically, both speech and writing matter.*

When modern linguists focus exclusively on speech, they’re overreacting to their predecessors’ preoccupation with writing. Describers have a bias toward studying speech; prescribers have a bias toward studying writing.

Both are important. In any language, speech precedes writing. It accounts for the overwhelming majority of linguistic events. Yet writing is a form of language worth studying in its own right. For some reason, though, many linguists refuse to recognize this. As Roy Harris, the Oxford linguist, put it some years ago: “One of the sophistries of modern linguistics is to treat scriptism, which has probably dominated the concept of a language in literate societies for at least several millennia, as some kind of theoretical heresy.”⁴³

⁴⁰*Id.*

⁴¹*Id.*

⁴²D.J. Enright, *Fields of Vision* 224 (1990).

⁴³Roy Harris, *The Language Makers* 7 (1980).

Writing endures and therefore helps stabilize the language. Universal literacy helps temper linguistic entropy. As more and more people become literate, the written and spoken forms of language influence each other—even while remaining distinct.

For the readers of this essay, a stable language is doubtless a desirable thing. Otherwise, the English language wouldn't be worth much as a lingua franca. Samuel Johnson rejected the idea of embalming the language,⁴⁴ and no one seriously wants to halt all change in a living language. "It is not a question of banning all linguistic changes," as F.L. Lucas put it. "Since language cannot stand still, the main thing for the public interest is that alterations in vocabulary and idiom should not become too rapid, reckless, and wanton . . ."⁴⁵

The study of writing—like the very fact that writing exists—serves as a conservative, moderating influence. Our literary heritage has helped form our culture. The means by which we record words on paper has an enormous influence on readers and on the culture as a whole.

One aspect of the writing-vs.-speech distinction is what linguists call "register": a user's style of language according to the subject, the audience, and the occasion. No one writes a job-application letter in the same style as a love letter; and no one speaks to an interviewer in the same way as to a pet. Most of us have five basic registers: (1) intimate, for conversations between family members and close friends; (2) casual, for everyday conversations; (3) consultative, for communicating with colleagues and strangers in conducting everyday business; (4) formal, for published essays and serious lectures; and (5) frozen, for religious and legal rituals.⁴⁶ Those who study oral communication (describers) incline toward 1–2 (occasionally 3); those who study written communication (prescribers) incline toward 3–4 (occasionally 2, sometimes 5). If describers and prescribers alike were more overt about the registers they're dealing with, many of their squabbles might wither away.

2. *Writing well is a hard-won skill that involves learning conventions.*

To educate people about the conventions of writing is good for them. Why? Because writing well requires disciplined thinking. Learning to write is a part of anyone's education.

What are the conventions that aspiring writers need to learn? Among other things, those who write expository prose must learn cognitive skills—how to:

- Summarize complicated matter.
- Maintain a cohesive train of thought.
- Support ideas with adequate evidence.

To communicate the material, the writer must also learn mechanical skills—how to:

- Vary sentence structure.
- Vary sentence length.
- Vary paragraph length.
- Connect ideas from sentence to sentence, and paragraph to paragraph.

Finally, to make certain that the communication is clear to the reader and free of distractions, the writer must learn stylistic skills—how to:

- Adopt a relaxed, natural tone.
- Omit unnecessary words.

⁴⁴See the Preface to his *Dictionary of the English Language* (1755).

⁴⁵F.L. Lucas, *Style* 43 (1955; repr. 1962).

⁴⁶See generally Martin Joos, *The Five Clocks* (1962).

- Observe recognized grammatical niceties (subject–verb agreement, parallel constructions, logically placed modifiers, and so on).
- Distinguish between similar words that are easily confused, such as *affect* and *effect*, *principle* and *principal*, and the like.

Only the last three, for some reason, seem to trouble most describers, who overstate their objections. They like to caricature prescribers as insisting on such fripperies as *It's I* and *none is*, and as prohibiting all split infinitives, all prepositions as sentence-enders, and all conjunctions as sentence-starters.⁴⁷ The truth is that informed prescribers didn't take any of those positions at any time in the 20th century—and certainly not in the 21st. In fact, prescribers have been just as severe as describers in ridiculing such superstitions.⁴⁸

Back to the main point: writing is a learned activity, no different in that regard from hitting a golf ball or playing the piano. Yes, some people naturally do it better than others. But apart from a few atypical autodidacts (who exist in all disciplines), there's no practical way to learn to write, hit a golf ball, or play the piano without guidance on many points, large and small. And everyone, even the autodidact, requires considerable effort and practice in learning the norms. The norms are important even to those who ultimately break them to good effect.

3. *It's possible to formulate practical advice on grammar and usage.*

Although 18th- and 19th-century grammarians' work was too often corrupted by whimsy and guesswork, their basic instincts were sound: we can indeed help writers on critical questions of grammar and usage.

Usage and style operate differently in writing and in speech. In oral communication, inflection and body language and interaction help convey meaning. And a speaker can perceive cues that invite immediate clarifications. But in writing, these aids to communication are absent: you rely exclusively on marks on a page (words and punctuation). A writer rarely gets a second chance to communicate effectively, so clear writing requires much more forethought. It's no wonder that publishers have produced thousands of books designed to teach people how to improve their writing.

Authorities on the written word echo each other in stressing how difficult good writing is: "Writing is hard work. A clear sentence is no accident. Very few sentences come out right the first time, or even the third time. Remember this in moments of despair. If you find that writing is hard, it's because it *is* hard."⁴⁹ Writers must learn to have a point, to deliver it efficiently, to cut the extra words that inevitably appear in any first draft, and to maintain a clean narrative line, among many other skills. These things trouble even professionals.

Prescriptive usage guides deal with many of the small points that writers grapple with. These manuals are pedagogical books intended to be browsed in as much as consulted. In this book, for example, many entries deal with emerging confusions in diction that

⁴⁷See the quotations accompanying notes 9, 10; see also Steven Pinker, *The Language Instinct* 373–74 (1994) ("Most of the hobgoblins of contemporary prescriptive grammar (don't split infinitives, don't end a sentence with a preposition) can be traced back to . . . eighteenth-century fads").

⁴⁸See, e.g., H.W. Fowler, *A Dictionary of Modern English Usage* 586–87 (1926) (s.v. "Superstitions"); Eric Partridge, *Usage and Abusage* 159–60 [*it is me*], 204–05 [*none*], 296 [split infinitive], 245 [terminal preposition] (1940); Wilson Follett, *Modern American Usage: A Guide* 227 [*none*], 313 [split infinitive], 64 [*and, but*] (1966); Theodore M. Bernstein, *Miss Thistlebottom's Hobgoblins: The Careful Writer's Guide to the Taboos, Bugbears, and Outmoded Rules of English Usage* (1971) (passim).

⁴⁹William Zinsser, *On Writing Well* 12 (6th ed. 1998). Cf. Alexei Tolstoy, "Advice to the Young Writer" (1939), in *Maxim Gorky, Vladimir Mayakovsky, Alexei Tolstoy, and Konstantin Fedin on the Art and Craft of Writing* 231, 231–32 (Alex Miller trans., 1972) ("Nobody has ever found that writing comes easy, that it 'flowed' from the pen. Writing is always difficult, and the more difficult it is, the better it turns out in the end.").

threaten to spread: *disburse* for *disperse*, *expatriot* for *expatriate*, *fruit melody* for *fruit medley*, *heart-rendering* for *heart-rending*, *marshal arts* for *martial arts*, *presumptious* for *presumptuous*, *reign in* for *rein in*. Other entries deal with plural forms that, for now, most careful writers want to maintain in plural senses, such as *criteria*, *paparazzi*, and *phenomena*. Still other entries urge wider acceptance of disputed usages, such as the singular *media*.

The focus is on the particular: these are the words and phrases that writers and editors must make considered choices about daily. There aren't just a few dozen trouble spots in the language, or even a few hundred. There are several thousand of them. Given the critical acumen of many readers, for a writer to remain unconscious of these pitfalls and write whatever sounds close enough will inevitably lead to a loss of credibility. Vague intelligibility isn't the touchstone; precision is.

As a field of study, usage doesn't hold much interest for modern linguists, who are drifting more and more toward quantitative psychology and theory. Their leading theorist, Noam Chomsky of MIT, has acknowledged, with no apparent regret, the pedagogical irrelevance of modern linguistics: "I am, frankly, rather skeptical about the significance, for the teaching of languages, of such insights and understanding as have been attained in linguistics and psychology."⁵⁰ An equally august prescriptivist, F.W. Bateson of Oxford, said just a few years later: "The professional linguist has very little to contribute to style considered as the *best* words in the *best* order."⁵¹ If you want to learn how to use the English language skillfully and gracefully, books on linguistics won't help you at all.

Yet people *want* normative rules of language. Linguistic relativism, though valuable on some levels, has its limitations. True, it's probably helpful for students to hear insights such as this from Charlton Laird: "Nothing in language is essentially vulgar or genteel, barbarous or elegant, right or wrong, except as the users of the language want to feel that the locutions have those qualities."⁵² But of course most writers believe that words and phrases can have right and wrong qualities. In a given social setting, those widely shared views matter enormously. And Laird—a sensible describer—recognized this:

We must have standards. After all, who makes the language? You and I and everybody make the language. And what does this hydra-headed language-manufacturer want in his product? Obviously, he wants a number of things; he wants flexibility and versatility, but he also wants standards. He may not know just what standards he wants, nor how rigidly he wants them applied, but he does want them in spelling, in punctuation, in diction, in usage, in all aspects of language, and on the whole he relies on people of our sort [English teachers] to inform him which are the best standards and what he should do about them. We had better be prepared to tell him, and to know what we are talking about when we do so.⁵³

Despite the describers' decades-old campaign to convince us that no uses of language are inherently better than others, literate people continue to yearn for guidance on linguistic questions. With great acuity half a century ago, an English teacher—Louis Salomon—characterized what remains the current state of affairs:

The public may not care whether English teachers eat or not, but if there is any sentiment in favor of feeding them I'm willing to bet that the idea is to keep them

⁵⁰Noam Chomsky, "Linguistic Theory," in *Northeast Conference on the Teaching of Foreign Languages* 43 (1966) (as quoted in J.B. Pride, *The Social Meaning of Language* 80 (1971)). Cf. Linguistic Society of America, *Report of the Commission on the Humanities* 155–56 (1964) ("The impact which the recent advances in linguistics have upon the general public [is] essentially zero").

⁵¹F.W. Bateson, *The Scholar-Critic* 100 (1972).

⁵³*Id.* at 47–48.

alive as English teachers, that is, as a kind of traffic cop to tell the average person when to stop and when to move on, where he may park and where he may not. If English teachers don't want to be traffic cops—if they just want to stand on the corner and count the cars that try to beat the red light—then they might as well turn in their badges. Because sooner or later the taxpayers will (a) begin to wonder why the accident rate keeps going up, and (b) discover that a machine with an electric eye can do the counting more cheaply and more efficiently.⁵⁴

Yet several linguists assert, essentially, that there is no right and wrong in language. Consider what one well-known linguist, Robert A. Hall Jr., famously said: “There is no such thing as good and bad (or correct and incorrect, grammatical and ungrammatical, right and wrong) in language. . . . A dictionary or grammar is not as good an authority for your speech as the way you yourself speak.”⁵⁵ Some of the better theorists in the mid-20th century rejected this extremism. Here, for example, is how Max Black responded:

This extreme position . . . involves a confusion between investigating rules (or standards, norms) and prescribing or laying down such rules. Let us grant that a linguist, qua theoretical and dispassionate scientist, is not in the business of telling people how to talk; it by no means follows that the speakers he is studying are free from rules which ought to be recorded in any faithful and accurate report of their practices. A student of law is not a legislator; but it would be a gross fallacy to argue that therefore there can be no right or wrong in legal matters.⁵⁶

One might have thought that this no-right-and-no-wrong fallacy had long since been laid to rest. But it's very much with us, at least in academia. Through the latter half of the 20th century and still today, there has been an academic assault on linguistic standards. Today the remark “That's not good English” would likely be met with the rejoinder, “Says who?” This is because people are increasingly hearing the dogma that no use of language is better than any other.

Today the teaching of standard English is being labeled discriminatory. An essay published in 1998 by a University of Michigan linguist, James Milroy, says this: “In an age when discrimination in terms of race, color, religion, or gender is not publicly acceptable, the last bastion of overt social discrimination will continue to be a person's use of language.”⁵⁷

In other words, the spirit of the day demands that you not think critically—or at least not think ill—of anyone else's use of language. If you believe in good grammar and linguistic sensitivity, *you're* the problem. And there is a large, powerful contingent in higher education today—larger and more powerful than ever before—trying to eradicate any thoughts about good and bad grammar, correct and incorrect word choices, effective and ineffective style.

Terms of the Truce

Prescribers should be free to advocate a realistic level of linguistic tidiness—without being molested for it—even as the describers are free to describe the mess all around them. If the prescribers have moderate success, then the describers should simply describe those successes. Education entailing normative values has always been a part of literate society. Why should it suddenly stop merely because describers see this kind of education as meddling with natural forces?

⁵⁴Louis B. Salomon, “Whose Good English?” 38 *Am. Ass'n Univ. Profs. Bull.* 441, 448 (Fall 1952) (as quoted in *The Ordeal of American English* 160, 163 (C. Merton Babcock ed., 1961)).

⁵⁵Robert A. Hall Jr., *Leave Your Language Alone!* 6 (1950).

⁵⁶Max Black, *The Labyrinth of Language* 70 (1968).

⁵⁷James Milroy, “Children Can't Speak or Write Properly Any More,” in *Language Myths* 64–65 (Laurie Bauer & Peter Trudgill eds., 1998).

Meanwhile, prescribers need to be realistic. They can't expect perfection or permanence, and they must bow to universal usage. But when an expression is in transition—when only part of the population has adopted a new usage that seems genuinely undesirable—prescribers should be allowed, within reason, to stigmatize it. There's no reason to tolerate *wreckless driving* in place of *reckless driving*. Or *wasteband* in place of *waistband*. Or *corollary* when misused for *correlation*. Multiply these things by 10,000, and you have an idea of what we're dealing with. There are legitimate objections to the slippage based not just on widespread confusion but also on imprecision of thought, on the spread of linguistic uncertainty, on the etymological disembodiment of words, and on decaying standards generally.

As Roy Harris has remarked: "There is no reason why prescriptive linguistics should not be 'scientific,' just as there is no reason why prescriptive medicine should not be."⁵⁸ Harris went even further, denouncing the antiprescriptive doctrine as resulting from naiveté:

Twentieth-century linguists, anxious to claim "scientific" status for their new synchronic discipline, were glad enough to retain the old nineteenth-century whipping-boy of prescriptivism, in order thereby to distinguish their own concerns as "descriptive," not "prescriptive." When the history of twentieth-century linguistics comes to be written, a naive, unquestioning faith in the validity of this distinction will doubtless be seen as one of the main factors in the academic sociology of the subject.⁵⁹

Elsewhere Harris has referred to "the anti-prescriptivist witch-hunt in modern linguistics."⁶⁰

Other linguists have explained the blind spot that misleads so many of their colleagues. In 1959, C.A. Ferguson suggested that linguists too often take a blinkered look at the language, ignoring its social import: "[Describers] in their understandable zeal to describe the internal structure of the language they are studying often fail to provide even the most elementary data about the socio-cultural setting in which the language functions."⁶¹

Maybe this, in turn, is because linguistic investigations tend to be highly theoretical—and divorced from most people's immediate interests in language. Barbara Wallraff, an *Atlantic* editor who is a prescriber with acute judgment, puts it in a self-deprecating⁶² way: "I am not an academic linguist or an etymologist. Linguistics and what I do stand in something like the relation between anthropology and cooking ethnic food, or between the history of art and art restoration."⁶³ Other analogies might be equally apt, such as musicologists vis-à-vis musicians, or sociologists vis-à-vis ethicists.

To my knowledge, anthropologists don't denounce ethnic food, and art historians don't denounce art restorers—especially not when the cooks and the artisans know a thing or two about the material they're dealing with. Musicologists don't censure musicians who teach others how to produce a vibrato. Sociologists don't look askance at ethicists who aim to guide human behavior. Those who study language could learn something from these other fields—something about balance, civility, and peaceful coexistence.

The Ongoing Tumult in English Usage

Bryan A. Garner

“Research from the New Literacy examines literacy practices, and literacy events, and many researchers have used it’s [sic] perspective to look at what people do with literacy.”

—Kate Pahl & Jennifer Rowsell¹

A Solecistic Summary

The truce that I once proposed² between descriptivists and prescriptivists having been only conditionally excepted by a single linguist,³ the embattlements must continue.

Linguistic history bares out the fact that since English has spreaded throughout the world, people who hue to traditional idioms can avoid the maelstrom of indivious solecisms that await for the unwary. Although the language is continually evolving, and insipient changes become wide-spreadly disbursed and then take route so that words become distant from their entomologies, the mileau in which these changes occur remains fairly constant. To ask whether all change can be quelched is a mute point—a serious misnomer. The language is a self-regulating system of disambiguation, without any official body of persons in high dungeon, at our beckon call, exerting a right to meet out punishment to a would-be literati who has a heyday abusing it—punishment that might amount not just to a mild annoyance but to caricature assassination.

For all intensive purposes, some linguistic shifts may past mustard, even those that don’t harp back to Middle English or Early Modern English. People with an overweening interest in oversighting English sometimes, as a kind of guttural reaction, take all this for granite. There will never be paralyzation of a living language, nor even hiati in its evolution. And it may give piece of mind to know that linguistic change isn’t something to be measured in decades, much less per anum. Improperious words and phrases that may once have been considered abdominable, slightly course, or otherwise beyond the pail may, over time, become fully acceptable and no longer peak anyone’s interest. But even if there are many a person whom misuse particular words and are allowed to do so with impugnity—and all tolled, English contains a heterogenous mother load of almost infinite potential errors—their credulity is likely to be strained in the minds of listeners and readers. The more populace the language community, the greater the wrecklessness with which some speakers and writers can reek havoc on the language itself. These phenomenon become their mode of operandi; for them, perhaps we might say they could not of known better, even if they had ought to. But in the end, close analyzation

should demonstrate that correct English usage should be brandishment enough—it's own reward.

This fictitious summary of this essay contains no fewer than 63 more or less prevalent misuses (some of them quite popular) that represent potential shifts in English usage—that is, each of them can be readily documented in modern print sources. (For a key to this gallimaufry of bad usage, see the end of this essay.) When solecisms arise today, they can spread as never before—like linguistic infections. There are thousands of outbreaks throughout the English-speaking world at any one time.

The viral nature of linguistic change has assumed new dimensions with the advent of mass communications. Consider three examples. (1) On 31 August 1997, immediately after Princess Diana died in a car crash while being chased by tabloid photographers, reporters throughout the world that evening proclaimed that she'd been hounded by “paparazzis.” Millions of viewers at once were exposed to the new double-plural. (2) In 1995, Mazda introduced America to its new luxury sedan, the *Millenia*, having trademarked the car name by changing the standard spelling of a word and dropping an *-n*. With the ad campaigns that followed, millions of people were exposed to the single-*n* spelling and to the idea of having a single *Millenia*. In 2000, Mazda offered a special luxury sedan: the “Mazda Millenia Millennium Edition”—doubtless prompting in consumers everywhere even further linguistic befuddlement. (3) The new popularity of e-banking has made it commonplace for many of us to pay bills online. One bank now sends hundreds of thousands of e-mail acknowledgments every day, each beginning with an individualized salutation: “Dear Bryan A. Garner; A payment has been made . . .” When an exasperated bank customer wrote to protest the repeatedly misused semicolon after the many salutations he receives daily, a bank representative coolly responded: “The semicolons are embedded in our computer systems, and there's no easy way to change the code. Besides, several of us here at the bank think the semicolons are correct.” The customer's punctuational credentials matter not. When it comes to language, people with meager knowledge like to think of themselves as experts.

With each of these mass-communication “linguistic events” or “speech acts”—and my three examples could be multiplied a thousandfold—people not surprisingly come to view *paparazzis*, *Millenia*, and semicolons after salutations as normal. And their own usage soon reflects that view.

On the whole, teachers of English can do only so much to improve the situation—little but help inculcate a lively interest in words, grammar, punctuation, and the like. Even that much has seemed impossible to many. Certainly it's a great challenge to make those subjects lively and engaging. Yet the best teachers do.

But academia has promoted some nefarious ideas that have undermined those efforts, and the ideas have made headway among the teaching ranks. That is, some teachers now validate the demotic idea that no native speaker of any language can ever make a “mistake”—that there *are* no mistakes (just “different” ways of approaching speech acts). Even if they do believe that mistakes are possible in a native speaker's use of language, they may think that it would be discriminatory and politically unacceptable even to mention the errors. Some teachers think that their mission should be to focus on the appreciation of literature—that linguistic matters, especially those relating to usage, are beneath them. Or they may believe in the “new literacy,” the idea that perpetuating standard English is a hopeless, thankless task because linguistic change is inevitable. Some teachers don't want to interrupt the “natural” process of linguistic change. Just go with the flow: as long as their students are intelligible to others, they are “literate” and engaging in “appropriate speech acts.”

It's true, of course, that children learn to write better if they spend lots of time writing, as opposed to diagramming sentences and going through rote drills. Teachers generally now accept that truth. Yet it's almost as if the education system starts but never even tries to finish teaching children how to write.

Approaching a finish would mean recognizing that intelligibility is only part of the goal—perhaps the first part, but only a part. Another part is *credibility*. If students are to profit from their education, they need to acquire knowledge. For as the truism goes, knowledge is power. But power depends on having credibility with others.

Students don't need to have their own faddish or unthinking linguistic habits merely validated at school. They need to have their communication skills sharpened and elevated, lest they enter the adult speech-world handicapped by sounding ill-educated. This upgrading involves their acquiring, among other things, word-consciousness, which tends to retard linguistic change rooted in misunderstandings. This brings us back to usage, and to the viral outbreaks that sometimes become epidemics, even pandemics.

Descriptive linguists hardly resist change—of any sort. They certainly don't see degenerative change as a sign of “disease.” Rather, they largely embrace change. As Mark Halpern observes, “Linguists’ insatiable appetite for change in language is undoubtedly another phenomenon for which there is a mixture of reasons, but among them one is surely fundamental: without change, an important group of linguists would have little fresh material to study.”⁴ So if descriptive linguists welcome dialectal varieties and resist the teaching of a standard language because a standard language makes their linguistic laboratory less *interesting*,⁵ they're like epidemiologists who get excited about the spread of new viruses.

But perhaps the disease metaphor isn't as apt as another biological metaphor—evolution. The forces of natural selection are every bit as much at work in living languages as they are in the rest of the natural world. Over time, words and phrases mutate both in form and in meaning, sometimes through useful innovation and sometimes through unconscious drift and pervasive error. Usually the mutations don't survive, but occasionally a change proves meritorious and ends up becoming a part of the standard language. That happens only if it's fit enough to survive—as a part of the natural selection that takes place in every language.

Sometimes the source of a mutation can be hard to pinpoint. Take, for example, the word *nimrod*. That word has always denoted a hunter. It derives from a name in Genesis: Nimrod, a descendant of Ham, was a mighty huntsman and king of Shinar. Most modern dictionaries even capitalize the English word, unlike similar eponymic words such as *mentor* (= a guide or teacher, from the name of a character in Homer's *Odyssey*) and *solon* (= a legislator, from the name of an ancient Athenian lawmaker, statesman, and poet).

But few people today capitalize *Nimrod*, and fewer still use it to mean “great hunter.” The word has depreciated in meaning: it's now pejorative, denoting a simpleton, a goofy person, a dummy.

Believe it or not, we can blame this change on Bugs Bunny, the cartoon character created in the 1940s. He is so popular that *TV Guide* in 2002 named him the “greatest cartoon character of all time.” Bugs is best known for his catchphrase “What's Up, Doc?” But for one of his chief antagonists, the inept hunter Elmer Fudd, Bugs would chide, “What a moron! [pronounced like *maroon*] What a nimrod! [pronounced with a pause like two words, *nim rod*].” So for an entire generation raised on these cartoons, the word took on the sense of ineptitude—and therefore what was originally a good joke got ruined.

Ask any American born after 1950 what *nimrod* means and you're likely to hear the answer “idiot.” Ask anyone born before 1950 what it means—especially if the person is culturally literate—and you're likely to hear “hunter.” The upshot is that the traditional sense is becoming scarcer with each passing year.

⁴Mark Halpern, *Language and Human Nature* 20 (2009).

⁵See, e.g., Ang Yiying, “Linguists Speak Up for Singlish,” *Straits Times* (Singapore), 9 Dec. 2008 (quoting sociolinguist Anthea Fraser Gupta, who opposes the Speak Good English Movement in Singapore on the grounds that Singlish [a dialect of Singaporean English] should be allowed to flourish, and not be displaced by standard English, because from a linguist's perspective, the dialect makes Singapore “the equivalent of a really well-equipped laboratory for a chemist”).

1 The Ongoing Tumult in English Usage

This little example illustrates the huge changes that words can and do undergo all the time. Sometimes the changes aren't semantic—changes in meaning—but instead involve word-formation. Take, for example, *bridegroom* or *groom*. In Middle English (ca. 1200–1500), the original term was *goom* (= man). The extra *-r-* was added centuries ago by false association with someone who works in a stable to care for horses. America's greatest lexicographer, Noah Webster, fought in vain in the early 19th century to make a man on his wedding day the *bridegoom* and all his attendants the *goomsmen*. But the English-speaking people would have none of it—they wanted their extra *-r-*, and they got it. The harmless mutation survived, and today we're wedded to it.

It's one thing to hear about past changes. We already know the outcomes and feel comfortable with them. But it's quite another to consider current word-struggles. Most people feel justified in taking a position on the current standing of a word or phrase. After all, the language belongs to all of us, and we all have a say.

So let's consider the major stages of verbal change. They were first suggested in a 1967 article by Louis G. Heller and James Macris in the journal *American Speech*. I've adapted their four stages into five. (Each nonstandard form below is preceded by an asterisk.)

Stage 1: A new form emerges as an innovation (or some dialectal usage persists) among a small minority of the language community, perhaps displacing a traditional usage. Examples include the misspellings **baited breath* for *bated breath*; **bellwether* for *bellwether*; the misbegotten **harp back* for *hark back*; the double negative **unrelentlessly* for the correct *relentlessly* or *unrelentingly*; and the dialectal **brung* for *brought*. People normally consider innovations at this stage outright mistakes. Most people who are aware of them hope they won't spread.

Stage 2: The form spreads to a significant portion of the language community, but it remains unacceptable in standard usage. Terms at this stage include using *alumni* and *criteria* as if they were singulars (*alumnus*, *alumna*, or even *alum* being correct, and *criterion* being the singular form); misspelling and mispronouncing *sherbet* as if it were **sherbert* (with an extra *-r-*); misusing *infer* for *imply*; using *peruse* to mean “scan hastily” rather than “read carefully”; and using a nominative pronoun in compound objects such as **between you and I* rather than *between you and me*. Terms in stage 2 often get recorded in dictionaries as variant forms, but this fact alone is hardly a recommendation for their use.

Stage 3: The form becomes commonplace even among many well-educated people, but it's still avoided in careful usage. Examples include **gladiolas* for *gladioluses* (or simply *glads*); **hone in* for *home in* (traditionally it's what homing pigeons do); **miniscule* for the correct spelling *minuscule*; and the supposed contraction **'til* for the good old word *till* (as in *We'll be here till noon*).

Stage 4: The form becomes virtually universal but is opposed on cogent grounds by a few linguistic stalwarts (the traditionalists that David Foster Wallace dubbed “snoots”: syntax nudniks of our time). Examples are pronouncing *flaccid* as **/flas-**id/ instead of the traditional **/flak-**sid/ (like *access* [**/ak-**ses/] and *accident* [**/ak-**sə-dent/]); using *unbeknownst* for *unbeknown*; saying or writing **the reason is because* instead of *the reason is that*; and using *nimrod* in the Bugs Bunny sense.

Stage 5: The form is universally adopted except by a few eccentrics. It's a linguistic fait accompli: what was once merely *de facto* has become accepted as *de jure*. There's no going back here. Examples include *contact* as a verb (as in *I'll contact you next week*); the verb *finalize* (*Let's finalize our plans*); the adjective *interpretive* instead of the traditional *interpretative*; *pompom* in reference to cheerleaders' ornamental balls or tufts, instead of *pompon*; the adjective *self-deprecating* instead of the original *self-depreciating* (which the British still sometimes insist on); and saying *You can't have your cake and eat it too* (as opposed to the original and more logical sequence, from centuries ago: *You can't eat your cake and have it too*).

Many mutations never progress beyond stage 1. They stay in the shadows of the language, emerging now and again, mostly to the annoyance of educated people. Arguments frequently erupt about words and phrases in stages 2 and 3. But if a mutation makes its way to stage 4, its long-term progression to stage 5 is all but assured: it's just a question of the passing of time, whether decades or mere days.

As words go through their long lives, they swell and shrink, grow bright or dull, become loud or soft. To some degree they're always changing—most of them glacially, but some of them precipitately (or precipitously [stage 4]). Anyone who aspires to true proficiency with the language should cultivate the habit of assessing words.

I've tried to further that educational effort in my various writings, most notably in the book that you're now holding. In this new third edition, I've developed a "Language-Change Index," as just outlined. Of the nearly 11,000 usage entries in the book, I have assigned rankings (stages 1 to 5) to more than 2,000 usages. The purpose is to measure how widely accepted various linguistic innovations have become. In their 1967 article, Heller and Macris rightly noted (in their characteristically odd phrasing) that "usage specialists can make a clear-cut demarcation of phrases in the evolutionary process relevant to the inception and development of alternative terms."⁶

A reference to the key to my five-stage ranking system appears at the bottom of each right-hand page. Once again, briefly, stage 1 represents usages that are widely rejected; stage 2, usages that have spread but are rejected by better-educated speakers and writers; stage 3, usages that have spread even to well-educated speakers and writers but are rejected by the most careful ones; stage 4, usages that are almost universal, being rejected only by the most conservative linguistic stalwarts; and stage 5, usages that, perhaps once condemned, are now universal even among the best-educated, most fastidious speakers and writers. That is, stage-5 usages are accepted by everyone except linguistic oddballs.

The rankings were arrived at by a variety of methods.

First, I had the benefit of many studies carried out and reported over the years. These were especially useful for the "canonical" usage problems—the ones that every serious usage guide treats. Most notable among these is Margaret M. Bryant's *Current American Usage* (1957), based on more than 900 specific surveys conducted by English teachers in the 1950s. But other surveys were also useful, including those of (1) the *American Heritage Dictionary* usage panels over the years (reported in various forums since the early 1970s), (2) William and Mary Morris's usage panel assembled for both editions of *Harper's Dictionary of Contemporary English Usage* (1975 and 1985), and (3) the findings reported in *Merriam-Webster's Dictionary of English Usage* (1989; concise ed. 2002). These surveys, of course, had to be weighted according to their dates and the predispositions of the survey participants (easily fathomable).

Second, I made extensive use of computer databases, including Google Books, WESTLAW, NEXIS, and the Oxford English Corpus. The findings here had to be weighted according to word frequencies of newer as compared with older usages. In this new edition of the book, I had the unprecedented advantage of Google's ngrams, which give a diachronic view of usage based on big data. This tool became the single most important determinant—but hardly to the exclusion of others.

Third, I have relied—unabashedly—on my own sense, based on a lifetime of serious linguistic study, of where a given usage falls on the spectrum of acceptability in Standard English. Part of this sense I have developed through attentive observation and part through daily correspondence with English-language aficionados throughout the world. Fortunately, my daily usage e-mails, known as Garner's Usage Tip of

⁶Louis G. Heller & James Macris, "English Usage and Modern Linguistic Theory," 42 *Am. Speech* 131, 132 (May 1967).

the Day,⁷ have brought me into contact with thousands of language-lovers who have written to me about their linguistic views over the past several years. Additionally, I frequently discuss linguistic matters with acknowledged experts such as Charles Harrington Elster, Mark Halpern, Richard Lederer, Wendalyn Nichols, Christopher Ricks, John Simon, and Barbara Wallraff. These discussions have proved particularly helpful in differentiating stage-4 usages from stage-5 usages.

Finally, I had the benefit of preliminary rankings by more than 100 members of my industrious panel of critical readers, assembled for the purpose of preparing this third edition. They proved most helpful in conducting independent research into the prevalence of specific usages.

My thought was that assigning these rankings to various usages is much more helpful than what one finds in existing usage guides. On the one hand are traditionally stern naysaying handbooks that mostly just tell readers not to indulge in certain usages. On the other hand are permissive guides such as the *Merriam-Webster Concise Dictionary of English Usage*, in which the writers typically come out with milquetoast pronouncements. For example, the anonymous authors of that particular book won't call *could of* a mistake. The entry reads in full: "This is a transcription of *could've*, the contracted form of *could have*. Sometimes it is used intentionally—for instance, by Ring Lardner in his fiction. Most of you will want *could have* or *could've*." That's the full measure of its guidance. Then sometimes there's virtually no guidance at all: on the question whether the distinction between *infer* and *imply* is worth preserving, the *Merriam-Webster* authors give five reasons why it's not. Bizarrely, along the way they say that "the words are not and never have been confused."⁸

These sweeping statements, and hundreds of others like them in *Merriam-Webster*, simply don't comport with reality.⁹ And they blur important distinctions in the gradations of usage. So the Language-Change Index helps the user understand something about answering the questions, Who uses a particular expression? Everybody? Highly literate people? Only moderately literate people? Only those whose language is pretty slipshod? And what does the use of a given expression say about its user?

The Language-Change Index rejects, naturally enough, the bizarre dogma that I touched on above—a dogma that many linguists have accepted since the mid-20th century—that a native speaker of English cannot make a mistake.¹⁰ The belief is that anything a native speaker says is ipso facto linguistically correct. The dogma was first espoused by the linguist-lexicographer Allen Walker Read and soon came to be accepted within the ivory tower.¹¹ Increasingly, though, that view has fallen into disrepute for three reasons: (1) common experience refutes it (see the "solecistic summary" at the outset of this essay);¹² (2) native speakers reject it, as witness the fact that

⁷Anyone can sign up at www.lawprose.org.

⁸*Merriam-Webster's Concise Dictionary of English Usage* 421 (2002).

⁹Warnings against the perennial confusion of misusing *infer* for *imply* are legion in English handbooks. But if citations of actual misuses are needed, see the entry in the middle of this book (p. 464), where I note: "Don't be swayed by apologetic notes in some dictionaries that sanction the use of *infer* as a substitute for *imply*. Stylists agree that the important distinction between these words deserves to be maintained."

¹⁰See William E. Rutherford, *Language Universals and Second Language Acquisition* 164 (1987) ("During the period of American structuralism a myth became well established that a native speaker cannot make a mistake.").

¹¹See, e.g., Bergen Evans, "Grammar for Today," 205 *Atlantic Monthly* 80, 80 (Mar. 1960) ("Scholars . . . do not believe that any language can become 'corrupted' by the linguistic habits of those who speak it. They do not believe that anyone who is a native speaker of a standard language will get into any linguistic trouble unless he is misled by snobbishness or timidity or vanity.").

¹²See Jefferson D. Bates, *Writing with Precision* 5–6 (rev. ed. 1985) ("'A native speaker of a language cannot make a mistake.' That statement is one I've encountered many times; possibly you've heard it too. No wonder we're confused. Either the statement is ridiculous, or there is no such thing as 'correct usage' anymore.").

they often admit errors in their speech and correct them;¹³ and (3) the dogma sweeps away any analytical insights into differences between educated and uneducated speech, or even the different strata within standard English—and the relative statuses of certain words.¹⁴ Besides, if a native speaker cannot make a mistake, then Mrs. Malaprop becomes unfunny in her verbal bumbles, as when she refers not to *alligators* but to *alle-gories on the banks of the Nile*.

There is, however, a school of linguists who persist in adhering to a version of the no-mistake-is-possible dogma. Even today, they are curiously reluctant to allow the notion that if one wants to sound educated, one must avoid certain syntactic constructions and word choices. Many of these linguists cavalierly dismiss any effort to advance prescriptive notions about effective language. Consider John McWhorter, a prolific linguist, in his 2008 book *Our Magnificent Bastard Tongue*: “All attention paid to [linguistic prescriptions] is like medievals hanging garlic in their doorways to ward off evil spirits. In an ideal world, the time English speakers devote to steeling themselves against, and complaining about, things like *Billy and me* [as subject], singular *they*, and *impact* as a verb would be better spent attending to genuine matters of graceful oral and written expression.”¹⁵ So: *My friend said they might come over by themselves this afternoon. I need to know the time, because it will impact when Billy and me will go to the store*. How can such a statement be consistent with “graceful oral and written expression”?

What I have here called a “solecism” McWhorter calls a “new way of putting things.” And he says: “the conception that new ways of putting things are mistakes is an illusion.”¹⁶ Much more tendentiously, Steven Pinker argues that linguistic prescriptions “survive by the same dynamic that perpetuates ritual genital mutilations,”¹⁷ and he refers to “the kind of terror that has driven the prescriptive grammar market in the United States during the past century.”¹⁸

Many linguists, indeed, would argue the position to which McWhorter gives voice: “the notion that people are always ‘slipping up’ in using their native English is fiction.”¹⁹ Further still: “One must revel in disorder.”²⁰ And the climax: “In our time, pedants are engaged in a quest to keep English’s pronouns in their cages instead of *me* being used as a subject after *and* and *they* being used in the singular. Whether that fashion will pass I cannot say, but we do know that it is nothing but one more fashion.”²¹

And what of the point that McWhorter and Pinker themselves, like all other self-respecting linguists, use standard English themselves? This has been a conundrum that linguists have lived with for years. I noted the issue in the preceding essay:

¹³See Patricia Demers, *The Creating Word* 13 (1986) (“Professor Read’s maxim, that a native speaker cannot make a mistake, is refuted by the evidence of common practice. Native speakers do not believe him, for they frequently correct themselves and sometimes each other: they are conscious of having made a mistake.”).

¹⁴Cf. Mark Halpern, *Language and Human Nature* 122 (2009) (“At what point is a solecism committed by a single person transformed into a change in language that it is futile to resist?”); T.W.H. Holland, *The Nature of English* 136 (1967) (“Clearly we have not to accept as right any usage that any native speaker happens to adopt, nor even that large numbers happen to adopt. We shall not find ourselves accepting *them as don’t like it* as sound usage, but why not? I suppose the only good reply is that people who use the language in a way we think good do not say it. This may be middle-class or upper-class snobbery, but it is also the defence of those who care about the clear and agreeable use of language, who value the power of making distinctions [that] are necessary or helpful.”).

²¹*Id.* at 85.

[Linguists] themselves write exclusively in Standard English. If it's really a matter of complete indifference to them, why don't they occasionally *flout* (or should that be *flaunt*?) the rules of grammar and usage? Their writing could *militate* (or is it *mitigate*?) in favor of linguistic mutations if they would allow themselves to be *unconscious* (*unconscionable*?) in their *use* (*usage*?) of words, as they seemingly want everyone else to be. But they don't do this. They write by all the rules that they tell everyone else not to worry about. Despite their protestations, their own words show that correctness is valued in the real world.²²

In a similar vein, a reviewer of David Crystal's *The Stories of English* called Crystal's consistent use of standard English while glorifying dialects "a major contradiction in the whole work," noting that "while it celebrates diversity [of usage] in every possible way, it is written throughout in flawless Standard English This is in a sense inevitable—the book wouldn't get printed otherwise—but one may also feel that the author is only theoretically sympathetic to nonstandards."²³ And the redoubtable Mark Halpern puts the point even more emphatically: "It is typical of the descriptivists to pat the uneducated on their heads and assure them that some poor usage is just fine, even if they would never dream of employing such usages in their own work. On this basis they plume themselves on being 'democratic,' and charge their prescriptivist opponents with elitism."²⁴

As for McWhorter's own English, he has his lapses. For example, he is addicted to *as such* in the sense of "therefore."²⁵ Two examples of this wretched new misusage:

- "You learned what subjects and objects are, you learned your Parts of Speech. As such, you don't like someone coming along and deeming your effort and vigilance worthless."²⁶
- "There are, believe it or not, languages where pronouns vary only for person but not number, such that *I* and *we* are the same word, *he*, *she*, and *they* are the same word, and as such, singular and plural *you* are the same word."²⁷

And then there are the seeming attempts at youthful hipness by using multiple (often quadruple) exclamation marks and question marks, this in a book representing itself as a work of scholarship:

- "They do not specify for us that they are *in the process of eating the apples at this very instant!!!!*"²⁸
- "[M]any grammarians considered the following words and expressions extremely déclassé: *all the time* (quality folks were to says *always*), *born in* (don't you know it's *born at????*), *lit* (What did I tell you, darling? It's *lighted*), *washtub* (I don't know why people can't say *washing tub* as they should!)"²⁹

These are only a few examples.

To the extent that linguists do use standard English, it's sometimes under protest. McWhorter purports to answer "the question we [linguists] often get as to why we do not use [nonstandard] constructions . . . in our own writing if we are so okay with them." The answer: "I was required to knuckle under."³⁰ And he adds: "At best I can wangle an

exception and get in a singular *they* or *their* once or twice a book. (I must note that the copy editor for this book, upon reading this section, actually allowed me to use singular *they* throughout the book. Here's to *them* in awed gratitude.)³¹ One wonders why copyediting might ever be necessary.

Descriptive linguists have long looked askance at anyone who purports to recommend certain uses of language over others, or to condemn isolated changes in language. In an otherwise superb history of the English language, Albert C. Baugh and Thomas Cable express pity for standard-bearing prescriptivists:

Conservatives in matters of language, as in politics, are hardy perennials. We have seen many examples of the type . . . They flourished especially during the eighteenth century, but their descendants are fairly numerous in the nineteenth and scarcely less common today. They generally look upon change with suspicion and are inclined to view all changes in language as corruptions. In retrospect they seem often melancholy figures, fighting a losing fight, many times living to see the usages against which they fought so valiantly become universally accepted. . . . If we might venture a moral, it would be to point out the danger and futility of trying to prevent the natural development of language.³²

Their book, of course, is written in flawless STANDARD ENGLISH—and appears to have been fastidiously copyedited.

Outside the grove of academe, the garlic-hangers—the “conservatives in matters of language”—continue to hold sway. Not all of us are melancholy at all. I, for one, have come to delight in each new stage-1 misusage, each new solecism that I'm able to document and write about. It can be thrilling to discover for the first time someone misusing *corollary* for *correlation*; or *as such* without an antecedent, as if it were equivalent to *therefore*;³³ or one of a thousand other bungles. It's entertainingly outré to be able to write a couple of paragraphs like the “summary” at the outset of this essay (see the key on page lvi). It's sad, of course, to know that many teachers have given up the idea that they should teach good English.³⁴ But the proliferation of error can definitely be the source of a perverse joy. Let there be no doubt about that. Or about the fact that not everyone is incorrigible.

³¹*Id.*

³²Albert C. Baugh & Thomas Cable, *A History of the English Language* 336 (5th ed. 2002).

³³I was, as far as I know, the first critic to note this misusage: see *A Dictionary of Modern American Usage* 59–60 (1st ed. 1998).

³⁴Consider this telling admonition from decades ago: “With the triumph of the doctrine of usage, amplified into ‘the native speaker can do no wrong,’ what does an English teacher have to teach his pupils that the pupils don't already know? After all, ‘anyone who is not deaf or idiotic has fully mastered his native language by the end of his fifth year.’ Teachers of English who listen to the siren song of the structuralists should perhaps begin to show some concern over the continuance of their own jobs, if not over anything else.” Mario Pei, “*Webster's Third* in the Classroom,” in *Words, Words, Words About Dictionaries* 110, 111 (Jack C. Gray ed., 1963).

Key to the Solecistic Summary

The truce that I once proposed between descriptivists and prescriptivists having been only conditionally *excepted* [accepted] by a single linguist, the *embattlements* [battles] must continue.

Linguistic history *bears* [bears] out the fact that since English has *spreaded* [spread] throughout the world, people who *hew* [hew] to traditional idioms can avoid the *maelstorm* [maelstrom] of *indivious* [invidious] solecisms that *await for* [await] the unwary. Although the language is continually evolving, and *insipient* [incipient] changes become *widespreadly* [widely] *disbursed* [dispersed] and then take *route* [root] so that words become distant from their *entomologies* [etymologies], the *milieu* [milieu] in which these changes occur remains fairly constant. To ask whether all change can be *quelched* [squelched] is a *mute* [moot] point—a serious *misnomer* [misconception]. The language is a self-regulating system of disambiguation, without any official body of persons in *high dungeon* [high dudgeon], at our *beckon call* [beck and call], *exerting* [asserting] a right to *meet* [mete] out punishment to a would-be *literati* [littérateur] who has a *heyday* [field day] abusing it—punishment that might amount not just to a mild *annoyment* [annoyance] but to *caricature* [character] assassination.

For all intensive purposes [For all intents and purposes], some linguistic shifts may *past* [pass] *mustard* [muster], even those that don't *harp back* [hark back] to Middle English or Early Modern English. People with an *overweening* [overwhelming] interest in *oversighting* [overseeing] English sometimes, as a kind of *guttural* [gut] reaction, take all this for *granite* [granted]. There will never be *paralyzation* [paralysis] of a living language, nor even *hiati* [hiatuses] in its evolution. And it may give *piece* [peace] of mind to know that linguistic change isn't something to be measured in decades, much less *per anum* [per annum]. *Improperious* [Improper] words and phrases that may once have been considered *abdominable* [abominable], slightly *course* [coarse], or otherwise beyond the *pail* [pale] may, over time, become fully acceptable and no longer *peak* [pique] anyone's interest. But even if there *are* [is] many a person *whom* [who] *misuse* [misuses] particular words and *are* [is] allowed to do so with *impugnity* [impunity]—and *all tolled* [all told], English contains a *heterogenous* [heterogeneous] *mother load* [mother lode] of *almost infinite* [countless] potential errors—their *credulity* [credibility] is likely to be strained in the minds of listeners and readers. The more *populace* [populous] the language community, the greater the *wrecklessness* [recklessness] with which some speakers and writers can *reek* [wreak] havoc on the language itself. These *phenomenon* [phenomena] become their *mode of operandi* [modus operandi]; for them, perhaps we might say they could not *of* [have] known better, even if they *had ought* [ought] to. But in the end, close *analyzation* [analysis] should demonstrate that correct English usage should be *brandishment* [blandishment] enough—it's [its] own *reword* [reward].

A

a. A. Choice Between *a* and *an*. The indefinite article *a* is used before words beginning with a consonant sound, including /y/ and /w/ sounds. The other form, *an*, is used before words beginning with a vowel sound. Since the sound rather than the letter controls, it's not unusual to find *a* before a vowel or *an* before a consonant. Hence *a eulogy*, *a European country*, *a one-year term*, *a Ouija board*, *a uniform*, *an FBI agent*, *an MBA degree*, *an SEC filing*.

The distinction between *a* and *an* was not solidified until the 19th century. Up to that time, *an* preceded most words beginning with a vowel, regardless of how the first syllable sounded. The U.S. Constitution, for example, reads: "The Congress shall have Power . . . [t]o establish *an uniform* Rule of Naturalization." U.S. Const. art. I, § 8. But that's no excuse for a modern writer—e.g.:

- "The revisions include . . . [f]iling legislation to create *an uniform* [read *a uniform*] inspection code." Doris Sue Wong, "Revisions to Title 5 Unveiled," *Boston Globe*, 2 Aug. 1995, at 25.
- "How many men can claim to have been at the center of such *an wild* [read *a wild*] and sensual tableau?" Steven Saylor, "The House of the Vestals" (1993), in *The House of the Vestals* 225, 240 (1997) (perhaps a typo).
- "When touring Fontainebleu in 1677, John Locke noted that the back stairs leading to the apartments of the King's brother smelt like *an urinal* [read *a urinal*]." Anne Somerset, *The Affair of the Poisons* 47 (2003).

People worry about whether the correct article is *a* or *an* with *historian*, *historic*, and a few other words. Most authorities have supported *a* over *an*. The traditional rule is that if the *h-* is sounded, then *a* is the proper form. So people who aspirate their *h*'s and follow that rule would say *a historian* and *a historic*—e.g.:

- "Because this argument isn't so much *a historical* analogy as *a historical* desecration." Paul Greenberg, "'They All Do It'—Even the Founding Fathers?" *Wall Street J.*, 12 Oct. 1998, at A18.
- "The treatment of crime in Britain shows *a historic* shift away from the protection of life and property toward the pursuit of ideological ends." Paul Johnson, "Britain: A Thieves' Paradise," *Forbes*, 17 Feb. 2003, at 35.

This is not a new "rule." Even the venerated language authority H.W. Fowler, in the England of 1926, advocated *a* before *historic(al)* and *humble* (*FMEUI* at 1).

The theory behind using *an* in such a context is that the *h-* is weak when the accent is on the second rather than the first syllable (giving rise, by analogy, to **an habitual offender*, **an hallucinatory image*, and **an hysterical crowd*). Hence no authority countenances **an history*, though a few older ones prefer **an historian* and **an historical*.

Today, however, such wordings as **an hypothesis*, **an hereditary title*, and **an historic era* are likely to strike readers and listeners as affectations in need of editing—e.g.:

- "If we value the information [that] they provide us, then the cognitive movement is reinforced and comes to be habitual: *an habitual* [read *a habitual*] pattern or pathway between neurons in the brain, *an habitual* [read *a habitual*] association of ideas in the mind." Nigel Rapport, "Context as an Act of Personal Externalisation," in *The Problem of Context* 194 (Roy Dillely ed., 1999).
- "[A]n agreement could be found among the members of the Security Council that they had the legitimate authority to start *an humanitarian* [read *a humanitarian*] intervention." Bruno Coppieters, "Legitimate Authority," in *Moral Constraints on War* 41, 50 (Bruno Coppieters et al. eds., 2002).
- "[She] laughed aloud, *an hysterical* [read *a hysterical*] sort of giggle, quickly stifled." Katharine Kerr, *Snare: A Novel of the Far Future* 591 (2003).

As Mark Twain once wrote, referring to *humble*, *heroic*, and *historical*: "Correct writers of the American language do not put *an* before those words." *The Stolen White Elephant* 220 (1882). Nearly a century later, the linguist Dwight Bolinger harshly condemned those who write *an historical* as being guilty of "a Cockneyed, cockeyed, and half-cocked ignorance and self-importance, that knoweth not where it aspirateth." Dwight Bolinger, "Are You a Sincere *H-Dropper*?" *50 Am. Speech* 313, 315 (1975).

Anyone who sounds the *h-* in words of the type here discussed should avoid pretense and use *a*. *An humanitarian* is, judged even by the most tolerant standards, a pretentious humanitarian. See **herb & humble**.

LANGUAGE-CHANGE INDEX

1. **an historic(al)* for *a historic(al)*: Stage 3
Current ratio (*a historic* vs. **an historic*): 3:1
2. **an habitual* for *a habitual*: Stage 3
Current ratio (*a habitual* vs. **an habitual*): 1.4:1

B. In Distributive Senses. *A*, in the distributive sense <ten hours a day>, has traditionally been considered preferable to *per*, which originated in **COMMERCIALESE** and **LEGALESE**. But *per* has muscled its way into idiomatic English in phrases such as *60 miles per hour*, *one golf cart per couple*, and *five books per student*. Although *an* could be substituted for *per* in the first of those phrases, *a* wouldn't work well in the second or third.

When the construction requires a **PHRASAL ADJECTIVE**, *per* is the only idiomatic word—e.g.: "Our *per-unit* cost is less than \$1,000."/"The *\$50-per-parent* fee seems unreasonably high."

C. Pronunciation. The indefinite article is ordinarily pronounced /ə/—not /ay/. The latter pronunciation

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

is appropriate only in cases of emphasis <I didn't say "clubs"; I said "a club">. But /ay/ is nearly ubiquitous among broadcasters, "who have been taught—and for good reason—to avoid filling pauses in their speech with *uh* or *um*. Thus, if they happen to pause on the article *a* when pronouncing it UH, they will appear to have committed this cardinal sin." *BBBM* at 2.

aback. See **taken aback**.

abalone (= an edible mollusk known for its mother-of-pearl shell lining) is pronounced /a-bə-**loh**-nee/. Cf. **calzone**.

abandon, vb. See **desert**.

abandonment; abandon, n. In most contexts, *abandonment* (= the permanent relinquishment of any right or interest in a thing) is the noun that answers to the verb *abandon*. But in one particular idiom, *abandon* is the required noun: *wild abandon* or *reckless abandon* (= unrestrained impulsiveness). The *SOED* dates the noun *abandon* (= surrender to natural impulses; freedom from constraint or convention) back to the early 19th century. And it records *abandonment* as sharing this sense from the mid-19th century. Still, *abandon* is so preponderant in this idiom that the two terms ought to be distinguished. In the following sentences, *abandon* better accords with modern usage:

- "Like a ventriloquist, the President put these words in the mouth of Dr. King: ' . . . I did not fight for the right of black people to murder other black people with reckless *abandonment* [read *abandon*].'" H. Bruce Franklin, "What King Really Would Have Said," *Phil. Inquirer*, 7 Dec. 1993, at A17.
- "But that reverb-drenched, Crazy-Horse-meets-Allman-Brothers-Band jamming, as precise as it is full of wild *abandonment* [read *abandon*], is one great machine at work?" Jeff Spevak, "My Morning Jacket One Great Machine," *Rochester Democrat & Chron.*, 16 Sept. 2002, at C2.
- "He walks straight into his boss's office, quits his job, goes on a pension and dives into a life of wild *abandonment* [read *abandon*], partying, drinking, taking drugs." David Wroe, "I Chose to Be a Victim," *The Age*, 30 Nov. 2002, at 10.

LANGUAGE-CHANGE INDEX

abandonment misused for *abandon*: Stage 2

Current ratio: 7:1

abbreviable. So formed—not **abbreviatable*. See -ABLE (D) & -ATABLE.

ABBREVIATIONS. A. Acronyms and Initialisms. Six points merit attention here. First, be aware of the technical difference between the two types of abbreviated names. An *acronym* is made from the first letters or parts of a compound term. It's read or spoken as a single word, not letter by letter (e.g., *awol* = absent without official leave, *radar* = radio detection and ranging, and *scuba* = self-contained underwater breathing apparatus). An *initialism* is also made from the first letters or parts of a compound term, but it's

sounded letter by letter, not as one word (e.g., *r.p.m.* = revolutions per minute).

Second, the question often arises whether to place a period after each letter in an acronym or initialism. Searching for consistency on this point is futile. The trend nowadays is to omit the periods. Including them is the more conservative and traditional approach. Yet because an acronym is spoken as a single word (e.g., *UNESCO*), periods are meaningless. If an initialism is made up of lowercase letters, periods are often preferable: *rpm* looks odd as compared with *r.p.m.*, and *am* (as opposed to *a.m.*) looks like the verb. But with initialisms made of uppercase letters, the unpunctuated forms are likely to prevail (as in *ABC*, *ATM*, *HIV*, *IRA*, *SUV*, *URL*, etc.).

Third, the best practice is to give the reader some warning of an uncommon acronym or initialism by spelling out the words and enclosing the acronym in parentheses when the term is first used. A reference to *CARPE Rules* may confuse a reader who does not at first realize that three or four lines above this acronym the writer made reference to a Committee on Academic Rights, Privileges, and Ethics. On the other hand, well-known abbreviations don't need this kind of special treatment—there's no need to announce a "Parent Teacher Association (PTA) meeting."

Fourth, capitalization raises various questions. In AmE there is a tendency to print initialisms in all capitals (e.g., *FMLA*, *NJDEP*) and acronyms in small capitals (e.g., *GAAP*, *MADD*, *NASA*). Some publications, however, use all capitals for both kinds. But in BrE the tendency is to uppercase only the first letter, as with *Ifor* and *Isa* for *Implementation Force* and *individual savings account*. An influential British commentator once suggested (with little success on his side of the Atlantic) that the lowercasing be avoided: "From the full name to the simplified label three stages can be detected. For instance, the Society [for Checking the Abuse of Public Advertising] . . . becomes first *S.C.A.P.A.*, then *SCAPA*, and finally *Scapa*. In the interests of clarity this last stage might well be discouraged, since thereby the reference is made unnecessarily cryptic." Simeon Potter, *Our Language* 177 (rev. ed. 1966). American writers have generally agreed with this view.

Fifth, don't use abbreviations that have already been taken. Although it's understandable how a writer in 1959 might have used *PMS* for *primary message systems*, this would be worse than ill-advised today, since *premenstrual syndrome* is more commonly referred to by its initials than by its name. E.g.: "There are ten separate kinds of human activity which I have labeled Primary Message Systems (PMS). Only the first PMS involves language. All the other *PMS* [read *PMSes*] are nonlinguistic forms of the communication process." Edward T. Hall, *The Silent Language* 45 (1959). The language doesn't easily embrace dual-meaning acronyms. One exception is *IRA*, which has long referred to the Irish Republican Army but in the 1980s came to denote also an individual retirement account. Other examples exist, but all are generally to be avoided.

Once everyone thinks of the *FAA* as the Federal Aviation Administration, it's unwise to use that initialism in reference to the Federal Arbitration Act.

Sixth, when an indefinite article is needed before an abbreviation, the choice between *a* and *an* depends simply on how the first syllable is sounded. A vowel sound takes *an*, a consonant sound *a*—hence *an MGM film*, *an SOS*, *a DVD player*, *a UFO*. See **a (A)**.

B. Resulting Redundancies. Some acronyms and initialisms often appear as part of a two-word phrase in which the second word is what one of the short form's letters stands for. So a bank customer withdraws cash from an *ATM machine*, using a *PIN number* as a password. A supermarket clerk searches a milk carton for its *UPC code*. High-school seniors study hard for the *SAT test* (though the SAT owners now insist that the *T* does not stand for *test*—see **SAT**). Economists monitor the *CPI Index*. American and Russian diplomats sit down to negotiate at the *SALT talks* as their military counterparts consider whether to launch *ABM missiles*. Websites may display pages in *PDF format*. And scientists try to unlock the mysteries of the deadly *HIV virus*.

The problem with these phrases, of course, is that they are technically redundant (*automated-teller machine machine*, *personal-identification number number*, *Universal Product Code code*, *Scholastic Aptitude Test test*, *Consumer Price Index Index*, *Strategic Arms Limitation Talks talks*, *anti-ballistic missile missile*, *portable document format format*, and *human-immunodeficiency virus virus*). And although the redundancies may be passable in speech—especially with unfamiliar acronyms—they should be avoided in edited writing.

A slightly different type of redundancy arises if you define *ATC* as the *air-traffic control system* (the hyphen is preferable for the PHRASAL ADJECTIVE) but later write *ATC system*, as here: “The third factor I mentioned is the air traffic control system (*ATC*). The United States *ATC* is the finest system [delete *system*] in the world, and on a good weather day, with runways and navigation facilities working, things operate smoothly. However, sometimes the *ATC system* [read *ATC*] must slow the arrivals at a particular airport.” Don Carty, “Why Was My Flight Canceled?” *Am. Way*, 1 May 2001, at 10. Perhaps the better solution in that passage would be to leave *system* out of the definition—e.g.: *The third factor I mentioned is the air-traffic control (ATC) system. The United States ATC system is the finest in the world, and in good weather, with runways and navigation facilities working, things operate smoothly. But sometimes the ATC system must slow the arrivals at a particular airport.*

See REDUNDANCY.

C. Initiallese. One of the most irritating types of pedantry in modern writing is the overuse of abbreviations, especially abbreviated names. Originally, to be sure, abbreviations were intended to serve the

convenience of the reader by shortening names so that cumbersome phrases would not have to be repeated in their entirety. The purported simplifications actually simplified. But many writers—especially technical writers—seem to have lost sight of this goal: they allow abbreviated terms to proliferate, and their prose quickly becomes a hybrid-English system of hieroglyphs requiring the reader to refer constantly to the original uses of terms to grasp the meaning. This kind of writing might be thought more scholarly than ordinary, straightforward prose. It isn't. Rather, it's tiresome and inconsiderate writing; it betrays the writer's thoughtlessness toward the reader and a puerile fascination with the insubstantial trappings of scholarship.

Three examples suffice to illustrate the malady:

- “As a comparison to these item-level indices, the factor-level indices IFS and C_ANR [*sic*] were both computed for the maximum likelihood factors. . . . Compression of the factor space tends to decrease both IFS and C_ANR, while excessive expansion is likely to also decrease the C_ANR, while the IFS might be expected to be reasonably stable. Thus, four rotation solutions were computed based upon Matthews & Stanton's (1994) extraction of 21 factors, the Velicer MAP test indicator of 26 (PCA) and 28 (image) factors, and Autosree indicators of 17 and 21 factors for PCA and image respectively. From these solutions, it was hypothesized that a full 31 factor rotation might provide the optimal C_ANR parameters for the OPQ scales. Further, as a by-product of the use of MLEA, it is possible to compute a test.” P. Barrett et al., “An Evaluation of the Psychometric Properties of the Concept 5.2 Occupational Personality Questionnaire,” 69 *J. Occupational & Organizational Psychology* 1, 12 (1996).
- “For the initial model, the significant variable TRANS is only significantly correlated with SUBNO. SUBCTY is correlated with NI, with SUBNO, and with FSALEPER. NI, however, is significantly correlated with: (1) DOMVIN; (2) METH1; and (3) METH3. In the reduced model, these intercorrelations with NI are not an area for concern.” Karen S. Cravens & Winston T. Shearon Jr., “An Outcome-Based Assessment of International Transfer Pricing Policy,” 31 *Int'l J. Accounting* 419, 436 (1996) (parentheticals omitted).
- “SLIP, like VALP and ECC, is a defeasible constraint that is obeyed by all the types of head-nexus phrase considered thus far. It guarantees that (except in SLASH-binding contexts that we turn to in a moment) the SLASH value of a phrase is the SLASH value of its head-daughter.” Ivan A. Sag, “English Relative Clause Constructions,” 33 *J. Linguistics* 431, 446 (1997).

And so it goes throughout each article. See OBSCURITY.

When naming something new, one sometimes finds the task hopeless: consider the *ALI-ABA CLE Review*, as opposed to calling it the *American Law Institute-American Bar Association Continuing Legal Education Review*. You can't choose either one enthusiastically. Both sponsors must have their due (in part so that they can have their dues), and the initialisms might gradually become familiar to readers. But they aren't ideal because they give bad first impressions.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Remember that effective communication takes *two*—the writer and the reader. Arthur Quiller-Couch reminded writers never to forget the audience:

[T]he obligation of courtesy rests first with the author, who invites the seance, and commonly charges for it. What follows, but that in speaking or writing we have an obligation to put ourselves into the hearer's or reader's place? It is *his* comfort, *his* convenience, we have to consult. To *express* ourselves is a very small part of the business: very small and unimportant as compared with *impressing* ourselves: the aim of the whole process being to persuade.

Quiller-Couch, *On the Art of Writing* 291–92 (2d ed. 1943).

Abbreviations are often conveniences for writers but inconveniences for readers. Whenever that is so, the abbreviations should vanish.

Robert Burchfield warned that the proliferation of initialisms could profoundly affect the language as a whole: “As formations they are often ingenious—for example KWIC (*Key Word in Context*) and CARE (*Cooperative for American Relief Everywhere*, a federation of U.S. charities)—but they are barren, in that they cannot generate anything except themselves, and etymologically rootless. Each one that is formed takes the language fractionally away from its Germanic, and ultimately its Indo-European, origins.” Robert W. Burchfield, *Unlocking the English Language* 65 (1989).

D. Plurals. See PLURALS (1).

abdomen is most commonly pronounced /**ab**-də-mən/, though some people continue to use the old-fashioned /**ab**-doh-mən/.

abdominal (= pertaining to the abdomen or belly) is so spelled. Perhaps under the influence of *abominable*, it is sometimes wrongly made **abdominable*—e.g.:

- “Colchicine, 0.5 or 0.6 mg every hour until relief or intolerable side effects (*abdominal* [read *abdominal*] cramping or diarrhea) occur . . .” “Treatment of Gout,” *Am. Fam. Physician*, 15 Mar. 1999, at 1624.
- “The uncertainty of Cox’s status—he has not been able to practice for weeks because of an *abdominable* [read *abdominal*] strain, and he says he no longer wants to take painkillers—is only a small reflection of the uncertainty over the team’s future.” Gerald Eskenazi, “Add Cox to List of Jets’ Troubles,” *N.Y. Times*, 10 Dec. 1999, at D5.
- “Alfonso Soriano, diagnosed with tendinitis in his right shoulder, sat out Yankees’ exhibition game vs. Twins yesterday in Fort Myers, as did Jason Giambi, who’s battling strained *abdominable* [read *abdominal*] muscle.” *N.Y. Post* (graphic), 8 Mar. 2003, Metro §, at 56.

Sometimes the substitution isn’t an error but a pun, as in this headline: “Arnaldo Magnani *Abdominable* Snowman: Hefty tenor Luciano Pavarotti packs another white meteorite to hurl at girlfriend Nicoletta Mantovani after Saturday’s Elton John AIDS fundraiser.” “A Test of Albright’s Domestic Policy,” *Daily News* (N.Y.), 11 Feb. 1997, Gossip §, at 14.

LANGUAGE-CHANGE INDEX

**abdominable* for *abdominal*: Stage 1
Current ratio (*abdominal* vs. **abdominable*): 44,048:1

***aberrance; *aberrancy.** See **aberration**.

aberrant, adj.; aberrational; aberrative. These terms appear in order of descending frequency. *Aberrant* /**ab**-ər-ənt or ə-**ber**-int/ = deviating from behavioral or social norms. *Aberrational* /a-bə-**ray**-shə-nəl/ = of, relating to, or involving an aberration. *Aberrative* /ə-**ber**-ə-tiv/ = tending toward aberration. For *aberrant* as a noun, see **aberration**.

aberration; aberrant, n.; *aberrance; *aberrancy. *Aberration* = (1) a deviation or departure from what is normal or correct; or (2) a mental derangement. *Aberrant*, which is almost always used in reference to people, means “a deviant; one deviating from an established norm.” **Aberrance* and **aberrancy* are NEEDLESS VARIANTS of *aberration*—enough so to be labeled linguistic aberrations themselves. See SPELLING (A).

aberrational; aberrative. See **aberrant, adj.**

abettor; *abetter. In both AmE and BrE, *abettor* is the more usual spelling. It was otherwise from about 1640 to 1750, but since then *abettor* has predominated. See -ER (A). Cf. **bettor**.

Current ratio: 2:1

abhor (= to detest, esp. on grounds of morality or ethics) is pronounced /**ab**-hor/ or /əb-**hor**/—not /ə-**bor**/. For an example of *adjure* misused for *abhor*, see **abjure** (c).

abide = (1) to stay, dwell <the right of entering and abiding in any state in the Union>; (2) to tolerate, withstand <we won’t abide that type of misconduct>; (3) to obey (construed with *by*) <we abided by the rules>; (4) to await <our decision must abide the outcome of this struggle>; or (5) to perform or execute (in reference to court orders or judgments) <the lower courts must abide the judgments of the Supreme Court>. In sense 1, *abode* is the preferred past tense, and either *abode* or *abided* is the past participle. In all other senses, *abided* is the preferred past tense and past participle.

ability; capacity. The traditional distinction is that while *ability* is qualitative, *capacity* is quantitative. Hence, *ability* refers to a person’s power of body or mind <a writer of great ability>; *capacity*, meaning literally “roomy, spacious,” refers figuratively to a person’s physical or mental power to receive <her memory has an extraordinary capacity for details>.

For the distinction between *capacity* and *capability*, see **capacity**.

abjection; abjectness. Both words refer to a state of being cast aside, abased, and humiliated. The subtle difference between the two is that *abjection* refers to the physical condition—e.g.: “*Abjection* was a way of surviving Stalin: you gave him something of your blood, without wavering.” “Other Comments,” *Forbes*, 3 Feb. 2003, at 26. *Abjectness* refers to the state of mind—e.g.: “But were he to continue in office, at least judging by the *abjectness* of his apology, MADD

might just have found a national poster boy.” Jim Coyle, “We’ve Come a Long Way in Public Attitudes,” *Toronto Star*, 14 Jan. 2003, at B2. *Abjection* is used more frequently today by a 12-to-1 ratio.

abjure; adjure. A. Senses Distinguished. *Abjure*, the more frequently used of these words, may mean either (1) “to renounce” <Germany abjured the use of force>, or (2) “to avoid” <her evaluation abjured excessive praise>. In bygone days, people were sometimes required to “abjure the realm,” i.e., go abroad. *Adjure* means “to charge or entreat solemnly; to urge earnestly” <Reagan adjured the Soviets to join him in this noble goal>.

B. Cognate Forms. The noun forms are *abjuration* (or **abjurement*—now defunct) and *adjuration*. The adjectival forms end in *-tory*. The agent nouns are *abjurer* and *adjurer*.

C. Adjure Misused. *Adjure* is sometimes misused for two other words, *abhor* and *require*. The first of these is hard to explain but easy to illustrate—e.g.: “Most of us don’t dislike lawyers individually; we *adjure* [read *abhor*?] them as a group.” “Our Legal System’s Put Us in a Box,” *Chicago Trib.*, 23 Aug. 1988, at C19.

The other error, *adjure* for *require* or *command*, occurs often in legal writing but elsewhere as well—e.g.:

- “Arizona law *adjures* [read *requires*] that statutes should be construed to effect their objects.” *Knapp v. Cardwell*, 667 F.2d 1253, 1261 (9th Cir. 1982).
- “Assaying the quality of defendant’s acts and omissions . . . *adjures* [read *requires*] just such a judgment call.” *Swift v. U.S.*, 866 F.2d 507, 511 (1st Cir. 1989).
- “‘Use Absolut,’ he *adjures* [read *commands*] a waiter at the restaurant where he, Iris, Kate and Daniel have an uncomfortable dinner. ‘I’ll know if the bartender uses a house brand.’” Amanda Vaill, “A Story of Reckless Passion and Race,” *Chicago Trib.*, 25 May 2003, Books §, at 3.

Fortunately, most writers use *adjure* correctly—e.g.: “Some talked of open schism last week, when she *adjured* him to ‘rule’ if he wanted to save home rule, and he replied that she had failed him in his moment of need.” Michael Powell & Hamil R. Harris, “Norton’s Exercise in Flexibility,” *Wash. Post*, 7 Aug. 1997, at J1.

LANGUAGE-CHANGE INDEX

1. *adjure* misused for *abhor*: Stage 1
2. *adjure* misused for *require*: Stage 1

abjurer; *abjuror. The *-er* spelling, which has always predominated, is preferred. See *-ER* (A).

Current ratio: 5:1

-ABLE. A. Choice of *-able* or *-ible*. Many adjectives have competing forms ending in *-able* and *-ible*. Some of these have undergone DIFFERENTIATION in meaning; the less commonly used forms in some pairs are merely NEEDLESS VARIANTS of the predominant forms. The lists that follow contain the most troublesome words of this class.

Unlike *-ible*, *-able* is a living suffix that may be added to virtually any verb without an established suffix in either *-able* or *-ible*. Following are only some of the hundreds of adjectives preferably spelled *-able*:

actionable	contestable	lapsable
addable	contractable	lovable
admittable	conversable	mixable
advisable	convictable	movable
affectable	correctable	noticeable
allegeable	definable	offendable
analyzable	detectable	patentable
annexable	diagnosable	persuadable
arrestable	discussable	preventable
ascendable	endorsable	processable
assertable	enforceable	protectable
assessable	evadable	ratable
averageable	excisable	redressable
avertable	excludable	referable
bailable	expandable	retractable
blamable	extendable	revisable
changeable	extractable	rinsable
chargeable	ignitable	salable
circumscribable	immovable	suspendable
commensurable	improvable	tractable
committable	inferable	transferable
condensable	inventable	transmittable
connectable	investable	willable

Although *-ible* is now dead as a combining form in English, the words in the following list retain that suffix:

accessible	divisible	perceptible
adducible	edible	perfectible
admissible	educible	permissible
audible	eligible	plausible
collapsible	erodible	possible
collectible	exhaustible	producible
combustible	expressible	reducible
compactible	extendible	remissible
compatible	fallible	reprehensible
comprehensible	feasible	repressible
compressible	flexible	*rescissible
concussible	forcible	resistible
conductive	fusible	responsible
contemptible	gullible	reversible
controvertible	horrible	revertible
convertible	impressible	risible
corrodible	includible	seducible
corruptible	incorrigible	sensible
credible	indelible	submersible (or submergible)
deducible	intelligible	suggestible
deductible	interfusible	suppressible
defeasible	invincible	susceptible
defectible	irascible	terrible
defensible	irrepressible	transmissible
descendible	irresistible	uncollectible
destructible	legible	vendible
diffusible	negligible	visible
digestible	omissible	
discernible	oppressible	
dismissible	ostensible	

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Some adjectives with the variant suffixes have different meanings. Thus *impassable* means “closed, incapable of being traversed”; its twin, *impassible*, means “unable to feel pain” or, less distinctively, “impassive, emotionless.” *Passable* and *passible* have correspondingly positive meanings. (These pairs are formed from different Latin roots, L. *passus* “having suffered” and L. *passare* “to step.”) Similarly, *impartible* means “not subject to partition” and *impartable* “capable of being imparted.” *Conversable* means “oral,” while **conversible* is a NEEDLESS VARIANT of *convertible*. *Forcible* means either “done by means of force” <forcible entry> or “characterized by force” <forcible behavior>; *forceable*, much less frequently encountered, means “capable of being overcome by force”; it would be the better term to describe a door that is “capable of being forced open.” (See **forcible**.) For the similar difference between *educible* and *educable*, see **educable (A)**.

Other variant adjectives, though, are merely duplicative. Typical examples are *extendable*, *extendible*, and *extensible*. The first of these is now prevalent in AmE (though labeled obsolete in the *OED*). *Extensible* was, through the mid-20th century, the most common form, but today it trails *extendable* by a substantial margin, while **extendible* continues to appear infrequently. Writers and editors ought to settle on the most firmly established form—*extendable*, which is as well formed as the variants—and trouble their minds with weightier matters. See DIFFERENTIATION & MUTE E.

B. Attaching -able to Nouns. This passive suffix is usually attached to verbs, as in *avoidable*, *forgettable*, and *reproachable*. But sometimes it's attached to nouns, as in *marriageable*, *objectionable*, and *salable*. These do not mean “able to be married,” “able to be objected,” and so on. Although **marryable* and **objectable* would have been the more logical forms, time, idiom, and usage have made these and several other forms both ineradicable and unobjectionable.

C. Attaching -able to Intransitive Verbs. A few words formerly upset purists: *dependable* (*depend-on-able*), *indispensable* (*in-dispense-with-able*), *laughable* (*laugh-at-able*), *listenable* (*listen-to-able*), *reliable* (*rely-on-able*), and *unaccountable* (*un-account-for-able*). They're indispensable to the modern writer—not at all laughable. See **reliable**.

D. Converting -ate Verbs into -able Adjectives. When *-able* is added to a transitive polysyllabic verb ending in the suffix *-ate*, that suffix is dropped. Hence *accumulable*, *calculable*, *regulable*, etc. (See **-atable**.) Exceptions, however, occur with two-syllable words, such as *rebatable* and *debatable*.

E. Dropping or Retaining the Medial -e- This question arises in words such as *irreconcilable*, *micro-wavable*, *movable*, *resumable*, and *salable*. Although writers formerly put an *-e-* before *-able*, both AmE and BrE generally drop such a medial *-e-*, except in words with a soft *-c-* (*traceable*) or a soft *-g-* (*chargeable*). See MUTE E.

F. Compounds. English has a remarkable ability to accept unlikely forms such as *come-at-able* (1687) <the come-at-able facts of the case>, *get-at-able* (1799)

<the source of the leak may not be get-at-able>, and *unputdownable* (1947) <an unputdownable book>. These have been fashioned by adding *-able* to PHRASAL VERBS. In both AmE and BrE, the first two tend to be hyphenated (*come-at-able*, etc.). Yet *unputdownable* is universally solid, perhaps because none of the internal syllable breaks except *-able* begins with a vowel.

able to be [+ past participle]. This construction is rare—and rightly so. A sentence such as *That speech is able to be delivered by anyone* can always be advantageously revised: *Anyone can [or could] deliver that speech*. See PASSIVE VOICE.

ablution (= washing), which appears most commonly in the plural form, should generally be reserved for washing or rinsing as part of a religious rite. E.g.: “Before every prayer, Muslims perform *ablution*—washing their hands and face, rinsing their mouth and nose, and even washing their feet.” Dr. Shagufta Hasan, “Age-Old Rituals Source of Health for Body, Mind,” *Oregonian* (Portland), 18 July 2002, at 13. And the word may belong in exotic contexts—e.g.: “Early bathers were already making their morning *ablutions* [in the Ganges River].” Glenn Leichman, “Season’s Greetings—on the Ganges,” *Seattle Times*, 22 Dec. 1996, at K1. But the word is pretentious, or else facetious, when the reference is to the ordinary act of washing one’s face and hands—e.g.: “By morning the water was usually frozen, calling for a trip to the kitchen to thaw it out before morning *ablutions*.” Oliver Andresen, “Old-Time Winters Have a Biting Story to Tell,” *Daily Herald* (Chicago), 24 Jan. 2003, at 3.

aboard. Usually restricted to ships or planes in BrE, this word is applied broadly in AmE to any public conveyance—e.g.: “The bus had about 35 pupils *aboard* from Varina and Mehfood Elementary schools.” Mark Bowes, “It Was Close to a ‘Catastrophe,’” *Richmond Times-Dispatch*, 18 Jan. 1997, at B1. More recently, it has come to be applied to organizations as well—e.g.: “Longtime in-house attorney Thomas ‘Tad’ Decker was brought *aboard* in 2000 to become managing partner.” Jeff Blumenthal, “New Year Brings Firm Leadership,” *Legal Intelligencer*, 2 Jan. 2002, at 1.

abode. For the past tense of *abide*, see **abide**.

abode, place of. This phrase is a pretentious way of referring to someone’s *home* or *house*. It’s also redundant, since an *abode* is a place. See REDUNDANCY.

abolition; *abolishment. The latter is a NEEDLESS VARIANT. Cf. **admonition (B)**.

Current ratio: 28:1

abominable (= [1] detestable, odious; or [2] extremely disagreeable) derives from the Latin adjective *abominabilis* “ill-omened” (seriously unlucky). During the Middle Ages, however, English writers mistook the ETYMOLOGY and believed—through a kind of “learned” folk etymology—that the word was **abhominalis*, from *ab homine* (meaning “away from man; repulsive to mankind”). This usage persisted

through the 17th century, and Shakespeare himself had a character in *The Tempest* (1611) refer to Caliban as “an abominable Monster” (2.2.158). Indeed, Shakespeare’s first folio includes 18 instances of the misspelled version. In what is probably Shakespeare’s first play (*Love’s Labour’s Lost* [1588]), the laughable pedant Holofernes derides the “rackers of ortography” (5.1.24–25) who were starting to use the etymologically correct spelling of *abominable*. In fact, the rackers of orthography had done their work 300 years before the name Holofernes was ever dreamt up, when they started inserting the *-h-* into the Latin word: “The connection with *homo*, ‘man,’ is a very old error and antedates the adoption of the word into English.” James Bradstreet Greenough & George Lyman Kittredge, *Words and Their Ways in English Speech* 342 (1901). Today usage has settled on the spelling *abominable* (things were set aright in the 18th century). The modern meaning of the word, however, derives from the erroneous etymology of medieval times.

aborigine, as a singular noun, is a BACK-FORMATION from the plural *aborigines* (L. *ab origine* “from the beginning”). Traditionally, the word *aboriginal* was considered the proper singular, but today *aborigine* is STANDARD ENGLISH as a singular noun. It predominates in print sources by a 2-to-1 ratio. (*Aboriginal* is still current in adjectival uses.)

The spelling *Aborigine*, with the initial capital, is traditional when referring to the indigenous peoples of Australia.

LANGUAGE-CHANGE INDEX
aborigine as a singular: Stage 5

abort = (1) (of a pregnancy, project, or mission) to end prematurely; (2) (of a fetus) to cause to be expelled before full development; or (3) (of a pregnant female) to cause to have an abortion. Senses 1 and 2 are more usual than sense 3, which, as an example of HYPALLAGE, strikes many readers as odd. E.g.: “In a case of 1949, the trial judge sentenced a husband who had tried to *abort* his wife and killed her to five years’ penal servitude.” Glanville Williams, *The Sanctity of Life and the Criminal Law* 155 (1957).

abortifacient. See **contraceptive**.

abortive; aborted. *Abortive* means “unsuccessful because cut short.” It takes on the figurative sense of *aborted* (= cut short), as *an abortive attempt*, i.e., one cut short. (Note that *-ive*, an active suffix, here has a passive sense.) E.g.: “In the 50 years after the 1916 rising, an *abortive* anti-British rebellion, nationalists incorporated the tragedy into their vision of ‘a heroic struggle against seven centuries of British oppression.’” “Famine, Politics Intertwined,” *USA Today*, 15 Jan. 1997, at D2. *Abortive* is archaic in reference to abortions of fetuses, except in the sense “causing an abortion.”

about. A. And approximately. When possible, use *about* instead of *approximately*, a FORMAL WORD often intended to lend a scientific air to prose. But it sounds pseudoscientific and pretentious when it appears in ordinary contexts.

B. And around. When there is a choice between *about* and *around*—as in *beat around* (or *about*) *the bush*, *strewn around* (or *about*) *the garden*, or *all around* (or *about*) *the city*—the word *around* greatly predominates in AmE. In those phrases, *about* sounds schoolmarmish.

C. About the head. Theodore M. Bernstein called this phrase “police-blotter lingo” (*The Careful Writer* at 5) when used in the sense “on” <the victim was pounded several times about the head>. The phrase might still be common in police blotters, but in published print sources it appears only occasionally—e.g.: “A Malaysian companion, 15, suffered a punctured eardrum from the interrogator’s blows *about the head*.” William Safire, “Singapore Adds Insult to Injury,” *Star Trib.* (Minneapolis), 24 May 1994, at A15.

D. At about. This phrase is sometimes criticized as a REDUNDANCY, the argument being that *about* can often do the work by itself. It often can, but in many contexts, especially those involving expressions of time, the phrase *at about* is common, idiomatic, and unimpeachable <we’ll arrive at about 9:00 tonight>.

above. A. Meaning “more than” or “longer than” Although *over* has come to be accepted in these senses, *above* should be restricted to informal contexts. It’s a CASUALISM when used before a plural noun—e.g.:

- “Now, the RBI has allowed only the incentive of one percent for one-year deposits, 1.5 percent for two-year deposits and two percent for deposits *above two years* [read *of two years or more or of longer than two years*].” “NBFCs Allowed to Reimburse Part of Broker’s Expenses,” *Econ. Times*, 3 Oct. 1996, at 8. Cf. **over** (A).
- “A recent survey of New York City restaurants showed that only 12 percent had seating capacity *above* [read *for more than*] 200 people.” Terry Fiedler, “Restaurants,” *Star Trib.* (Minneapolis), 22 Apr. 1998, at D1.
- “The data shows the vast majority of users in Wales were men with *above* nine out of ten users being men in nearly every town.” “Almost 3,000 Joined Adultery Website,” *S. Wales Evening Post*, 24 Aug. 2015, at 2. (A possible revision: *The data show that over 90% of Welsh users were men.*)

LANGUAGE-CHANGE INDEX
above meaning “more than”: Stage 4

B. For above-mentioned. *Above* is an acceptable ellipsis for *above-mentioned*, and it is much less inellegant <the above statements are his last recorded ones>. It was long thought that *above* could not properly act as an adjective. But the word was used in this way throughout the 20th century, even by the best writers. The *OED* records this use from 1873 and says that *above* “stands attributively,” through ellipsis, for *above-said*, *above-written*, *above-mentioned*, or some other phrase.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Some critics have suggested that *above* in this sense should refer only to something mentioned previously on the same page, but this restriction seems unduly narrow. Still, it's often better to make the reference exact by giving a page or paragraph number, rather than the vague reference made possible by *above*. Idiom will not, however, allow *above* to modify all nouns: **above vehicle* is unidiomatic for *vehicle mentioned above*. (If you must say *mentioned*, put *above* after that word.) Better yet, simply write *the vehicle* if readers will know from the context which one you're talking about.

Less common than the adjectival *above* is the noun use <the above is entirely accurate>. Pooley's assessment still stands: "Any writer may feel free at any time to use 'the *above* statement,' and with only slightly less assurance, 'the *above* will prove.' In either case, he has the authority of scholars and standard literature." Robert C. Pooley, *Teaching English Usage* 130 (1946).

LANGUAGE-CHANGE INDEX

1. *above* as an adjective (as in *the above data*): Stage 5

2. *above* as a noun (as in *all of the above*): Stage 5

abridgable. So spelled—not **abridgeable*. See MUTE E.

Current ratio: 3:1

abridgment; abridgement. The first spelling is AmE; the second is BrE. Cf. **acknowledgment & judgment** (A). See MUTE E.

abrogate. So formed—not **abrogatable*. See -ABLE (D) & -ATABLE.

abrogate; arrogate. These words are sometimes confounded. *Abrogate*, the more common term, means "to abolish (a law or custom) by authoritative or formal action; annul; repeal." E.g.:

- "In 1964, heavy fighting began on Cyprus after Cypriot Archbishop Makarios *abrogated* a 1960 treaty signed by Cyprus, Greece and Turkey." "Almanac," *Chicago Trib.*, 4 Apr. 1997, Metro §, at 10.
- "Last month, the NYSE raised its fees to as much as \$350 a branch from \$250, but the SEC can *abrogate* the increase within 60 days, a period that ends in mid-March." Cheryl Winokur Munk, "SEC Is Reviewing Higher NYSE Fees on Branch Offices," *Wall Street J.*, 10 Feb. 2003, at C9.

Arrogate, meanwhile, means "to usurp"—e.g.:

- "And if [the justices of the U.S. Supreme Court] rule in favor of the McDougall panel, they have even more dramatically *arrogated* to themselves the role of super legislators." "Resolving Judicial Malpractice," *Detroit News*, 9 Apr. 1997, at A6.
- "Two dangerous impulses of government are at work: First is the desire to *arrogate* more power to the executive branch by refusing to acknowledge Congress' oversight role." Editorial, "Government's Path of Secrecy," *St. Petersburg Times*, 16 Jan. 2003, at A12.

The most common mistake between these words is to misuse *abrogate* for *arrogate*—e.g.:

- "Some of them have *abrogated* [read *arrogated*] to themselves the functions of faith, making claims that history will probably refuse them." Anthony Winterbourne, *Speaking to Our Condition: Moral Frameworks in Wagner's Ring of the Nibelung* 31 (2000).

- "Elizabeth *abrogated* [read *arrogated*] to herself the coenesthetic realm of sensuous play, investing the state (and her own person) with the subject's primary affect, undercutting the Catholic cult of images." David Brett, *Rethinking Decoration: Pleasure and Ideology in the Visual Arts* 162 (2005). (Note the highfalutin tone, in which it's especially galling to see a word directly misapplied.)

See **arrogate**.

LANGUAGE-CHANGE INDEX

abrogate misused for *arrogate*: Stage 1

Current ratio (*arrogate to itself* vs.

**abrogate to itself*): 84:1

abscess (= a small mass of pus collected in a hollow where tissue has decayed) is sometimes misspelled **absess* or **abcess*—e.g.: "Though the jokes start out low (tooth *absesses* [read *abscesses*], fake body casts), the sassin' siblings eventually show their true, warm, brotherly colors." "Fall Previews," *Newsday* (N.Y.), 8 Sept. 1996, at 4.

LANGUAGE-CHANGE INDEX

abscess misspelled **abcess* or **absess*: Stage 1

Current ratio: 3,257:16:1

abscond, vb., is both transitive ("to conceal [something]") and intransitive ("to depart secretly or suddenly; to hide oneself"). The intransitive uses are more common—e.g.:

- "She *absconded* in early December and eluded police for a month." Brian Maffly, "Rape-Shield Law Shielding an Injustice?" *Salt Lake Trib.*, 3 Oct. 1997, at D1.
- "When two girls *absconded* with a car from their parents' driveway for a joyride, they blamed Jenny's stolen car escapade for giving them the idea." Julia Prodis, "Life After Suicide Pact No Joy Ride," *Tulsa Trib. & Tulsa World*, 30 Nov. 1997, at A5.

While *abscond* is often followed by *with* to indicate a taking, and especially a theft, the word itself has no such meaning. Yet it is sometimes misused alone as a transitive with that sense—e.g.:

- "Do you . . . *abscond* [read *steal*] juicy thoughts, clever notions, oddball trivia and take it home to hang on the fridge or set under a paperweight?" Ina Hughes, "Even God Lost on Information Superhighway," *Knoxville News-Sentinel*, 27 Aug. 2001, at A2.
- "The biggest problem is the Chinese government is going to *abscond* [read *take*] about 97 percent of his paycheck, meaning the Houston Rockets are going to buy Beijing a couple of ICBMs in the next three years." David Whitley, "Projecting Boys into Men Won't Be Easy Tonight," *Orlando Sentinel*, 26 June 2002, at D1.

LANGUAGE-CHANGE INDEX

abscond misused for *steal*: Stage 1

abscondence; *abscondment; *absconsion. The second and third are NEEDLESS VARIANTS rarely found. *Abscondence* is the preferred and most common noun corresponding to the verb *abscond*. E.g.: "Apart from these *abscondences*, the only clue to emotional turmoil was a struggle with his weight." Andrew Billen, "Playing the Shrink," *Observer*, 15 Sept. 1996, at 12. **Abscondance* is an infrequent misspelling.

Current ratio (in order of headwords): 2:1.5:1

absent, used as a preposition meaning “in the absence of” or “without,” is commonly used in LEGALESE but is simply unnecessary JARGON. The better choices are *without* and *in the absence of*—e.g.:

- “Absent [read *Unless our city has*] these [qualities], the good citizens will choose to live *outside this environment* [read *elsewhere?*].” Robert J. Fauls Jr., “Let’s Have Some Police Guidance,” *Atlanta J.-Const.*, 21 Mar. 1996, at A17. (As it stood in the original sentence, *absent* was a kind of DANGLER, appearing to modify *citizens* instead of the city mentioned in the preceding sentence [not supplied here].)
- “That is, *absent* [read *without* or *in the absence of*] justification, anything goes.” Jonathan Rauch, “For Better or Worse?” *New Republic*, 6 May 1996, at 18.
- “Absent a military solution, then, and *absent* a political one, the refugee crisis is unlikely to subside.” “Cameron Responds to the Refugee Crisis with Spin,” *Independent*, 8 Sept. 2015, at 2. (A possible revision: *Without a military or political solution, the refugee crisis is unlikely to subside.*)

Although Merriam-Webster has dated this usage from 1945, in fact it appeared in a law case 26 years earlier: “The *Dean* decision is a reminder . . . that fraud in the transferor is enough under 67e, *absent* good faith in and a fair consideration on the part of the transferee.” *Richardson v. Germania Bank of New York*, 263 F. 320, 324 (2d Cir. 1919). For an interesting discussion of how this American legalism has spread into nonlegal contexts, see two pieces by Alan R. Slotkin, “Absent ‘Without’: Adjective, Participle, or Preposition,” 60 *Am. Speech* 222 (1985); “Prepositional Absent: An Afterword,” 64 *Am. Speech* 167 (1989).

LANGUAGE-CHANGE INDEX
absent for *without*: Stage 3

absentee, used as an adverb, is a useful linguistic development. E.g.: “Almost 9 percent of the voters voted *absentee*.” Barbara Schlichtman, “Phillips, Chaney Apparently,” *Sunday Advocate* (Baton Rouge), 6 Apr. 1997, at B4. It would be cumbersome in that context to have to write *voted as absentees*. Although some dictionaries record *absentee* only as a noun, the adverbial usage is increasingly widespread. The word may also function as an adjective <absentee ballot> <absentee landlord>.

LANGUAGE-CHANGE INDEX
absentee as an adverb: Stage 4

absentia, in. See **in absentia**.

absinthe; *absinth. The word derives from *artemisa absinthium*, the botanical name for common wormwood, a bitter herb used in folk medicines and drink flavors. In reference to the herb, **absinth* was the predominant spelling in the 18th century. In the mid-19th century, a Swiss physician created a green medicinal alcoholic spirit with wormwood, green anise, and sweet fennel; he called it *absinthe*, and that has been

the predominant spelling ever since, for both the herb and the drink. Both spellings occasionally appear in studies of the effects of wormwood mixed with alcohol, none of which have concluded that absinthe makes the heart grow fonder.

Current ratio (in order of headwords): 23:1

absolute. See ADJECTIVES (B).

ABSOLUTE CONSTRUCTIONS. Increasingly rare in modern prose, absolute constructions have traditionally allowed writers to vary their syntax while concisely subordinating incidental matter. The absolute phrase doesn’t bear an ordinary grammatical relation to the rest of the sentence, since the noun or noun phrase does not perform any function (subject, object, apposition, etc.) that ordinarily attaches a noun grammatically to other words in the sentence. Yet the whole absolute phrase adverbially modifies some verb. For example: *The court adjourning, we left the courtroom.* This is equivalent to *When the court adjourned, we left the courtroom.*

This construction often has an antique literary flavor, and it gets creakier year by year. Few modern writers would use the nominative absolute in the way Herman Melville did: “A drumhead court was summarily convened, *he electing the individuals composing it . . .*” *Billy Budd* 63 (1891; repr. [Signet ed.] 1979). In that sentence, the pronoun *he* is modified by the participle *electing*; *the individuals composing it* is the object of *electing*. The whole italicized phrase is a nominative absolute, since it has no grammatical function in the statement *A drumhead court was summarily convened*.

One does encounter more modern examples—e.g.:

- “Mike would not soon forget the frantic drive back to civilization, *the four-wheel-drive Land Rover slipping and sliding* up the muddy track into the hills.” Michael Crichton, *Jurassic Park* 16 (1990).
- “When I visit the cemetery, I wonder what kind of life Mrs. Peter Anderson had, *she having been* pregnant and/or caring for children throughout much of her existence.” L.T. Anderson, “Lessons on Home Schooling,” *Charleston Gaz. & Daily Mail*, 15 June 1999, at C1.
- “He speaks in a voice that seems to emerge from a shadow. Perhaps it does, *he having been* conceived in the dark days of Europe following the last world war, and *he having been* nurtured under the repression of the ensuing Iron Curtain.” James Keeran, “Andrei Codrescu: Man of Letters . . . and Radio,” *Pantagraph* (Bloomington, Ill.), 28 Jan. 2000, at D1.

Yet as nominative absolutes become rarer, fewer and fewer writers understand how to handle them. Three problems arise.

First, many writers insert *with* at the beginning of the phrase (making it something like an “objective absolute”) <With Jacobson being absent, the party was a bore>. E.g.:

- “In other local elections in France, the results were mixed, *with* [delete *with*] the right doing a bit better

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

than expected.” “Balkan Dangers,” *Economist*, 24 Mar. 2001, at 33.

- “With her [read She] having mastered all these skills, it was time . . . to get her to face up to the biggest challenge yet.” Amy Edelstein, “It’s Jessie the Messy,” *Newsday* (N.Y.), 5 Mar. 2002, at B17. (A better revision: *Once she mastered all these skills, it was time . . .*)

Second, some writers mistakenly make an absolute construction—what should be a “nominative” absolute—possessive. E.g.: “His [read He] having won an astonishing thirteen major golf events, including the 1930 Grand Slam (the British Open, the British Amateur, the U.S. Amateur, and the U.S. Open Championship), it’s hard to fathom that Bobby Jones was little more than a part-time player.” William Kissel, “Great Golf Shops,” *Celebrated Living*, Mar. 2002, at 39–40.

Third, writers sometimes incorrectly separate the noun and the participle with a comma—e.g.: “President Clinton, having forcefully called attention to the atrocities in Bosnia, the U.N. decided to act.” (Read: *President Clinton having forcefully called attention to the atrocities in Bosnia, the U.N. decided to act.*) See PUNCTUATION (D).

All in all, it’s hard to quibble with the Fowler brothers’ judgment that the absolute construction is “not much to be recommended.” H.W. Fowler & F.G. Fowler, *The King’s English* 124 (3d ed. 1931). Or with Lester King’s later assessment: “The absolute construction is not wrong, merely stilted and clumsy. In my own editing, I always delete it and make some appropriate substitution.” Lester S. King, *Why Not Say It Clearly* 33 (1978).

For a modern remnant of an absolute construction, see **provided**.

absolutely, in the sense “really” or “very much,” is often a meaningless intensifier. *You should be absolutely ashamed of yourself* is the sort of thing a parent might say when scolding a child, but in polished writing the word *absolutely* adds nothing of value to that sentence.

absolve. Depending on the context, *absolve* takes either *of* or *from*. One is *absolved of* financial liability and *absolved from* wrongdoing—assuming that the authorities treat one kindly. *Absolve from* is the more frequent phrasing.

absorb; adsorb; *sorb. *Absorb* is the common term meaning “to soak up”; *adsorb* is a scientific term that refers to the collecting of condensed gas (or similar substance) on a surface. (Just try writing that without so much sibilance: it will stump even the most sedulous scribe.) **Sorb* is a relatively obscure term that embraces both of its prefixed siblings.

abstracter. See **abstractor**.

ABSTRACTITIS. “How vile a thing . . . is the abstract noun! It wraps a man’s thoughts round like cotton wool.” Arthur Quiller-Couch, *On the Art of Writing* 109 (2d ed. 1943). *Abstractitis* is Ernest Gowers’s term for writing that is so abstract and obtuse

(hence abstruse) that the writer does not even know what he or she is trying to say (*FMEU2* at 5). Far be it from the reader, then, to find coherent meaning in such writing.

One sympathizes with a keen judge who wrestled with the Internal Revenue Code: “The words . . . dance before my eyes in a meaningless procession: cross-reference to cross-reference, exception upon exception—couched in abstract terms that offer no handle to seize hold of—leave in my mind only a confused sense of some vitally important, but successfully concealed, purport, which it is my duty to extract, but which is within my power, if at all, only after the most inordinate expenditure of time.” Learned Hand, “Thomas Walter Swan,” 57 *Yale L.J.* 167, 169 (1947).

Perhaps the best antidote to this malady—which in some degree afflicts most sophisticated writers—is an active empathy for one’s readers. Rigorous thought about concrete meaning, together with careful revision, can eliminate abstractitis.

An example from political science illustrates the affliction:

Rosenau defines linkage as “any recurrent sequence of behavior that originates in one system and is reacted to in another.” While there remains little doubt that such linkages exist, it has nevertheless been convenient for scholars of comparative and international politics to disregard or, to use the more contemporary term, to hold constant, factors in the other sphere. Thus, for the student of international politics, the nation functions in the international environment on the basis of the givens of that system, unrestrained by any domestic considerations. Differences existing between national systems are not considered crucial to an understanding of a nation’s international behavior. This approach to international politics has been referred to as the “realist” school, and among its leading proponents is Hans J. Morgenthau. From the other perspective, the student of comparative politics feels that the international system is virtually irrelevant for purposes of explaining domestic political events. In both cases, this has led to a rather stultified approach. Situations arose in which the actions of a nation appeared to be “irrational,” in that they could not be explained adequately on the basis of the conceptual tools of either of the two approaches.

It is to these types of problems that the emerging linkage politics approach addresses itself. The purpose of studying linkage politics is to gain a more complete understanding of events by taking account of a large number of variables that have a bearing on the ultimate behavior of a nation, whether this behavior be manifested in the domestic or international spheres. The adoption of such an approach does not imply that all previously unexplained phenomena now come within our grasp. It merely adds a new dimension to those phenomena already accounted for.

Jonathan Wilkenfeld, Introduction, *Conflict Behavior & Linkage Politics* 1 (1973).

This passage doesn’t give any examples of the principles it discusses. It combines PASSIVE VOICE with JARGON. And it has many of the archetypal abstract words known as ZOMBIE NOUNS—that is, words ending with these suffixes: *-tion*, *-sion*, *-ment*, *-ity*, *-ence*, *-ance*. Writers are well advised to take these longish nouns and turn them back into verbs or participles

if possible—that is, write *adopting*, not *the adoption of*, and so on.

The Fowler brothers quote the following sentence—laden with zombie nouns—in *The King's English* (1906): “One of the most important reforms mentioned in the rescript is the unification of the organization of judicial institutions and the guarantee for all the tribunals of the independence necessary for securing to all classes of the community equality before the law” [42 words]. Arthur Quiller-Couch's revision eliminates the ZOMBIE NOUNS: “One of the most important reforms is that of the courts, which need to be independent within a uniform structure. In this way only can people be assured that all are equal before the law” [35 words]. *On the Art of Writing* 109–10 (2d ed. 1943). But the following revision is even better: “Among the most important reforms is to unify the courts so as to guarantee their independence and the equality of all people before the law” [25 words].

By some accounts, abstractitis leads to far worse things. “If concepts are not clear,” wrote Confucius, “words do not fit.” And consequences follow: “If words do not fit, the day's work cannot be accomplished, morals and art do not flourish. If morals and art do not flourish, punishments are not just. If punishments are not just, the people do not know where to put hand or foot.” Confucius, *Analects* 13.3. When we descend into abstractitis, more than just our language is afflicted.

Fred Rodell, a Yale law professor, realist, and semanticist who frequently criticized lawyers' language, issued his own inimitable warning against abstractitis: “Dealing in words is a dangerous business, and it cannot be too often stressed that what The Law deals in is words. Dealing in long, vague, fuzzy-meaning words is even more dangerous business, and most of the words The Law deals in are long and vague and fuzzy. Making a habit of applying long, vague, fuzzy, general words to specific things and facts is perhaps the most dangerous of all, and The Law does that, too.” Fred Rodell, *Woe Unto You, Lawyers!* 39 (1939; repr. 1980). See **OBSCURITY**.

ABSTRACT NOUNS, PLURALS OF. See **PLURALS** (j).

abstractor; *abstracter. The *OED* notes that *-or* is “analogically the more regular form.” Since the early 1960s, it has been the more usual as well. See **-ER** (A).

Current ratio: 2:1

abstruse; obtuse. *Abstruse* = (of a subject matter, piece of writing, etc.) difficult to understand; recondite. *Obtuse* = (1) not pointed or sharp; or (2) dull in intellect, not perceptive.

abysm(al); abyss(al). Both nouns signify “a bottomless gulf.” *Abyss* is in more widespread use and is therefore to be preferred. Though *abysm* is obsolescent, *abysmal* thrives (indeed, in some phrases it has become trite) as a figurative term for “immeasurably

bad” <abysmal ignorance> <abysmal weather>. *Abysmal* is a technical oceanographic term <the geology of the abyssal deep>.

academically. So spelled—not **academically*. E.g.: “The goal of the strategic plan is to keep the university competitive economically and *academically* [read *academically*] through the year 2005, the release states.” Frank Mastin Jr., “84 Employees Lose Their Jobs at Tuskegee University,” *Montgomery Advertiser*, 2 Oct. 1997, at C2. See **-IC**.

LANGUAGE-CHANGE INDEX

academically misspelled **academically*: Stage 1

Current ratio: 18:1

academy; academia; academe. An *academy* (/ə-kad-ə-mee/) is (1) a school, especially one to prepare for further education, usu. at the postsecondary level <college-prep academy>; (2) a school that provides specialized career training <police academy>; or (3) an organization of distinguished scholars, artists, scientists, or the like who aim to develop, promote, and maintain standards in a field <the National Academy of Sciences>. The term derives from *academia* (/ak-ə-dee-mee-ə/), which commonly refers to the academic community at large, or the society of university scholars <authorities from the worlds of business and academia>. Capitalized, it refers to Plato's school of philosophy in ancient Greece, which morphed into *Academe*. *Academe* (/ak-ə-deem/) is the oldest English-language term for a school or an academic community; today it's used almost exclusively to refer to an institution of higher education <halls of academe>, often in the SET PHRASE *groves of academe*.

a cappella (= [of singing] not accompanied by instrumental music) is sometimes misspelled **a capella*—e.g.: “Sarah Waltman and Lenore Lopez, both of Blue Island, were in the audience at Cafe Luna on the night when Yaseen made her *a capella* [read *a cappella*] debut.” Annemarie Mannion, “Instant Stardom,” *Chicago Trib.*, 17 Aug. 1997, Tempo Southwest §, at 1. Occasionally, it is misspelled with an apostrophe—e.g.: “A performance by the acclaimed Rust College *A'Cappella* [read *A Cappella*] Choir.” “SLU,” *Times-Picayune* (New Orleans), 1 Feb. 2001, Mandeville §, at 7. It's also wrong to spell the term as one word.

Though borrowed from the Italian for “chapel” the phrase has been thoroughly anglicized and should not be set in italic.

LANGUAGE-CHANGE INDEX

a cappella misspelled **a capella*: Stage 1

Current ratio: 4:1

accede; exceed. *Accede*, v.i., = (1) “to agree or consent”; (2) “to come into office or a position of stature”; or (3) “to enter a treaty or accord.” It takes the preposition *to*. *Exceed*, v.t., means (1) “to surpass,” or (2) “to go beyond the proper limits.” The first syllable

of *accede* should be pronounced with a short *a*- to differentiate its sound from *exceed*.

Occasionally *exceed* is misused for *accede* (sense 1)—e.g.: “Eighty potential jurors filed into the Santa Clara County superior court chambers of Judge Charles Hastings after he, *exceeding* [read *acceding*] to the wishes of Davis’ attorneys, instructed Joel and B.J. Klaas, the slain girl’s grandparents, to remove the memorial buttons from their lapels.” Michael Dougan, “Judge Orders Removal of Polly Klaas Buttons,” *S.F. Examiner*, 14 Feb. 1996, at A2.

LANGUAGE-CHANGE INDEX
exceed misused for *accede*: Stage 1

accelerate (= to speed up), in STANDARD ENGLISH, is pronounced /ak-sel-ə-rayt/—not /ə-sel-ə-rayt/.

accent, v.t.; **accentuate**. These synonyms have a good latent distinction. H.W. Fowler noted that *accent* is more common in literal senses, *accentuate* in figurative senses (*FMEU1* at 7). Hence one properly *accents* the second syllable of the word *insurance*, but *accentuates* the advantages of buying life insurance from a reputable company.

ACCENT MARKS. See DIACRITICAL MARKS.

accentuate. See **accent**.

accept, in STANDARD ENGLISH, is pronounced /ak-sept/—not /ə-sept/, /ə-sep/, or /ak-sep/. See **except**, vb.

acceptance; ***acceptancy**; **acceptation**; ***acceptation**. *Acceptance* expresses the active sense of the verb (to accept), and *acceptation* expresses the passive sense (to be accepted). The other two are NEEDLESS VARIANTS.

Acceptance, the broadest term, means (1) “the act of accepting” <Williams’s acceptance of the award was delayed>, or (2) “the state of being accepted” <widespread acceptance of the theory>. Although *acceptation* can bear sense 2 of *acceptance* (in which it’s really a NEEDLESS VARIANT), today its primary meaning is “a generally accepted meaning (of a word, phrase, or document)” —e.g.: “The Constitution’s ‘commerce clause,’ . . . in its original *acceptation*, had merely granted Congress limited authority over the regulation of interstate commerce.” Wilfred M. McClay, “A More Perfect Union? Toward a New Federalism,” *Commentary*, Sept. 1995, at 28.

access, n. **A. Confused with excess.** *Access*, n., most commonly means (1) “the right or ability to enter or get near,” (2) “a means of approaching,” or (3) “retrievability of electronic information by computer.” *Excess* = (1) an overabundance, superfluity; or (2) the amount by which one thing exceeds another. Sometimes *access* is misused for *excess*—e.g.:

- “[I]t has been noted that samples of this kind may be difficult to amplify with primers that give a product in *access* [read *excess*] of 400–500 bp.” Finbarr E. Cotter, *Molecular Diagnosis of Cancer* 117 (1996).
- “The event starts at 6:15 p.m., and carries a record purse in *access* [read *excess*] of \$2.5 million.” Will Parrish,

“May Month of Speed and Money,” *Herald* (Rock Hill, S.C.), 27 Apr. 1999, at B3.

LANGUAGE-CHANGE INDEX
access misused for *excess*: Stage 1

B. Meaning “outburst.” This sense, though somewhat archaic, is unimpeachable. Still, the usage is likely to give most readers pause—e.g.:

- “In an *access* [better: *outburst*] of unbridled enthusiasm, he hangs by his heels from a Calder sculpture while crooning ‘La donna e mobile.’” Donal Henahan, “A New Wave Director Goes to Work on ‘Rigoletto,’” *N.Y. Times*, 8 Sept. 1985, § 2, at 31.
- “His 90-year-old wife, Ellen, battered by years of strokes, knocked him down in a sudden *access* [better: *fit*] of wild rage, and wandered out of the house in her nightgown.” Pearl K. Bell, “The Other Side,” *New Republic*, 18 Dec. 1989, at 39.
- “Chris Denning . . . was fired, Peel recalls, for remarking on air that he awoke that morning in such an *access* of [better: delete *an access* of] high spirits that he felt like a 15 year-old boy, but that sadly there were no 15 year-old boys available at four o’clock in the morning.” D.J. Taylor, “The God of Adolescence,” *Sunday Independent*, 29 Aug. 2004, at 6.

access, vb. **A. Generally.** As a verb, *access* has its origins in COMPUTERESE. Like a number of other nouns turned into verbs (e.g., *contact*), it now seems increasingly well ensconced in the language. As Ernest Gowers said about *contact*, it is an ancient and valuable right of English-speaking peoples to turn their nouns into verbs when they are so minded (*FMEU2* at 108). *Gain access to* or some other such equivalent is admittedly ungainly alongside *access*.

But outside computing and electronic contexts, using *access* as a verb still jars sensitive ears. Avoid the verb if there’s a ready substitute—e.g.:

- “The residents had bypassed utility meters and were *accessing* [read *getting*] free gas, water, electricity and cable television, deputies said.” “Man, Mom Arrested in Child Endangering Case,” *Press-Enterprise* (Riverside, Cal.), 4 Dec. 1996, at B3.
- “There are now over 130 miles of converted trails in New York, all easily *accessed* [read *accessible*] by, what else, train.” “Best of the Net,” *Village Voice*, 21 Jan. 1997, at 25.

LANGUAGE-CHANGE INDEX
access as a verb outside computing contexts
<accessing the books>: Stage 4

B. For assess. Sometimes *access* is misused for *assess* (= to evaluate)—e.g.: “They track hundreds of trends, looking for connections and *accessing* [read *assessing*] the implications of major socio-economic and political events.” Siona Carpenter, “Turning Point,” *Times-Picayune* (New Orleans), 14 Jan. 1997, at F1.

LANGUAGE-CHANGE INDEX
access misused for *assess*: Stage 1

***accessary.** See **accessory** (A).

accessible. So spelled—not **accessible*. The word is pronounced /ak-ses-i-bəl/. See -ABLE (A).

Current ratio: 2,404:1

accession = (1) a coming into possession of an office or right; (2) acquisition of (something connected to one's property) by growth, labor, or the like; or (3) a secondary or subordinate thing that is connected with another thing. The word is pronounced /ak-se-shən/, not /ə-se-shən/.

accessory, n. **A. And** ***accessary**, n. *Accessory* now predominates in AmE and BrE in meaning both “abettor” and “a thing of lesser importance.” Although H.W. Fowler championed a distinction between *accessory* and **accessary* (the first applying primarily to things, the second to people [FMEU1 at 8]), **accessary* is now merely a NEEDLESS VARIANT and should be avoided.

Current ratio (*accessories* vs. **accessaries*): 275:1

B. Pronunciation. *Accessory* should be pronounced with the first -c- as a hard -k-: /ak-ses-ə-ree/. A common mispronunciation is /ə-ses-ə-ree/. Cf. **accession**, **flaccid** & **succinct**.

accidentally. So spelled. **Accidentally* is a solecism—e.g.: “Big mistake—I *accidentally* [read *accidentally*] turned on a full blast of icy water, [and] Debbie let out a bone-chilling yowl.” Bob Puhala, “Kohler’s ‘Club’ Cool Spot for Winter Whirl,” *Chicago Sun-Times*, 15 Jan. 1995, Travel §, at 4. Big mistake indeed. The confusion arises partly from the popular pronunciation and partly from seemingly analogous terms such as *evidently* and *inadvertently*. Cf. **incidentally**.

LANGUAGE-CHANGE INDEX
accidentally misspelled **accidentally*: Stage 1
Current ratio: 59:1

accident working. See **working**.

acclimate; acclimatize. Although the -ize form is preferred by H.W. Fowler and other BrE authorities, the shorter form—which actually predates the longer—is now standard AmE. Some American dictionaries put the primary definition under *acclimatize* /ə-klɪ-mə-tɪz/, but few Americans use this term; the main term is *acclimate* /ak-lə-may/. The corresponding nouns are *acclimation* /ak-lə-may-shən/ in AmE and *acclimatization* /ə-klɪ-mə-ti-zay-shən/ in BrE. See -IZE.

LANGUAGE-CHANGE INDEX
acclimate, vb., and *acclimation*, n.: Stage 5
Current ratio (*acclimate* vs. *acclimatize*): 3:1

accommodable. So formed—not **accommodatable*, as it is sometimes erroneously written. E.g.: “Ford [cites as the company’s values] persistence, understanding business etiquette, and a demand in the industry to know the client’s needs and deliver them in a concise, *accommodatable* [read *accommodable*] manner.” Andrea Akins, “New Agency’s Successes on the Fast Track So Far,” *Nashville Bus. J.*, 21 June 1993,

at 35. But *accommodating* is far more common and familiar to readers. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX
**accommodatable* for *accommodable*: Stage 1
Current ratio (*accommodable* vs. **accommodatable*): 2:1

accommodate is one of the most frequently misspelled words in the language. See SPELLING (A).

accompanied. Since the 19th century, idiom has required *accompanied by*, not **accompanied with*—e.g.:

- “The book, inspired by his No. 1 song ‘Butterfly Kisses,’ features pictures of various fathers and daughters *accompanied with* [read *accompanied by*] short essays on growing up together.” “Features, Books, Religious Bestsellers,” *Christian Science Monitor*, 24 Dec. 1997, at 15.
- “Acupuncture has gained acceptance because more and more people seek therapy without the undesirable side effects often *accompanied with* [read *accompanying*] pharmaceutical drug treatments.” “The Acupuncture Clinic,” *Times Record News* (Wichita Falls, Tex.), 1 Sept. 2015, at A6.

Accompanied by, like *together with* and *along with*, does not make a singular subject into a plural one because it merely introduces a prepositional phrase. See SUBJECT-VERB AGREEMENT (E).

LANGUAGE-CHANGE INDEX
**accompanied with* for *accompanied by*: Stage 2
Current ratio (*accompanied by* vs. **accompanied with*): 18:1

accompaniment is so spelled—not **accompanymnt*. E.g.: “Ending his set with a shimmering 12-string guitar *accompanymnt* [read *accompaniment*] to his first hit ‘Part of the Plan,’ Fogelberg returned for a one-song encore.” Jack Leaver, “Fogelberg Revisits Good Years, to Hearers’ Delight,” *Grand Rapids Press*, 22 June 1997, at B7.

LANGUAGE-CHANGE INDEX
accompaniment misspelled **accompanymnt*: Stage 1
Current ratio: 2,623:1

accompanist /ə-kəm-pə-nist/ is the standard form, not **accompanyist*—e.g.: “Paxton was in wonderful form, and *accompanyist* [read *accompanist*] Eric Weissberg added just enough instrumental firepower on guitar and dobro to lend the songs some spark.” Greg Haymes, “Tom Paxton Shows He’s Still at Top of His Songwriting Game,” *Times Union* (Albany), 28 Mar. 1994, at C4.

LANGUAGE-CHANGE INDEX
accompanist misspelled **accompanyist*: Stage 1
Current ratio: 174:1

accord, n.; **accordance.** To be *in accord* is to be in agreement. E.g.: “The church agrees that Mary’s message at those places is *in accord* with Catholic teaching and devotion.” Steve Gushee, “For Many, Seeing Is Believing,” *Palm Beach Post*, 17 Jan. 1997, at F1.

To be *in accordance* is to be in conformity or compliance. Though sometimes cumbersome, the phrase is indisputably useful—e.g.: “Supporters of comprehensive sex ed are preparing to bring the battle to the states, compiling information detailing the least harmful way to design programs *in accordance* with the newly laid out federal standards.” Clare Saliba, “Just Say No,” *Village Voice*, 21 Jan. 1997, at 2. Certainly that wording is preferable to the legalistic phrase *pursuant to*. (See **pursuant to**.) But much depends on the precise phrase. For example, *in accordance with your request* is always stilted. Instead, write *as you requested* or some similar phrase.

Accord is sometimes wrongly used for *accordance*—e.g.:

- “Justice Marcos Aburto of the Supreme Court felt compelled to say that a decision would be made *in accord* [read *in accordance*] with the law and would not be influenced by outside pressure.” Calvin Sims, “Case of ’76 U.S. Assassination Reaching Final Stage in Chile,” *N.Y. Times*, 15 May 1995, at A9.
- “An outside auditor [will] determine whether . . . the payments were disbursed *in accord with* [read *in accordance with* or *according to*] state law and local policy.” “Hasty No-Bid Decision on Snap Just One Troubling Aspect of Deal,” *Sun-Sentinel* (Ft. Lauderdale), 21 Dec. 1996, at A14.
- “The transaction went down *in accord* [read *in accordance*] with general plans outlined seven and a half months ago, except shareholders made a little more money than expected.” Jeff Sturgeon, “Purchase of Valley Bank Complete,” *Roanoke Times*, 2 July 2015, at A6.

LANGUAGE-CHANGE INDEX

in accord with misused for *in accordance with*: Stage 1

accord, v.t. **A. And afford**. These words share the meaning “to furnish or grant” <accorded (or afforded) all the respect due him>. Yet some DIFFERENTIATION is possible: *accord* has the nuance of granting something because it is suitable or proper <some 269 charter schools in 25 states have been accorded the freedom to do what is in their students’ best interests>. *Afford*, in contrast, is the more general term meaning “to furnish (something) out of kindness, goodwill, or competitive strategy” <the airline afforded free upgrades to its most frequent fliers>.

B. Construing with Prepositions. When used intransitively, *accord* takes the preposition *in*, *to*, or *with*, depending on the context <we accord in our opinions> <we accord to plaintiff his due> <this accords with the prevailing view>.

accordance. See **accord**, n.

according. **A. According to**. This phrase means (1) “depending on”; (2) “as explained or reported by (a person)”; or (3) “in accordance with.” In sense 2, the phrase is a weak form of attribution <according to Barbara Tuchman, . . .>; a text sprinkled with *according to*’s gives the appearance of having little originality. Use the phrase sparingly.

B. According as. This phrase, which has an antique literary flavor, means “in a manner corresponding to the way in which; just as.” The phrase appears throughout the King James Version of the Bible—e.g.:

“And, behold, I come quickly; and my reward is with me, to give every man *according as* his work shall be.” Revelation 22:12. In modern prose it carries a hint of ARCHAISM—e.g.: “Indiana schoolchildren will or will not learn to read and to write *according as* [read *depending on whether*] they are taught by their teachers and prodded by their parents.” William F. Buckley, “What Has Caused the Gender Gap at the Polls?” *Las Vegas Rev.-J.*, 5 Nov. 1996, at B11.

C. As a Dangler. For *according as* an acceptable dangling modifier, see DANGLERS (E).

accordingly = (1) consequently, therefore <they were caught red-handed; accordingly, they were summarily fired>; or (2) in a corresponding or appropriate manner <they’ll be dealt with accordingly>. See SENTENCE ADVERBS. The word is a heavy connector often replaceable to good advantage by *so*. Cf. **consequently**.

accost (= to approach and usu. to speak to in an abrupt or challenging manner) has historically had no connotations of physical contact. Hence it would traditionally be considered inappropriate in cases of physical violence—e.g.: “The victim, who was *accosted* [read *assaulted*] as he left the bar with three women, suffered scrapes and bruises.” “Police Beat,” *Capital* (Annapolis), 24 Aug. 1996, at A11. *Accost* simply isn’t a strong enough word for that context. Cf. **altercation** & **assault**.

Also, *accost* isn’t the right verb for what a threatening animal does, no matter how noisy it becomes—e.g.: “Two months later, a trio of yelping pit bull puppies *accosted* [read *attacked*] Waters in the basement of an apartment building.” William Gaines & Laurie Cohen, “Workers’ Comp Puts City on Injured List,” *Chicago Trib.*, 12 Jan. 1997, at C1.

LANGUAGE-CHANGE INDEX

accost used in reference to a physical assault: Stage 3

accounting. See **bookkeeping** & **generally accepted accounting principles**.

accoutrement (= a supplementary item of dress or equipment; accessory) is predominantly so spelled in AmE and BrE alike, and always has been. Though given preference in several American dictionaries, **accouterment* has never prevailed in print. Likewise, the prevailing verb is *accoutre* in both AmE (by a 4-to-1 ratio) and BrE (by an 8-to-1 ratio).

Having been fully naturalized in the 16th century, the word is pronounced /ə-**koo**-tər-mənt/. It shouldn’t be given a Frenchified pronunciation, as it sometimes is.

Current ratio (World English): 7:1
(AmE): 6:1

accredit (= [1] to establish as credible, or [2] to issue credentials to) is the verb corresponding to the noun *accreditation*. But **accreditate*, a BACK-FORMATION from *accreditation*, has arisen as a NEEDLESS VARIANT—e.g.: “The laboratory, on the second floor of the sheriff’s Wheaton office, is one of 77 *accredited* [read *accredited*] facilities in the country.” Art Barnum, “Du Page Crime Lab Wins National

Accreditation,” *Chicago Trib.*, 13 Mar. 1991, at D9. Although the longer form finds citations in the *OED* from the mid-17th century, these provide no basis for using it in contemporary prose. Besides, the *OED* labels the word obsolete.

Occasionally *accredit* is loosely used in place of *credit* or *attribute*—e.g.:

- “It would be reasonable to assume that at least some of Rusedski’s astonishing recent improvement could be *accredited* [read *credited*] to his coach, Tony Pickard.” Rosie DiManno, “More than Meets the Eye in Rusedski Affair,” *Toronto Star*, 29 June 1998, at D6.
- “He was also an inventor and had several patents *accredited* [read *credited*] to his name.” “John Steven” (obit.), *S. Bend Trib.*, 2 July 1999, at D5.
- “She *accredits* [read *attributes*] to her father, the retired Rev Hugh Dermot McMorran, one of the tenets of her policing ‘beliefs.’” Alan Murray, “Force for the Future,” *Belfast Telegraph*, 17 Dec. 2011, at 22.

The *OED* cites two examples, from 1876 and 1900, and labels this use an Americanism. But it doesn’t represent the best in American usage.

LANGUAGE-CHANGE INDEX

1. **accreditate* for *accredit*: Stage 1

Current ratio: 336:1

2. *accredit* in the sense “credit” or “attribute”: Stage 2

accreditation (= official approval given to someone or something by reason of having reached an acceptable standard) is pronounced /ə-kred-i-**tay**-shən/—not /ə-kred-i-**day**-shən/.

accrual; ***accruement**. The latter is a NEEDLESS VARIANT.

Current ratio: 528:1

accumulable. So formed—not **accumulatable*. See -ABLE (D) & -ATABLE.

Current ratio: 10:1

accumulate; **accumulative**; ***cumulate**; **cumulative**. *Accumulate* is far more common than **cumulate* as the transitive verb meaning “to pile up, collect.” **Cumulate* should be avoided as a NEEDLESS VARIANT. *Accumulate* has the additional intransitive sense “to increase.”

The adjectives demonstrate more palpable DIFFERENTIATION. In one sense they are synonymous: “increasing by successive addition,” in which meaning *cumulative* is the usual and therefore the preferred term. *Accumulative* = acquisitive; inclined to amass. It would be salutary to strengthen this distinction.

accurate (= correct in every detail) is pronounced /**ak**-yə-rit/—not /**ak**-ə-rit/ or /**ak**-rit/. It’s a matter of precision.

accusatory; **accusatorial**; **accusative**. *Accusatory* (= accusing; of the nature of an accusation) is occasionally confused with *accusatorial* (= of, relating to, or involving a criminal-law system in which the

prosecution and the defense put forward their claims before an independent decision-maker). E.g.: “Before she could utter an *accusatorial* [read *accusatory*] word, Stella said, ‘I know what you’re thinking and the answer is no.’” Max Haines, “A Bitter Pill to Swallow,” *Toronto Sun*, 31 Dec. 1995, at 42. To contrast *accusatorial* with *inquisitorial*, see **inquisitive**.

Accusative should be restricted to its grammatical sense, i.e., the case that marks the direct object of a verb or the object of certain prepositions. But it’s sometimes used incorrectly in place of *accusatory*—e.g.: “Adopting an *accusative* [read *accusatory*] tabloid-TV style, the ad shows the Washington apartment of a lobbying firm where Kerry stayed intermittently over a period of months in 1989.” Frank Phillips, “Weld Calls a Truce on Attack Ads,” *Boston Globe*, 26 Oct. 1996, at A1.

LANGUAGE-CHANGE INDEX

accusative misused for *accusatory*: Stage 1

accuse; **charge**. One is *accused of*, then *charged with*, a crime. Perhaps under the influence of *charged with*, the verb *accused* is sometimes unidiomatically paired with *with*—e.g.: “Ross and Vince Fera, Local 57’s recording secretary and a member of its executive board, were *accused with* [read *accused of*] violating the union’s code of ethics.” Jim McKay, “Monitor Accuses Union of Crime Ties,” *Pitt. Post-Gaz.*, 25 Nov. 1997, at F1. (The headline writer got it right.) See **charge** (A).

LANGUAGE-CHANGE INDEX

**accused with* for *accused of*: Stage 1

Current ratio: 131:1

***accusee** is a NEEDLESS VARIANT of the noun *accused* (= a person accused of wrongdoing). E.g.:

- “Later, [Judge Oren R. Lewis] turned to James S. Augus, the senior Justice Department trial lawyer, and accused him of ‘shifting the burden of proof’ from the accuser [the Justice Department] to the *accusee* [read *accused*].” Robert Meyers, “Courtroom Becomes Classroom,” *Wash. Post*, 17 Mar. 1979, at C3.
- “This would, of course, suggest Nicholas Daniloff, U.S. News’ Moscow correspondent, as the actual *accusee* [read *accused*].” Rance Crain, “Spying Inside the Inside Story,” *Advertising Age*, 29 Sept. 1986, at 46.
- “Blocking is often inspired; especially inspired is an indiscretion with the *accusee* [read *accused*] defending himself with back to desk, side by side with the accuser.” Geoff Gehman, “Theatre Outlet Pulls All the Stops in Magical ‘Moonshine,’” *Morning Call* (Allentown, Pa.), 10 Mar. 2001, at A60.

Occasionally **accusee* is erroneously used for *accuser*—e.g.: “If these accusations are grounded on truth, then surely the *accusee* [read *accuser*] has a lot less to fear than the accused.” Letter of Brody Stewart, “Readers’ Views,” *St. Cloud Times* (Minn.), 12 Mar. 2002, at B5. See -EE.

LANGUAGE-CHANGE INDEX

1. **accusee* for the attributive noun *accused*: Stage 1

Current ratio: 164:1

2. **accusee* misused for *accuser*: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

accuser; ***accusor**. The *-er* form is standard. It has always predominated. See *-ER* (A).

Current ratio: 869:1

accustomed. Formerly, the idiom was *accustomed to do*, *accustomed to think*, etc. But in the mid-20th century the phrasing shifted to *accustomed to doing*, *accustomed to thinking*. Today the older usage sounds strange to many ears, but some traditionalists stick to it, especially in BrE—e.g.: “Both stem from the age profile of a profession in which nearly two thirds of teachers are over 40 and *accustomed to think* of early retirement as the norm.” John Carvel, “Questioning Professionalism of Teachers Can Be Harmful” *Guardian*, 14 Jan. 1997, at 2.

Current ratio (*accustomed to being* vs. *accustomed to be*): 2:1

acerbic, in AmE, is sometimes said to be inferior to *acerb* because it is a syllable longer. But *acerb* is so rare and *acerbic* so common—much more common than its sibling in modern print sources—that the criticism is misplaced. *Acerbic* is also standard in BrE, in which *acerb* is now virtually unknown. (Predominant in the 18th century, *acerb* rapidly declined in the 19th.) The noun is *acerbity*.

Current ratio (*acerbic* vs. *acerb*): 59:1

achieve, v.t., implies successful effort at something more than merely surviving to a given age. Thus **achieving manhood* and **achieving womanhood* are ludicrous phrases, but they and others like them are fairly common EUPHEMISMS—e.g.: “Others remember the excitement of seeing the world and the satisfaction of *achieving* [read *reaching*] adulthood in such difficult times.” Robert Preer, “Fifty Years Later, Pain of War Still Throbs,” *Boston Globe*, 29 May 1994, South Weekly §, at 1.

Achilles’ heel; **Achilles tendon**. Since the early 19th century, *Achilles’ heel* has predominantly sported the possessive apostrophe—though the competition between the with-apostrophe and without-apostrophe forms has been keen since before 1900. Meanwhile, though, the attributive form *Achilles tendon* (no apostrophe) has been vastly predominant since the mid-19th century. Hence many (perhaps most) dictionaries justifiably list the terms as they are recorded at the head of this entry.

Current ratio (*Achilles’ heel* vs. *Achilles heel*): 1.2:1

Current ratio (*Achilles tendon* vs. *Achilles’ tendon*): 22:1

acknowledge. The phrasing *This acknowledges your letter of January 15* is pure COMMERCIALESE. Instead, try for a more relaxed tone: *Thank you for your January 15 letter*.

acknowledgment; **acknowledgement**. As with *judgment* and *abridgment*, the spelling without the medial *-e* has always predominated in AmE. But in BrE the medial *-e* is standard (but only since about 1970). See MUTE E.

***acquaintanceship**, a NEEDLESS VARIANT of *acquaintance*, adds nothing to the language except another syllable, which we scarcely need. E.g.:

- “Mexicans, having been distanced from Jews for centuries, brought a mixed background to the new *acquaintanceship*

[read *acquaintance*].” Adina Cimet, *Ashkenazi Jews in Mexico* 3 (1997).

- “We eat, pay bills, maneuver through the social pleasures of an average set of *acquaintanceships* [read *acquaintances*], and try to maintain the cock of whatever hat we have chosen to wear through the terrain of an entire life.” Edward Hoagland, “Sex and the River Styx,” *Harper’s Mag.*, Jan. 2003, at 49, 59.

LANGUAGE-CHANGE INDEX

**acquaintanceship* for *acquaintance*: Stage 2

Current ratio (*acquaintance* vs.

**acquaintanceship*): 59:1

acquiesce (/ak-wee-es/) takes either *in* or *to*—e.g.:

- “We have a strong desire to work with President-elect Bush when our ideas and values intersect, but also a duty not to *acquiesce in* actions with which we fundamentally disagree.” Evan Bayh, “The Wrong Man,” *Wash. Post*, 19 Jan. 2001, at A37.
- “The question for Bush is whether to simply *acquiesce to* the demands of these industries that provided millions for Republican campaigns.” “Bush Pick Signals Big Changes for Western Lands,” *USA Today*, 16 Jan. 2001, at A14.

Acquiesce in is the more traditional choice; it has always been more common than *acquiesce to*.

A slight DIFFERENTIATION seems to be emerging. Though one may *acquiesce in* events (especially unfortunate ones), one *acquiesces to* proposals and requests, or the people who propose them—e.g.:

- “Our president . . . will go down in history as having *acquiesced in* our nation’s moral decline.” Richard Rorty, “I Don’t Need Money from Social Security,” *Seattle Post-Intelligencer*, 9 Mar. 2000, at A21.
- “Burleigh paints a depressing picture of a society that *acquiesced in* the establishment of a brutal dictatorship and facilitated the unfolding of its increasingly murderous policies.” Omer Bartov, “Hitler’s Willing Believers,” *New Republic*, 20 Nov. 2000, at 29.
- “Attorney General Thomas F. Reilly . . . has blasted the DTE for *acquiescing to* utilities without investigating their claims of higher costs.” Peter J. Howe, “Agency Approves Electricity Rate Hike,” *Boston Globe*, 12 Dec. 2000, at C1.
- “Bush might *acquiesce to* smaller changes made by Congress in annual spending bills.” Jim Barnett & Jeff Mapes, “Bush May Bring Rural America into White House,” *Oregonian* (Portland), 14 Dec. 2000, at A15.

acquiescence. See **permission**.

acquisition; **acquirement**. Here’s the difference: traditionally, *acquirement* denotes the power or faculty of acquiring, *acquisition* the thing acquired. But both may also mean “the act of acquiring”; *acquisition* is more usual in that sense.

acquirer. So spelled—not **acquiror*.

Current ratio: 9:1

acquisition. See **acquirement**.

acquit. This verb once took either *of* or *from*, but since the early 18th century the preferred and vastly predominant preposition has been *of*. E.g.: “In the end James was induced to withdraw a letter resigning from the Society, after the Council had passed a resolution *acquitting him from* [read *of*] any unfairness.”

K.M. Elisabeth Murray, *Caught in the Web of Words* 286 (1977).

LANGUAGE-CHANGE INDEX

**acquit from* for *acquit of*: Stage 1

Current ratio (*acquit of* vs. **acquit from*): 4:1

acquittal; acquittance; *acquittment. *Acquittal* is the usual term, meaning (1) “the legal certification, usu. by a jury’s verdict, that an accused person is not guilty of a charge”; or (2) “the discharge of a debt or other liability.” **Acquittment*, a NEEDLESS VARIANT, is obsolete. *Acquittance* is obsolete in all senses except “a written release showing that a debtor has been discharged of an obligation.” It would be advantageous to allow *acquittance* this commercial meaning and leave *acquittal* to the criminal law.

acre measures area, not length. To put it differently, *acre* is a square, not a linear, measure. But the word is sometimes misused as if it referred to length—e.g.: “There were about 1,500 people buried at the Hardin Cemetery, once a pristine landscape *nine acres across* [read *of nine acres*] and now a muddy lake where minnows and snapping turtles live alongside broken headstones and toppled graves.” Isabel Wilkerson, “Cruel Flood: It Tore at Graves, and at Hearts,” *N.Y. Times*, 26 Aug. 1993, at A1.

ACRONYMS. See ABBREVIATIONS.

across, in STANDARD ENGLISH, is pronounced /ə-**kraws**/—not /ə-**krawst**/.

act; action. Distinguishing between these overlapping words is no mean task. Generally, *act* is the more concrete word <an act of Congress>, *action* the more abstract <spring into action>. *Act* typically denotes the thing done, *action* the doing of it. *Act* is unitary, while *action* suggests a process—the many discrete events that make up a bit of behavior.

activate. See **actuate**.

ACTIVE VOICE. See **PASSIVE VOICE**.

actual fact, in. See **fact (c)**.

actuality. See **in actuality**.

actuate; activate. The Evanses wrote that *actuate* means “to move (mechanical things) to action” and that *activate* means “to make active” (*DCAU* at 10). The distinction is a fine one not generally recognized by dictionaries.

The less common term, *actuate*, often appears as a fancy substitute for *motivate* in a variety of contexts. (Likewise, *actuation* sometimes displaces *motivation*.) This usage should generally be avoided on stylistic grounds, but it is not strictly incorrect—e.g.: “What we are talking about is harassment by a small but determined group of photographers *actuated* [better: *motivated*] by greed to the point that they have lost all

sense of humanity.” David Mellor, “The People’s Princess,” *Daily Mail*, 1 Sept. 1997, at 12.

acumen (= shrewd perception) is traditionally pronounced /ə-**kyoo**-men/, but in recent decades the variant /**ak**-yə-men/ has become dominant. Charles Harrington Elster, who writes on pronunciation matters, thinks “that AK-yuh-men was the innovation of younger (not well-enough-) educated speakers who think nothing of shifting an accent here and there in an effort to sound more urbane or savvy. . . . Like most pseudosophisticated innovations, AK-yuh-men soon became a follow-the-leader pronunciation with two quite different ways of saying *acumen* countenanced by the dictionaries where one, in my opinion, would do just fine.” *BBBM* at 8.

LANGUAGE-CHANGE INDEX

acumen accented on first syllable: Stage 3

ACUTE ACCENT. See **DIACRITICAL MARKS**.

A.D. See **B.C.**

ad, short for *advertisement*, is acceptable in all but the most formal contexts.

adage (= a familiar saying that had its origins in antiquity) often appears in the venially redundant phrase *old adage*. The phrase is especially inappropriate when the saying is a recent one—e.g.: “Like all mathematical models, the *old adage* [read *adage*] of garbage in-garbage out holds true.” Lauren Rudd, “Intel’s Dismal Numbers Mask Earnings Growth,” *Orlando Sentinel*, 25 July 2001, at B6.

adamant (= unrelenting, unyielding) has no corresponding noun at the ready. *Adamantness* is awkward at best. There’s a gap in the language, and to fill it some writers have begun using *adamance*, on the analogy of *brilliant*–*brilliance*, *preponderant*–*preponderance*, *protuberant*–*protuberance*, and the like. Although the **NEOLOGISM** is quite understandable, conservative writers would probably insist (adamantly, one supposes) on *adamant stand*, *adamant attitude*, or *insistence* in sentences such as these:

- “Some San Fernando Valley business groups are wary of LABA because it won’t relent in its *adamance* [read *adamant stand*] toward neighborhood councils.” Jim Newton, “A Look Ahead,” *L.A. Times*, 14 Sept. 1998, at B1.
- “Clarke was taken aback by Neilson’s *adamance on being* [read *determination to be*] back for the second round.” “Flyers Coach Anxious to Return from Cancer,” *Ariz. Republic*, 11 Apr. 2000, at C8.
- “The peace process marked by the Good Friday agreement of 1998 had been endangered by the IRA’s *adamance* [read *resistance*] against giving up its guns and explosives in any manner that might suggest defeat in its guerrilla war for Irish unification.” “Breakthrough on IRA Arms,” *S.F. Examiner*, 10 May 2000, at A22.
- “The *opposition’s adamance* [read *strength of the opposition*] stunned the commission and its staff.” Bryan

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Hendricks, "AGFC Cancels Crown Lake Ramp Plans," *Ark. Democrat-Gaz.*, 16 Apr. 2015, at 25.

The *OED* traces *adamance* back to 1954, with additional examples from 1961 and 1979. In fact, though, the word appeared in print sources as early as 1931.

LANGUAGE-CHANGE INDEX
adamance: Stage 3

adapt; adopt. These two are occasionally confounded. To *adapt* something is to modify it for one's own purposes; to *adopt* something is to accept it wholesale and use it.

adaptation; *adaption; *adaptive; adaptive. The longer form is standard in the noun (*adaptation*), the shorter in the adjective (*adaptive*).

Current ratio (*adaptation* vs. **adaption*): 95:1

Current ratio (*adaptive* vs. **adaptive*): 288:1

addable. So spelled—not **addible*. See -ABLE (A).

Current ratio: 4:1

added to. See SUBJECT-VERB AGREEMENT (E).

addendum (= an addition or supplement) forms the plural *addenda*. It's sloppy to use *addenda* as a singular—e.g.:

- "It is a new, revised and enlarged edition with an *addenda* [read *addendum*] by Robert H. Kelby." Damon Veach, "Continental Army Officers, 1775–1783 Updated," *Advocate* (Baton Rouge) (Mag.), 16 Feb. 1997, at 28.
- "Two Cape Cod gunning shorebird decoys that arrived too late for catalogue listing and so were included in an *addenda* [read *addendum*] are thought to be early carvings done by Crowell in the late 1800s." Virginia Bohlin, "Decoys Gain Prestige, Patina of Folk Art," *Boston Globe*, 24 July 2005, at G26.
- "As the new caterer at the Van Wezel, he'll be creating some pre- and post-events as an *addenda* [delete *an*] to the performances." Deborah Seeber, "Party Time," *Sarasota Herald Trib.*, 1 Oct. 2006, at L78.

See PLURALS (B).

LANGUAGE-CHANGE INDEX
addenda used for the singular *addendum*: Stage 2
Current ratio (*an addendum* vs. **an addenda*): 3:1

addicted; dependent. Regarding people's reactions to drugs, the distinction between these terms can be important. Someone who is *addicted* to a habit-forming drug has an intense physiological need for it. Someone who is *dependent* on a drug has a strong psychological reliance on it after having used it for some time. *Addiction*, then, is primarily physical, whereas *dependency* (also known as *habituation*) is primarily psychological.

address, n. & vb. In several of its verb senses, this is a FORMAL WORD: (1) "to speak to" <Jones addressed the managers in a manner that they considered insubordinate>; (2) "to direct (a statement, question, etc.) to" <Walters addressed the question to Fawcett, not to Majors>; (3) "to call attention to" <the report addressed four issues>; (4) "to deal with" <it's time to address these problems>.

Whether as a verb or as a noun, *address* is preferably accented on the second syllable: /ə-**dres**/. But for a residence or business, /**ad**-dres/ is fully acceptable.

addressee. See -EE.

adduce; educe; deduce. All three are useful when discussing the evidence marshaled in support of an argument. To *adduce* is to put forward for consideration something such as evidence or arguments. E.g.: "What I saw were individuals who voted to cripple the education process on the basis of rumors they freely attributed to one or two unnamed sources rather than properly *adduced* evidence." "How to Reform Our National Intelligence," *Baltimore Sun*, 30 Nov. 1996, at A13.

To *educ*e is to draw out, evoke, or elicit. This term is the rarest of the three, but it occasionally appears in the popular press—e.g.: "Hitherto, how [Thurber] fitted into the screwball reputation of that magazine has had to be *educ*ed from his 'The Years with Ross' (1959)." John McAleer, "The Thurber Spirit," *Chicago Trib.*, 17 Dec. 1995, at C1. Sometimes, however, *educ*e is misused for *adduce*—e.g.: "But the only evidence *educ*ed [read *adduced*] in support of this theory is a passing and rather inconclusive comment made by the Bronte family cook." Terry Castle, "Hush Hush, Sweet Charlotte," *New Republic*, 22 Jan. 1996, at 32. For still more complications involving this word, see **educ**e.

To *deduce* is to draw an inference. E.g.: "As it happens, scientists have *deduced* the nature of an evolutionary path that a primitive blood-clotting mechanism could have followed to evolve into the more complex cascade." Boyce Rensberger, "How Science Responds When Creationists Criticize Evolution," *Wash. Post*, 8 Jan. 1997, at H1. See **deduce**.

LANGUAGE-CHANGE INDEX
*educ*e misused for *adduce*: Stage 1

adducible. So spelled—not **adduceable*. See -ABLE (A).
Current ratio: 13:1

adequate. A. And sufficient. Though both words were originally used in reference to quantity, *adequate* now tends toward the qualitative and *sufficient* toward the quantitative. Hence *adequate* means "suitable to the occasion or circumstances," and *sufficient* means "enough for a particular need or purpose." For more on *sufficient*, see **enough**, adj.

B. *Adequate enough. This phrase is redundant. Either word suffices alone—e.g.:

- "While Tyrol doesn't have a particularly large or sophisticated snowmaking system, it is *adequate enough* [read *adequate*] to cover 100 percent of the slopes." Mike Ivey, "Snowboarders Aid in Revival of Tyrol Basin," *Capital Times* (Madison), 22 Dec. 1995, at C1.
- "The question [is] whether a translation is *adequate enough* [read *adequate*] considering not only different legal terminology but also changes from the L1 legal system into the L2 legal system." Marie J. Myers, "Bilingualism and the Use of Voice Dictation Software for Personal Computers," in *Language for Special Purposes* 140, 144 (Felix Mayer ed., 2001).
- "The commander of the garrison was dead. Veranius had been an *adequate enough* [read *able*] officer—*adequate enough* [read *able enough*] to be spared for this command—but the Second Legion could ill afford to send another

centurion from the campaign being waged against the hill-forts." Simon Scarrow, *The Eagle and the Wolves* 23 (2004).

See ADJECTIVES (B).

adherence; adhesion. Both words derive from the verb *adhere*, but *adhesion* is generally literal and *adherence* generally figurative. One should write about *adherence* to tenets or beliefs, and about *adhesion* of bubble gum to the sole of one's shoe. The word more frequently called on is *adherence*—e.g.: "Clinton's slavish *adherence* to a corporate agenda cannot be understated." Adolph Reed Jr., "A Slave to Finance," *Village Voice*, 21 Jan. 1997, at 27. (The writer seems to have misused *understated* for *overstated*.)

Occasionally *adhesion* appears wrongly for *adherence*—e.g.:

- "The strong *adhesion* [read *adherence*] to technocratic rules would block self-initiative and encourage resignation." M.K. Welge, "A Comparison of Managerial Structures in German Subsidiaries in France, India, and the United States," *Mgmt. Int'l Rev.*, Jan. 1994, at 33.
- "Certainly they vaunted their *adhesion* [read *adherence*] to the belief in the 'great blessings . . .'" David S. Forsyth, "Scots and the Union," *Herald* (Glasgow), 23 Sept. 1995, at 19.

LANGUAGE-CHANGE INDEX
adhesion misused for *adherence*: Stage 1

ad hoc, adv. & adj., is a widespread and useful term meaning "for this specific purpose." Some have questioned its justification in English (e.g., Vigilans [Eric Partridge], *Chamber of Horrors* 26 [1952]). But it is firmly established and serves the language well when used correctly <ad hoc committee>.

By extension—some would say SLIPSHOD EXTENSION—the term has come to mean "without any underlying principle that can be consistently applied"—e.g.: "The D.C. Council, for example, undermines the work of the commission by approving tax changes *on an ad hoc basis* [read *haphazardly*] in response to the whims of business groups." Rudolph A. Pyatt Jr., "One Bold Plan Deserves Another," *Wash. Post*, 16 Jan. 1997, at E3.

Generally speaking, the phrases *on an ad hoc basis* and *in an ad hoc way* are verbose for the adverb *ad hoc*. (See **basis** (A).) Likewise, *ad hoc* should rarely if ever be qualified by *very* or *fairly*. Finally, attempts to condense the phrase into one word (e.g., **adhocking*) have failed and should be forgotten, and there is no need to hyphenate it. See PHRASAL ADJECTIVES (H).

ad hominem [L. "to the person"] is shortened from the LATINISM *argumentum ad hominem* (= an argument directed not to the merits of an opponent's argument but to the personality or character of the opponent). Occasionally the full phrase appears—e.g.: "But supposing it had come to something?" demanded Miss Barton, pinning the *argumentum ad hominem* with a kind of relish." Dorothy L. Sayers, *Gaudy Night* 371 (1936; repr. 1995).

The more usual shortened form is sometimes misspelled **ad hominum*—e.g.:

- "He is not without sin; Limbaugh himself has made *ad hominum* [read *ad hominem*] attacks on some with whom he disagrees." Debra J. Saunders, "Rush and the Juice," *S.F. Chron.*, 8 July 1994, at A23.
- "I don't believe that they'll get into a lot of *ad hominum personal* [read *ad hominem*] attacks." Andy Sher, "Quayle Predicting Different Approach by Gore This Time," *Nashville Banner*, 9 Oct. 1996, at A1.
- "I think most Americans are getting a bellyful of *ad-hominum* [read *ad hominem*] attacks and character assassinations." "A Character of Conservation," *Wash. Times*, 4 Mar. 2001, at B5.

LANGUAGE-CHANGE INDEX
ad hominem misspelled **ad hominum*: Stage 1
Current ratio: 87:1

adieu /ə-**dyoo**/ (= farewell) for *ado* /ə-**do**/ (= fuss, trouble) is a surprisingly common error—e.g.:

- "So without further *adieu* [read *ado*], presenting the best of the 1994 NCAA Tournament field: . . ." Jim Thomas, "Committee Digests Upsets: Extra Hours Bring About Little Change," *St. Louis Post-Dispatch*, 14 Mar. 1994, at C1.
- "If Teevens' 1992 and 1993 Green Wave teams, which tilted and rolled to a cumulative 5–18 record, are the only measuring stick, then it's much *adieu* [read *ado*] about nothing." Dave Lagarde, "Bigger and Stronger, But Is Wave Better?" *Times-Picayune* (New Orleans), 18 Aug. 1994, at D1.
- "So without further *adieu* [read *ado*], here's an early-week primer for this 60th annual event." John Lindsay, "The Road to San Antonio," *Cincinnati Post*, 11 Mar. 1998, at D8.

Sometimes a pun is clearly intended—e.g.: "And then there's Whitewater, which has taken on a miserable life of its own. If it ever ends, it'll be much *adieu* about nothing." Herb Caen, "Time of Our Lives," *S.F. Chron.*, 30 Mar. 1994, at C1. The opposite error—*ado* for *adieu*—is exceedingly rare.

LANGUAGE-CHANGE INDEX
adieu misused for *ado*: Stage 1
Current ratio (*without further ado* vs. **without further adieu*): 53:1

ad infinitum (= continuing without end) is pronounced /ad in-fi-**nī**-təm/—not /ad in-**fin**-i-təm/ or /ad in-fi-**nee**-təm/.

adjective (= a word that describes a noun or pronoun) is pronounced /aj-ik-tiv/—preferably not /aj-ə-tiv/.

ADJECTIVES. A. Definition. An adjective is a word that modifies a noun. The word is sometimes used sloppily as if it meant "noun"—e.g.:

- "'Excellence' is an *adjective* [read *a noun*] that describes something which is of the highest quality." "Their Work Stands Out," *Barrister*, Summer 1989, at 5. (In that sentence, *describes* should probably be *denotes*, and *which* is should be deleted.)

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Indeed, greatness is *an adjective* [read *a word*] befitting this Irish-bred 5-year-old son of 1990 Breeders’ Cup Turf champion In The Wings.” Jay Richards, “Singspiel More Versatile than Superhorse Cigar,” *Las Vegas Rev.-J.*, 4 Apr. 1997, at C6.

Of course, *excellence* and *greatness* are nouns; their corresponding adjectives are *excellent* and *great*.

B. Noncomparable Adjectives. Many adjectives describe absolute states or conditions and cannot take *most* or *more*, *less* or *least*, or intensives such as *very*, *quite*, or *largely*. The ILLOGIC of such combinations is illustrated in this sentence: “It is possible that this idea too has outlived its usefulness and soon will be *largely discarded*.” The literal meaning of *discard* impinges on the METAPHOR here: it is hard to imagine a single idea being halfway discarded, though certainly it could be halfway discredited. Deleting *largely* clears the meaning.

The best-known noncomparable (/non-kom-pər-ə-bəl/) adjective is *unique* (= being one of a kind). Because something is either unique or not unique, there can be no degrees of uniqueness. Hence **more unique* and **very unique* are incorrect. Yet something may be *almost unique* or *not quite unique*—if, for example, there were two such things extant. (See **unique**.) The Hope Diamond is unique; a Gutenberg Bible is almost unique. The diamond is not “more unique,” though. This writer of distinction got the distinction right: “I’ve got a Dante, and a Caxton folio that is *practically unique*, at Sir Ralph Brocklebury’s sale.” Dorothy L. Sayers, *Whose Body?* 16 (1923; repr. 1995) (several variants of the folio are known to exist, but none are identical).

Many other words belong to this class, such as *preferable*: “Stoll said the city also plans dozens of hearings with groups, showing different scenarios of how growth could be handled and getting feedback on what is *most preferable* [read *preferable*].” Jack Money, “Technology Useful in City Planning,” *Sunday Oklahoman*, 27 Apr. 1997, at 2. Cf. COMPARATIVES AND SUPERLATIVES (D).

Among the more common noncomparable adjectives are these:

absolute	inevitable	singular
adequate	infinite	stationary
chief	irrevocable	sufficient
complete	main	unanimous
devoid	manifest	unavoidable
entire	only	unbroken
false	paramount	uniform
fatal	perfect	unique
favorite	perpetual	universal
final	possible	void
ideal	preferable	whole
impossible	principal	

For example, the phrase **more possible* should typically be *more feasible* or *more practicable*, since something is either possible or impossible. E.g.: “The VA medical centers, which have a long history of hospitalizing patients, have been stepping up outpatient services as they become more and more *possible* [read *compatible*] with emerging technology.” Mary

McGrath, “Debate Over VA Center Comes Home,” *Omaha World-Herald*, 16 Feb. 1997, at B1.

This general prohibition against using these words in comparative senses (e.g., “absolutely impossible”) should be tempered with reason. It has exceptions. Good writers occasionally depart from the rule, but knowingly and purposefully. For example, the phrase *more perfect* appears in the U.S. Constitution: “We the People of the United States, in order to form a *more perfect* Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.” U.S. Const. pmbl. One writer criticizes this phrase and suggests that it “should read ‘to form a *more nearly perfect* Union.’” George J. Miller, “On Legal Style,” 43 *Ky. L.J.* 235, 246 (1955). Although the Constitution is not without stylistic blemishes, this probably isn’t one of them, and the suggested edit seems pedantic. See **more perfect**.

A few adjectives, such as *harmless*, are wrongly thought of as noncomparable. It’s hopelessly donnish to insist that something is either *harmful* or *harmless* and that you can’t write *more harmful*, *more harmless*, or *relatively harmless*. The same is true of many other words.

C. Coordinate Adjectives. When two adjectives modifying the same noun are related in sense, they should be separated by a comma (or else *and*). So we say *a big, sprawling house* and *a poignant, uplifting film*. But when the consecutive adjectives are unrelated, there shouldn’t be a comma—hence *a big white house* and *a poignant foreign film*.

Some consecutive adjectives present close questions—e.g.: “The *brief, unsigned Supreme Court opinion* said that the lawyers for Ms. Benten had failed to show a substantial likelihood that the case would be won if it were argued before the United States Court of Appeals for the Second Circuit.” Phillip J. Hilts, “Justices Refuse to Order Return of Abortion Pill,” *N.Y. Times*, 18 July 1992, at 1. Is the fact that the opinion is *brief* related to the fact that it is *unsigned*? If so, the comma is proper; if not, the comma is improper. Because signed opinions tend to be longer than unsigned opinions, the comma is probably justified. But the string of adjectives is awkward and might be improved: *The brief Supreme Court opinion, which was unsigned, said . . .*

For more on the punctuation of successive adjectives, see PUNCTUATION (D).

D. Proper Names as Adjectives. When a proper name is used attributively as an adjective, the writer should capitalize only that portion used in attribution <a University of Florida student> <a John Birch Society member>.

The practice of using as adjectives PLACE NAMES having two or more words should generally be resisted. But it is increasingly common. Although *California home* and *Austin jury* are perfectly acceptable, *Sacramento, California home* and *Austin, Texas*

jury are not. To make matters worse, some writers place a second comma after the state (on the theory that the state is an APPOSITIVE). Hence, using a city plus the state as an adjective disrupts the flow of the sentence—e.g.: “Farmland’s president, Marc Goldman, sent out sleuths who traced the missing containers to an *Elizabeth, N.J., warehouse* he says is filled with discarded bottles of designer water.” Edward Felsenthal, “Nobody’s Crying Yet, but There Must Be Spilled Milk Somewhere,” *Wall Street J.*, 20 June 1990, at B1. Such constructions contribute to NOUN PLAGUE, lessen readability, and bother literate readers. For more on this phenomenon, see FUNCTIONAL SHIFT (B).

E. Adjectives vs. Adverbs. English contains a number of linking verbs (or copulas) apart from *to be*—e.g., *appear, become, feel, look, seem, smell, taste*. These verbs connect a descriptive word with the subject; hence the descriptive word following the linking verb describes the subject and not the verb. We say *He turned professional*, not **He turned professionally*. Writers frequently fall into error when they use linking verbs. One must analyze the sentence rather than memorize a list of common linking verbs, much as this may help. Often unexpected candidates serve as linking verbs—e.g.:

- “The rule sweeps too *broadly* [read *broad*].” (The writer intends not to describe a manner of sweeping, but to say that the rule is broad.)
- “Before the vote, the senator stood *uncertainly* [read *uncertain*] for several days.” (The word describes not the manner of standing, but the man himself.)

A similar issue arises with an object complement, in which the sequence is [subject + verb + object + complement]—e.g.:

- “Chop the onions *finely* [read *fine*].” (The sentence does not describe the manner of chopping, but the things chopped. The onions are to become fine [= reduced to small particles].)
- “Slice the meat *thinly* [read *thin*].” (As above.)

An elliptical form of this construction appears in the dentists’ much-beloved expression, *Open wide* (= open your mouth wide). Cf. **badly** (A).

F. Past-Participial Adjectives. In certain phrases, there is a decided tendency for past-participial adjectives to lose their participial endings. Hence *iced cream* has become *ice cream*, *creamed cheese* has become *cream cheese*, *high-backed chair* has become *high-back chair*, and *skimmed milk* has become *skim milk*. Meanwhile, *chartered plane* threatens to become *charter plane*. Yet *iced tea* stubbornly retains the participial inflection in most print sources. Although purists battle this trend, its inevitability seems clear. Purists, of course, are free to continue using the past participles for the phrases in transition, but they may not get what they were expecting if they order “iced cream.”

G. Phrasal or Compound Adjectives. See PHRASAL ADJECTIVES.

H. Modification of Adjectives Ending in -ed. See **very** (B).

I. Adjectives Ending in -ly. See ADVERBS (B).

J. Adjectives That Follow the Noun. See POSTPOSITIVE ADJECTIVES.

K. Dates as Adjectives. See DATES (C).

L. Comparative and Superlative Adjectives. See COMPARATIVES AND SUPERLATIVES.

M. Animal Adjectives. See ANIMAL ADJECTIVES.

N. Adjectives as Nouns. See FUNCTIONAL SHIFT (C).

O. Adjectives as Verbs. See FUNCTIONAL SHIFT (E).

P. Nouns as Adjectives. See FUNCTIONAL SHIFT (B).

Q. Adjective-Noun Disagreement. See CONCORD (E).

adjournment = (1) the act of suspending proceedings to another time or place; or (2) an adjourned meeting, i.e., a meeting “scheduled for a particular time (and place, if it is not otherwise established) by the assembly’s ‘adjourning to’ or ‘adjourning until’ that time and place.” *Robert’s Rules of Order Newly Revised* § 9, at 90 (10th ed. 2000). As *Robert’s* points out, because sense 2 is susceptible to confusion with sense 1, the phrase *adjourned meeting* is preferable to *adjournment* in sense 2. Reserve *adjournment* for its ordinary meaning: sense 1.

adjudicable. So formed—not **adjudicable*. See -ATABLE.

adjudicative; *adjudicatory; *judicative. The first is standard; the second and third are NEEDLESS VARIANTS.

Current ratio: 19:12:1

adjure. See **abjure**.

adjurer; *adjuror. The *-er* spelling is standard. See -ER (A).

Current ratio: 3:1

adjuster; *adjustor. *Adjuster* (= one whose job is to determine the amount of loss suffered when an insurance claim is submitted and to try to settle the claim) is the preferred spelling—the one that has vastly predominated since the words came into common use in the 18th century. See -ER (A).

Current ratio: 19:1

administer, v.t.; minister, v.i. *Administer*, which suffices in most contexts, has four meanings: (1) “to give” <administer treatment> <administer the oath of office>; (2) “to dispense” <administer frontier justice>; (3) “to manage” <administer the state health department>; and (4) “to manage and dispose of” <administer the movie mogul’s estate>. The verb *minister*, now exclusively intransitive, shares all but the second sense, though only rarely. *Minister* is most commonly used in the sense of attending to others’ needs or, in religious

contexts, of administering sacraments. And people in need are *ministered to*. Cf. ***administrate**.

***administerable**. See **administrable**.

***administerial**. See **administrative**.

administrable; ***administerable**; ***administratable**.

The first is the correct form. The other two are NEEDLESS VARIANTS, the last one being an abomination to boot. See -ABLE (D) & -ATABLE.

Current ratio: 75:3:1

***administrate** is an objectionable BACK-FORMATION from *administration*. Avoid it as a NEEDLESS VARIANT of *administer*—e.g.:

- “Inevitably, his unenlightened attempts to teach and *administrate* [read *administer*] were doomed to failure.” Roger Braun, “Remember the Bad, Old Administrator-Less,” *Wis. State J.*, 31 Dec. 1994, at A9.
- “The only people who would have known just how [much trouble] Jeremy was in were the people involved in *administering* [read *administering*] the wages deal.” Christopher Brookmyre, *Quite Ugly One Morning* 108 (1996).
- “This musical comedy features adults playing prepubescent teens and the grownups who *administrates* [read *administers*] the contest.” “Is It the Weekend Yet?” *Hartford Courant*, 17 Aug. 2015, at B8.

LANGUAGE-CHANGE INDEX

**administrate* for *administer*: Stage 1

Current ratio (*administer* vs. **administrate*): 86:1

administrative; ***administrational**; ***administerial**. *Administrative* is the general, all-purpose term meaning “of, relating to, or involving administration or an administration.” The other two are NEEDLESS VARIANTS.

Current ratio: 42,983:18:1

admirable (= having good qualities worthy of respect) is pronounced /ad-mi-rə-bəl/—not /ad-mir-ə-bəl/.

admissible; ***admissable**; ***admittable**. *Admissible* (the standard word) = (1) allowable; or (2) worthy of admittance (i.e., gaining entry). The other two are NEEDLESS VARIANTS. See -ABLE (A).

Current ratio: 2,754:10:1

admission. **A. And admittance**. The distinction between these terms is old and useful, but it has a history of being ignored. *Admittance* is purely physical, as in signs that read “No admittance.” E.g.: “Temple Israel in Boston, one of the largest congregations in the area, has told members that tickets will be required for *admittance*, ushers will be vigilant about security, and bags might be searched.” Michael S. Rosenwald, “Synagogues Add Security for High Holy Days,” *Boston Globe*, 6 Sept. 2002, at B8.

Admission is used in figurative and nonphysical senses: “His *admission* to the bar in 1948 began a career that would be long and noteworthy.” *Admission* is also used, however, in physical senses when rights or privileges are attached to gaining entry: “He supervised 200 people involved in . . . the *admission* of immigrants at Newark International Airport and the

detention of illegal immigrants at Federal detention centers.” Ronald Smothers, “Ex-Official at Office for Aliens Is Sentenced,” *N.Y. Times*, 22 Apr. 1997, at B4.

Sometimes *admittance* is misused for *admission*, as when the subject is being accepted for enrollment in a school—e.g.:

- “Your recent story on Texas Woman’s University students’ reaction to their board of regents’ decision to allow men *admittance* [read *admission*] made me wonder.” Letter of Robert L. Hazelwood, “The Other Side Now,” *Houston Post*, 30 Dec. 1994, at A26.
- “To the extent that some private colleges may not require B averages to gain *admittance* [read *admission*], it could be tougher to win a state scholarship.” “All Students Receiving Aid Should Have a B Average,” *Atlanta J.-Const.*, 20 Jan. 1995, at A10.

LANGUAGE-CHANGE INDEX

admittance misused for *admission*: Stage 2

B. And confession. In criminal law, a distinction has traditionally existed between these words: an *admission* is a concession that an allegation or factual assertion is true without any acknowledgment of guilt with respect to the criminal charges, whereas a *confession* involves an acknowledgment of guilt as well as of the truth of factual allegations.

admit. In the sense “to acknowledge (something negative) as true or valid,” the phrase *admit to* is invariably inferior to *admit*—e.g.: “But now it turns out they did not completely *admit to* [delete *to*] their losses, thanks to an accounting gambit that is breathtaking in its audacity.” Floyd Norris, “Cooking Books: How Hurricane Losses Vanished,” *N.Y. Times*, 5 Sept. 1993, § 3, at 1. Cf. **confess** (A).

***admittable**. See **admissible**.

admittance. See **admission** (A).

admittedly. See SENTENCE ADVERBS.

admonition. **A. And monition**. Both terms mean “a warning; caution.” *Admonition* is the more common, less technical term—e.g.: “Then Jack Kemp chimes in with an *admonition* to listeners to beg Congress to ban the procedure in question ‘before one more life is lost.’” Nell Bernstein, “Abortion Wars: A Smaller Sequel,” *Newsday* (N.Y.), 9 Mar. 1997, at G5. This word has the additional sense “a mild reprimand”—e.g.: “Righter could face sanctions ranging from an official *admonition* to being stripped of his priesthood and rank as a bishop.” Mark O’Keefe, “Bishop’s Heresy Trial May Split Pro- and Anti-Gay Episcopal Factions,” *San Diego Union-Trib.*, 29 Sept. 1995, at E4.

Monition, a specialized term, means either (1) “a summons to appear and answer in court as a defendant or to contempt charges”; or (2) “a formal notice from a bishop mandating that an offense within the clergy be corrected.”

B. And admonishment. Strictly speaking, *admonishment* is the act of admonishing, while *admonition* is the warning or reproof itself. Whenever *admonishment* can be replaced with *admonition*, it should be.

admonitory; ***admonitorial**; **monitory**; ***monitorial**. The *-ory* forms predominate.

ad nauseam is frequently misspelled **ad nauseum*—e.g.:

- “More frustrating than the targeted, test-marketed media coverage . . . is the intellectual echo chamber that diagnoses *ad nauseam* [read *ad nauseam*] with nary a cure.” Letter of Dan Sullivan, “Audible Sigh,” *Harper’s Mag.*, Jan. 2003, at 5.
- “Notice that Mark Geragos mentions . . . innuendo and references *ad nauseam* [read *ad nauseam*] to the satanic cult theory perpetrated for the last two months.” Loretta Dillon, *Stone Cold Guilty: The People v. Scott Lee Peterson* 56 (2005).

LANGUAGE-CHANGE INDEX

ad nauseam misspelled **ad nauseum*: Stage 2
Current ratio: 4:1

adolescent. See **teenager**.

adopt. See **adapt**.

adoptive; **adopted**. *Adoptive* = (1) related by adoption <adoptive parents>; or (2) tending to adopt <first he took an adoptive posture toward the proposal, but then he rejected it>. The phrase **adopted father* is an example of HYPALLAGE, to be avoided in favor of *adoptive father*. The Latin sourceword, *adoptivus*, applied both to the adopting parent and to the adopted child. But today *adoptive* is almost always used to refer to the adults rather than the children. This has been true, however, only since about 1940. In the 19th century, **adopted father* predominated. But it has fallen off greatly since the mid-20th century.

Another way of looking at it is to say that *adoptive* is the active form: an adoptive parent is one who has adopted a child. *Adopted* is the passive form: an adopted child is one who has been adopted by a parent. So what happens in extended senses?

In reference to a city or country, *adopted* is the better, more logical, and much more common choice—e.g.: “[Elton] John had faith in his *adopted* city, or at least in Agassi and Sampras.” Todd Holcomb, “Agassi, Sampras Show Knack for Court Comedy,” *Atlanta J.-Const.*, 15 Dec. 2000, at D5. Although *adoptive* sometimes appears in such contexts, it is comparatively uncommon and usually less metaphorically accurate (since people can typically choose where to live)—e.g.: “My grandparents . . . were very proud of their native land [Italy]. However, their *adoptive* [read *adopted*] country was first and foremost in their minds and hearts.” James Cimino, “Why Give Cubans Preferential Treatment?” *USA Today*, 10 Apr. 2000, at A26.

adsorb. See **absorb**.

adult is pronounced either /ə-**dɔ**lt/ or /**ad**-əlt/ as a noun <adults only>, but only /ə-**dɔ**lt/ as an adjective <adult supervision>.

***adult**. See **adulterer**.

adulterable (= capable of being adulterated) is so formed—not **adulteratable*. See -ABLE (D) & -ATABLE.

adulterant, adj.; ***adulterate**, adj.; **adulterated**; **adulterine**. See **adulterous**.

***adulteratable**. See **adulterable**.

adulteration. See **adultery** (B).

adulterer; ***adulter**; **adulteress**; **adultera**; **adulterator**. *Adulterer* is the usual term meaning “someone who commits adultery.” But the usage issue doesn’t stop there because that definition raises the question: Which participant is it, precisely, who commits adultery? The law gives three possible answers:

- Under the canon-law rule, a married participant is an adulterer and an unmarried one is a fornicator. The sex of the participant doesn’t matter.
- Under the common-law rule, both participants commit adultery if the married participant is a woman. But if the woman is the unmarried one, both participants are fornicators, not adulterers. This rule is premised on whether there is a possibility of “adulterating” the blood within a family. (Any offspring from an adulterous union were called *adulterini*.)
- Under modern statutory law, some courts hold that the unmarried participant isn’t guilty of adultery (that only the married participant is), but others hold that both participants are adulterers.

The other forms occur much less frequently. **Adulter* is an obsolete variant of *adulterer*; it also had the meaning of *adulterator* (= counterfeiter). *Adulteress* is the feminine form, now disfavored because of the growing awareness of SEXISM—likewise with *adultera*, the term from the civil law. *Adulterator*, as suggested above, derives from the noun *adulteration*, and not from *adultery*.

Today all these terms—and their legal meanings—are somewhat obscure because the legal doctrines themselves have long been somnolent (not to say sleeping around).

adulterous; ***adulterate**, adj.; **adulterant**, adj.; **adulterated**; **adulterine**. *Adulterous* and **adulterate* both mean “of, characterized by, or pertaining to adultery,” the former term being the more common. E.g.: “There are revelations about *adulterous* wrinkles in his generally happy fourth marriage to Lauren Bacall—an affair with a makeup artist for him and an affair with Frank Sinatra for her.” L.S. Klepp, “Play It Again, Sam, and Again,” *Entertainment Weekly*, 11 Apr. 1997, at 78. **Adulterate*, adj., more common in Shakespeare’s

day than in ours, has been relegated to the status of a NEEDLESS VARIANT.

Adulterant = tending to adulterate <adulterant chemicals in the mixture>. *Adulterated* = (1) corrupted or debased <an adulterated culture>; or (2) corrupted by an impure addition; made spurious <the vintage wine was thoroughly adulterated once the water was added>. *Adulterine* = (1) spurious; (2) illegal; or (3) born of adultery <adulterine bastard>.

adultery. A. And fornication; cohabitation. *Adultery* = sexual intercourse engaged in voluntarily by a married person with a person who is not the lawful spouse. Generally today, it doesn't matter whether the other participant is married. (But see **adulterer**.) *Fornication* often implies that neither party is married, but it may also refer to the act of an unmarried person who has sex with a married person. *Cohabitation* is "the fact, state, or condition of living together, esp. as partners in life, usu. with the suggestion of sexual relations" (*Black's Law Dictionary* 316 [10th ed. 2014]). It's often a EUPHEMISM for an unmarried couple's living together—but unlike *adultery* or *fornication*, it now carries little suggestion of wrongdoing.

B. And adulteration. *Adulteration* = (1) the act of debasing, corrupting, or making impure; (2) a corrupted or debased state; or (3) something corrupted or debased. The Latin verb *adulterare*, from which both *adultery* and *adulteration* derive, encompasses all these senses.

adumbrate (= [1] to foreshadow, or [2] to outline) is a FORMAL WORD that has been called an affectation. For example, two influential writers said in 1901 that the word is "so high-sounding as hardly to be allowable even in elaborate writing." James Bradstreet Greenough & George Lyman Kittredge, *Words and Their Ways in English Speech* 7 (1901). But contemporary writers (especially critics and English professors) sometimes find it serviceable in formal literary contexts—e.g.: "Auden was already of the view that 'all genuine poetry is in a sense the formation of private spheres out of public chaos,' a claim that *adumbrates* his more developed sense of literature as making a secondary world, to be set against the primary world over which otherwise we have little or no control." Denis Donoghue, "W.H. Auden," *Wash. Times*, 9 Feb. 1997, Books §, at B8.

Traditionally pronounced /ə-**dəm**-brayt/, it is today more often pronounced /**ad**-əm-brayt/.

advance; advancement. Generally, *advance* refers to steady progress; *advancement* refers to progression (1) beyond what is normal or ordinary, and (2) involving an outside agent or force. Hence the *advancement* of science suggests a bigger step forward than the *advance* of science. And although someone might get an occupational *advancement*, we speak of the *advance* of civilization. In senses suggesting the action of moving up or bringing forth, *advancement* is the proper word <National Association for the Advancement of Colored People>.

The distinction gets fuzziest in financial contexts. Although we speak (properly) of *cash advances* and *advances on royalties*, in law *advancement* commonly refers to a parent's expenditure made for a child with the idea that it's to be deducted from the child's inheritance.

The phrases **advance notice*, **advance plans*, **advance warning*, and the like are redundant.

advanced, adj., = (1) having progressed beyond most others <an advanced way of thinking>; (2) being beyond an elementary level <advanced studies> <advanced students>; (3) sophisticated <advanced weaponry>; or (4) toward the end of a span of time or distance <people who are advanced in age>. Though it has these several meanings, *advanced* does not mean "in advance"—a meaning for which *advance*, adj., suffices. Yet writers increasingly misuse *advanced* for this sense—e.g.:

- "With this law, your landlord must give you two days' *advanced* warning before entering your apartment." Ed Sacks, "New Tenant Wants to Get Out of Nightmarish Apartment," *Chicago Sun-Times*, 19 Jan. 1997, Housing §, at 7.
- "These are the parents who rarely give schools *advanced* notice of planned trips and who let their children stay home from school for minor problems." Tamara Henry, "Skipping School for Travel," *USA Today*, 27 Mar. 1997, at D10.

In both examples, *advance* is the intended word—yet it should be deleted as a REDUNDANCY. Cf. **advance guard**.

***advancee** is an 18th-century creation meaning either (1) "someone who advances," or (2) "someone who receives an advance payment." The word seems both unattractive and unnecessary—e.g.:

- "[I]f the *advancee* [read *recipient of the advance*] predeceases the intestate, no other person is affected or burdened . . ." Lawrence Newman & Richard V. Wellman, *Comparative Law Studies* 389 (1976).
- "The division's biggest *advancee* [read *gainer*?] should be the Phoenix Cardinals (4–12), particularly if Joe Bugel's offensive line finds a comfort zone with young talent." John Hawkins, "Speed Reigns in NFL's Best Division," *Wash. Times*, 5 Sept. 1993, at G20. (A possible revision: *The Phoenix Cardinals (4–12) stand to gain the most in the division, particularly . . .*)
- "There were 12 teams and 74 individuals that made their way out of a sectional tournament this past school year . . . And most of those *advances* [read *advancing to regionals*] come from the Ohio area." Bryan Walters, "Regional Runs," *Point Pleasant Register* (W. Va.), 25 June 2013, Sports §, at 6.

See -EE (A).

advance guard (= a military contingent sent before the main troops) is sometimes written **advanced guard*, a spelling that was dominant for most of the 19th century. The standard spelling today is *advance guard*, but the variant still often occurs—e.g.: "On the afternoon of April 1, after skirmishing all morning, Gen. Wilson's *advanced guard* [read *advance guard*] ran into Gen. Forrest's line of battle." William Rambo,

“Re-Enactor Recounts Fight,” *Montgomery Advertiser*, 21 Apr. 1996, at C7.

The variant also occurs in figurative uses, in which the true meaning might be *avant garde*—e.g.: “Schwarzkogler, who died in 1969 either after accidentally falling from a window or defenestrating himself, was a young, emotionally fragile member of the controversial Viennese artistic *advanced guard* [read *avant garde*] of the 1960s.” Robert W. Duffy, “Art as Revelation,” *St. Louis Post-Dispatch*, 28 Jan. 1996, *Everyday Mag.* §, at C4. See **advanced**.

LANGUAGE-CHANGE INDEX

**advanced guard* for *advance guard*: Stage 4

Current ratio (*advance guard* vs.

**advanced guard*): 2:1

advancement. See **advance**.

ADVERBS. A. Placement of Adverbs. Many writers fall into awkward, unidiomatic sentences when they misguidedly avoid splitting up verb phrases. Although most authorities squarely say that the best place for the adverb is in the midst of the verb phrase, many writers nevertheless harbor a misplaced aversion, probably because they confuse a split verb phrase with the SPLIT INFINITIVE. H.W. Fowler explained long ago what writers still have problems understanding: “When an adverb is to be used with [a compound] verb, its normal place is between the auxiliary (or sometimes the first auxiliary if there are two or more) and the rest. Not only is there no objection to thus splitting a compound verb . . . , but any other position for the adverb requires special justification” (*FMEU1* at 448). Other authorities agree and have long done so, as the following sampling shows—e.g.:

- “[The adverb] frequently stands between the auxiliary and the verb, as ‘He . . . was attentively heard by the whole audience.’” Robert Lowth, *A Short Introduction to English Grammar* 135 (rev. ed. 1782).
- “Those [adverbs] . . . which belong to compound verbs, are commonly placed after the first auxiliary.” Goold Brown, *The Institutes of English Grammar* 167 (rev. ed. 1852).
- “When the tense of a transitive verb is compound, the adverb follows the first auxiliary if the verb is in the active voice [e.g., *the boy has always obeyed his father*], and immediately precedes the principal verb if the verb is in the passive voice [e.g., *the house can be quickly built*].” Josephine Turck Baker, *Correct English: Complete Grammar and Drill Book* 180 (1938).
- “When there is a compound verb form, it is usual to put the adverb between the auxiliary and the main verb. ‘I have always wanted to do so.’ ‘He has rarely failed us.’” W.P. Jowett, *Chatting About English* 184 (1945).
- “Barring the infinitive, verb groups should be split In verb groups formed by parts of the verbs ‘be,’ ‘have,’ ‘do,’ ‘can,’ ‘may,’ and ‘must,’ adverbs are best placed immediately before the main verb.” R.G. Ralph, *Put It Plainly* 60 (1952).
- “The truth is that more often than not the proper and natural place for an adverb is between the parts of a

compound verb.” Theodore M. Bernstein, *The Careful Writer* 26 (1965).

- “There is a frequent need to link an adverb with a compound verb (‘I have always been’), and the regular place for the modifier is shown in the example.” Jacques Barzun, *Simple & Direct* 63 (1975).

But confusion on this point is all but ubiquitous. The result is an unidiomatic, unnatural style—e.g.:

- “Circuit judges *currently are elected* [read *are currently elected*] in countywide races.” Michael R. Zahn, “Two Veteran Judges Favor District System to Elect More Minority Judges,” *Milwaukee J. Sentinel*, 18 Oct. 1994, at A1.
- “Capitalistic economies *easily can adjust* [read *can easily adjust*] to more unequal distributions of purchasing power.” Lester C. Thurow, “Inequalities in Wealth a Political, Not Economic Problem,” *USA Today*, 23 Nov. 1999, at A19 (also asserting that “policies . . . *easily could be designed* [read either *could easily be designed* or *could be easily designed*]”).

In the following example, the first adverb is awkwardly placed and the second is right: “If you’re doing serious research, possibly for a college course, then you *already have* [read *have already*] begun (or will soon begin to involve yourself in) Internet research.” H. Eric Branscomb, *Casting Your Net* 1 (2000). For more on this point of splitting verb phrases, see SUPERSTITIONS (c).

A few general adverbs of time occur between subject and verb—“I *usually* play golf on Saturday,” “We *never* do much in that room,” “He *always* takes the credit for himself.” Yet adverbs of place don’t appear between subject and verb, and people never say, “I *there* saw her standing,” “We *here* will stake our claim,” “She *anywhere* loves to travel.” The linguist W.F. Twaddell first noticed this point about adverbs of time as opposed to adverbs of place. He calls it “a rather complicated rule of English grammar,” adding that “speakers of English are largely unaware of it, but the English they speak is consistent in conforming to it.” W.F. Twaddell, “Meanings, Habits and Rules,” in *A Linguistics Reader* 10, 11 (Graham Wilson ed., 1967).

B. Awkward Adverbs. Adjectives ending in *-ly* and *-le* often make cumbersome adverbs, e.g., *chillily*, *friendlyly*, *ghastlily*, *holily*, *jollily*, *juvenileyly*, *lovelily*, *sillily*, *statelily*, *supplely*, *surlily*, *uglily*, *wilily*, and so on. You needn’t be timid in writing or pronouncing such adverbs when they’re genuinely needed—e.g.: “During the year’s cold months, when the abundant fenestration of her home office kept the room chilly, [the therapist] wore a pelisse of hand-tanned Native American buckskin that formed a somewhat *ghastlily* moist-looking flesh-colored background for the enclosing shapes her hands formed in her lap.” David Foster Wallace, “The Depressed Person,” *Harper’s Mag.*, 1 Jan. 1998, at 57. But if they seem unnatural, you can easily rephrase the sentence, e.g., *in a silly*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

manner. A few words, however, act as both adjectives and adverbs; examples are *daily*, *early*, *hourly*, *kindly*, *stately*, and *timely*.

The same is true, to a lesser extent, of many adverbs derived from adjectives that end in *-y*, such as *funny* (making *funnily*). But they have a more widespread acceptance—e.g.: “His long play about the Civil War is obviously and *unfunnily* bad, but a hundred pages are devoted to reproducing the manuscript and another fifty to endless jawing about its relation to art, justice, and order.” Jonathan Franzen, “Mr. Difficult,” *New Yorker*, 30 Sept. 2002, at 100, 111.

If you do use unusual adverbs, use them sparingly. Some writers display an unfortunate fondness for them, as by using such forms as *consideredly*, *corollarily*, and the spurious **widespreadly*. Cf. -EDLY.

C. Double Adverbs. Several adverbs not ending in *-ly*—especially *doubtless*, *fast*, *ill*, *much*, *seldom*, *thus*—have NONWORD counterparts ending in *-ly*. Using **doubtlessly*, **fastly*, etc. is poor style. The terms with the superfluous *-ly* reveal an ignorance of idiom.

D. Adverbs vs. Adjectives. See ADJECTIVES (E).

adversary, adj.; **adversarial**. *Adversary*, which can act as both noun and adjective, appears in phrases such as *adversary relationship* and *adversary system*—e.g.: “Granted, it is the job of an opposing political chairman working in the *adversary system* of American politics to try to make the worst case against the elected leader of the opposition party.” Bill Hall, “The Premature Failure of Gary Locke’s First Year,” *Lewiston Morning Trib.* (Idaho), 26 Feb. 1997, at A10.

Though it has only recently made its way into dictionaries, *adversarial* has become fairly common in place of the adjective *adversary*—e.g.: “Our *adversarial*, court-based system of collecting child support creates hate and misunderstanding.” Robin Miller, “Day in Court No Solace for Deadbeat Dad,” *Baltimore Sun*, 10 Mar. 1995, at A13. This shift in usage occurred mostly during the 1980s. *Adversarial* often connotes animosity <adversarial conferences>, whereas *adversary* is more neutral and even clinical.

Current ratio (*adversarial relationship* vs. *adversary relationship*): 14:1

adverse; averse. To be *adverse to* something is to be turned in opposition against it <Thailand was adverse to Japan during most of World War II>. The phrase usually refers to things, not people. To be *averse to* something is to have feelings against it <averse to risk>. The phrase usually describes a person’s attitude. Both words may take the preposition *to*, but *averse* also takes *from*.

Each word is occasionally misused for the other—e.g.:

- “Alistair Boyle’s narrator Gil Yates is certainly not *adverse* [read *averse*] to a money-making scheme, however dubious.” Jeremy C. Shea, “Everyone’s a Con,” *St. Louis Post-Dispatch* (Everyday Mag.), 4 May 1996, at D4.
- “He and Kasner say many investors are *adverse* [read *averse*] to risk and unlikely to substitute risky company

shares for conservative muni bond investments.” John G. Edwards, “Cost of Interest Could Increase,” *Las Vegas Rev.-J.*, 9 Jan. 2003, at D1.

- “People with chronic liver problems can lead normal lives until an *averse* [read *adverse*] reaction to something such as a viral infection or a fatty diet pushes them over the edge into liver failure.” Linda Marsa, “An Artificial Liver May Bridge a Gap,” *L.A. Times*, 20 Jan. 2003, at F3.

LANGUAGE-CHANGE INDEX

1. *adverse* misused for *averse*: Stage 2
2. *averse* misused for *adverse*: Stage 1

advert; avert. To *advert to* something is to refer to it, to bring it up in speech or writing, or to turn attention to it. In AmE the word is best reserved for formal contexts, especially legal writing—e.g.:

- “Brandeis frequently *adverted to* ‘manhood’ and ‘manliness’ in rallying his supporters in reform ventures.” Clyde Spillenger, “Elusive Advocate,” 105 *Yale L.J.* 1445, 1453 n.23 (1996). See **allude** (A).
- “He sometimes *adverted to* that distinction and thought that it was an obstacle to his being appreciated by English readers such as Ruskin.” Denis Donoghue, “Of ‘Song of Myself,’” *Hudson Rev.*, 1 July 2012, at 247 (referring to Walt Whitman).

To *avert* is to turn away or avoid, or to ward off—e.g.:

- “Clinton said even ‘5 million police officers’ could not *avert* this kind of tragedy if children are not taught the difference between right and wrong.” “Clinton Cites Need for Role Models,” *Chicago Sun-Times*, 18 Oct. 1994, at 3.
- “Tuning in on the radio is like listening to the couple in the apartment next to you scream at each other. You just can’t *avert* your ears.” Bill Torpy, “How Awful Are the Braves? Just Listen,” *Atlanta J.-Const.*, 10 Sept. 2015, at B1.

Occasionally, *advert* is misused for *avert*—e.g.: “Although five persons were injured, a real tragedy was *adverted* [read *averted*] because of the way firefighters and quick-acting neighbors in the area worked together.” Stephen Byrd, “Smoking Blamed in Independence Fire,” *Kansas City Star*, 20 May 1996, at B1. See MALAPROPISMS.

LANGUAGE-CHANGE INDEX

advert misused for *avert*: Stage 1

advertise. So spelled. But the erroneous form **advertize* occasionally occurs—e.g.: “A GOP consultant . . . was forced to quit Bob Dole’s campaign yesterday after two tabloids reported he *advertizes* [read *advertises*] for group sex partners.” Helen Kennedy, “Sex Flap Hits GOPer,” *Daily News* (N.Y.), 13 Sept. 1996, at 21.

LANGUAGE-CHANGE INDEX

advertise misspelled **advertize*: Stage 1

Current ratio: 222:1

advertisement is chiefly pronounced /**ad**-vər-tīz-mənt/ or /**ad**-vər-tīz-mənt/ in AmE and /**ad**-vər-tīz-mənt/ in BrE.

advice; advise. *Advice* /**ad**-vīs/ (= counsel that one person gives another) is a noun. *Advise* /**ad**-vīz/ (= to counsel; try to help by guiding) is a verb. The spellings are sometimes confounded—e.g.: “All the programs take pains to inform you with large disclaimers that

they are no substitute for real medical professionals (good *advise* [read *advice*]) and as such cannot be responsible if you use them improperly.” Bob Bielk, “Dr. Disc,” *Asbury Park Press* (Neptune, N.J.), 10 June 1997, at D1. See **advise**.

LANGUAGE-CHANGE INDEX

advise misused for *advice*: Stage 1

Current ratio (*good advice* vs. **good advise*): 278:1

***advisatory**. See **advisory**.

advise for *tell, say, explain, inform, or warn* is a pomposity to be avoided—e.g.:

- “The judge *advised* [read *told* or *warned*] Smith that he would not have the benefit of a skilled attorney who could identify legal issues or problems with the state’s evidence.” Kathryn Kranhold, “Mother’s Plea Fails to Sway Suspect,” *Hartford Courant*, 19 Oct. 1995, at A1.
- “Police *advised* [read *informed*] him of his rights before handcuffing him and transporting him to a nearby police station for booking.” Don Babwin, “Chicago Police Arrest R. Kelly on Child-Porn Charges,” *Phil. Inquirer*, 8 June 2002, at A4.

For examples confounding *advise* with *advice*, see **advice**.

adviser has been the standard spelling since the early 17th century. *Advisor* is a variant that became common in the 20th century but remains marginally less frequent. Note, however, that the adjectival form is *advisory*. See -ER (A).

Current ratio (*adviser* vs. *advisor*): 1.1:1

advisory; ***advisatory**. The latter is a NEEDLESS VARIANT.

Current ratio: 27,552:1

advocate; ***advocator**. The latter is a NEEDLESS VARIANT.

Current ratio: 1,828:1

AE. In many words, *ae* is a remnant of the Latin digraph, formerly ligatured (*æ*), appearing in words of Latin and Greek origin. In many words in which this digraph once appeared, the first vowel has been dropped, esp. in AmE. One sees this tendency at work in (*a*)*eon*, (*a*)*estivate*, (*a*)*ether*, (*a*)*etiology*, *encyclo-(a)edia*, *et c(a)etera*, and *f(a)eces*. But in some words, the *ae-* forms are established—for example, *aegis*, *aeolian*, *aerial*, *aerobic*, *aerosol*, *aerospace*, *aesthetic*, *diaeresis*, *paean*, and *praetor*.

Some words in BrE retain digraphs (e.g., *anaesthetic* and *foetus*) that AmE has shortened (e.g., *anesthetic* and *fetus*). Note that the preferred AmE forms are *aesthetic* but *anesthetic*. A definitive across-the-board statement about *-ae-* isn’t possible—just as it isn’t about most other usage matters.

aegis /*ee-jis*/ (= auspices, sponsorship) was originally a mythological term meaning “protective shield” or “defensive armor.” The word is now used exclusively

in figurative senses, usually in the phrase *under the aegis* (not *with the aegis*)—e.g.: “And they appreciate that for creditors, there are some benefits to having companies either liquidated or reorganized under the *aegis* of the bankruptcy code.” Kim Strosnider, “Involuntary Bankruptcy?” *Portland Press Herald*, 15 Oct. 1996, at C5. The phrase is often equivalent to *under the auspices*. See **auspices**.

Be careful not to confuse *aegis* with leadership in general—e.g.: “*Under Waxman’s aegis* [read *With Waxman directing* or *With Waxman as director*], [Neil Simon’s *Lost in*] *Yonkers* fails to achieve the razor-sharp pacing and the superb characterizations that marked its Royal Alex engagement a few years ago.” John Coulbourn, “Simon’s Finest Found with ‘Lost in Yonkers,’” *Toronto Sun*, 6 Feb. 1997, at 56.

The variant spelling **egis* is all but defunct.

Current ratio (*aegis* vs. **egis*): 181:1

aeolian; ***eolian** (= carried, deposited, or affected by the wind) derives from the name of the Greek wind god Æolus. The word retains its *æ* digraph in English (decoupled), unlike so many other Greek derivatives that drop the *a*, such as *estuary*. Although *W11* lists **eolian* as the predominant spelling, that form is today less frequent than *aeolian* in AmE print sources and is little known in BrE. The word is pronounced /*ee-oh-lee-ən*/.

Current ratio: 2:1

***aeon**. See **eon**.

aerie. See **eyrie**.

Aesop (the Greek fabulist) is pronounced /*ee-sop*/ or /*ee-səp*/—not /*ay-sop*/.

aesthetic; ***esthetic**. Although some dictionaries have long recorded **esthetic* as the primary form in AmE, the form *aesthetic* remains much more common in AmE and BrE alike. See **AE**.

Current ratio (World English): 23:1

***aestivate**. See **estivate**.

aetiology. See **etiology**.

affect; **effect**. In ordinary usage, *affect* is always a verb; it means “to influence; to have an effect on.” *Effect*, as suggested by its use in that definition, is primarily a noun meaning “result” or “consequence.” To *affect* something is to have an *effect* on it. But as a verb, *effect* means “to bring about; produce.”

Perhaps the most common error with these words is misusing *effect* for *affect*—here illustrated plentifully: “Katrina *effected* [read *affected*] everyone in the state of Mississippi in some way As the recovery from Hurricane Katrina began, thousands of *effected* [read *affected*] homeowners on the Coast began getting the bad news. . . . Even before the power had been restored in some *effected* [read *affected*] areas,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Gulf Coast residents were looking for relief [T]he Scruggs Katrina Group . . . would be dedicated to representing homeowners *effected* [read *affected*] by the storms." Alan Lange & Tom Dawson, *Kings of Tort* 96, 97, 98, 100 (2009).

Using *affect* (= to influence) for *effect* (= to bring about) is also an old error that looks as if it will be increasingly difficult to stamp out. The mistake is especially common in the phrase to *effect change(s)*—e.g.:

- "Throughout the book her winning personality *affects* [read *effects*] changes in the drab and pitiful 'sad' people she encounters . . ." Philip Martin, "Rags, Riches," *Ark. Democrat-Gaz.*, 17 Dec. 1995, at E1.
- "[It is] a good example of environmentalists working with corporations to *affect* [read *effect*] change." John Holusha, "Companies Vow to Consider Environment in Buying Paper," *N.Y. Times*, 20 Dec. 1995, at D5.

H.W. Fowler treated only the verb forms of these words, apparently because they didn't seem susceptible to confusion as nouns. But today even the confusion of nouns is fairly common—e.g.:

- "She doubted the majority flip would have a huge *affect* [read *effect*] on the council." Rona Kobell, "Republicans Ride Ehrlich Wave," *Baltimore Sun*, 6 Nov. 2002, at B8.
- "Most players, though, did not think it will have a lasting *affect* [read *effect*]." Ed Bouchette, "Looking Ahead," *Pitt. Post-Gaz.*, 14 Nov. 2002, at C6.
- "The Challenger accident had a large and lasting *affect* [read *effect*] on the Michoud plant." Gordon Russell & Keith Darce, "Once More, Attention Is Focused on Michoud," *Times-Picayune* (New Orleans), 2 Feb. 2003, Nat'l §, at 1.

Likewise, *effect* is sometimes misused for *affect*. See **effect (B)**. Cf. **impact**.

Affect may also mean "to pretend, feign, or assume (a characteristic) artificially"—e.g.: "One wonders at her choice to have all the actors *affect* Russian accents." Marshall Fine, "K-19," *J. News* (Westchester Co., N.Y.), 18 July 2002, at G5.

Although *affect* is almost always a verb, it does have a rare, somewhat vague noun sense in the fields of psychology and psychiatry: "In general, [*affect*] is characterized as a state brought about by actions almost wholly devoid of intentional control in accordance with moral and objective viewpoints. The term is also found in the literature as practically synonymous with 'emotion' in certain senses." 1 *Encyclopedia of Psychology* 28 (H.J. Eysenck et al. eds., 1972). Other definitions seem no clearer. One text defines *affect* as "the feeling-tone accompaniment of an idea or mental representation." Leland E. Hinsie & Robert Jean Campbell, *Psychiatric Dictionary* 18 (4th ed. 1970). The term certainly doesn't belong outside highly specialized contexts. And it seems questionable whether it justifiably belongs within them.

LANGUAGE-CHANGE INDEX

1. *affect* misused for *effect*, n. & vb.: Stage 1
Current ratio (*the bad effects* vs. **the bad affects*): 1,001:1
2. *effect* misused for *affect*, vb.: Stage 2
Current ratio (*affect our lives* vs. **effect our lives*): 55:1

affectable. So spelled—not **affectible*. See -ABLE (A).
Current ratio: 6:1

affectation. See **affectation**.

affected, adj.; **affective**; **affectional**; **affectionate**. *Affected*, adj., = artificially assumed; pretended <a highly affected accent>. *Affective* = emotional <bipolar affective disorder>. *Affectional* = pertaining to affection <affectional displays>. *Affectionate* = loving, fond <affectionate children>.

Just as *affect* is sometimes misused for *effect*, so *affective* sometimes wrongly displaces *effective*—e.g.: "Physicians are also finding some non-opiate medications used to treat disease are *affective* [read *effective*] in controlling pain, Lingam said." Candace L. Preston, "Doctors Offer Balm of Nепenthe," *Bus. First* (Columbus), 27 June 1997, at 15. See **affect**.

LANGUAGE-CHANGE INDEX

affective misused for *effective*: Stage 1

affectation; **affectation**. The first means "love, fondness"; the second means "pretentious, artificial behavior." In Elizabethan English, these words were used more or less interchangeably, but now each has acquired its own distinct sense—which is good for the language.

affectation; **affectation**; **affective**. See **affected**.

affianced. See **affined**.

affidavit (= a voluntary declaration of facts written down and sworn to by the declarant before an officer authorized to administer oaths) sometimes appears in the REDUNDANCY **sworn affidavit*—e.g.:

- "[The] defendant gave no evidence whatsoever, but put in a *sworn affidavit* [read *an affidavit*], pleading in extenuation of her offence the treacherous conduct of the Fitzgeralds." Daphne du Maurier, *Mary Anne: A Novel* 333 (1972).
- "And he released three *sworn affidavits* [read *affidavits*] from former detectives who said they were forced to resign." Jacqueline Soteropoulos, "New Port Richey," *Tampa Trib.*, 7 Oct. 1995, at 1.
- "In a *sworn affidavit* [read *an affidavit*], the Mexican champion said he never received any insurance money . . ." Greg Logan, "King Trial Starts Today," *Newsday* (N.Y.), Nassau & Suffolk ed., 10 Oct. 1995, at A44.

affiliable. So formed—not **affiliated*. See -ABLE (D) & -ATABLE.

affined; **affianced**. *Affined* = closely related; connected. *Affianced* = engaged, betrothed.

affirm (= [1] to declare emphatically, or [2] [of an appellate court] to uphold a lower court's judgment) is sometimes misused for *vindicate* (= to justify by outcome): "The results tonight *affirmed* [read *vindicated*] Mr. McCain's decision to skip the Iowa caucuses." Richard L. Berke, "McCain Romps in First Primary," *N.Y. Times*, 2 Feb. 2000, at A1. Although one definition of *affirm* is "to validate or confirm," here *vindicated* or even *justified* would have been a better choice.

affirmation; affirmance. These terms, unfortunately, overlap somewhat. Yet sorting out usage isn't difficult: *affirmation* is preferable in every context but one—when an appellate court affirms a lower court's judgment <the Supreme Court's affirmance of the judgment came as a surprise>.

affirmative, in the; in the negative. These phrases have been criticized as jargonistic and pompous. (See, e.g., Quiller-Couch's statement quoted under JARGON.) They appear frequently in legal and pseudolegal writing. They can usually be improved—e.g.:

- “All the other questions were answered *in the affirmative* [read *yes*], including a query on whether the evidence showed that Mr. Simpson had acted with malice.” Paul Pringle, “Jury Holds Simpson Liable in Slayings,” *Dallas Morning News*, 5 Feb. 1997, at A1.
- “But the council did *vote in the affirmative on* [read *grant*] a request from the Contributory Retirement Board to accept a state law that indemnifies board members if civil actions are brought against them.” David T. Turcotte, “Plan to Buy Goose Dog Advances in Gardner,” *Telegram & Gaz.* (Worcester), 4 Mar. 1997, at B4.
- “The more I thought about these questions, the more it seemed to me that they had to be answered *in the negative* [read *no*].” Jonathan Schell, “American Democracy Defines Itself,” *Newsday* (N.Y.), 1 Dec. 1996, at A34.

Cf. **yes & no.**

afflatus; *afflation; *inflatus. For the sense “inspiration” or “supernatural impulse,” *afflatus* is the standard—though rare—term. E.g.: “Richard Brookhiser, the author and editor, reminded us that it is generally alien to Dole’s temperament to act as the advocate, charged with disseminating his *afflatus*—he is more a technician.” William F. Buckley, “Are the Conservatives Mutinous?” *Buffalo News*, 10 Apr. 1996, at B3. **Afflation* and **inflatus* are NEEDLESS VARIANTS.

The plural of *afflatus* is *afflatuses*, not **afflati*. See HYPERCORRECTION (A) & PLURALS (B).

afflict. See **inflict**.

affluence; affluent. These words are preferably accented on the first syllable (/af-loo-ən[t]s/, /af-loo-ənt/), not the second (/ə-floo-ən[t]s/, /ə-floo-ənt/). See PRONUNCIATION (B).

afford. See **accord** (A).

affront. See **effrontery** (A).

***affrontery.** See **effrontery** (B).

Afghan; Afghani. A person from Afghanistan is an *Afghan*. A thing from Afghanistan is an *Afghan* thing. It’s a common error to make the noun or adjective *Afghani*, which correctly refers only to the basic monetary unit of the country and is not capitalized—e.g.:

- “In 1997, the organization launched a campaign to aid *Afghani* [read *Afghan*] women.” Michelle Millhollon,

“Sisters Fast for Ramadan,” *Advocate* (Baton Rouge), 28 Nov. 2002, at A1.

- “Simple, serene place for approachable *Afghani* [read *Afghan*] food including good kebabs, fried eggplant and cardamom-scented milk pudding.” “Critic’s Choice: Restaurants Serving Ginger Desserts,” *S.F. Chron.*, 20 Dec. 2002, at D17.

See DENIZEN LABELS.

Afghan is also (1) an alternative term for the Pashto language, (2) a short form of *Afghan hound*, and (3) (not capitalized) a crocheted or knitted blanket or shawl.

LANGUAGE-CHANGE INDEX
Afghani misused for *Afghan*: Stage 2

aficionado is often misspelled **afficionado*—e.g.:

- “Orson St. John and Roswell Perkins, Manhattan-based attorneys by winter, Little Compton *aficionados* [read *aficionados*] by summer, became officers and legal advisers who could start tackling the call for a light.” David Arnold, “Time to Shine: 40-Year Lighthouse Effort Ends in a Flash,” *Boston Globe*, 9 Mar. 1997, at A1.
- “You will be shocked at the wealth of information in those tomes if you are not already an almanac *aficionado* [read *aficionado*].” David Hass, *Is Your Life Out of Whack?* 40 (2002).

LANGUAGE-CHANGE INDEX
aficionado misspelled **afficionado*: Stage 1
Current ratio: 39:1

à fond; au fond. These GALICISMS have different meanings. While *à fond* means “to the bottom,” *au fond* means “at bottom.” The terms also carry different figurative senses: *à fond* (/ah-fon/) means “fully, thoroughly” <she knows the subject of mineralogy *à fond*>; *au fond* (/oh-fon/) means “basically, fundamentally” <every good proofreader is, *au fond*, attentive to detail>. You’re surely better off sticking to English phrases.

a fortiori (/ah for-shee-or-ee/ or /ay for-shee-or-ɪ/), a term most commonly used in logic and argumentation, is an adverb meaning “by even greater force of logic; so much the more.” The phrase is sometimes effective, but only if the intended readers are sure to get it—e.g.:

- “Federal judges already have pointed out that the constitutional right to abortion, that is, to destroy a life, *a fortiori* implies a right to assisted suicide, the right to destroy one’s own life.” Leon J. Podles, “The ‘Big Tent’ Case Against Abortion,” *Wash. Times*, 22 Apr. 1996, at 28. (The argument is by greater force of logic, according to this writer, because if a person can take another life, surely one can take one’s own.)
- “Indeed, human bloodshed even by an animal must be avenged, and, *a fortiori*, bloodshed by a man’s own

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

brother—a clear reference to Cain and Abel.” Leon R. Kass, “A Genealogy of Justice,” *Commentary*, July 1996, at 44. (The argument is by greater force of logic because human bloodshed by a brother is more reprehensible.)

The phrase is used illogically when the proposition following *a fortiori* is no stronger than the one preceding it—e.g.:

- “The argument for ‘mixing’ the Jewish studies program at Queens College, of course, applies *a fortiori* to many other studies programs that have sprung up in recent years.” “PC Absurdity at Queens,” *Times Union* (Albany), 19 July 1996, at A14. (Why is the argument even stronger for non-Jewish programs? Because the sentence is reasoning from the particular to the general, a proficient editor would probably substitute *equally* for *a fortiori*.)
- “[The book] *Leakage* is an extraordinary achievement—a careful, probing, empirical analysis of the American macro-economy and, *a fortiori*, [of] any free-market economy in the world.” George P. Brockway, “The Bleeding of the American Economy,” *New Leader*, 4 Nov. 1996, at 12. (If the book *Leakage* is a good analysis of the American economy, why would it more surely be a good analysis of any free-market economy in the world? For *a fortiori*, substitute *even* without commas.)

Writers sometimes use *a fortiori* as an adjective, a usage to be resisted—e.g.: “Clearly, if laws depend so heavily on public acquiescence, the case of conventions is an *a fortiori* [read *even more compelling*] one.” P.S. Atiyah, *Law and Modern Society* 59 (1983).

Afrikaner; *Afrikaaner; *Afrikander; Africander; *Africaander. These terms, frankly, are a mess. But let’s sort through them. The first is the standard term for a South African of European, especially Dutch, descent. The second and third are variants of that word: **Afrikaaner* reflects the spelling of the language Afrikaans, just as the end of **Afrikander* (the predominant form until World War II) reflects the end of *Hollander*. The word *Africander*, meanwhile, denotes a breed of tall, red, humpbacked cattle prominent in South Africa; but it is also an obsolescent term for *Afrikaner*, and *Afrikaner* is an acceptable variant of *Africander*. **Africaander* is a variant spelling of the name of the cattle breed. All clear now? See DENIZEN LABELS.

Afrikaner is pronounced /af-ri-**kah**-nər/; *Africander* and **Afrikander* are pronounced /af-ri-**kan**-dər/.

aftereffect. One word.

***after having [+ past participle].** This construction is ordinarily incorrect for *after* [+ present participle]. That is, although either *having gone on for ten years* or *after going on for ten years* makes sense, coupling *after* with *having* [+ past participle] makes a REDUNDANCY—e.g.:

- “*After having had* [read *After having*] my fill of looking and wanting and wishing, I walked along the docks back to where I had parked my car.” Jay Reed, “Imagination Can Run Wild at Racine Boat Show,” *Milwaukee J. Sentinel*, 16 Aug. 1997, at 4.
- “The nearest [precedent] is to be found in the sad tale of Queen Caroline, the estranged consort of George IV, who died at Hammersmith in 1821, three weeks *after having*

been [read *after being*] excluded from the Coronation in Westminster Abbey.” Kenneth Rose, “Precedent, Protocol and the Stately Ceremonial of Death,” *Sunday Telegraph*, 7 Sept. 1997, at 29. (On the ambiguous *who* in that sentence, see REMOTE RELATIVES (A).)

- “Religion was the topic that finally got the teenager talking . . . while he was being interrogated by the Montreal police and RCMP *after having robbed* [read *after robbing*] a convenience store in Lachine earlier that month.” Paul Cherry, “Debating Religion Got Teen Talking During Interrogation,” *Montreal Gaz.*, 10 Sept. 2015, at A2.

LANGUAGE-CHANGE INDEX

**after having been* for *after being*: Stage 3

Current ratio (*after being* vs. **after having been*): 6:1

afterward; afterword. *Afterward* (= later) is preferred over *afterwards* by American editors, though in popular usage the two forms are used interchangeably. *Afterword* is a noun meaning “epilogue.” Cf. **foreword**.

For more on *afterward(s)*, see DIRECTIONAL WORDS (A).

again, like *against*, is preferably pronounced in AmE with an /e/ in the second syllable—hence /ə-**gen**/ and /ə-**genst**/. The pronunciations /ə-**gayn**/ and /ə-**gaynst**/ are chiefly BrE variants—though *DARE* records that these pronunciations may be found in AmE in Atlantic States, adding that they “may be considered affected” (1 *DARE* at 19). The pronunciations /ə-**gin**/ and /ə-**ginst**/ are frequent among less educated speakers (*ibid.*).

agape. There are two words so spelled, with unrelated senses, different pronunciations, and even different syllabification. As a noun, *agape* (/ə-**gah**-pay/) comes from a Greek word for “brotherly love” and denotes (1) “spiritual love in contrast to earthly or sensual love,” or (2) “a love feast.” As an adverb, *agape* (/ə-**gayp**/) means “with mouth wide open, esp. in awe, surprise, or fear.”

aged. A. Pronunciation. As an adjective, the word may be either one syllable (/ayjd/) <aged cheese> or two (/ay-jəd/) <an aged mentor>, depending on its sense. In the first of those uses, the word means “having been allowed to age”; in the second, it means “elderly.” As an attributive noun similar to *elderly* <the sick, the weak, and the aged>, the word has two syllables (/ay-jəd/).

B. Used Adverbially in BrE. British publications have adopted a shorthand adverbial used of *aged*, found most commonly in obituaries. Essentially, BrE uses *aged* where AmE would use the phrase *at the age of*—e.g.:

- “Later in the week, I met a man who had gone to Oxford *aged* 17 to read English and by the age of 22 had become a don.” Sarah Hervey-Bathurst, “The Spectator,” *Country Life*, 17 June 1999, at 136.
- “Professor John Lawlor, scholar of medieval English, died on May 31 *aged* 81.” “Professor John Lawlor” (obit.), *Times* (London), 7 July 1999, at 23.
- “James Farmer, who has died *aged* 79, was one of America’s four leading civil rights leaders during the 1960s.” “James Farmer” (obit.), *Guardian*, 13 July 1999, at 20.

- “Patrick Saul, who has died *aged* 85, was the founder of the National Sound Archive, the aural counterpart to the British Library.” “Patrick Saul” (obit.), *Daily Telegraph*, 16 July 1999, at 31.

Though once in use in the U.S. (mostly before the mid-20th century), this adverbial use of *aged* is now little known in AmE.

C. **Aged . . . years old*. To say that someone is **aged 75 years old* is redundant—e.g.: “The average pension paid the average retiree, *aged 71.4 years old* [read *age 71.4* or *71.4 years old*], was \$11,448 a year.” “State Employee Pensions to Cost \$4.7 Million More,” *Providence J.-Bull.*, 18 Apr. 1995, at C5.

ageing; ageism. See **aging**.

agenda is (1) the plural form of *agendum*, which means “something to be done” (another, less proper plural of *agendum* being *agendums*); and, more commonly, (2) a singular noun meaning “a list of things to be done” or “a program.” The plural of *agenda* in sense 2 is *agendas* (certainly not **agendae*). Decrying *agendas* as a double plural is bootless.

In fact, sense 1 of *agenda* is archaic today and sounds pedantic—e.g.: “Place your notes, thoughts, quotations, queries, and *lists of agenda* [read *agenda items*], divided according to topics, in envelopes.” Lester S. King, *Why Not Say It Clearly* 74 (1978).

LANGUAGE-CHANGE INDEX
agenda as a singular noun: Stage 5
Current ratio (singular vs. plural): 9:1

***agendize**, an ugly bureaucratic NEOLOGISM meaning “to put on an agenda,” originated in the late 1980s and has spread—e.g.:

- “‘Mr. Eliot did not make a decision on his own,’ he [Robert Bacon] said. ‘We made an error and did not *agendize* that item.’” Craig Quintana, “West Covina Renewal Deals to Get Closer Look,” *L.A. Times*, 28 Apr. 1988, San Gabriel Valley §, at 1.
- “William R. Ferris . . . thought that starting a tradition of presidential lecturers would raise the visibility of the annual Jefferson series and set up a nice chance for presidents to speak away from their usual *agendized* forums.” Tom Peepen, “Presidency Becomes a Casualty,” *Times Union* (Albany), 29 Sept. 1999, at A9.
- “Twice the Tustin school board has *agendized*, then tabled, the matter.” George Stewart, “Red Tape Slows After-School Program Series,” *Orange County Register*, 27 Sept. 2001, Tustin §, at 1.

The word remains JARGON and should be voted down.

agent provocateur. The predominant plural in English has always taken the French form: *agents provocateurs*, not **agent provocateurs*. See GALLICISMS & PLURALS (B).

Current ratio: 5:1

aggrandize (= [1] to increase the power or influence of, or [2] to exaggerate the reputation of)

is pronounced /ə-**gran**-dɪz/—or, archaically, /ag-rən-dɪz/.

aggravate; aggravation. Though documented as existing since the 1600s and today an engrained CASUALISM, *aggravate* for *annoy* or *irritate* has never gained the approval of stylists and should be avoided in formal writing. Strictly speaking, *aggravate* means “to make worse; exacerbate” <writing a second apology might just aggravate the problem>.

Even Oliver Wendell Holmes Jr. nodded once, using *aggravate* for *irritate* in one of his letters to Sir Frederick Pollock in 1895: “Our two countries *aggravate* each other from time to time.” 1 *Holmes–Pollock Letters* 66 (1941). The lapse is common in modern writing—e.g.: “It has *aggravated* [read *irritated*] me when I have seen billboards that contained misspelled words, punctuation errors and other things that are fundamental to the English language.” Letter of Shael Morgan, “Newspaper Critic Should Watch TV,” *Fla. Today*, 31 Jan. 1998, at A12.

In some contexts, it’s genuinely difficult to tell whether the word *aggravating* is an adjective or a present participle—e.g.: “The City of Washington is notorious for aggravating allergies, and Mr. Clinton said he expected his to be more severe there than in Arkansas.” Lawrence K. Altman, “Clinton, in Detailed Interview, Calls His Health ‘Very Good,’” *N.Y. Times*, 14 Oct. 1996, at A1, A14. The second half of that compound sentence suggests that the writer is using *aggravating* correctly. But taken alone, the phrase in the first half of the sentence (*Washington is notorious for aggravating allergies*) could refer to either (1) making allergies worse (preferred), or (2) allergies that are irritating or frustrating.

The confusion also occurs between the noun forms—e.g.:

- “Washington Coach Jim Lambright’s insistence that his Huskies deserve to go to the Cotton Bowl instead of Oregon, and that the Ducks are overrated and lucky, has been met with bemusement and *aggravation* [read *irritation*] in Eugene.” “Cotton Bowl Flap,” *Austin Am.-Statesman*, 16 Nov. 1995, at C4.
- “Rush Limbaugh, still the industry giant, has an extra tone of *aggravation* [read *irritation*] as he denounces the unyielding poll leads of ‘the Schlickmeister’ and ‘noted hetero fun-seeker,’ President Clinton.” Francis X. Clines, “Cool to Dole’s Campaigning, Talk Radio Tries to Start Fire,” *N.Y. Times*, 25 Sept. 1996, at A12.

Often when one word is commonly misused for a second word, part of the blame can go to a third word that sounds like the first but means something close to the second. Perhaps *exasperate* contributes to the misuse of *aggravate* (which sounds a bit like *exasperate*) in the sense of *irritate* (which is close in meaning to *exasperate*). Also, when *aggravate* is used in this sense, it often implies something more intense than merely *irritate*. It is closer in meaning to *exasperate*.

LANGUAGE-CHANGE INDEX
aggravate for *annoy* or *irritate*: Stage 4

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

aggregable; aggregatable. The first has long been the standard adjective. But in the mid-1990s, *aggregatable* overtook its shorter sibling in frequency of use—and it shows no signs of declining. The word became popular in Internet terminology, especially in the phrase *aggregatable* global unicast address. See *-able* (d) & *-atable*.

aggregate, n.; aggregation. Both may mean “a mass of discrete things or individuals taken as a whole,” *aggregate* being the more usual term. *Aggregate* /ag-rə-gɪt/ stresses the notion “taken as a whole” (as in the phrase *in the aggregate*), and *aggregation* /ag-rə-gay-shən/ is more nearly “a mass of discrete things.” For “the act of aggregating,” only *aggregation* will suffice.

aggregate, vb. A. Sense. *Aggregate* (/ag-rə-gayt/) = to bring together a mass of discrete things or individuals into a whole. The verb is sometimes misused for *total* in reference to sums—e.g.: “Trade between China and Taiwan has grown steadily in the past decade, *aggregating* [read *totaling*] almost \$21 billion.” V.H. Krulak, “China’s Weapon Against Taiwan,” *San Diego Union-Trib.*, 9 Mar. 1996, at B8.

B. Aggregate together. This phrase is redundant—e.g.: “Terrestrial dust is mostly tiny fragments abraded from larger things; some of it may be even smaller things *aggregating together* [read *aggregating* or *clumping together*] to form motes of dust.” C. Claiborne Ray, “Q&A,” *N.Y. Times*, 13 Feb. 1996, at C5.

aggregation. See **aggregate, n.**

aggress. See **BACK-FORMATIONS.**

***aggrievance.** See **grievance.**

agilely, adv., is occasionally misspelled **agiley*—e.g.: “But it’s pointless to bemoan the status quo; what we need to do is work as *agiley* [read *agilely*] and cannily as we can with the situation as given to get across the many exciting and provocative and challenging works that continue to be written—and widely read.” “Will Publishing Survive?” *L.A. Times*, 25 Feb. 2001, Book Rev. §, at 6. Cf. **futilely & solely.** See **ADVERBS (B).**

LANGUAGE-CHANGE INDEX
agilely misspelled **agiley*: Stage 1

aging; ageism. *Aging* is the standard spelling for the present participle for *age*, vb. *Ageing* is a chiefly BrE variant. (See **MUTE E.**) Yet *ageism* (= discriminatory feelings or practices toward a particular age group, esp. the elderly) has become standard probably because, as a fairly recent coinage (1969), it more readily suggests its meaning (and pronunciation) than **agism*.

agitable. So formed—not **agitatable*. See **-ABLE (D) & -ATABLE.**

agnostic. See **atheist.**

-AGOG(UE). This suffix derives from the Greek word meaning “to lead; drive.” Traditionalists prefer retaining the *-ue*—hence *demagogue* (lit., “a leader of

people”) and *pedagogue* (lit., “a leader of children”). Among other advantages, these spellings prevent any possible confusion with the adjective and adverb *agog* (= intensely excited) <all *agog* over the Christmas presents>.

William Safire has predicted the demise of *-ue* forms: “Note the lack of a *u* in . . . [what] most of us would until recently *spell* [read *have spelled*] as *demagoguing*. But we live in a non-U world; just as *catalogue* and *dialogue* have been dropping their *ue* endings, so too will *demagogue* soon enough be spelled *demagog*, with its gerund *demagoging*.” William Safire, “On Language,” *N.Y. Times*, 21 May 2000, § 6, at 28, 30. For now, the traditionalist will continue to use the *-ue* forms—and their disappearance, if Safire is right, will be gradual enough that no one will get all *agog* over it. Cf. **demagogue.**

agree. A. Preposition with. *Agree with* means “to be in accord with (another)”; *agree to* means “to acquiesce in (usu. the performance or specifications of something).” One *agrees with* someone *on* or *about* a certain settlement <I agree with you about the color>. *Agree on* refers to the subject of the agreement <we agree on the color>.

B. Transitive or Intransitive. In BrE, *agree* is coming to be used as a transitive verb <they agreed the change> where AmE would make it intransitive <they agreed to the change>. The usage may appear to be a typo when you first see it, but notice that it appears in the title as well as the first line of this: “The German cabinet yesterday *agreed* sweeping changes to unemployment benefits, aimed at making savings of DM17bn (\$11bn) by 2000.” Judy Dempsey, “Bonn Agrees Heavy Cut in Jobless Costs,” *Fin. Times*, 13 June 1996, at 2.

AGREEMENT, GRAMMATICAL. See **CONCORD & SUBJECT-VERB AGREEMENT.**

agriculturist; agriculturalist. The shorter form (*agriculturist*) has traditionally been considered preferable, but the longer form is now nearly as common in AmE. Actually, *farmer* is even better if it applies.

Current ratio (in order of headwords): 2:1

ague (= a fever accompanied by chills) is pronounced /ay-gyoo/.

ahold. This noun is an American **CASUALISM** equivalent to *hold*. It ordinarily follows the verb *get*. Though omitted from most British dictionaries, it appears in most American dictionaries and surfaces fairly often in informal contexts—e.g.:

- “Brand, the Clay juvenile officer, said she isn’t surprised the kids were able to get *ahold* of fireworks.” Julianna Gittler & Cammi Clark, “Illegal, Dangerous, and Always Around,” *Post-Standard* (Syracuse), 2 July 1998, at 13.
- “It’s not as easy to get *ahold* of Hennepin County Sheriff Pat McGowan as recent news has led us to believe.” Doug Grow, “Would Others Get Grams Treatment?” *Star Trib.* (Minneapolis), 13 Dec. 1999, at B2.
- “He got *ahold* of Theodore while clenching his teeth and saying, ‘We’ll see about this,’ forcing the boy into his shoes.” Jan Faull, “Parenting,” *Seattle Times*, 3 Feb. 2001, at F1.

Even so, *get hold of* is much more frequent than *get ahold of* in AmE and BrE alike.

The dialectal variant **aholt* is quite uncommon even in recorded speech, and is much more provincial-sounding—e.g.: “The Lord’s going to get *aholt* of people, she smiles.” Bo Emerson, “Joyful Noise,” *Atlanta J.-Const.*, 29 June 1997, Dixie Living §, at 1.

LANGUAGE-CHANGE INDEX

1. *ahold* for *hold*: Stage 2

Current ratio (*get hold* vs. *get ahold*): 18:1

2. **aholt* for *ahold*: Stage 1

Current ratio (*ahold* vs. **aholt*): 50:1

-AHOLIC; -AHOLISM. These newfangled “suffixes” derive from *alcoholic* and *alcoholism*, which were extended to *workaholic* and *workaholism*, and from there to other words indicating various addictions or obsessions. Each new term is automatically a MORPHOLOGICAL DEFORMITY. Most examples, though, are nonce-words (e.g., *beefaholic*, *footballaholic*, *spend-aholic*, *wordaholic*).

aide; aid, n. Both terms are used in reference to a person whose responsibility is to provide help to another <a physician’s aide> <a teacher’s aide>. The spelling *aide* is preferable—and it’s much more common, probably because *aid* also has the sense of “practical help or support, such as money or food.”

Current ratio (*teacher’s aide* vs. **teacher’s aid*): 8:1

aide-de-camp (= military aide) is so spelled—not **aid-de-camp*. Borrowed from French, the phrase should retain the French spelling—*aide*—especially considering that *aide* is itself now an English word (meaning “a staff member under one’s authority”). The plural is *aides-de-camp*. See PLURALS (B).

Current ratio (*aide-de-camp* vs. **aid-de-camp*): 8:1

aim to [+ vb.]; aim at [+ vb. + -ing]. The idiom *aim to* (*do*) has long been typical of AmE—e.g.: “Rhetoric . . . aims to make us artists.” Brainerd Kellogg, *A Text-Book on Rhetoric* 18 (1881). Although some British commentators have expressed a preference for *aim at* (*doing*), that form is not prevalent today even in BrE.

***ain’t.** Is this word used orally in most parts of the country by cultivated speakers? In 1961, *W3* said it was, provoking a firestorm of protests from journalists and academics. See Herbert C. Morton, *The Story of Webster’s Third* 153–70 (1994). *W3*’s assessment was quite a change from that of *W2* (1934), which had given it a tag: “*Dial. or Illit.*” The editor of *W3*, Philip Gove, explained the change by conceding that he had no large files of empirical evidence: “Knowledge of some kind of language behavior comes through contact with its observers and is not always documented because there seems to be no reason to collect additional evidence” (*ibid.* at 262). If that’s the method,

then one can confidently say that *W3*’s treatment of *ain’t* was flawed in its incompleteness.

In 1962, the year after *W3* was published, an apt cartoon appeared in *The New Yorker*. A man stands in the reception area of G. & C. Merriam Dictionary Division, as the receptionist says to him, “Sorry. Dr. Gove ain’t in.”

Yes, **ain’t* is used by cultivated speakers, but almost always for either of two reasons: (1) to be tongue-in-cheek; and (2) to flaunt their reverse snobbery. For most people, it remains an emblem of poor usage—a NONWORD. All in all, the 1934 tag has either remained accurate or been bolstered.

LANGUAGE-CHANGE INDEX

**ain’t* used with a straight face: Stage 1

AIRLINESE. The JARGON of the airline business is notable in several ways. First, it has an odd vocabulary, in which *equipment* refers to the airplane you wish you were boarding (“The flight has been delayed because we don’t have any *equipment*—it’s in Pittsburgh”). Second, it relies heavily on DOUBLESPEAK, with a heavy dose of ZOMBIE NOUNS; *seat cushions may be used as flotation devices* means “if we crash in water, use your seat cushion to float”; *in the event of a loss in cabin pressure* means “if we lose cabin pressure so that no one can breathe”; *please use the trash dispenser for anything other than bathroom tissue* means “don’t try to flush paper towels or anything other than bathroom tissue down the commode.” (For still another example, see **only (B)**.) Third, it is often stilted and redundant—e.g.: “It is a federal requirement to comply with all safety regulations.” Fourth, it has borrowed many nautical terms, both directly (*aft*, *bulkhead*, *crew*, *fleet*, *galley*, *hold*, *stowage*) and by analogy (*airworthy*, *flight deck*). Finally, it contains many NEOLOGISMS, some formed by combining nouns (*cross-check*, *ground personnel*), some by affixation (*inflight*, adj.), and some by changing parts of speech (e.g., *overnight*, vb., as in “We’ll have to overnight you”). Among other recent coinages are these:

- *enplane*: “PFCs are \$1 to \$3 fees that airports can tack on to the ticket price paid by each *enplaned* passenger, in order to finance the expansion of airfields and terminals.” Jon McKenna, “Trends in the Region,” *Bond Buyer*, 5 Sept. 1996, at 29.
- *enplanement*: “Though it recorded more than 600,000 *enplanements* in the mid-’70s, the state is now struggling to board about 350,000 passengers a year.” Rick Steelhammer, “Airport Group Seeking Increased Federal Role,” *Charleston Gaz.*, 14 Aug. 1996, at C1.
- *hub-and-spoke*: “The industry’s *hub-and-spoke* system of operating, in which short flights feed customers into big airports, where they board longer flights, has also increased demand for regional jets” “Airline to Pay \$1.4 Billion for 67 Jets,” *N.Y. Times*, 18 June 1997, at C4.
- *interline*: “Southwest does not *interline* with other carriers, in part because it is simply unwilling to spend the extra time and money on the ground, waiting to board

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

passengers from connecting flights that are often delayed.” Kevin Freiberg & Jackie Freiberg, *Nuts! Southwest Airlines’ Crazy Recipe for Business and Personal Success* 52 (1996).

- **load factor**: “Instead of raising fares when *load factors* (ratio of passenger capacity to tickets sold) are up, Southwest increases the number of flights and expands the market.” *Ibid.* at 53.
- **pushback**: “[The] ramp agent unhooks the *pushback* from the aircraft and the plane taxis toward the runway.” *Ibid.* at 59.

Although these neologisms serve a genuine purpose, airlines otherwise typifies some of the worst qualities of modern AmE (e.g., “We’ll be on the ground *momentarily*”—see **momentarily**). And it has a debilitating effect because so many people are so frequently exposed to it. Small wonder that some of them feel tempted to dash for an emergency exit. See **OBSCURITY**.

airworthy, used in reference to aircraft, means “fit for flying.” The word, surprisingly enough first used in 1829, was analogized from *seaworthy*. See **AIRLINESE** & **seaworthy**.

ait (BrE for “a small island”) is predominantly so spelled—not **eyot*, a variant that was never common.

Current ratio: 7:1

***aitiology**. See **etiology**.

a la; à la. This **GALLICISM**, meaning “in the manner or style of,” was borrowed into English in the late 16th century. It appears in such well-known phrases as *à la carte* (= according to the menu’s individual pricing for an item) and *à la mode* (= [1] fashionable, stylish, or [2] topped with ice cream). The phrase often serves a comparative function <he’s bound to be a record-breaking baseball player a la Hank Aaron> <a recipe for economic instability a la the 1930s>. Generally, it is written without the **DIACRITICAL MARK** and without italics <he chipped in a la Tom Watson>, unless it appears as part of a larger French phrase <steak *à la grecque*> <pommes *à la duchesse*>.

Alabamian; *Alabaman. The first, pronounced /al-ə-bay-mee-ən/ or /al-ə-bam-ee-ən/, is standard; the second is a variant form that occurs much less often in print. See **DENIZEN LABELS**.

Current ratio: 2:1

alas; alack. *Alas*, a mild exclamation, expresses woe caused by a lamentable state of affairs. E.g.: “The creatures keep Susan alive (inexplicable unless she is meant to be mated with the king bug), and they stop evolving into humans (so we never, *alas*, see the final stage of a really ugly bug-man).” Richard Corliss, “Really Bugged: In *Mimic*, Giant Roaches Invade New York City,” *Time*, 25 Aug. 1997, at 70.

Alack, a synonymous exclamation, is archaic. *Alas* and *alack* is a tiresome **CLICHÉ**. Because the words are so old-fashioned, virtually all uses have a touch of humorous irony.

See **ARCHAISMS**.

Albanian. This term may refer to someone from either Albania (in which case it’s pronounced /al-bay-nee-ən/) or Albany, New York (in which case it’s pronounced /ahl-bə-nee-ən/). See **DENIZEN LABELS**.

albeit. Though Eric Partridge pronounced this conjunction archaic (*U&A* at 41), it thrives in written AmE. Labeled “literary” in the *COD*, the word *albeit* means “though.” The predominant modern use for *albeit* is to introduce concessive phrases—e.g.:

- “How did one of the most respected engineering schools in the country, *albeit* the smallest, reach such a low point?” Gord Henderson & Ted Shaw, “Controversy Turns Dreams to Turmoil,” *Windsor Star*, 26 Oct. 1996, at A1.
- “There may be another way, *albeit* unconfirmed, to increase your odds.” Shelly Branch, “Tax Audits Aren’t Nice,” *Fortune*, 17 Mar. 1997, at 188.
- “The fair has been an annual event, *albeit* one far removed from the thrill rides and demolition derby that have become popular attractions for modern fairgoers.” Tammy Garrett, “White County Fair to Celebrate 80-Year Anniversary,” *Ark. Democrat-Gaz.*, 10 Sept. 2015, at 68.

Albeit may also begin a subordinate clause, *albeit though* or *although* is more natural and more common with this type of construction—e.g.: “The state will let the free market do it, *albeit* the effects may accrue more unevenly and, perhaps, more brutally.” Lucette Lagnado, “Sick Wards: New York’s Hospitals Merge, Cut and Fret as Deregulation Nears,” *Wall Street J.*, 25 Oct. 1996, at A1. Cf. **howbeit**.

The first syllable of *albeit* is pronounced like *all*, not like your friend *Al*.

albino. Pl. *albinos*. See **PLURALS** (D).

album /al-bəm/ is sometimes mispronounced with an intrusive *-l-*, as if it were /al-bləm/. See **PRONUNCIATION** (B), (C).

Albuquerque; Albuquerque. The accepted spelling of the city in New Mexico is *Albuquerque*. But the original spelling—used in the title of Rudolfo Anaya’s novel by that name (published in 1992)—was *Alburquerque*. The place name is frequently misspelled **Alberquerque* or **Albequerque*.

Current ratio (*Albuquerque* vs. *Alburquerque* vs. **Albequerque* vs. **Alberquerque*): 1,149:25:1:1

Albuquerquean; *Albuquerqueian. The first is standard; the second is an uncommon variant. See **DENIZEN LABELS**.

aleatory; fortuitous; stochastic. These words have similar but distinct meanings. The first two are especially close, meaning “depending wholly on chance.” *Aleatory* derives from the Latin word for the game of dice: *alea jacta est* (= the die is cast). *Fortuitous*, meanwhile, carries the suggestion of an accident, usually but not always a happy one. (See **fortuitous**.) As it happens, *aleatory* usually refers to present descriptions or future events <the aleatory process of flipping a coin seems much too capricious for settling

a dispute>, *fortuitous* to past events <how fortuitous that we met here, and on this day>. *Stochastic*, the most rarefied of these words, means “random”; it is fairly common in the writing of economic analysts and statisticians.

Alfred, Lord Tennyson. See **Tennyson**.

algae; *algee. The plural word for the mostly aquatic, plantlike organisms capable of photosynthesis is *algae* (/al-jee/). No other spelling has been recorded in dictionaries, yet the phonetic misspelling **algee* occasionally and surprisingly appears in edited scholarship—e.g.: “*Typha latifolia*, *Typha augustifolia*, *Phragmites australis*, *Scirpus* sp., and different *algae* [read *algae*] were the prevalent plant species in the wetland.” V.S.T. Ciminelli, “Biohydrometallurgy,” in *11 Process Metallurgy Series* 583 (2001).

The (rare) singular *alga* is pronounced /al-gə/.

alias is both adverb (= otherwise [called or named]), as an elliptical form of *alias dictus*, and noun (= an assumed name), today usually the latter. *Alias* refers only to names and should not be used synonymously with *guise* (= assumed appearance, pretense). See **pseudonym**.

alibi. **A. As a Noun for excuse.** Strictly speaking, the words are not synonymous, although the confusion of their meanings is understandable. *Alibi* is a specific legal term referring to the defense of having been at a place other than the scene of a crime. By SLIPSHOD EXTENSION it came to be used (beginning in the 1920s) for an excuse or explanation for misconduct, usually one that shifts blame to someone else. This broader meaning has its defenders—e.g.: “Cynicism and the common man’s distrust of the law have tinged *alibi* with a suggestion of improbability and even of dishonesty. Purists insist that it should be restricted to its legal meaning, and those who wish to be formally correct will so restrict it. In so doing, however, they will lose the connotation of cunning and dishonesty which distinguishes it from *excuse*.” *DCAU* at 24. Their point is well taken, but *alibi* to denote a cunning excuse remains at best a CASUALISM.

LANGUAGE-CHANGE INDEX

alibi for *excuse*: Stage 3

Current ratio (*an excuse for not* vs. *an alibi for not*): 63:1

B. As an Adverb. In recent years *alibi* has been used as an adverb (meaning “elsewhere” <he proved himself *alibi*>), but this usage should be avoided. Although “elsewhere” is the original Latin meaning of *alibi* (originally a locative of *L. alius* “other”), in English it has long served only as a noun, and harking back to the classical sense is an affectation.

LANGUAGE-CHANGE INDEX

alibi as an adverb: Stage 1

C. As a Verb. Nor should *alibi* be used as a verb, as it occasionally has been since the early 20th century. The examples below are doubly bad, since the misbegotten verb (meaning *excuse*) is based on the misused noun:

- “‘He looked very heavy-armed warming up,’ Apodaca said. ‘I’m not *alibying* [read *making excuses*] for him, but I was very worried about him because of that start in Chicago.’ Rafael Hermoso, “Reynoso Feeling ‘Lucky,’” *Record* (N.J.), 18 June 1997, at S1 (quoted speech).
- “Tyson *alibied* [read *said* or *tried to excuse himself by saying*] that he ‘snapped’ when he bit Holyfield—twice.” Jeff Schultz, “Tyson’s Main Event: Avoid Trouble,” *Atlanta J.-Const.*, 11 July 1997, at F10.
- “‘I’d say there’s a danger and plain lousy taste in distorting a current president’s words to zip up a movie. ‘It’s fantasy, entertainment,’ Zemeckis *alibied* [read *rationalized*]. ‘It adds verisimilitude.’” Sandy Grady, “When Hollywood Distorts Reality for Big Bucks,” *Milwaukee J. & Sentinel*, 23 July 1997, at 12.

LANGUAGE-CHANGE INDEX

alibi as a verb: Stage 1

alien, adj., takes the preposition *to* or, less commonly, *from*. For purposes of DIFFERENTIATION, H.W. Fowler noted, “there is perhaps a slight preference for *from* where mere difference or separation is meant (*We are entangling ourselves in matters alien from our subject*), and for *to* when repugnance is suggested (*cruelty is alien to his nature*)” (*FMEU1* at 15).

Current ratio (*alien to* vs. *alien from*): 13:1

alienable (= transferable to another) is so formed—*not *alienatable*. See -ABLE (D) & -ATABLE.

aliquot, adj.; **aliquant**, adj. *Aliquot* = contained in a larger whole an exact number of times <4 is an aliquot part of 16>. *Aliquant* = contained in a larger number or quantity but not an exact number of times <4 is an aliquant part of 15>.

all. **A. All (of).** The better construction is to omit *of* and write, when possible, “*All* the attempts failed.” Since the beginnings of Modern English, the phrasing *all the* (+ plural noun) has vastly predominated over *all of* (+ plural noun): the *of*-variant was essentially nonexistent till the turn of the 20th century, and even now it is not nearly as frequent in print sources, whether in AmE or BrE. E.g.: “With the end to fighting, the group was disbanded, and *all* its members were ordered to burn their identity papers and go into hiding.” P.H. Ferguson, “End of War Gave Life to Would-Be Kamikazes,” *Austin Am.-Statesman*, 3 Sept. 1995, at A20. Although *all of* is more common in AmE than in BrE, it should generally be avoided in all formal writing. See **of** (A).

In two circumstances, though, *all of* is the better choice. The first occurs when a pronoun follows <all of them>, unless the pronoun is serving as an

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

adjective, either possessive <all my belongings> or demonstrative <all that jazz>. The second occurs when a possessive noun follows—e.g.: “Beyond *all of Jones’* ego-stroking maneuvers and incessant need for attention, this is what he is talking about.” Paul Daugherty, “Cowboys Owner Smarter than Average Bear,” *Cincinnati Enquirer*, 8 Sept. 1995, at B1.

Current ratio (*all the* vs. *all of the*): 8:1

B. With Negatives. *Not all*—as opposed to **all . . . not*—is usually the appropriate sequence in negative constructions. E.g.:

- “All literary sentences are *not* elaborate.” George P. Krapp, *The Knowledge of English* 72 (1927). (A possible revision: *Not all literary sentences are elaborate.*)
- “All people do *not* possess *Life’s* intuitive perception that the word is so ‘monstrous’ that even to list it as a dialect variation is to merit scorn.” Bergen Evans, “But What’s a Dictionary For?” in *The Ways of Language* 77, 81 (Raymond J. Pflug ed., 1967). (A possible revision: *Not all people possess Life’s intuitive perception . . .*)
- “Students rightfully protest; and while *all of their complaints do not* [read *not all their complaints*] have merit, they too should be heard.” William O. Douglas, *Points of Rebellion* 14 (1970).
- “When he screened Foster’s office files two days after his death, Nussbaum decided that *all of the papers were not* relevant to the suicide inquiry.” “Cops: White House Aide Foiled Probe,” *Chicago Trib.*, 4 Feb. 1994, at N14. (Two possible revisions to remedy the ambiguity of the original: *Nussbaum decided that none of the papers were relevant./ Nussbaum decided that some of the papers were not relevant.*)
- “Since *all teachers do not* [read *not all teachers*] teach the FSA subjects, other tests, like end-of-course exams, must be used.” Sue Legg, “Testing—When Is Enough, Enough?,” *Gainesville Sun*, 6 Sept. 2015, Opinion §.

See **not (A)**. Cf. **everyone . . . not*.

LANGUAGE-CHANGE INDEX

**all . . . not* for *not all*: Stage 3

Current ratio (*not all of them are* vs.

**all of them are not*): 10:1

C. As Subject. *All*, as subject, may take either a singular or a plural verb. When a plural noun is implied after *all*, the verb should be plural <all were present>—e.g.: “Until this morning, *all were* official residents of the three Dadaab refugee camps near the Kenya–Somalia border.” David Finkel, “African Refugees Start Journey to Homes in Distant U.S.,” *Miami Herald*, 25 Aug. 2002, at A16. But when *all* denotes a collective abstraction (as a mass noun), it should take a singular verb <all is well>—e.g.: “*All she wants is* people to be touched by the gifts she believes God has given her.” Johanna D. Wilson, “Back Roads,” *Sun-News* (Myrtle Beach, S.C.), 19 Aug. 2002, at C1.

Writers sometimes err, especially when a collective *all* has a plural complement in the predicate—e.g.: “All she needs *are* [read *is*] the open-house listings in the Sunday Real Estate section.” Elliott Rebhun, “Checking Out the Scenery in Apt. 3C,” *N.Y. Times*, 26 May 2001, at A11. The Christmas song “All I Want for Christmas Is My Two Front Teeth” gets it right.

D. And any. *All* follows a superlative adjective <the best of all>; *any* follows a comparative adjective <more than any other>. Constructions such as **more than . . . all* are illogical. See **best of all** & COMPARATIVES AND SUPERLATIVES.

All-American, n.; **All-America**, adj. As the head-words suggest, *All-American* is predominantly a noun <Jones is an All-American>. In the athletic sense, the preferred adjective has long been *All-America* <three Nebraska linemen were selected for the All-America team>, though usage is almost equally divided. In the more general sense, however, *all-American boy* or *all-American girl* is the only idiomatic phrasing.

Current ratio (*All-America team* vs.

All-American team): 1:1

Current ratio (*all-American kid* vs. **all-America kid*):

[none possible because the latter phrasing does not appear]

all-around, adj.; **all-round**. The first is the standard AmE form, the second the BrE form. In fact, though, *all-round* predominated in AmE till about 1950, when the slightly longer form overtook it in frequency of use. In both varieties of English, the other form is a variant. When Americans use *all-round*, they have traditionally felt the need to show the elision of *a* with an apostrophe: “The apostrophe is needed to indicate that the word is a shortening of ‘around,’ not the adjective ‘round.’ ‘An all round man’ would mean one who is completely curved, of globular construction.” Edward N. Teall, *Putting Words to Work* 216 (1940). See **around**.

***allegator**. See **alleger**.

allege; contend. To *allege* is to formally state a matter of fact as being true or provable, without yet having proved it. The word once denoted stating under oath, but this meaning no longer applies. To *contend* is to strive against—or, in the advocate’s sense, to state one’s position in a polemical way.

Allege should not be used as a synonym of *assert*, *maintain*, *declare*, or *claim*. *Allege* has peculiarly accusatory connotations. One need not *allege* only the commission of crimes; but certainly the acts alleged must concern bad conduct or negligence. Of course, journalists commonly use the word when speaking about things that a suspect is thought to have done <the witnesses alleged that he stole the car from the Joneses’ garage>—and they do it to avoid legal trouble.

alleged, adj. If the thing that is *alleged* has already been verified, then *alleged* is the wrong word. So the word is inappropriate when describing something that is known to have occurred. If the police believe that some particular person has committed a crime, that person is a genuine suspect, not an *alleged* one—e.g.: “The story goes that Pierce had a verbal beef a year ago with one of the three *alleged suspects* [read *suspects*], and, by chance, they crossed paths again.” Will McDonough, “Cops and Players II,” *Boston Globe*, 30 Sept. 2000, at G1.

Alleged is pronounced with two syllables (/ə-lejd/), not three.

allegedly (/ə-lej-id-lee/) does not mean “in an alleged manner,” as it would if the adverb had been formed as English adverbs generally are. Wilson Follett considered adverbs like this one ugly and unjustified—especially *reportedly* (MAU at 279). Yet *allegedly* is a convenient space- and time-saver for *it is alleged that* or *according to the allegations*. Though not logically formed, *allegedly* is well established and, if used in moderation, unobjectionable. See -EDLY. Cf. **shamefacedly**.

LANGUAGE-CHANGE INDEX
allegedly: Stage 5

allegor; ***allegator**. The latter is a miserable excuse for a NEEDLESS VARIANT.

allegro. Pl. *allegros*, preferably not the Italian *allegri*. But some writers use the pedantic foreign plural—e.g.: “His delicate touch made the andante movements glisten like an expanse of water, his 3rd movement *allegri* [read *allegros*] skip deliriously.” Rick Jones, “Rhythm, Religion and Gowns of Green for Television,” *Evening Standard*, 29 July 1996, at 7. See PLURALS (D).

Current ratio: 3:1

allegen-friendly. See **-friendly**.

alleviable. So formed—not **alleviatable*. See -ABLE (D) & -ATABLE.

ALLITERATION. A. Pleasant Examples. How language affects the ear should be a critical concern of every writer. Writers frequently harness sounds for any of several effects. When they repeat sounds in nearby words, the result is called *alliteration* (which has two subsets: *assonance* for vowels <reverie in poetry>, *consonance* for consonants <put pen to paper>).

Sometimes alliteration reinforces sarcasm, as when Vice President Spiro Agnew referred to the *nattering nabobs of negativism* or when Fred Rodell, a Yale professor, referred to due process as *that lovely limpid legalism*. Rodell, in fact, relished sarcastic alliteration, once referring to “the *tweedledum-tweedledee twaddle* of much that passes for *learned legal* argument.” Fred Rodell, *Nine Men* 331 (1955).

At other times alliteration merely creates memorable phrasing—e.g.:

- “Only active measures, *promptly* applied, can *provide* this *poor, pusillanimous poop* with the *proper pep*.” P.G. Wodehouse, *Right Ho, Jeeves* 129 (1934; repr. 1986) (consonance).
- “Nothing *sounds* more *studied* than a repeated *spontaneity*.” Tom Stoppard, *Lord Malquist and Mr. Moon* pt. 2, at 1 (1966) (consonance).
- “She had a *sneaky, sly, shy, squamous* personality.” Ursula K. Le Guin, *The Lathe of Heaven* 92 (1971) (consonance).

- “Music is unique among the *fine arts* in that it calls for a response not only *from the head* and the *heart* but also, *frequently, from one or more of the feet*.” Frank Muir, *An Irreverent and Thoroughly Incomplete Social History of Almost Everything* 1 (1976) (consonance).
- “A moment later, the banister gave way, and the *pair* on the *stair* were in the *air*.” Roger Zelazny, *A Night in the Lonesome October* 200 (1993) (assonance).

Sometimes alliteration is risky. If it leads you into SESQUIPEDALITY just for the sake of sound, it will probably annoy some readers—e.g.: “Lukacs has an *eagle eye* for the *etiology of error* and the seductions of false logic.” Ron Rosenbaum, “Springtime for Hitler,” *L.A. Times*, 23 Nov. 1997, at 12. If that writer hadn’t been lured by alliteration, he almost certainly would have used *cause* rather than *etiology* there. See **etiology**.

B. Unpleasant Examples. The unconscious repetition of sounds, especially excessive sibilance (too many /s/ sounds, as in the phrase *especially excessive sibilance*), can easily distract readers: “When used by accident it falls on the ear very disagreeably.” W. Somerset Maugham, “Lucidity, Simplicity, Euphony,” in *The Summing Up* 321, 325 (1938). E.g.: “Everybody with a stake in solving the problem will have to *bear their fair share* of the costs involved.” Robert Ebel, “Personal View: Soviet Reactors Need a Western Focus,” *Fin. Times*, 13 July 1995, at 11. (A possible revision, which also solves the *everybody . . . their* problem: *Everybody with a stake in solving the problem will have to bear some of the costs*.)

The best way to avoid the infelicity of undue alliteration is to read one’s prose aloud when editing. See SOUND OF PROSE.

Yet sometimes unpleasant alliteration isn’t merely a matter of whether it’s conscious or unconscious. That is to say, a writer may use it quite consciously but also quite unpleasantly, through poor literary judgment—e.g.: “The necessarily contextual, contested, and contingent character of substantive liberal principles necessarily prevents them, qua principles, from effectively inhibiting human brutality.” Lief H. Carter, “Law and Politics as Play,” 83 *Chicago-Kent L. Rev.* 1333, 1333 (2008).

***all . . . not**. See **all (B)**.

allocation. See **elocution**.

all of. See **all (A)**.

all of a sudden. This is the idiomatic phrase, not **all of the sudden*—e.g.:

- “I wasn’t thinking of anything, but *all of the sudden* [read *all of a sudden*] I was no longer tired.” Sam Brumbaugh, *Goodbye, Goodness: A Novel* 108 (2005).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “*All of the sudden* [read *All of a sudden*] there was a huge flash and explosion.” Ray A. Jones, *110 Questions and Answers on Electrical Safety* 4 (2011).
- “She came, saw and conquered, and *all of the sudden* [read *all of a sudden*], every second A-list pop star wanted a residency on the strip.” Brendan Kelly, “‘Crazy’ Gamble Pays Off in Vegas,” *Edmonton J.*, 29 Aug. 2015, at D1 (referring to Celine Dion).

LANGUAGE-CHANGE INDEX

all of the sudden* for *all of a sudden*: Stage 1Current ratio (*all of a sudden* vs.all of the sudden*): 48:1

allow; permit. These words have an important connotative difference. *Allow* suggests merely the absence of opposition, or refraining from a proscription. *Permit*, in contrast, suggests affirmative sanction or approval.

all ready. See **already.**

all right; *alright. **Alright* for *all right* has never been accepted as standard. Gertrude Stein used the shorter form, but that is not much of a recommendation: “The question mark is *alright* [read *all right*] when it is all alone.” Gertrude Stein, “Poetry and Grammar” (1935), in *Perspectives on Style* 44, 48 (Frederick Candelaria ed., 1968). This short version may be gaining a shadowy acceptance—e.g.:

- “They are obviously thoroughly British and so are *alright* and should be reintroduced if possible.” Richard Ryder, “Hands Off Our Ruddy Ducks,” *Independent*, 30 June 1995, at 20.
- “There are to be ‘tough new criminal penalties,’ including a doubling of the maximum sentence for fraud; *alright*, everyone can understand that, but a financial crisis SWAT team?” Bronwen Maddox, “Devil in the Detail Weakens President’s Fervour,” *Times* (London), 10 July 2002, at 14.

Still, the combined version cannot yet be considered good usage—or even colloquially all right.

LANGUAGE-CHANGE INDEX

**alright* for *all right*: Stage 2Current ratio (*all right* vs. **alright*): 8:1

all-round. See **all-around.**

all that. In negative statements, conditions, and questions, *all that* frequently means “to the expected degree”—essentially as an equivalent of *so very* <not all that exciting>. The expression is a CASUALISM dating back to the 17th century. E.g.:

- Negative statement: “Sure, we may smile ruefully at the memories of these past missteps, but they’ll never really be *all that* funny.” Ken Potts, “Remembering Mistakes Helps You Learn from Them,” *Daily Herald* (Chicago), 13 Jan. 2001, at 4.
- Condition: “If these bogus graduates are *all that* smart and computer-savvy, why don’t they design their own phony diplomas instead of paying ‘thousands of dollars’ to someone else?” “Furthermore,” *Omaha World-Herald*, 28 Dec. 2000, at 12.
- Question: “As dysfunctional as the Los Angeles Lakers seem at the moment, is it really *all that* strange that notorious malcontent Isaiah Rider would actually sound

like the team’s voice of reason?” David Leon Moore, “O’Neal–Bryant Flap Has L.A. Teammates Scratching Heads,” *USA Today*, 12 Jan. 2001, at C8.

See **that (E).**

all the; all these. See **all (A).**

all the time. Margaret Nicholson criticizes this expression when used in a context that doesn’t indicate a definite period (*DAEU* at 17). Hence she labels the following usage “slang”: “Actors act while they are on stage, but he acts *all the time*.”

This may have been one of Nicholson’s pet peeves, since no other usage commentator has objected to the phrase. Though slightly informal, *all the time* in the nonliteral sense is acceptable English.

All the time is more polished phrasing than the unidiomatic **all of the time*. See **all (A).**

all together. See **altogether.**

all told. One archaic meaning of *tell* is “to count.” Hence the idiom is *all told* <all told, there were 14 casualties>, which dates from the mid-19th century. Some people write **all tolled*, perhaps because *toll* can mean “to announce with a bell or other signal.” But this is an error—e.g.:

- “*All tolled* [read *All told*], perhaps half the people eligible to participate will do so.” “Getting Out the Vote,” *Columbian* (Vancouver, Wash.), 17 Oct. 2002, at C6.
- “In 1999–2000, each of the eight Ivy League colleges received at least 10,000 applications; *all tolled* [read *all told*], the Ivy League colleges received 121,948 applications that year and admitted only 23,532, fewer than one in five.” Christopher Avery, Andrew Fairbanks & Richard Zeckhauser, *The Early Admissions Game: Joining the Elite* 7 (2003).

LANGUAGE-CHANGE INDEX

**all tolled* for *all told*: Stage 1Current ratio (*all told* vs. **all tolled*): 300:1

allude. A. And advert & refer. To *allude* is to refer to (something) indirectly or by suggestion only. To *advert* or *refer* is to bring up directly, *advert* being the more FORMAL WORD. (See **advert**.) *Allude* is misused for *refer* when the indirect nature of a comment or suggestion is missing—e.g.:

- “The generous wrath which had caused her to *allude* [read *refer*] to her betrothed as a pig in human shape had vanished completely.” P.G. Wodehouse, *The Return of Jeeves* 37 (1954) (the angry fiancée had just said, “You’re simply a pig in human shape!”).
- “Calling on President Clinton to enter the debate forcefully, Jackson *alluded to* [read *referred to* or *quoted*] the words spoken by King on Aug. 28, 1963: ‘I have a dream that this nation will rise up . . .’” Chuck Finnie, “Jackson: Proposition 209 Equals ‘Ethnic Cleansing,’” *S.F. Examiner*, 25 Aug. 1997, at A1.

In the following sentence, the writer creates an OXYMORON because an allusion can’t be explicit: “The images in the grid *alluded explicitly to homosexuality*

[read *depicted homosexuality explicitly*], since all showed male couples, most in sexual positions.” Maud Lavin, “Robert Flynt at Witkin,” *Art in America*, Feb. 1993, at 111.

LANGUAGE-CHANGE INDEX
allude used for a specific reference: Stage 3

B. And *illude* & *elude*. To *illude* (a rare verb) is to deceive with an illusion; to *elude* (a common verb) is to avoid or escape. Both words are sometimes misused for *allude*—e.g.:

- “He later added that ‘It’s more difficult than just having the money,’ *illuding* [read *alluding*] to the politics that is played in owning a major professional sports team.” Charles L. Griggs, “Black Athletes Lost in Sports Power Struggle,” *Jacksonville Free Press*, 12 Mar. 1997, at 5. (For the use of the singular *is* with *politics*, see **politics**.)
- “But they draw the line at *eluding* [read *alluding*] to world events.” Breuse Hickman, “Halloween Happenings Mean Pleasant Screams for Fright Fans,” *Fla. Today*, 4 Oct. 2002, at 16.

The reverse error—*allude* for *elude*—is somewhat less common. E.g.: “Glenn said Derogatis also was charged with aggravated assault, possession of cocaine and *alluding* [read *eluding*] police.” “Law & Order,” *Star-Ledger* (Newark), 19 Dec. 2002, Essex §, at 39.

LANGUAGE-CHANGE INDEX
1. *illude* misused for *allude*: Stage 1
Current ratio (*allude to* vs. **illude to*): 56,182:1
2. *elude* misused for *allude*: Stage 1
Current ratio (*allude to* vs. **elude to*): 513:1
3. *allude* misused for *elude*: Stage 1
Current ratio (*eluded him* vs. **alluded him*): 254:1

C. For *suggest*. This is an attenuated use of *allude* to be avoided—e.g.: “As Johnson *alluded* [read *suggested*], who among us has no sin?” Letter of Karen M. Piet, “Jesus Forgave Sins of Those Who Repented and Told Them to Sin No More,” *Rocky Mountain News* (Denver), 3 Sept. 1997, at A40.

LANGUAGE-CHANGE INDEX
allude misused for *suggest*: Stage 1

illusion. A. And *illusion*. While an *allusion* is an indirect reference <literary allusion>, an *illusion* is a deception <optical illusion>. But some writers bungle the two—e.g.:

- “Full of jokes, literary *illusions* [read *allusions*], fractured Shakespeare and physical comedy, it’s a show that appeals to young and old.” Nadine Goff, “‘Buck Mulligan’ Has Something for Everyone,” *Wis. State J.*, 18 Sept. 1995, at C5.
- “‘I try not to be too annoying,’ he said, admitting that Councilwoman Ramona Martinez once asked if she could get ‘extra credit’ for enduring his literary *illusions* [read *allusions*].” Susan Greene, “Stalwart Pursues New Role,” *Denver Post*, 9 Apr. 2003, at A19.

For the difference between *illusion* and *delusion*, see **illusion**. See MALAPROPISMS.

LANGUAGE-CHANGE INDEX
illusion misused for *allusion*: Stage 1
Current ratio (*literary allusions* vs. **literary illusions*): 84:1

B. And *reference*. See **allude (A)**.

ALLUSION. See LITERARY ALLUSION.

allusive; *allusory. The latter is a NEEDLESS VARIANT. See **elusive**.

Current ratio: 192:1

ally. As a noun, the accent is on the first syllable: /*al*-I/. As a verb, the accent is on the second: /*ə*-I/.

almond is preferably pronounced /*ah*-mænd/—not /*ahl*-mænd/ or (worse) /*al*-mænd/. The pronunciation /*am*-ænd/ is also sometimes heard. See PRONUNCIATION (B).

almost. A. Placement. This word is sometimes misplaced in a sentence—e.g.: “There is *almost a childlike simplicity* [read *an almost childlike simplicity*] in their straightforward depictions.” Myra Yellin Outwater, “Early American ‘Naive’ Art a Surprise for Sophisticates,” *Morning Call* (Allentown, Pa.), 10 Mar. 1996, at F1. Like *only*, the word *almost* should be placed immediately before the word it modifies. See **only (A)**.

B. *Almost quite. H. W. Fowler branded this phrasing an “illiteracy,” and so it remains today—e.g.:

- “‘They’re feeding at the door,’ a competing bookseller says jealously, and *almost quite* [read *almost*] literally.” Raphael Sagalyn, “Bookstore Wars,” *Wash. Post* (Mag.), 11 Mar. 1979, at 28.
- “‘Treacle tart and cream was terrific, with enough lemon cutting the syrup to make it feel *almost quite* [read *almost* or *quite*] health-giving.” Fay Maschler, “How to Keep Cool on a Tightrope,” *Evening Standard*, 4 July 1995, at 23.
- “‘A Density of Souls’ runs straight as a string until the last third, when all hell breaks loose (*almost quite literally*) [delete the entire parenthetical] and Rice’s carefully constructed melodrama goes up like a transformer in a hurricane.” Kevin Allman, “Grand Guignol 90210,” *Times-Picayune* (New Orleans), 3 Sept. 2000, Travel §, at 6.

Oddly, however, this phrasing wasn’t uncommon in the 17th and 18th centuries. It trailed off in the 19th century and was stigmatized in the 20th. See **quite**.

LANGUAGE-CHANGE INDEX
**almost quite*: Stage 1

alms (= money or food given to the poor) is pronounced with the *-l-* silent: /*ahmz*/—not /*ahlmz*/ or /*amz*/.

alone. See **lone**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

alongside, prep., = at the side of. Hence one car is parked *alongside* another and logs are stacked *alongside* one another. It is unnecessary—and poor style—to write **alongside of*. See **of (A)**.

LANGUAGE-CHANGE INDEX
**alongside of for alongside*: Stage 3
 Current ratio (*alongside the vs. *alongside of the*): 25:1

along with. Like *together with*, this connective phrase does not affect the grammatical number of the sentence. E.g.: “He admitted that he, *along with* other board members, *are* [read *is*] no longer sure about anything concerning the [controversy].” Elizabeth W. Crowley, “Salem Dispute Drags On,” *Patriot Ledger* (Quincy, Mass.), 7 Aug. 2002, at 1. See SUBJECT-VERB AGREEMENT (E).

When the sense is necessarily plural, use *and* instead of *along with*—e.g.: “He *along with* [read *and*] his wife, Edith, *were* the owners of the Snug Club until they sold it in 1997.” Thomas E. McDonald Sr. (obit.), *Daily Oklahoman*, 8 Aug. 2002, at C8.

a lot (= many) is the standard spelling. **Alot* has always been considered nonstandard—e.g.:

- “*Alot* [read *A lot*] of people have noticed that the two teams playing in the World Series have one very important thing in common.” Charles A. Jaffe, “Investors Can Learn a Thing from Baseball,” *Boston Globe*, 22 Oct. 2000, at F10.
- “*Alot* [read *A lot*] of kids found out yesterday that the easiest thing to do on ice skates is fall down.” Eve Rubenstein, “Skating Stars, Past and Future,” *S.F. Chron.*, 22 Nov. 2000, at A27.
- “Dalmatians are active and require *alot* [read *a lot*] of exercise and attention.” “Dalmatian Alert,” *Sarasota Herald-Trib.*, 2 Dec. 2000, at B7.

Cf. **all right**.

LANGUAGE-CHANGE INDEX
**alot for a lot*: Stage 2
 Current ratio (*a lot vs. *alot*): 659:1

aloud; out loud. The latter is colloquial when used in place of the former in expressions such as *read out loud*. Because of this—and because *read aloud* is 12 times as common as *read out loud* in modern print sources—*read aloud* should be preferred in edited prose. E.g.:

- “McGuffey’s fifth and sixth readers had an abundance of the kind of poetry that demands to be read *out loud* [read *aloud*], like ‘The Raven’ by Edgar Allan Poe.” Diane Ravitch, “Children’s Books,” *N.Y. Times*, 17 May 1987, § 7, at 46.
- “Oprah loves writing that begs to be read *out loud* [read *aloud*].” Marilyn Johnson, “Oprah Winfrey: A Life in Books,” *Life*, Sept. 1997, at 44.

al Qaeda is preferably pronounced /al kɪ-də/, a fair Anglophone approximation of the Arabic pronunciation—not /al kay-də/. As one authority says, “When faced with two anglicizations of a foreign name, it is generally better (and more politic) to choose the one

closer to the original, [and] al-KY-duh is closer to the Arabic than al-KAY-duh, which probably arose merely because *Qae-* suggested *-KAY-* to many speakers.” *BBBM* at 22 (with a full five-paragraph discussion of the issue). See HOBSON-JOBSONISM.

already; all ready. *Already* has to do with time <finished already>, *all ready* with preparation <we are all ready>. The terms are occasionally misused—e.g.: “The Bahhumbug with lack of tact / Now called attention to the fact, / Which made it feel to Edmund Gravel / He was *already* [read *all ready*] to unravel.” Edward Gorey, *The Headless Bust* 4 (1997).

LANGUAGE-CHANGE INDEX
already misused for all ready: Stage 1

***alright**. See **all right**.

also. This word is a close synonym of *too* (= as well), but its syntactic flexibility is greater <she was also there> <she also was there> <she was there, also>. Avoid treating the word as if it were a conjunction—e.g.: “The dishes were dirty, *also* [read *and*] several of them were broken.” This poor use of *also* creates a RUN-ON SENTENCE.

For more on *also*, see **too (A)**.

LANGUAGE-CHANGE INDEX
also as a conjunction: Stage 2

also not. This phrasing, which ordinarily follows a negative statement, is usually inferior to *nor*—e.g.:

- “*Race should also not* [read *Nor should race*] be a matter in law enforcement, prosecution or sentencing, but it is.” Letter of Stanley S. White, “Unavoidable Reality,” *Atlanta J.-Const.*, 23 Jan. 1997, at I5.
- “*He was also not* [read *Nor was he*] told until later, he says, about the allegations of military doctor Maj. Barry Armstrong that one of the Somali men may have been killed execution-style.” David Pugliese, “Criminal Probe Delayed, Top Officer Tells Inquiry,” *Windsor Star*, 28 Jan. 1997, at A8.
- “*Tosco is also not* [read *Nor is Tosco*] afraid to duke it out with the unions.” Arthur Goldgaber, “Tosco’s Gusher,” *Fin. World*, 18 Mar. 1997, at 38.

See **nor (A)**.

But when a contraction precedes the phrase and the tone is intentionally conversational, *also not* seems the more natural wording—e.g.:

- “They’re *also not* as dangerous as other animals around the compound.” Chris Vaughn, “Teen Goes Whole Hog for Hobby,” *Ft. Worth Star-Telegram*, 27 Jan. 1997, at 4.

alter; altar. *Alter* (= to change) is a verb; *altar* (= the table or structure used for sacramental purposes) is a noun. But writers have sometimes confused the two—e.g.:

- “Civil liberties have been sacrificed on the *alter* [read *altar*] of zero tolerance.” Jeff A. Schnepfer, “Mandated Morality Leads to Legalized Theft,” *USA Today* (Mag.), Mar. 1994, at 35.
- “We are learning that privacy and truth have been sacrificed on the *alter* [read *altar*] of greed, power, safety and

security.” H. Roy Kaplan, “Striking a Balance of Freedom, Control,” *Tampa Bay Times*, 4 July 2013, at A9.

LANGUAGE-CHANGE INDEX

alter misused for *altar*: Stage 1

Current ratio (*at the altar* vs. **at the alter*): 46:1

alterative; alterant. Each word may act as both noun and adjective. As adjectives, they both mean “causing alteration.” As nouns, however, the meanings diverge. An *alterant* is anything that alters or modifies. *Alterative* appears in medical contexts—though rarely now by physicians—in reference to a medicine that gradually changes unhealthy bodily conditions into healthy ones.

altercation. The traditional view is that this word refers to “a noisy brawl or dispute,” not rising to the seriousness of physical violence. For authority limiting the term to the sense “wordy strife,” see the *OED*, W2, W3, and Eric Partridge’s *U&A*. But since about 1980 in AmE and BrE alike, the word has often denoted some type of scuffling or fighting, especially in police JARGON—e.g.:

- “A 29-year-old drugstore manager who was punched in the chest last month during an *altercation* has died of his injuries, Suffolk police reported yesterday.” Olivia Winslow, “Man Punched in Chest During Store Spat Dies,” *Newsday* (N.Y.), 12 Sept. 1997, at A32.
- “He was involved in a fight with Cincinnati’s Bob Wren, who was cut during the *altercation*.” Pete Dougherty, “Kinneer Will Miss One Game,” *Times Union* (Albany), 17 Oct. 1997, at C1.
- “Fitzpatrick ascended to the starting position when Geno Smith suffered a broken jaw in a locker-room *altercation*.” J.P. Pelzman, “Gang Green Quarterback Enjoying Ride,” *Herald News* (West Paterson, N.J.), 10 Sept. 2015, at C1.

Some will lament this development as SLIPSHOD EXTENSION, but the purely nonphysical sense seems beyond recall. The real battle now is to limit *altercation* to light roughhousing. That is, it’s wrong to say that someone is killed during an *altercation*. But police (and the reporters who interview them) tend to talk this way—e.g.:

- “Jonny E. Gammage died during an *altercation* [read *struggle*?] with white suburban police officers after a traffic stop.” Aliah D. Wright, “Veon Wants Race Relations Panel,” *Pitt. Post-Gaz.*, 10 Sept. 1997, at B2.
- “The fatal *altercation* [read *confrontation* or *fight*] between Taylor and Mancuso had been brewing for a long time.” Bill Poehler, “Death at Raceway Was Unfortunate, Preventable,” *Statesman J.* (Salem, Ore.), 18 July 2015, at C1.
- “Samuel Harrell . . . was killed on April 21 during an *altercation* with several corrections officers.” Amanda J. Prucell, “Legal Action Filed for Harrell,” *Poughkeepsie J.*, 9 Sept. 2015, at A1.

Cf. **accost**.

LANGUAGE-CHANGE INDEX

altercation referring to physical violence: Stage 3

alter ego (lit., “other I”) = a second self. Generally, it means “a kindred spirit” or “a constant companion.” E.g.: “Stump Connolly is the *alter ego* of Scott Jacobs, a political reporter turned video producer.” Bob Minzesheimer, “‘Trail Fever’ and ‘Stump’ Split Vote on How to Pillory Politics,” *USA Today*, 14 Aug. 1997, at D6. The phrase should not be hyphenated (except possibly as a PHRASAL ADJECTIVE).

alternate; alternative. A. As Nouns. *Alternative* is needed far more often than *alternate*. An *alternative* is a choice or option—usually one of two choices, but not necessarily. Etymological purists have argued that the word (fr. L. *alter* “the other of two”) should be confined to contexts involving but two choices. Ernest Gowers termed this contention a fetish (*FMEU2* at 196), and it has little or no support among other stylistic experts or in actual usage. E.g.: “The county has *three alternatives* on how to meet the region’s needs before its treatment plants reach capacity in 2010.” “Officials Oppose Plan Expansion,” *Seattle Times*, 26 Aug. 1997, at B2.

Indeed, *alternative* carries with it two nuances absent from *choice*. First, *alternative* may suggest adequacy for some purpose <an alternative to driving>; and second, it may suggest compulsion to choose <the alternatives are liberty and death>.

Alternate = (1) something that proceeds by turns with another; or (2) one that substitutes for another.

LANGUAGE-CHANGE INDEX

three or more *alternatives*: Stage 5

B. As Adjectives. *Alternative* = providing a choice between two or more things; available in place of another. E.g.: “Herman would not oppose the light without offering an *alternative* solution, he said.” Mary Gail Hare, “Herman Opposes Traffic Signal at Springfield Ave.,” *Baltimore Sun*, 29 Aug. 1997, at B1.

Alternate = (1) coming each after one of the other kind, every second one <the divorced parents had agreed on visits in alternate months>; or (2) substitute <although he didn’t make the first team, he was named the first alternate player>.

Alternate is often misused for *alternative*, an understandable mistake given how close sense 2 of *alternate* is—e.g.: “Patton responded to the Atlanta Preservation Center’s proposal for an *alternate* [read *alternative*] site for the classroom building.” Christina Cheakalos, “Building a Better GSU in Six Years,” *Atlanta J.-Const.*, 7 Sept. 1997, at G5.

alternative: Stage 2

Current ratio (*alternative solution* vs.

**alternate solution*): 10:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

although; though. As conjunctions, the words are virtually interchangeable. The only distinction is that *although* is more formal and dignified. In print sources from the 16th century to the present day, *though* has occurred more frequently. *Though* serves also as an adverb <he stated as much, though>. Cf. **while**.

**Altho* and **tho* are old-fashioned truncated spellings that were at one time very common, but failed to become standard. They should be avoided.

although . . . yet was formerly a common construction. The two words were considered CORRELATIVE CONJUNCTIONS—e.g.: “Wrote a 6th century Chinese master: ‘*Although* they dwell in seven jeweled palaces, and have fine objects, smells, tastes, and sensations, *yet* they do not regard this as pleasure . . . [and] seek only to leave that place.’” Howard Chuaeoan, “Other Faiths, Other Visions,” *Time*, 24 Mar. 1997, at 78. Today the construction is seen only in the most formal contexts. Generally, either conjunction will suffice to give the same meaning, but with a more modern tone.

altogether; all together. *Altogether* = completely; wholly <the charges were altogether unfounded>. *All together* = at one place or at the same time <the board members were all together at that meeting>.

alum. See **alumnus (A)**.

aluminum; aluminium. *Aluminum* is the standard spelling in AmE; *aluminium* is standard in BrE. In the first decade of the 19th century, the metallic element was named *aluminum* by the English chemist Sir Humphrey Davy. In 1813, *aluminium* was offered as being more “classical” in sound, since the *-ium* suffix harmonizes better with the names of other elements such as sodium, potassium, and magnesium. In his 1828 unabridged American dictionary, Noah Webster recorded the word as *aluminum*; his British counterparts, who admitted the word somewhat later, recorded it as *aluminium*. The AmE–BrE difference has existed ever since. It became most strongly pronounced beginning about 1900.

Aluminum /ə-**loo**-mi-nəm/ is sometimes, in AmE, mispronounced /ə-**lim**-i-nəm/. The BrE word *aluminium* is pronounced /al-yoo-**min**-ee-əm/ or /a-**loo**-**min**-ee-əm/.

alumnus; alumna. A. Plurals: alumni; alumnae; alums; *alums. *Alumni* (/ə-**lɒm**-ni/) refers either to male graduates or to males and females collectively; the singular form, which is masculine, is *alumnus*. *Alumnae* (/ə-**lɒm**-nee/) refers to female graduates and not, traditionally, to mixed groups; the singular is *alumna*.

A more common mistake than confusing the gender of these words is confusing their number, as by using *alumni* or *alumnae* as a singular—e.g.: “He was an *alumni* [read *alumnus*] of Massachusetts Institute of Technology (MIT) and UCLA.” “Abraham James Kennison” (obit.), *News Trib.* (Tacoma), 7 Jan. 1998, at B4. See **PLURALS (B)**.

Alum is a clipped form that dodges the gender issue. This slangy CASUALISM appears often in chatty discussions about high-school and college sports—e.g.:

- “A group of former Kentucky residents and Wildcat *alums*—mostly female—gather to cheer on their team.” Ethan Machado, “Team Spirits,” *Oregonian* (Portland), 27 Mar. 1998, at 4.
- “He still has the support of influential *alums*, but it may be too late.” Dick Weiss, “Penders on Ropes in Texas,” *Daily News* (N.Y.), 29 Mar. 1998, at 93.

Alum is a better and more frequent spelling than **alumn*—e.g.:

- “Four Lancaster-Lebanon League *alums* [read *alums*] are members of the 24th-ranked Penn State team.” “Sports Digest,” *Lancaster New Era*, 27 Sept. 1996, at C5.
- “I’ve been doing nothing all day but spouting bullshit: to the press, to trustees, to parents, to *alums* [read *alums*].” Joanne Dobson, *Quieter than Sleep* 136 (1997).

B. *Former alumnus, alumna. Just as a graduate is always a graduate, an *alumnus* or *alumna* is ever thus. Yet the strange REDUNDANCY **former alumnus* is fairly common—e.g.:

- “Gregory Bellamy, a friend of Sean Taylor’s, speaks at a memorial service at Gulliver Preparatory School for the slain *former alumnus* [delete *former*] and NFL safety.” Shandel Richardson & Joel Marino, “Rolle: Taylor Was a Target,” *Sun-Sentinel* (Ft. Lauderdale), 29 Nov. 2007, at C1 (photo caption).
- “Many team principals are interviewed ([John] Wooden lovers all), as are entertaining *former alumni* [delete *former*] for extra juice.” Mike Clark, “New on DVD: The UCLA Dynasty,” *USA Today*, 14 Mar. 2008, at E9.

LANGUAGE-CHANGE INDEX

2. *alumnae* as a singular: Stage 1
Current ratio (*an alumna* of vs. **an alumnae* of): 36:1
3. *alum* as a clipped form: Stage 5
4. **alumn* as the spelling for the clipped form: Stage 1
Current ratio (*alums* vs. **alums*): 160:1
5. **former alumni* for *alumni*: Stage 1
Current ratio (*the alumni* vs. **the former alumni*): 1,715:1

Alzheimer’s (the brain disease) is pronounced /**ah**lts-hɪ-mərz/ (rhyming with *malts* in the first syllable) in AmE and /**alts**-hɪ-mərz/ in BrE. With either version, the first syllable ends with an /s/ sound, not a /z/ sound.

a.m.; AM; p.m.; PM. A. Generally. Whether you use small capitals or lowercase, keep your document consistent throughout. The lowercase letters are now more common, and with lowercase the periods are standard. But many editors prefer the look of AM.

These abbreviations stand for the Latin phrases *ante meridiem* (“before noon”) and *post meridiem* (“after noon”). But some writers, when using the full phrases, mistake *meridiem* for *meridian*—e.g.: “Twelve noon

is neither *ante meridian* [read *ante meridiem*] (before midday) nor *post meridian* [read *post meridiem*] (after midday)." Jim Cowley, "Notes and Queries," *Guardian*, 2 Oct. 1996, at T17.

B. Redundant Use. Because AM and PM are well understood to designate "morning" and "night" (or "afternoon" or "evening"), it is not necessary to use both designations—e.g.:

- "It was 11:45 a.m. Saturday morning [delete a.m. or morning] in Bangkok, Thailand." M.A.J. McKenna, "Disease Spreads Fear," *Atlanta J.-Const.*, 2 Apr. 2003, at A1.
- "As of 8 p.m. Tuesday night [delete p.m. or night], Fresno recorded 0.16 of an inch." "Cold Weather Returns to Valley for Weeklong Stay," *Fresno Bee*, 2 Apr. 2003, at B5.

C. And noon; midnight. Is noon 12 AM or 12 PM? What about midnight?

Logically—at least in theory and leaving aside the complications of time zones—neither is either. Neither one comes before (*ante*) or after (*post*) the moment when the sun is on the meridian (*meridiem*), that imaginary circle in the sky that includes the point directly overhead and both poles. Rather, *noon* is the moment from which other times are labeled AM or PM. To refer to *noon* as either 12 AM or 12 PM is not just logically and astronomically wrong, but ambiguous as well. The context may clear things up—few people eat lunch at *midnight*—but to say that lunch will be served at "12 AM" is sloppy writing that reflects sloppy thinking.

Idiom compounds the conundrum because, by convention, *midnight* is considered the end of the previous day, not the start of the following day. That would seem to recommend 12 PM *midnight*, but how can 12:00 PM be followed by 12:00:01 AM?

The simple solution is to shun both AM and PM and stick with the unambiguous words *noon* <registration starts at noon> and *midnight* <the deadline for filing taxes is April 15 at midnight>. The numeral 12 is superfluous with either word.

LANGUAGE-CHANGE INDEX

12 AM or 12 PM for *noon* or *midnight*: Stage 2

amalgam; amalgamation. Some DIFFERENTIATION is possible. *Amalgam*, the older term, means "a combination" <the restaurant serves an amalgam of regional cuisines>. *Amalgamation* means primarily "the act of combining or uniting; consolidation" <Snobelen announced the *amalgamation* of Metro's seven public-school boards into a single board>.

Avoid *amalgamation* whenever *amalgam* will suffice—e.g.: "This woozy *amalgamation* [read *amalgam*] of rock, funk, jazz and blues obviously tugs ardently at Connick's heart." Melissa Ruggieri, "For Connick, It's About Funk," *Richmond Times-Dispatch*, 28 Oct. 1996, at E7.

amass, vb. This is traditionally a transitive verb meaning "to accumulate (something) systematically over

time" <the investigators amassed evidence against the suspect>. That is, someone amasses something; the things don't simply "amass." Although the *OED* records two intransitive uses (separated by some 300 years), it also labels those uses obsolete or archaic. Instances such as the following one violate idiom, *accumulate* being the better word: "Because Mattes lacked health insurance, and the malaria left her both physically exhausted and financially drained, the medical bills that *amassed* [read *accumulated* or *piled up*] during the illness completely wiped out her life savings." Denny Guge, "Clearing Hurdles," *America West Airlines Mag.*, Aug. 1999, at 128.

LANGUAGE-CHANGE INDEX

amass used in an intransitive sense: Stage 1

amateur. In best usage, an amateur (*/am-ə-chər* or *am-ə-tər/*) is a hobbyist, one who engages in an activity out of love and enthusiasm rather than for profit. This is still the meaning in phrases such as *amateur astronomer* and *amateur golfer*. In some uses it has long had a negative connotation of undeveloped skills <rank amateur> <an amateurish job>.

In recent years, it has come to be used as a synonym for *beginner*. A good alternative would be *novice* or *neophyte* (both usually neutral in connotation) or even *tyro* (with connotations of a bumbler).

Amateur has also become a genre of low-budget pornography (an odd usage, since it apparently involves "paid" amateurs).

The word is sometimes misspelled **amature*—e.g.: "Thanks to travel sites, Web cams and the ego of *amature* [read *amateur*] photographers, you can get your fill of colorful leaves by letting your fingers do the peeping." Stephanie Schorow, "Net Life," *Boston Herald*, 4 Oct. 2000, at 59.

LANGUAGE-CHANGE INDEX

amateur misspelled **amature*: Stage 1

Current ratio: 2,250:1

amatory; *amative. See **amorous**.

ambassador; *embassador. The first is the preferred spelling. See **embassy**.

Current ratio: 176:1

ambience. See **ambience**.

ambidextrous. While *dexterous* is preferably spelled with two *e*'s, *ambidextrous* has only one. Of the *OED*'s nine citations for this word, only one has the two-*e* spelling; in modern print sources, the ratio is 43 to 1 in favor of *ambidextrous*. This inconsistency between *dexterous* and *ambidextrous* is something of a mystery. Cf. **dexterous**.

ambience; ambience. These words denote the atmosphere of a place. *Ambience* (*/am-bee-ən[t]s/*) is an anglicized form that entered the language in the late

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

19th century. It's preferable to *ambiance* (/ahm-bee-ahn[t]s/), a Frenchified affectation that, since its proliferation in the mid-20th century, has become a VOGUE WORD.

In modern print sources, *ambience* is used more than twice as often as *ambiance*. Though the *New York Times* style manual specifies *ambience*, its editors (like all other editors) have occasionally stumbled—e.g.: “Ratings reflect the reviewer’s reaction to food, *ambiance* [read *ambiance*] and service with price taken into consideration.” “What Lies Beneath: Serious Mexican Food,” *N.Y. Times*, 11 Sept. 2002, at F6.

LANGUAGE-CHANGE INDEX

ambiance for *ambiance*: Stage 4

Current ratio (*ambience* vs. *ambiance*): 2.3:1

ambulance /am-byə-lən[t]s/ is often mispronounced /am-byoo-lan[t]s/.

***ameba**. See **amoeba**.

ameliorable. So formed—not **amelioratable*. See -ABLE (D) & -ATABLE.

ameliorate; ***meliorate**. *Ameliorate* is the standard term meaning “to make or become better.” E.g.: “If injustices abound in that region—as they do almost everywhere—they will not be *ameliorated* by heaping invective on parties to the conflict.” Letter of John B. Aycrigg, *Denver Post*, 23 Apr. 1997, at B6. **Meliorate* is a NEEDLESS VARIANT.

Ameliorate does not mean “to lessen”—e.g.: “It would also allow a return to more normal inventory management by *ameliorating* [read *lessening* or *reducing*] the likelihood of stumbling into the four pitfalls described earlier.” Peter A. Meyer, “No One Is Laughing at Good News vs. Bad News in Corn Processing,” *Milling & Baking News*, 18 Feb. 1997, at 19. Cf. **vitiate**.

LANGUAGE-CHANGE INDEX

ameliorate misused for *lessen*: Stage 1

amen (the conclusion to a prayer) may be pronounced either /ah-men/ or /ay-men/.

amenability. See **amenity**.

amenable (= [1] suitable for a particular type of treatment, or [2] willing to accept something without argument) is preferably pronounced /ə-meen-ə-bəl/—not /ə-men-ə-bəl/.

amend; **emend**. Both derive from the Latin verb *emendare* (= to free from fault). *Amend* = (1) to put right, change; or (2) to add to, supplement. This is the general word. The other is more specialized. *Emend* = to correct (as a text). The corresponding nouns are *amendment* and *emendation*.

amenity; **amenability**. These words, of unrelated origin, are occasionally confused. *Amenity* = (1) agreeableness <as a host, he showed great amenity to his guest’s demands>; (2) something that is comfortable or convenient <the many amenities at the hotel make

guests quite happy>; or (3) a basic social convention <it’s not just that he burps aloud—he seems to be unaware of most gustatory amenities>. *Amenability* = (1) willingness to approve, act, or yield <the bank’s amenability to make the loan>; (2) legal responsibility; answerability <the corporation’s amenability to suit in New York>; or (3) capability of being treated or tested <the victim’s amenability to psychiatric treatment>.

The words are pronounced /ə-men-i-tee/ and /ə-meen-ə-bil-i-tee/.

American. As an adjective limited in application to the United States, this word has long been known to be anomalous. All North Americans and South Americans have claim to being called *Americans*, and yet the language has never quite recognized this fact: “In strict logic such a use is not justifiable, but common practice and understanding have long since put the word beyond the jurisdiction of logic.” 1 George Philip Krapp, *The English Language in America* xiii (1925). Perhaps one reason for the firmly established usage is the lack of any reasonable alternative (*United Statesian*?).

American government. This phrase is acceptable when you’re talking about the way the United States is governed, as opposed to “the government” as an entity—e.g.:

- “This seminar, dealing with congressional policies and *American government*, is presented by the Washington Workshops Foundation and will be attended by high school leaders from across the country.” “School News,” *Portland Press Herald*, 20 Dec. 1995, at B7.
- “The liberal welfare-state model of *American government* has run its course . . .” John F. Stacks, “Good Newt, Bad Newt,” *Time*, 25 Dec. 1995, at 90.

When you’re speaking of the governing powers, though, the proper phrase is *U.S. government*—e.g.:

- “But such a situation also means that while the Chinese deal harshly with pro-democracy forces, the *American government* [read *U.S. government*] has very little leverage with which to pressure Beijing to alter its behavior.” “Again, What About China?” *Wash. Times*, 23 Dec. 1995, at C2.
- “The man said he was a retired military officer from Syria, which the *American* [read *U.S.*] government deems a sponsor of terrorists.” Diana Jean Schemo, “Diploma Mill Concerns Extend Beyond Fraud,” *N.Y. Times*, 29 June 2008, at A14.

When *American government* is used with *an* or *any*, the reference is to the presidential administration at any particular time. *An* or *any American government* is the appropriate hypothetical phrase—e.g.:

- “Would *any American government* take similar risks with U.S. security, including delivering strategically important support in Congress?” Yossi Ben Aharon, “Momentum Madness,” *Jerusalem Post*, 20 Dec. 1995, at 6.
- “At any rate, *an American government* can serve best by putting immediate American interests above almost everything.” “Case for Bosnia Move Not Just U.S. Interests,” *Dayton Daily News*, 20 Dec. 1995, at A14.

AMERICANISMS AND BRITICISMS. A. Generally. Although this book points out many differences between AmE and BrE, that is not its primary purpose. For guidance on distinctions not covered here, see Norman W. Schur, *British English A to Zed* (1987); Norman Moss, *British/American Language Dictionary* (1984); and Martin S. Allwood, *American and British* (1964). For differences in editorial style, compare *The Chicago Manual of Style* (16th ed. 2009) with Caroline Drake & Maureen Leach, *Butcher's Copy-Editing: The Cambridge Handbook for Editors, Copy-Editors, and Proofreaders* (4th ed. 2006).

B. Americanisms Invading BrE. During the 20th century, the English language's center of gravity gradually shifted from England to the United States. As a result, the most influential linguistic innovations occur in AmE, as a further result of which BrE speakers frequently bemoan American encroachments. For example, on 7 February 1995, Steve Ward of Bristol said in a letter published in *The Times*: "Sir, I am disappointed to see that even *The Times's* leader columns are succumbing to the relentless invasion of American English. In your leader of January 28, on the National Lottery, you state that 'stores which sell tickets for the draw have lottery-only lines on a Saturday.' Do you mean: 'Shops . . . have lottery-only queues'?"

C. Briticisms Invading AmE. To some extent, transatlantic linguistic influences are reciprocal. In the late 20th century, it became common in AmE to use the Briticism *take a decision* (as opposed to the usual AmE *make a decision*). And many Americans have begun using *amongst* and *whilst*. (See **among (A)** & **whilst**.) On the whole, though, BrE's influences on AmE are so slight that few people take any notice.

D. Related Entries. For several other differences between the two major strains of English, see **-ER (B)**, **-OR & SPELLING (B)**.

amicable; amiable. The first came directly from Latin, the second from French, but the two forms are at base the same word. Yet they have undergone DIFFERENTIATION. *Amiable* applies to people <an amiable chap>, *amicable* to relations between people <an amicable resolution>.

Amicable is pronounced /**am**-i-kə-bəl/—not /ə-**mik**-ə-bəl/. *Amiable* is pronounced /**ay**-mee-ə-bəl/.

amicus curiae; friend of the court. These phrases refer to "someone who is not a party to a lawsuit but who petitions the court or is requested by the court to file a brief in the action because that person has a strong interest in the subject matter." *Black's Law Dictionary* 102 (10th ed. 2014). Lawyers write *amicus curiae*; journalists often write *friend of the court*. See **LEGALESE**.

The Latin phrase is variously pronounced. The singular is /ə-**mee**-kəs **kyoor**-ee-1/ or /ə-**mī**-kəs **kyoor**-i-ee/

and the plural (*amici curiae*) is /ə-**mee**-kee **kyoor**-ee-1/ or /ə-**mee**-see/ or /ə-**mī**-kee/ or /ə-**mī**-see/. Another acceptable pronunciation of the first word—a common pronunciation in AmE—is /**am**-ə-kəs/.

Current ratio (*amicus curiae* vs. *friend of the court*): 5:1

amid. A. And among. *Amid* usually connotes position—e.g.: "Amid the public tributes, the one from Felix Frankfurter stood out." Barry Siegel, *Claim of Privilege* 186 (2008). *Among* often connotes a mingling—e.g.: "To see the true [Tom] Coughlin, watch him *among* friends and family, away from football." John Branch, "Coughlin's Playful Side Has Deep Roots in Florida," *N.Y. Times*, 6 May 2008, at D1.

B. And amidst; in the midst of; mid; 'mid. *Amid* and *amidst* are slightly quaint words, especially the latter. Often the word *in* or *among* serves better. (But see **among (B)**.) Since the mid-19th century, *amid* has predominated in AmE and BrE alike. Today it is about 20 times as common as *amidst*.

In the midst of, a wordy equivalent, has always been more common than *amid*. It often lends a better cadence, as in these titles:

- David Freeman Hawke, *In the Midst of a Revolution* (1961).
- Louis Breger, *Freud: Darkness in the Midst of Vision* (2000).
- Geoffrey Warner, *In the Midst of Events: The Foreign Office Diaries and Papers of Kenneth Younger* (2005).

The preposition *mid* is poetic in all uses except the traditional compounds (e.g., *midnight*, *midstream*) or scientific uses; if the word is appropriate, however, *mid* is better than *'mid*.

***amn't I?** See **aren't I?**

amoeba; *ameba. Since the mid-19th century, *amoeba* has been the standard spelling in all varieties of English. During the 1920s, AmE seemed close to adopting **ameba* as standard, but that spelling has long since receded.

Current ratio: 11:1

amok; amuck. *Amok* is now the standard term. Usage authorities once held firmly to the idea that *amuck* is preferable to *amok*—solely on the mistaken notion that *amuck* is older in English and *amok* (though a better transliteration of the Malaysian word) was a late-coming "didacticism." In fact, both forms date from the 17th century. And in any event, *amok* became predominant in BrE about 1905 and in AmE about 1955. It is three times as common as *amuck* in print sources today—e.g.: "But by 2005, federal banking regulators were beginning to worry that mortgage lenders were running *amok* with exotic and often inscrutable new products." Edmund L. Andrews, "Fed Shrugged as Subprime Crisis Spread," *N.Y. Times*, 18 Dec. 2007, at

A1. But some publications fight the trend—e.g.: “One symptom of lobbying run *amuck* is the proliferation of earmarks—spending placed in legislation without public review, for specific projects.” Mike Allen & Perry Bacon Jr., “Can This Elephant Be Cleared Up?” *Time*, 15 Jan. 2006, at 22.

The long-term effect of the prevalent spelling may be that it will be mispronounced, as happens when the spelling doesn’t match the sound. People may well come to say /ə-**mahk**/ instead of the correct /ə-**mæk**/, just as so many mispronounce *buttock* as /bət-tahk/ instead of the correct /bət-ək/.

LANGUAGE-CHANGE INDEX

amok for *amuck*: Stage 5

Current ratio (*amok* vs. *amuck*): 3:1

among. **A. And *amongst*.** Most forms ending in *-st*, such as *whilst* and *amidst*, are ARCHAISMS in AmE. *Amongst* is no exception: in AmE it is pretentious at best. E.g.: “Imagine a city where the electricity and water companies are owned by the local authorities and, thanks to progressive planning and construction, prices are *amongst* [read *among*] the lowest in the country.” Michael Dibdin, “Seattle Is the America Thatcher Ignored,” *Seattle Times*, 17 Jan. 1997, at B5.

Amongst is more common and more tolerable in BrE, where it doesn’t suggest affectation—e.g.:

- “With the deft wit of a real technician, Marber sets up the relationships *amongst* the employees.” Michael Billington, “A Dab Hand,” *Guardian*, 11 Feb. 1995, at 28.
- “But imagine the in-take of breath (muted) *amongst* the grey old heads bending over their Tupperware lunchboxes.” Sue Mott, “Champion of British Sport,” *Daily Telegraph*, 9 Dec. 1996, at 10.

Cf. **amid (b); whilst.**

Current ratio (AmE): 17:1

Current ratio (BrE): 8:1

B. With Mass Nouns. Generally, *among* is used with plural nouns and *amid* with mass nouns. Hence one is *among* friends but *amid* a crowd. (See COUNT NOUNS AND MASS NOUNS & **amid**.) *Among* is frequently misused for other prepositions—e.g.:

- “Incompetence in writing English is widespread *among* [read *in* or *within*] the legal profession.” Robert W. Benson, “The End of Legalese,” 13 *N.Y.U. Rev. L. & Soc. Change* 519, 570 (1984–1985).
- “*Among* [read *With*] the president’s contingent are Mr. Robert Mosbacher, commerce secretary, and around 20 top U.S. executives.” Stefan Wagstyl, “Japan Promises to Boost U.S. Imports,” *Fin. Times*, 8 Jan. 1992, at 1.
- “*Among* [read *Contributing to*] last year’s toll was a gas blast that leveled part of a New York City block, killing eight people and injuring 48 more.” Nick Penzenstadler, “Scientists: Gas-Pipe Upgrades Paying Off in Cities,” *Greenville News* (S.C.), 10 Sept. 2015, at B3.

LANGUAGE-CHANGE INDEX

among used with a mass noun: Stage 2

C. And *between*. See **between (A)**.

amoral. See **immoral**.

amorous; amatory; *amative. *Amorous* = (1) strongly moved by love and sex; (2) enamored; or (3) indicative of love. *Amatory* = of, relating to, or involving sexual love. **Amative* is a NEEDLESS VARIANT, not of *amatory* but of *amorous*.

***amortise.** See **amortize**.

amortization; *amortizement. The latter is a NEEDLESS VARIANT.

Current ratio: 3,570:1

amortize; *amortise. The *-ize* form is standard in both AmE and BrE.

Current ratio: 16:1

***amortizement.** See **amortization**.

amount; number. The first is used with mass nouns, the second with count nouns. Hence we say “an increase in the *amount* of litigation” but “an increase in the *number* of lawsuits.” But writers frequently bungle the distinction—e.g.:

- “The *amount* [read *number*] of ex-players who talked shows that the authors did their homework.” John Maher, “If Notre Dame Has to Cheat, Who Can Win Fairly?” *Austin Am.-Statesman*, 20 Sept. 1993, at D1, D9.
- “But they seldom mention the great *amount* [read *number*] of people who have been lifted out of poverty over the last few hundred years.” Bjorn Lomborg, *The Skeptical Environmentalist* iv (2001).
- “Concerning fashion, artistic education at schools, children and youth literature, we can connect the high *amount* [read *number*] of women in these fields with their gender role model.” Elisabeth Mayerhofer, “Exchange, Deception, and Disillusionment,” in *Exchange and Deception: A Feminist Perspective* 133, 140 (Caroline Gerschlagler & Monika Mokre eds., 2002).

See COUNT NOUNS AND MASS NOUNS.

LANGUAGE-CHANGE INDEX

amount misused for *number*: Stage 2

Current ratio (*number of people* vs.

**amount of people*): 84:1

amount of, in the. See **check (b)**.

amphibology; amphiboly. The form *amphibology* (= a quibble; ambiguous wording) predominates in AmE, *amphiboly* in BrE. E.g.: “*Amphibology* [occurs] when a phrase or sentence has two often-contrary meanings.” Stephen Wilbers, “Can’t Say Too Many Good Things About Clarity,” *Orange County Register*, 15 May 1995, at D10.

The corresponding adjectives are *amphibological* and *amphibolous*.

ample (= abundant; plenty of), according to H.W. Fowler, should refer to abstract things <ample goodwill> but never to substances of indefinite quantity <ample foliage> (*FMEU1* at 19). Fowler’s view appears to follow the *OED*’s principal definition, which reads: “Of things immaterial: Large in extent or amount, extensive, abundant, excellent.” Some writers use it in that sense, to good effect—e.g.: “One

advantage of the midwinter darkness is the *ample* opportunity it (in theory) provides for gazing at the colorful northern ignis.” Wayne Curtis, “In Hot Water,” *Atlantic*, Dec. 2006, at 155. But the distinction between immaterial and material things is hard to sustain in actual usage and leads to idle hairsplitting. Today the word frequently and naturally applies to material substances—e.g.:

- “The bread that came with it was tasty, with *ample* butter included.” Rick Gershman, “At the Greenery, Dinner Take-out Is a Cut Above,” *St. Petersburg Times*, 11 Jan. 1996, at D3.
- “Mortar must be cleaned up with *ample* water before it starts to harden.” John O’Dell, “Bigger and Boulder,” *L.A. Times*, 25 Jan. 1997, Home Design §, at 1.
- “China’s tree-planting campaign has successfully reforested areas with *ample* rain, says Luo.” Dennis Normile, “Ecology: Getting at the Roots of Killer Dust Storms,” *Science*, 20 July 2007, at 317.

amuck. See **amok**.

amuse. See **bemuse**.

an. See **a (A)**.

***anachronic.** See **anachronistic**.

anachronism; *parachronism; prochronism; archaism. All these words indicate that, in some respect, the time is out of joint. An *anachronism* is any error in chronology, or something that is chronologically out of place <the Western movie contained several anachronisms, including a jet’s vapor trail visible in the opening scene>. **Parachronism* is a NEEDLESS VARIANT of *anachronism*. A *prochronism* is a reference to a person, thing, or event at a date earlier than it existed <Shakespeare’s notorious prochronism of putting a striking clock in *Julius Caesar*>. An *archaism* is something archaic, outmoded, or old-fashioned <the Senate’s creaky archaisms, such as the two snuffboxes filled constantly with fresh snuff, can be endearing>. See **ARCHAISMS**.

anachronistic; *anachronic; *anachronous. The first is the standard adjective. The second and third are NEEDLESS VARIANTS.

Current ratio: 148:1:1

ANACHRONYMS. If you don’t have broadband Internet service, you may still connect by *dial-up* service. If you phone someone but get a busy signal, you may try again by punching the button on your phone that is labeled *redial*. But try to buy a telephone that actually has a dial on it and you’ll come home empty-handed. The *dial* in *dial-up* and *redial* is an anachronism: a word that lives on in a figurative sense even though technology or culture or history has rendered its literal sense absurd.

Anachronyms live on longer than might be expected when there is no ready replacement (say *dial*

and people immediately think *telephone*). So we still “tune in” to a radio or television program even though there is no conventional tuner in digital sets, because how else are we going to select a station or channel?

But anachronyms live on by sheer force of habit as well. We still say *tin can* even though the cans are made of steel these days. It’s still common to hear *tin-foil*, even though the technically correct *aluminum foil* is prevalent. When we send an e-mail, we may still include a *carbon copy* addressed to a third party. A few old fogeys still keep their beverages cool in the *icebox*. Cf. **RETRONYMS**.

anacoluthon (= an instance of syntactic incoherence or grammatical inconsistency within a sentence) predominantly makes the Greek form of the plural (*anacolutha*) in AmE and BrE alike—not **anacoluthons*.

Current ratio: 4:1

anaemia. See **anemia**.

anaesthetic. See **anesthetic** & **AE**.

analects; analecta. The English plural *analects* predominates over the Latin plural *analecta*. See **PLURALS (B)**.

Current ratio: 1.4:1

analog. See **analogue**.

analogism. See **analogy**.

analogous; analogical. These words mean different things. *Analogous* /ə-**nal**-ə-gəs/ = parallel in certain respects. The word should be avoided where *similar* suffices, but the two are not perfectly synonymous. What is *analogous* serves as an analogy for guidance, while *similar* carries no such connotation.

Analogical /an-ə-**loj**-i-kəl/ = of, by, or expressing an analogy. E.g.: “Much of constitutional law is a tradition of ‘common law’ development, as judges specify and alter constitutional meaning through *analogical* reasoning in the course of deciding individual disputes.” Cass R. Sunstein, “Making Amends,” *New Republic*, 3 Mar. 1997, at 38.

analogue; analog. An *analogue* is a thing that is analogous to something else—e.g.: “Apparently, the planned conformity of Levittown and its *analogues*, coupled with the close proximity of the world’s media capital, makes it the perfect crucible for ambient celebrities.” G. Beato, “Long Island’s New Breed of Low-Wattage Celebs,” *Newsday* (N.Y.), 7 Sept. 1997, at G6. The spelling *analog* should be confined to technical contexts involving physics or computers. For a comment on the decline of the *-ue* form, see **-AGOG(U)**.

analogy; analogism. An *analogy* is a corresponding similarity or likeness. In logic, *analogy* means “an inference that, if two or more things are similar in some respects, they must be alike in others.”

Analognism is a fairly rare term meaning “reasoning by analogy” <analognism is not the most rigorous form of reasoning>.

analyse. See **analyze**.

analysis; *analyzation. The first, of course, is the standard word. **Analyzation*, a pseudo-learned variant of *analysis*, is a NONWORD—e.g.:

- “Dr. David L. Carnes Jr. . . . will be heading the computer *analyzation* [read *analysis*] project.” Paul H. Carr, “Dentists Drill into Big Market with Root Tool,” *San Antonio Bus. J.*, 27 June 1988, at 1.
- “The module assists in the computerized design and performance *analyzation* [read *analysis*] of wooden pallets and skids.” “Company Connections,” *Buffalo News*, 28 Dec. 1996, at C14.
- “The younger Dylan has grown tired of such *over-analyzation* [read *overanalysis*].” Aaron Wherry, “Generation Gap: The Wallflowers Have a New Album,” *Nat’l Post*, 3 Dec. 2002, at B4.

Cf. ***paralyzation**.

LANGUAGE-CHANGE INDEX

**analyzation* for *analysis*: Stage 1

Current ratio (*analysis* vs. **analyzation*): 21,501:1

analyst; analyzer; *analyzist. The first is standard in reference to a person who analyzes. The second is a NEOLOGISM for software that examines data for patterns, relationships, etc. The third is a NEEDLESS VARIANT.

analytical; analytic. No DIFFERENTIATION has surfaced between the two. In modern print sources, the long form is twice as common as the short, perhaps because it is perceived as being generally more euphonious. This being so, *analytic* could justifiably be labeled a NEEDLESS VARIANT—except in the few SET PHRASES denoting disciplines or schools of thought, such as *analytic geometry* and *analytic philosophy*.

Current ratio: 2:1

***analyzation.** See **analysis**.

analyze; analyse. The first is AmE, the second BrE.

***analyzer; *analyzist.** See **analyst**.

anonym. See **anonym**.

anarchy; anarchism. *Anarchy* is a state of lawlessness or disorder in society. *Anarchism* is a political theory antithetical to any form of government. The preferred adjectival forms are *anarchic* and *anarchistic*.

Anchoragite; *Anchoragite. The first spelling is standard. See DENIZEN LABELS.

anchor baby, a term dating from the mid-1990s, didn’t come to widespread public attention until the 2016 U.S. presidential campaign. The phrase refers to a child born in the United States of a mother who has illegally crossed the border or overstayed her visa specifically to benefit from the Birthright Citizenship Clause of the U.S. Constitution, which makes every

person born on U.S. soil a citizen of the country. Although the extent of the anchor-baby “problem” is a matter of debate, its existence is not. It is not clear whether opponents of the term object to the term itself or to the public highlighting of the existence of the issue. When asked to suggest an alternative term, opponents often cite *baby*—which, of course, is a vague hypernym that obscures the denotative fact that *anchor baby* is intended to convey. Arguments about the term and what it denotes will play out in coming years. Some will argue that it’s a snarl-phrase, and others will insist that it’s a straightforward descriptor uttered without malice or enmity. Any proposed synonym that doesn’t approach DOUBLESPEAK is likely to inflame the debate—which suggests that the difficulty is not merely with the words themselves.

anchorite; *anchoret. This word, meaning “hermit,” is predominantly spelled *anchorite*. In AmE, the preference is overwhelming.

Current ratio: 18:1

***anchorperson.** See **SEXISM (C)**.

anchors aweigh; anchors away. The linguistic history here is murky. The original phrase, in the 19th century, was indeed *anchors away*—and that form is about as common today in BrE as *anchors aweigh*. But in AmE, *anchors aweigh* has been the predominant form, thoroughly established, since the 1920s.

Sometimes—in especially poor usage—*aweigh* is corrupted into *way*, often as part of a lame pun. E.g.: “Anchors *way* [read *aweigh*?]: Former Chicago news anchors Larry Mendte and Giselle Fernandez . . . manage not to bump into each other.” Marla Hart, “Psssst!” *Chicago Trib.*, 10 Dec. 1996, at C1.

For a related blunder—**under weigh* for *underway*—see **underway**.

Current ratio (World English): 2:1

anchovy (the small salty fish) is pronounced /**an**-choh-vee/ in AmE—not /**an**-**choh**-vee/. In BrE, the second syllable commonly has a schwa sound: /**an**-chə-vee/.

ancillary (= connected with or supporting something else) is preferably pronounced /**an**-si-ler-ee/ in AmE but /**an**-sil-ə-ree/ in BrE.

and. A. Beginning Sentences with. It is rank superstition that this coordinating conjunction cannot properly begin a sentence:

- “[T]he idea that a sentence should *never* begin with [*and*] is absurd. It would be quite as sensible to and worthy of consideration to insist that a sentence should never begin with *but* or *nor*.” S.W.W., “‘And’ at the Beginning of a Sentence,” 19 *N.Y. Teacher & Am. Educ. Monthly* 204, 205 (May 1870).
- “Objection is sometimes taken to employment of *but* or *and* at the beginning of a sentence; but for this there is much good usage.” Adams Sherman Hill, *The Principles of Rhetoric* 88 (rev. ed. 1896).

- “Another stumbling-block to a certain type of academic mind is the conjunction *and*. It is often laid down as a rigid rule that a sentence should never begin with *and*. This was a point on which my own schoolmaster was inflexible. And quite recently a training college student whom I asked to comment on a passage from Malory condemned him for using ‘the objectionable conjunction *and*.’ And printers have an ugly trick of emasculating my meaning by turning my periods into commas because they happen to be followed by *and*. Taking down my Bible and opening it at random, I find that the eighth chapter of Exodus contains thirty-two sentences, twenty-five of which begin with *and*.” Philip Boswood Ballard, *Teaching and Testing English* 26 (1939).
- “In medieval prose . . . *and* is a dominant word, especially at the beginning of the sentence. One sentence follows on another in simple succession, with a conjunction as headword representing a link in a chain, or (to jump to another metaphor) a single step in the chronological development of the narrative. The pattern, as has already been pointed out, is familiar to us in the Authorized Version.” G.H. Vallins, *The Pattern of English* 83 (1956).
- “That it is a solecism to begin a sentence with *and* is a faintly lingering superstition. The *OED* gives examples ranging from the 10th to the 19th c.; the Bible is full of them.” Ernest Gowers, *FMEU2* at 29.
- “A prejudice lingers from the days of schoolmarmish rhetoric that a sentence should not begin with *and*. The supposed rule is without foundation in grammar, logic, or art. *And* can join separate sentences and their meanings just as well as *but* can both join sentences and disjoin meanings.” Wilson Follett, *MAU* at 64.
- “Many years ago schoolteachers insisted that it was improper to begin a sentence with *and*, but this convention is now outmoded. Innumerable respected writers use *and* at the beginning of a sentence.” William Morris & Mary Morris, *Harper Dictionary of Contemporary Usage* 37 (2d ed. 1985).
- “*And* the idea that *and* must not begin a sentence, or even a paragraph, is an empty superstition. The same goes for *but*. Indeed either word can give unimprovably early warning of the sort of thing that is to follow.” Kingsley Amis, *The King’s English* 14 (1997).
- “Mr Rossiter quotes the observation of a B.B.C. official that his talks were ‘too much the spoken word for *The Listener*.’ *And* that in itself is significant. It means that in the medium of print, the long established syntax of the sentence, with its complex relationships, still holds its own. But what will happen in the future it is too early, as yet, to prophesy.” G.H. Vallins, *The Pattern of English* 94 (1956; repr. 1957).
- “A dictionary is good only insofar as it is a comprehensive and accurate description of current usage. *And* to be comprehensive it must include some indication of social and regional associations.” Bergen Evans, “But What’s a Dictionary For?” in *The Ways of Language* 77, 79 (Raymond J. Pflug ed., 1967).
- “If we view the paragraph as a *discursive development of a proposition*, we can predict that the topic sentence of the paragraph in question will generate a development based on objectives. *And* this is exactly what we do find.” W. Ross Winterowd, *Rhetoric: A Synthesis* 147 (1968).
- “*And* one had better make use of whatever beauty, elegance, riches the translator’s language possesses, and hope that something emotionally, intellectually, aesthetically equivalent will emerge.” John Simon, *The Sheep from the Goats* 397 (1989).
- “*And* there is, come to think of it, that unsounded *b*, to keep alive some small doubt.” Christopher Ricks, *Beckett’s Dying Words* 51 (1993).

B. For or. Oddly, *and* is frequently misused for *or* where a singular noun, or one of two nouns, is called for—e.g.: “While third-party candidates have mounted serious challenges for senator *and* [read *or*] governor in almost two dozen states this year, building an effective third-party apparatus is rare.” Jonathan Rabinovitz, “Weicker’s Victory: Lasting Legacy?” *N.Y. Times*, 5 Oct. 1994, at A13. (The phrase should be *senator or governor*; as written, the sentence says that in each of almost 24 states third-party candidates were running for both senator and governor—an idea belied by the context of the article.)

C. In Enumerations. Some writers have a tendency, especially in long enumerations, to omit *and* before the final element. To do so is often infelicitous: the reader is jarred by the abrupt period ending the sentence and may even wonder whether something has been omitted. One may occasionally omit *and* before the final element in an enumeration with a particular nuance in mind. Without *and*, the implication is that the series is incomplete—rhetoricians call this construction “asyndeton.” With *and*, the implication is that the series is complete. This shade in meaning is increasingly subtle in modern prose.

D. Serial Comma Before *and* in Enumerations. On the question of punctuating enumerations, the better practice is to place a comma before the *and* introducing the final element. See **ENUMERATIONS (B)** & **PUNCTUATION (D)**.

E. *But* misused for *and*. See **but (c)**.

Schoolteachers may have laid down a prohibition against the initial *and* to counteract elementary-school students’ tendency to begin every sentence with *and*. As Follett and Amis point out, the same superstition has plagued *but*. See **but (A)** & **SUPERSTITIONS (D)**.

The very best writers find occasion to begin sentences with *and*—e.g.:

- “*And* the technique of the approach to poetry has not received half so much serious systematic study as the technique of pole-jumping.” I.A. Richards, “An Experiment in Criticism” (1929), in *Richards on Rhetoric* 25, 31 (Ann E. Berthoff ed., 1991).
- “*And* the thought of being engaged to a girl who talked openly of fairies being born because stars blew their noses, or whatever it was, frankly appalled me.” P.G. Wodehouse, *Right Ho, Jeeves* 95 (1934; repr. 1986).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

*and etc. See etc. (B).

and/or. A legal and business expression dating from the mid-19th century, *and/or* has been vilified for most of its life—and rightly so. To avoid ambiguity, don't use it. Many writers—especially lawyers—would be surprised at how easy and workable this solution is.

Or alone usually suffices. If you are offered coffee or tea, you may pick either (or, in this case, neither), or you may for whatever reason order both. This is the ordinary sense of the word, understood by everyone and universally accommodated by the simple *or*.

But in two situations this ordinary sense of *or* does not accomplish everything we need. Both involve the level of exclusivity between the elements on either side of *or*. One comes up in the standard statement of punishment, “a \$1,000 fine or a year in jail *or both*.” The other comes up when the choices are mutually exclusive. If that exclusivity is important to point out—if the judge must choose between a fine and jail, for instance—the writer may substitute *but not both* for *or both* in the previous example. But these situations generally arise only when linguistic rigor is imperative, as in legal drafting.

and particularly. See **particularly**.

androcracy. See GOVERNMENTAL FORMS.

and which. See **which (D)**.

***anecdotalist.** See **anecdotalist**.

anecdote. **A. Adjective Forms:** *anecdotal*; **anecdotic*; **anecdotalical*. The form *anecdotal* is standard; the other forms are NEEDLESS VARIANTS. In reference to evidence, *anecdotal* refers not to anecdotes, but to personal experiences reported by one or more people.

Current ratio (the adjectives): 371:3:1

B. And antidote. *Anecdote* (= a brief story, usu. true and intended to amuse) is sometimes confused with *antidote* (= something that counteracts poison), resulting in a MALAPROPISM—e.g.:

- “One dog was poisoned but we found the *anecdote* [read *antidote*].” Dennis Pollock, “Home Alone Is Not This Guy’s Choice During Holidays,” *Fresno Bee*, 5 Dec. 1994, at F2.
- “The Oilers were 6–6 and staggering and looking for an *anecdote* [read *antidote*] to whatever was poisoning their system.” John McClain, “On the Road Again,” *Houston Chron.*, 22 Dec. 1996, Sports §, at 4.
- “He went to the hospital quickly but still died because there is no *anecdote* [read *antidote*] for glory lily poisoning.” Katherine Snow Smith, “Know What to Do if Your Child Eats a Toxic Plant,” *St. Petersburg Times*, 7 Apr. 2002, Neighborhood Times §, at 12.

The opposite error is less common, but it does occur—e.g.:

- “Laughter could be heard. It was the apparent jovial reunion following a successful hunt, no doubt accompanied by a few amusing *antidotes* [read *anecdotes*] of Spade’s undress.” John M. Bishop, *Casting Shadows with Shamans* 21 (2003).
- “Amanda delighted the two women by playing the consummate hostess, serving tea and cookies to their guest, telling funny *antidotes* [read *anecdotes*] about the cats,

and describing the dolls in remarkable detail.” R.C. Morris, *Tender Prey* 162 (2005).

LANGUAGE-CHANGE INDEX

1. *anecdote* misused for *antidote*: Stage 1
 2. *antidote* misused for *anecdote*: Stage 1
- Current ratio (*amusing anecdote* vs. **amusing antidote*): 190:1

anecdotalist; ***anecdotalist**. The first is standard; the second is a NEEDLESS VARIANT that flourished for a time in the late 20th century.

anemia; **anaemia**. Denoting a medical condition in which one’s blood has too few red blood cells, *anemia* has been the standard spelling in AmE only since about 1915. From the time when the word was first used in English in the 1820s, the BrE spelling has predominantly been *anaemia*. But the two spellings have been locked in close competition in BrE since about 1980.

anemone /ə-**nem**-ə-nee/ (= [1] a flower of the buttercup family; or [2] a flowerlike sea polyp) is so spelled—not **anemome*. But the misspelling (like the mispronunciation /ə-**nen**-ə-mee/) is common—e.g.:

- “On the right rear tail brilliantly colored clown fish have made their home in a sea *anemome* [read *anemone*], waving in the warm water like a happy baseball crowd.” Bob Howarth, “Guadalcanal’s Ironbottom Sound: A Terrible Beauty,” *Indianapolis Star*, 6 Aug. 1995, at K1.
- “Two further points, illustrated by the *anemome* [read *anemone*] fish, are worth highlighting.” Michael Begon, Colin R. Townsend & John L. Harper, *Ecology: From Individuals to Ecosystems* 555 (2006) (word misspelled five times on page).

The phrase *any money* can be a helpful mnemonic device for spelling, *an M on E* for pronunciation. See METATHESIS.

LANGUAGE-CHANGE INDEX

anemome misspelled **anemome*: Stage 1
Current ratio: 119:1

anent. Theodore M. Bernstein writes, “Except in legal usage, *anent* [= about] is archaic and semiprecious.” *More Language That Needs Watching* 24 (1962). He could have omitted *except in legal usage* and *semi*. Perhaps the best statement is that *anent* “is a pompous word and nearly always entirely useless.” Percy Marks, *The Craft of Writing* 47 (1932). Common in the 17th century, it has been in retreat ever since. See ARCHAISMS.

anesthesia. See **anesthetic**.

anesthesiologist. See **anesthetist**.

anesthetic, n.; **anesthesia**. An *anesthetic* (e.g., ether) causes *anesthesia* (= loss of sensation). Writers often administer the wrong term—e.g.: “Coroner’s investigators said Jackie was ‘very nervous’ and was given *anesthesia* [read *an anesthetic*] by dentist Thien Luong, who was extracting a molar.” John Asbury, “Death of Girl Who Choked on Tooth Ruled Accidental,” *Press Enterprise* (Riverside, Cal.), 27 Aug. 2008, at C1.

AmE prefers the spellings above; the BrE spellings are *anaesthetic* and *anaesthesia*. See AE.

LANGUAGE-CHANGE INDEX
anesthesia misused for *anesthetic*: Stage 2
 Current ratio: 6:1

anesthetist; anesthesiologist. Generally, *anesthetist* will serve for “someone who administers an anesthetic.” The term dates from the late 19th century. *Anesthesiologist*, of World War II vintage, refers specifically to a physician specializing in anesthesia and anesthetics.

aneurysm (= a bulged blood vessel caused by disease) is the standard spelling. **Aneurism*, an etymologically inferior spelling that was common in the 19th century, is best avoided.

Current ratio: 24:1

Angeleno; *Los Angelean. The first is the standard term for someone who hails from or lives in Los Angeles. The second is a fairly uncommon equivalent. See DENIZEN LABELS.

Current ratio: 45:1

angina pectoris (= a medical condition that causes chest pains because of a weak heart) is pronounced /an-ji-nə pek-tə-ris/. It is typically shortened to *angina*.

angst (= strong anxiety and intense unhappiness brought on by worries) is traditionally pronounced in the German way (/ahngkst/), but today /ayngkst/ or /angkst/ predominates in AmE and BrE alike. See GERMANICISMS.

anilingus; *anilinctus. The term denotes a nonstandard thing, of course, but the standard form is *anilingus*. **Anilinctus* is a NEEDLESS VARIANT that many dictionaries record but that almost never appears in print. The term dates from the mid-20th century.

Because of its etymological association with *anal*, writers frequently, by false analogy (ahem) with that word, use a deviant spelling—e.g.:

- “The list contained 20 words for sexual acts that spanned the alphabet, from *anilingus* [read *anilingus*] to zoerasty.” Teresa Burney, “Sex Definitions Perplex Council,” *St. Petersburg Times*, 9 Sept. 1993, Pasco Times §, at 1.
- “It was Carrie and chums who persuaded a couple of my friends to experiment with *anilingus* [read *anilingus*].” “Learn to Love,” *Guardian*, 4 Feb. 2003, at P20.

Cf. **cunnilingus**.

LANGUAGE-CHANGE INDEX
anilingus misspelled **anilingus*: Stage 4
 Current ratio (a shocker): 1:1.5

ANIMAL ADJECTIVES. If you have an English–Latin dictionary, look up any animal to find the corresponding Latin term. Then look up that term in an unabridged English-language dictionary and you’re

likely to find an English adjective—perhaps rare, but there nevertheless—ending in *-ine*. Some of these, of course, are well known:

asinine	=	of, relating to, or like an ass (donkey)
bovine	=	of, relating to, or like a cow
canine	=	of, relating to, or like a dog
elephantine	=	of, relating to, or like an elephant
equine	=	of, relating to, or like a horse
feline	=	of, relating to, or like a cat
serpentine	=	of, relating to, or like a snake

Others are somewhat less well known. Aficionados of Sherlock Holmes know that Sir Arthur Conan Doyle described Holmes more than once as having an *aquiline* nose. (That means “eagle-like.”) Others that are maddeningly well known appear from time to time—e.g.:

- “Jagger [acted as if he were] in the midst of a shopping spree, and the lean, *leonine* singer was a pounding, preening song-and-dance man—a kindlier version of the ‘Clockwork Orange’ rounder he played in the ‘70s.” Greg Kot, “Stones Are Risk-Free, but Rockers in the End,” *Chicago Trib.*, 25 Sept. 1997, at 2. (*Leonine* = of, relating to, or like a lion.)
- “‘You have to treat the bear like a loaded, fully explosive-laden gasoline tanker,’ Tamahori said. The *ursine* star came with his longtime trainers, who oversaw him in ‘The Bear.’” Steve Murray, “Call of the Wild Put ‘Edge’ Director into His Element,” *Atlanta J.-Const.*, 5 Oct. 1997, at L2. (*Ursine* = of, relating to, or like a bear.)
- “Jonathan Heale’s colored woodcuts perfectly suit the two *porcine* heroes.” Michael Dirda, “Children’s Books,” *Wash. Post*, 5 Oct. 1997, Book World §, at 11. (*Porcine* = of, relating to, or like a pig.)

For those who dabble in SESQUIPEDALITY, the less familiar ones are equally appealing, if the sense fits:

accipitrine	corresponds to	hawk
anserine		goose
avine		bird
cancrine		crab
caprine, hircine		goat
cervine, damine		deer
corvine		crow; raven
crocodiline		crocodile
crotaline		rattlesnake
falconine		falcon
ferine		any wild animal
hippopotamine		hippopotamus
hirundine		swallow
hystricine, porcupine		porcupine
lacertine		lizard
larine, laridine		gull
leporine		hare
lumbricine		earthworm
lupine		wolf
murine		mouse
ovine		sheep
pardine		leopard; panther
passerine		sparrow
pavonine		peacock

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

picine	woodpecker
piscine	fish
psittacine	parrot
ranine	frog
scolopendrine	centipede
soricine	shrew
struthionine	ostrich
suilline	swine
taurine	bull; ox
tigrine	tiger
vespine	wasp
viperine	viper
vituline	calf; veal
viverrine	mongoose
vulpine	fox
vulturine	vulture
zebrine	zebra
zibeline	sable

In each of these words, the last syllable is most commonly pronounced /-in/, but /-in/ is also acceptable. Avoid /-een/, except in *elephantine* and *serpentine*. For more on the pronunciation of words ending in *-ine*, see -ILE.

For more on animal words, see Darryl Lyman, *Dictionary of Animal Words and Phrases* (1994); Stephen Potter & Laurens Sargent, *Pedigree: The Origins of Words from Nature* (1974).

animalculum (lit., “little animal”) forms the plural *animalcula*, not **animalculae*—e.g.: “John Crawford, a reputable Baltimore physician and an early promoter of contagion theory in America, lost both his reputation and his practice for maintaining, in 1806/7, that disease was spread by microscopic insects or *animalculae* [read *animalcula*].” Ronald Rees, “Under the Weather: Climate and Disease, 1700–1900,” 46 *History Today* 35 (1996). But the more common term is *animalcule* (pl. *animalcules*). See DIMINUTIVES (B).

LANGUAGE-CHANGE INDEX

**animalculae* for *animalcula*: Stage 2

animus is double-edged. At times the word is neutral, meaning “intention; disposition”—especially in legal texts. But more often in AmE *animus* denotes ill will, as if it were synonymous with *animosity*—e.g.:

- “Thomas won [the Senate’s] approval by 52–48 and said it was ‘a time for healing, not a time for anger or for *animus* or animosity.’” Aaron Epstein, “Bush Nominee Carries Closest Vote Since 1888,” *Phil. Inquirer*, 16 Oct. 1991, at A1.
- “He . . . spent his whole life strung out between need of, and *animus* toward, his mother.” Colin Walters, “The Life and Loves of Lord Byron,” *Wash. Times*, 18 May 1997, at B6.
- “There’s no *animus*, at least outwardly, between the one-year-and-done offensive coordinator and a Ravens franchise that he helped to franchise-record offensive numbers.” Jon Meoli, “Over to the Other Side,” *Baltimore Sun*, 10 Sept. 2015, at D1.

anise (= a plant with seeds strongly tasting of licorice) is pronounced /an-*is*/, rhyming with *Janice*.

annex, n.; **annexation**; ***annexment**; ***annexion**. *Annex* = something attached, as an appendix or a

wing of a building. (**Annexe* is a chiefly BrE variant.) *Annexation* = (1) the act of attaching or incorporating (as territory within a municipality or nation); or (2) the state of having been attached or incorporated. **Annexment* and **annexion* are NEEDLESS VARIANTS of *annexation*.

annexable. So spelled—not **annexible*. See -ABLE (A).

annexation; ***annexment**; ***annexion**. See **annex**, n.

annihilable. So formed—not **annihilatable*. See -ABLE (D) & -ATABLE.

anniversary (= the day of the year on which an event occurred in a previous year) is today used informally to denote a milestone in months or even weeks. That usage has become increasingly common, perhaps because there is no convenient equivalent for terms shorter than a year (*milestone* is close, but it doesn’t connote observance and recurrence the way *anniversary* does). Given the word’s tight association with “year,” however, this loose usage is subject to criticism and should be avoided if possible—e.g.:

- “So, how’s he doing at the one-month anniversary of his arrival [read *a month after arriving*] in Richmond?” Margaret Edds, “Shucet Steers Troubled Roads Department on a Straight Course,” *Virginian-Pilot* (Norfolk), 19 May 2002, at J5.
- “The only other week in 2002 when terrorism was the top evening news story came during the six-month anniversary [read *remembrance*] of the New York and Washington attacks.” Mark Jurkowitz, “News Media Try to Give Public Fair Warnings,” *Boston Globe*, 30 May 2002, at D6.

LANGUAGE-CHANGE INDEX

anniversary denoting any milestone: Stage 2

announce; **annunciate**; ***enounce**; **enunciate**. *Announce*, the best-known of these terms, may mean (1) “to proclaim” <she announced her independence>; (2) “to give notice of” <he announced that he would leave within the hour>; or (3) “to serve as announcer of” <Henry Longhurst announced the tournament>.

Annunciate is generally a NEEDLESS VARIANT of *announce*, except that it sometimes appears in religious contexts to lend a weighty effect. It has no place in other contexts—e.g.: “Mr. Clinton has made it difficult for union workers to receive a refund for dues used for political purposes, a right *annunciated* [read *announced* or, perhaps, *enunciated*] by the Supreme Court in a ruling known as the Beck decision.” Greg Pierce, “Inside Politics,” *Wash. Times*, 11 Feb. 1997, at A5.

Enunciate = (1) to formulate systematically; (2) to announce, proclaim; or (3) to articulate clearly. **Enounce* is a NEEDLESS VARIANT in sense 1 of *enunciate*. Sometimes writers misuse **annunciate* for *enunciate* (sense 3)—e.g.: “While her voice was clear and solid, she *annunciated* [read *enunciated*] just a little too much.” Maureen Johnson, “‘Grease!’ Rocks, Despite a Few Slips,” *Charleston Daily Mail*, 12 May 1997, at A10.

LANGUAGE-CHANGE INDEX

**annunciate* misused for *enunciate*: Stage 1

annoy. See **aggravate**.

annoyance; *annoyment. The first has always been the standard term in Modern English. The second, when used with a straight face, is worse than a NEEDLESS VARIANT—it's a NONWORD that is itself what it denotes. E.g.: "Even into July, Howe had not stirred. Nor had Washington been active, to Adams's considerable *annoyment* [read *annoyance*]." John E. Ferling, *John Adams: A Life 178–79* (1996). Occasionally it appears as a jocular antonym that echoes *enjoyment*—e.g.: "So here, for your *enjoyment/annoyment*: What new director found his preteen daughter's pot stash moments before his big film's premiere party, and what critic took the rap for it?" Michael Musto, "La Dolce Musto," *Village Voice*, 4 Feb. 1997, at 30.

LANGUAGE-CHANGE INDEX

**annoyment* for *annoyance*: Stage 1

Current ratio (*annoyance* vs. **annoyment*): 4,360:1

annulment. So spelled—not **annullment* (a common misspelling). See **divorce (A)**.

Current ratio: 355:1

annunciate. See **announce**.

anoint is sometimes misspelled **annoint*—e.g.:

- "The piece did everything except *anoint* [read *anoint*] Gov. William Weld." Jon Klarfeld, "With These Friends, Who Needs Enemies?" *Boston Herald*, 16 Sept. 1994, at 27.
- "A few hundred years ago, doctors treating a wound with ointment also made sure to *annoint* [read *anoint*] the weapon that inflicted it." Scott McLemee, "Better Living Through Science," *Newsday* (N.Y.), 12 May 2002, at D33.

LANGUAGE-CHANGE INDEX

anoint misspelled **annoint*: Stage 1

Current ratio: 97:1

anomalous; anomalistic. Something that is an anomaly is *anomalous*. That is, *anomalous* is the general adjective corresponding to the noun *anomaly*. But for astronomical anomalies, the adjective is *anomalistic*. Sometimes, though, this much narrower adjective erroneously displaces the broader one—e.g.:

- "Whether the conflicting findings between the levels of analysis are *anomalistic* [read *anomalous*] is unclear." David W. Romero, "Requiem for the Lightweight," *Presidential Studies Q.*, 1 Sept. 2001, at 454.
- "It fails to mention the *anomalistic* [read *anomalous*] 1981–83 digression of Gov. Frank White." Michael Storey, "Paper Trails: Has Hillary Forgotten Us?" *Ark. Democrat-Gaz.*, 26 Jan. 2003, at 53.

LANGUAGE-CHANGE INDEX

anomalistic misused for *anomalous*: Stage 1

anomie /a-nə-mee/ (= cultural anarchy and social instability) is the standard spelling. **Anomy* is a variant. The adjective is *anomic* (/ə-nom-ik/).

Current ratio (*anomie* vs. **anomy*): 31:1

anonym; anonym; anonym. An *anonym* (preferably spelled without the *-e*) is an anonymous person. (See **pseudonym**.) An *anonym* is a pseudonym arrived at by spelling the author's name backward (as, hypothetically, *Renrag* for *Garner*).

anorectic; anorexic. *Anorectic* (= suffering from a loss of appetite) is the general term, *anorexic* (= suffering from *anorexia nervosa*) the term specific to the medical condition characterized by self-starvation. As an adjective and also as a noun, both may refer to people with *anorexia nervosa*, but *anorexic* is far more common. *Anorectic* is mostly confined to the medical and scientific communities, while *anorexic* predominates in general writing.

As an adjective, *anorectic* has the additional meaning of "causing a loss of appetite" and is used to refer to drugs such as amphetamines and to their physical effects.

another has a schwa in the first syllable (/ə-nəth-ər/)—not /ay-/.

another think coming; *another thing coming. The traditional idiom is "If you think X, you've got another think coming." That phrasing has predominated since the expression became popular in the early 20th century. It may not be funny anymore, but it makes sense: X is wrong, so eventually you're going to think Y instead. But a surprising number of writers substitute *thing* for *think*, which is grammatical but not even vaguely clever. E.g.:

- "If Osama bin Laden imagined, in releasing a threatening new videotape days before the presidential election, that he could sway the votes of Kerry supporters like David and Jan Hill and Bush supporters like Paul Christene, he has *another thing coming* [read *another think coming*]." Kirk Johnson, "Voters, Their Minds Made Up, Say bin Laden Changes Nothing," *N.Y. Times*, 31 Oct. 2004, § 1, at 1.
- "If the leaders of the Democratic Party hope that they can fool the holy people by buying themselves white leatherette-bound Bibles and pink plastic Jesuses and turning up to give testimony at church, they've got *another thing coming* [read *another think coming*]." Nicholas von Hoffman, "Democrats Should Oppose Empowering the Pious," *N.Y. Observer*, 29 Nov. 2004, at 4.
- "If anyone is expecting Francona to gloat, they've got *another thing coming* [read *another think coming*]." Jeff Horrigan, "Unwelcome Mat: Not Much Brotherly Love in Philly for Francona," *Boston Herald*, 24 June 2005, at 123.

The *OED* lists *think* as a dialectal or colloquial noun, with several citations from the 19th century. It shows

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

the phrase *to have another think coming* first used in print in a 1937 article in *American Speech* reporting on the already-established use of that and similar phrases to mean “to be greatly mistaken.”

The heavy-metal band Judas Priest may share some blame for the widespread acceptance of the variant wording; its most commercially successful song was “You’ve Got Another Thing Coming,” first recorded in 1982.

LANGUAGE-CHANGE INDEX

**another thing coming* for *another think coming*: Stage 4
Current ratio (*another think coming* vs.
**another thing coming*): 1.6:1

answer back is a common REDUNDANCY, especially in BrE—e.g.: “Hilary and Piers du Pre seem determined to wreak the ultimate revenge on their sister by discrediting her while she lies—unable to *answer back* [read *answer*]—in her grave.” Julian Lloyd Webber, “An Insult to Jackie’s Memory,” *Daily Telegraph*, 4 Jan. 1999, at 15.

In AmE, the phrase is fairly common in sportswriting in the sense “to equal an opponent’s recent scoring effort”—e.g.:

- “Jake Armstrong quickly *answered back* for the Knights, but the two-goal cushion was short-lived.” Joe Connor, “La Jolla, Bishop’s Tie One On in Wester,” *San Diego Union-Trib.*, 16 Dec. 1998, at D6.
- “Wimberley would *answer back* with senior wide-out Matt Stroman hauling in a 22-yard TD pass from sophomore quarterback JoJo Weeks to knot the game up at 7—all late in the first quarter.” Mark Rico, “More Than a Game,” *San Marcos Daily Record* (Tex.), 9 Sept. 2015, Sports §, at 5.

Some writers have used the sports phrase metaphorically—e.g.: “The last time somebody tried to impose prohibition on Chicago, the city *answered back* with Al Capone.” Peter Annin, “Prohibition Revisited?” *Newsweek*, 7 Dec. 1998, at 68. Despite the currency of this usage, *answer* can carry the entire load by itself.

LANGUAGE-CHANGE INDEX

answer back for *answer* (outside sports): Stage 3

antagonist. See **protagonist** (c).

Antarctica is frequently misspelled and mispronounced **Antartica*—e.g.: “Kroc expanded the golden-arches empire to every continent on the globe (except *Antartica* [read *Antarctica*]).” Bob Ivry, “A Zillion Burgers Later—Perfection,” *Record* (N.J.), 13 Sept. 1997, Your Time §, at 1. In fact, this misspelling occurs in about 3% of the modern journalistic sources containing the word. See **Arctic**.

LANGUAGE-CHANGE INDEX

Antarctica misspelled **Antartica*: Stage 1
Current ratio: 101:1

ANTE-; ANTI-. The prefix *ante-* means “before,” and *anti-* “against.” Thus *antecedent* (= something that goes before) and *antipathy* (= feelings against, dislike). In a few words *ante-* has been changed to *anti-*, as in *anticipate* (= to consider or use before the due or natural time) and *antipasto* (= an Italian appetizer,

usu. consisting of an assortment of cheeses, vegetables, meats, and olives).

In some compound words, the prefix *anti-* may cause ambiguities. See **antinuclear protester**.

antebellum. One word.

ANTECEDENTS, AGREEMENT OF NOUNS WITH. See CONCORD.

ANTECEDENTS, REMOTE. See MISCUES (C) & REMOTE RELATIVES.

antedate; predate. Both words are so common that it would be presumptuous to label either a NEEDLESS VARIANT. One sees a tendency to use *antedate* in reference to documentary materials, and *predate* in reference to physical things and historical facts. The DIFFERENTIATION is worth encouraging. Although *antedate* has historically been the more common of the two, *predate* has occurred more frequently in print sources since the late 1970s—in 2008 by a 4-to-1 margin.

For another sense of *predate*, see **predate**.

antenna. When the reference is to insects, *antennae* /an-ten-ee/ is the usual plural. But when the reference is to televisions and electronic transmitters, *antennas* is better. See PLURALS (B).

Current ratio (*insect antennae* vs.
insect antennas): 17:1

Current ratio (*TV antennas* vs. *TV antennae*): 4:1

antenuptial. See **prenuptial**.

antepenultimate (= the next to the next-to-last) is sometimes misspelled **antipenultimate*—e.g.: “The two versions of the *antipenultimate* [read *antepenultimate*] poem on the Houghton manuscript offer an even stronger indication.” Ashby Bland Crowder, “Attribution or Misattribution: New Poems by Robert Browning?” 43 *Philological Q.* 443 (2012). The corresponding noun *antepenult* is pronounced either /an-tee-pee-nəlt/ or /an-tee-pi-nəlt/.

anthropocentric; homocentric. Both words may denote a philosophy or worldview that puts human beings at the center of the universe or views them as the reason for creation. While *anthropocentric* is older and always correct in this sense, *homocentric* takes this sense only by SLIPSHOD EXTENSION. *Homocentric* is primarily a scientific term describing (1) a path that is round and concentric rather than oblique, esp. the path of a planet; or (2) the spreading rays of light from an apparent focal point, esp. rays of sunlight. So *anthropocentric* is always the better choice—e.g.:

- “I’m not *homocentric* [read *anthropocentric*]. I don’t think people are the most important thing on the planet. We are part of the community of life.” “Earth Lovers Battle Green Alien,” *Baltimore Sun*, 11 June 2000, at A2 (quoting Mary Burks).
- “If the astonishing complexity of the double helix argues against a random emergence and argues in favor of intelligent design, and since no evidence of life elsewhere exists, then, though our location is not geocentric, the universe

might very well be *homocentric* [read *anthropocentric*]." Jeffrey Hart, "The Once and Future Life of Zoos," *Wash. Times*, 17 June 2001, Books §, at B7.

- "Some scientists say it is *anthropocentric* hubris to think people understand the living planet well enough to know how to manage it." Andrew C. Revkin, "Managing Planet Earth," *N.Y. Times*, 20 Aug. 2002, at F1.

Homocentric is inferior for another reason: to many people today the *homo-* prefix suggests primarily sexual orientation, not the species. And *homocentric* is now sometimes used in a homosexual sense—e.g.: "The introduction by the late Martin Taylor is a model of explication that discusses the strong homoerotic element of much of the poetry without ever becoming a tedious, *homocentric* [read *gay-pride?*] rant." Scott Eyman, "Soldiers' Letters Give Civil War a Human Face," *Palm Beach Post*, 10 Nov. 2002, at J4.

LANGUAGE-CHANGE INDEX

1. *homocentric* for *anthropocentric*: Stage 1
Current ratio (*anthropocentric* view vs. *homocentric* view): 37:1
2. *homocentric* in the sense "homosexually oriented": Stage 1

anti- (= opposed to, against) is most traditionally pronounced /an-tee/ in AmE and BrE alike, but /an-ti/ is perfectly acceptable in AmE and tends to predominate among speakers born after about 1980. See **ANTE-**.

***an't I?** See **aren't I?**

antiaircraft. See **VOWEL CLUSTERS**.

anticipate = (1) to sense beforehand; (2) to take care of beforehand; to preclude by prior action; forestall <they anticipated the problem by filing for bankruptcy>; (3) to await eagerly <this much-anticipated film is a great disappointment>; or (4) to expect <we anticipate that 40 people will attend>. Senses 3 and 4 have long been considered the result of **SLIPSHOD EXTENSION**. Sense 3 no doubt resulted from the unfortunate tendency for people to choose longer words. Generally, avoid *anticipate* when it's merely equivalent to *expect*. See **expect**.

The poor usage is now seemingly ubiquitous—e.g.: "It is *anticipated* [read *expected* or *estimated*] that the 70-team, invitation-only tourney will realize about \$15,000 for the clubs." Bubbles Greer, "Fish Tales Part of Bass Tourney Preparations," *Sarasota Herald-Trib.*, 10 Sept. 1997, at B2. Indeed, sometimes this usage leads to near-ambiguities. In the following example, *anticipate* means "expect," but it suggests "forestall"—e.g.: "The foreboding of traffic snarls, towing and overall melee in connection with last night's Ohio State University football game may have prevented the problems officials had *anticipated*." Dean Narciso,

"Fears of Football-Related Traffic Frenzy Fizzle Out," *Columbus Dispatch*, 29 Aug. 1997, at D2.

LANGUAGE-CHANGE INDEX
anticipate for *expect*: Stage 4

anticipatory; ***anticipative**. The first is standard; the second is a **NEEDLESS VARIANT**.

Current ratio: 33:1

ANTICIPATORY REFERENCE (known also as *cataphora*) here denotes the vice of referring to something that is yet to be mentioned. A sentence will be leading up to the all-important predicate but before reaching it will refer to what is contained in the predicate. Or the reference may not even be explained until a later sentence. The reader is temporarily mystified. E.g.: "Conflict of laws is the study of whether or not, *and if so, in what way*, the answer to a legal problem will be affected because the elements of the problem have contacts with more than one jurisdiction." (A possible revision: *Conflict of laws is the study of whether the answer to a legal problem will be affected because the elements of the problem have contacts with more than one jurisdiction—and, if so, what the effect will be.*)

Only rarely can anticipatory reference be used in a way that doesn't bother the reader—e.g.: "We think it's clear—and *nobody has disputed this point*—that Carla has the first choice in deciding whether to take the furniture." Innocuous examples tend to involve personal pronouns <his most recent biographer called Lindley Murray a blockbuster author>.

Vexatious examples occur in a variety of forms. First, they're frequent with *do*-constructions—e.g.:

- "New Mexico, as *do* most states, invests a great deal of money in its highways." (Either put *as most states do* at the end of the sentence or change *as do* to *like*.)
- "English professors, *as do* [read *like*] novelists and journalists, produce a body of writing that can be analyzed to discern their underlying philosophies."

See **like**.

Second, sometimes *have* appears too early in the sentence—e.g.: "The president, *as have* [read *like*] many others, has tried to understand the dynamics of this dispute between the company and its workers."

Third, problems frequently crop up with pronoun references that anticipate the appearance of the noun itself—e.g.: "Mr. Hytner is a director who knows how to keep the pot on the boil; whether you agree with *them* [read *his points*] or not, he makes *his points* [read *them*] with boldness and panache." John Gross, "A Badly Brought-Up Bunch of Girls," *Sunday Telegraph*, 15 July 1990, at ix. (Another possible revision: *whether you agree with him or not, he makes his points . . .*)

The best antidote to this problem is to become a stickler for orderly presentation and to develop an abiding empathy for the reader.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

ANTICIPATORY SUBJECTS. See EXPLETIVES.

anticlimactic /an-tee-klɪ-mak-tɪk/ is the correct form. **Anticlimatic* is a solecism (referring seemingly to climate) that somehow became fairly widespread in the 20th century—e.g.: “The *anticlimatic* [read *anticlimactic*] character of this encounter between St. Preux and Julie, in which writing seems to replace or displace person and event, recalls the almost comically *anticlimatic* [read *anticlimactic*] moment of the consummation of their affair in the first part of the novel.” David Marshall, *The Frame of Art: Fictions of Aesthetic Experience* 121 (2005). But the erroneous form has never seriously rivaled the standard form in print sources. See **climactic**.

LANGUAGE-CHANGE INDEX

anticlimactic misspelled **anticlimatic*: Stage 1
Current ratio: 28:1

antidote. See **anecdote** (B).

antinomy; antimony. These words are not to be confused. *Antinomy* = a contradiction in law or logic; a conflict of authority. *Antimony* = a brittle silvery-white nonmetallic chemical element common in alloys.

antinuclear protester is technically ambiguous, though everyone should know what is intended. For the literal-minded, however, it might suggest “a protester *denouncing* the antinuclear cause,” instead of “a protester *espousing* the antinuclear position.” So it might be preferable to write *nuclear-energy* (or *-weapon*) *protester* or *antinuclear advocate*. The same might be said of antiwar, anti-abortion, and antiglobalization protesters.

antipathy (= strong aversion; intense dislike) is sometimes misused for *antithesis* (= opposite; contrast)—e.g.: “Jiang can wear tri-cornered hats and tour Independence Hall, but his regime represents the *antipathy* [read *antithesis*] of America’s democratic values.” “Jiang’s Smiles Are a Thin Mask,” *Wis. State J.*, 30 Oct. 1997, at A13.

Antipathy usually takes the preposition *toward* or *against* <they feel strong antipathy toward each other> <antipathy against the lame-duck mayor is palpable>. Also, it sometimes takes *to* or *for* <in the late 1990s, antipathy to tobacco manufacturers reached an all-time high> <society has always had an antipathy for child abuse>.

The adjectival form is *antipathetic*.

LANGUAGE-CHANGE INDEX

antipathy misused for *antithesis*: Stage 1

antipodes /an-tɪp-ə-deez/. This noun, meaning “the exact opposite or contrary things,” is used most often in the plural form—sometimes even when the sense is singular <greed is the antipodes of charity>.

But the singular *antipode* /an-ti-pohd/ is also quite frequent—e.g.: “Still, the black mood about the group seems the *antipode* of those heady days over two years ago.” Vito J. Racanelli, “Will Vodafone Be a Bellwether

of the Bottom?” *Barron’s*, 6 May 2002, at MW6. This singular form might be worth encouraging when the meaning is singular because it promotes DIFFERENTIATION and makes intuitive sense. Yet the synonym *antithesis* is better understood by most readers.

The capitalized plural—*Antipodes*—refers to Australia, New Zealand, and nearby islands (being on the opposite side of the planet from Europe). E.g.: “He toured the role in the *Antipodes* a few years ago, but this is Soul’s first shot at the West End.” Jasper Rees, “From Here to Fraternity (or Whatever Happened to David Soul?),” *Independent*, 30 Jan. 1997, Arts §, at 8.

antisocial, n. See **psychopath**.

antisocial personality. See **psychopath**.

antiterrorism; counterterrorism. The military distinguishes between these terms. *Antiterrorism* is defensive, involving measures to protect against vulnerability to a terrorist attack. It is also sometimes called “hardening the target.” *Counterterrorism*, the more frequent term, “includes the full range of offensive measures to prevent, deter, and respond to terrorism.” *U.S. Army Field Manual FM-78* (1992).

But the distinction is lost outside the military, where the words are used interchangeably. In each of the following examples, they illustrate the vice of INELEGANT VARIATION:

- “The Department of Defense is pouring billions of dollars into upgrading security and protection for U.S. forces, as well as funding private research and development of *antiterrorism* technology. . . . For Idaho Technology and the handful of other obscure entrepreneurs that provide highly specialized *counterterrorism* products and services, business is booming.” Tony Pugh, “In a Changed World, Security Sells,” *Phil. Inquirer*, 13 Oct. 2001, at C1.
- “Despite President Bush’s promise that his *antiterrorism* chief will have Cabinet-level status and undefined control over 46 agencies and \$11 billion in *counterterrorism* spending, the betting is that the czar won’t get far unless he can give orders and control purse strings.” Lorraine Woellert, “Can Tom Ridge Take On the Terrorists? It’s Up to Bush,” *Bus. Week*, 15 Oct. 2001, at 57.
- “The FBI is designated the leading agency for *counterterrorism*, but receives only 1 percent of the government’s *antiterrorism* budget.” George Will, “The New Investigators,” *Tulsa World*, 16 Oct. 2001, at 10.

antithesis. For a misuse of this word, see **antipathy**.

antithetical; *antithetic. *Antithetical* (= exhibiting direct opposition) has become established in the phrase *antithetical to* and in most other contexts. The shorter form should be avoided as a NEEDLESS VARIANT.

The phrase *directly antithetical* verges on REDUNDANCY—e.g.: “The question is simple: Will Americans be forced to finance teachings *directly antithetical* [read *antithetical*] to their best interests?” Leonce Gaiter, “School Vouchers Split in the Eye of Our Democratic Principles,” *L.A. Times*, 4 Feb. 1996, at M5.

LANGUAGE-CHANGE INDEX

**antithetic* for *antithetical*: Stage 2
Current ratio (*antithetical* vs. **antithetic*): 11:1

antitrust. So written—without a hyphen.

antivenin (= an antitoxin for venom, esp. from snakes) is often mistakenly written **antivenom*. The word *venin* refers to a toxic constituent of venom, and the name of the counteracting agent is formed from this word, not *venom*. But even though no general English-language dictionary recognizes the incorrect form, it now appears in print somewhat more often than the correct form—e.g.:

- “A new approach may lead to better snake *antivenoms* [read *antivenins*] than have been possible so far.” Stephen Reucroft & John Swain, “Better *Antivenoms* [read *Antivenins*],” *Boston Globe*, 26 Sept. 2000, at D6.
- “He was fine after receiving *antivenom* [read *antivenin*].” Evan Henerson, “Preparing for the Hazards of the Season,” *Rocky Mountain News* (Denver), 5 June 2001, at D3.
- “The bites of venomous snakes are indeed dangerous, but not always as deadly as many people think. In fact, the *antivenom* [read *antivenin*] is about as bad as the venom.” Michael Dongilli, “He’s Out to Shed Snake’s Image,” *Pitt. Post-Gaz.*, 25 July 2001, at N9.

LANGUAGE-CHANGE INDEX
**antivenom* for *antivenin*: Stage 4

Current ratio (*antivenins* vs. **antivenoms*): 1:1.2

a number of. See **number of (A).**

anxious. This word has a range of meaning. As the adjective corresponding to *anxiety*, it has long meant “uneasy, disquieted.” In the most unimpeachable uses, the word stays close to that association—e.g.: “The latest holdup is the EPA’s final approval of the companies’ plans to test for lead at the 150 homes Some residents are getting *anxious*.” Stacy Shelton, “Toxic Investigation,” *Atlanta J.-Const.*, 13 Sept. 2002, at D1.

Today the word typically encompasses both worry and anticipation—e.g.: “Creator and anchorman Brian Lamb, the prince of un-chic, tirelessly fields the remarks of obnoxious callers, preening journalists, and *anxious* authors.” “Spanning the Spectrum,” *Nat’l Rev.*, 24 Mar. 1997, at 16. The word carries a sense of expectation. Here, for example, it seems appropriately used as the author discusses a major life change: “I was *anxious* to leave for Boston I was looking forward to a change.” Elizabeth Morgan, *The Making of a Woman Surgeon* 219 (1980).

But when no sense of uneasiness is attached to the situation, *anxious* isn’t the best word. In those instances, it displaces a word that might traditionally have been considered its opposite—namely, *eager*. E.g.: “Three years ago, the Latin music industry was caught up in crossover mania, *anxious* [read *eager*] to ride the popularity of singers such as Ricky Martin and Enrique Iglesias by selling their English-language albums to the American mainstream.” David Cazares,

“Songstresses from Peru, Mexico to Grace Stages,” *Sun-Sentinel* (Ft. Lauderdale), 13 Sept. 2002, at 30.

LANGUAGE-CHANGE INDEX
anxious for *eager*: Stage 4

any. A. Uses and Meanings. As an adjective, *any* has essentially six uses. (1) The most common occurrence is in conditional, hypothetical, and interrogative sentences, where *any* means “a (no matter which)” or “some” <if you have any salt, I’d like to borrow some> <if any problem were to arise, what would it likely be?> <is there any evidence of the crime?>. (2) In negative assertions, it creates an emphatic negative, meaning “not at all” or “not even one” <it was not in any way improper> <she did not know any member who was at the event>. (3) In affirmative sentences, it means “every” or “all” <any attempt to flout the law will be punished> <you are required to produce any documents relating to the issue>. (4) In a sentence implying that a selection or discretionary act will follow, it may mean “one or more (unspecified things or people); whichever; whatever” <any student may seek a tutorial> <pick any books you like> <a good buy at any price>. (5) In a declarative sentence or imperative involving a qualitative judgment, it means “of whatever kind” <you’ll have to take any action you consider appropriate>. In this sense, there is sometimes the implication that the quality may be poor <any argument is better than no argument>. (6) In a declarative sentence involving a quantitative judgment, it means “unlimited in amount or extent; to whatever extent necessary” <this computer can process any quantity of numbers simultaneously>. In a related colloquial sense, it may mean “of great size or considerable extent” when following a negative <we won’t be able to make any real headway this week>.

As an adverb, *any* is used before a comparative adjective or adverb in questions and in negative sentences <is he any better?> <they can’t walk any faster>. Cf. **all (D)**. See **COMPARATIVES AND SUPERLATIVES**.

B. Singular or Plural. *Any* may take either a singular or a plural verb. The singular use is fairly rare—e.g.:

- “He and Didi prop Sissy up in front of an Elvis mural to see if *any* of them *is* tall enough to ride the Rock ‘n’ Rollercoaster.” Sandy Smith, “Sharing a Good Time,” *Tennessean*, 18 July 1996, at D1.
- “If *any* of them *is* successful, it would be the first time an Asian American would serve on the council.” Sarah Kershaw, “Chen Bumped Off Ballot in Flushing Race for Council Seat,” *Newsday* (N.Y.), 15 Aug. 1997, at A6.
- “Many of the other professors have Washington strings to pull, and Tal isn’t sure which side *any* of them *is* on.” Laurie Muchnick, “A Debut Novel of Suspense and Social Observation,” *Chicago Trib.*, July 7, 2002, Books §, at 7.

In such contexts, *any* is elliptical for *any one*; the sentence often reads better if *one* is retained. See **anyone (A)**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

anyhow (= in any way; in any manner) is a folksy CASUALISM for *anyway* or *nevertheless*. E.g.: “I’m not sure they would *anyhow* [read *anyway*].” John Ed Pearce, “Old Age: Not for the Unwary,” *Courier-J.* (Louisville), 8 Jan. 1995, at D3.

LANGUAGE-CHANGE INDEX
anyhow for *anyway*: Stage 3
Current ratio: 8:1

anymore. A. Meaning “now.” In the sense “now,” “nowadays,” or “still,” the word *anymore* fits in three contexts: (1) negative declaratives <you don’t bring me flowers anymore>, (2) yes/no questions <do you go there anymore?>, and (3) hypothetical clauses introduced by *whether* or *if* <I wonder whether they go there anymore>. In sense 1, the meaning is “now” or “nowadays”; in senses 2 and 3, the meaning is “still.” When *anymore* is used in some other type of positive statement (not in sense 2 or 3), it is dialectal—e.g.: “The price of housing is outrageous *anymore* [read *these days* or *nowadays*].” In a linguistic study of Missourians, informants considered this dialectal usage “well established, though controversial.” See Gilbert Youmans, “Any More on *Anymore*,” 61 *Am. Speech* 61, 61 (1986). That means that the informants were all familiar with it, but many didn’t like it. The findings would probably hold throughout most of the United States. See **DIALECT**.

LANGUAGE-CHANGE INDEX
anymore misused for *nowadays*: Stage 1
Current ratio (*Nowadays* vs. *Anymore* as first word in sentence): 14:1

B. And *any more*. While *anymore* conveys a temporal sense, *any more* conveys a sense of comparing quantities <I don’t want any more tea, thank you> or degrees <I don’t like it any more than you do>. Sometimes even careful writers muddle this distinction—e.g.:

- “*Peruse* . . . is not a word we use very often *any more* [read *anymore*].” *Merriam-Webster’s Concise Dictionary of English Usage* 584 (2002).
- “By Fowler’s time it apparently was not so rare *any more* [read *anymore*], and it is not at all rare today.” *Ibid.* at 630.

LANGUAGE-CHANGE INDEX
any more misused for *anymore*: Stage 1

anyone. A. And *any one*. For the indefinite pronoun, the one-word spelling is required <anyone could do that>. Though formerly written as two words, the unification of the phrase is now complete. *Any one* = any single person or thing (of a number). E.g.: “When he

died, none of us could remember *any one* thing he’d said.” Richard Hoffer, “The Player,” *Sports Illustrated*, 30 Sept. 1996, at 13.

B. And *anybody*. The two terms are interchangeable, so euphony governs the choice in any given context. In practice, *anyone* appears in print about three times as often as *anybody*. Cf. **everyone (C)**; **somebody**.

C. *Anyone* . . . *they*. In all types of writing, sentences like this one are on the rise: “If *anyone* thought Diana would be chastened, *they* were wrong.” Jerry Adler & Daniel Pedersen, “Diana’s Battle Royal,” *Newsweek*, 11 Mar. 1996, at 20. Americans who care about good writing tend to disapprove—and strongly. But the tide against them is great, primarily because the construction is ubiquitous (and so handy) in speech. For more on this subject, see **SEXISM (B)** & **PRONOUNS (D)**.

LANGUAGE-CHANGE INDEX
anyone . . . *they*: Stage 4

D. **Anyone* . . . *are*. Although *anyone* . . . *they* might arguably be acceptable, **anyone* . . . *are* isn’t—e.g.: “Indeed, *anyone* who thought he or she could solve *their* immigration problems by getting hitched *are* in for a shock.” Julie Tilsner, “Guardians of the Green Cards,” *N.Y. Times*, 12 Apr. 1997, at 19. (A possible revision: *Indeed, those who thought they could solve their immigration problems by getting hitched are in for a shock.*)

E. *Anyone else’s*. See **else’s** & **POSSESSIVES (I)**.

****anyplace*** for *anywhere* has appreciably crept into print sources only since the early 1960s. It remains nonstandard—e.g.: “The old [athletic director] hasn’t gone *anyplace* [read *anywhere*], though.” Ron Bush, “Green Replaces Smith at CSTCC,” *Chattanooga Free Press*, 31 Jan. 1997, at H5. When the meaning is “any location,” *any place* should always be two words <at any place>. E.g.: “Readers out there are looking for . . . *anyplace* [read *any place* or *a place*] that serves a good Italian beef sub, like the ones Cousins used to sell.” Jeremy Iggers, “Celebrate Asian New Year in French,” *Star Trib.* (Minneapolis), 7 Feb. 1997, at E15. Cf. ****noplace*** & ***someplace***.

LANGUAGE-CHANGE INDEX
**anyplace* for *anywhere*: Stage 1
Current ratio (*anywhere* vs. **anyplace*): 64:1

anything; any thing. *Anything* is the far more general word, meaning “whatever thing.” *Any thing*, for practical purposes, is limited to plural constructions <do you have any things to donate?> and to contrasts with *any person* <is there any thing or person that might be of help?>.

anytime, adv., = at any time; whenever. E.g.: “*Anytime* a seller rents back from a buyer, an interim occupancy agreement should be completed.” Dian Hymer, “Seller Rent-Back Can Benefit Both Sides,” *S.F. Examiner*, 25 Oct. 1992, at F1. Some writers consider this term a CASUALISM, but it is highly convenient and has—for whatever reason—gained more widespread

acceptance than *anymore* (in positive contexts) and **anyplace*. Cf. *anymore* & **anyplace*.

LANGUAGE-CHANGE INDEX
anytime for *whenever*: Stage 5

***anyways.** This dialectal variant of *anyway* is very much on the rise in AmE speech—although its use is negligible in print sources (outside dialogue). It usually falls at the beginning or end of a sentence, to mean “in any event” or “just the same”—e.g.: “‘Anytime a kid plays, it’s learning *anyways* [read *anyway*].’” Peggy Hager, “Real-Life Playing,” *Daily News* (L.A.), 17 Sept. 2002, News §, at AV4 (quoting Danielle Rothe).

At the beginning of a sentence, it often means “as I was saying before” or “be that as it may” (*anyhow* would be a better choice)—e.g.: “*Anyways* [read *Anyhow*], the Times sent a feller name-a Mark Stein out Phoenix way to report on where East Coast businessmen should hang their feedbags and sack out if they finds theyselves stranded in the desert.” E.J. Montini, “Load Yer Guns, Boys, It’s Time to Hunt Yankees,” *Ariz. Republic*, 28 July 2002, at B3. See DIALECT.

LANGUAGE-CHANGE INDEX

apart from. See **aside** (b).

apartheid. The traditional and preferred pronunciation of this Afrikaans term is /ə-**pahrt**-hayt/, the last syllable appropriately mimicking the word *hate*. But it is so commonly pronounced /ə-**pahr**-tīt/ (like *tight*) that the variant is widely accepted. Not accepted are pronunciations that meld the *-t-* and *-h-* into a digraph.

apex forms the plurals *apexes* and *apices*. The latter has greatly predominated since the 17th century. See PLURALS (b).

Current ratio: 5:1

aphrodisiac (= a food, drink, or drug that strengthens the sex drive) is pronounced /af-rə-**diz**-ee-ak/—not /af-rə-**deezh**-ee-ak/.

apiary. See **aviary**.

aplomb (= self-assurance and poise) is pronounced either /ə-**plom**/ or /ə-**pləm**/.

***apolog.** See **apologue**.

apologia. See **apology**.

apologue (= an allegorical story) is the standard spelling. **Apolog* is a variant. (Cf. **analogue**, **catalog(ue)** & **epilogue**.) For a comment on the decline of the *-ue* form, see -AGOG(UE).

apology; apologia. *Apology*, in its general sense, applies to an expression of regret for a mistake, usually with the implication of guilt. It may also refer to a defense of one’s position, a sense shared with *apologia* /a-pə-**loh**-jee-ə/. But *apologia* should preempt this meaning for purposes of DIFFERENTIATION.

apophthegm. See **apothegm**.

apostasy; *apostacy. The latter spelling is inferior, the original Greek word being *apostasía*. E.g.: “The church has had its share of negative publicity, most recently stemming from its September 1993 purge of writers and thinkers it accused of *apostacy* [read *apostasy*] for publishing work the church said preached false doctrine.” Lisa Carricaburu, “Media-Wise Men Charting PR Path for LDS Church,” *Salt Lake Trib.*, 23 Aug. 1997, at B1.

LANGUAGE-CHANGE INDEX
apostasy misspelled **apostacy*: Stage 1
 Current ratio: 10:1

APOSTROPHES. See PUNCTUATION (A).

apothegm; apophthegm. These are variant synonyms for *aphorism*, *maxim*, or *epigram*. Although the longer spelling matches the Greek etymon, the shorter *apothegm* is now universally accepted. It’s also easier to spell and seemingly to say (/ap-ə-them/)—though in fact the longer spelling is pronounced identically, with a silent *-ph-*. In his famous dictionary of 1755, Samuel Johnson gave the longer form a boost by listing both terms (two pages apart) but declaring the longer one to be “proper.” It predominated till about 1850—not long after Noah Webster gave preference to the shorter form. In AmE there is a decided preference for *apothegm*; in BrE the two forms vie, but *apophthegm* is slightly more common. Doubtless these trends are traceable in large measure to the two great national lexicographers—Johnson (BrE) and Webster (AmE).

Silent in the noun, the hard *-g-* sound is pronounced in the adjective *apothegmatic* (/ap-ə-theg-**mat**-ik/). The word should not be confused with *apothem*, a term in geometry for a line connecting the center of a regular polygon with the center of any of its sides. See PRONUNCIATION (D).

Current ratio (*apothegm* vs. *apophthegm* in World English): 2:1

appall; appal. For this verb meaning “to shock and upset,” the standard spelling in BrE was *appall* until

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

shortly after Samuel Johnson listed the word as *appal* in his 1755 *Dictionary of English Language*. Since the mid-1780s, *appal* has predominated in BrE. That spelling predominated also in AmE until the 1860s, when *appall* became preeminent. The dichotomy has remained: *appall* is AmE, *appal* BrE.

apparatus has the plural forms *apparatus* (the Latin form) and *apparatuses* (the native English form). Because the word has been thoroughly naturalized, *apparatuses* is standard—e.g.: “This . . . is meant to mean an incapacity, uncured by education, to know what our vocal *apparatuses*, along with our brains, are doing when sounds are uttered.” Anthony Burgess, *A Mouthful of Air* 6 (1992). But the Latin plural does still appear occasionally—e.g.: “Two men were sitting there: one in an armchair, the other at a table where a curious selection of *apparatus* was laid out: mahogany boxes with brass terminals, copper-bound induction coils, and an instrument like a piano keyboard, the keys each marked with a letter of the alphabet.” Phillip Pullman, *The Tin Princess* 173–74 (1994). See PLURALS (B).

**Apparati* is not a correct plural, even in Latin. It’s an example of HYPERCORRECTION—e.g.:

- “Even out of competition, exercycles, ab crunchers, and personal-trainers-as-therapists are the *apparati* [read *apparatuses*] of life in the 90’s.” Marjorie Rosen, “Fat Chance,” *N.Y. Times*, 4 Aug. 1994, § 6, at 37.
- “Who serves in the *apparati* [read *apparatuses*] of violence? . . . Are the rank and file in the *apparati* [read *apparatuses*] of violence likely to follow the orders of the top authorities?” Thomas S. Szayna, *Identifying Potential Ethnic Conflict* 318 (2000) (the solecism appears eight times on this one page).
- “Interestingly, an evolutionary epistemology that draws insights from the evolution of sensory *apparati* [read *apparatuses*] of living organisms provides a very Deweyan critique of spectator theory without any apparent awareness of Dewey’s thought (Bartley 1987).” James L. Webb, “Dewey: Back to the Future,” *J. Econ. Issues*, 1 Dec. 2002, at 981.

Cf. **nexus & prospectus**.

LANGUAGE-CHANGE INDEX

**apparati* for *apparatuses*: Stage 1

Current ratio (*apparatuses* vs. **apparati*): 21:1

apparel, vb., makes *appareled* and *appareling* in AmE, *apparelled* and *apparelling* in BrE. See SPELLING (B).

apparent = (1) seeming <the apparent motion of the planets>; or (2) obvious <the problems are quite apparent>. Sense 2 is usual after a BE-VERB.

In sense 1, the word is frequently misused in reference to fatalities. What happens is that the adverb *apparently* gets morphed into an adjective and paired with the wrong word (a noun) when logically it should modify a verb. For example, a person may die “*apparently* of a heart attack,” but one doesn’t die “of an *apparent* heart attack.” Yet variations on this ILLOGIC are legion—e.g.:

- “Less than a month after basking in the Thanksgiving glow of release from North Korea, where he was held as a spy and threatened with execution, Evan C. Hunziker was found this morning in a rundown hotel here with a bullet

in his head—dead of an *apparent suicide*” Timothy Egan, “Man Once Held as a Spy in North Korea Is a Suicide,” *N.Y. Times*, 19 Dec. 1996, at A12. (A possible revision: . . . *Evan C. Hunziker was found this morning in a rundown hotel here with a bullet in his head, dead apparently by suicide.*)

- “Buster Auton will take over for the popular Elmo Langley, who died of an *apparent heart attack* in Japan in November.” Mark Znidar, “Changes Abound as Another Season Nears Starting Line,” *Columbus Dispatch*, 11 Feb. 1997, at F3. (A possible revision: *Buster Auton will take over for the popular Elmo Langley, who died in Japan in November, apparently of a heart attack.*)
- “Davenport, who died June 1 of *apparent ‘natural causes,’* was exchanging texts with a convicted prostitute at the time of the crash.” Lydia X. McCoy, “Families Sue Over Bush Crash,” *Knoxville News-Sentinel*, 21 July 2015, at 5A. (A possible revision: *Davenport, who died June 1 (apparently of unrelated natural causes), was texting with a convicted prostitute when the crash occurred.*)

LANGUAGE-CHANGE INDEX

**apparent heart attack*, etc.: Stage 3

appear. The phrase *it would appear* is invariably inferior to *it appears* or *it seems*—e.g.: “*It would appear* [read *It appears*] that more than a few of us are desperate for an easy dinner.” Ruth Fantasia, “Desperate Times Require Desperate Measures,” *Virginian-Pilot & Ledger Star* (Norfolk), 7 Jan. 1998, at F1. See **would & SUBJUNCTIVES**.

On the sequence of tenses in phrases such as *appeared to enjoy* (as opposed to *appeared to have enjoyed*), see TENSES (B).

appellant. This word is ordinarily a noun meaning “a litigant who appeals against an adverse decision.” Although dictionaries may provide some historical support for using *appellant* as an adjective corresponding to the noun *appeal*, this usage violates modern legal idiom, which reserves *appellate* for this purpose. E.g.: “The ruling must be reviewed by an *appellant* [read *appellate* or *appeals*] court before a new test can be scheduled.” “Rifle, Bullet Should Be Retested, Judge Rules in King Case,” *Columbia Daily Trib.*, 21 Feb. 1997, at A10.

LANGUAGE-CHANGE INDEX

appellant misused for *appellate*: Stage 1

appendant (= attached, associated) is the standard spelling. **Appendent* is a variant.

Current ratio: 28:1

appendectomy; appendicectomy. The first is standard in AmE. The second was long standard in BrE—e.g.: “We early called the process of *appendicectomy* ‘hanger-on-cutting-out.’” Basil Cottle, *The Plight of English* 15 (1975). The longer form was long considered etymologically preferable—and perhaps it still is, in some quarters, since the appendix and not the “append” is removed (*-ectomy*)—but today the syncopated form *appendectomy* is the undisputed favorite in World English. The AmE preference for the shorter term was established by 1900; not until the mid-1970s did the shorter form become predominant in BrE.

Current ratio: 8:1

***appendent.** See **appendant**.

appendixes; appendices. Both are correct plural forms for *appendix*, but *appendixes* has long been considered preferable outside scientific contexts—e.g.:

- “The authors of ‘The Bell Curve’ tell readers that they may limit their perusal to the summaries that precede each chapter, and that they may skip the main text. Still, ‘The Bell Curve’ is 845 pages long, and a reader who skips even the *appendixes* will miss many of the points the authors are at pains to make.” Malcolm W. Browne, “What Is Intelligence, and Who Has It?” *N.Y. Times*, 16 Oct. 1994, § 7, at 3.
- “The book’s three *appendixes* . . . will be helpful to newcomers to church traditions.” “Beyond Smells and Bells: The Wonder and Power of Christian Liturgy,” *Publishers Weekly Reviews*, 11 Feb. 2008, at 66.

Nevertheless, the nonnative plural is more frequent by a 3-to-1 margin. See **PLURALS (B)**. Cf. **index (A)**.

appertain; pertain. Some **DIFFERENTIATION** is possible. Both take the preposition *to*, but *appertain* usually means “to belong to rightfully” <the privileges appertaining to this degree>, whereas *pertain* usually means “to relate to; concern” <the meeting pertains to the headmaster’s continued employment>.

applause. A. Singular or Plural. This word, derived from the Latin verbal noun *applausus*, means (1) “loudly expressed approval,” or (2) “marked commendation.” In English, the word traditionally appears in such a way that its number (singular or plural) is disguised <we could hear the applause> <he gained our applause>. But the *OED* gives only singular definitions, and when *applause* is the subject of a verb it takes a singular verb—e.g.: “The biggest *applause* comes after his nod to party loyalty.” Paul Demko, “Here We Go A-Caucusing,” *City Pages* (Minneapolis), 25 Apr. 2001, at 6.

Yet because the end of the word sounds much like a plural ending in *-s*, some writers (who deserve some hoots) erroneously use the word as if it were plural—e.g.:

- “Big *applause are* [read *applause is*] in order for the entire cast.” Don Thomas, “Ragtime: Broadway’s Got a New Hit Musical,” *N.Y. Beacon*, 25 Feb. 1998, at 26.
- “The largest *applause were* [read *applause was*] reserved for the favourite oldies including ‘Come Home,’ ‘She’s a Star,’ and an excellent performance of ‘Tomorrow.’” Graham Young, “Shania Twain Special,” *Evening Mail* (London), 8 Dec. 1999, at 27.
- “Talley . . . falls just once and is back on his feet before his family’s teasing *applause die* [read *applause dies*] out.” Nora K. Froeschle Jenks, “Speed Skater Qualifies for Winter Games in Alaska,” *Tulsa World*, 13 Dec. 2000, at 4.

LANGUAGE-CHANGE INDEX
applause misused as a plural: Stage 2
 Current ratio (*the applause was* vs.
 **the applause were*): 75:1

B. Narrowing of Meaning. As suggested in (A), the word has never referred merely to clapping. Huzzahs would count as applause. But today the word is increasingly thought to be interchangeable with clapping—e.g.:

- “Several of the legislators burst into *applause*—and the loudest *clapping* seemed to come from the men.” Yolanda Jones, “In Brief,” *Memphis Comm. Appeal*, 15 Feb. 2008, at 1.
- “His answer was met with hearty *applause* from those in the audience, to which Clemens jokingly replied, ‘Are you *clapping* because you want me not to be on city council?’” Marquita Brown, “Salem Residents Hear from Candidates,” *Roanoke Times*, 23 Apr. 2008, at B10.
- “At Chelsea Cinema on Saturday there were close on 700 people (mainly women, all ages, and a smattering of homosexual men), whooping, *clapping* (Samantha, with the best lines, gets the most *applause*) and crying (look out for Charlotte saying ‘no’).” Glenda Cooper, “Carrie and Co. Beat Indy in Battle of Films,” *Daily Telegraph*, 2 June 2008, at 5.

apple cider. Strictly speaking, this phrase is a **REDUNDANCY** because *cider* has traditionally referred to a drink made from apple juice. But for many decades now, beverage manufacturers have marketed other types of “ciders,” from the juice of peaches, raspberries, and the like. So if *apple cider* is redundant, it is also sometimes necessary for clarity. Cf. **tuna fish**.

LANGUAGE-CHANGE INDEX
apple cider for *cider*: Stage 5

***applicable.** See **applicable (A)**.

applicable. A. And *applicable; *applyable. These two variants are incorrect. *Applicable*, the correct form, is properly accented on the first syllable (/əp-*li*-kə-bəl/), not on the second. See **PRONUNCIATION (B)**.

Current ratio: 30,347:5:1

B. And *applicative; *applicatory. These forms are **NEEDLESS VARIANTS** of *applicable*. **Applicative* is also a needless variant of *applied*, as in the phrase **applicative psychology*.

Current ratio: 4,732:35:1

C. Be applicable. This construction is almost always inferior to the simple verb *apply*—e.g.:

- “Not all of these ideas, of course, *are really applicable* [read *really apply*] to my house or my life.” Monty S. Leitch, “Home Improvement Via the Satellite Dish,” *Roanoke Times*, 1 Sept. 1997, at A7.
- “Because no new lands will be added until the year 2000, the current brochure will *be applicable* [read *apply*] for the next three seasons.” Charlie Meyers, “Public Hunting Access Getting a Shot in the Arm,” *Denver Post*, 12 Sept. 1997, at D3.
- “They call Heath Miller ‘Big Money,’ but ‘Big Country’ would *be just as applicable* for [read *apply just as well to* or *be just as apt for*] the veteran tight end.” Dan Gigler, “Pairing Steelers and Food,” *Pitt. Post-Gaz.*, 9 Sept. 2015, at C1.

See **BE-VERBS**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-ii.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

applicant; applicator; *applier. An *applicant* is “someone who applies for something (as a position in a firm).” *Applicator* = (1) a device for applying a substance, or (2) someone who applies a substance. **Applier* is a NEEDLESS VARIANT of *applicator*.

Current ratio (*applicator* vs. **applier*): 17:1

***applicative; *applicatory.** See **applicable (B)**.

***applier.** See **applicant**.

***applyable.** See **applicable (A)**.

apposite. See **apt (A)**.

apposition (= the grammatical relation between two words or phrases that stand for the same idea) is sometimes misused for *opposition*—an odd MALAPROPISM. E.g.: “Their accounts were in stark *apposition* [read *opposition*] at several other points, too.” Maureen Dowd, “Testimony Conflicts at Military Hearing on Abuse by Fliers,” *N.Y. Times*, 18 Aug. 1993, at A1.

LANGUAGE-CHANGE INDEX

apposition misused for *opposition*: Stage 1

APPOSITIVES. An appositive points out the same person or thing by a different name, usually in the form of an explanatory phrase that narrows an earlier, more general phrase. So in the sentence “My brother Brad is a musician,” *Brad* is the appositive of *brother*. Typically, in phrases less succinct than *my brother Brad* (in which *Brad* is restrictive), the appositive is set off by commas or parentheses:

- “‘Gotta watch what I do,’ joked the dark-haired 18-year-old, the youngest child of Councilwoman Dominique Thornton and her husband, *Richard Thornton*.” “In the Running for First Daughter,” *Hartford Courant*, 11 Sept. 1997, at B7. (*Richard Thornton* is an appositive of *her husband*. And the entire phrase *the youngest child . . . Thornton* is an appositive of *18-year-old*.)
- “In that community, individual farming compounds were spaced between the complex of the community leader, *the caddi*, and the complex of *the xinesi*, the paramount religious authority.” Timothy K. Perttula, *Southwest Hist. Q.* (Book Rev.), Apr. 2001, at 616. (*The caddi* is an appositive of *the community leader*, and *the paramount religious authority* is an appositive of *the xinesi*.)

Generally, a pair of commas (or, less frequently, parentheses or dashes) must frame an appositive unless the appositive is restrictive. So a person might write *my brother Blair* to distinguish Blair from another brother (say, Brad). But if Blair were the only brother, the reference should be to *my brother, Blair*. This is not a hard-and-fast rule, and many publications ignore commas with a name as a short appositive of relationship, for two reasons. The first is stylistic: the written comma <my husband, Bob> does not reflect any audible pause in the spoken sentence <“my husband Bob”>. The second is practical: enforcing the rule would require finding out how many brothers the subject has before deciding between *his brother Blair* or *his brother, Blair*, and that can be a lot of effort for a small payoff.

One telltale signal that an appositive is restrictive is the definite article *the* preceding the noun—e.g.: *The*

grammarian Henry Sweet provided Shaw a model for Henry Higgins. (But reverse the order and it comes out differently: *Henry Sweet, the grammarian, provided Shaw a model for Henry Higgins*.) The signal is not infallible, however. Consider: *My favorite restaurant is Abacus. The chef, Kent Rathbun, trained at . . .* Here, *the chef* is the main information and the name adds to it but could be omitted. In the previous example, though, *the grammarian* could not stand alone.

Emphatic appositives (also termed “intensive pronouns”) are never set off by commas—e.g.: “*He himself* flunked the test.” See **PRONOUNS (E)**.

Some writers erroneously omit the comma that should follow an appositive introduced with a comma—e.g.:

- “In the lawsuit, Douglas Hartman, an Illinois air traffic controller[,] says he was forced to walk through a Tailhook-style gantlet during a workshop designed by Eberhardt to combat sexual harassment.” Jean Marbella, “Daring Tailhook-Style Gantlet Stirs Up Debate,” *Detroit News*, 12 Oct. 1994, at A12.
- “Barry Popik, an etymologist[,] has found the earliest use so far in a Dec. 1, 1883, Washington weekly called *The Hatchet*.” William Safire, “On Language,” *N.Y. Times*, 15 Dec. 2002, at 48, 49 (assuredly a copyediting error—as inside information has confirmed).

As a matter of CONCORD, an appositive should match its noun in part of speech and number. For example, it’s wrong to use a noun appositive after a possessive—e.g.: “Merton W. Starnes’s (Starnes) claim arrived in this office after the deadline had passed.” The better strategy would be to avoid the shorthand definition altogether; on a second reference, *Merton W. Starnes* becomes *Starnes*—and no reasonable person would be confused. Likewise, it’s wrong to use a singular noun with a plural appositive—e.g.: “The spelling ‘kinda’ and ‘coupla’ probably reflects [read spellings ‘kinda’ and ‘coupla’ probably reflect] the writer’s feeling about the special status of these ‘words.’” Dwight Bolinger, “*Couple*: An English Dual,” in *Studies in English Linguistics* 30, 40 n.5 (Sidney Greenbaum et al. eds., 1979).

For the problem of the “disjointed” appositive, see **ILLOGIC (D)**.

appraisal; appraisement. Although some dictionaries treat these as variants, the *OED* definitions suggest some divergence in meaning. Both may mean “the act of appraising, the setting of a price, valuation.” But *appraisement*, when connoting the acts of an official appraiser, is the term usually used in reference to valuation of estates.

The more broadly applicable and more frequent term is *appraisal* in both literal and figurative senses—e.g.:

- “The plaintiffs cannot touch the money allotted them under a court-ordered *appraisal* of the market value of their properties.” Laura Mansnerus, “The Mail’s Expanding—and You’re Evicted,” *U.S. News & World Rep.*, 15 Sept. 1997, at 43.
- “Clinton should bring with him an honest *appraisal* of the situation.” “Clinton’s Indefinite Commitment to Bosnia,” *S.F. Chron.*, 19 Dec. 1997, at A30.

Strange to say, H.W. Fowler classified *appraisal* among those words “that have failed to become really familiar and remained in the stage in which the average man cannot say with confidence off-hand that they exist” (*FMEU1* at 14). Yet *appraisal* has become the standard term in BrE as well as in AmE, largely from the American influence.

Current ratio (*appraisal* vs. *appraisalment*): 70:1

***appraisal valuation**, though fairly common in financial and insurance contexts, is illogical and redundant—e.g.:

- “Clarifications are expected to be issued on performance measurement, accounting policies and *appraisal valuations* [read *appraisals*], according to Richard Carlson.” “Task Force Sets Vote on Industry Reporting Standards,” *Real Estate Fin. & Investment*, 4 Nov. 1996, at 2.
- “In reality, most home *appraisal valuations* [read *appraisals*] are based on recent, nearby comparable home sales prices.” Robert J. Bruss, “Your Place: A Judgment Call How to Get a Fair Appraisal of Your Home,” *Chicago Trib.*, 28 Jan. 2000, at 26.

appraise; apprise; *apprize. To *appraise* is to put a value on or set a price for (a thing). To *apprise* is to inform or notify (someone). Writers often misuse *appraise* when they mean *apprize*—e.g.:

- “‘Other employees also are kept *appraised* [read *apprised*] of developments within the company,’ Highsmith said.” Elena Bianco, “New Dimensions in Lumber,” *Lewiston Morning Trib.* (Idaho), 4 Nov. 1990, at E1.
- “The elder Hugh called up the Charlotte Bank and *appraised* [read *apprised*] them of the situation.” Katherine Burton et al., “NationsBank’s \$8.7 Billion Acquisition Matches CEO’s Drive,” *Commercial Appeal* (Memphis), 1 Sept. 1996, at C1.
- “Bandidos could be *appraised* [read *apprised*] of potential customers through Morse code.” Larry Habegger & Natanya Pearlman, *Central America: True Stories* 130 (2002).

Occasionally, the opposite mistake occurs—e.g.: “The maximum loan-to-value is the percentage of the *apprised* [read *appraised*] value of the house the lender will finance.” “Fall Mortgage News,” *Seattle Times*, 20 Oct. 1996, at G1.

The NEEDLESS VARIANT **apprize* (rare) is synonymous with *appraise*, although it is sometimes erroneously used as an equivalent of *apprise*—e.g.: “You, in turn, for a fee, would be *apprized* [read *apprised*] of the date the city was notified of the potholes’ existence.” Bruce Williams, “Cities, States Limit Own Liability for Damage,” *Cincinnati Post*, 5 Mar. 2002, at B12.

LANGUAGE-CHANGE INDEX

1. *appraise* misused for *apprise*: Stage 1
Current ratio (*apprised of* vs. **appraised of*): 16:1
2. *apprise* misused for *appraise*: Stage 1
Current ratio (*appraised at* vs. **apprised at*): 40:1
3. **apprize* misused for *apprise*: Stage 1
Current ratio (*apprised of* vs. **apprized of*): 8:1

appraisalment. See **appraisal**.

appreciable. So formed—not **appreciatable*. E.g.: “It is most unlikely that it has been in the river where it was recently discovered for any *appreciatable* [read *appreciable*] length of time, the report said.” “Cockroach Gives Cat an Alibi in Slayings,” *Times-Picayune* (New Orleans), 8 Aug. 1995, at A4. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX

**appreciatable* for *appreciable*: Stage 1
Current ratio (*appreciable* vs. **appreciatable*): 10,516:1

appreciate = (1) to fully understand; (2) to perceive or detect; (3) to increase in value; or (4) to be grateful for. Sense 4 originated through SLIPSHOD EXTENSION but is now firmly established.

Sense 4 is often part of a wordy construction: “I would *appreciate it if you would send* [read *appreciate your sending*] me an application.” Better yet: “Please send me an application.”

LANGUAGE-CHANGE INDEX

appreciate in the sense “to be grateful for”: Stage 5

apprise; *apprize. See **appraise**.

approbation; approval. There is no generally accepted distinction between these two words, except that the first is more unusual and dignified. Wilson Follett suggests that we restrict *approbation* to a favorable response on a particular occasion and use *approval* for a more general favorable attitude (*MAU* at 72).

As for the corresponding verbs, rarely does *approve* justifiably supersede *approve*—e.g.: “Now the timid North Atlantic Treaty Organization ‘expansion,’ by practically *approbating* [read *approving*] the Hitler-Stalin Pact of 1939, invites the always-hungry Russian empire again to expand into Baltic States.” “A Date to Remember,” *Orlando Sentinel*, 8 May 1997, at A26. See **disapprobation**.

approbatory; *approbative. In modern print sources, *approbatory* is somewhat more common than **approbative*, a NEEDLESS VARIANT.

Current ratio: 1.4:1

appropriable—not **appropriatable*—is the adjective corresponding to *appropriate*, v.t. See -ABLE (D) & -ATABLE.

Current ratio: 38:1

appropriate, v.t. **A. And *misappropriate***. *Appropriate* = (1) to set apart for a particular person or organization for a specific purpose <government-appropriated funds>; or (2) to take from a particular person or organization for a specific purpose <by appropriating her valuables and locking them away, her stepmother in effect stole them>. Sense 1 is the more usual in AmE, perhaps because it is better to give than to receive.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Sense 2 is gradually fading. *Misappropriate* = to apply (as another's money) dishonestly to one's own use. *Appropriate* has a more neutral, nonaccusatory connotation. Still, in meaning "to take from a particular person or organization for a particular purpose," it is tinged with some of the negative connotations made explicit in *misappropriate*. See **embezzle**.

B. And *expropriate*. *Expropriate* = (1) to exercise eminent domain over; to take, by legal action, private land for public use; or (2) to transfer title to another's property to oneself. Sense 1 is more usual—e.g.: "The government had every legal right to *expropriate* the land." Sheryl WuDunn, "Farmers Holding Out Against Japan Airport," *Dallas Morning News*, 7 Sept. 1997, at A26. Although sense 2 of *appropriate* seems generally consonant with sense 1 of *expropriate*, the latter is the better, more concrete term whenever it fits.

C. As a Contronym. See CONTRONYMS.

approval. See **approbation**.

approve. **A. *Approve (of)*.** One may either *approve* something or *approve of* something. Usually, *approve* suggests formal sanction <the council approved the stadium plans>, whereas *approve of* suggests favorable sentiments <she approved of her mother's remarrying>. As a matter of linguistic frequency, the collocation *approve the* appears in print sources about four times as often as *approve of the*. Cf. **disapprove (of)**.

B. And *endorse*. The two should be distinguished. To *endorse* is to support actively and explicitly. The word connotes action as well as attitude. To *approve*, apart from the sense of giving official sanction, is to consider right or to have a favorable attitude toward. The verb conveys an attitude or thought. In both senses, *approve* is more passive than *endorse* <she approved his stand on most issues but never endorsed his candidacy>.

C. And *approve*. See **approbation**.

approximate; approximal; proximate. *Approximate* = (1) closely resembling; (2) nearly accurate; or (3) close together. *Approximal* = contiguous. *Proximate* = (1) very near; or (2) directly related. Sense 3 of *approximate* should usually yield to either *approximal* (if the two things are touching) or *proximate* (if the two things are close). See **proximate**.

***approximately about** is a REDUNDANCY. See **about (A)**.

apricot (the fruit) is pronounced /ay-pri-kot/ throughout the English-speaking world—/ap-ri-kot/ being a chiefly AmE variant.

April Fool's Day; *April Fools' Day. The singular-possessive form has been consistently more common since the term became popular in the mid-19th century.

Current ratio: 2:1

apropos (of). Both the long form (*apropos of*) and the short form (*apropos*) are generally unnecessary, though they might prove serviceable in informal

letters. *Apropos of* (suggested by the French phrase *à propos de*)—meaning "with respect to"—is well established in English. Yet the GALLICISM *apropos* may be used as a preposition to mean "concerning, apropos of" <apropos your plans, let me tell you about our schedule>. Hence *of* can usually be included or omitted, as the writer desires. E.g.:

- "Then, *apropos of* nothing, he proclaims: 'I'm 105 years old!'" Anne Rochell, "The Goat Man Lives," *Atlanta J-Const.*, 10 Sept. 1997, at D1.
- "As Leo Varadkar . . . put it last week *apropos* Greece, 'It seems like the student union has taken over the government.'" Ruth Dudley Edwards, "Sinn Fein Is Panicking as Its Brothers Wreak Havoc in Greece," *Sunday Independent*, 5 July 2015, at 23.

As for comparative frequency in print sources, *apropos of* has predominated over the rival form ever since they emerged in English in the early 19th century.

The word is sometimes misused for *appropriate*, adj., a mistake often signaled by the use of *to*—e.g.: "Just three years ago, Sears, Roebuck and Co.'s finance department built a data warehouse [that] the retailer, *apropos to* its business, calls a data mall." Leslie Goff, "Beitler Sees the Data Side of Sears," *Computerworld*, 15 Sept. 1997, at 79. (A possible revision: *Just three years ago, Sears, Roebuck and Co.'s finance department built a data warehouse called (appropriately) a data mall.*)

LANGUAGE-CHANGE INDEX

apropos misused for *appropriate*: Stage 1

Current ratio (*it is appropriate that* vs.

**it is apropos that*): 270:1

apt. **A. And *opposite*.** Both words mean "fit, suitable." Whereas *apt* is the ordinary term, *opposite* is a FORMAL WORD.

B. And *likely*. Although some critics have objected to *apt* in a sense similar to *likely*, this usage has long been considered perfectly acceptable: "Even the dictionary justifies 'apt' in the sense of 'habitually likely,' thus graciously acknowledging the custom of many high-grade writers and the crowd." Edward N. Teall, *Putting Words to Work* 279 (1940). As Ernest Gowers explains, however, "in British usage *apt* always implies a general tendency; for a probability arising from particular circumstances *likely* is the word" (*FMEU2* at 34).

The same distinction between *apt* and *likely* applies in the best American usage. In the following sentences, *apt* is correctly used of general or habitual tendencies, rather than a likelihood in a particular instance—e.g.:

- "But be aware: seedling foliage looks like grass, and it is *apt* to be treated as such by meticulous gardeners." Nell Lewis, "Freeze Lays Fall Colors to Rest," *News & Record* (Greensboro), 10 Dec. 1997, at R4.
- "Fund managers . . . are more *apt* than most to dislike sick people and babies." Brian O'Reilly, "Does Your Fund Manager Play the Piano?" *Fortune*, 29 Dec. 1997, at 139.

LANGUAGE-CHANGE INDEX

1. *apt* for "habitually likely": Stage 5

2. *apt* for a particular instance: Stage 4

aquaculture (= the cultivation of marine life) is now the standard spelling. **Aquiculture*—once given as the main headword in several American dictionaries—is now a variant.

Current ratio: 342:1

aquarium. The anglicized plural *aquariums* has been predominant in AmE and World English since the 1980s. In BrE, the predominant plural is still *aquaria*, though now by a very slender margin. See PLURALS (B).

Current ratio (World English): 2:1

aquatic (= involving water) is pronounced either /ə-**kwah**-tik/ or /ə-**kwat**-ik/.

***aquiculture.** See **aquaculture.**

Arab; Arabic; Arabian. As an adjective, *Arab* has predominated in all varieties of English since the 1920s and has the broadest applicability. The longer terms tend to have specific applications. *Arabic* usually describes language, art, script, and numerals. *Arabian* refers to the cultures and geography of the regions where Arab peoples reside or to animals native to the Arabian peninsula.

Now for the nouns. *Arab* typically refers to any person of Arabic descent or an Arabic-speaking inhabitant of the Middle East or northern Africa. *Arabic* refers to the language. *Arabian* should be reserved for the breed of horse. See **Saudi.**

arbiter. See **arbitrator.**

arbitrable; arbitrability. Although these are the established forms, some writers use the NEEDLESS VARIANTS **arbitratable* and **arbitratability*, which have an extra syllable—e.g.: “Courts have held that an arbitration clause is to be construed so as to favor *arbitratability* [read *arbitrability*].” W. Dudley McCarter, “Arbitration Agreements Binding in Missouri,” *Springfield Bus. J.*, 25 Apr. 1994, at 7. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX

**arbitratability* for *arbitrability*: Stage 1

arbitrage. See **arbitration (A).**

arbitrageur; *arbitrager. English-language dictionaries have traditionally preferred the Frenchified *arbitrageur* (= someone who simultaneously buys and sells different securities, commodities, currency, and the like to profit on price differences). Some journalists and courts have preferred the naturalized form, **arbitrager* (with the main accent on the first syllable: /ahr-bi-trah-jər/)—e.g.:

- “The *arbitragers* who were indicted yesterday were D. Ronald Yogada [and others] . . .” Kurt Eichenwald, “Two Firms Are Charged as Insiders,” *N.Y. Times*, 3 Nov. 1988, at 29.
- “Robert Freeman, 46, of Goldman, Sachs & Co., was one of the country’s most powerful takeover-stock speculators, or *arbitragers*.” Steve Swartz & James B. Stewart, “Kidder’s

Mr. Wigton, Charged as ‘Insider,’ Ends His Long Ordeal,” *Wall Street J.*, 21 Aug. 1989, at 1.

But by a 7-to-1 ratio, usage is now firmly set in favor of the GALLICISM *arbitrageur* (with the main accent on the last syllable: /ahr-bi-trah-**zhoor**/)—e.g.:

- “In a world adhering to the purities of the rational-markets faith, *arbitrageurs* should have instantly eliminated this discrepancy by simultaneously buying 3Com and selling Palm short, making themselves a mint.” Holman W. Jenkins Jr., “Business World: Short Sellers Are People, Too!” *Wall Street J.*, 29 Jan. 2003, at A19.
- “The *arbitrageur* simultaneously buys the lower-priced asset and shorts the higher-priced version based on the certainty that the prices will eventually converge, at which point he will liquidate the position and collect a guaranteed profit.” Mark Anderson, “How to Invest Like the Pros: A Cheat Sheet on the Leading Market Strategies That Have Made Some Investors Famously Rich,” *Nat’l Post Bus. Mag.*, 1 Feb. 2003, at 56.

**Arbitrager* ought to be considered a NEEDLESS VARIANT.

LANGUAGE-CHANGE INDEX

Current ratio: 7:1

***arbitratable.** See **arbitrable.**

arbitration. A. And arbitrage. *Arbitration* = the process of submitting a dispute to a neutral third party whose decision is binding on the participants. *Arbitrage* = the simultaneous buying and selling of currencies or securities at different values in order to profit by price discrepancies.

Writers occasionally err by substituting *arbitrage* for *arbitration*—e.g.:

- “In a terse statement on Wednesday, Sir Leon said the EU ‘will carefully study both the *arbitrator*’s report and the two panel reports, and of course meanwhile reserve our right of appeal’ . . . In a parallel ruling, an *arbitrage* [read *arbitration*] panel decided the U.S. retaliation is legal but excessive.” Elizabeth de Bony, *J. of Commerce*, 8 Apr. 1999, at A1.
- “What’s more, in a hotly contested move, a state *arbitrage* [read *arbitration*] panel granted the Florida Windstorm Underwriting Association, a state pool of insurers, an average increase of 96 percent statewide, with rates climbing nearly 300 percent for homeowners in South Florida.” Sharon Harvey Rosenberg, “Wind Damage Is Down This Hurricane Season, but Not Insurance Rates,” *Miami Daily Bus. Rev.*, 26 Oct. 2000, at A1.

The opposite error is rare but not unknown—e.g.: “Futures and options based on the Russell 1000 provides *arbitrage* opportunities for investors The degree to which such *arbitrations take* [read *arbitrage takes*] place is likely to determine the pace at which the Russell 1000 overtakes the S&P 500.” C. Michael Carty, “Favored Large-Cap Barometer Will Change,” *Pensions & Investments*, 1 Nov. 1999, at 36.

In the Russian Federation, courts that settle commercial disputes are popularly called *arbitrage*

courts (reflecting the Russian pronunciation /ahr-bi-**trazh**/)—e.g.: “Here, she is outside the Federal Arbitration Court in Kazan in front of a mural of Lenin.” “Judge Discovers Striking Differences in the Way Russian Society Views Women,” *Albuquerque J.*, 4 June 1999, at 14 (photo caption). The federation’s highest such court, however, calls itself the “Supreme Arbitration Court” to avoid confusion with the term of speculation.

B. And mediation. Both terms refer to resolving disputes through a neutral third party. Traditionally, the results of *arbitration* are binding—that is, the parties to the arbitrator’s decision are bound by it. Because that aspect of the proceedings is not universally understood, the REDUNDANCY *binding arbitration* is unassailable in most contexts. In *mediation*, to the contrary, the mediator merely tries to help two disputing parties reach an agreeable solution; the parties are not, however, bound by a mediator’s decisions.

This distinction is muddled somewhat by the emergence of *nonbinding arbitration* in the U.S. and Canada. But nonbinding arbitration generally addresses just one aspect of the dispute, and the decision (there is no award) serves merely to help the parties reach a settlement. The arbitrator, unlike a mediator, does not actively negotiate toward a settlement.

arbitrator; arbiter. An *arbitrator* is a person chosen to settle differences between two parties. *Arbiter*, by contrast, is more general, meaning “anyone with power to decide disputes, such as a referee, judge, or commissioner.” The terms overlap considerably, and they cause confusion on both sides of the Atlantic. When referring to legal arbitration, the term should be *arbitrator*. When legal disputes aren’t at issue, the better term is *arbiter*.

Hence in the popular phrase *final or ultimate arbiter*, the word *arbitrator* is inferior—e.g.: “Foreign attention enhances Assad’s image as the *ultimate arbitrator* [read *ultimate arbiter*] in the region.” John Walsh, “Accord: Diplomacy Ends Mideast Border Attacks,” *Montgomery Advertiser*, 4 May 1996, at A8.

**Arbitor* is a frequent misspelling—e.g.:

- “Under the owners’ proposal, they would have the right to reject an *arbitor’s* [read *arbiter’s*] ruling and declare the player a free agent.” Dave Fay, “Union Says League Is Holding Up Agreement,” *Wash. Times*, 30 Nov. 1994, at B2.
- “Ever since the 1954 Supreme Court desegregation decision, judges, not legislators, have been the *arbitors* [read *arbiters*] of social policy.” Paul Craig Roberts, “Victory Trail from the New Majority Corral,” *Wash. Times*, 11 Aug. 2000, at A17.

LANGUAGE-CHANGE INDEX

1. *arbitrator* for *arbiter*: Stage 1

2. *arbiter* misspelled **arbitor*: Stage 1

Current ratio (*arbiter* vs. **arbitor*): 1,538:1

arboretum. The predominant plural is *arboretums* (AmE) or *arboreta* (BrE). See PLURALS (B).

arc, vb., now uniformly makes *arced* and *arcing*, no longer **arcked* and **arcking*. See -c-.

Current ratio (*arcing* vs. **arcking*): 4,915:1

archaeology (= the study of the remains of ancient peoples and their cultures) is the standard spelling in both AmE and BrE. **Archeology* is a variant spelling. (See AE.) The word is pronounced /ahr-kee-**ol**-ə-*jee*/, preferably not /ahr-kay-*l*/.

Current ratio: 13:1

archaic; obsolete; obsolescent. *Archaic* = old-fashioned; antiquated; characteristic of an earlier time and rarely used today. *Obsolete* = no longer in general use; out-of-date. *Obsolescent* = passing out of use; becoming obsolete. The phrase **totally obsolescent* or **completely obsolescent* is an OXYMORON—e.g.: “Widespread acceptance of that work would render his own much more conventional, delicately Impressionist poetry *completely obsolescent* [read *obsolete*].” Christopher Hampton, “The Long Brief Encounter,” *Sunday Telegraph*, 6 Apr. 1997, at 9.

archaism. See **anachronism**.

ARCHAISMS. A. Generally. Many writers indulge in antiquated phrasings known primarily through the King James Version of the Bible or through Shakespeare. Avoid them, unless you’re being jocular. Among the ones to be especially wary of are these:

alack	haply	shew (for <i>show</i>)
anent	howbeit	spake
anon	in sooth	to wit
begat	maugre	verily
belike	meseems	whilom
betimes	methinks	withal
divers	nigh	wot
durst	peradventure	ye
fain	perchance	yea
forsooth	saith	

One writer aptly says of a similar list: “These are easily avoided by anyone of the least literary sensibility.” Herbert Read, *English Prose Style* 9 (1952).

B. Mistakes Caused by Archaism. Archaism can be faulted in itself. But a still more embarrassing problem arises when the indulger doesn’t understand how the phrasings work. In Early Modern English, the following singular forms frequently appeared:

Second Person	Third Person
thou goest	he (or she) goeth

Up to the 17th century, the *-eth* suffix was merely an alternative third-person singular inflection for an English verb. Used primarily in southern England, it had, by the end of that century, become obsolete. *She calls* and *he answers* took the place of *she calleth* and *he answereth*. Some writers, straining for an archaic literary touch, use this suffix with no regard to whether the subject is singular or plural. The following title illustrates this tendency: Bill Rogers, “The Bowls Overfloweth [read *Overflow*],” *Canyon News*, 25 Dec. 1994, at 9 (referring to the football bowls). This use of *-eth* with a plural subject has become lamentably common—e.g.:

- William F. Powers, “The Friendly Faces *Giveth*, the Fine Print *Taketh* Away,” *Wash. Post*, 13 July 1993, at D1 (the singular use of *taketh* with *print* is correct here).
- “They *giveth* legroom, and they *taketh* away.” Barbara Ann Curcio, “Worldwise,” *Wash. Post*, 5 June 1994, at E3.
- “What the travel Gods *taketh* away, they sometimes *giveth* back.” Alan Reinhart, “Taking Advantage of Life on the Road,” *Nat’l Dragster*, 28 Aug. 2015, at 22.

Sometimes the second-person *-est* appears in the third person or even the first person—e.g.:

- “Whither *goest* the sport of boxing these days?” Bill Dwyre, “Arum’s Next Big Promotion Definitely Goes the Distance,” *L.A. Times*, 10 Aug. 2013, Sports §, at 2.
- “These silver linings provided balm to some, while the editorial writers and columnists—as always—worried aloud: Whither we *goest* into this nuclear night?” Bob Hill, “A Glimpse of News and Views at the Dawn of the Atomic Age of World War II,” *Courier-J.* (Louisville), 3 Aug. 1995, at B1.

Sometimes an error creeps in from the mangling of a SET PHRASE. A famous quotation from Shakespeare’s *Hamlet*, for example, is that “the lady doth protest too much” (3.2.230). Translate this to the first person and you have: “Perhaps *I doth* protest too much; it’s just that the players’ timing could have been better managed, methinks.” Stephen Foster, “Case of Awkward Timing?” *Roanoke Times*, 8 Aug. 1995, NRV §, at 2. That’s equivalent to saying *I does*.

A similar example appears in the phrase *the ice man cometh*, from Eugene O’Neill’s play by that name. Refer instead to *men*—or to some other plural noun—and you make a hash of the phrase or at best an inept allusion:

- “The tax men *cometh*.” Mary Ann Galante, “More Tax Audits Due as FBI Adds to County Force,” *L.A. Times* (Orange County ed.), 21 May 1987, § 4, at 1.
- “Tickets are hot in Denver now that they know the ice men [i.e., hockey players] *cometh*.” “Icy Reception May Await in Nashville,” *Boston Globe*, 25 June 1995, at 94.
- “Cometh the hour, *cometh* the brothers.” Adam Lusher, “Jeremy Corbyn Wants to Run the Country. His Brother Wants to Control the Weather,” *Independent*, 29 Aug. 2015, at 8 (the use of *cometh* with *hour* is correct here).

Even when the writer gets the grammar right, it’s not very heartening because the archaism makes the sentence ring false—e.g.:

- “But *doth* Nippon see through the wooden masks of a Noh drama—slow, plotless, and mistily symbolic?” James W. Scott, “Ad 1995,” *Kansas City Star*, 1 July 1995, at C6.
- “As an example, what *doth* one think would happen in Washington if it was discovered that the chief guy in charge of the nation’s finances had made his fortune in part by avoiding American taxes by way of putting his operations under flags of convenience?” Allan Fotheringham, “Columnists Need to Step into Fields Where Politicians Fear to Tread,” *Fin. Post*, 12 Aug. 1995, § 1, at 19. (This passage is particularly inept because a redundant CASUALISM [*chief guy in charge*] is mixed with a pseudo-biblical style.)

- “When he goes to bed at night, the taxpayer pays for the pillow upon which Walker *doth* rest his weary head.” Thomas L. Knapp, “Election 2016: Scott Walker vs. Government Dependence,” *Jackson Star News* (Ravenswood, W. Va.), 23 July 2015, at A3.

And even in jocular contexts, the jocularity is typically lame:

- “Yet it’s fitting that a comic rockumentary, *Spinal Tap*, has come closest to portraying the ridiculous truth of life as it *doth* rock and thence roll.” David Belcher, “Source of the Sound That Goes with the Flow,” *Herald* (Glasgow), 10 Aug. 1995, at 12.
- “So ‘all the world’s a stage,’ says Shakes, but *doth* the world need another staging of Hamlet, say I?” Shannon Harvey, “Bell Rings Up an Accessible Hamlet,” *West Australian*, 5 Aug. 2015, at 6.
- “The Denver star receiver *doth* protest too much, methinks.” Mark Kiszla, “D.T. Isn’t Catching a Lot of Respect,” *Denver Post*, 28 Aug. 2015, at B1.

Finally, even when the intent is to be humorous, one shouldn’t betray an utter ignorance of how a given form was once used. In the mid-1990s, British Airways ran a commercial in which an Englishman strikes up a mock-Shakespearean dialogue that ends, “’Tis the way we make you feeleth.” This construction is doubly bad because *feel*, in that sentence, is actually an infinitive in an elliptical construction: “’Tis the way we make you [to] feel[eth].” How awful. Maybe an ad agency was to blame.

***archeology.** See **archaeology**.

archetype; prototype. These words are close in meaning, but a distinction between them should be encouraged. As commonly used, *archetype* means “an ideal, a standard or typical example,” and most often applies to living things, especially human characteristics <Mother Teresa was an archetype of benevolence>. *Prototype*, by contrast, means “the original type that has served as a model for successors”; it most often refers to a physical model of a mechanical invention <the investors may want to see a prototype>.

Inconsistently enough, the corresponding adjectives are *archetypal* and *prototypical*. The several by-forms (**archetypic*, **archetypical*, **prototypal*, and **prototypic*) are NEEDLESS VARIANTS.

archipelago (= a group of small islands) is pronounced /ahr-ki-**pel**-i-goh/, not /ahr-chi-/. Pl. *archipelagoes* or (now more frequently) *archipelagos*. See PLURALS (D).

Current ratio (-os vs. -oes): 2:1

architectural; architectonic. *Architectural* is usually the literal, and *architectonic* the figurative, term. Whereas *architectural* relates to the design of physical structures, *architectonic* relates to rational organization or to the abstract structure of a thing or idea.

Although *architectonic* is sometimes used like *architectural*, it should be confined to figurative or abstract senses to make the DIFFERENTIATION complete.

-ARCHY. See GOVERNMENTAL FORMS.

***arcked**; ***arcking**. See **arc**.

Arctic; **Antarctic**. Always spelled (and best pronounced) with the first -c-: /**ark**-tik/, /ant-**ark**-tik/. See **Antarctica**.

ardor; **ardour**. The first is AmE, the second BrE. The BrE spelling was the predominant AmE spelling until the 1840s. See -OR; -OUR.

area, an abstract word, is sometimes used almost as a space-filler: *a problem in the area of domestic policy* should be *a problem in domestic policy*. E.g.: “Madeline Andrews, a third-grade teacher from the North School, in Londonderry, . . . has developed activities using computers for each theme and *subject matter area* [read *subject*].” “Celebrating All Aspects of Education in NH,” *Union Leader* (Manchester, N.H.), 10 June 1996, at A8. Cf. **field**.

aren't I?; ***amn't I?**; ***an't I?** *Aren't I*, though illogical, is the standard contraction corresponding to *am I not*. **Amn't*, a dialectal form, is found mostly in Scotland and Ireland. See ***ain't**.

In the 1930s, Frank Vizetelly denounced *aren't I* as a “hopelessly ungrammatical . . . representation of ‘an't I;’” and declared **an't* (pronounced /ahnt/) to be “correct” and preferable to *aren't* if used with a singular pronoun. Vizetelly, *How to Use English* 83 (1932). Even though he acknowledged that there was no support for his position and that the term was archaic and heard only in London dialect, he insisted that educated people use **an't I* so that the verb would agree with its subject. (*Ibid.* at 71, 89–90.) Still, however, **an't* occurs only in DIALECT. And it is not limited to the first-person singular. E.g.:

- First-person singular: “Much earlier in the novel, Bone adamantly tells Granny that she ‘an't no fool and an't no bastard’ ([page] 144); but, as the years progress, Bone has a harder time rejecting the horrible names that are given to her.” Vincent King, “Hopeful Grief: The Prospect of a Postmodernist Feminism in Allison’s *Bastard*,” *Southern Literary J.*, 1 Oct. 2000, at 128.
- First-person plural: “‘We don’t never talk, do we?’ Dede asks her mother near the end of *Cavedweller*. Delia shakes her head: ‘We an't the type.’” Dorothy Allison, “Book Review: *Cavedweller*,” *Boston Globe*, 15 Mar. 1998, at F1.
- Third-person singular: “‘I say,’ said Haley, and leaning back in his chair and gesturing impressively, ‘I’ll say this now, I alays meant to drive my trade so as to make money on’t, fust and foremost, as much as any man; but then, trade an't everything, and money an't everything, ‘cause we’s all got souls.’” Editorial, “A Bill with the Devil,” *St. Louis Post-Dispatch*, 18 Sept. 1998, at B6.

LANGUAGE-CHANGE INDEX
aren't I? for *am I not?*: Stage 5

Current ratio (*aren't I* vs. **amn't I*): 71:1

Current ratio: 231:1

areola; **aureole**; **aureola**. *Areola* /air-ee-oh-lə/ = a circular pigmented area of skin, esp. that surrounding a nipple. Pl. *areolas* (or, in medical contexts, *areolae*). *Aureole* = a corona around the sun or moon. *Aureola* is the short name for *Hakonechloa macra Aureola*, an ornamental Japanese forest grass. But it is also a variant spelling of *aureole* and a common misspelling of *areola*—e.g.:

- “When it is still too difficult for the baby to latch on, it is sometimes necessary to use soft silastic nipple shields [that] cover the *aureola* [read *areola*] and nipple and give the baby a papilla that can be utilized.” Fima Lifshitz, *Childhood Nutrition* 26 (1995).
- “The *aureola* [read *areola*] surrounds the nipple; it’s darker than the rest of the breast.” Felice Newman, *The Whole Lesbian Sex Book* 25 (1999).
- “She is naked, with one marionette-like arm upraised. Her *aureolas* [read *areolas*] are surrounded by concentric circles so that her breasts resemble marksmanship targets.” Edward Guthmann, “Still in the Shadows, an Artist in His Own Right,” *S.F. Chron.*, 3 Oct. 2006, at E1.

LANGUAGE-CHANGE INDEX
aureola misused for *areola*: Stage 2

Argentine; ***Argentinian**. These terms are essentially interchangeable in practice, but *Argentine* is the vastly predominant form as both noun and adjective. The disparity in use is great enough to label **Argentinian* a NEEDLESS VARIANT. See DENIZEN LABELS.

Current ratio: 10:1

ARGOT. See JARGON.

arguably. See SENTENCE ADVERBS.

argument, n.; **argumentation**. *Argumentation* refers to the act or process of arguing, or the art of persuading. *Argument* should be reserved for all other contexts.

argumentative; ***argumentive**. The longer form is the preferred adjective corresponding to *argumentation*.

Current ratio: 231:1

arise; **rise**. Although these words are sometimes interchangeable, there is a distinct tendency to make *arise* metaphorical <doubts arise> and *rise* literal <I rise about 6 AM each day>.

Arizonan; ***Arizonian**. The first is standard; the second is a variant form that, although predominant in the 19th century, now occurs much less often in print. See DENIZEN LABELS.

Current ratio: 2:1

Arkansan; **Arkie**; ***Arkansawyer**. The first is standard. Some Arkansas denizens don’t like it because of the *Kansan* it contains and therefore prefer the fairly common CASUALISM *Arkie*. **Arkansawyer* is an infrequent variant. See DENIZEN LABELS.

Current ratio (in order of headwords): 25:13:1

Arkansas /ahr-kən-saw/. But the Arkansas River—which flows from Colorado through Kansas, Oklahoma, and Arkansas into the Mississippi River—is pronounced /ar-**kan**-zəs/ in the Kansas part of its run.

A 19th-century Arkansas statute ineptly prescribes the “only true” pronunciation of the state name: “Be it therefore resolved by both houses of the General Assembly, that the only true pronunciation of the name of the state, in the opinion of this body, is that received by the French from the native Indians and committed to writing in the French word representing the sound. It should be pronounced in three (3) syllables, with the final ‘s’ silent, the ‘a’ in each syllable with the Italian sound, and the accent on the first and last syllables. The pronunciation with the accent on the second syllable with the sound of ‘a’ in ‘man’ and the sounding of the terminal ‘s’ is an innovation to be discouraged.” Ark. Code § 1-4-105 (1881). One can only imagine what happens when American speakers try to mimic an “Italian sound.” One also wonders how many orthoepists testified before the legislative committee on this statute or were consulted about how the statute should be worded. In any event, no litigation has ever ensued over its interpretation.

***Arkansawyer**; **Arkie**. See **Arkansan**.

armadillo. Pl. *armadillos*—not **armadilloes*. Cf. **peccadillo**.

armful. Pl. *armfuls*—not **armsful*. See **PLURALS** (G).

Armistice Day. See **Veterans Day**.

arm’s-length; ***arms-length**. In phrases such as *arm’s-length transaction*, the correct form is to make *arm* possessive; the phrase is usually and best hyphenated when it appears before the noun it modifies <arm’s-length negotiations>, but not otherwise <negotiate at arm’s length>. Even when two people are dickering, the figurative distance between them is still a single *arm’s length*. If the word becomes popular enough, it may one day become solid, like *beeswax* and *oneself*. But that day is not yet.

Current ratio (*at arm’s length* vs. **at arms length* vs. **at arms’ length*): 19:2:1

Current ratio (*arm’s-length transaction* vs. **arms-length transaction*): 7:1

around; **round**. AmE prefers *around* <they walked around the gardens>, while BrE prefers *round* <they walked round the gardens>. See **all-around**. Cf. **about** (B).

arouse; **rouse**. In modern usage, *arouse* tends to be metaphorical <the speech aroused much interest>, and *rouse* tends to be literal <the alarm clock roused everyone in the cabin>.

arraignment; **indictment**. The meanings of these terms vary, depending on the jurisdiction. An *indictment* is almost universally the instrument charging a person with a felony; it also loosely refers to the act of charging someone with a crime. An *arraignment* is the reading of the indictment to the defendant or

informing the defendant of the substance of the charge and calling for a plea to the charge. For more on *indictment*, see **indictment**.

arrant. See **errant**.

arrear(s). The most common use of either of the terms is the phrase *in arrears* (= behind in the discharge of a debt or other obligation). Current AmE and BrE idiom calls predominantly for this plural form, though in the late 18th and 19th centuries **in arrear* predominated. **In arrearages* is obsolete.

Current ratio (*in arrears* vs. **in arrear* vs. **in arrearages*): 435:86:1

arrivee. See **-EE**.

arriviste. See **nouveau riche** (B).

arrogate (= to claim or seize without legal justification) shouldn’t be used reflexively. Although it’s possible to *arrogate* something to oneself, one cannot *arrogate* oneself something—e.g.:

- “The Court of Appeal stated that if such an injunction were granted, the English court would be *arrogating itself* [read *arrogating to itself*] the power to resolve the precise dispute between the parties.” Aviva Golden, “Digest of Cases Reported in the Hilary Term,” *Fin. Times*, 13 Apr. 1988, at I-20.
- “The hinges were being oiled to open the door for Lewis *shamelessly* to *arrogate himself onto* [read *shamelessly* *arrogate to himself a place on*] the sprint relay team to win his unprecedented 10th gold medal.” Steve Jacobsen, “Atlanta Olympics,” *Newsday* (N.Y.), 2 Aug. 1996, at A89.
- “Robert Lowell and Richard Wilbur wrote poetry as a civic instrument, but few today seem willing to *arrogate themselves* [read *arrogate to themselves*] such an audience.” Dave Lucas, “Masters of Verse Pinsky, Boland and Simic Provide Rhyme and Reason,” *Plain Dealer* (Cleveland), 20 Apr. 2008, at G4.

Without the edits, those sentences illustrate the vice described at **OBJECT-SHUFFLING**.

For the distinction between *arrogate* and *abrogate*, see **abrogate**.

LANGUAGE-CHANGE INDEX

Current ratio (*arrogated to himself* vs.

**arrogated himself*): 66:1

arse; **ass**. *Arse* is the spelling of the BrE **SLANG** term—in the anatomical sense, that is, not in the horse sense. In AmE, *ass* is the spelling for both meanings.

There’s a story behind this. Today *ass* means both (1) “donkey,” and (2) “a person’s bottom.” Sense 1 is the historical one; sense 2 originated in the mid-18th century as the result of a phonological change, as *arse* and *ass* became homophones. By the early 19th century, it was possible to engage in wordplay between the words—as in the 1802 cartoon in which one female rider says to another, “I’ll show my Ass against any

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Lady's at Wells" ("Neddy Paces at Tunbridge Wells," Kent). See Tony Fairman, "How the Ass Became a Donkey," *10 English Today* 29–35 (1994).

LANGUAGE-CHANGE INDEX
ass meaning "derriere" (for *arse*): Stage 5

arsenious; ***arsenous**; **arsonous**. *Arsenious* /ahr-sen-ee-əs/ (= of, relating to, or involving arsenic) should not be confused as being an adjectival form of *arson* (*arsonous*). As for the arsenic-related adjective, the spelling with the *-i-* is standard; the other form is a NEEDLESS VARIANT.

Current ratio (*arsenious* vs. **arsenous*): 9:1

artefact. See **artifact**.

***artisan**. See **artist (B)**.

arthritis (the disease in joints) has three syllables: /ahr-thrɪ-tis/. Avoid adding the epenthetic schwa that makes it sound like *Arthur-itis*.

arthroscopic; **orthoscopic**. *Arthroscopic* (= of, relating to, or involving surgery performed with a viewing instrument inserted at a joint in the body) derives from *arthro-* "joint" + *-scopic* "viewing." The word is pronounced /ahr-thrə-skah-pik/. Yet many people confuse the beginning of this word with the many terms beginning *ortho-* "straight, correct" (such as *orthodontist*, *orthopedist*, and *orthotic*). So they mistakenly refer to **orthoscopic surgery*—e.g.:

- "Orthoscopic [read *Arthroscopic*] surgery, physical therapy and rehabilitation followed." Chris Antonacci, "Davis Feeling Good Again, Reaching New Highs," *Newsday* (N.Y., Nassau ed.), 19 Nov. 2004, at A76.
- "At the time, Isaac, as he was called by friends and family, had recently had *orthoscopic* [read *arthroscopic*] surgery on his knee and was using crutches to get around." Elizabeth Fitzsimons, "Death Becomes Lifesaving Cause," *San Diego Union-Trib.*, 2 May 2005, at B1.

Just to confuse matters, though, *orthoscopic* is in fact a word that means "rendering a proportionate image" or "giving a flat, undistorted image" <modern TVs give an orthoscopic view>.

LANGUAGE-CHANGE INDEX
orthoscopic misused for *arthroscopic*: Stage 1

articulable, not **articulatable*, is the correct form—e.g.: "The salient conclusion is, therefore, to scratch such invidious issues from one's *articulatable* [read *articulable*] political concerns." Letter of John R. Blake, "Modern Anti-Liberal Logic Sometimes Difficult to Grasp," *Seattle Times*, 7 Dec. 1991, at A21. See **-ABLE** (D) & **-ATABLE**.

 Current ratio (*articulable* vs. **articulatable*): 36:1

artifact (= an object made or used by humans in an earlier era) is the standard spelling in AmE. *Artefact* is a chiefly BrE variant, and the predominant form there, though the *-i-* spelling is almost as frequent in BrE.

artifice is sometimes misspelled **artiface*—e.g.: "There are subtle lines between art and *artiface* [read *artifice*], between performance and reality." Jerry O'Brien, "No More Cocktail Dresses," *Providence J.-Bull.*, 10 Nov. 1995, at C1.

LANGUAGE-CHANGE INDEX
artifice misspelled **artiface*: Stage 1
 Current ratio: 2,263:1

artist. A. And artiste. *Artist* (/ahr-tist/) is the general word for someone who creates works of aesthetic value, especially in the fine arts. *Artiste* (/ahr-teest/), a GALLICISM, is a more specialized word denoting (1) a public performer or entertainer, especially in song and dance; or (2) an affected, often flamboyant fop with artistic pretensions. Sense 2, the pejorative one, is now more common—e.g.:

- "Goodwin's Leontes, in long hair and greatcoat, has been conceived as a pathological *artiste*; we see him at a piano, lighted by a candelabrum and moodily fingering the keys." Peter Marks, "The Banked Fire of 'Winter's Tale,'" *Wash. Post*, 4 Sept. 2002, at C1.
- "It is the voice of Pearl Jam's Eddie Vedder, Creed's Scott Stapp and all the other sulking, groaning *artistes* who have labored over the past decade to rid rock 'n' roll of its unpretentious joy." Elysa Gardner et al., "Lifeforce Not Up to Code," *USA Today*, 17 Sept. 2002, at D4.
- "From the realm of show biz . . . came musical comedy veteran Leigh Scarritt in three roles—Babe the supermarket checker, Roberta the hooker and Dolores the waitressing *artiste*." Anne Marie Welsh, "'Working' Is Getting a Bit Tired," *San Diego Union-Trib.*, 23 Sept. 2002, at D1.

B. And artisan. Although these terms were once synonymous, they have undergone DIFFERENTIATION: an *artist* is someone skilled in any of the fine arts (such as painting), while an *artisan* is a crafter or one skilled at a trade. (**Artesan* and **artizan* are variant spellings.) Yet *artist* has degenerated to the point where many people use it in reference to anyone with a talent—e.g.:

- "'Burlesque is back!' bubbles Dixie Evans, the legendary 1950s-era striptease *artist*." "Bare-All Reunion," *L.A. Times*, 23 May 2002, § 6, at 37.
- "Here is where Rothan comes alive as a natural slapstick *artist*, her slim frame bending and whipping into frantic shapes as she flies into a panic at the fear of forgetting the signals, blowing the act and getting them both thrown into the clink." Elaine Liner, "Love You to Death," *Dallas Observer*, 18 July 2002, at 55.
- "Story follows a phobic con *artist* (Cage) and his protege (Rockwell), who are on the verge of pulling off a lucrative swindle when Cage's teenage daughter (Lohman) arrives unexpectedly." Dana Harris, "Lohman Joins 'Matchstick,'" *Daily Variety*, 29 July 2002, at 12.

Current ratio (*artisan* vs. **artizan* vs. **artesan*): 1,808:36:1

artless has opposing connotations. On the one hand, it is favorable when contrasted with the idea denoted by *artificial*—e.g.: "Generally, Ms. Benedis's works seem as *artless* as nature itself." Patricia Malarcher, "Show Features Artwork Formed from Cuttings and Branches," *N.Y. Times*, 9 Feb. 1997, at WC13. But it's

often unfavorable when contrasted with *artful*—e.g.: “In an age of *artless* novels, here was an *artful* book.” Richard Dyer, “Sibling Reveries,” *Boston Globe*, 22 May 1994, at B15.

as. A. Causal Words: *as*; *because*; *since*; *for*. In the causal sense, *as* should generally be avoided because (not *as!*) it may be misunderstood as having its more usual meaning “while,” especially when it is placed anywhere but at the beginning of the sentence. H.W. Fowler states: “To causal or explanatory *as*-clauses, if they are placed before the main sentence . . . there is no objection” (*FMEUI* at 31). This is most common in BrE—e.g.: “As she didn’t get the original money, could she please have the larger sum?” Martin Waller, “Mail Shot,” *Times* (London), 30 May 1997, at 29.

As Fowler suggested, however, the reverse order is infelicitous unless the reader necessarily knows what is to be introduced by the *as*-clause. So don’t use it in midsentence—e.g.: “Indeed, some jurors confirmed later that they wished they had been given the manslaughter option *as* [read *because*] they didn’t believe the au pair intended to harm the baby.” Kimberly Mills, “Au Pair’ Decision Does Injustice to the Lone Innocent,” *Seattle Post-Intelligencer*, 14 Nov. 1997, at A15.

Given the syntactic restrictions on *as*, we are left with three general-purpose causal conjunctions. *Because* is the strongest and most logically oriented of these. *Since* is less demonstratively causal and frequently has temporal connotations. But using *since* without reference to time is not, despite the popular canard, incorrect. (See SUPERSTITIONS (G).) *For*, the most subjective of the three, is the least used. If *because* points out a direct cause-and-effect relationship, *for* signals a less direct relationship, adding independent explanation or substantiation. Moreover, *for* is a coordinating conjunction and not, like *because* and *since*, a subordinating conjunction; hence it can properly begin a sentence—that is, one consisting only of an independent clause <I want to go home now. For I am tired>.

B. And *like*. See **like**.

as against = as compared with. E.g.: “The last Wednesday before the change, the newscast drew a 7.9 rating and 23 percent audience share in its first quarter hour, *as against* an 8.7 rating and 25 share for Channel 4.” Gail Pennington, “St. Louis Daytime TV Gets New Shows, New Times,” *St. Louis Post-Dispatch*, 4 Sept. 1997, at G6. The phrase is most common in Indian English, quite common in BrE, and somewhat uncommon in AmE.

The phrase is sometimes misused for *against*, especially in American law—e.g.: “Accordingly, for the foregoing reasons, petitioner is awarded summary judgment *as against* [read *against*] respondent.”

“Harmit Realities LLC v. Phillips Educational Servs.,” *N.Y.L.J.*, 9 July 1997, at 27.

Speakers of AmE sometimes use the phrase in completely different ways that can give rise to MISCUES. First, it’s occasionally a shorthand for *as being against*—e.g.: “I wouldn’t classify our campaign *as against* [read *as being against*] Wisconsin,” CMAB official Nancy Fletcher said. “Cheese Wars,” *Wis. State J.*, 12 Sept. 1997, at C1. And sometimes it’s part of an *as . . . as* construction—e.g.: “Often the law enforcement agencies and the drug czar seem to spend as much time fighting among themselves *as against* [read *as they do against*] the drug lords.” Gordon Witkin, “The Troubled Reign of the Nation’s Drug Czar,” *U.S. News & World Rep.*, 8 Sept. 1997, at 26.

LANGUAGE-CHANGE INDEX
as against misused for *against*: Stage 1

as . . . as. A. And so . . . as. In positive statements, the *as . . . as* construction is customary—e.g.: “The corn, which should be as tall as I am at this time of year, is barely half my height.” Eason Jordan, “A Visit to the Land of the Vanishing Lake,” *Time*, 25 Aug. 1997, at 52.

In the mid-20th century it was commonly held that *so . . . as* is preferable to *as . . . as* in negative statements—e.g.: “The Republican governor said he might support future efforts to raise the ballot bar on non-major party candidates, but *not so high as* Senate Bill 200 tried to set.” Mario F. Cattabiani, “Ridge Vetoes Bill on Ballot Access,” *Morning Call* (Allentown, Pa.), 26 June 1997, at A1. But *as . . . as* generally serves equally well in such negative statements, and examples abound in good literature.

LANGUAGE-CHANGE INDEX
as . . . as for *so . . . as* in negative statements: Stage 5

B. First *as* Omitted. It is fairly common to see this phrase with the first *as* left off <they were thick as thieves>. The construction is a CASUALISM that is often employed with CLICHÉS. It is unobjectionable in informal speech and writing, but avoid it in formal contexts.

C. Repetition of Verb After. Often, when the second *as* in this construction is far removed from the first *as*—or when there’s otherwise an opportunity for ambiguity—the verb is repeated for clarity. E.g.: “Owner Ray Haynie—tall, slim and baritone-voiced—is as likely to be cleaning tables *as is* any employee.” Ruth Fantasia, “Not Just Any Port in a Storm Sting,” *Richmond Times-Dispatch*, 3 Dec. 1995, at H5. (If we deleted the *is*, employees might bring sexual-harassment claims against Ray.) But if the second verb isn’t needed, omit it—e.g.: “Montreal is *as likely to survive as is* [read *as*] common civility.” Mike Celizic, “Baseball Players Making Nice,” *Record* (N.J.), 9 Apr. 1995, Sports §, at 3.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

D. As [+ adj.] a [+ n.] as. In AmE, writers sometimes err by inserting *of* after the adjective. But good usage rejects this—e.g.: “From the sidelines, Nunez became nearly *as good of a cheerleader* [read *as good a cheerleader*] as he was a running back.” Jaime Aron, “Westlake’s Nunez Leads AP Honor Roll,” *Austin Am.-Statesman*, 26 Oct. 1994, at C3. See **of (B)**.

LANGUAGE-CHANGE INDEX

Current ratio (*not as good a* vs.
**not as good of a*): 25:1

E. As . . . than. *Than* is sometimes misused for the second *as*—e.g.: “A Roper Starch poll says that 24 percent of consumers—twice *as many than* [read *as*] in 1987—say they never go to malls.” Allison Lucas, “The Fall of the Mall,” *Sales & Marketing Mgmt.*, 1 Apr. 1996, at 13. (But it would be *twice more than*.) See SWAPPING HORSES.

LANGUAGE-CHANGE INDEX
**as . . . than* misused for *as . . . as*: Stage 1

as at (= as of) is characteristic chiefly of BrE financial JARGON—e.g.:

- “This book reflects the law *as at* August 1986.” Stanley Berwin, *The Economist Pocket Lawyer* i (1986).
- “The restructuring was needed, the group said, after a cumulative loss of GBP 75.4m *as at* December 31, 1996.” “Seafeld Plans Restructuring,” *Fin. Times*, 27 Nov. 1996, at 22.

It’s a construction best avoided.

as a whole. See **in whole**.

as best; *as best as. The traditional idiom is *as best she can*, meaning “in the best way that she can.” The *as* isn’t part of a comparative *as . . . as* construction, which takes the positive form of the adjective (*as good as*), not the superlative (*best*). So adding a second *as* is poor form—e.g.:

- “But in the meantime, Michelle combed his coat *as best as she* [read *as best she*] could and adorned him yesterday with a pink ribbon and a yellow bandanna around his neck.” Celeste Tarricone, “Lost Six Weeks, Sebastian Is Back in the Family Fold,” *Providence J.-Bull.*, 10 June 1998, at C1.
- “Good dog owners try to discipline their dogs *as best as they* [read *as best they*] know how, but I don’t think people give us a chance.” D. Andrich, “Dog Bias,” *Chicago Trib.*, 26 Sept. 1998, at 20.
- “He raised himself *as best as he* [read *as best he*] could on his hands and knees and crawled out of the store.” Bruce Von Deylen, “Store Owner Felt Remorse, Fear After Shooting,” *South Bend Trib.*, 31 Jan. 1999, at A1.

LANGUAGE-CHANGE INDEX
**as best as he can* for *as best he can*: Stage 1
Current ratio (*as best he can* vs.
**as best as he can*): 15:1

asbestos (the gray mineral once used in buildings and in protective clothing) is preferably pronounced /as-**bes**-təs/—not /as-**bes**-tohs/ (a mispronunciation based on the spelling).

as between. See **between (E)**.

ascendable. So spelled—not **ascendible* (though, surprisingly, the *-i-* spelling predominated for a brief period around 1800). For an anomaly in spelling, see **descendible**. See **-ABLE (A)**.

Current ratio: 13:1

ascendancy (= a position of dominant control; supremacy) is the standard term. **Ascendance* is a NEEDLESS VARIANT.

**Ascendancy* and **ascendance* are variant spellings not recommended.

Current ratio (*ascendancy* vs. **ascendancy* vs.
**ascendance* vs. **ascendance*): 207:53:31:1

ascendant, in the. Derived from astrology and denoting the part of the zodiac that is rising above the eastern horizon at a particular time, this phrase is sometimes mistakenly written **in the ascendancy*—e.g.:

- “A slower pace of reform, as advocated by Prime Minister Viktor S. Chernomyrdin, whose star is in the *ascendancy* [read *ascendant*] here, will only delay the dawn of recovery.” R.W. Apple Jr., “Clinton in Europe: A Russian Tightrope,” *N.Y. Times*, 15 Jan. 1994, § 1, at 6.
- “No such justification is available to support affirmative action for conservatives, who have never been excluded, and in fact were once greatly in the *ascendancy* [read *ascendant*], and who are no longer in the *ascendancy* [read *ascendant*] in some disciplines because they have chosen to go into others.” Stanley Fish, “Postmodern Warfare,” *Harper’s Mag.*, 1 July 2002, at 33.

Avoid the variant spelling **ascendent*.

LANGUAGE-CHANGE INDEX
**in the ascendancy* for *in the ascendant*: Stage 2
Current ratio (*in the ascendant* vs.
**in the ascendancy*): 3:1

ascent. A. And ascension. Both *ascent* and *ascension* mean “the act of ascending.” *Ascent*, however, has these additional senses: (1) “the act of rising in station or rank, or in natural chronological succession” <the ascent of man>; (2) “a method of ascending” <an unorthodox ascent>; and (3) “the degree of slope or acclivity” <a steep ascent>. And *ascension* also denotes (1) in Christianity, the ascent of Jesus Christ to heaven 40 days after his resurrection; and (2) in the astronomical term *right ascension*, the measure of the position of a celestial body along an equator as an arc from the first degree of Aries.

B. And assent. *Assent* (= agreement) is surprisingly often misused for *ascent*—e.g.:

- “Weihenmayer and several other climbers from throughout the United States have begun their *assent* [read *ascent*] to Mount Everest’s summit with a lofty goal.” Robert Sanchez, “Blind Climber Heads for Peak of Everest,” *Rocky Mountain News* (Denver), 4 May 2001, at A24.
- “Mehrunnisa is calculating even as a child; by the age of 8, she tells everyone around her that she intends to marry Prince Salim (who is called Jahangir upon his *assent* [read *ascent*] to the throne).” Carmela Ciuraru, “‘Twentieth Wife’ Opens the Door on Palace Life,” *USA Today*, 14 Mar. 2002, at D4.

- “Analysts welcomed Zafirovski’s *assent* [read *ascent*] to the position of Motorola president and chief operating officer.” Rob Kaiser, “Motorola’s No. 2 a Turnaround Vet,” *Chicago Trib.*, 27 July 2002, Bus. §, at 1.

For the difference between *assent* and *consent*, see **assent**.

LANGUAGE-CHANGE INDEX
assent misused for *ascent*: Stage 1

as concerns. See **as regards**.

ascribe (= to attribute to a specified cause) is sometimes misused for *subscribe* in the sense “to think of favorably.” Although the mistake was once thought to be found only among the semiliterate, today it appears in print with some frequency. Perhaps there is some influence from *aspire*, as the first and second examples suggest—e.g.:

- “Within the field of family and couple counseling, models are not generally *ascribing* [read *subscribing*] to the view of normality as process.” Ray Woolfe & Windy Dryden, *Handbook of Counseling Psychology* 424 (1996).
- “Maybe there are enough readers in the publishing industry who *ascribe* [read *subscribe*] to Oscar Wilde’s aphorism—“There is only one thing in the world worse than being talked about, and that is not being talked about.” Janice D’Arcy, “‘Happiness’ Sadly Weak as Satire,” *Hartford Courant*, 23 June 2002, at G3.
- “During opening arguments yesterday, prosecutor James Willett told the jury Powell ‘happens to be a racist of the highest order’ who *ascribes* [read *subscribes*] to the beliefs of the Ku Klux Klan and Adolf Hitler.” Matthew Barakat, “Death-Penalty Trial Set in Motion by Letter Starts,” *Richmond Times-Dispatch*, 14 Jan. 2003, at B2.

Still, *ascribe* is far more commonly used correctly—e.g.: “Van Gogh’s accelerating cycles of mental disturbance will probably never be fully diagnosed, but they continue to be variously *ascribed* to epilepsy, manic-depressive illness and alcohol.” Jo Ann Lewis, “Trove of Van Goghs to Visit Washington,” *Wash. Post*, 13 Jan. 1998, at A1.

LANGUAGE-CHANGE INDEX
ascribe misused for *subscribe*: Stage 2
Current ratio (*don’t subscribe to that* vs.
**don’t ascribe to that*): 43:1

as do. See ANTICIPATORY REFERENCE.

as equally. See **equally as**.

as far as. In its figurative uses, this phrase must be followed by some complement such as *that’s concerned*, *that goes*, or *I know*—e.g.: “*As far as* they’re concerned, January 1, 2000, will bring enough of a hangover.” Neil Randall, “Welcome to the Millennium,” *PC Mag.*, 23 Sept. 1997, at 229.

When the complement is omitted, idiom is severely violated. This seems to happen most often in reported speech—e.g.: “*As far as* Ron Lynn [insert *is concerned*], I have no idea what the inner workings of [his]

team are.” Lee Shappell, “Miracle Win over Redskins Revived Cardinals in ‘96,” *Ariz. Republic*, 12 Sept. 1997, at C1 (quoting Vince Tobin, a coach). Having first been noted by Robert L. Chapman in “Trouble with the Pointing Phrase,” 44 *Am. Speech* 305 (1969), this error is becoming fairly widespread in spoken English.

Idiom aside, however, *as far as* usually signals verbosity. So instead of *As far as he is concerned*, it’s possible to save half the words by writing *As for him*, . . . See **insofar as**.

LANGUAGE-CHANGE INDEX
as far as without a subject and verb
following: Stage 2

as follows; *as follow. *As follows* is always the correct form, even for an enumeration of many things. The expression is elliptical for *as it follows*—not *as they follow*.

Although the plural **as follow* sometimes appeared in 19th-century and earlier texts, today it is unidiomatic. In fact, the 19th-century grammarian Lindley Murray disfavored **as follow* long ago: “The phrases *as follow*, *as appears*, form what are called impersonal verbs, and should, therefore, be confined to the singular number: the construction being, ‘as it follows,’ ‘as it appears.’” 1 Lindley Murray, *An English Grammar* 222 (5th ed. 1824) (adding that “analogy and usage favour this mode of expression” [*as follows*]).

Current ratio: 128:1

as good as or better than; *as good or better than. The second *as* is obligatory—e.g.: “It follows . . . that the dialogue will be either *as good as or better than* an exposition along the same lines.” George Rudebusch, “Plato’s Aporetic Style,” in *Plato: Critical Assessments* 350, 351 (Nicholas D. Smith ed., 1998). Another, less creaky way of putting the idea is this: *It follows that the dialogue will be as good as an exposition along the same lines, or even better*.

Many writers, however, mangle their grammar by omitting the second *as* without rearranging the syntax as suggested above—e.g.: “A locally made cheese can be *as good or better than* [read *as good as or better than*] an imported, well-known variety.” Jennifer Darling, *New Cook Book* 276 (2003). [An alternative wording: *A locally made cheese can be as good as an imported, well-known variety—or even better*.] Cf. **as much as or more than; as well as or better than**.

LANGUAGE-CHANGE INDEX
**as good or better than* for
as good as or better than: Stage 3

ashen; ashy. A useful DIFFERENTIATION has emerged here. *Ashen* means “resembling the color of ashes” or, by extension, “pale” <her face became ashen when she heard the news>. *Ashy* more broadly means “of, relating to, or involving ashes” <an ashy residue>. The following examples track this distinction:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Seeing her husband *ashen*, with sunken eyes and a stooped look, Mickie had had enough. ‘You’re going to the doctor,’ she said.” Alexander Wolff, “Back in Action,” *Sports Illustrated*, 23 Oct. 1995, at 94.
- “Panicked, he had turned pale, almost *ashen*.” Laura Yee, “The View from the Flower Shop,” *Plain Dealer* (Cleveland), 14 Feb. 1997, at F1.
- “It takes more than a frumpy wardrobe, constricted hairdo, overtly *ashy* makeup and cane to convert France’s venerable, radiant diva of the big screen, Catherine Deneuve, into the glum, bisexual philosophy professor.” Roger Hurlburt, “No Honor Among Bungling ‘Thieves,’” *Sun-Sentinel* (Ft. Lauderdale), 31 Jan. 1997, at 7.
- “Winter’s frigid temperatures, lower humidity and icy winds leave skin dry, *ashy* and scaly.” “Spring Forward: Skin Care for a More Beautiful You,” *Ebony*, Mar. 1997, at 28.

Asian; Asiatic. *Asian* is the predominant adjective for people or things from or related to Asia. Until the 1950s, *Asiatic* was 8 to 12 times as common in print as *Asian*. But after WWII, *Asian* rapidly became preferred and now predominates by a 14-to-1 ratio. Today, *Asiatic* is limited to academic uses such as *Asiatic style* (florid rhetoric), *Asiatic mode of production* (Marxist economic theory), and *Asiatic lion* (zoology).

aside. **A. Mistakenly Meaning “on each side.”** *Aside*, adv., properly means “to one side, on one side” <she lay the book aside and fell asleep>. But it’s sometimes used wrongly in the sense “on each side, per side”—e.g.:

- “For the lawyers, and there are three *aside* [read for each side] in this case, [jury selection] is vitally important.” Christie Blatchford, “The End of the Beginning,” *Toronto Sun*, 15 Nov. 1995, at 5.
- “Bill Guerin scored a controversial goal with the teams skating five *aside* [read a side] with 6:31 left in the second to gain a brief 3–2 lead.” Kisha Ciabattari, “Richter Nets Two Goals as Canadiens and Devils Tie,” *Asbury Park Press* (Neptune, N.J.), 15 Dec. 1996, at H3.
- “With teams locked 0–0 after regulation time, McCambridge used her pace to exploit the additional space afforded to her as both sides dropped to nine *aside* [read a side] then seven *aside* [read a side].” Adam Clifford, “Extra Time Counts as Ships Shoot to Defend Title,” *Mercury* (Hobart, Aus.), 6 Sept. 2015, at 61.

This usage occurs most commonly in sports contexts—and particularly (though not exclusively) outside the United States, where games with different team-size variants are more popular. Soccer, for instance, is usually played with 11 on each team, but seven-a-side and five-a-side variants are also common. While *aside* is used adverbially in the examples above, when such phrases are used as adjectives or nouns, they should properly take two hyphens—e.g.:

- “The sporting world splits into two camps over whether McIlroy was reckless in playing *five-aside* [read *five-a-side*] football so close to The Open or simply living his life.” Derek Lawrenson, “There Is Life in G-Mac Yet,” *Scottish Daily Mail*, 10 July 2015, at 82.
- “The winning team after *seven-asides* [read *seven-a-sides*] would be rewarded with Mars bars, the losers sent off on a punishing run.” Lee Clayton, “Mars Bars and Brandy

Prove Perfect Ingredients for the ‘Lunatic’ Who Goes His Own Way,” *Daily Mail*, 5 Aug. 2006, at 100.

LANGUAGE-CHANGE INDEX

aside misused for *on each side*: Stage 1

B. *Aside from* vs. *apart from*. Though once considered inferior to *apart from*, *aside from* has become standard in AmE and BrE alike. But *apart from* appears far more frequently in print sources from both sides of the Atlantic. Cf. **outside**.

Current ratio (*apart from* vs. *aside from*): 6:1

as if; as though. Attempts to distinguish between these idioms have proved futile. Euphony should govern the choice of phrase. As a matter of word frequency, *as if* has always been the more common phrase in Modern English. Eric Partridge suggested that *as if* is usually preceded by a comma and that *as though* rarely is (*U&A* at 47).

A better distinction is that *as if* often suggests the more hypothetical proposition when cast in the subjunctive <as if he were a god>. E.g.: “As he came closer to it he felt a great strength flow into him from the west, *as if* Silence had taken him by the hand after all.” Ursula K. Le Guin, *Tales from Earthsea* 161 (2001). By contrast, *as though* suggests a more plausible suggestion <it looks as though it might rain>.

asinine. So spelled. See SPELLING (A) & ANIMAL ADJECTIVES.

as is; as was. “He bought the company ‘as is.’” Although a martinet of logic might insist on *as was* in the preceding sentence, that phrase is jarringly unidiomatic. *As is*, in the context of that sentence, is really an elliptical form of *as it is* or *on an “as is” basis* and is infinitely better than those paraphrases. The purpose of the phrase *as is*, of course, is for a seller to disclaim warranties and representations.

as it were. The *OED* defines this phrase as meaning “as if it were so, if one might so put it, in some sort,” and describes it as “a parenthetical phrase used to indicate that a word or statement is perhaps not formally exact though practically right.” It is a highly self-conscious phrase typically found in highly self-conscious writing. Each of the following examples would probably be improved by its deletion:

- “His unit gone ahead without him, Melander accepted an invitation, *as it were*, to become a runner for a company commander, Lt. Al Ungerlighter.” Ed Lowe, “Unlocking Memories of Liberation,” *Newsday* (N.Y.), 16 May 1997, at A8.
- “They first assembled during humid two-a-days at the pool of the Collegiate Village Inn, where many players are housed, to walk—or wade, *as it were*—through their playbook.” Brian Schmitz, “Knights Prepared for Quixotic Quest,” *Orlando Sentinel*, 13 Sept. 1997, at B1.
- “There was the slight inconvenience of ‘training in a vacuum’ in that first week, preparing for a match, *as it were*, without knowing who Kerry would be playing in that match.” Paul Brennan, “Draw Keeps Kerry in a Vacuum for Another Week,” *Kerryman* (Irl.), 2 Sept. 2015, at 66.

Cf. **if you will**.

asked /askt/ is sometimes mispronounced /ast/ or, through METATHESIS, /akst/. See PRONUNCIATION (B).

as much as or more than. The second *as* must appear in this phrase—e.g.: “In our sample, 31.5% of the wives earned *as much as or more than* their husbands.” Diane F. Halpern & Susan E. Murphy, *From Work–Family Balance to Work–Family Interaction* 164 (2005).

A common blemish is to write **as much or more than*—e.g.: “Suppositional Departures lead to just *as much* bitterness, and even *more* subjunctives, *than* Actual Departures.” James Thurber, “Ladies’ and Gentlemen’s Guide to Modern English Usage,” in *The Ways of Language* 142, 146 (Raymond J. Pflug ed., 1967). [A suggested revision: *Suppositional Departures lead to just as much bitterness as, and even more subjunctives than, Actual Departures.*] Cf. **as good as or better than; as well as or better than.** See CANNIBALISM & ILLOGIC (B).

as of. A. Generally. *As of* should be used with caution. Originally an Americanism, the phrase frequently signifies the effective date of a document, as when the document is backdated, postdated, or signed by various people at different times <this contract is effective as of July 1>. When such a nuance is not intended, *as of* is the wrong phrase. Often it is inferior to *on*—e.g.: “Barnaby’s employment with New Jersey Public Service ended *as of* [read *on*] September 30.” Cf. **as at**.

B. As of now. This phrase, along with *as of* itself, has been criticized as downright uncivilized. Lord Conesford wrote: “An illiteracy is introduced when the words *as of* precede not a date, but the adverb *now*. *As of now* is a barbarism which only a love of illiteracy for its own sake can explain. What is generally meant is *at present*.” Lord Conesford, “You Americans Are Murdering the Language,” in *Advanced Composition* 374, 383 (J.E. Warriner et al. eds., 1968).

But *as of now* does not mean “at present”; rather, it means “up to the present time.” Wilson Follett also disapproved of the phrase—recommending instead *up to now* or *for the present* (MAU at 76)—but *as of now* is today unobjectionable in AmE.

LANGUAGE-CHANGE INDEX

as of now meaning “up to now”: Stage 5

***as of yet.** See ***as yet**.

***as per** is commonly understood to mean “in accordance with.” But writing texts have long condemned the phrase—e.g.:

- “**As Per.** This hybrid is inexcusable. Instead of ‘as per your request’ say ‘in accordance with your request,’ or ‘in compliance with your request.’” Maurice H. Weseen, *Crowell’s Dictionary of English Grammar* 55 (1928).

- “**as per**, ‘in accordance with,’ is such horrible commercialese that even merchant princes are less than riotously happy when their secretaries wish it on them.” Eric Partridge, *U&A* at 47.
- “When used to mean ‘according to’ (*per* your request, *per* your order), the expression [*per*] is business jargon at its worst and should be avoided. Equally annoying is the phrase *as per*.” Charles T. Brusaw et al., *The Business Writer’s Handbook* 478 (3d ed. 1987).

Originating in 18th-century COMMERCIALESE, **as per* is redundant for *per*. Yet even *per* is a LATINISM in place of which any one of several everyday equivalents would be better (*as, according to, in accordance with, etc.*)—e.g.:

- “*As per her request* [read *At her request* or *As she had requested*], her family scattered her ashes Saturday at the summit of Mt. Washington in New Hampshire, said her husband, James Gardner.” Joe Haberstroh, “Irene S. Gardner, Retired Nurse” (obit.), *Newsday* (N.Y.), 10 Sept. 1997, at A49.
- “*So as per our predictions* [read *as we predicted*], we’ll have to give Foss’ date at South Sound Stadium with River Ridge on Oct. 24 the nod as the key game.” Gary Brooks, “Key Games,” *News Trib.* (Tacoma), 12 Sept. 1997, at C2.
- “*As per usual* [read *As usual*], Trump blew the little uber lefty punk out of the water with his reply.” Roddy D. Riggs, “Game Plan,” *Belleville News-Democrat* (Ill.), 10 Sept. 2015, at 242.

The phrase **as per usual*, which emerged in the late 19th century and became suddenly popular in the early 21st, is an embarrassing barbarism.

LANGUAGE-CHANGE INDEX

1. **as per* for *per* or *in accordance with*: Stage 3

2. **as per usual* for *as usual*: Stage 1

Current ratio (*as usual* vs. **as per usual*): 349:1

aspersions, to cast is a prolix CLICHÉ for *asperse* (= to disparage; criticize harshly), a little-known but useful verb—e.g.:

- “Fazio et al. should cast their barbs at ordained character assassins . . . rather than *aspersing* the American majority that claims to be both Christian and conservative.” “An Undeserved Whacking,” *Rocky Mountain News* (Denver), 14 July 1994, at A48.
- “And so to *asperse* her performance in this shabby way is to report irresponsibly and to forsake a goodly measure of any newspaper’s goal of fairness.” “Ford’s Husband Denounces Use of Unnamed Critics,” *Times-Picayune* (New Orleans), 10 Dec. 1999, at B6.

asphyxia; asphyxiation. The first refers to the condition of having insufficient oxygen resulting in suffocation. The second is the action of producing suffocation. Hence: “*Asphyxiation* [/as-fik-see-ay-shən/], also known as suffocation, is any interruption of breathing resulting in *asphyxia*.” Ann Ehrlich & Carol L. Schroeder, *Medical Terminology for Health Professions* 201 (2004).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

as regards, a much-maligned phrase, is sometimes called a solecism. Actually, it's a traditional, perfectly good literary idiom more common in BrE than in AmE—e.g.:

- “The superiority *as regards* directness of association is not invariably on the side of gesture-language.” Henry Sweet, *The History of Language* 4 (1900).
- “We might expect . . . a more wary approach *as regards* some of the dangers of the test.” I.A. Richards, *Practical Criticism* 5 (1929; repr. 1964).
- “Southeast Asia’s troubles could magnify what has already been a difficult summer for many U.S. multinational companies, at least *as regards* their ability to meet earnings growth targets.” Tom Petruno, “Wall Street, California,” *L.A. Times*, 2 Sept. 1997, at D1.
- “*As regards* the use of troops, Clinton’s apparent stratagem is to deploy troops by executive action.” James Gardner, “Exactly Which U.S. ‘Values’ Are Right for Bosnia?” *News & Record* (Greensboro), 7 Sept. 1997, at F3.

Though *as regards* is no more objectionable than *with regard to*, the whole lot of such phrases is suspect: “Train your suspicions to bristle up whenever you come upon *as regards*, *with regard to*, *in respect of*, *in connection with*, *according as to whether*, and the like. They are all dodges of jargon, circumlocutions for evading this or that simple statement.” Arthur Quiller-Couch, *On the Art of Writing* 114 (2d ed. 1943). They are especially lame when used to start a sentence. See **regard (A)**.

ass. See **arse**.

assassin; assassinator. Generally speaking, the latter can be regarded as a NEEDLESS VARIANT—e.g.: “Dr. Samuel Mudd was imprisoned there for setting the broken leg of Lincoln *assassinator* [read *assassin*] John Wilkes Booth.” Morgan Stinemetz, “Lost in Time,” *Tampa Trib.*, Sports §, 22 June 2001, at 8.

Yet *assassinator* has a rarefied mathematical sense. If you must know, it’s the unique associated prime of a uniform right module over a right noetherian ring (and please don’t ask for further elucidation of this bit of arcana). E.g.:

- “The set of all associated primes of M is denoted by $\text{Ass}(M)$ (the ‘*assassinator*’ of M .)” Paul Moritz Cohn, *Basic Algebra: Groups, Rings, and Fields* 380 (2003).
- “If U is a uniform right module over a right noetherian ring, the unique associated prime of U is called the *assassinator* of U .” K.R. Goodearl, *An Introduction to Noncommutative Noetherian Rings* 102 (2004).

Got that?

LANGUAGE-CHANGE INDEX

assassinator as an equivalent of *assassin*: Stage 1

assassination. When does a murder become an assassination? If a political figure is murdered—but not for political reasons or for hire—is it an assassination? The following passage rightly suggests that it is not: “An Egyptian diplomat was shot to death in the parking garage of his Geneva apartment building, authorities said yesterday. The victim was Alaa el-Din Nazmi, the commercial counselor in the Egyptian mission to

the United Nations and other international organizations based in Geneva. Police said Nazmi was hit by six bullets. Prosecutors said they were treating the slaying as a *possible assassination*.” “Egyptian Diplomat Shot to Death in Geneva,” *S.F. Chron.*, 15 Nov. 1995, at C1.

Today, the word’s meaning has been broadened beyond political killing. Here’s a good modern definition of *assassination*: “the act of murdering someone (esp. a public figure) by surprise attack, usu. for hire or for political reasons.” The word also appears figuratively in the sense “malicious ruining or destruction” in the SET PHRASE *character assassination*.

assassinator. See **assassin**.

assault; battery. In popular usage, these two are virtually synonymous. Most people use *assault* in referring to an incident that might begin with a threat and end with hitting and kicking. In fact, most people wouldn’t say that someone had been *assaulted* unless the incident included physical contact. So in the popular mind, *assault* is essentially the same as *battery* (a rarer term).

But in law these terms have precise meanings. Essentially, an *assault* is the use or threat of force that causes the person to whom the force is directed to have a well-founded fear of physical injury or offensive touching. A *battery* is the use of force or violence on another (in the criminal sense), or any repugnant intentional contact with another (in the noncriminal, tort sense).

Shooting a gun just to the side of someone, if that person reasonably feared physical injury, or shooting a blank gun directly at someone, would be an *assault*. Hitting someone with a bullet would make the act a *battery*, even if the shooter never knew about the hit. And in the tort sense, an uninvited kiss by a stranger is considered a *battery*. Cf. **accost**.

assay; essay, v.t. These words, related etymologically, have distinct meanings. *Assay* = to test, to analyze. E.g.: “They all but stuck pure *HIV virus* [read *HIV*] in the mosquitoes. They *assayed* a huge variety of mosquitoes at various times in the first few days and found that the virus had been entirely digested.” Donna Jacobs, “Pests & Pestilence: Why Can’t a Mosquito Transmit AIDS?” *Ottawa Citizen*, 9 Mar. 1997, at C4 (quoting Dr. Paul Grimstad).

Essay (as a verb), though sometimes used synonymously with *assay*, most frequently takes on the meaning “to attempt; to try to accomplish.” In this sense it is a FORMAL WORD—e.g.: “Caesar, a Durham native, played a church singer in the original production, but she has *essayed* the role of the meddling Mother Winters in the subsequent productions.” Bill Morrison, “Blessed Assurance: Caesar Shines,” *News & Observer* (Raleigh), 2 Mar. 1997, at G1. This usage is really an ARCHAISM; *attempt* or *try* serves better in ordinary contexts. Cf. **endeavor**.

assemblage; assembly. An *assemblage* is an unorganized group of people or things. An *assembly* is a group of people organized and united for some common purpose.

assent; consent. The traditional distinction is that *assent* denotes agreement with an opinion, while *consent* denotes permission to let something happen. *Assent* contains a touch more enthusiasm and support than *consent*, which suggests mere acquiescence. Today *assent* is becoming less and less common; it survives mostly in formal uses <with the override vote, the bill became law without the President's assent>.

For the confusion of *assent* with *ascent*, see **ascent (B)**.

assert; exert. Writers sometimes confuse these quite different words. *Assert* = (1) to state with force and confidence <they asserted that the world is flat>; (2) to exercise or demonstrate (authority, a right, a privilege, etc.) <the committee never fully asserted its authority>; or (3) to behave or speak forcefully <instead of backing down, assert yourself in the debate>. *Exert* = (1) to put forth or apply (energy, force, strength, etc.) to something <the team members exerted all their strength and won the tug-of-war>; or (2) to make a physical or mental effort <you can't possibly write well without exerting yourself>.

When it comes to asserting authority or asserting a right—that is, sense 2 of *assert*—some writers mistakenly use *exert*. This seems to be the main context in which WORD-SWAPPING occurs between the words—e.g.:

- “Engine builders will *exert* [read *assert*] executive privilege, making sure the session is nothing more than a light workout.” Don Coble, “One-Engine Rule Faces Test,” *Augusta Chron.*, 25 May 2002, at C3.
- “The Ojibwe [tribe members] were simply *exerting* [read *asserting*] their rights under a treaty between the nation and the United States government.” Steve Arney, “Ojibwe Indian Spreads Culture, Tradition,” *Pantagraph* (Bloomington, Ill.), 8 Feb. 2003, at D1.
- “U.S. forces arrested . . . an [Iraqi] exile who named himself Baghdad's mayor. U.S. Central Command accused him of *exerting* [read *asserting*] authority he didn't have.” “Baghdad ‘Mayor’ Held,” *Chicago Trib.*, 28 Apr. 2003, at 3.

LANGUAGE-CHANGE INDEX
exert misused for *assert*: Stage 1

assertable. So spelled in ordinary contexts—not *assertible* (except in philosophy). See -ABLE (A).

assertedly. See -EDLY.

assertor, not **asserter*, is the usual agent noun corresponding to the verb *assert*. See -ER (A).

Current ratio: 1.2:1

assess. See **access**, vb. (B).

asseverate. See **aver** (A).

assignment. See **assignment**.

***assigner.** See **assignor**.

assignment; assignation. *Assignment* = (1) a task or job; (2) the transfer of property; (3) the property so transferred; or (4) the legal document that brings about the transfer.

Assignation = (1) an assignment; (2) a tryst; or (3) an assignee (meaning “one to whom property rights or powers are transferred”). Because *assignation* is a NEEDLESS VARIANT of *assignment* in sense 1 and of *assignee* in sense 3, it should be confined to sense 2, in which it is truly useful <despite precautions, a pregnancy resulted from their middle-of-the-night assignation>. The word is pronounced /a-sig-nay-shən/—not /ə-sin-ay-shən/.

assignor; *assigner. The second has long been said to be the general term, and the first to be the legal spelling (as the correlative of *assignee*). In fact, though, the -*or* spelling has always predominated in all varieties of English. See -ER (A).

assimilable. So spelled—not **assimilatable*. See -ATABLE.

Current ratio: 127:1

assist, n., has come into the language through basketball and ice-hockey lingo <with an assist from her editors>. For now, it remains a CASUALISM.

assist, v.t., is genuinely useful in a few phrases in which *help* simply wouldn't do <assisted reproductive technology> <physician-assisted suicide>. But when *help* suffices, it's the better choice—e.g.:

- “The Trumbull officer . . . could have stopped the chase and *assisted* [read *helped*] the innocent victims of the crash, he said.” Michael Remez, “Police Chases,” *Hartford Courant*, 9 Dec. 1997, at A1.
- “Arvedson . . . slumped to the ice, where he stayed for about three minutes before being *assisted* [read *helped*] to the locker room.” “Salo Makes a Point for Islanders,” *Star-Ledger* (Newark), 17 Dec. 1997, Sports §, at 7.

Assist is even worse when it's buried in a phrase such as *be of assistance* to or *provide assistance to*. Once again, try *help* instead—e.g.: “Phone lines opened early this year to *provide assistance to* [read *help*] people in need.” Mary Sansom, “Director Seeks Support to Open Tri-County Mission,” *Charleston Gaz.*, 18 Jan. 1995, Metro West Kanawha §, at 5. See ZOMBIE NOUNS.

assisted suicide. See **ethanasia** (B).

***associate together** is a REDUNDANCY. **Associate together in groups* is even worse. Cf. ***congregate together**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

associational; associative. These words are virtual synonyms (“of, relating to, or characterized by association”). *Associative* is now somewhat more common, especially in contexts involving psychology and mathematics <associative memory>. But *associational* also appears with some frequency, especially in legal contexts <associational rights>.

ASSONANCE. See ALLITERATION.

assuage (= to make less painful or severe) is pronounced /ə-*swayj*/—not /ə-*swayzh*/ or (worse) /ə-*swahzh*/.

as such. In this phrase, *such* is a pronoun requiring an antecedent—e.g.:

- “There has been an abundance of English slang from at least the sixteenth century to the present time, but it has always been recognized *as such* [i.e., as slang], and has at no time been supposed to be anything but a minor part of the English language.” Sir William Craigie, “Our American English Marches Onward,” *N.Y. Times*, 18 Aug. 1935, § 7, at 15.
- “I saw in this a threat to the British way of life, but I saw also that my seeing it *as such* [i.e., as a threat] was nonsense.” Anthony Burgess, *A Mouthful of Air* 20 (1992).
- “Jake Coker was the starter even if Saban didn’t anoint him *as such*.” “Tide Buzz,” *Huntsville Times*, 11 Sept. 2015, at B6. (*Starter* is the antecedent of *such*.)
- “We recognize that parents are the ultimate arbiters of their children’s education, and *as such*, should be permitted to pull their children out of certain lessons in the curriculum.” “Pulling Out Is Not the Answer,” *Nat’l Post* (Can.), 11 Sept. 2015, at A8. (*Arbiters* is the antecedent of *such*.)

Sometimes the phrase causes an ambiguity when the referent isn’t clear. When that is so, substituting *in principle* or some like phrase is recommended—e.g.: “There could, accordingly, be no grounded objection to the existence of images *as such*.” Arthur C. Danto, “Likeness and Presence,” *New Republic*, 7 Nov. 1994, at 43. (A possible revision: *There could, accordingly, be no objection in principle to the existence of images*.)

Also, some writers faddishly use *as such* as if it meant “thus” or “therefore”—e.g.: “These efforts represent a fundamental change in the way responsibility is spread throughout the organization, what practices and behaviors are nurtured and rewarded, and how care will be provided in the future. *As such*, [delete phrase] the change will not occur immediately nor easily.” Kenneth W. Kizer et al., “The Veterans Healthcare System,” *Hosp. & Health Servs. Admin.*, 22 Sept. 1997, at 283. This misuse is perhaps a SLIPSHOD EXTENSION from correct sentences such as the following, in which *icon* is the antecedent of *such*, but the sentence could be misread in such a way that *as such* would mean “therefore”: “She will become an icon; *as such*, she will be a role model for years to come.” Letter of Ruth W. Junk, “It Can Be OK to Imitate, but Not Deify, Good People,” *Pantagraph* (Bloomington, Ill.), 11 Sept. 1997, at A12.

Obviously, this phrase requires much care.

LANGUAGE-CHANGE INDEX
as such for *therefore*: Stage 2

assume; presume. *Assume* means (1) to take upon oneself; to take over duties and responsibilities; or (2) to take for granted or without proof. *Presume* means (1) to take for granted or without proof; or (2) to undertake without permission. So one may *assume* a rank or office or authority by right, but another may *presume* to exercise the privileges of a rank, office, or authority despite a lack of right. *Presume* often carries a sense of arrogance, of going too far in acting without justification—hence the adjective *presumptuous*.

assuming. For *assuming* as an acceptable dangling modifier, see DANGLERS (E).

assumption; presumption. The connotative distinction between these words is that *presumptions* are more strongly inferential and more probably authoritative than mere *assumptions*, which are usually more hypothetical. *Presumptions* may lead to decisions, while *assumptions* typically don’t.

Assumptive is pretentious for either *assumed* <assumptive beliefs> or *assuming* or *presumptuous* <an assumptive character>.

As for adverbs, always use the common forms derived from *presume*—that is, *presumably* (= I presume, it is to be presumed) or *presumptively* (= there is a presumption that). Stay away from **assumedly* and **assumptively*.

assurance. See **insurance** (A).

assure; ensure; insure. A. **Assure for ensure.** A person *assures* (makes promises to, convinces) other people <our hosts assured us that we would have comfortable rooms>; a person *ensures* (makes certain) that things occur or that events take place <our hosts ensured that we had comfortable rooms>. To put it a little technically, if the verb is in the active voice, a predicate beginning with *that* should be introduced by the verb *ensure*.

Assure takes a personal object—e.g.: “Davis *assured* residents they can help decide which trees are to be cut.” Bruce Schultz, “Cajundome Neighbors Air Problems,” *Advocate* (Baton Rouge), 12 Sept. 1997, at B3.

In word frequency since 1900 (when the phrases came into common use), *ensure that* greatly outstrips **assure that*. But the discommended usage crops up in other locutions as well—e.g.: “That would defeat the entire purpose of the legislation, which is to *assure* [read *ensure*] public perception of total independence.” William Safire, “See-Nothing Congress,” *N.Y. Times*, 23 June 1994, at A15. Theodore Bernstein doesn’t discuss this point in *The Careful Writer*, but here’s a less-than-careful usage: “What good writing can do . . . is to *assure* [read *ensure*] that the writer is really in communication with the reader, that he is delivering his message unmistakably and, perhaps, excellently. When that happens, the reader takes satisfaction in the reading and the writer takes joy in the

writing.” Theodore M. Bernstein, *The Careful Writer* vii (1965).

The following sentences illustrate the correct use of *ensure*:

- “There used to be an Eastern Idaho Sailing Association with more than 100 people, but the members’ independent-minded personalities eventually *ensured* its demise.” Paul Menser, “Wadsworth Set Sail into Yachting Business in 1940,” *Idaho Falls Post Register*, 24 Mar. 1997, at A9.
- “The suspension of talks until midmorning *ensured* another gridlocked rush-hour throughout the San Francisco Bay area.” “Transit Talks Called Off After Marathon Session,” *Buffalo News*, 11 Sept. 1997, at A11.
- “The volcano’s shieldlike shape *ensures* that the air at the summit is . . . cool and clear.” “Hawaii: Under the Volcano,” *Economist*, 12 Sept. 2015, at 70.

LANGUAGE-CHANGE INDEX

assure for *ensure*: Stage 3

Current ratio (*to ensure that* vs. **to assure that*): 22:1

B. *Insure* and *ensure*. *Insure* is best restricted to financial contexts involving indemnification; it should refer to what insurance companies do. *Ensure* should be used in all other senses of the word. Intransitively, *insure* is commonly followed by the preposition *against* <insure against loss>; it may also be used transitively <insure one’s valuables>. Following is a commonplace peccadillo: “He has an agenda, but with Clinton, he’s reached the top and is going to *insure* [read *ensure*] that he serves his master,” says an observer.” “The Young Master of the White House,” *Time*, 4 Apr. 1994, at 25.

C. Corresponding Nouns. See **insurance (A)**.

assurer; *assuror. The *-er* spelling, which has predominated since the late 19th century, is standard. See **-ER (A)**.

Current ratio: 90:1

-ASTER. See **DIMINUTIVES (A)**.

asterisk /as-tə-risk/. The mispronunciation of this word, as if it had no second *-s-*, is well known. (See **PRONUNCIATION (B)**.) Not so well known are the resulting misspellings of the word. The most common one is **asterick*—e.g.:

- “Speaking of Khannouchi, when he and Belgian Eddy Hellebuyck become U.S. citizens this fall, will the critics of American distance running put *astericks* [read *asterisks*] next to their performances . . . ?” Steve Nearman, “Chicago, New York Battle for Top Marathon Runners,” *Wash. Times*, 9 Aug. 1998, at C8.
- “Entries marked with the *asterick* [read *asterisk*] (*) did not run in the Sebastian River edition.” “Crimewatch,” *Fla. Today*, 4 May 1999, at B4.

- “*Astericks* [read *Asterisks*] appear for schools that are new and did not have test results from last year.” “Reading the Charts,” *San Diego Union-Trib.*, 28 July 1999, at A20.

Another misspelling, **asterik*, is nearly as common—e.g.: “The most memorable score in the 80-year history of the NFL—Chicago 73, Washington 0 in the 1940 championship game—always has deserved an exclamation point. Now it has got an *asterik* [read *asterisk*].” Bob Broeg, “59 Years Later, Baugh Casts Doubt on Bears’ Rout,” *St. Louis Post-Dispatch*, 5 Dec. 1999, at D1.

LANGUAGE-CHANGE INDEX

asthma /az-mə/. The *-th-* is silent.

as though. See **as if**.

astigmatism (= an uneven curvature of the cornea; a defect in a lens) is often incorrectly written (and pronounced) *stigmatism*—which, according to the *OED*, is actually a rare antonym of *astigmatism*. Sometimes the word is mistaken for a singular count noun (**a stigmatism* instead of *astigmatism*), as in the second and third examples below—e.g.:

- “Singh, the 1983 and 1995 Buick winner, had laser eye surgery last week to correct slight *stigmatism* [read *astigmatism*] and nearsightedness.” John Nicholson, “Major Preparation Makes Tiger Woods Pass on Buick Open,” *Nat’l Post*, 8 June 2000, at B15.
- “He has tried contacts, too, but that didn’t work out, primarily due to a *stigmatism* [read *astigmatism*] on his right eye.” Tim Buckley, “Polynice Eyes Better Shooting,” *Deseret News* (Salt Lake City), 5 Oct. 2000, at D1.
- “One son was in special education classes, the mom was suffering from a *stigmatism* [read *astigmatism*], another son was juggling college and work to help support the family.” Piper Nichole, *The For Sale by Owner Handbook 223* (2005).

For further misuse of *stigmatism*, see **stigma (B)**.

LANGUAGE-CHANGE INDEX

**a stigmatism* for *astigmatism*: Stage 1

as to. A. Defensible Uses. First, it must be said that *as to* is an all-purpose preposition to be avoided whenever a more specific preposition will do. But *as to* isn’t always indefensible. The phrase is most justifiable when introducing something previously mentioned only cursorily: “*As to* concerns the fair might lose on-track business if it offered its signal to the OTBs, [Dun said]: ‘I figured we were going to lose the handle either way.’” Jay Burns, “Farmington Takes Step Forward, Using OTB for New Revenue,” *Portland Press Herald*, 7 Sept. 1997, at D8. In beginning sentences this way, *as to* is equivalent to the more colloquial *as for*. In effect,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

the phrase is a passable shorthand form of *regarding*, with *regard to*, or *on the question of*.

The phrase is also (minimally) defensible when used for *about*, but that word is stylistically preferable in most contexts. *As to* smells of JARGON—e.g.:

- “The bill carries no presumptions *as to* [read *about*] the effect of incorporation.” “Citizens and Swift Creek,” *News & Observer* (Raleigh), 17 Mar. 1997, at A9.
- “Reasonable people may disagree *as to* [read *about*] the importance of the school system’s efforts to prevent and detect thefts in the schools.” Roy D. Nichols Jr., “Searches at Granby Are ‘Reasonable,’” *Virginian-Pilot & Ledger Star* (Norfolk), 6 Sept. 1997, at B8.

B. Poor Uses. The main problem with *as to* is that it doesn’t clearly establish syntactic or conceptual relationships, so it can hamper comprehensibility. In each of the following examples, another preposition would more directly and forcefully express the thought:

- For *about*: “There’s no rule *as to* [read *about*] how long you have to wait before you can enjoy your creation.” Dan Macdonald, “At-Home Winemaking,” *Fla. Times-Union*, 14 Aug. 1997, at E6.
- For *on*: “It is always possible that your neighbor is not aware of how disturbing his or her behavior is and that he or she can be more sensitive to your concerns, or you can agree *as to* [read *on*] certain time *parameters* [read *limits*] or (if music is the culprit) what is an acceptable volume level.” Robert Griswold et al., “What to Do When Noise Becomes Intolerable,” *San Diego Union-Trib.*, 24 Aug. 1997, at H6. (On the use of *parameters* in the second example, see **parameters**.)
- For *of*: “The same is true *as to* [read *of*] other cases finding for leaders by applying the regulation.” Robert P. Simons, “Environmental Lender Liability Rule Vacated,” *Bankr. Ct. Decisions*, 24 Mar. 1994, at 11.
- For *for*: “There is no change in the prior IRA rules with regard to an individual’s participation in other qualifying retirement plans. *As such* [read *Therefore*], the rules remain the same *as to* [read *for*] the maximum amount of adjusted gross income a taxpayer can have before the IRA deduction begins to phase out.” George W. Smith III, “New Law Offers Businesses, Workers Retirement Options,” *Gaz. Telegraph* (Colo. Springs), 12 Mar. 1997, at D1. (On the use of *as such* in that sentence, see **as such**.)
- For *by* or *at*: “Some people are a little surprised *as to* [read *by* or *at*] how quickly Veniard has gotten to his present level.” Peter Zellen, “Bolles Grad Proves He Can Pitch in Pros,” *Fla. Times-Union*, 28 June 1997, at 9.
- For *into*: “During a trip to the Mars Pathfinder Mission Control Center in Pasadena this summer, House Aeronautics and Space Subcommittee member Sheila Jackson-Lee, D-Texas, inquired *as to* [read *into*] whether the Pathfinder Mission had taken pictures of the American flag planted by Neil Armstrong in 1969.” Leah Garchik, “Getting There,” *S.F. Chron.*, 15 Sept. 1997, at E10. (Another wording, *asked whether*, would work even better in that sentence.)
- Superfluous: “Another equally important question is *as to* [delete *as to*] whether technical efficiency improvements due to economic reforms for each province over the periods were statistically important.” K.P. Kalirajan Shiji Zhao, “Did the Technical Efficiency of State Enterprises Improve with the Same Speed in All Provinces of China?” *Applied Econ.*, 1 Mar. 1997, at 269. / “With the season down to a dozen games, it’s an open question *as to* [delete

as to] whether Sele would have been placed at risk if he’d been asked to throw a couple of dozen more pitches.” Gordon Edes, “Red Sox Called Out,” *Boston Globe*, 17 Sept. 1997, at D3. See **question whether & whether** (B).

as was. See **as is**.

as well. When used at the beginning of a sentence, this phrase has traditionally been considered poor usage. But in Canada it’s standard as an equivalent of *Also*, . . . or *In addition*, . . . Each of the following examples comes from a Canadian publication. In AmE they would be edited as shown in the brackets:

- “*As well*, [read *And*] people would have to work longer to qualify for UI [unemployment insurance].” Derek Ferguson, “‘Attack’ on Jobless Riles Labor Chief,” *Toronto Star*, 16 Apr. 1996, at A5.
- “*As well* [read *Also*], people can place a sticker announcing their donor consent on their driver’s license at the time of renewal or on their Care Card.” Pamela Fayerman, “\$250,000 TV Ad Blitz Aims to Get More People Donating Organs,” *Vancouver Sun*, 22 Apr. 1997, at B4.
- “*As well*, [read *And*] many of today’s workers are stashing money in RRSPs, an estimated \$6.5 billion this year alone.” Mary Janigan, “Making the Middle Class Pay,” *Maclean’s*, 29 Sept. 1997, at 42.

2. **as of yet* for *yet*: Stage 2

Current ratio (*not yet* vs. **not as of yet*): 5,415:1

-ATABLE does not generally appear other than in *-able* adjectives derived from two-syllable verbs (e.g., *create*, *vacate*). It does so in those cases because the *-able* adjectives would be unrecognizable. H.W. Fowler notes some long exceptions to the general rule (*inculcatable*, *inculpatable*, *incubatable*), and states his standard: "The practice should be to use *-atable* where the shorter form is felt to be out of the question" (*FMEUI* at 36). Other examples with which the shorter form is impracticable are *anticipatable*, *translatable*, and *infiltratable* (so that *infiltrable* not be thought to be derived from *infilter* [= to sift or filter in] rather than from *infiltrate*).

The following words, which occur with some frequency, are better than the *-atable* forms:

abbreviable	confiscable	manipulable
abdicable	corroborable	medicable
abrogable	cultivable	navigable
accommodable	delegable	obligable
accumulable	delineable	obviable
activable	demonstrable	operable
administrable	detonable	originable
adulterable	differentiable	participable
affiliable	eradicable	penetrable
aggregable	evacuable	perpetrable
agitabile	evaluable	perpetuable
alienable	expropriable	predicable
alleviable	generable	propagable
allocable	indicable	regulable
ameliorable	inevitable	replicable
annihilable	inextirpable	repudiable
appreciable	inextricable	segregable
appropriable	infatuable	separable
arbitrable	infuriable	subjugable
articulable	invalidable	terminable
calculable	investigable	vindicable
communicable	isolable	violable
compensable	litigable	vitable

At least one pair distinguished by the two suffixes has undergone DIFFERENTIATION. *Estimable* = worthy of esteem; *estimatable* = capable of being estimated.

at about. See **about (D)**.

at all events. See **in any event**.

at arm's length. See **arm's-length**.

at fault; in fault. Today, *at fault* is commonly used in the sense "responsible for a wrong committed; blame-worthy" <in a divorce, it's of little value to try to determine which spouse is more at fault>. An American

critic once wrote that "hunting dogs [that] lose the scent are said to be *at fault*. Hence the phrase means perplexed, puzzled." He added that *in fault* means "in error, mistaken," with this example: "No certified public accountant should be *in fault*." Clarence Stratton, *Handbook of English* 24, 158 (1940). The phrase is virtually never used for *perplexed* or *puzzled* anymore. The phrase *at fault* is seven times as common in modern print sources as *in fault*.

atheist; agnostic; unbeliever; nonbeliever; free-thinker. These terms denote different levels of religious skepticism. An *atheist* denies the existence of God altogether. An *agnostic* thinks a person cannot know for sure—in other words, God's existence cannot be proved or disproved. An *unbeliever* or *nonbeliever* might believe in God but not in a particular religion. Finally, a *freethinker* might belong to a particular religion but refuse to accept that religion's dogmas as incompatible with reason. See **disbelief**.

athlete has two syllables (/ath-leet/), not three (/ath-ə-leet/). See PRONUNCIATION (B). Cf. **-ATHLON**.

LANGUAGE-CHANGE INDEX

athlete pronounced with three syllables: Stage 2

-ATHLON. This suffix, from the Greek word for "contest," has two syllables. Avoid adding an *-a-* when spelling it and slipping in an epenthetic schwa when pronouncing it. For example, *triathlon* (an athletic contest featuring swimming, running, and bicycle races) is pronounced /tri-ath-lahn/, not /tri-ath-ə-lahn/. Likewise with *pentathlon* (swimming, running, steeplechase, fencing, and shooting) and *decathlon* (three races of varying distances plus high hurdles and six field events). See PRONUNCIATION (B). Cf. **athlete**.

ATM machine. For this redundant initialism, see ABBREVIATIONS (B).

atomic; atom, adj. These words should generally be confined to their natural parts of speech: *atomic* as an adjective and *atom* as a noun. But *atom* is sometimes used adjectivally, especially in the phrase *atom bomb*.

Current ratio (*atomic bomb* vs. *atom bomb*): 5:1

at present. See **at the present time**.

atrium. Pl. *atria* (predominant in World English) or *atriums* (which has made slight inroads since the mid-1970s). See PLURALS (B).

Current ratio: 17:1

***attached hereto**. This phrase, symptomatic of COMMERCIALESE and LEGALESE, is normally redundant. Delete *hereto*.

attain; obtain. These two—both FORMAL WORDS—are sometimes confused. *Attain* = to achieve, accomplish

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

<she put extraordinary effort into attaining that goal>. *Obtain* = (1) to get, acquire <obtain a license>; or (2) to apply; be prevalent <several unusual customs obtain in that village>.

Attain, in another sense, is also a FORMAL WORD for “to reach (an age).” It’s often simplifiable—e.g.: “Under prior law, if neither you nor your wife had *attained* [read *reached*] the age of 55 before you sold your house, the amount by which the adjusted sale price of your old house exceeded the purchase price of your new house would have been subject to the federal income tax.” Walter Bithell, “New Tax Laws Will Help Parents Afford High Costs of College,” *Idaho Statesman*, 31 Aug. 1997, at E4.

Occasionally—as a MALAPROPISM—*obtain* is misused for *attain*. E.g.: “The same exception . . . applies if U.S. residency or citizenship is renounced before *obtaining* [read *attaining*] age 18.” Don W. Llewellyn, “Income and Transfer Tax Planning for Nonresident Aliens Holding or Disposing of U.S. Investment Assets,” *Tax Mgmt. Int’l J.*, 11 Oct. 1996, at 643.

attribute, n.; attribution. An *attribution* (/ə-trə-byoo-shən/) is the act or an instance of ascribing a characteristic, quality, or source. An *attribute* (/ə-trə-byoot/) is a characteristic or quality so ascribed.

attribute, v.t. (= to credit [something] as resulting from a specified cause; to ascribe), is sometimes confused with *contribute* (= to play a significant part in producing something). The blunder is especially common among sportswriters—e.g.:

- “The Buccaneers made 22 percent of their shots in the first half and had 17 turnovers at halftime. Most of that can be *contributed* [read *attributed*] to Kansas’ defense.” Shannon Rose, “Kansas Freshman Pierce Scores 30 Points in Rout,” *Kansas City Star*, 5 Jan. 1996, at D1.
- “Most of the Broncos’ troubles this year can be *contributed* [read *attributed*] to their defense.” Bert Sahlberg, “Flush with Inspiration,” *Lewiston Morning Trib.* (Idaho), 23 Nov. 1996, at B1.

See MALAPROPISMS. For a brief comment on the misuse of *accredit* for *attribute*, see **accredit**.

The verb is pronounced /ə-**tri**-byoot/.

LANGUAGE-CHANGE INDEX
contribute misused for *attribute*: Stage 1

attribution. See **attribute, n.**

attributive is the standard term. **Attributory* is a variant form.

Current ratio: 461:1

at which time is a phrase that can almost always be improved, either by substituting *when* or by reworking the sentence—e.g.:

- “The letter says patients reported the incidents on April 16, *at which time* Luster was placed on administrative leave from his psychiatric technician position before he was fired [the next month].” Tammie Smith, “Mental Health Workers Fired After Sex Claims,” *Tennessean*, 7 Aug. 1997, at B1. (A possible revision: *The letter says that when patients reported the incidents on April 16, Luster was placed on administrative leave from his position as psychiatric technician. The following month, he was fired.*)
- “Lester operated the company until he was 84 years old, *at which time* [read *when*], on January 1, 1979, he sold the business to Space Center, Inc. of St. Paul.” “Robert R. Lester” (obit.), *Kansas City Star*, 14 Sept. 1997, at B9.
- “The lasers trained on the sails help push it to a transition point, *at which time* the craft essentially coasts all the way to the next star.” Nick Wilson, “Cal Poly Professor Gets Grant to Build Interstellar Spacecraft,” *Trib.* (San Luis Obispo, Cal.), 11 Sept. 2015, Local News §. (A possible revision: *The lasers trained on the sails help push it to a transition point; from there the craft essentially coasts all the way to the next star.*)

atypical; *untypical. *Atypical* has been the standard term since the late 19th century. (Before that time, neither term was common.) **Untypical* is a variant form.

Current ratio: 4:1

au fond. See *à fond*.

auger. See **augur** (A).

ought. **A. Generally**. *Ought* (= [1] anything; or [2] all) is an ARCHAISM in rapid decline. Today it is generally restricted to BrE—e.g.: “For *ought* I see they adjust themselves to their stations with all proper humility.” Fintan O’Toole, “Race Issue Reflects Shameful Double Standards,” *Irish Times*, 30 May 1997, at 14. In legal contexts, however, the term sometimes surfaces in the phrase *for ought that appears*.

B. For *nought*. By error, a *nought* (= a zero) was widely misconstrued as a *ought*. Thus, *ought* has come—mistakenly—to bear the sense “zero.” One explanation from folk etymology (see ETYMOLOGY (D)) is that, among graduating seniors in 1900, the class of *nought-nought* sounded too negative; the class of *oh-oh* sounded too accident-prone; and the class of *zero-zero* sounded like a bunch of losers. So it became *ought-ought*. E.g.:

- “At the grass roots, a new organization, the National Alumni Forum, is urging its troops to withhold checks from alma mater until she bends her intellectual agenda to terms more favorable to the class of *ought nine*.” Rick Perlstein, “Professional Correctness: Literary Studies and Political Change,” *Nation*, 18 Dec. 1995, at 792.
- “Some old-timers say at the turn of the century, high school graduates were the class of double ‘*ought*.’” Rebecca Simmons, “The Class of ’00 or 2000: What’s It Going to Be?” *Knoxville News-Sentinel*, 10 Nov. 1996, at E1.
- “Twenty *ought six* . . . isn’t that how they said it a century ago?” Jeff Metcalfe, “Class of ’86,” *Ariz. Republic*, 29 Dec. 1996, at F1.

These uses, to the American ear, sound either self-consciously old-fashioned or very British. The American way of saying 2006 is not “twenty *ought six*” but “twenty *oh six*” or “two thousand *six*.” For more on *nought*, see **naught**.

LANGUAGE-CHANGE INDEX
ought in the sense of *nought*: Stage 5

C. Misused for *ought*. Occasionally, *ought* displaces *ought* (= should)—e.g.: “Maradona and Cantona *ought* [read *ought*] to show humility for their failure to live up to superstardom.” Rob Hughes, “Maradona’s Union,” *Int’l Herald Trib.*, 20 Sept. 1995, at 21. Cf. **naught**.

LANGUAGE-CHANGE INDEX
ought misused for *ought*: Stage 1

au gratin (= sprinkled with breadcrumbs or grated cheese before being browned) is pronounced /oh **grah**t-ən/ or /oh **grat**-ən/ in AmE. Avoid /aw/ in the

first syllable. In BrE, the quasi-French pronunciation /oh grə-**tan**/ is common.

augur, n. & vb. **A. And *auger***, n. & vb. These are very different words with similar spellings. They are pronounced identically: /aw-gər/. The more common one is *augur*. As a noun, it refers to a soothsayer or fortune-teller—e.g.: “[In ancient Rome], a man called an *augur* was said to be able to tell the future by observing the flight of birds.” “No Ducks, No Glory,” *Wash. Post*, 18 Jan. 2001, at C13. The word appears in Deuteronomy (18:10–12, NRSV): “one who practices divination, or is a soothsayer, or an *augur*, or a sorcerer, or one who casts spells.” As a verb, *augur* means to forebode or presage—most commonly in phrases similar to those in which *bode* appears <augurs well> <augurs ill>. E.g.: “No theatrical spectacle could have been more majestic. It was poignant, it was glorious. And it *augured* war.” Carolly Erickson, *Alexandra: The Last Tsarina* 219 (2001).

Auger refers to a tool with a center shaft and a helical flange, used for boring holes or for moving loose material—e.g.: “His machine roughs up the ice with an *auger*, squirts warm water over the ice and then squeegees that water to leave a smooth-as-glass surface behind the Zamboni.” Nancy Lofholm, “Tres Slick: Zamboni in No-Rink Town,” *Denver Post*, 2 Feb. 2001, at A1. The word also refers to a drill-like tool that rotates to gradually release particles of material such as animal feed—e.g.: “A computer-controlled system monitors temperatures and an *auger* feeds pellets into the furnace as needed.” John Spears, “Put Another Blade of Grass on the Fire, Dear,” *Toronto Star*, 7 Jan. 2001, at WB5. As a verb, it means to use such a tool. E.g.: “Durst . . . steered his six-rowhead Case 2166 combine through the fields and *augered* corn into a wagon driven by his father.” Clare Howard, “Watching His Harvest,” *Peoria J. Star*, 30 Sept. 2000, at A1.

Not surprisingly, some writers confuse the two words. Most commonly, *auger* is misused for *augur*—e.g.:

- “The highly partisan vote to begin open-ended impeachment proceedings against President Bill Clinton *augers* [read *augurs*] ill for the United States and for the world that depends upon its stability and leadership.” “Partisan Impeachment Vote,” *Ariz. Daily Star*, 10 Oct. 1998, at A18.
- “The dearth of rainfall that pervades virtually all of the Midlands *augered* [read *augured*] against pheasants and other game birds in several deadly ways.” Charlie Meyers, “Tough Times Are Ahead for Pheasant Hunters,” *Denver Post*, 23 July 2000, at C3. (Note also the clashing words in *dearth of rainfall that pervades*.)
- “Sens. John McCain (R-Ariz.) and Russell D. Feingold (D-Wis.) said that the skyrocketing election spending and new Senate allies *auger* [read *augur*] well for at least a ban on soft money.” Alan C. Miller & T. Christian Miller, “America Waits,” *L.A. Times*, 8 Dec. 2000, at A1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

And the reverse error sometimes occurs, especially with the noun (*augur* being misused for *auger*)—e.g.: “Chesapeake Fire Chief R. Stephen Best said most of the barrels recovered were found in one location, near the spot where an *augur* [read *auger*] drilled into a buried drum last fall during excavations.” Robert McCabe, “Officials Find More Waste on City Land,” *Virginian-Pilot* (Norfolk), 31 Jan. 2001, at B1.

LANGUAGE-CHANGE INDEX

1. *auger* misused for *augur*: Stage 1
2. *augur* misused for *auger*: Stage 1

B. And *augury*, n. An *augury* is an omen, portent, or indication of the future; or it can refer to the art of reading omens and the like. *Augur* is to *augury* as *soothsayer* is to *omen*—e.g.:

- “The results were invigorating and fearless, an exciting *augury* for the performances still to come.” Joshua Kosman, “S.F. Symphony Gets Stravinsky ‘Rite,’” *S.F. Chron.*, 14 June 1999, at E1.
- “Unfortunately for Bush, the *auguries* are disquieting: A recession and a fall in the stock market are both overdue.” John O’Sullivan, “Profiting from Recession,” *Chicago Sun-Times*, 26 Dec. 2000, at 33.

The word appears much more commonly in BrE than in AmE. But writers commonly misuse *augur* for *augury*—e.g.:

- “In what may be an *augur* [read *augury*] of coming events, soon after the ECAR meeting closed Enron Power Marketing pulled its offers to sell power.” “The Heat Is On,” *Retail Servs. Rep.*, 31 Mar. 2000, at 17.
- “This time the blood stayed dry, and many interpreted it as an *augur* [read *augury*] of misfortune.” John L. Allen Jr., “Cardinal’s Acquittal Met with Cynicism,” *Nat’l Catholic Rptr.*, 5 Jan. 2001, at 28.

LANGUAGE-CHANGE INDEX

augur misused for *augury*: Stage 1

au jus. This phrase—in French, “with the juice”—is traditionally a POSTPOSITIVE ADJECTIVE meaning “(of a meat) served with its natural juice” <steak au jus>. But it has gradually been corrupted into a noun form <served with au jus> and then an attributive adjective <au jus sauce>—e.g.:

- “We had to ask the waitress to take the plate back, and to return it with horseradish sauce instead of the *au jus*.” Robert Tolf, “Chuck’s Still Cookin’ After All These Years,” *Sun-Sentinel* (Ft. Lauderdale), 27 Sept. 1996, Showtime §, at 39.
- “Evans uses beer in everything from *au jus sauce* to dessert.” “Hops, Grains, and Earthy Flavors to Food,” *Bulletin* (Bend, Or.), 17 Dec. 1996, at E1.

These uses are so well ensconced in culinary talk that there seems little hope of ousting them.

To make matters worse, the phrase is typically pronounced /oh **zhoos**/ or even /oh **joos**/ instead of the more nearly correct /oh **zhoo**/.

LANGUAGE-CHANGE INDEX

1. *au jus* as a noun: Stage 4
2. *au jus sauce*: Stage 3
3. *au jus* mispronounced /oh-**joos**/ or /oh-**zhoos**/: Stage 3

aunt (= the sister of one’s mother or father) is predominantly pronounced /ant/ in AmE, though the BrE pronunciation /ahnt/ is also common in New England and Virginia.

aural; oral. *Aural* = of, relating to, or involving the ears or hearing. *Oral* = of, relating to, or involving the mouth or speaking. The words present little problem in their written form; they’re most confusing when given orally and received aurally.

In the early 1960s, when “the pill” was introduced as the first oral contraceptive, some women reportedly mistook *oral* for *aural* and stuffed pills into their ears. See Jacki Wullschlager, “When Family Planning Met the Joy of Sex,” *Fin. Times*, 2–3 June 2001, FT Weekend §, at v.

aureole; aureola. See **areola**.

auspices. *Under the auspices* /aw-spi-siz/ means “with the sponsorship or support of”—e.g.: “Hugo Boss has developed an art library *under the auspices* of the Guggenheim.” Carol Vogel, “Inside Art,” *N.Y. Times*, 7 Feb. 1997, at C28. But the phrase is frequently misconstrued as meaning “in accordance with” or “by means of”—e.g.:

- “A red light still burns outside the building as a reminder of its past, and each guest is furnished with a copy of Madame Bailey’s city license issued in 1857 *under the auspices of* [read *in accordance with or under*] the ‘ordinance concerning lewd and abandoned women.’” Jack Biesterfeld, “French Quarter a Rich Gumbo in Itself,” *Record* (N.J.), 29 May 1994, Travel §, at T9.
- “*Under the auspices of* [read *With the help of*] new telemarketing rules, the Federal Trade Commission is cracking down on deceptive credit repair services for misleading advertising.” “Today’s News,” *Am. Banker*, 29 Mar. 1996, at 1.
- “Quickly, it was moved and seconded that a name change be ordered *under the auspices of* [read *in accordance with*] Robert’s Rules.” Ron Schara, “Swamp Hunters Convene for Another Season of Grouse,” *Star Trib.* (Minneapolis), 20 Oct. 1996, at C18.

See **aegis**.

LANGUAGE-CHANGE INDEX

under the auspices of misused for *in accordance with*: Stage 1

autarchy; autarky. Although some dictionaries treat these words as variants, they stem from different roots and should be distinguished. *Autarchy* = absolute rule or sovereignty; autocracy. *Autarky* = national economic self-sufficiency; isolationism. In the mid-1960s, *autarky* overtook *autarchy* in frequency of use.

authentic; genuine. Today the words are interchangeable in most sentences, but a couple of distinctions do exist. First, *authentic* is off-target when the sense is “substantial”—e.g.: “No cinema owner has ever lacked for customers with a Woody Allen film. Allen enjoys demi-god status with the intelligentsia but his films are also *authentic* [read *real or genuine*] crowd-pleasers, with many first-run titles playing for the better part of

a year.” Lisa Nesselson, “Obscure Helmers Have Gaul,” *Variety*, 26 Aug. 2002, Deaville Film Fest. Supp., at 26. Second, *authentic* is an awkward choice when the sense is “sincere”—e.g.: “. . . the stirring color photographs of women and children in liberated Afghanistan, those huge, *authentic* [read *sincere* or *genuine*] smiles from human beings who have been rescued from misogynous thugs.” George Vecsey, “Knicks Face One Rivalry at a Time,” *N.Y. Times*, 16 Nov. 2001, at S1. Cf. **bona fide**.

The *OED* notes that late-18th-century theologians tried to differentiate the words, arguing that a book is *authentic* if its content is accurate, and *genuine* if it is correctly attributed to the writer. The point, weak as it was to begin with, has been preserved in some later usage guides.

authentication, so spelled, is occasionally misrendered **authentification*—e.g.:

- “Data encryption, one-time password generators, ‘firewalls’ and a user-*authentication* [read *-authentication*] system called Kerberos are all cited as effective ways to decrease the risk of password theft.” Peter H. Lewis, “How to Keep Bandits from ‘Snarfing’ Your Passwords,” *N.Y. Times*, 13 Feb. 1994, § 3, at 9.
- “Open Market software allows businesses to process Internet orders made with credit cards, conduct on-line customer service, order management, *authentication* [read *authentication*] and record keeping.” Jon Auerbach, “Open Market Reportedly Wins Pack with AT&T,” *Boston Globe*, 5 Oct. 1996, at F1.
- “When it comes to *authentication* [read *authentication*] of a high-five, there are two frequently cited sources.” Jeff Strickler, “Give Her a Hand,” *Star Trib.* (Minneapolis), 21 Apr. 2015, at E1.

LANGUAGE-CHANGE INDEX

**authentification* for *authentication*: Stage 1

Current ratio: 394:1

author, n. On the use of this word in place of *I*, see FIRST PERSON.

author, v.t. **A. Status.** Since the mid-20th century, *author* has been rapidly becoming standard as a verb, though many writers still avoid it when they can. Generally it’s a mildly turgid substitute for *write*, *compose*, or *create*—e.g.:

- “Dougherty now represents some of the country’s top archery firms, serves as a consultant, and also stays very busy *authoring* [read *writing*] books and articles about bowhunting.” Sam Powell, “Tulsa’s Dougherty Is Due Induction into National Archery Hall of Fame,” *Tulsa Trib. & Tulsa World*, 22 Dec. 1996, at B15.
- “She has lectured throughout the world, and *authored* [read *written*] articles in the press and in scholarly journals.” “Chemistry Expert to Address Meeting,” *Peoria J. Star*, 6 Feb. 1997, at B5.
- “‘Humanized’ stems from the work of [Aza] Raskin’s late father, Jef Raskin, who created the vision for the Macintosh computer and *authored* [read *wrote*] the book ‘The

Humane Interface.’” Ann Meyer, “A Simpler Approach to Computers,” *Chicago Trib.*, 12 Feb. 2007, Bus. §, at 3.

Some journalists and lawmakers have taken to using *author* in reference to a politician who sponsors legislation. This seems irresponsible, given that few legislators today actually write the bills they promote. E.g.:

- “Abzug co-founded the National Women’s Political Caucus in 1971, and *authored* [read *sponsored*] numerous bills intended to prevent sex discrimination.” Stephanie Balzer, “Days of Speaking Softly Past, Says Abzug,” *Bus. J.—Phoenix*, 28 Feb. 1997.
- “He also *authored* [read *sponsored*] the state’s adoption law.” Tracy Jordan, “Politician Will End His 17-Year Hiatus,” *Morning Call* (Allentown, Pa.), 11 Mar. 1997, at B1.
- “Some did so out of solidarity over a procedural dispute with their partisan colleagues in the Senate—despite the fact that the resolution was *authored* [read *sponsored*] by John Warner, a Republican.” Steve Kornacki, “Republican Senators Deepen a Hole for 2008,” *N.Y. Observer*, 12 Feb. 2007, Opinions §, at 5.

Coauthor has been considered more acceptable as a verb, perhaps because *cowrite* seems deadpan. Yet *cowrite* and *cowriter* are often used in scriptwriting circles. See FUNCTIONAL SHIFT (D).

LANGUAGE-CHANGE INDEX

1. *author* for *write*: Stage 3

2. *coauthor* for *cowrite*: Stage 5

B. Origin. H.L. Mencken explained the origin of the modern usage in this way: “*To author* . . . arose on the movie lots to designate the preparation of a script. To say that a given author *writes* a given script may be inaccurate, for a great deal goes into it besides the mere writing of its text, and sometimes the text is the least part of it. So *to author* was born—and now, as new verbs have a way of doing, it has begun to displace *to write* in situations where *to write* would be quite as accurate and a great deal less slobbergompious.” H.L. Mencken, “The Birth of New Verbs,” in *Aspects of American English* 92, 96 (Elizabeth M. Kerr & Ralph M. Aderman eds., 1963). The *OED*’s treatment of the verb suggests that this account is accurate. It is true, however, that there was an earlier period (ca. 1575–1650) when the verb was used in the sense “to cause” or “to declare.”

authoress. See SEXISM (D).

authorial; *auctorial. The latter is a stuffy NEEDLESS VARIANT of the former.

Current ratio: 149:1

authority. For an interesting misusage, see **autonomy**.

autocracy. See GOVERNMENTAL FORMS.

autoeroticism; *autoerotism. Although most American dictionaries list the shorter form first, *autoeroticism* is four times as common as **autoerotism*. The shift in preference had occurred by the mid-1960s in

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

AmE and by the mid-1990s in BrE. The longer form ought to be accepted as standard.

Current ratio: 4:1

automaton (= [1] a humanoid robot that moves without visible outside control, or [2] someone who seems emotionless and unreflective) has predominantly formed the plural *automata* since the early 18th century. Although AmE seriously flirted with *automatons* from about 1915 to the early 1950s, that plural has been much in decline ever since.

Current ratio: 6:1

autonomy (= self-rule) is sometimes misused for *authority*—e.g.: “But Dave Checketts, president of Madison Square Garden, insisted that the 50-year-old Riley wanted part ownership and complete *autonomy* of [read *authority* over] the team, and that his heart was no longer in the job when those requests were denied.” Clifton Brown, “Riley Quits over Difference with Management,” *N.Y. Times*, 16 June 1995, at B14. This sentence suggests that Coach Pat Riley wanted the team to be entirely self-governing, but the context shows that he wanted authority for himself.

LANGUAGE-CHANGE INDEX

autonomy misused for *authority*: Stage 1

autopsy; postmortem. These equivalents are each current in AmE and BrE. *Autopsy* is slightly more common in both AmE and BrE. *Postmortem* now tends to be used figuratively <Let’s do a postmortem on our performance>.

As a verb, *autopsy* dates back to the late 19th century but wasn’t recorded in the dictionaries until much later. It means “to perform a postmortem examination on.” E.g.:

- “Rhoda Walston, veterinary pathologist at the lab, *autopsied* the carcass and traced a trajectory showing the bear had been shot from the side, not the front.” Kim Murphy, “Shielded Species Get High-Tech Lab Help,” *L.A. Times*, 29 Dec. 1996, at A1.
- “All but 15 bodies have been recovered and *autopsied*.” “Flight 800 Autopsy Reports Released,” *Wash. Post*, 4 Jan. 1997, at A12.

auxiliary. So spelled, this word is best pronounced /awg-zil-yə-ree/. Perhaps through confusion with *ancillary*, it is often misspelled **auxillary* (and mispronounced /awg-zil-ə-ree/)—e.g.:

- “In the past week, the company has moved operations to its *auxillary* [read *auxiliary*] warehouse.” Jeff Richgels, “Rising from the Ashes,” *Capital Times* (Madison), 10 Aug. 1996, at C1.
- “She was a member of the Ladies *Auxillary* [read *Auxiliary*] of Gerald O’Neill Post #1683 American Legion.” “Helen G. Featherstone” (obit.), *Times Union* (Albany), 14 Jan. 1997, at B6.

LANGUAGE-CHANGE INDEX

auxiliary misspelled **auxillary*: Stage 1

Current ratio: 805:1

avail. **A. As a Verb.** *Avail* = (1) to get the benefit of, make use of <to avail oneself of the opportunity>; or

(2) to be of advantage or utility <the attempts to rectify the problem availed no one>.

In sense 1, which is always reflexive, it’s an error to use the PASSIVE VOICE—e.g.: “Where the special lump-sum averaging rule *is availed of*, there is no \$20,000 exclusion allowed.” Marshall L. Fineman, “New York State and City Income Tax Consequences of IRA and Pension Distributions,” *CPA J.*, 1 June 1995, at 72. (A possible revision: *If the taxpayer uses the lump-sum averaging rule, no \$20,000 exclusion is allowed.*)

In AmE, some jargonistic writers use the passive *be availed* in various incorrect senses. For example, some think it means “to be made available,” a usage without any sanction—e.g.: “The court acknowledged . . . that . . . it was the inherent duty of government to ensure that equitable educational opportunity *was availed* [read *be made available* or *is made available*] to all of its citizenry.” Chet Whye Jr., “40 Years After *Brown* Decision, Education Chances Slipping Again,” *Denver Post*, 17 May 1994, at B7. Others seem to think *be availed* means “to be allowed”—e.g.: “On the other hand, in single-income families, only the working spouse *is availed* [read *is allowed*] the graduated tax rates.” “The Taxman’s Dual-Income Bias,” *Fin. Post*, 9 Apr. 1994, at 16.

In Ireland, oddly, it is quite common to omit the reflexive object and to use *avail of* in the sense “to take advantage of”—e.g.:

- “Drapier also believes he has a duty to tell his readers that, yes, his wife *availed of* [read *took advantage of*] the Dunnes Stores ‘Saucepans for Stamps’ promotion.” “Parties Try to Outdo Each Other in Their Race to the High Moral Ground,” *Irish Times*, 14 Dec. 1996, at 14.
- “Galway United increased their lead on the hour when they *availed of* [read *took advantage of*] a poor clearance by Noel Hartigan.” “First Blood to Galway in Final,” *Irish Times*, 18 Dec. 1996, at 21. (The *they* in reference to a sports team is typical of BrE. See COLLECTIVE NOUNS.)

Irish examples of this usage are legion.

Often this verb, when used transitively (sense 2), could be replaced by a simpler word such as *help*, *profit*, or *benefit*—e.g.:

- “The sedate slopes averted mildew—death for grapes—and *availed* [read *helped*] Evans in his quest for developing a sweet purple grape.” Bart Ripp, “Maritime Memento,” *News Trib.* (Tacoma), 15 Oct. 1995, Soundlife §, at 10.
- “The Tide blitzed Danny Wuerffel, knocked him down, made him hurry. This was the formula plied by FSU, but it *availed Alabama not at all* [read *didn’t help Alabama at all*].” Mark Bradley, “Florida 45, Alabama 30,” *Atlanta J.-Const.*, 8 Dec. 1996, at E4.

Often simpler words also better express sense 1—e.g.: “Festival-goers *availed* [read *helped*] themselves to a buffet and a bellyful of ragtime, jazz standards and vaudeville classics.” Michael Kuelker, “Ragtime Fest Opens with 6-Hour Session,” *St. Louis Post-Dispatch*, 2 Sept. 1995, at D7. In that sentence, *avail* was also mistakenly matched with *to* rather than *of*.

LANGUAGE-CHANGE INDEX

**to be availed* misused for *to make available*: Stage 1

B. As a Noun. *Avail* is frequently a noun having the sense “beneficial effect, advantage,” especially in the phrase *to no avail*, meaning “without success”—e.g.:

- “We tried to get them to sing carols with us, but *to no avail*.” Joe A. Ashley, “The Christmas Train,” *Anchorage Daily News*, 24 Dec. 1996, at E1.
- “Wren got a shot off, but he even got his stick on an in-close rebound, *to no avail*.” Phil Jackman, “Bandits Lose Lead in Third, Salvage 4–4 Tie with Blades,” *Baltimore Sun*, 7 Feb. 1997, at D6.
- “Sometimes she’d cross her legs tightly, trying to make it all stop—*to no avail*.” Andrea K. McDaniels, “Treatment for Parkinson’s Could Replace Surgery,” *Baltimore Sun*, 8 Sept. 2015, at A1.

avenge. **A. And *revenge*,** vb. & n. To *avenge* is to visit fitting retribution on a wrongdoer by reason of (a specified wrong). *Avenge* and *vengeance* have to do with justice, and often with the legal process—e.g.:

- “He longs to see his friends’ deaths *avenged*, to get a date with Beth Penrose, and to keep her from the amorous advances of the FBI liaison working on the case.” Susan Marx, “A Fruitful Mix of Mystery and Romance,” *Orange County Register*, 27 July 1997, at F24.
- “Unable to control his combustible emotions, a man goes to prison for *avenging* an attack on his wife.” “Freeze Frames,” *Christian Science Monitor*, 12 Sept. 1997, at 13.

But the justice may also be taken upon oneself—e.g.:

- “In its statement, the Islamic Jihad said it carried out the attack *to avenge* the deaths of more than 30 Palestinian civilians during Israeli army raids in the Gaza Strip this month.” Peter Mermann, “Car Bomb Kills at Least 16 in Northern Israel,” *Baltimore Sun*, 22 Oct. 2002, at A16.
- “Petrucci aspired to become a made man in the Luchese crime family, and stabbed Cicero *to avenge* the shooting of fellow Tanglewood Boys member Darin Mazzarella, Assistant U.S. Attorney David Raskin said.” John Lehmann, “Mob Boss to Squeal at Slay Trial,” *N.Y. Post*, 23 Oct. 2002, at 21.

Quite often, however, *avenge* has nothing to do with real justice, but only with evening a score, especially in sports and politics—e.g.:

- “Many present came holding tortured Rally Monkeys and a sense of inevitability the Giants would *avenge* Sunday’s ugly 11–10 Game 2 loss.” Joe Strauss, “Angels Pound Giants to Take Lead in Series,” *St. Louis Post-Dispatch*, 23 Oct. 2002, at B1.
- “The goal is not only to *avenge* Al Gore’s failure to capture the state in 2000, but also to set the stage for a Democratic presidential candidate in 2004.” Katharine Q. Seelye, “McAuliffe Describes Jeb Bush as the Democrats’ Top Target,” *N.Y. Times*, 24 Oct. 2002, at A31.

To *revenge* is to inflict suffering or harm upon another out of personal resentment. *Revenge* has to do with getting even—e.g.: “In 1996, with Leslie at the lead, the Americans *revenge*d that defeat.” John Erardi, “Past Forward,” *Cincinnati Enquirer*, 28 Mar. 1997, at F2. Actually, though, sportswriters use the two verbs almost interchangeably. If they’re looking for hype, the word should be *revenge*.

Often, too, *revenge* is a reflexive verb—e.g.:

- “Solon, for example, opposed waiting until the dissatisfied class *revenge*d itself with revolution and confiscation.” William D. Snider, “A Three-Week Greek Sailing Cruise Turns into a Voyage Back in Time,” *News & Record* (Greensboro), 30 June 1996, at F3.
- “Never having been able to afford the real thing as a young woman, she *revenge*d herself by designing gigantic ropes of pearls and huge crystals.” Patricia McLaughlin, “Fake Fur: Glamour Without Guilt,” *St. Louis Post-Dispatch*, 3 Oct. 1996, Style West §, at 7.

Moreover, *revenge* can (and usually does) function as a noun, whereas *avenge* cannot.

B. *Avenge* for *get revenge*. Although the *OED* supports the notion that *avenge* may also mean “to take vengeance on (a wrongdoer),” this sense is labeled obsolete and the few examples are from the mid-17th century. Today this sense is fairly rare and not at all idiomatic—e.g.: “Not only did they *avenge* [read *get revenge on*] the schoolyard bullies and nasty teachers, but they’re also famous for it, because they got their faces all over the news.” Jack Levin & James Alan Fox, “Making Celebrities of Serial Killers Elevates Threat,” *USA Today*, 23 Oct. 2002, at A13.

LANGUAGE-CHANGE INDEX
avenge in the sense “to get revenge on”: Stage 2
Current ratio (*avenge his* vs. **avenge him*): 4:1

aver. **A. And *asseverate*.** These are FORMAL WORDS for *say* or *state*. *Aver* has its place in solemn contexts <Allen averred that he would somehow make things right>. *Asseverate*, a rarer and weightier word, is seldom justified. Both refer to affirmations of fact, usually with no implication that an oath has been taken.

B. Corresponding Noun: *averment* or **averral*. *Averment* is the preferred noun corresponding to *aver* in both AmE and BrE—e.g.: “Gingrich personally and his Contract [with America] are endlessly hammered for ‘ms’-ness, as in columnist Robert L. Steinbeck’s *averment* in the Tampa Tribune.” Daniel Seligman, “Our Spirited Republicans, the Great Coed Bathroom Caper,” *Fortune*, 25 Dec. 1995, at 231 (“*ms*”-ness referring to “mean-spiritedness”). **Averral* is a NEEDLESS VARIANT, perhaps coined with *avowal* in mind.

Current ratio: 36:1

average is a word that assumes a broad sample of subjects. As a verb, it does not mix well with *each*: “Each Boston member *averages* ten years of experience.” (Read: *Members in Boston have an average of ten years’ experience*. Or: *The Boston members average ten years’ experience*.) See **each**.

averageable. So spelled.

averment; **averral*. See **aver** (B).

averse. See **adverse**.

avert. See **advert**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

avertable. So spelled—no longer **avertible*. Though the *-i-* spelling was once standard, the *-a-* spelling became predominant in the 1980s and remains so. See **-ABLE (A)**.

Current ratio: 5:1

aviary; apiary. An *aviary* is a place for captive birds; an *apiary* is a place for bees and beehives. The words derive from the Latin terms *avis* (= bird) and *apis* (= bee). *Aviary* has been the victim of **SLIPSHOD EXTENSION** in the sense *insectarium* (= a place for keeping and breeding insects)—e.g.:

- “Renaker is donating land and building materials to construct an *aviary* [read *insectarium*] where the insects will be bred and studied.” Terry Rodgers, “Beauties and the Base,” *San Diego Union-Trib.*, 12 Dec. 1991, at A1 (referring to butterflies).
- “The Insectarium features thousands of living and mounted insects from all over the world, a *butterfly aviary* [read, perhaps, *lepidoptarium* or *butterfly tent*], a working hive of bees and hands-on games.” Allen Bradford, “Montreal Spices Birthday Fest with Charm and French Flavor,” *Wash. Times*, 4 Oct. 1992, at E1.
- “Salopek said the bees would be taken to his house, where he has an *aviary* [read *apiary*] he uses for bees.” Jorge Milian, “Buzz Quietened in Wellington,” *Palm Beach Post*, 22 Aug. 2015, at B1.

LANGUAGE-CHANGE INDEX

aviary misused for *insectarium*, etc.: Stage 1

avocado. Pl. *avocados*—not **avocadoes*. See **PLURALS (D)**.

Current ratio: 19:1

avocation; vocation. Although these words are quite different, many writers misuse *avocation* for *vocation*. The first means “hobby,” whereas the second means “calling or profession.” Here is the common mistake, worsened by **REDUNDANCY**: “My one life—my *professional avocation* [read *vocation*]*—*is to help prevent animal suffering.” Michael Fox, “Animal Doctor,” *St. Louis Post-Dispatch*, 28 Feb. 1996, *Everyday Mag.* §, at E2.

LANGUAGE-CHANGE INDEX

avocation misused for *vocation*: Stage 1

***avouch.** See **vouch**.

await. **A. And wait for.** Because *await* is transitive, it doesn’t take a preposition such as *for*. Essentially, *await* means the same thing as *wait for*: you can *await* someone’s arrival or *wait for* the person to arrive. But **await for* isn’t good English. Although it appears mostly in the writings of nonnative speakers of English (especially in foreign journals), it does surface in homegrown writing as well—e.g.:

- “He was being held by customs officials at Kennedy Airport, who captured him *while awaiting for* [read *while he awaited* or *while he waited for*] a Pakistan International Airline flight.” “Suspect Held in NYC for 4 Ohio Deaths,” *Cincinnati Enquirer*, 13 Sept. 1999, at B2.
- “Collectors eagerly *awaited for* [read *awaited* or *waited for*] each new card in the series.” Anne Gilbert, “Ad Trade Cards Have Long History,” *Chicago Sun-Times*, 25 June 2000, *Sunday Homelife* §, at 8.

- “Microsoft and Nintendo bide their time in their corners anxiously *awaiting for* [read *waiting for*] the bell to ring.” Marc Saltzman, “The Console Game Wars Should Dominate in 2001,” *Toronto Star*, 4 Jan. 2001, at FF3.

If no object is supplied (or clearly implied), *wait* is the proper term. That is, if the verb ends the clause, it shouldn’t be *await*—e.g.:

- “The crew returned Saturday evening to Ellington Field in Houston where friends and family *awaited* [read *waited*].” Stephanie Asin, “Columbia Crew Sets New Mark,” *Houston Chron.*, 24 July 1994, at A6.
- “The plane headed back to the gate, where airport police *awaited* [read *waited*], ATA spokeswoman Angela Thomas said.” Katherine Shaver, “Puzzling Note to Pilot Delays Flight at National,” *Wash. Post*, 7 Feb. 2003, at A2.
- “The blue-green water sparkled, and a pristine white-sand beach *awaited* [read *waited*], though it was already heavily dotted with visitors.” Karin Esterhammer, “Destination: Thailand,” *L.A. Times*, 9 Feb. 2003, at L10.

LANGUAGE-CHANGE INDEX

**awaiting for* for *awaiting* or *waiting for*: Stage 1

Current ratio (*awaiting her* vs.

**awaiting for her*): 454:1

B. And wait on. A waiter *waits on* tables. But a dinner partner does not *wait on* you to arrive. That is the distinction that critics made for more than a century: they objected to *wait on* in the sense of *await* or *wait for*—e.g.: “They *waited on* [read *waited for*] the jury’s verdict.” Even if this is not the best phrasing, however, *wait on* is now so common as a **CASUALISM** that it can’t be labeled incorrect.

LANGUAGE-CHANGE INDEX

wait on in the sense “to wait for”: Stage 5

awake(n). See **wake**.

away; aweigh. See **anchors aweigh**.

aweless; *awless. Since the mid-19th century, *aweless* has been the predominant spelling. But today **awless* competes closely with it, doubtless on the analogy of *awful*.

awesome, in the 1980s and 1990s, became a ubiquitous **VOGUE WORD** <That movie was totally awesome!>. For the time being, the word has been spoiled by overuse.

LANGUAGE-CHANGE INDEX

awesome for *excellent* or *stupendously good*: Stage 4

awful; awfully. The word *awful* has undergone several transformations. Originally, it referred to people and meant “filled with awe”; later it referred to things and meant “inspiring people with awe.” Its meaning then degenerated to “horrible, terrible” <what an awful accident>. And *awfully*, meanwhile, became an equivalent of *very*, but with greater intensity <Joe was awfully sorry about the mix-up>. Nobody objects to these uses in speech, and few would in writing. But some begin to object when *awfully* intensifies adjectives with positive connotations <they’re awfully good people> <Tiger played awfully well>. Although these uses have been called humorously illogical, they’re actually quite close to the original sense.

Occasionally, of course, *awfully* can be ambiguous—e.g.: “He is *awfully* educated.” But in sentences in which that ambiguity doesn’t appear, the intensive *awfully* must be accepted as standard.

To use *awful* adverbially typifies dialectal usage—e.g.: “He’s an *awful* [read *awfully*] good fellow.”

LANGUAGE-CHANGE INDEX

1. *awful* in the sense “very bad” <what an awful performance>, “shocking” <the casualties were just awful>, or “very great” <we did an awful lot of work>: Stage 5
2. *awful* as an adverb <she’s awful nice>: Stage 1
Current ratio (*awfully good* vs. **awful good*): 5:1
3. *awfully* for *very* with positive adjectives <an awfully pleasant evening>: Stage 4

awhile; a while. As a noun element, spell it as two words <he rested for a while> <it took quite a while to learn this>. As an adverb, spell it as one <he rested awhile>. Misuses are common—e.g.:

- “We lay back and rested *a while* [read *awhile*] in the warm breeze.” Henry Miller, *Sexus* 58 (1949; repr. 1965).
- “She looked up at the sky *for awhile* [read *awhile* or *for a while*], remembering her father’s astronomy lessons.” Deborah Ellis, *Parvana’s Journey* 54 (2004).

When the choice is between *for a while* and *awhile*, prefer the latter. And don’t write **for awhile*.

LANGUAGE-CHANGE INDEX

1. *a while* used adverbially for *awhile*: Stage 4
Current ratio (*rested awhile* vs. **rested a while*): 1.4:1
2. *awhile* misused for *a while*: Stage 1
Current ratio (*for a while* vs. **for awhile*): 11:1

awing. The present participle of *awe*, vb., is so spelled—not **aweing*. See MUTE E.

***awless.** See **aweless**.

awoke(n). See **wake**.

awry (= [1] amiss, [2] askew) is pronounced /ə-ri/.

ax; axe. According to the *OED*, the spelling *ax* is “better on every ground of etymology, phonology, and analogy.” But *axe* is standard in AmE and BrE. Despite what American desktop dictionaries have long said, the form ending in *-e* has predominated in print sources.

Compound words follow the same course—hence *pickaxe* and *poleaxe*.

Current ratio (*axe* vs. *ax*): 2:1

axel; axle. The first is a figure-skating maneuver; the second is a rod or pin connecting two wheels. But *axle* sometimes wrongly displaces *axel*—e.g.:

- “An Olympic silver medal, a million-dollar professional skating gig and Saturday’s marriage to her agent, Jerry Solomon, have put her a few leaps, bounds and triple *axles* [read *axels*] ahead of former rival Tonya Harding.” “For Kerrigan, It’s Happily Ever After,” *Sacramento Bee*, 10 Sept. 1995, at A2.
- “Gale Tanger has just completed the triple *axle* [read *axel*], triple toe jump of figure skating judging.” Gary Rummier, “Figure Skating Judge Worked Years to Reach Her Goal,” *Milwaukee J. Sentinel*, 26 Sept. 1996, Neighbors §, at 5.
- “She was grudgingly admired as a superb sportswoman and the first skater in America, and the second woman ever, to achieve a *triple axle* [read *triple-axel*] jump.” Barbara McMahon, “The Ice Princess and Me,” *People* (U.K.), 19 Jan. 2014, at 26.

LANGUAGE-CHANGE INDEX

axle misused for *axel*: Stage 1

axes is the plural of both *axis* (pl. pron. /ak-seez/) and *ax* (pl. pron. /ak-səz/).

aye (= yes) is the standard spelling of this word, most commonly used in the parliamentary procedure of voting. The word is pronounced /i/. **Ay* is a variant form.

Current ratio (*ayes have* vs. **ays have*): 16:1

B

babysit > babysat > babysat. So inflected. The erroneous **babysitted* sometimes appears—e.g.:

- “Let us leave alone the fact that the pro-tem, non-elected prime minister of the land is being run and *babysitted* [read *babysat*] by a collection of coiffed lobbyists.” Allan Fotheringham, “Salinger: From Flack to Hack and Back Again,” *Fin. Post*, 9 Sept. 1993, at 13.
- “Dykeman frequently *babysitted* [read *babysat*] the child.” “Teen Pleads Guilty to Kidnapping,” *Peoria J. Star*, 25 Apr. 2001, at A1 (photo caption).

Cf. **sit**.

LANGUAGE-CHANGE INDEX

**babysitted* for *babysat*: Stage 1
Current ratio (*babysat* vs. **babysitted*): 179:1

baccalaureate /bak-ə-lor-ee-ət/ = (1) a bachelor’s degree conferred by a college (such as a *bachelor of arts* or *bachelor of science*); (2) a commencement address (esp. a religious one) given at a college graduation; or (3) a religious service held in connection with commencement events. In sense 1, it is redundant to refer to a **baccalaureate degree*. In sense 2, the word is a shortened form of the phrase *baccalaureate address* or *baccalaureate sermon*. In sense 3, it’s a shortened form of *baccalaureate service*.

baccarat /bahk-ə-rah/ (the card game) is the standard spelling. **Baccara* is a variant.

Current ratio: 62:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

bacchant, n. & adj.; **bacchante**. Traditionally, the language has distinguished between men and women who worshipped Bacchus, the Greek god of wine and revelry. By extension, a drunken carouser who is male is known as a *bacchant* (/bæk-ənt/ or /bə-kant/), whereas one who is female is known as a *bacchante* (/bə-kant/ or /bə-kaht/ or /bə-kant-ee/). Curiously, the feminine *bacchante* has occurred about twice as often in print sources as *bacchant* from 1800 to the present day—in both singular and plural uses. See **SEXISM** (D).

The word *bacchant* is also an adjective and in that role may refer to both men and women <during those months, she led a bacchant life>.

bachelor's degree. So written.

bacillus (= a rod-shaped bacterium) forms the plural *bacilli*. The words are pronounced /bə-sil-əs/ and /bə-sil-ɪ/. See **PLURALS** (B).

***backadation**. See **backwardation**.

BACK-FORMATIONS are words formed by removing suffixes from longer words that are mistakenly assumed to be derivatives. Most commonly, a *-tion* noun is shortened to make a verb ending in *-te*—e.g., from *emotion* comes *emote*.

Such back-formations are objectionable when they are merely **NEEDLESS VARIANTS** of already existing verbs:

<i>Back-Formed Verb</i>	<i>Ordinary Verb</i>
*administrate	administer
*cohabitare	cohabit
*delimitate	delimit
*interpretate	interpret
*orientate	orient
registrate	register
remediate	remedy
*revocate	revoke
*revolute	revolt
*solicitate	solicit

Many back-formations never gain real legitimacy (e.g., **elocute*, **enthuse*), some are aborted early in their existence (e.g., **ebullit*, **evolute*), and still others are of questionable vigor (e.g., *aggress*, *attrit*, *effulge*, *evanesce*, *frivol*). *Burgle* (back-formed from *burglar*) continues to have a jocular effect (in AmE), as do *effuse*, *emote*, *laze*, and the learned word *metamorphose*. See **burglarize**.

Still, many examples have survived respectably, among them *collide*, *diagnose*, *donate*, *edit*, *elide*, *grovel*, *orate*, *peeve*, *resurrect*, and *sculpt*. **Enthuse* may one day be among these respectable words; although it first appeared in the early 19th century, it still struggles for approval. Many other back-formations have filled gaps in the language and won acceptance through sheer utility.

The best rule of thumb is to avoid newborn back-formations that appear newfangled, but not better-established ones that, being only faintly recognizable as back-formations, are genuinely useful. Only philologists today recognize (much less condemn) as

back-formations *beg* (from *beggar*), *jell* (from *jelly*), *peddle* (from *peddler*), and *type* (from *typewriter*).

For specific discussions elsewhere in the dictionary, see **liaise**, **register**, **remediate** & **surveil**.

back of; in back of. In the sense “behind,” these Americanisms strike a casual tone. Although *back of* was long considered a better form than *in back of*, the latter is now almost as common. (No one, after all, questions *in front of*.) Still, good editors tend to replace either phrase with *behind*—e.g.:

- “They are thinking of building an addition *in back of* [read *behind*] their offices and warehouse, which survived the fire.” Monica von Dobeneck, “Burned Mill Bouncing Back,” *Patriot & Evening News* (Harrisburg), 7 Oct. 1997, at B1.
- “Deer are starting to move now, and I have been seeing indications of that in the woods *in back of* [read *behind*] our house.” Randy Julius, “Kids Get First Shot,” *Enterprise* (Brockton, Mass.), 6 Sept. 2015, at 33.

Back of dates from late-18th-century AmE; it was adopted in BrE by the 1820s. *In back of* didn’t become common until the 1930s in AmE and a decade later in BrE.

LANGUAGE-CHANGE INDEX

1. *back of* for *behind*: Stage 5
2. *in back of* for *behind*: Stage 4

backwardation; *backadation. This term—meaning “a fee paid by the seller of securities to allow for delivery after the delivery date originally agreed to” (*Black’s Law Dictionary* 166 [10th ed. 2014])—is preferably spelled *backwardation*. H.W. Fowler included the term in his “ill-favored list” of hybrid derivatives (*FMEU* 1 at 241), but it has become standard. See **HYBRIDS**. It originated in BrE in the early 19th century.

backward(s). See **DIRECTIONAL WORDS** (A).

bacteria, the plural form of *bacterium*, takes a plural verb. From the mid-19th century, the term has predominantly been treated as a plural—e.g.:

- “Scientists reported today a sharp increase in antibiotic-resistant strains of the *bacteria* that *cause* pneumonia, meningitis and other diseases.” “Sharp Rise Found in Resistance of Pneumonia Bacteria to Drugs,” *N.Y. Times*, 25 Aug. 1995, at A18.
- “Some *bacteria* are pathogenic (disease causing) but many are beneficial, even essential to our health.” Richard T. Bosshardt, “If Yogurt Doesn’t Help, Probiotics May Be Solution,” *Orlando Sentinel*, 1 Sept. 2002, Lake §, at K12.

See **PLURALS** (B).

Yet since the late 19th century, some writers have ignored the plural form and erroneously treated *bacteria* as singular—e.g.:

- “A second youth remained in the hospital yesterday suffering with the *bacteria* that *causes* [read *cause*] meningitis.” Gail Hulbert, “High School Returning to Normal Following Meningitis Scare,” *Providence J.-Bull.*, 25 Sept. 1996, at C5.
- “And so the *bacteria* *spreads* [read *spread*].” Angela Allen, “Hidden Threat: Food-Borne Illness,” *San Diego Union-Trib.*, 5 Oct. 1997, at A1.
- “In all, 178 people were stricken with salmonella—a *common bacteria* [read *the common bacteria*] that *causes*

[read *cause*] food poisoning—and 22 were hospitalized with diarrhea, cramps, fever, nausea and other symptoms.” Jerry W. Jackson, “Bad Luck Takes a Seat at Darden’s Table,” *Orlando Sentinel*, 2 Sept. 2002, CFB §, at 16.

The singular usage shows no signs of gaining ground in frequency of use.

LANGUAGE-CHANGE INDEX
bacteria as a singular: Stage 2
 Current ratio (*a bacterium* was vs.
 **a bacteria* was): 7:1

bad. See **badly** (A).

bade. See **bid** (A).

bad(-)faith. *Bad faith* is the noun phrase <in bad faith>, *bad-faith* the adjectival phrase <bad-faith promises>. Cf. *bona fide* & *bona fides*. See PHRASAL ADJECTIVES.

badly. A. **And bad.** With a linking verb such as *is*, *feels*, *seems*, or *tastes*, the predicate adjective *bad* is required, not the adverbial complement *badly*—e.g.:

- “But the punishment hardly seems to fit the ‘crime’ as presented, and both teacher and students come off looking *badly* [read *bad*].” Eric Ries, “Rip-Snortin’ Romp,” *Techniques*, 1 Feb. 2000, at 76.
- “A good rule of thumb is: If a mushroom looks, smells, or tastes *badly* [read *bad*], do not eat it.” Art Judd, “Mushroom Madness,” *Santa Fe New Mexican*, 21 June 2001, at C1.

See **feel** (B).

LANGUAGE-CHANGE INDEX
badly after a linking verb <*feel badly> <*looked badly after the loss>: Stage 2
 Current ratio (*felt bad* vs. **felt badly*): 6:1

B. In the Sense “very greatly” or “very much.”

This use, as in *badly in need*, was formerly criticized. Having become established in the early 20th century, it is perfectly idiomatic in AmE—e.g.: “Democrats demanded concessions in a bill tightening immigration laws, another measure Republicans want *badly*.” Dave Skidmore, “Congress Fights Budget Demons,” *Chattanooga Times*, 28 Sept. 1996, at A4. But cf. **awful**.

Stick to *badly* (not *bad*) in this adverbial sense. One might expect a professional athlete to say, for example, “We need him *bad*, we need him real *bad*.” Joe Donnelly, “Ecstasy, Agony,” *Newsday* (N.Y.), 17 Dec. 1993, at 247 (quoting Herb Williams, a basketball player). But an announcement about a local symphony function should probably be more literate: “If you can meet these criteria, then the people who put on the Symphony Style Show need you *bad* [read *badly*].” Douglas Imbrogo, “In Search of a Fashionable Dog,” *Charleston Gaz.*, 8 Sept. 1994, at D1. See ADVERBS (D).

LANGUAGE-CHANGE INDEX
 1. *badly* for *very much* <badly in need>: Stage 5
 2. *bad* for *badly* <we need some paper bad>: Stage 2
 Current ratio (*need it badly* vs. **need it bad*): 2:1

badminton (the tennis-like game played with a shuttlecock) is pronounced /**bad**-min-tən/, with the medial *n*—preferably not /**bad**-mit-ən/.

Bagehot. The name of Walter Bagehot (1826–1877)—the economist and journalist—is frequently encountered in literary works. But few people know how to pronounce it: /**ba**j-ət/.

bagful. Pl. *bagfuls*—not **bagsful*. See PLURALS (G).
 Current ratio: 6:1

baggage; luggage. Signs in U.S. airports direct travelers to the *baggage claim* where they wait while *baggage handlers* unload the aircraft. In the U.K., travelers, especially in railroad stations, are accustomed to seeing signs for *left luggage* and *luggage vans* into which suitcases and packages are loaded. Although *baggage* predominated in AmE until the 1980s and is still favored, *luggage* has become almost equally common. In BrE, *luggage* is dominant.

In AmE and BrE alike, *baggage* has negative extended senses, some pejorative. For instance, one refers to metaphorically carrying *psychological baggage* or *political baggage*. In BrE slang, disliked women are referred to as *bags* or *baggage*. These may be factors for sometimes preferring *luggage*.

Bahamian (= a resident of the Bahamas) is pronounced /bə-**hay**-mee-ən/. See DENIZEN LABELS.

bail; bale. You *bail* water out of a boat but *bale* hay. In this particular sense, *bail* means “to dip out (water, etc.) with a bucket.” But some writers mistakenly use *bale* in this sense, a confusion that has existed since the mid-19th century—e.g.:

- “The yacht started spinning in circles as the crew furiously *baled* [read *bail*] water.” “Cup Yacht Ends in a Spin,” *Evening Standard*, 6 Jan. 1992, at 46.
- “The scenario was replayed up and down Village Road as homeowners, who were evacuated by boat Friday night, were back yesterday *baling* [read *bailing*] out water.” Christine Schiavo, “Flood Waters Hit Home 18th Time in 30 Years,” *Morning Call* (Allentown, Pa.), 23 Jan. 1996, at B1.
- “Some residents were forced to *bale* [read *bail*] water from their pools in a bucket brigade to drench flames as they neared homes.” “Fire Destroys at Least 43 Homes in Florida,” *L.A. Times*, 17 Apr. 1999, at A10.

To *bale* hay or cotton is to put it into a large bundle, usually compressed and wrapped. But a few writers (not many) mistakenly use *bail* in this sense—e.g.:

- “I helped our neighbor *bail* [read *bale*] hay or clean the barn.” Wayne I. Goodall, *The Fruit of the Spirit* 37 (2000).
- “But a few days later, when Jahns drove to Lee to record Romney *bailing* [read *baling*] hay on one of his campaign ‘work days,’ she was politely turned away.” Joanna Weiss, “Video Puts Campaigns on Record,” *Boston Globe*, 20 Aug. 2002, Metro/Region §, at A1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

In a related sense, of course, *bale* is also a noun: the product of *baling hay* is a *bale of hay*. But once again writers occasionally err—e.g.:

- “I can remember when we opened a *bail* [read *bale*] of hay that Dad would save.” Carl Allen, “We Had to Save Everything,” *Ledger* (Lakeland, Fla.), 13 Mar. 1995, at C6.
- “Sparks from a 14-acre controlled field burn near Star ignited two one-ton *bails* [read *bales*] of hay Thursday afternoon.” “Briefs,” *Idaho Statesman*, 2 Aug. 2002, Local §, at 1.
- “Matt threw the last *bail* [read *bale*] of hay inside the fence.” Steve Galley, *Nicky’s Time* 77 (2005).

Current ratio (*bale of hay* vs. **bail of hay*): 24:1

***baited breath**. See **bated breath**.

bakeable. See MUTE E.

bald-faced; barefaced; boldface(d). What is *bald-faced* is unobscured by facial hair <bald-faced pirate>, trees <bald-faced mountain>, or other features <bald-faced hornet>—or, oddly enough in a specialized bovine sense, has white hair covering the entire face <bald-faced heifer>. Figuratively, and more commonly as an Americanism dating from the early 20th century, it describes something that is obvious, brazen, and shameless. Most often the term appears in the catchphrase *bald-faced lie*, but it goes as easily with other shameful acts—e.g.: “[H]ere the configuration reeks of *bald-faced* contrivance.” Dan Craft, “Despite ‘Signs,’ It’s Not About Them,” *Pantagraph* (Bloomington, Ill.), 8 Aug. 2002, at D2.

The past-participial form (*bald-faced*) is grammatically correct and is preferred by those with finer-tuned ears over *bald-face*, which is also correct. The second form is far from rare—e.g.: “The chief U.S. negotiator, Dennis Ross, calls that a *bald-face* lie.” Editorial, “Media Shows Its Bias for Palestinian Cause,” *News & Record* (Greensboro), 30 May 2002, at A8.

What is *barefaced* is unobscured either by facial hair <a barefaced friar among all the bearded ones> or by a mask <though most of the robbers were masked, at least one was barefaced>. From the 18th century on, especially in BrE, the word has meant “unscrupulous” <barefaced warmongering>. Unlike the other terms in this entry, it makes an *-ly* adverb: *barefacedly* (/bair-fay-səd-lee/).

Occasionally a writer will mistakenly substitute *boldfaced* for one of the other words, thereby savaging the essence of the phrase—e.g.: “Getting my father to move to the nursing home was quite a feat, and I needed the help of my wife, my father’s best friend, and a *boldfaced* [read *bald-faced*] lie.” Kenneth A. McClane, “Driving; Family; Alzheimer’s Disease Patients,” *Antioch Rev.*, 22 Sept. 2006, at 604.

What is *boldface* is lettered in a thick typeface <boldface headline>—e.g.: “[H]ospital officials backed

out after the proposal trumpeted in *boldface* type that no money would change hands.” Andy Staples, “Pasco Picks Safety over Bureaucracy,” *Tampa Trib.*, 21 Aug. 2002, Pasco §, at 5. Figuratively, what is *boldface* is emphasized or especially important—e.g.: “Over the years, those friends have included virtually every *boldface* name to set foot on the East End.” Blair Golson, “Goose Creek Guest House Sells for \$5.2 Million,” *N.Y. Observer*, 19 Aug. 2002, Fin. §, at 11.

Boldface is the preferred and most common spelling, but also common are *bold-faced*, *bold-face*, and *boldfaced*—e.g.: “To add flava to his new hip-hop comedy, ‘Death of a Dynasty,’ director Damon Dash is giving cameos to a galaxy of *bold-faced* New Yorkers.” “The Wide World of Harvey W,” *N.Y. Post*, 31 July 2002, at 10.

The general sense of both *bald-faced* and *barefaced* is that something is shameless; the gist of *boldface* is that something is emphasized. But the distinction is not always observed. In general use, and especially in the catchphrase about shameless lying, the three are often used interchangeably. *Barefaced lie*, the most traditional term, predominates in BrE; *bald-faced lie* has predominated in AmE since the 1980s; and *boldface(d) lie* is simply an outlier (perhaps a slander against printers).

Because of the “shameful” connotation of *bald-faced*, it is occasionally used to describe a shameful truth, leading to a twist on the expression *bald-faced lie*—e.g.: “It is a *bald-faced* truth that men are attached to their hair, physically and emotionally.” Dick Feagler, “Hair Today,” *Plain Dealer* (Cleveland), 4 Aug. 2002, at B1.

LANGUAGE-CHANGE INDEX

- **boldface lie* or **boldfaced lie* for *bald-faced lie*: Stage 1
Current ratio (*bald-faced lie* vs. **boldfaced lie* vs. **boldface lie*): 21:2:1

balding (= becoming bald), having emerged as a NEOLOGISM in the early 20th century, was once objected to because there was thought to be no corresponding verb *to bald*. In fact, though, the verb dates from the early 17th century and still occasionally appears <he’s starting to bald>. There is no sound reason for objecting to *balding* (the word, that is, though many regret the reality it denotes).

LANGUAGE-CHANGE INDEX

balding: Stage 5

bale. See **bail**.

baleful; baneful. These words share the basic sense “evil,” but their connotations are different. *Baleful* = threatening evil; ominous; menacing <a baleful look>. *Baneful* = causing evil; ruinous; destructive <the baneful excesses of modern society>. To help distinguish the words, consider that *bale* denotes evil, while *bane* denotes something highly repellent (formerly something that causes death).

balk, vb. (= [1] to obstruct or block; [2] to refuse to act; or [3] [of a baseball pitcher] to make an illegal motion before or during a pitch), is the standard

spelling in AmE and BrE alike. **Baulk* is a chiefly BrE variant. The word is traditionally pronounced /bawk/.

Current ratio (*balking* vs. **baulking*): 7:1

***ball out.** See **bawl out.**

balm (= [1] something that comforts, or [2] ointment for the skin) has a silent *-l-* (/bahm/).

balmy. See **barmy.**

baloney; bologna. For the word meaning “nonsense,” *baloney* is the spelling (dating from the early 20th century)—e.g.: “Much of what the world thinks it knows about this dish (or dishes, for they are myriad) is a bunch of *baloney* (from Bologna, the north-central Italian town that is alleged to have invented this rather inferior meat).” Dora Jane Hamblin, “For the Gourmet and Gourmand, Bounty from Italy,” *Smithsonian*, May 1991, at 84.

For the sausage, *bologna* (pronounced like *baloney*) is the spelling—e.g.: “After \$12,000 in plumbing repairs through Aug. 30, jail officials said they stopped giving out the 6 p.m. *bologna*, lunchmeat or peanut butter sandwiches wrapped in plastic.” Bartholomew Sullivan, “Beef or Baloney? Forty Fastidious Arkansas Inmates Turn Up Noses at Jail Sandwiches,” *Commercial Appeal* (Memphis), 26 Sept. 1996, at A1.

But this clear, widely followed DIFFERENTIATION is sometimes muddled. Most often this occurs when the spelling *bologna* is used in reference to nonsense—e.g.:

- “The idea that just a little pollution won’t hurt anything is a bunch of *bologna* [read *baloney*],” said Jack Stephens, a soft-spoken veteran of World War II and the Korean War.” Bob Hill, “Pipes and Map of Pipeline Diffuser/Location,” *Courier-J. Mag.* (Louisville), 13 May 1990, at M4.
- “There was no political motivation; that’s a bunch of *bologna* [read *baloney*].” Marv Cermak, “Duci Angry TV Show Failed to Include Fyvie,” *Times Union* (Albany), 17 Aug. 1995, at B7 (quoting Richard Howland).
- “Regina Busse, 84, also recalls the broadcast and equated it to lunch meat. ‘It was a bunch of *bologna* [read *baloney*],’ she says.” Brandon Morley, “Remembering the First ‘Invasion,’” *J.-Gaz.* (Ft. Wayne, Ind.), 26 June 2005, at E1 (referring to Orson Welles’s 1938 “War of the Worlds” broadcast). (The writer here has conflated the two words, mistaking *baloney* for a metaphor.)

Sometimes, too, the spelling *baloney* is pressed into service where *bologna* belongs—e.g.:

- “I remember . . . [t]he special deliciousness of a lunch made by a mother who cared enough about me to cut the crusts off a *baloney* [read *bologna*] sandwich or pack a freshly baked chocolate cookie.” Susan Cheever, “Mothering,” *Newsday* (N.Y.), 11 Nov. 1995, pt. II, at B2.
- “She would make fried chicken or *baloney* [read *bologna*] sandwiches.” Steve Morse, “The Spirit and Song of LaVern Baker,” *Boston Globe*, 30 Oct. 1996, at F3.
- “Don’t say ‘Hey, let’s have a picnic,’ then bury your nose in the Sunday sports section while Mom makes *baloney* [read *bologna*] sandwiches.” Ralph Berrier Jr., “Giving

Gifts That Make Mom’s Day,” *Roanoke Times*, 4 May 2015, at E1.

In what appears to be an amalgam of the two words, *baloney* is sometimes misspelled **boloney*—e.g.: “I got some bad publicity during the trial with Jackie [Onassis] in 1972. . . . All this is *boloney* [read *baloney*]. I don’t jump out of bushes. I hide behind bushes to get pictures.” Patricia Sheridan, “Ron Galella,” *Pitt. Post-Gaz.*, 24 June 2002, at D2. This error was at its peak in the mid-20th century but has since tapered off.

LANGUAGE-CHANGE INDEX

1. *bologna* misused for *baloney* in reference to nonsense: Stage 1
Current ratio (*bunch of baloney* vs. **bunch of bologna*): 14:1
2. *baloney* misused for *bologna* in reference to meat: Stage 3
Current ratio (*bologna sandwich* vs. **baloney sandwich*): 3:1
3. **boloney* for *baloney*: Stage 1
Current ratio (*baloney* vs. **boloney*): 40:1

baluster; balustrade; banister. A *baluster* /**bal**-ə-stər/ is a round, vertical support, as for a wineglass, a chair, or the rail on a stairway—e.g.: “The two-story house, which has a massive open porch with vase-shaped *balusters*, was renovated over seven years by Ms. Sarver and her ex-husband, Bob.” Gretchen McKay, “Coming Up Roses,” *Pitt. Post-Gaz.*, 1 Oct. 2006, Business §, at G1.

A *balustrade* /**bal**-ə-strayd/ is a set of balusters along with the rail they are supporting, as for a stairway or a barrier—e.g.: “Mr. Diamond’s future penthouse has a 1,350-square-foot wrap terrace, though pesky *balustrades* interrupt the panorama from indoors.” Max Abelson, “Park Slope Celebrity Tour!” *N.Y. Observer*, 2 Oct. 2006, Finance §, at 11.

Banister /**ban**-i-stər/ is the more common term for *balustrade*, but it typically denotes the handrail alone—e.g.: “Izzy Stone devoured newspapers. . . . His wife Esther recalled how Stone would slide down the *banister* of their Washington home to get the newspapers.” John C. Ensslin, “The Stone Age,” *Rocky Mountain News* (Denver), 29 Sept. 2006, Spotlight §, at D28.

Bamar. See **Burmese.**

bambino (Ital. “child, baby”) forms the plural *bambinos*. The Italian plural, *bambini*, is ordinarily an affectation—e.g.: “Cynthia Hart’s Victoriana Calendar (Workman, \$9.95) gives you all kinds of commercial illustrations of fetching *bambini* [read *bambinos*] with more ringlets than are actually found in nature, and pinker cheeks and frillier dresses, too.” Jeff Simon, “Counting the Days,” *Buffalo News*, 13 Dec. 1995, at D1. See PLURALS (B).

But *bambini* seems less affected when it appears in a description of Italy, where *bambinos* might seem out

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

of place—e.g.: “Sounds of a street fair drew us toward the Piazza Santa Maria, where tented booths offered free tastes of organic honey and vegetables, and two mimes entertained the local *bambini* at the base of the fountain.” Letter of Marcia Wood, “When in Rome,” *N.Y. Times*, 17 Dec. 1995, § 5, at 15.

“The Bambino” was also a nickname for Babe Ruth.

banal (= pedestrian and uninteresting for lack of new ideas) is pronounced /bə-**nahl**/, /bə-**nal**/, or /**bay**-nəl/. It’s “a word of many pronunciations, each of which has its outspoken and often intractable proponents.” *BBM* at 55.

bandanna (= a large, colorful handkerchief) is an 18th-century borrowing from Hindi. In AmE, the spelling *bandanna* has always been standard. In BrE, that spelling contended with *bandana* from the 18th century to the 20th. Only in the 1990s did *bandanna* establish itself as the predominant form in BrE.

bandeau (= [1] a hairband, or [2] a tube-top wrap that functions like a brassiere) has predominantly formed the plural *bandeaux* since the 1840s—before that *bandeaus* having been prevalent. Today the homegrown *bandeaux* is an infrequent variant in English-language print sources.

Current ratio (*bandeaux* vs. *bandeaux*): 7:1

bandit has two plural forms, *bandits* and *banditti*. The native-English form (*bandits*) is standard. (See PLURALS (B).) The Italian plural is usually tongue-in-cheek: “It can be a tough call if your dad takes a European vacation and gets kidnapped. Refuse to ransom the old geezer and he is entitled, under Louisiana’s forced-heirship law, to disinherit you. You can always take a chance, though, figuring that he might have a tough time contacting his lawyer before the *banditti* slice him up.” James Gill, “The Forced-Heirship Question,” *Times-Picayune* (New Orleans), 9 Aug. 1995, at B7.

Current ratio (*bandits* vs. *banditti*): 8:1

baneful. See **baleful**.

banister (= the handrail on a staircase) is the standard spelling. **Bannister* is a variant. For more, see **baluster**.

bank holiday. See **legal holiday**.

bankrupt. **A. And **bankrout***. The spelling **bankrout* is obsolete. In the English Renaissance, scholars respelled French borrowings such as **bankrout* on the Latin model—hence *bankrupt*. Many of these respellings did not survive (e.g., **accmpt* for *account*); *bankrupt* is one of the few that did. Cf. **comptroller**.

B. As a Noun. Although in popular speech and writing it is common to refer to a person as a *bankrupt*—a common usage since at least the early 16th century—modern bankruptcy statutes use the term *debtor* instead. In general usage, though, almost all of us are *debtors*; only the insolvent among us are *bankrupts*.

bankruptcy [fr. *L. bancus* “table” + *ruptus* “broken”] is sometimes misspelled **bankruptsy*—e.g.: “John Canney, *bankruptsy* [read *bankruptcy*] trustee for Ascunty, [called] Plausteiners’ \$1.1 million purchase ‘the bargain of the year, maybe of the decade.’” Tony Chamberlain, “Plausteiners Bid to Revive Ascunty,” *Boston Globe*, 16 Dec. 1993, Sports §, at 99.

LANGUAGE-CHANGE INDEX

bankruptcy misspelled **bankruptsy*: Stage 1

Current ratio: 44,571:1

***bannister**. See **banister**.

banns (= the public announcement of a wedding, usu. posted in a church) is the standard spelling. *Bans* is a variant.

banquet; banquette. *Banquet* (/bang-kwit/) = an elaborate feast or ceremonial meal. E.g.: “The winners will be announced at a June 24 black-tie *banquet* at the Omni Richmond Hotel.” Maria Osborn Howard, “Finalists Chosen for Entrepreneur Awards,” *Richmond Times-Dispatch*, 1 June 1997, at 16.

Banquette (/bang-ket/) = a bench or sofa placed against or attached to a wall. E.g.: “Newspapers spilled across a red leather *banquette*.” Bob Spits, “The Long and Winding Road,” *St. Louis Post-Dispatch*, 25 May 1997, at C3.

bans. See **banns**.

banshee (= in Gaelic folklore, a female spirit who, by wailing, warns a family that some family member will soon die) is the standard spelling. **Banshie* is a variant.

Current ratio: 873:1

Baptist is preferably pronounced /bap-tist/—not /bab-tist/, a pronunciation common especially in the Southern United States.

bar; debar; disbar. The first two have closely related meanings. *Bar* means “to prevent (often by legal obstacle)”—e.g.:

- “The agreement *barred* Hennessy from testifying against Soulsby during his confirmation hearing in October and guaranteed Hennessy better work assignments.” Robert E. Pierre, “Another Critic of Chief Soulsby Disciplined,” *Wash. Post*, 24 July 1996, at F3.
- “But this year, in response to Principal James D. McConnell’s concerns that students were roaming the building unsupervised, students were *barred* from entering the building before 7:15 a.m., five minutes after staff members arrive.” Jean Mickle, “District, Students Settle School Opening Dispute,” *Asbury Park Press* (Neptune, N.J.), 19 Oct. 1996, at A3.
- “Lohmar is *barred* by judicial rules from talking about the Conard-King matter, which started Nov. 29.” Nordeka English, “Controversial Cases Stir Lohmar-Cundiff Contest for Judge,” *St. Louis Post-Dispatch*, 30 Oct. 1996, at 1.

In a corresponding sense, *bar* serves as a noun as well <a bar to all claims>.

Debar, a somewhat archaic FORMAL WORD, means “to preclude from having or doing (a thing), or

entering (a realm of activity).” It is more common in BrE than in AmE—e.g.:

- “His enemies . . . had accused him of being a greengrocer by trade, something to be ashamed of, they had implied, which *debarred* him from public life.” Richard Lambert, “The Goldsmith File,” *Fin. Times*, 19 Oct. 1996, at 7.
- “A criminal conviction of the firm could bring licensing problems in some states and might result in efforts to *debar* Anderson from government work.” David S. Hilzenrath & Susan Schmidt, “Anderson Seeking Quick Settlement,” *Wash. Post*, 28 Feb. 2002, at A1.

The corresponding noun is *debarment*, a rather infrequent word.

Disbar means “to expel from the legal profession”—e.g.:

- “Despite a Bel Air lawyer’s glowing references from several distinguished former and current judges, the Court of Appeals ruled Friday to *disbar* him from the practice of law.” Mary E. Medland, “Testimonials, Blaming the Accountant Fail to Save Tax Evader’s Law License,” *Daily Record* (Baltimore), 20 May 1996, at 21. (Note the venial REDUNDANCY in *disbar from the practice of law*.)
- “The bar can reprimand or *disbar* an attorney.” Alan Abrahamson & Chuck Philips, “State May Take Control of Rap Mogul’s Case,” *L.A. Times*, 26 Oct. 1996, at A1.
- “The state associations should enforce their codes of ethics—and *disbar* lawyers who do not comply with the law.” Letter of Theodore J. Sheskin, “Of Corporate Lawyers and Accountability,” *N.Y. Times*, 18 Aug. 2002, § 3, at 10.

The corresponding noun is *disbarment*—a word not in common use until about 1900.

barbaric; barbarous. These words share the basic sense “primitive, uncivilized.” *Barbaric*, which is four times as common as *barbarous* in modern print sources, typically describes a lack of culture that ranges from trivialities to anything less than heinous destruction of human life—e.g.:

- “The *barbaric* American tradition of splitting the check is still unknown here.” Scott Baldauf, “Dim Sum: A Celebration in Itself,” *Christian Science Monitor*, 15 Feb. 1996, Food §, at 14.
- “The stories must have sounded *barbaric* to the teenager sitting wide-eyed among adults at the breakfast table. Thirty-three swats with a wooden paddle for violating the dress code by wearing cuffed pants (a possible hiding place for cigarettes) in junior high school.” Sandy Banks, “Ban of the Paddle Left a Void in Discipline,” *L.A. Times*, 3 Sept. 2002, So. Cal. Living §, pt. 5, at 1.
- “That changed, Adewale remembers, once they heard he could earn a college scholarship. America’s *barbaric* sport then became something to stomach right up to the time he tore up his left knee during his senior season at Indiana.” Dave Hyde, “Ogunleye a Royal Find for Dolphins,” *Orlando Sentinel*, 4 Sept. 2002, at D8.

Occasionally, though, *barbaric* actions are shocking—e.g.:

- “California Department of Corrections chief James Gomez has much to answer for in response to shocking

reports that Corcoran State Prison guards have staged *barbaric* gladiator battles among inmates and have shot more than 50 convicts—seven fatally—when they failed to quit fighting when ordered.” “State Prison Barbarism,” *S.F. Chron.*, 30 Oct. 1996, at A20.

- “Justice by the government was swift and *barbaric* by Western norms. The four were beheaded.” Loganathan Naidoo, “Saudis, U.S. Patch Things Up,” *Green Bay Press-Gaz.*, 31 Aug. 2002, at A6.

The word *barbarous* is reserved for contexts involving savage cruelty—e.g.:

- “Calling the rape of an Okinawan schoolgirl a premeditated and *barbarous* act, prosecutors yesterday demanded 10-year prison terms with hard labor for three accused U.S. servicemen.” Willis Witter, “Okinawa Case Pressed in Court,” *Wash. Times*, 30 Jan. 1996, at A15.
- “Dray’s graphic descriptions of *barbarous* lynchings provide the most compelling passages; his narratives are not for the squeamish.” Marilyn K. Howard, “Shameful Legacy of Hatred Exposed,” *Columbus Dispatch*, 28 July 2002, at E7.

barbarism; barbarity. Both denote a lack of civilization. *Barbarism* refers either to tastelessness or to incorrect language. *Barbarity* refers to savagery and brutality. Although misuses can run either way, *barbarity* for *barbarism* is the more frequent problem—e.g.: “It hangs on even in rather sophisticated styles, long after the writer has ceased to commit such *barbarities* [read *barbarisms*] as dangling modifiers, agreement errors, reference errors, and case-form errors.” Bertrand Evans, “Grammar and Writing,” in *A Linguistics Reader* 111, 122 (Graham Wilson ed., 1967). Both words have declined in frequency since the mid-19th century.

LANGUAGE-CHANGE INDEX

barbarity misused for *barbarism*: Stage 1

barbarous. See **barbaric**.

barbecue; *barbeque; *bar-b-cue; *bar-b-que; *BBQ. The first form is the predominant spelling. It is also the preferred one since it most clearly resembles its Spanish parent, *barbacoa*, meaning “a wooden framework for supporting meat over a fire.” The other forms—as well as variants such as **Bar-B-Q* and **B-B-Q*—are common in advertising but should be avoided in carefully edited prose.

LANGUAGE-CHANGE INDEX

Current ratio (*barbecue* vs. all six variants combined): 3:1

barbed wire (= strands of twisted wire with sharp projections that impede passage when the wire is used in a fence) is two words as a noun phrase <the fence is made of barbed wire> but should be hyphenated as a PHRASAL ADJECTIVE <barbed-wire fence>. The form **barbwire* (though economical) is a NEEDLESS VARIANT, and **bob wire* is either an attempt at being folksy or a silly blunder—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “A neighboring congressman has climbed over the *bob wire* [read *barbed-wire*] fence.” William Murchison, “Army Talks Horse Sense on Agriculture,” *Dallas Morning News*, 3 Mar. 1990, at A31.
- “And they patched our pants after we snagged them crawling under a *bob wire* [read *barbed-wire*] fence.” Guy Friddell, “Readers Share Depression Memories,” *Virginian-Pilot & Ledger Star* (Norfolk), 12 Mar. 2001, at B1.

LANGUAGE-CHANGE INDEX

bob wire* for *barbed wire*: Stage 1Current ratio (*barbed wire* vs. **bob wire*): 1,129:1*barbeque**. See **barbecue**.

barbiturate is pronounced either /bar-**bich**-ər-it/ or (less good) /bar-bi-t[y]oor-ət/. The pronunciation /bar-**bich**-ə-wət/, though increasingly common, is best avoided. Of course, if you’ve taken one before trying to say the word, your listeners will probably make allowances.

bar-b-que**. See **barbecue**.barbwire**. See **barbed wire**.

bare, v.t. (= to uncover), is sometimes confused with *bear* (= [1] to carry; or [2] to endure)—e.g.: “They’ve invited women to *bear* [read *bare*] their breasts on ‘Whip ’em out Wednesday.’” Larry Bonko, “Meet Charles DeFoore, Your Local Man in the Fight Against Vulgar TV,” *Virginian-Pilot* (Norfolk), 1 Sept. 2002, at E2.

The verb is inflected *bare* > *bared* > *bared*. For the opposite error, see **bear out**.

LANGUAGE-CHANGE INDEX

bear misused for the verb *bare*: Stage 1Current ratio (*bare your soul* vs.**bear your soul*): 14:1**barefaced**. See **bald-faced**.

baritone; ***barytone**. Since 1850 or so, the first has been standard in both AmE and BrE. Before that, BrE used the form **barytone*.

Current ratio: 29:1

bar mitzvah; **bat mitzvah**; **bas mitzvah**. These terms are sex-specific. *Bar mitzvah* = (1) the ceremony celebrating a Jewish boy’s reaching religious adulthood at the age of 13; or (2) a Jewish boy who has turned 13 and thus attained religious adulthood. *Bat mitzvah* (or its variant, *bas mitzvah*) has the same meanings for a Jewish girl, though her age can vary from 12 to 13.

While these terms were once compounded into single words, or joined by hyphens, today they are written as two-word phrases.

Current ratio (*bat mitzvah* vs. *bas mitzvah*): 42:1

barmy; **balmy**. In the sense “crazy, slightly mad,” *barmy* is the original term and the usual one in BrE, where the word most often appears <she’s gone barmy on us>. In AmE, *balmy* is more common—but neither term is often encountered with this sense in AmE.

Each word has additional, unrelated meanings. *Barmy* = foamy, frothy <barmy malt liquor>. *Balmy* = pleasant, mild <balmy weather>.

barrel, vb., makes *barreled* and *barreling* in AmE, *barrelled* and *barrelling* in BrE. See SPELLING (B).

barring. For *barring* as an acceptable dangling modifier, see DANGLERS (E).

bar sinister**. See **bend sinister**.barytone**. See **baritone**.

basal (= forming or belonging to a bottom or normative layer) is pronounced /bay-səl/—not /bay-zəl/.

basalt (the dark green-black rock) is pronounced /bə-sawlt/ or /bay-sawlt/.

base, misused for *bass*, is scandalously poor usage—e.g.:

- “‘Three Days’ was an exercise in carnality, propelled by the sinuous *base* [read *bass*] guitar of Flea.” Michael Saunders, “Jane’s Addiction: This Set Didn’t Satisfy,” *Boston Globe*, 8 Nov. 1997, at C3.
- “Made up of four sopranos, four altos, three tenors and three *bases* [read *basses*], the student singers have been sharing their voices with audiences in Algonquin.” “Neighbor,” *Daily Herald* (Chicago), 16 Nov. 2000, at 1.

LANGUAGE-CHANGE INDEX

base misused for *bass*: Stage 1Current ratio (*bass guitar* vs. **base guitar*): 74:1

based on. This phrase has two good and two bad uses. First, the phrase may carry a verbal force (*base* being a transitive verb)—e.g.:

- “She said she *based* her ruling on Xiong’s allegations.” Len Armstrong et al., “Cops and Confessions,” *Chicago Trib.*, 16 Dec. 2001, at 1.
- “Dr. Douglas Richman . . . *based* his findings on blood samples taken from 1,908 men and women.” “New Drug May Make Hay Fever Less Painful,” *St. Petersburg Times*, 19 Dec. 2001, at A5.
- “Senior Pakistani intelligence officials . . . said they *based* their estimates on immigration records.” Molly Moore & Peter Barker, “Inside Al Qaeda’s Secret World,” *Wash. Post*, 23 Dec. 2001, at A1.

Second, in a passive sense, it may carry an adjectival force (*based* being read as a past-participial adjective)—e.g.:

- “A quick calculation *based on* U.S. data indicates a requirement of \$13 billion a year for Afghanistan.” Letter of Randal Haithcock, *BusinessWeek*, 24 Dec. 2001, at 18. [*Based on* is an adjectival phrase modifying *calculation*.]
- “There is no handicapping formula *based on* urgency.” Paul Zimmerman, “Dr. Z’s Forecast,” *Sports Illustrated*, 24 Dec. 2001, at 80. [*Based on* modifies *formula*.]
- “Last year, advance publicity *based on* laboratory results said Craig’s detector would be able to find mines as the operator walked at a normal pace.” Charles W. Petit, “Risky Ground,” *U.S. News & World Rep.*, 24 Dec. 2001, at 54. [*Based on* modifies *publicity*.]

But traditionally speaking, *based on* should have neither adverbial nor prepositional force. Here it’s an adverb:

- “American officials said they attacked the convoy *based on* intelligence reports.” Larry Kaplow & Don Melvin, “A Tricky Time in Afghanistan,” *Atlanta J.-Const.*, 22 Dec. 2001, at A1. [*Based on* improperly modifies *attacked*. Try *because of* or *owing to* instead.]
- “He encourages his students to listen to the candidates and vote *based on* the issues, not *based on* their clan.” Lornet Turnbull, “Local Election Set for Somali Civic Leadership,” *Columbus Dispatch*, 22 Dec. 2001, at A1. [*Based on* improperly modifies *voted*. Try *according to* instead.]
- “Executives were compensated *based on* a market valuation formula.” Bethany McLean, “Why Enron Went Bust,” *Fortune*, 24 Dec. 2001, at 58. [*Based on* improperly modifies *compensated*. Try *according to* instead.]

And here it’s a preposition (a DANGLER, to be exact):

- “*Based on* those conversations, Riley said he doubts Graham will play.” “Graham’s Father Killed,” *Deseret News* (Salt Lake City), 22 Dec. 2001, at D4. [A suggested revision: *Riley said that because of those conversations, he doubts . . .*]
- “*Based on* a survey of manufacturers’ and retailers’ orders for shrink-wrapped gift paper rolls, Appert estimates that overall Christmas season retail sales will be relatively flat.” Jeffrey Hirsch, “It’s Wrapping Up to Be a Poor Season for Gift Paper Services,” *L.A. Times*, 22 Dec. 2001, at C1. [A suggested revision: *A survey . . . led Appert to estimate . . .*]

LANGUAGE-CHANGE INDEX

based on used adverbially in place of *because* or *because of*: Stage 4

basically. So spelled—not **basically*.

Current ratio: 6,002:1

basil (the strong-tasting herb used in cooking) is pronounced either /**baz**-il/ (the most traditional pronunciation) or /**bay**-zil/. The ordinary pronunciation of the proper name *Basil* is /**baz**-il/ in BrE but sometimes /**bay**-zil/ in AmE.

basilisk (= an imaginary snakelike animal in ancient stories, legendarily capable of killing people by looking at them) is pronounced either /**baz**-i-lisk/ or /**bas**-i-lisk/.

basis. **A. In Wordy Constructions.** The word *basis* often signals verbosity in adverbial constructions such as *on a daily basis* and *on a regular basis*, where a simple adverb would serve better—e.g.:

- “Each one is tremendously important to me *on a personal and professional basis* [read *both personally and professionally*].” Zig Ziglar, *Ziglar on Selling* 15 (1991).
- “Fain has refused to release the material because some of it, such as employee surveys, was collected *on a confidential basis* [read *confidentially*].” “Fired Town Manager to Request Hearing,” *Hartford Courant*, 7 Sept. 1996, at B3.
- “The IOC must decide whether beach volleyball and women’s softball, which were introduced *on a provisional basis* [read *provisionally*], should be retained for Sydney.” “Sports Flashes,” *Toronto Sun*, 12 Oct. 1996, at S18.

See FLOTSAM PHRASES. For *on a pro rata basis*, see **pro rata**.

B. Plural Form. The plural of *basis*, as well as of *base*, is *bases*. The pronunciations differ, however: for *basis*, the plural is pronounced /**bay**-seez/; for *base*, /**bays**-iz/.

basketful. Pl. *basketfuls*—not **basketsful*. See PLURALS (G).

Current ratio: 4:1

bas mitzvah. See **bar mitzvah**.

bas relief (= a style of art in which stone or wood is cut so that it has raised shapes) is pronounced with a silent *-s* (/bah ri-**leef**/).

bass. See **base**.

bassinet (= a hooded basket used as a baby’s cradle) is so spelled—not **bassinette*. The word probably derives from a modified form of the French word *barcelonnette*. But the mock-French form **bassinette* doesn’t exist in French and shouldn’t exist in English—e.g.: “You had the nursery all set up [with] matching quilts, crib bumpers, diaper bag and a *lacey* [read *lacy*] *bassinette* [read *bassinet*] or cradle just inches from the marital bed.” Margery Eagan, “There’s Double the Wisdom by the Time No. 3 Arrives,” *Boston Herald*, 15 Mar. 1994, at 8. See GALLICISMS.

bastille; *bastile. Apart from historical references to the *Bastille*—the Paris prison stormed in 1789 during the French Revolution—the term is occasionally used as a dressy equivalent of *prison* or *jail*. Although the Middle English spelling was **bastile*, today the settled spelling is *bastille*, after the French.

Current ratio: 2:1

bated breath is the phrase from Shakespeare’s *Merchant of Venice*: “Or shall I bend low and in a bondman’s key, with *bated breath* and whisp’ring humbleness, say this: . . .” (1.3.122–25). The idea is that breath is *abated*, or stopped. **Baited breath* is a bun-gle that was not an appreciable issue in the language until about 1950. Today it is more common than ever, though the correct spelling remains far more frequent in modern print sources—e.g.:

- “During its ‘Creature Feature’ blowout, the aquarium wants kids and adults alike to celebrate the holiday with *baited breath* [read *bated breath*].” Bob Herguth, “Six Galleries of Aquatic Horror!” *Chicago Sun-Times*, 27 Oct. 1995, WKP §, at 3.
- “Start by replacing the outfield walls with stalks of corn. Give the corn a little bit of water, sunshine and just enough love to let it grow. Then wait with *baited breath* [read *bated breath*] for the ghosts of the Brewers’ past to

**balled him out*): 36:1

bay. See **gulf**.

bayonet. Both noun and verb are preferably pronounced /bay-ə-net/. The verb is inflected *bayoneted* and *bayoneting*.

bazaar. See **bizarre**.

***BBQ**. See **barbecue**.

B.C.; A.D.; B.C.E.; C.E. The abbreviation B.C. (= before Christ) is usually so printed—in small capitals. By convention, B.C. follows the year <Julius Caesar died in 44 B.C.>. But A.D. (= *Anno Domini* “in the year of our Lord”) properly precedes the year <Hadrian’s wall was completed in A.D. 126>, unless the abbreviation is paired with a time frame expressed in words <the second century A.D.>.

Some scholars condemn B.C. and A.D. as undesirably sectarian. What about non-Christians? they ask. Why should non-Christians have to measure their calendar from the birth of Christ? A trend has therefore emerged to use B.C.E. (= before the common era) and C.E. (= common era)—the traditional Jewish designations—in place of the Christian labels. Unlike A.D., the abbreviation B.C.E. or C.E. never precedes the year. E.g.:

- “The Greeks were much interested in language just as they were interested in any number of things, and in the fifth and fourth centuries BCE they debated many linguistic issues.” Ronald Wardhaugh, *Proper English: Myths and Misunderstandings About Language* 107 (1999).
- “70 CE: The Gospel of Mark is written, scholars believe. It contains the ‘Little Apocalypse’ (Mark 13), which includes Christ’s words to his disciples, ‘This generation shall not pass till all these things be fulfilled.’” Elizabeth Trever Buchinger, “The End? Again!?” *Pensacola News J*, 1 Jan. 2000, at B1.
- “In the year 167 BCE (Before the Common Era), Judea was a province under the control of the Syrian-Greek Empire.” “Hanukkah, the Jewish Festival of Lights,” *Orlando Sentinel*, 9 Dec. 2001, at G2. (Note that the use of B.C.E. and C.E. is uncommon enough that this editor felt a need to explain it to the readers.)

Whether this trend will catch on outside academic writing is still uncertain. There has already been much

wrangling on the point, and there is sure to be more. Unless you feel strongly averse to them, the traditional tags are the better choice because they are clear to more readers.

By the way, many people mistakenly believe that A.D. means “after death.” By that erroneous measure, about 33 years of history (Jesus’ lifetime) would be lost.

be. See BE-VERBS.

bear > bore > borne. See **born.** See also **bare.**

bear out (= to support or confirm as evidence) is sometimes wrongly made **bare out*—e.g.:

- “These are just a few of the many numbers [that] *bare* [read *bear*] out the fact that Texas and Randall County are caught up in a wave of juvenile crimes.” Bradley Harrington, “Living in Confinement,” *Canyon News*, 31 Mar. 1996, at 1.
- “A luncheon date with his offensive line next week *bears* [read *bears*] that out.” Gary Voet, “Edmonds Scores High as SCC’s Quarterback,” *Sacramento Bee*, 22 Nov. 1996, at E1.

For the opposite error, see **bare.**

The past-participial form of *bear out* is *borne out*. For *borne* vs. *born*, see **born.**

LANGUAGE-CHANGE INDEX

**bare out* for *bear out*: Stage 1

Current ratio (*bear out* vs. **bare out*): 186:1

beat > beat > beaten. So inflected. The archaic past participle *beat* persists only in the CASUALISMS *I’m beat* (= I’m exhausted) and *can’t be beat* (= is superb), and (vestigially) in the word *deadbeat*.

In DIALECT, *beat* frequently gets used as a past participle, and it sometimes creeps into otherwise highbrow prose—e.g.: “He gives other reasons for questioning the idea that Kennedy could have *beat* [read *beaten*] Richard Nixon in 1968.” Garry Wills, “Waiting for Bobby,” *N.Y. Rev. of Books*, 10 Feb. 2000, at 18.

But if that usage (*could have beat*) is nonstandard, the form **beated* is distinctly substandard, whether as a past tense or as a past participle—e.g.:

- “That win was even more gritty, since Disponzio had *beated* [read *beaten*] Golnar twice during the regular season.” John Valenti & Joe Krupinski, “Vogts Doesn’t Miss a Beat,” *Newsday* (N.Y.), 9 Nov. 1995, at A86.
- “Daniels never left. Not after Rev. James Reeb, a Unitarian minister from Boston, was *beated* [read *beaten*] to death by four segregationists in Selma the next day.” Bob Hohler, “Seminary Student Honors ‘65 Sacrifice,” *Boston Globe*, 24 Aug. 1997, at A1.
- “Third-seeded Alberto Berasategui of Spain *beated* [read *beat*] unseeded countryman Joaquin Munoz 6–4, 6–4 in the first round.” Paul Newberry, “Pro Tennis—Courier Saves U.S. Hopes,” *Dayton Daily News*, 7 Apr. 1998, at C1.

See IRREGULAR VERBS.

Beatrice and Benedick. See **Benedick.**

beau forms the plurals *beaus* and *beaux*, the second of which is predominant in both AmE and BrE. See PLURALS (B). Perhaps because of its quaintness, the word has been very much on the wane since about 1950.

beaucoup (= many or much) is pronounced /boh-koo/ or /boh-koo/—preferably not /boo-koo/ (usually a facetious illiteracy).

beau geste (= [1] a generous or magnanimous gesture, or [2] a transparently empty gesture meant to seem generous or magnanimous) suffers from an unfortunate ambiguity. Is the term laudatory or damning? In any event, its plural is *beaux gestes* (pronounced, like the singular, /boh zhest/)—not **beaus gestes*.

beau ideal (= [1] ideal beauty, or [2] the perfect example of a thing) has, since the early 19th century, predominantly formed the English plural *beau ideals*—not *beaux ideals* (the French plural) or **beaux ideal*. Sense 2 is attributable to a misunderstanding of the French phrase. Although *beau* is the noun and *ideal* the adjective in French, many mistakenly think that *beau* is the adjective and *ideal* the noun. Sense 1 is the strictly correct translation.

Current ratio (*beau ideals* vs. *beaux ideals* vs. **beaux ideal*): 27:2:1

beauteous. Though H.W. Fowler labeled this word a “poeticism” equivalent to *beautiful*, the process of DIFFERENTIATION has created a distinction between the two words. Today, *beauteous* typically means not just “beautiful” but “beautiful and sexy,” when it refers to women (as it most commonly does)—e.g.:

- “It might be called ‘Leaving Long Island,’ except that no *beauteous* hooker gives Buscemi’s lonesome loser-boozer a seraphic farewell.” Malcolm Johnson, “One Sad Life Melts Away in ‘Trees Lounge,’” *Hartford Courant*, 1 Nov. 1996, at E5.
- “The campaign to draw in listeners approaches hysteria. One *beauteous* young violinist displays herself sawing away while wearing a wet T-shirt.” Bernard Holland, “The Decline and Fall of the Classical Empire?” *N.Y. Times*, 10 Nov. 1996, § 2, at 11.
- “Four *beauteous* Staten Islanders have reigned as Miss New York.” Carol Ann Benanti, “The Tiara Through the Years,” *Staten Island Advance*, 5 June 2015, Entertainment §, at 8.

One can understand why writers sometimes wish to avoid the commonplace *beautiful*. As one professional

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

editor put it, “*Beautiful* is an adjective so hackneyed that it has lost all force and really indicates little more than mild to moderate approval.” Lester S. King, *Why Not Say It Clearly* 54 (1978).

because. A. Senses. The conjunction *because* ordinarily begins a dependent clause that expresses reason, cause, or motive for whatever idea appears in the main clause. It has a well-known sense (“for the reason that” or “by reason of”) and, in expressions that amount to CASUALISMS, some senses that most dictionaries don’t record. The most common of the seldom-recorded meanings is “and the evidence is that” <it must be snowing in Chicago because the airport has been shut down for “weather-related reasons”>. This usage contains an ellipsis: “(I deduce) p because q.” E.g.:

- “It must be genetic *because* it takes a certain amount of determination to want to take on the rigours of coaching the Canadian junior hockey team for a second year in a row.” Donna Spencer, “Junior Coach Inspired by Daughter,” *Globe & Mail* (Toronto), 20 Dec. 2001, at S5.
- “Someone out there must be sitting pretty—*because* the toilet seat is gone.” Phillip Matier, “Drug-Sniffing Pooch Patrol Lands BART in the Doghouse,” *S.F. Chron.*, 23 Dec. 2001, at A25.
- “The people who go to Times Square must be out-of-towners, *because* I never met a New Yorker who wanted to be anywhere near there when the clock struck midnight.” Steve Lopez, “Doing Fine Without MSNBC or NFL,” *L.A. Times*, 28 Dec. 2001, at B1.

Sometimes *because* occurs in a question in the sense “given the fact that” or “in view of the fact that” <Why are you wearing an overcoat, because it’s 85 degrees out here!>. Here the ellipsis is “(I’m asking) p because q.”

B. Punctuation with. The word *because* usually shouldn’t follow a comma: when a dependent clause (the *because*-clause) follows the main independent clause of the sentence, no break is needed between the two. E.g.:

- “Apparently, I answered right *because* Barbara Hendra then did something that I have marveled at for nearly two decades.” William Parkhurst, “Champagne Corks and Mafia Killers,” in *My First Year in Book Publishing* 127, 130 (Lisa Healy ed., 1994).
- “Some writers objected to the loan words *because* of their obscurity.” Sidney Greenbaum, *The Oxford English Grammar* 406 (1996).
- “Eliot knew she wanted him sitting beside her *because* she was afraid.” Jhumpa Lahiri, *Interpreter of Maladies* 119 (1999).
- “Throughout, I’ve allowed more of me to appear, which is good only *because* it lets me point up how writers are entitled to their own tastes and proclivities.” John Trimble, *Writing with Style* viii (2d ed. 2000).

Yet a comma may be all but necessary when the sentence is long or complex—e.g.: “I begged him to try to find some way of getting me out of this frightful situation in which I was enmeshed—assuring him that I would not blame him if he failed to do so, *because* it seemed to me, after some days of reviewing the matter, that I was beyond human aid.” P.G. Wodehouse, *The Code of the Woosters* 56 (1938; repr. 1976). And

when an adverb such as *perhaps* or *possibly* precedes *because*, a comma usually precedes the adverb—e.g.: “I have not taught or examined in the Faculty in thirteen years, though I gather it is now at peace with itself, possibly *because* most of the professors are now women, possibly *because* the depredations of government have forced them into alliances against an external enemy, possibly *because* there is now not thought to be anything worth fighting for.” Frank Kermodé, *Not Entitled* 258 (1995).

C. Causing Ambiguity. Putting a purpose clause or phrase after a negative often causes ambiguities, attested by a priest’s unintentionally humorous statement: “I wear no clothes to distinguish myself from the congregation.” Sometimes the ambiguity is technical only—e.g.: “A proposition is not false *because* it is a truism darkly expressed.” W.W. Buckland, *Some Reflections on Jurisprudence* 109 (1945). Does this mean that the proposition is not false for that reason but for some other? Or does it mean that the proposition isn’t necessarily false at all? The latter, Buckland intended to say. Other examples:

- “Patricia Buthmann and Tim Tyroler on Tuesday lost their effort to block being evicted from the Casa Carranza apartments, 1803 N. Country Club Drive, Mesa, *because* they allowed a woman to stay with them who possessed two syringes suspected to be drug paraphernalia.” Kris Mayes, “Renters Run Afoul of Eviction Law,” *Phoenix Gaz.*, 29 Sept. 1994, at B1. (What trouble did the unwelcome person cause? Did the tenants get an eviction notice because of the syringe-bearing woman, or did they lose their attempt at blocking the eviction because of her?)
- “By most writers on Elgar the sketches have been underrated, held of small account. For two reasons. First, because they recycle some earlier material. . . . (But Bach’s Mass in B minor, Handel’s Messiah, Beethoven’s Fidelio, Verdi’s Requiem are *not* contemned *because* they use ideas from earlier compositions.)” Andrew Porter, “Classical: Elgar’s Unfinished Business,” *Observer*, 26 Mar. 1995, at 12. (To eliminate the ambiguity, change *because they use to for using*.)
- “Waters was *not* there *because* she had dismissed the CIA director’s visit as meaningless.” John L. Mitchell, “Undeterred, Waters Crusades for Answers Politics,” *L.A. Times*, 4 Mar. 1997, at A3. (If not for that reason, then why was she there? A possible revision: *Waters was not there: she had dismissed the CIA director’s visit as meaningless*.)

D. Wordy Substitutes for. *Because* is often needlessly replaced by a verbose phrase such as *for the reason that*, *due to the fact that*, or *on the grounds that*—e.g.:

- “The motion for setoff could also have been denied *for the reason that* [read *because*] Patterson had failed to raise the contribution claim in a timely fashion during the original proceeding.” Theodore Postel, “Arbitration Award: Setoff,” *Chicago Daily Law Bull.*, 3 June 1994, at 1.
- “In 1991, Bridgeport, Connecticut, sought Chapter 9 protection but a judge denied it *on the grounds that* [read *because*] the city was solvent.” Tony Jackson, “Orange County Hit by Wall St. Selling,” *Fin. Times*, 8 Dec. 1994, at 6. (*On the grounds that* suggests—wrongly, here—that the reason isn’t really a good one.)
- “That led one local analyst, who asked not to be named *due to the fact that* [read *because*] he had not yet seen the

filing, to speculate that the company was burning through cash and needed more to fuel its growth.” M. Sharon Baker, “RealNetworks Finally Jumps into IPO Whirl,” *Puget Sound Bus. J.*, 3 Oct. 1997, at 4.

E. Beginning a Sentence with. There’s an odd myth that it’s poor grammar to begin a sentence with *because*. It seems to have resulted from grade-school teachers who were trying to prevent fragments such as this: “We came in from recess after 15 minutes. Because everyone was tired.” (See INCOMPLETE SENTENCES.) One way to prevent third-graders from committing this error is to outlaw putting *because* at the head of a sentence. But as with so many other third-grade rules, it sweeps too broad. It would prevent a writer’s putting the cause before the effect: “Because everyone was tired, we came in from recess after 15 minutes.”

In any event, the “rule” has never had any basis in grammar, and good writers often have occasion to put the cause before the effect (completing the subordinate clause beginning with *because* in a main clause that follows a comma)—e.g.:

- “*Because* a psychologist working in this field is characteristically concerned with people who are in difficulties or suffering from mental ill-health, he meets them (typically) as patients in a psychiatric and therefore medical context.” B.A. Farrell, “Abnormal Psychology,” in *The New Fontana Dictionary of Modern Thought 2* (Alan Bullock & Stephen Trombley eds., 2d ed. 1988).
- “*Because* of difficulty traversing rough terrain, Eugene was late in arriving at the battlefield.” Paul K. Davis, *100 Decisive Battles from Ancient Times to the Present* 229 (1999).

See SUPERSTITIONS (F).

F. *Because*-Clause as Subject. Although using a *because*-clause as the subject of a sentence—as if *because* meant “the mere fact that”—is common in speech, it is not standard written English. A typical example: “*Because a golfer might not be an athlete* doesn’t mean he or she won’t be a top competitor.” Harvey Penick, *Harvey Penick’s Little Red Book* 114 (1992). [A possible revision: *A golfer’s not being an athlete doesn’t mean he or she won’t be a top competitor. Or: Even a golfer who isn’t an athlete may well be a top competitor.*] The problem with making a subordinate clause into the subject, as in the original, is that a MISCUE is created: the reader expects a different syntactic outcome in the sentence and is surprised, even with a short sentence such as the Penick original, to find that the *because*-clause governs a finite verb.

G. Fragment Beginning with. See INCOMPLETE SENTENCES (B).

H. Coupled with *reason*. See **reason is because*.

I. As a Causal Word Generally. See as (A).

J. And by *reason of*. See *by reason of*.

K. And *since*. See *since* & SUPERSTITIONS (G).

L. *Just because*. See *just because . . . doesn’t mean*.

beck and call is the idiom—e.g.: “We want men who would hang on every word we uttered, laugh at every joke, however lame. They would attempt to buy our love with little tokens, gifts, poetry. They would be at our *beck and call*” L. Wayne Moss & Donna and Eve Shavatt, “The Daydream and Nightmare of Reality TV,” *Pitt. Post-Gaz.*, 26 Jan. 2003, at W2. A *beck* is a summoning gesture. The word arose in Middle English and is related to both *beckon* and *beacon*.

Sometimes the phrase *beck and call* comes out as a MONDEGREEN: **beckon call*. E.g.:

- “Eleven years ago, McMahon was king of Super Bowl XX, with his own podium and an audience at his *beckon call* [read *beck and call*].” Danny Wells, “Backup Draws a Crowd,” *Charleston Gaz.*, 23 Jan. 1997, at C1.
- “Rather, the collars, which are actually called ‘electronic trainers,’ are intended to be used when training dogs to obey an owner’s *beckon call* [read *beck and call*].” Stephanie A. Stanley, “Electronic Dog Collars Create Clash Between Jogger, Parish,” *Times-Picayune* (New Orleans) (St. Tammany ed.), 12 Sept. 2000, at 1.
- “Don’t forget the personal trainer, personal swing doctor, and personal sports psychologist at his *beckon call* [read *beck and call*].” George Willis, “Drive Time for Ty,” *N.Y. Post*, 20 Jan. 2002, at 92.

**Beckon call* is an understandable guess at the phrase, since one would naturally call out to *beckon* someone. And *beckon* (= to summon) is a more familiar term than its shorter sibling *beck*. But *beck and call* is the historical and still the greatly predominant phrase.

LANGUAGE-CHANGE INDEX

**beckon call* for *beck and call*: Stage 1

Current ratio (*beck and call* vs. **beckon call*): 71:1

beckon, vb., may be either transitive <she beckoned the child> or intransitive <she beckoned to the child>. The more economical usage is the transitive one. As an intransitive verb, *beckon* sometimes takes *to*, sometimes *at*, and sometimes *for*; the most traditionally correct preposition is *to*. But you can forestall that problem by making the verb transitive—e.g.: “A coaching lieutenant named Mike Martz . . . *beckoned for* [read *beckoned*] Green to join him and Vermeil in St. Louis in 1999.” Jerry Magee, “There’s No Separating Chiefs QB from NFL Change,” *San Diego Union-Trib.*, 1 Oct. 2002, at D6.

beef. This word has two plurals: in reference to types of meat or to complaints, the plural is *beefs*; but in reference to fattened cattle, the preferred plural is *beeves*. See PLURALS (C). *Beeves* is more common by a 4-to-1 ratio.

beg. For the phrase *beg the question*, see **beg the question**.

beget. **A. Sense.** *Beget* = (1) to sire; to father (a child); or (2) to produce (a result). The metaphorical meaning (sense 2) is an understandable extension of the

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

biological meaning (sense 1). But whenever the context is biological, it's worth remembering that this word isn't gender-neutral—e.g.: “She laughed. ‘One does not object to the desires of one's king! Of course, if *I beget* [read *I give birth to*] a child, that will put an end to it.” Carolyn Meyer, *Doomed Queen Anne* 14 (2002) (quoting the character Queen Anne).

B. Inflection: *beget* > *begot* > *begotten*. Because **beget* is an archaic past-tense form, it should typically be replaced by *begot* (and sometimes *begotten*). It appears most commonly when a writer strives for a humorous echo of all the *begats* in the King James Version of Genesis. But the humor often fails, as in the following misbegotten examples:

- “Entire generations of Cubs and Sox fans have been born, raised, *beget* [read *begotten*] new generations of frustrated fans and died since our last winner.” Dennis Byrne, “‘Mistake by the Lake’ Moves West,” *Chicago Sun-Times*, 10 Oct. 1995, at 27. (The sentence has a nonparallel construction that could be advantageously recast: *Entire generations of Cubs and Sox fans have been born and raised, have begotten new generations of frustrated fans, and have died since our last winner.* See PARALLELISM.)
- “He and his wife had three children, who later *beget* [read *begot*] eight grandchildren and 10 great-grandchildren.” John Keilman, “A Man of Indomitable Spirit Is Cited,” *Capital* (Annapolis), 25 Sept. 1996, at A10.
- “The shootings of Ronald Reagan and Press Secretary James Brady eventually *beget* [read *begot* or (better) *led to*] the Brady Law, which requires a waiting period for handgun purchases.” Gordon Witkin, “A Very Different Gun Culture,” *U.S. News & World Rep.*, 28 Oct. 1996, at 44.

See ARCHAISMS & IRREGULAR VERBS.

Because the past tense **beget* is so common in allusion to the Old Testament, writers sometimes misuse it for the present tense—e.g.: “‘Jesse the Body [Ventura] *begats* [read *begets*] Jerry Springer.” B. Drummond Ayres Jr., “Political Briefing: A Run for the Senate or a Brawl for It,” *N.Y. Times*, 22 July 1999, at A14 (quoting the Democratic Party chairman of Hamilton County, Ohio). The speaker has a vague memory of the **beget* passage from Genesis, but no sense of how the verb is conjugated.

LANGUAGE-CHANGE INDEX

1. **beget* for *begot* or *begotten*: Stage 1
2. **beget* for present-tense *beget*: Stage 1

beggar description. To *beggar description* is to be indescribable or beyond description. The phrase originated in Shakespeare's reference to Cleopatra: “For her own person, / It beggar'd all description” (*Antony and Cleopatra*, 2.2.197–98). What the phrase says, in essence, is that something is so incredible as to make a beggar of anyone's powers of description—e.g.:

- “Recently, New Yorkers have been up in arms over something so grievous, so blasphemous, that it *beggars description*. I'll give it a shot, though. Mayor Bill de Blasio was caught eating pizza with a knife and fork.” Jim Sullivan, “‘Pizzagate’ in Big Apple,” *Boston Herald*, 15 Jan. 2014, at 17.

- “The camera takes us into the house, and what we see *beggars description*.” Joan Acocella, “Let It Go,” *New Yorker*, 15 Dec. 2014, at 69.

Writers can get it wrong in many ways. And so they do. In the following example, the correct idiom wouldn't work because it wouldn't match the sense. And although the writer's **begs description* approaches the literal sense, his echo of the related idiom seems like a MALAPROPISM: “Ask Jim Adkins what is his area of specialty and he simply says he ‘deals with the human figure.’ It's an answer that *begs description* [read *demands elaboration?*]. See his works and no elaboration is necessary.” Mike Boslet, “An Artist's Intentions Bared,” *Wash. Post*, 4 July 1996, at M8.

LANGUAGE-CHANGE INDEX

- *beg description* for *beggar description*: Stage 1
- Current ratio (*beggar description* vs. **beg description*): 32:1

begging the question. See **beg the question**.

begin. A. To begin. As an introductory phrase used to enumerate reasons, the idiomatic phrase is *to begin with*, not *to begin*. In the following sentence, the lack of the preposition *with* makes *to begin* sound narrowly chronological, as if Aaron actually began something and then, at some indeterminate point, stopped: “*To begin* [add *with*], Aaron played a substantial role in negotiating both agreements.”

B. And commence & start. *Begin* is the usual word. *Commence* is a FORMAL WORD; ceremonies and exercises are likely to *commence*, as are official proceedings. *Start* usually refers to an activity <to start running> <I started thinking>; *begin* is also acceptable in this sense. Both *begin* and *start* may be followed by an infinitive (*to* + verb), but *commence* may not. See **institute & commence**.

C. Past Tense and Past Participle. *Begin*, of course, makes *began* in the past tense and *begun* in the past participle. But writers occasionally misuse *began* as a past participle—e.g.:

- “Rivera was competing for a spot in the back end of the Orioles' rotation, but probably would *have began* [read *have begun*] the season at Rochester.” Roch Kubatko, “O's Rivera May Be Out for Season,” *Baltimore Sun*, 24 Feb. 2001, at C1.
- “The deal, which values Carlyle at nearly \$20 billion, strengthens the buyout firm's ties to the Middle East, which *has began* [read *has begun*] to use the profits from higher oil prices to go on a buying spree.” Andrew Ross Sorkin, “Carlyle to Sell Stake to a Mideast Government,” *N.Y. Times*, 21 Sept. 2007, at C1.
- “What *had began* [read *had begun*] as an overnight hike in rugged Denali National Park had turned into a five-day drama marked by rollercoaster reports and emotions.” Mary Lynn Smith, “2 Hikers Rescued After a Call from the Alaska Wilderness,” *Star Trib.* (Minneapolis), 19 June 2008, at A1.

These misuses are nothing new. Vallins noted them in 1951: “‘He has *began*’ is still common in careless speech, and sometimes crops up in even more careless

writing.” G.H. Vallins, *Good English: How to Write It* 30 (1951). See IRREGULAR VERBS.

began for past-participial *begun*: Stage 1

begrudge. See **resent (A) & grudging.**

beg the question. This phrase has not traditionally meant “to invite an obvious follow-up question,” as some mistakenly believe. The strict meaning of *beg the question* is “to base a conclusion on an assumption that is as much in need of proof or demonstration as the conclusion itself.” The formal name for this logical fallacy is *petitio principii*. Following are two classic examples and a third from a book review:

- “Reasonable people are those who think and reason intelligently.” (This statement begs the question, What does it mean to think and reason intelligently?)
- “Life begins at conception, which is defined as the beginning of life.” (This comment is patently circular.)
- “These premises and conclusions are no longer controversial among qualified students of language, including the best lexicographers.” Sumner Ives, “A Review of *Webster’s Third New International Dictionary*” (1961), in *A Language Reader for Writers* 44, 47 (James R. Gaskin & Jack Suberman eds., 1966). (This statement begs the question, Who is a “qualified student of language”?)

In the following sentence, the writer mangled the SET PHRASE *beg the question* and misapprehended its meaning (by using *begs* for *ignores* and *issue* for *question* or *problem*): “Blaming Congress and the Democrats for ‘criminalizing of policy differences with the executive branch’ *begs* a much larger *issue* here: Should members of the executive branch be allowed to withhold vital information from those members of Congress charged by law to monitor specific actions of the president?” Letter of John M. Burns, *Wall Street J.*, 16 May 1990, at A17.

All that having been said, the use of *beg the question* to mean *raise another question* is so ubiquitous that the new sense has been recognized by most dictionaries and sanctioned by descriptive observers of language. Still, though it is true that the new sense may be understood by most people, many will consider it slipshod.

LANGUAGE-CHANGE INDEX
 1. *beg the question* for *evade the issue*: Stage 3
 2. *beg the question* for *invite the follow-up question*: Stage 4

behalf. The phrases *in behalf of* and *on behalf of* have traditionally signified different things. *In behalf of* means “in the interest or for the benefit of” <he fought in behalf of a just man’s reputation>; *on behalf of* means “as the agent or representative of” <on behalf of the garden club, I would like to thank our luncheon speaker> <she appeared on behalf of her client>. In current usage, the distinction is seldom followed; *on behalf of* is much more common in both senses. But stalwart stylists continue to distinguish the two.

In the following passages, one phrase has been switched for the other:

- “‘There’s a certain irony in the movie role,’ the prosecutor said. ‘In 1980, our man kills an Iranian dissident *in behalf of* [read *on behalf of*] an oppressive government. Now he’s in a movie critical of oppression.’” Francis X. Clines, “An Actor’s Film Wins Raves, His Identity Attracts Scrutiny,” *N.Y. Times*, 3 Jan. 2002, at A14 (quoting State’s Attorney Douglas F. Gansler).
- “Both agents testified *on Barboza’s behalf* [read *in Barboza’s behalf*] at the 1971 Clayton Wilson murder trial.” Jim Lawrence, “Hub Fed Judge Must Testify on Mob Hit,” *Boston Herald*, 5 Jan. 2002, News §, at 2. (They didn’t testify as Barboza’s representatives, but they gave testimony helpful to his case.)

Upon behalf of is now considered much inferior to *on behalf of*. See **upon**.

behemoth (= a huge, powerful animal) is pronounced /bə-**hee**-məθ/. The word is sometimes misspelled (and presumably mispronounced) **behometh*—e.g.: “The other quarterfinals feature Lleyton Hewitt against Tommy Haas during the day today and Sweden’s Joachim Johansson against Andy Roddick in a battle of big-serving, ace-loving *behomeths* [read *behemoths*] at night, weather permitting.” Marc Berman, “Rain Men—Federer Leads Agassi by Set,” *N.Y. Post*, 9 Sept. 2004, at 84.

LANGUAGE-CHANGE INDEX
behemoth misspelled **behometh*: Stage 1

behest (bi-**hest**), a stronger word than *request*, means (1) “a command,” or (2) “a strong urging.” *Bequest* (= a gift by will) is sometimes misused for *behest*, perhaps because of its phonic similarity to *request*—e.g.:

- “Growing up in Harlem, he was inspired by his creative uncles and his ‘religious’ mother, at whose *bequest* [read *behest*], he says with a sheepish smile, he joined a Trappist monastery in Massachusetts.” Dennis Grogan, “Elbow Room for Creativity,” *Atlanta J.-Const.*, 20 June 1996, at K1.
- “The Guardian Angel Personal Alcohol Test strips are being handed out at the *bequest* [read *behest* or, more likely, *request*] of the Colorado State Patrol at two of Lower Downtown’s bustling bars this weekend.” Allison Sherry, “Test a New Party Guest,” *Denver Post*, 1 Sept. 2002, at B3.
- “One sends Jimmy [Hopkins] on a panty raid at the *bequest* [read *behest*] of his gym teacher, and another involves stealing the school mascot uniform.” “High School Was Never This Entertaining,” *Wash. Post*, 8 Dec. 2006, at T41.

This error is a MALAPROPISM. See **bequest**, n.

behold > **beheld** > **beheld**. The word *beholden* is an archaic past participle, now used only as an adjective meaning “indebted” and attached to a *to*-phrase—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Ryan implies that Eckels will be *beholden* to the contractors underwriting a large part of his campaign.” Alan Bernstein, “County Judge Race Pits Opposing Styles,” *Houston Chron.*, 9 Oct. 1994, at A1.
- “The elder Mr. [Duncan D.] Hunter said each of the earmarked projects stands up to scrutiny and rejected the notion that accepting campaign funds from defense contractors made him *beholden* to them.” Matthew Cella, “Hunter’s Earmarks Benefit His Son,” *Wash. Times*, 13 Oct. 2008, at A1.

See IRREGULAR VERBS.

behoove (= to be necessary or proper) is so spelled in AmE <it behooves you to bite your tongue in such circumstances>. In BrE, the spelling is *behave*. The word has an archaic flavor, and its noun form, *behoof*, is all but obsolete.

Historically, the verb in BrE was pronounced, as reflected in the AmE spelling, to rhyme with *move* and *prove*. In BrE today “it is generally made to rime with *rove*, *grove*, by those who know it only in books” (*OED*). In AmE it is pronounced /bi-**hoov**/.

Beijing; Peking. The traditional form, *Peking*, resulted from a system of transliteration called Wade–Giles Romanization, introduced by two 19th-century English scholars. (*Peiching* was a variant.) In 1979, the Chinese government settled on a system called Pinyin Romanization (also called the Chinese phonetic alphabet) to convert Chinese sounds into roman letters; it is thought to be a closer approximation of Chinese pronunciation in the Mandarin dialect (/bay-**jing**/, not /-**zhing**/ or /-**shing**/). The Pinyin system resulted in *Beijing*, and most American media have now adopted this name for the capital of China. Despite the success of Pinyin, Taiwan still adheres to Wade–Giles spellings—and so do some Western scholars on China.

being that. **A. Meaning “because” or “since.”** Instead of using this awkward phrase in the sense of *because* or *since*, use one of those straightforward words—e.g.:

- “And working with the Big Eye network made sense, *being that* [read *because*] the show comes from David Letterman’s Worldwide Pants productions, whose other shows . . . are all on CBS.” Scott Pierce, “‘Ed’ Perseveres,” *Deseret News* (Salt Lake City), 17 Nov. 2000, at C8. (Delete the comma before the newly inserted *because*.)
- “*Being that* [read *Since*] it’s installed in the front where the driver can see, its main purpose should be for navigation.” Lynne Harrison, “Entertain the Kids on That Long Road Trip,” *Winnipeg Free Press*, 29 Dec. 2000, at E1.
- “Bill Duffy, a native son of Chicago and longtime resident of the city of St. Francis, deserves our accolades, *being that* [read *since*] he has done all that he could to save a part of the town’s history for probably another century.” Ken Garcia, “Gold Rush Era Anchored in Saloon,” *S.F. Chron.*, 21 Dec. 2001, S.F. Today §, at 1.

Sometimes the best replacement is *given that* or *in that*—e.g.: “I guess they finally understand Bush has many supporters in Kentucky, *being that* [read *given that* or *in that*] he won the state by a sizable margin.” Letter of Greg Schuler, “The C-J Headline,” *Courier-J.* (Louisville), 19 Dec. 2000, at A6.

B. In an Absolute Construction. This phrase frequently appears in what grammarians call a “nominative absolute”—e.g.:

- “Berglund . . . said the company has learned a lot since the company entered the market four years ago, the biggest surprise *being that* shoppers actually like grocery shopping.” Patricia Wen, “Old Ways Run Deep,” *Boston Globe*, 17 Nov. 2000, at A1.
- “Harris has declared her intention to certify the statewide results after overseas absentee ballots have been counted, the expectation *being that* those votes will add to Bush’s current 300-vote lead.” Thomas B. Evans Jr., “Count Them All Again,” *Wash. Post*, 18 Nov. 2000, at A23.
- “When someone describes a film of today as a ‘70s picture,’ . . . it’s invariably meant as a backhanded compliment, the implication *being that* the film is so edgy, gloomy or contemplative that it has no hope of reaching a wide audience.” Patrick Goldstein, “The Dubious Anniversary of Cimino’s ‘Heaven’s Gate,’” *L.A. Times*, 12 Dec. 2000, at F1.

See ABSOLUTE CONSTRUCTIONS.

But this type of absolute construction often appears ill-advisedly in a separate sentence as a fragment. (See INCOMPLETE SENTENCES.) The best solution is to use an ordinary finite verb (*is* or *are*)—e.g.:

- “Over the years I’ve adopted a policy of excluding from my annual Top 10 list any picture that has not opened in the Tacoma area by the end of the calendar year. The reason *being* [read *is*] that it seems unfair to salute movies that the vast majority of *News Tribune* readers wouldn’t have had the opportunity to see by the time the list is published.” Soren Andersen, “Marvels and Mistakes,” *News Trib.* (Tacoma), 29 Dec. 2000, at SL1. (As this example shows, the construction is sometimes nothing more than throat-clearing. The second sentence would be stronger if it started with *it*, omitting everything that came before that.)
- “Most duck hunts are the kind that begin somewhere in the cold and darkened hours when no one but the owls and night herons are about. The theory *being* [read *is*] that one must be waiting in ambush when the ducks wake up.” Bob Simpson, “This Wintry Hunt Produces Duck, Mistletoe,” *News & Observer* (Raleigh), 31 Dec. 2000, at C15.

The next best solution would be to combine the two sentences into one.

But take care not to create an unwieldy sentence—as would happen if the two sentences here were combined: “[George] Will details the faults of Gore, but ignores those of Bush, who has made as many exaggerations as Al Gore, usually pronouncing them incorrectly in the process. One of the most egregious exaggerations *being* [read *is*] that he championed this and that legislation regarding health care and education, when in fact it was the Texas Legislature that did most, if not all, of the work.” Bill Amborn, “Will’s Diatribe,” *Press Democrat* (Santa Rosa), 17 Nov. 2000, at B6.

belabor; labor, v.t. Modern dictionaries suggest that the words are interchangeable. But in the early 20th century, *belabor* (= to attack physically) was not much used figuratively in phrases such as *to belabor*

an argument, the preferred expression being to *labor an argument*—e.g.: “I need not *labor* the point that the four elements of the positivist creed just outlined are interdependent.” Lon L. Fuller, *The Morality of Law* 193 (rev. ed. 1969).

The popular grammarian Edwin Newman once chided a Justice of the U.S. Supreme Court for writing “to say more would *belabor* the obvious,” stating: “To *belabor* the obvious is to hit it, which hardly seems judicial conduct.” Edwin Newman, Foreword to Morton S. Freeman, *A Treasury for Word Lovers* viii (1983).

In fact, though, the figurative sense of *belabor* has vastly predominated over the literal one since about 1950. It is standard—e.g.:

- “The embalmed, *belabored* fussiness of the filmmaker’s style, laden with a sentimentality at once maudlin and coy, makes one wonder if the Belfast-born wunderkind hasn’t gone slightly batty.” David Baron, “Tired ‘Tale’ Likely to Leave You Cold,” *Times-Picayune* (New Orleans), 5 Apr. 1996, at L22.
- “There’s no need to *belabor* here the ingenious forms of folly that led the ‘smart guys’ on Wall Street to believe they could eliminate risk by making it invisible.” Tim Rutten, “A Crisis of Trust Too,” *L.A. Times*, 11 Oct. 2008, at A19.
- “[Author Ian] O’Connor *belabors* the rivalry a bit, describing how [Jack] Nicklaus and [Arnold] Palmer competed passionately for endorsements (Palmer was the clear winner) and contracts to design new golf courses (Nicklaus dominated).” Chuck Leddy, “Sizing Up Golf’s Legendary Rivalry,” *Boston Globe*, 13 Oct. 2008, Sidekick §, at 8.

LANGUAGE-CHANGE INDEX

belabor an argument for *labor an argument*: Stage 5
Current ratio (*belabor* vs. *labor a point*): 4:1

Belarusian; *Belarusan. For a citizen of Belarus, the first is the standard term. The second is a NEEDLESS VARIANT. See DENIZEN LABELS.

Current ratio: 17:1

belie = (1) to disguise, give a false idea of; (2) to contradict or prove the falsity of; or (3) to leave unfulfilled. Senses 1 and 2 are the most common—e.g.:

- “One of the newspaper articles boldly suggested that Rodman’s popularity had possibly eclipsed Jordan’s among the local citizenry—a wholly preposterous thought that was *belied* [i.e., proved false] by the cheers from the sell-out crowd of 24,394 the moment Jordan was introduced before the contest.” Anthony Cotton, “Bulls Get Jump on Knicks, 91–84,” *Wash. Post*, 6 May 1996, at C8.
- “But Israel’s image as a modern, progressive state is *belied* [i.e., contradicted] by laws that still intertwine synagogue and state.” Israel Herzliya, “Wedlocked: Jewish Law Impedes Divorce for Some,” *Dallas Morning News*, 30 Oct. 1996, at C5.
- “Campbell’s quiet, restrained delivery *belies* [i.e., disguises] a fearlessness that’s well beyond her 26 years.” Tim Chan, “Shooting Stars,” *Globe & Mail* (Toronto), 11 Sept. 2015, at 30.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The word does not mean “to disclose or reveal,” as is sometimes thought. That is, some writers wrongly think of it in a sense almost antithetical to sense 1—e.g.: “It was a high for the professional from Opelika, Ala., whose soft drawl *belied* [read *betrayed* or *revealed*] his Southern roots.” Becky Paull, “Boise Open’s First Winner Hopes to Regain Glory,” *Idaho Statesman*, 17 Sept. 1995, at C1.

belligerence; belligerency. *Belligerence* refers to a person’s truculent attitude. *Belligerency* has traditionally been the preferred term in international law when referring to the status of a state that is at war—e.g.: “Other states are within their rights in declaring themselves neutral in the struggle, and since there can be no neutrals unless there are two belligerents, such a declaration is equivalent to a recognition of the *belligerency* of both parties.” J.L. Brierly, *The Law of Nations* 134 (5th ed. 1955). Although *belligerency* was more common in print from 1860 to 1980, *belligerence* has predominated since then—in 2008 by a 2-to-1 ratio.

bellwether (= someone who takes the lead or initiative; a trendsetter) is sometimes mistakenly written **bellweather*, perhaps because, like a weathervane, it shows which way the wind blows—e.g.:

- “The sheriff conducted me to one of the two vacant jury rooms, then the jury, *bell-weathered* [read *bellwethered*] by Callahan, the court officer, filed out and retired into the other directly opposite.” Ephraim Tutt, *Yankee Lawyer* 226 (1943). (The verbal use illustrated in the quoted sentence is unusual—see FUNCTIONAL SHIFT (D).)
- “The annual Vermont Open, a *bellweather* [read *bellwether*] of the New England Pro state championships, will be played on Monday through Wednesday, June 10–12, at Lake Morey Country Club in Fairlee, Vt.” John R. Hussey, “Abenaqui Pro Sheerin Earns Spot at Senior PGA Event,” *Union Leader* (Manchester, N.H.), 7 June 2002, at C2.
- “The success of either or both of these events could be a *bellweather* [read *bellwether*] for another high-profile MMA promotion taking place July 26.” Tim Lemke, “A Promotion Commotion,” *Wash. Times*, 16 July 2008, at C2.

Less common but no less whimsical is the misspelling **bellwhether*—e.g.: “Intel Corp. advanced to \$22.08. The semiconductor *bellwhether* [read *bellwether*] was raised to ‘buy’ from ‘neutral’ by Bank of America, which said the stock was likely to climb significantly.” “Market Movers,” *Chicago Trib.*, 11 Apr. 2008, at C5.

LANGUAGE-CHANGE INDEX

1. *bellwether* misspelled **bellweather*: Stage 1
Current ratio: 43:1

2. *bellwether* misspelled **bellwhether*: Stage 1

beloved. This word can be spoken with two syllables /bi-ləvd/ or three /bi-ləv-id/. The two-syllable form is somewhat old-fashioned and is usually reserved for the past participle <the queen was beloved by her subjects>. The three-syllable form is used for the

adjective <my beloved wife> or the attributive noun <dearly beloved, we are gathered here . . .>. Justice Sonia Sotomayor uses the three-syllable version in referring to her best-selling autobiography *My Beloved World* (2013).

bemean. See **demean**.

bemuse; amuse. The meanings of these two words differ significantly. *Bemuse* = (1) to make confused or muddled; bewilder <the jury was bemused by all the technical evidence>; or (2) to plunge into thought; preoccupy <the math student was bemused with the concept of infinity>. *Amuse*, of course, means “to entertain” or “to cause laughter in” <the speaker amused the audience with various anecdotes>.

Yet many writers mistakenly use *bemuse* as a synonym for *amuse*—e.g.:

- “The show also has a quirky humor that will *bemuse* [read *amuse*] jaded adults and even manages to touch some deeper chords without descending to the saccharine.” Lawrence Johnson, “Nutcracker: A Classic Musical,” *Chicago Trib.*, 12 Dec. 1996, Tempo §, at 2.
- “Led by Costas’ ability to *bemuse* [read *amuse*] viewers and make them care about the athletes, NBC’s Sydney squad was at least the tops since ABC’s 1980s heyday. ‘I appreciate the kind comments,’ Costas said.” Rudy Martzke, “Ratings Don’t Dent NBC’s Stellar Effort,” *USA Today*, 2 Oct. 2000, Bonus §, at E4.

benchmark (= a point of reference from which to make measurements) is best spelled as one word.

bend > bent > bent. So inflected (although *on bended knee* is a SET PHRASE). Occasionally the verb gets bent out of shape—e.g.:

- “A teammate dummied a run over the ball, and then Mikacenic hit a right-footed shot—Lakeside’s first of the game—that *bended* [read *bent*] up and around Mount Rainier’s four-player wall and into the far-post side netting.” Melanie Brennan, “Girls Soccer: Lakeside Ousts Mount Rainier,” *Seattle Times*, 22 Nov. 1997, at B7.
- “He rolled and *bended* [read *bent*] the wrist to prove its mobility and strength.” Paul Grondahl, “Racing Form,” *Times Union* (Albany), 26 July 1998, at T2.
- “Lest anyone accuse my little one of being partisan, she might well have copied Hillary Clinton’s Democratic National Convention address if we had *bended* [read *bent*] the bedtime rule to allow her to stay up to watch it.” Jennifer Wheary, “Copying the ‘Can-Do’ Sarah Palin,” *Newsday* (N.Y.), 8 Sept. 2008, at A29.

But in soccer, *bended* is the accepted past-tense and part-participial form of *bend* (= to kick a ball with enough spin to make it curve)—e.g.: “[Keenan] Seguancia *bended* his free kick to the edge of the 6-yard box and [Leslie] Nwapa got past the defense and knocked it in.” Kyle Sakamoto, “Roosevelt 2, Aiea 1,” *Honolulu Advertiser*, 25 Jan. 2008, at D2. See IRREGULAR VERBS.

bend sinister; *baton sinister; *bar sinister. In heraldry, the *bend sinister* is a diagonal band on a shield, extending (from the viewer’s vantage point) between the upper right and the lower left corners; it denotes bastardy in the family line—e.g.: “To the 99.9% of

people in Britain and beyond who feel their identity to be defined adequately without the aid of impalements and *bends sinister* or a family tree going back to John of Gaunt, the vocation of Garter King of Arms must seem as fantastical as that of the Lion King or King Kong.” “Anthony Wagner,” *Economist*, 3 June 1995, at 95. As in that quotation, the plural form is *bends sinister*. See POSTPOSITIVE ADJECTIVES.

**Baton sinister* is a variant form seldom encountered.

**Bar sinister*, though perhaps the most common of the three, is strictly incorrect because a bar is a horizontal stripe. Unlike a diagonal band, a bar can’t have a distinct left (sinister) aspect. And because **bar sinister* is hardly less arcane for most readers than *bend sinister*, it might as well be corrected to that form—e.g.: “Finland thinks of itself as ‘The daughter of the Baltic,’ although she is not clear on her parentage. No *bar sinister* [read *bend sinister*], implying illegitimacy, it’s just that Finns are forever running through the birch bark and pines looking for a national identity.” Kevin Keating, “Laplander Lullabies,” *Int’l Travel News*, Mar. 1996, at 153.

In the 1990s, the phrase was probably best known as part of the name of a rock group, Simon and the Bar Sinisters—but most of the fans were probably unaware of the allusion, and the band wisely avoided the correct plural form: *bars sinister*. Before that, Simon Bar Sinister was one of the villains in the *Underdog* cartoon series (1964–1973).

Benedick; Benedict. Both names were once traditional for a recently married man, especially one who was previously considered a confirmed bachelor. The *-ick* spelling is more common in BrE, the *-ict* spelling in AmE.

The character in Shakespeare’s *Much Ado About Nothing* is Benedick, but writers occasionally get the name wrong—e.g.:

- “This provides the central story, but the ‘merry war’ of sub-plot characters Beatrice and *Benedick* [read *Benedick*] is what distinguishes ‘Much Ado,’ and long ago became its most recognizable component.” Richard Dodds, “Festival Opens with ‘Much Ado,’” *Times-Picayune* (New Orleans), 24 June 1994, at L23.
- “The comedy is about mature, unwilling lovers, Beatrice and *Benedict* [read *Benedick*]—prototypes for later squabbling lovers like Spencer Tracy and Katharine Hepburn.” Christopher Rawson, “Pittsburgh Public Theater Looks to the Familiar, Classic,” *Pitt. Post-Gaz.*, 24 Feb. 2002, at E3.
- “Dan Snook will be *Benedict* [read *Benedick*], opposite Karen Ziemba as Beatrice.” Frank Rizzo, “Will ‘Our Town’ Be New York City by Year’s End?” *Hartford Courant*, 8 Aug. 2002, Cal. §, at 16.

Several dictionaries list *benedict* as a common noun for a newly married man who was formerly considered a confirmed bachelor. Among these are *AHD*, *W2*, *W11*, and *WNWCD*. This usage appears to have resulted from a Shakespearean allusion, but the spelling was changed from *-ick* to the more common *-ict*. (The *SOED*, by contrast, puts the main entry under *Benedick* and labels *-ict* a variant.) The usage is fairly uncommon today.

beneficent; benevolent; *benefic; beneficial. The etymological difference between *beneficent* and *benevolent* is that between deeds and sentiments. *Beneficent* = doing good; charitable (**benefic* now being merely a NEEDLESS VARIANT). The word is pronounced /bə-**nef**-i-sənt/. *Benevolent* = well-wishing, supportive, (emotionally) charitable. Aside from the idiom *benevolent society*, the distinction should be cultivated: we should reserve *beneficent* for “doing good” and *benevolent* for “inclined or disposed to do good.” *Beneficial* has the general meaning “favorable, producing benefits.” Cf. **malevolent**.

beneficiary is pronounced /ben-ə-**fish**-ee-er-ee/ or /ben-ə-**fish**-ə-ree/—not /ben-ə-**fish**-ə-rer-ee/. Cf. **judiciary**.

benefit. A. Inflections of Verb. *Benefit* makes *benefited* and *benefiting* in AmE, *benefitted* and *benefitting* in BrE. See SPELLING (B).

B. Improving Wordy Constructions. As a verb, *benefit* typically functions more economically and smoothly in the active voice than in the passive—e.g.:

- “The launch of the Multia MI, which now complements the Alpha-based Multia, will be significantly benefited by [read *benefit significantly from*] the Digital/Microsoft alliance.” Stephen Lawton, “Digital Adds Intel-Based Multia Client,” *Digital News & Rev.*, 6 Nov. 1995, at 1.
- “Just as the public is benefited by [read *benefits from*] licensure, individual states also have a stake in establishing licensure legislation.” Ronni Chernoff, “Licensure—Perseverance in a Good Cause,” *J. Am. Dietetic Ass’n*, Aug. 1996, at 805.

See PASSIVE VOICE.

As a noun in the phrase *be of benefit to* or *be a benefit to*, the word (once again) can often perform better as an active-voice verb—e.g.:

- “Newmark said the structure would be a benefit to [read *benefit*] an area town planners had said needed redevelopment.” Nancy Degutis, “Morristown Approves 6-Story Condo Building,” *Star-Ledger* (Newark), 22 Aug. 2002, at 18.
- “In terms of [read *As to*] health, feng shui can not only help with issues [read *problems*] such as weight gain and weight loss, but it can also be of benefit to [read *benefit*] people with muscular sclerosis and chronic health problems.” Catherine Murrell, “Feng Shui Principles Can Improve Home Life,” *Chicago Sun-Times*, 20 Sept. 2002, at C16. (For more on the unparalleled *not only . . . but also* construction in this sentence, see **not only . . . but also** & PARALLELISM.

See BE-VERBS (B).

benefit of clergy = (1) at common law (12th c.–19th c.), the right of a clergyman not to be tried for a felony in the King’s Court; or (2) by SLIPSHOD EXTENSION, religious approval as solemnized in a church ritual. By invoking the benefit of clergy—usually by reading the so-called *neck verse* (a biblical passage recited in

Latin)—one accused of a felony could have the case transferred from the King’s Court (which imposed the death penalty for a felony) to the Ecclesiastical Court (which did not).

In sense 2, the phrase is a popularized legal technicality, appearing most often in reference to children born out of wedlock—e.g.:

- “With her, and *without benefit of clergy*, he had five children, and it was his boast that, as each arrived, he dispatched it promptly to a foundling home.” René A. Wormser, *The Story of the Law* 215 (1962).
- “Wakefield’s generation, twenty years on, didn’t just engage in sex *without benefit of clergy*, they talked about it.” Rhoda Koenig, “Talkin’ bout Their Generation,” *New York*, 1 June 1992, at 57.
- “We weren’t permitted to live together and have children in those days *without benefit of clergy*.” Leo Haber, “Bobby,” *Midstream*, Fall 2012, at 36.

benevolent. See **beneficent**.

benign; *benignant. The latter is a NEEDLESS VARIANT. The antonym of *benign*, however, is *malignant*.

Current ratio (*benign* vs. **benignant*): 28:1

bequeath = (1) to give (an estate or effect) to a person by will <she bequeathed the diadem to her daughter>; or (2) to give (a person) an estate or effect by will <she bequeathed her daughter the diadem>. Using the word as a fancy equivalent of *give* or *present* is an ignorant pretension—e.g.:

- “Apparently Mayor Annette Strauss plans to *bequeath* [read *present*] the gift personally to Her Majesty—something rarely done, according to protocol experts. Usually, a gift is *bequeathed* [read *presented*] to the queen’s secretary, who then *bequeaths* [read *gives*] it to the queen.” Helen Bryant, “Names & Faces,” *Dallas Times Herald*, 5 Apr. 1991, at A2.
- “In addition to featuring a strong lineup of regional performers, . . . the festival *bequeaths* [read *awards*] its Golden Umbrella Award to a jazz artist—Seattle’s beloved first lady of song, Ernestine Anderson.” Paul de Barros, “Bumbershoot’s Light Shines on Ernestine Anderson,” *Seattle Times*, 30 Aug. 2002, at H6.

The word is pronounced /bi-**kweeth**/, with a soft *th*.

LANGUAGE-CHANGE INDEX

bequeath for *present* or *give*: Stage 1

bequest, n.; *bequeathal; *bequeathment. *Bequest* = (1) the act of bequeathing; or (2) personal property (usu. other than money) disposed of in a will. *Bequest* is sometimes confused with *behest*. See **behest**.

**Bequeathal* and **bequeathment* are NEEDLESS VARIANTS of sense 1 of *bequest*—e.g.:

- “What is known about Lillian Thomas Pratt is that she changed the face of the Virginia Museum, with a *bequeathal* [read *bequest*] that placed the commonwealth on the artistic map of the world.” Sibella C. Giorello, “Egg Money: Lillian Thomas Pratt Gathered Some of the Finest Faberge Pieces,” *Richmond Times-Dispatch*, 18 Aug. 1996, at J1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Martha [Boyle] receives this *bequeathment* [read *bequest*] as her family prepares to leave for its annual trip to Cape Cod—and one of the oceans that Olive never saw.” Claire Martin, “Realizing How Many Lives One Person Can Touch,” *Denver Post*, 19 Oct. 2003, Books §, at EE2.
- “Last updated in 1993, before the U.S. political lexicon had acquired ‘soccer moms’ (1996), ‘fuzzy math’ (2000) and ‘Swift Boat spot’ (2004), the book’s newest version includes rich linguistic *bequeathals* [read *bequests*] from both the Clinton and second Bush White Houses.” Katie Baker, “How to Sound Presidential,” *Newsweek*, 24 Mar. 2008, at 17.

LANGUAGE-CHANGE INDEX

1. **bequeathment* for *bequest*: Stage 1Current ratio (*bequest* vs. **bequeathment*): 381:12. **bequeathal* for *bequest*: Stage 1Current ratio (*bequest* vs. **bequeathal*): 182:1

bequest, v.t., is obsolete in place of *bequeath*. Today it amounts to no more than a silly error that has appeared in a would-be Shakespearean scholar’s writing: “And by so felicitously using the words newly *bequested* [read *bequeathed*] to English, [Shakespeare], more than any other writer of the English Renaissance, validated the efforts of earlier and contemporary neologists.” Bryan A. Garner, “Shakespeare’s Latinate Neologisms,” 15 *Shakespeare Studies* 149, 151 (1982).

LANGUAGE-CHANGE INDEX

bequest misused for the verb *bequeath*: Stage 1Current ratio (*bequeathed* vs. **bequested*): 411:1

bereave, v.t., yields as past-tense forms *bereft* and *bereaved*, and the same forms as past participles. *Bereaved* is used in reference to loss of relatives by death. *Bereft* is used in reference to loss of immaterial possessions or qualities.

As Bill Bryson observes, to be *bereft* of something is not merely to lack it but to have been dispossessed of it (*Dictionary of Troublesome Words* 26 [1984]). Hence the following uses are off target:

- “There may be more than six degrees of separation, but American Presidential candidates with ties to royalty have a distinct advantage over those *bereft of* [read *lacking*] noble connections.” Nadine Brozan, “Chronicle,” *N.Y. Times*, 28 Oct. 1996, at B12.
- “On the other hand, [the Third Symphony] is largely *bereft of* [read *lacking in* or *barren of*] engaging ideas and, in a word, boring.” Bernard Holland, “From Penderecki, a Mob That Howls or Whispers,” *N.Y. Times*, 28 Oct. 1996, at C15.
- “At the vegan restaurant Angelica Kitchen, in the East Village, there’s a Reuben sandwich *bereft of* [read *without*] corned beef and Swiss cheese, which sort of makes you wonder why it doesn’t just take a different name, like an Irving or a Bernard.” Frank Bruni, “Not Missing the Meat (Mostly),” *N.Y. Times*, 15 Oct. 2008, at D10.

LANGUAGE-CHANGE INDEX

bereft of used without a sense of loss: Stage 3

berth (= a spot or position) is occasionally misspelled *birth*, sometimes (as in the first example below) with hilarious results—e.g.:

- “The Academy finished second behind Tufts University in the four-division regatta. Two Navy women earned *births*

- [read *berths*] in the nationals last weekend.” Jeff Nelson, “Race Wrapup,” *Capital* (Annapolis), 19 Oct. 1995, at D6.
- “The Washington Wizards . . . are beginning to think about a playoff *birth* [read *berth*].” Justin Brown, “NBA’s New York Story,” *Christian Science Monitor*, 21 Dec. 2001, at 10.
- “The Tigers clinched an Empire 8 playoff *birth* [read *berth*], while improving their record 6–2, 6–1.” “Andres, Vegy Help Spark MCC Shutout,” *Rochester Democrat & Chron.*, 24 Sept. 2008, at D5.

LANGUAGE-CHANGE INDEX

birth misused for *berth*: Stage 1Current ratio (*secure a berth* vs. **secure a birth*): 31:1

beseech > **besought** > **besought**; **beseech** > ***beseech** > ***beseched**. The traditional past tense and past participle is *besought*. The simple past is the more common usage—e.g.:

- “She tried to comfort me, *besought* me to come to breakfast.” Lincoln Steffens, “Even Santa Claus Can’t Put a Pony into a Stocking,” *Star Trib.* (Minneapolis), 25 Dec. 1997, at E1.
- “‘Let history treat me kindly,’ California Democrat Maxine Waters, a deep-seated opponent of impeachment, *besought* shortly after the first article was approved.” Craig Gilbert, “Historic Votes Send House 3 Articles of Impeachment,” *Milwaukee J. Sentinel*, 12 Dec. 1998, at 1.
- “One evening, my sister *besought* a blessing on Jimmie Morton, the red-headed boy in the corner house who had a brown puppy and chewed bubble gum.” John Gould, “Praying for Mother to Stay,” *Christian Science Monitor*, 15 Jan. 1999, at 23.

The form *besought* will surprise some readers, who might have thought the past form to be **beseched*, which the *OED* labels “now regarded as incorrect.” It is a fairly common solecism—e.g.:

- “The presiding officer *beseched* [read *besought*] speakers to avoid ‘personally abusive’ comments about the president of the United States.” David M. Shribman, “Debate Shows the Roundup of Resentments,” *Boston Globe*, 19 Dec. 1998, at A12.
- “McClelland frequently *beseched* [read *besought*] the society to accept the design that he obsessively continued to modify.” Mary Kay Ricks, “Washington Monuments That Never Quite Made It,” *Wash. Post*, 13 Jan. 1999, at H3.
- “Coats had a powerful backer in former U.S. Rep. Louis Stokes, who *beseched* [read *besought*] the Democratic Party to open countywide offices to black politicians.” James Ewinger & Joe Hallett, “Mason’s Biggest Foe in Prosecutor Bid May Be Memories,” *Plain Dealer* (Cleveland), 15 Jan. 1999, at B1.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

Current ratio (*besought* vs. **beseched*): 5:1

beside (= [1] alongside; or [2] in comparison with) is surprisingly often misused for *besides* (= [1] other than, except; or [2] in addition). While the two words were once used interchangeably, *beside* has been reserved as the preposition and *besides* as the adverb since the late 18th century. But they are still confounded—e.g.:

- “When we speak of a unilateral contract, we mean a promise in exchange for which an act or something *beside* [read

besides] another promise has been given as consideration.” Clarence D. Ashley, “What Is a Promise in Law?” 16 *Harv. L. Rev.* 319, 319 (1903).

- “Hill is the only man *beside* [read *besides*] Trevino to win on the Senior Tour this year.” Jaime Diaz, “At Tradition, Duel Falls Short of Hope,” *N.Y. Times*, 31 Mar. 1990, at 30.
- “*Beside* [read *Besides*] pleading guilty to the murder, . . . Spradley also pleaded guilty to intimidating a key witness.” Kent Faulk, “Once on Death Row, Man Walks Free After Reduced Sentence,” *Birmingham News* (Ala.), 11 Sept. 2015, at A4.

Likewise, *besides* is sometimes misused for *beside*—e.g.: “Whether or not the city sets an attendance record is somewhat *besides* [read *beside*] the point, tournament organizers say.” Gargi Chakrabarty & Michael Pointer, “Sales of Tickets Disappointing,” *Indianapolis Star*, 28 Aug. 2002, at A1.

LANGUAGE-CHANGE INDEX

1. *beside* misused for *besides*: Stage 1
Current ratio (*Besides doing* vs. **Beside doing*): 24:1
2. *besides* misused for *beside*: Stage 1
Current ratio (*beside the point* vs. **besides the point*): 36:1

bestial (= behaving like an animal, esp. a cruel one) is pronounced /**bes**-chuul/ or /**best**-yuul/—not /**bees**-/.

bestir (= to stir [oneself] to action), in the modern idiom, is preferably confined to reflexive uses—e.g.:

- “This page agrees that the Dole tax-cut plan is misguided, but even we have to admit that it is possible to make a better argument for it than Mr. Dole could *bestir* himself to offer on Sunday.” “The Missing Sermon on Taxes,” *N.Y. Times*, 8 Oct. 1996, at A24.
- “What kind of people will not *bestir* themselves to exercise their franchise if doing so requires them to get off their couches and visit neighborhood polling places?” George Will, “Farewell, Election Day,” *Newsweek*, 6 Oct. 2008, at 64.

It has long been regarded as unidiomatic to use *bestir* as an ordinary transitive verb—e.g.:

- “He sought to *bestir* [read *stir*] action at both the local and state levels.” Rebecca Conrad, “The State Park Movement,” *Des Moines Register*, 6 Oct. 1996, Opinion §, at 1.
- “How else can filmmakers and exhibitors hope to *bestir* [read *rouse*] audiences out of their high-definition, surround-sound home-theater cocoons?” Scott Galup, “New Dimensions in Film,” *Wash. Times*, 18 Apr. 2008, at D1.
- “‘Dr. Arbuthnot, the cliché expert,’ created in the 1930s by *The New Yorker*’s Frank Sullivan, would have had a field day with the way red meat is racing through the political commentariat deploring anybody else’s severe criticism that *bestirs* [read *stirs up* or *excites*] partisan crowds.” William Safire, “Hot’s Not Cool,” *N.Y. Times*, 21 Sept. 2008, Mag. §, at 38.

LANGUAGE-CHANGE INDEX

- bestir* used as a transitive verb: Stage 1
Current ratio (*stirs the* vs. **bestirs the*): 341:1

best of all [+ pl. n.] is more logical than *best of any* [+ sing. n.]. Why? Because the all-encompassing plurality of *all* isn’t as well conveyed by *any*—e.g.:

- “New York’s clincher grabbed a 22.2 rating and 37 share, *the best of any Series game* [read *the best of all Series games* or *better than any other Series game*] this year.” Steve Rosenbloom, “Good Morning,” *Chicago Trib.*, 29 Oct. 1996, Sports §, at 1.
- “But last Friday, Hopewell’s Steve Day had *the best game of any WPIAL running back* [read *of all WPIAL running backs*] this season.” Mike White, “Graham Rethinks PSU Choice,” *Pitt. Post-Gaz.*, 7 Nov. 1996, at E3.
- “That help was rewarded this year—labor unions fared *the best of any special interest group* [read *the best of all special-interest groups* or *better than any other special-interest group*].” Mark Martin, “Davis Signs Bills with Eye on Votes,” *S.F. Chron.*, 2 Oct. 2002, at A4.

Cf. **better than any (other) & ILLOGIC (B)**.

But when the sense is “one (no matter which),” and the noun that follows *must* be singular, the word *any* fills the bill—e.g.: “The *best* part of *any* Rush show isn’t hearing the new songs done live, but experiencing the onstage chemistry.” J.D. Considine, “It’s a Rush,” *Baltimore Sun*, 7 Nov. 1996, Md. Live §, at 8. See **any (A)**.

**betted* for past-tense *bet*: Stage 1
Current ratio (*bet* vs. **betted*): 17:1

bête noire; ***bête noir**. The spelling *bête noire* /bet nwahr/—the only one with any standing in the dictionaries—is about four times as common in modern print sources as **bête noir* (in which, by the way, the gender of the adjective does not agree with that of the noun). The French term literally means “black beast,” but in English it is used figuratively to mean “a person or thing that is strongly disliked or that should be avoided”—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Dole tried to put President Clinton on the defensive last night by saying that Sen. Edward M. Kennedy, the *bête noire* of conservatives, was his friend.” Chris Black, “The Friend of My Enemy Is . . .” *Boston Globe*, 7 Oct. 1996, at A11.
- “As senator, Gore was the cable industry’s *bête noire*, declaring it to be, following a spate of rate increases, ‘a monopoly that’s out of control.’” William Bradley, “A Reality Check on Gore,” *Times Union* (Albany), 14 Oct. 1996, at A7.
- “With a quick nod to the troops, Mr. McCain, characteristically, hijacked the question and skipped to pork-barrel spending, his favorite *bête noire*.” Katharine Q. Seelye, “A Scrappy Fighter, with a Debating Style Honed in and out of Politics,” *N.Y. Times*, 23 Sept. 2008, at A25.

The plural form remains the French *bêtes noires*, as opposed to the more fully anglicized **bête noires*—e.g.:

- “Parisian motorists’ particular *bêtes noires* are the women police auxiliaries in bright blue uniforms who slap instant fines on illegally parked cars.” “Copstyle: Parisian Meter Maids Go High Fashion,” *St. Louis Post-Dispatch*, 2 Oct. 1994, at 2.
- “It simply requires the state board of education, if asked by local school districts, to help create an environment that promotes ‘critical thinking’ and ‘objective discussion’ not only about evolution and the origins of life but also about global warming and human cloning, two other *bêtes noires* of the right.” “Louisiana’s Latest Assault on Darwin,” *N.Y. Times*, 21 June 2008, at A18.

Given that the circumflex remains over the first *-e-*, it is hardly surprising that the word has retained its foreign plural. See PLURALS (B).

betrothal; *betrothment. The latter is a NEEDLESS VARIANT.

Current ratio: 66:1

better. A. For *had better*. Dropping the *had* in expressions such as *You (had) better be going now* is acceptable only in informal speech or recorded dialogue. Even in the compressed space of a headline, the ellipsis is inadvisable—e.g.: “Perspective—The FCC *Better* [read *Had Better*] Shape Up Those Monopolies,” *CommunicationsWeek*, 15 Apr. 1996, at 49. The phrasing is a low CASUALISM—e.g.:

- “If the Flyers are going to make an offer, they *better* [read *had better*] do it in a hurry.” “Lightning Time Line,” *St. Petersburg Times*, 16 Aug. 1997, at C10.
- “But with [Clinton’s] animal magnetism running so strong, perhaps *I better* [read *I’d better*] steer clear of the White House.” John F. Cogan, “President Irresistible,” *N.Y. Times*, 18 Feb. 1998, at A25.

STANDARD ENGLISH still requires *you had better, I had better, she had better*, etc. Cf. **get (c)** [last ¶].

Sometimes *best* replaces *better*, as in *We had best be on our way*. This phrasing—*had best* rather than *had better*—is quite casual, but not low.

LANGUAGE-CHANGE INDEX

1. *better* for *had better*: Stage 3

Current ratio (*you had better go* vs. **you better go*): 2:1

2. *had best* for *had better* in casual use: Stage 5

Current ratio (*you had better* vs. *you had best*): 14:1

B. And *better*. See **bettor**.

better . . . rather than. In this phrasing, the word *rather* is usually unnecessary, since *than* completes the comparison begun by *better*—e.g.:

- “When will the administration learn that it is *better* to disclose such arrangements up front *rather than waiting* [read *than to wait*] until the university has been sued?” Letter of Gordon J. Johnson, “Secrecy Suggests Something’s Amiss,” *Rocky Mountain News* (Denver), 3 July 1999, at A51.
- “It’s *better* to remove weeds by the roots *rather than chopping* [read *than to chop*] them up with a tiller or cultivator, Akre says; many can re-sprout from the chopped-up bits.” Beth Botts, “Success in the Vegetable Patch,” *Chicago Trib.*, 15 June 2008, Home & Garden §, at 2.
- “Last year, Curlin appeared *better* when he raced outside other horses *rather than being hemmed in* [read *than when he was hemmed in*], which some believe cost him the Belmont.” Jennie Rees, “It’s Churchill Down, Fun to Go for Curlin,” *Courier-J.* (Louisville), 15 June 2008, at C1.

The exception occurs when the phrase following *better* is rather long—e.g.: “The next two years could be *better* spent looking for new ways to accomplish this goal *rather than* simply trying to wring more money out of taxpayers’ pockets.” Jack Roberts, “Culprit Is Distribution Formula, Not Tax Structure,” *Oregonian* (Portland), 6 Aug. 1999, at E11. Cf. **more . . . than**.

better than any (other). Ordinarily, *better than any other* is more logical than *better than any*, because the thing being proclaimed best is also one of the things being considered—e.g.: “Hooley, 63, knows this landscape and its residents *better than any other* elected official.” Editorial, “Return Hooley to Congress,” *Oregonian* (Portland), 4 Oct. 2002, at C6.

Writers who omit the word *other* fall into logical lapses—e.g.:

- “If there’s been a down moment or a traumatic flashback in Monica Seles’ 1996, then she’s a *better actor than any* [read *better actor than any other*] athlete I’ve ever met.” Michael Gee, “Seles Still Serves Up a Smile,” *Boston Herald*, 7 Sept. 1996, Sports §, at 36.
- “Tommy Oravetz grew up in the FSU family and appreciated maybe *better than any player* [read *better than any other player*], even his fellow Tallahasseeans, what going to Omaha means.” Steve Ellis, “Former ‘Noles Players Play Supportive, Not Jealous, Role,” *Tallahassee Democrat*, 13 June 2008, at C2.
- “Fitzgerald’s defense played freer and faster, tackling *better than any* [read *better than any other*] Northwestern team in memory.” David Haugh, “School’s in Session for Turner,” *Chicago Trib.*, 8 Sept. 2015, Sports §, at 1.

Cf. **best of all & ILLOGIC (B)**.

Sometimes, though, the thing being touted is excepted, and then the *other* becomes unnecessary. For example, two different types of things are often compared, such as the two sexes in the first example or German versus British products in the second:

- “Her jump was not only tops for her division, but it was also *better than any* boy’s jump in the same division.” Joni Averill, “Capehart Is Part of New Generation,” *Bangor Daily News*, 18 Aug. 1994, at PDA. (On the lack of PARALLELISM in that sentence, see **not only . . . but also**.)

- “Marks & Spencer confirmed last night that it sells only German fishfingers, claiming the quality is *better than any* British product.” Justin Dunn, “Germans Scupper Captain Birds Eye,” *Daily Mirror*, 18 Aug. 1994, at 1.

LANGUAGE-CHANGE INDEX
better than any for *better than any other*: Stage 3

bettor is the standard spelling for “someone who bets or wagers.” *Better* has also been used in this sense, but it is liable to be confused with the comparative form of *good* or as a singular form of *bettors* in the sense “people of higher skill or status.” E.g.: “Each week the din coming from the Coliseum is tremendous—not from the birds crowing their heads off as they go about slaughtering each other but from the *bettors* [read *bettors*] yelling out wagers until another is willing to accept the odds.” Uli Schmetzer, “Philippines Erupt with Fowl Play,” *Chicago Trib.*, 17 Sept. 1996, at 10. (The headline should have read “Philippines Erupts” or “Filipinos Erupt.”) Cf. **abettor**.

LANGUAGE-CHANGE INDEX
better misused for *bettor*: Stage 1
 Current ratio (*a heavy bettor* vs.
 **a heavy better*): 3:1

between. A. And among. *Between* is commonly said to be proper with two things, and *among* with more than two. Ernest Gowers calls this a “superstition” and quotes the *OED*: “In all senses *between* has been, from its earliest appearance, extended to more than two. . . . It is still the only word available to express the relation of a thing to many surrounding things severally and individually; *among* expresses a relation to them collectively and vaguely: we should not say *the space lying among the three points or a treaty among three Powers*” (*FMEU2* at 57). Another critic agrees: “A man may halt between *three* as well as *two* opinions.” G.H. Vallins, *Better English* 68 (4th ed. 1957).

In terms of frequency, the collocation *between three* has outstripped *among three*—by a significant margin—in all periods of English since 1500. The same is true of *between four* vs. *among four*.

The rule as generally enunciated, then, is simplistic. Although it is an accurate guide for the verb *divide* (*between* with two objects, *among* with more than two), the only ironclad distinction is that stated by the *OED*: *between* expresses one-to-one relations of many things, and *among* expresses collective and undefined relations.

In fact, good writers commonly use *between* with more than two elements, in AmE and BrE alike—e.g.:

- “Sunday morning in Denmark Hill is for the six Huxtable daughters (the difference *between whom*, as Granville Barker puts it in his stage directions, ‘is to the casual eye the difference between one lead pencil and another’) a time of nursery scurryings and silences under the unwavering eye of their mother.” J.K.L. Walker, “Edwardian Underwear,” *TLS*, 11 Sept. 1992, at 19.

- “Part of the journey has been to discover the appropriate balance *between family, solitude and community*.” Terry Waite, “A Long, Long Way to Travel,” *Times* (London), 27 Aug. 1994, at 15.
- “So I said, ‘Why don’t you go build a fort in the woods?’ I had no idea it would turn out to be this monstrosity’ bolted *between* four treetops in the corner of her front yard.” Elizabeth Maker, “Family Trees,” *N.Y. Times*, 29 Sept. 2002, 14CN §, at 1.

Sometimes, however, the sense is anything but reciprocal or mutual. Without a one-to-one relation, *among* is the better word—e.g.:

- “The five dancing grandmothers have 25 grandchildren *between* [read *among*] them.” “Dancing Grandmothers,” *Austin Am.-Statesman*, 13 Sept. 1993, at B1 (photo caption).
- “In a recent interview, Mr. Weitzner explained the relationships *between* [read *among*] the various entities at 741 Alexander.” Brett Pulley, “At One Office, Intricate Links in New Jersey’s G.O.P. Funds,” *N.Y. Times*, 8 July 1996, at A1, A9. (*Among* is correct here because the multitude of interlocking political organizations is being stressed.)

See SUPERSTITIONS (H).

B. Between you and me; *between you and I. Because the pronouns following *between* are objects of the preposition, the correct phrase is *between you and me*. Yet the phrasing **between you and I* is appallingly common—“a grammatical error of unsurpassable grossness,” as one commentator puts it. Interestingly, this grammatical error is committed almost exclusively by educated speakers trying a little too hard to sound refined but stumbling badly. It’s almost surely an ingrained instance of hypercorrection based on childhood admonitions not to use *you and me* (or similar compounds) as the subject of the sentence—and, far more confusing to most people, as a predicate nominative in sentences such as *it is I*. See PRONOUNS (B) & HYPERCORRECTION (B).

Still, descriptive linguists—linguistic liberals—are fond of quoting early writers, who worked at a time when the language was not so fully developed, in support of poor usage. Back in 1892, Henry Sweet was quite right to say that in Early Modern English, “the usage was more unsettled than now, the nominative being as freely substituted for the objective as vice-versa, as in such constructions as *’tween you and I*. *You and I* were so frequently joined together as nominatives—*you and I will go together*, etc.—that the three words formed a sort of group-compound, whose last element became invariable.” 1 Sweet, *A New English Grammar, Logical and Historical* 340–41 (1892).

Here is the characteristic view of modern descriptive linguists: “The meaning is clear; ‘I’ is no less, or more, euphonious than ‘me’; if the usage offends, it does so because the hearer (occasionally) or the reader (more frequently) is in the habit of expecting ‘me.’ Why is such a habit worth fighting about?”

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Ellsworth Barnard, *English for Everybody* 25 (1979). This view ignores the reality and the importance of the thousands of settled views of English usage. *I*, as an object of a preposition or a verb, has long been stigmatized. Using it in the objective case simply creates doubts about the speaker's ability to handle the language.

Randolph Quirk—a leading English grammarian of the late 20th century—puts all this in perspective: “I would not go along with making ‘I’ and ‘me’ interchangeable. It is true that Shakespeare used both, but that did not make it any more correct. There are permanent pressures on language, and the fact that they are resisted shows that people recognise the value of correct usage.” As quoted in John O’Leary, “Language Police at Odds over Misuse of Pronouns,” *Times* (London), 2 Oct. 1995, Home News §.

Among the better-considered views on the question are these:

- “If the ditch-digger’s child said ‘between you and me,’ it would probably be ridiculed into using the environmentally more favored ‘between you and I.’ Thus the penalties provided for nonconformity nourish and perpetuate ungrammatical usage, and the folk speech is rooted deep in the life of the masses.” Edward N. Teall, *Putting Words to Work* 4 (1940).
- “The nation is divided in its use of ‘between you and me’ and ‘between you and I.’ Let me begin by declaring that the only admissible construction of the two in standard use in the twentieth century is ‘between you and me.’ . . . *I*, *he*, and other pronouns were frequently used in the sixteenth and seventeenth centuries in ways now regarded as ungrammatical. Grammatical assumptions were different then.” Robert W. Burchfield, *Points of View* 117 (1992).
- “English now recognizes only two inflections for all pronouns—the subjective (or nominative) ‘I,’ ‘you,’ ‘he,’ ‘she,’ ‘they,’ and the objective (or accusative) ‘me,’ ‘you,’ ‘him,’ ‘her,’ ‘them.’ The possessives, as in ‘his face’ or ‘her hair’ or ‘their cheek,’ are adjectival. The objective form is used after transitive verbs like ‘hit,’ ‘kick,’ ‘love,’ and also after prepositions like ‘after,’ ‘for,’ ‘between.’ It is because ‘you’ has become an invariable form—in number as well as in case—that the solecisms ‘Between you and I’ and ‘Let you and I talk’ are committed.” Anthony Burgess, *A Mouthful of Air* 59 (1992).

In print sources, the STANDARD ENGLISH expression is in less danger today than it was in the 18th century: *between you and me* occurs with much, much greater frequency. In fact, the erroneous form represents barely a blip on the screen.

LANGUAGE-CHANGE INDEX

- **between you and I* for *between you and me*: Stage 2
Current ratio (*between you and me* vs.
**between you and I*): 16:1

C. *Between* and Numbers. This usage causes problems if the things being counted are discrete units and the numbers at both ends of the spectrum are intended to be included. E.g.:

- “Saleh met with several other defendants in a Queens garage *between June 23 and June 24* [read (depending on the meaning) *from June 23 to June 24* or *on June 23 or 24*] to discuss getting cars for the conspiracy.” Peg Tyre &

Kevin McCoy, “Busted at Beach,” *Newsday* (N.Y.), 24 July 1993, at 3. (There is no time between June 23 and June 24.)

- “They had the option of booking *between one and three* [read *from one to three*] days.” “Window on Tomorrow’s World,” *Birmingham Post*, 23 Aug. 2002, at 13. (Two is the only whole number between one and three.)

When you intend to refer to a range of possibilities from a low point to a high point, *from . . . to*, *between . . . and*, or *to* alone is the correct form, not **between . . . to*. E.g.:

- “Businesses estimate they lose *between \$25 billion to \$30 billion* [read *between \$25 billion and \$30 billion*] a year nationwide in lost productivity, errors and accidents attributable to poor literacy.” William Celis III, “Study Says Half of Adults in U.S. Can’t Read or Handle Arithmetic,” *N.Y. Times*, 9 Sept. 1993, at A1, A16.
- “The large pressure difference between the low and a high over the southern Plains will generate winds *between* [read *from*] 18 to 36 m.p.h. in the wake of a sharp cold front.” “High Winds Whip Upper Midwest,” *Chicago Trib.*, 10 Sept. 1993, at 10.
- “*Between 500 to 1,000* [read *Between 500 and 1,000*] students a year are served by the district’s Homeless Education Program.” Richard Obert, “Homeless to Hopeful,” *Ariz. Republic*, 11 Sept. 2015, at C1.

Of the first of those immediately preceding examples, supplied by the late Professor John W. Velz of the University of Texas, Velz commented: “It’s a sad irony to find a subliterate idiom in an article about subliteracy. It’s like a physicist’s making a simple mistake in arithmetic.”

LANGUAGE-CHANGE INDEX

1. *between* [date 1] and [date 2] for *from* [date 1] to [date 2]: Stage 2
2. **between* [date 1] to [date 2] for *between* [date 1] and [date 2]: Stage 2

D. *Choose between*. This construction (with various verbs of selection) takes *and*, not *or*. The misuse probably results from confusion between *between . . . and* and *either . . . or*—e.g.:

- “Guests can choose *between* ‘Eve of the Eve Classic,’ a smaller, more elegant affair with dinner and open bar, or [read *and*] the general ‘Eve of the Eve’ party, which accommodates more than 2,000 revelers.” Audarshia Townsend, “Parties for the Celebratory Mood,” *Chicago Trib.*, 21 Dec. 2001, at 31.
- “Russia . . . will face, in some instances, the choice *between* isolation or [read *and*] union with the rest of Europe.” Eugene Rumer & Jeffrey Simon, “NATO: Russia Should Have a Seat at the Table,” *L.A. Times*, 23 Dec. 2001, at M2.

E. *Between; as between*. Sometimes *as between* (= comparing; in comparison of) is misused for the straightforward preposition. E.g.: “The contractual provisions *as between* [read *between*] the parties are as follows.” Cf. **as against**.

F. **Between each and Other Constructions with Fewer than Two Objects*. This phrasing is a peculiar brand of ILLOGIC, as in **between each house and* **between each speech* (instead of, properly, *between every two houses* and *between speeches*). Although it

is possible to think of **between each house* as being an ellipsis for *between each house and the next*, native speakers of English don't consciously think of the phrase in this way. And the resulting expression is literally nonsensical—e.g.:

- “Customers can use the same dial tone to make multiple calls by pressing the pound sign *between each call* [read *between calls*].” Carol Smith, “Options to Keep the Costs Down When Phoning from Abroad,” *L.A. Times*, 2 Oct. 1996, at D4.
- “*Between each pitch* [read *Between pitches*], the camera will dart between batter, Angel manager, Twin manager, a fan with her hands in front of her face, the Rally Monkey jumping up, the pitcher's eyes, some guy in the dugout biting his nails, the Rally Monkey landing, a fan with a Christmas tree on her head, a kid screaming.” T.J. Simers, “The Inside Track,” *L.A. Times*, 13 Oct. 2002, at D2.
- “The bells were traditionally rung at 6 a.m., noon and 6 p.m. in three groups of three chimes with a pause *in between each group* [read *in between groups*], followed by nine consecutive strokes.” Marilyn Salzl Brinkman, “Bells Will Toll for St. Joseph Again,” *St. Cloud Times* (Minn.), 14 June 2008, at C5.

LANGUAGE-CHANGE INDEX

**between each period* for *between periods*: Stage 2
Current ratio (*between periods* vs.
**between each period*): 67:1

between Scylla and Charybdis. See **Scylla and Charybdis**.

***between you and I.** See **between (c)**.

betwixt is an **ARCHAISM**. On the few occasions when it appears, it's usually in the **CLICHÉ** *betwixt and between* (meaning “in a middle position; neither one nor the other”). But sometimes it pops up on its own when the writer tries to affect quaintness—e.g.:

- “*Betwixt* the owls and the frogs, the familiar sound [of the woodcock] comes from an old field not far from the house.” “The Woodcock Dance Is Thrilling Rite of Spring,” *Pitt. Post-Gaz.*, 10 Mar. 1996, at D13. (A possible revision: *While the owls and the frogs sing, the familiar sound comes from an old field not far from the house.*)
- “If you have \$100 to burn, you could be living *betwixt* the aspens and the firs.” Brandon Loomis, “Chances Sold on \$35,000 Lot,” *Idaho Falls Post Register*, 3 Sept. 1996, at A10. (A possible revision: replace *betwixt* with *among*.)
- “So there is no contradiction, no cornering, no rock and a hard place for Bryant to be placed *betwixt*, she said.” John Brummett, “Bryant Still Up a Tree,” *Ark. Democrat-Gaz.*, 15 Oct. 1996, at B7. (A possible revision: replace *betwixt* with *between*.)

bevel, vb., makes *beveled* and *beveling* in AmE, *bevelled* and *beveling* in BrE. See **SPELLING (B)**.

BE-VERBS. A. Wrongly Omitted in Nonfinite Uses. *Be*-verbs, usually in the infinitive or participial form, are often omitted from sentences in which they would add clarity. One explanation is that they are intended

to be “understood.” (See **UNDERSTOOD WORDS**.) But this explanation does not excuse the ambiguity and awkwardness often caused by such omissions. The bracketed verbs in the following sentences were omitted in the original sources.

- “These devices can be used to intercept a wire or oral communication; specifically designated as not [*being*] such devices are telephone or telegraph equipment furnished to a user and used in the ordinary course of business, and hearing aids.”
- “If the Western film offer were found [*to be*] different from the musical film offer, then it might be more appealing.”

B. Circumlocutions with *Be*-Verbs. Verb phrases containing *be*-verbs are often merely roundabout ways of saying something better said with a simple verb. Thus *be determinative of* for *determine* is verbose. But *be determinative* is all right without an object <this factor may be determinative in a given situation>.

The following circumlocutory uses of *be*-verbs are common in stuffy writing. The simple verb is usually better:

- be abusive of (abuse)
- be applicable to (apply to)
- be benefited by (benefit from)
- be derived from (derive from)
- be desirous of (desire or want)
- be determinative of (determine)
- be in agreement (agree)
- be in attendance (attend)
- be indicative of (indicate)
- be in error (err)
- be in existence (exist)
- be influential on (influence)
- be in possession of (possess)
- be in receipt of (have received)
- be in violation of (violate)
- be operative (operate)
- be productive of (produce)
- be promotive of (promote)
- be supportive of (support)

Many such wordy constructions are more naturally phrased in the present-tense singular: *is able to (can)*, *is authorized to (may)*, *is binding upon (binds)*, *is empowered to (may)*, *is unable to (cannot)*.

C. For *say*. In a contraction with a personal pronoun, and especially when accompanied by *like*, *be*-verbs used in the sense of “say” have become a common verbal tic among the younger generations—e.g.: “I'm like, ‘What do you think?’ And she's like, ‘I don't know.’ And I'm all, ‘Well, I think . . .’” Whether the tic seems to be determined more by emotional development than by age alone is a question for sociolinguists to determine. But it is poor usage. Cf. **go (B) & like (E)**.

D. Reduplicative Copula: *is is*. See **is is**.

beyond a reasonable doubt. See **not guilty (B)**.

beyond the pale. See **pale, beyond the**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

BI-; SEMI-. One can remember the proper prefix in a given context by noting that *bi-* means “two” <bifocals>, and *semi-* “half” <semicircle>. Hence *bimonthly* = every two months (not “twice a month”) and *semimonthly* = every half-month, or twice a month. *Biweekly* and *semiweekly* work similarly.

Still, *bi-* has been used to mean “occurring twice in a (specified span of time)” so often (and legitimately, e.g., in *biannual*) that, for the sake of clarity, you might do well to avoid the prefix altogether when possible. See **biannual**.

LANGUAGE-CHANGE INDEX

bimonthly as a synonym of *semimonthly*: Stage 2

biannual; biennial; semiannual. *Biannual* and *semiannual* both mean “occurring twice a year.” *Biennial* means “occurring once every two years.” The distinction becomes important, for example, when contractual language provides for “*biannual* increases” or “*biannual* meetings.” The best advice is not to rely on words like *biannual* and *biennial* if confusion might cause problems. For absolute clarity, use *semiannual* or *once every two years*. See BI- & **biennial**; see also NUMERICAL PREFIXES.

bias, vb., makes *biased* and *biasing* in AmE, *biased* and *biasing* in BrE. See SPELLING (B).

Bible; bible. As a proper noun referring to the holy book, *Bible* is capitalized <Which book of the Bible are you referring to?>. As a common noun denoting any definitive text, it should be lowercase <that cookbook is the chef’s bible>. The adjective *biblical* is always lowercase, even when it refers to the Bible <the biblical account of the flood>.

bicentennial; bicentenary. See **centennial**.

bicep; biceps. Despite its appearance, *biceps* is traditionally a singular noun. H.W. Fowler preferred the plural *bicipes*, which is rare, and mentioned also the technical form *bicipites*, also rare. He called *biceps*, as a plural, “a mere blunder” (*FMEU1* at 51).

His objection was pedantic: *bicipes* has hardly ever been used, whereas the plural *biceps* has been fairly common since the late 19th century. It is now standard—e.g.:

- “The heroines of ‘Aliens’ and ‘Terminator 2,’ however, developed their *biceps* between movies.” Caryn James, “The Woman in ‘True Lies,’” *N.Y. Times*, 17 July 1994, § 2, at 13.
- “The sculpted *biceps* reflect the constant work that’s made him an attraction for Division I schools.” Kevin Lonquist, “Making a Name,” *Dallas Morning News*, 25 Oct. 1996, at B4.
- “He’s one of the team’s hardest workers in the weight room, and his *biceps* look like tree trunks.” Robert Gagliardi, “Gentry’s Play Positive from Last Week, but UW Needs to Build from There,” *Laramie Boomerang*, 10 Sept. 2015, at B1.

Naturally, the back-formed singular *bicep* has also caught on and in nontechnical contexts is the usual form—e.g.: “Lincoln Kennedy will be sidelined two weeks by a torn left *bicep*.” “Slaughter Gets Deal with Jets,” *Chattanooga Times*, 24 July 1996, at F5. But that

usage isn’t uniform, even within a single publication in a single month: “Appier (8–7), sidelined since July 3 because of inflammation in his right *biceps*, allowed one run and three hits.” “Padres Stop Rockies’ Streak,” *Chattanooga Times*, 19 July 1996, at E2. See BACK-FORMATIONS.

Today, to refer to a person’s right *biceps* and to both *bicipes* or *bicipites* seems pedantic. (In 1939, one commentator said that he had “never met anyone with sufficient hardihood to use [*bicipes*].” William Freeman, *Plain English* 84 [Blanche C. Williams ed., Am. ed. 1939].) Although the ETYMOLOGY suggests that those forms are superior, the standard terms are now *bicep* as the singular and *biceps* as the plural. The same will probably someday be true for *triceps* and *quadriceps*. Cf. **pecs, quadriceps & triceps**.

Current ratio (*a torn biceps* vs. *a torn bicep*): 1.3:1

bid. A. Standard Past-Tense Forms. *Bid* (= to offer a bid) forms *bid* in the past tense—e.g.: “Williams also *bid* more than the state initially budgeted for that project.” Jeffrey Brainard, “New Life for Zephyrhills Depot,” *St. Petersburg Times*, 25 Oct. 1996, Pasco Times §, at 1.

When the thing offered is a greeting or a farewell, the past tense is *bade*, rhyming with *glad* (not *glade*)—e.g.:

- “Thousands of people, many of them police officers from throughout the West, *bid* [read *bade*] farewell to slain Pierce County sheriff’s Deputy John Bananola yesterday in a funeral that had the toughest cops weeping with grief.” Larry Lange, “Thousands Honor Slain Deputy at Funeral,” *Seattle Post-Intelligencer*, 25 Oct. 1995, at A1.
- “Many shed tears or hugged each other as they *bade* farewell to waiters and waitresses they had befriended long ago.” Henry K. Lee, “Oakland Patrons Bid a Sad Adieu to JJ’s Diner,” *S.F. Chron.*, 28 Oct. 1996, at A13.
- “With tears and her signature smile, Katie Couric *bade* farewell to the ‘Today’ show yesterday in a three-hour love-fest packed with celebrity guests and the regular folks who woke up with her for 15 years.” Brittany Karford, “A Katie Lovefest,” *Daily News* (N.Y.), 1 June 2006, News §, at 2.

See **forbid (A)**.

So which past tense is correct in the phrase *to bid fair* (= to seem likely)—is it *bid fair* or *bade fair*? Although writers have used both, the *OED* records only *bade fair*, the better form—e.g.:

- “This fiasco *bid fair* [read *bade fair*] to destroy the fund of goodwill among the citizens of Europe.” Patrick Minford, “Monetary Calm Threatened on Two Fronts,” *Daily Telegraph*, 26 June 1995, at 22.
- “And paired as it was with a second congressional sleuthing effort, into the Whitewater affair, it *bade fair* to generate what passed for some agreeable theater, if not actual news.” Brian Duffy, “Just Sniffing,” *U.S. News & World Rep.*, 14 Aug. 1995, at 8.

LANGUAGE-CHANGE INDEX

1. *bid farewell* misused for the past-tense *bade farewell*: Stage 2

Current ratio (*he bade farewell* vs. **he bid farewell*): 5:1

2. *bid fair* misused for the past-tense *bade fair*: Stage 3
Current ratio (*he bade fair* to vs. **he bid fair* to): 2:1

B. *Bidded as a Solecism. The nonstandard past form **bidded* isn't nearly as scarce as it should be—e.g.:

- “But for years, because of the way prison posts are *bidded* [read *bid*] for and filled by seniority, administrators have had little choice but to spend millions of dollars each year in overtime to fill vacant positions.” Tom Mooney, “State Bows to ACI Union, Drops Privatization Idea,” *Providence J.-Bull.*, 21 Oct. 1998, at B1.
- “As described by officials this week—a specific design has yet to be solicited, *bidded* [read *bid*], submitted and selected—the new bridge will feature a scaled-down, striking cable-stayed design and carry four lanes of traffic at a total project cost of \$640 million.” Editorial, “Spanning a River—and a Civic Gulf,” *St. Louis Post-Dispatch*, 2 Mar. 2008, at B2.
- “Magee board chairman Fred D’Angelo *top-bidded* [read *won the bidding for*] a basketball (\$1,200) signed by sports figures who attended . . .” Michael Klein, “Inqlings: ‘Happy Tears’ Cast a Visible Lot,” *Phil. Inquirer*, 13 May 2008, at E2.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

**bidded* for past-tense *bid*: Stage 1
Current ratio (*bid* vs. **bidded*): 3,295:1

C. Past Participle. In the sense “to make a bid,” the past participle is *bid*—e.g.: “NTL and France Telecom are each believed to have *bid* more than pounds 200m.” Mathew Horsman, “France Added to BBC Bid List,” *Independent*, 29 Oct. 1996, at 17. Otherwise, the past-participial form is usually *bidden*—e.g.: “‘Good morning, Signor Mach,’ one of them said as the fugitive Italian financier ventured from an apartment on the Boulevard St.-Germain in Paris on Sunday to buy the Italian newspapers from a corner kiosk, only to find himself arrested by the Italian plainclothes policeman who had just *bid* [read *bidden*] him good day.” Alan Cowell, “Rich Italian Fugitive Finally Caught in Paris,” *N.Y. Times*, 1 Nov. 1994, at A4. See IRREGULAR VERBS (A).

The simple past *bade* is sometimes misused for *bidden*, a mistake that should be universally forbidden—e.g.:

- “This historic spot (where Flora MacDonald is said to have *bade* [read *bidden*] farewell to Bonnie Prince Charlie after the Jacobite rebellion) is reasonably priced and sports a lively bar.” Mary Gillespie, “If You Go,” *Chicago Sun-Times*, 8 Mar. 1998, at 4.
- “With an Olympic flag hanging behind the casket, Florence Griffith Joyner was *bade* [read *bidden*] farewell in a two-hour funeral at Saddleback Community Church.” “Morning Briefing,” *Pitt. Post-Gaz.*, 27 Sept. 1998, at D2.
- “So when the Blackhawks offered Doug Gilmour a three-year deal for \$18 million, . . . he was *bade* [read *bidden*] goodbye.” Jay Greenberg, “Lamoriello’s Way Is NHL’s Best Way,” *N.Y. Post*, 17 Dec. 1998, at 92.

LANGUAGE-CHANGE INDEX

Current ratio (*had bidden her* vs. **had bid her*): 3:1
2. *bade* misused for past-participial *bidden*: Stage 1
Current ratio (*was bidden* vs. **was bade*): 23:1

bidden. See **bid** (c).

bid fair. See **bid** (A).

biennial = occurring every two years. If we climb the numerical ladder, we have *triennial* (3), *quadrennial* (4), *quinquennial* (5), *sexennial* (6), *septennial* (7), *octennial* (8), *novennial* (9), *decennial* (10), *vicennial* (20), *centennial* (100), *millennial* (1,000). See NUMERICAL PREFIXES; see also **BI-** & **BIANNUAL**.

bigamy; polygamy; deuterogamy; *digamy. *Bigamy* = the act of marrying one person while being married to another. It may be committed knowingly or unknowingly; if committed knowingly, *bigamy* is a criminal offense.

Polygamy is the generic term for multiple marriages and encompasses *bigamy*. The word is much used by anthropologists, describing both *polygyny* (/pə-lij-ə-nee/—the practice of having several wives) and *polyandry* (/pahl-ee-an-dree/—the practice of having several husbands).

Deuterogamy (/d[y]oo-tər-ahg-ə-mee/) and **digamy* (/dig-ə-mee/) both mean “a legal second marriage, such as one occurring after a divorce or after the death of the first spouse.” *Deuterogamy* is the more common term (to the extent that either might be called common!) and is not, like **digamy*, liable to confusion with *bigamy*. Hence **digamy* should be considered a NEEDLESS VARIANT. Of course, the term *second marriage* is more common—and more readily understood—than either of the other words.

Big Island. See **Hawaii** (A).

***big of.** See **of** (B).

BIG WORDS. See SESQUIPEDALITY.

billfold. See **wallet**.

billiard. See **billion**.

billion. In most English-speaking countries, *billion* denotes a thousand millions (a 1 followed by nine 0’s). In most of continental Europe and other German-, French-, and Spanish-speaking countries, it means a million millions (a 1 followed by twelve 0’s)—a thousand millions being dubbed a *milliard*. Today, the two large-number systems are called the *short scale* and the *long scale*.

In the not-so-distant past, the scales were referred to as the American and British systems. But in 1974, by statute, the U.K. adopted the short scale.

The short system is based on thousands, so that a *million* is a thousand thousands, a *billion* is a thousand millions, a *trillion* is a thousand billions, and so forth. But the older long scale is based on millions, so that a *billion* is a million millions, the equivalent of a *trillion* in the short scale. Just as the long scale calls a thousand millions a *milliard*, it calls a thousand of its

billions a *billiard*. But that's another game. Cf. **trillion**. See NUMERALS.

Biloxi (the city in Mississippi) is pronounced /bi-lək-see/—not /bi-lok-see/.

bimonthly; semimonthly. See BI-.

bind > bound > bounded. It was bound to happen: some writers have erroneously introduced a weak past-tense form (**binded*). The word suggests what punishment might be inflicted at their wrists (though no one says **binded and gagged*)—e.g.:

- “ABL players cannot play for the WNBA this season because they are *binded* [read *bound*] by their exclusive contracts until Aug. 31.” Jason Quick, “ABL’s Success Has to Be Seen,” *Oregonian* (Portland), 17 Feb. 1997, at B1.
- “Russell had the cover laminated and *binded* [read *bound*] the book.” Ellena Fortner, “Students’ Book Generates Memories and Self-Discovery,” *Ft. Worth Star-Telegram*, 9 Dec. 1997, at 1.
- “He’d sell in a minute if he could find a local buyer *binded* [read *bound*] to keeping the franchise here.” Nick Horvath Jr., “Senators Still in a Midstate Hit,” *Sunday Patriot-News* (Harrisburg), 12 Apr. 1998, at C1.

Occasionally, an even worse past form, *bounded*, appears, especially in reported speech—e.g.:

- “Members of a club are *bounded* [read *bound*] by a long-term contract only insofar as the arrangement makes it easier to attain each one’s independent goals.” Elias L. Khalil, “Two Kinds of Order: Thoughts on the Theory of the Firm,” *Socio-Economics*, 1 Mar. 1999, at 157.
- “When asked if he was disappointed, [Jerry] Silverstein said, ‘I don’t know about disappointed. We’re *bounded* by a contract.’” Dave Lance, “Miami to Play Cardinals After TCU Says No,” *Dayton Daily News*, 2 Dec. 2003, at C1.

Bounded is correct, of course, for the past tense of the verb *bound* <they bounded up the hill>.

LANGUAGE-CHANGE INDEX

1. **binded* for past-tense *bound*: Stage 1
Current ratio (*is bound* vs. **is binded*): 7,363:1
2. *bounded* misused for past-tense *bound*: Stage 1
Current ratio (*bound by the contract* vs. **bounded by the contract*): 75:1

biographee. This seeming NEOLOGISM actually dates from 1841, but still it’s a relative newcomer compared to *biographer* (1702). Of course, many English words ending in *-graphy*, such as *biography*, *calligraphy*, and *cartography*, have agent nouns ending in *-er* even though there is no corresponding verb. But the *-ee* noun *biographee* is anomalous. (See -EE (A).) Still, the word can be useful, especially in book reviews—e.g.:

- “The *biographees*’ years of birth and death, places of birth, parentage and/or Welsh ancestors are indeed valuable genealogical data.” Lloyd Bockstruck, “The Raisin: More than a Shriveled Grape,” *Dallas Morning News*, 21 Oct. 1995, at C10.
- “But it’s clear that the roles of biographer and *biographee* have been correctly assigned.” Desson Howe, “Basquiat: Spray-Painted Valentine,” *Wash. Post*, 16 Aug. 1996, at N31.
- “There is none of that grotesque gap between style of biographer and style of *biographee* that can plague the form.”

Nicholas Lezard, “Sifting Fact and Fiction in Updike’s Life and Work,” *Evening Standard*, 24 Apr. 2014, at 44.

biopic (= a film that tells the story of someone’s life), a PORTMANTEAU WORD from *biographical picture*, is pronounced /bi-oh-pik/. It doesn’t rhyme with *myopic*, which has its accent on the second syllable.

bipolar disorder. See **manic depression**.

birth was used with some frequency in the Middle Ages as a verb. It fell into disuse, however, and has only recently been revived in standard AmE <she birthed four babies>. It often appears as a participial adjective <birthing room>. Some dictionaries label it dialectal. But given its usefulness and its long standing in the language, it should be accepted as standard.

LANGUAGE-CHANGE INDEX

birth as a verb: Stage 5

bishopric; diocese; see. These theological terms are closely related, even overlapping, but they can be treated as distinct. A *bishopric* is the position or rank of a bishop (or the district that the bishop is in charge of). A *diocese* is the district that a bishop is in charge of—in other words, identical with the alternative sense of *bishopric*. A *see* is a bishop’s seat of authority or jurisdictional headquarters. See **diocese**.

bitcoin. Lowercase.

bite > bit > bitten. While *bit*, the past-tense form, is recognized in most dictionaries as an alternative past participle, since 1825 or so it has been far less common than the standard *bitten*. Although the *OED* labels it archaic, the participial *bit* lives on in some SET PHRASES—e.g.:

- “Carolina Hurricanes general manager Jim Rutherford has *bit his lip* since the former Hartford Whalers moved south five seasons ago.” David Droschak, “Postseason Perks Up Canes Fans,” *Chattanooga Times/Chattanooga Free Press*, 9 June 2002, at C9.
- “Even Maher’s most ardent defender would probably agree, however, that Maher should have *bit his tongue* on the ‘cowardly’ comment. His timing was terrible.” Tom Dorsey, “‘Politically Incorrect’ Skewers Its Last Tonight,” *Courier-J.* (Louisville), 28 June 2002, at E2.
- “Jacobson’s has *bit the dust*.” Mary Kramer, “Who Will Ever Take Jacobson’s Place?” *Crain’s Detroit Business*, 19 Aug. 2002, at 9.

In most contexts, though, *bitten* is the preferred form—e.g.:

- “That probably would have happened by now had Barnes not been *bit* [read *bitten*] by a spider in Florida in May 1995.” Phil Richards, “A Few Sobering Thoughts,” *Indianapolis Star*, 19 Sept. 1996, at C1.
- “Neither Jensen nor Ashenbrenner has ever been *bit* [read *bitten*], which strikes me as somewhat amazing.” Doug Clark, “Shake, Rattle and Head for the Hills,” *Spokesman-Rev.* (Spokane), 1 May 1997, at B1.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

bit misused as a past participle for *bitten*: Stage 2
Current ratio (*had bitten* vs. **had bit*): 6:1

bitter cold. This is an age-old SET PHRASE in which *bitter* functions adverbially. (See ADVERBS.) It appears, for example, at the outset of Shakespeare's *Hamlet* (1602), where Francisco says: "'Tis *bitter cold*, and I am sick at heart" (1.1.6–7). The phrase *bitterly cold* is an example of HYPERCORRECTION.

bivouac. A. As a Noun. This word is primarily a noun denoting a short-term encampment, especially one with little or no shelter. E.g.:

- "With their plastic hard hats and sun-burnished skin, the migrant laborers and their construction-site *bivouacs* did not fit with the image of a modern city that China's leaders wanted to project." Edward Cody, "During Games, a Forced Vacation for Beijing's Migrant Workers," *Wash. Post*, 21 Aug. 2008, at A8.
- "His living room has the poised-for-departure air of a boho *bivouac*." Gerri Hirshey, "Sharing a Taste of Honey, on an International Scale," *N.Y. Times*, 30 Nov. 2008, CT §, at 1.

Phrases such as *temporary bivouac*, *bivouac camp*, and the like create redundancies. See REDUNDANCY.

And *bivouac* is misused when the context suggests a long-term settlement—e.g.: "A president who believes government is the answer to everything quite naturally looks to government for a solution to the Michigan Militia, the Montana Maniacs, the Kansas Kooks, the Idaho Idiots and whatever other nut cases might be out there on permanent fantasy *bivouacs* [read *maneuvers*]." Kevin O'Brien, "Anti-Terrorism Laws to Solve the Wrong Problems," *Plain Dealer* (Cleveland), 30 Apr. 1995, at C1.

B. As a Verb. As a verb meaning "to temporarily make camp or take shelter" or "to provide with temporary shelter," *bivouac* makes the past tense *bivouacked* and the present participle *bivouacking*.

biweekly; semiweekly. See BI-.

bizarre; bazaar. *Bizarre* (= startlingly odd) is occasionally misused for *bazaar* (= a market, esp. a collection of small shops or vendors offering a wide variety of goods). The tricky spelling of the second word, which comes from Persian by way of Hindi and Turkish, may lead some writers into this error—e.g.:

- "The thought of yet another library bake sale or classroom Christmas *bizarre* [read *bazaar*] makes Polly Mire cringe." Andrea Vogt, "Obscure Tax Law Could Aid Schools," *Spokesman-Rev.* (Spokane) (Idaho ed.), 24 Dec. 1997, at B1.
- "The Holiday *Bizarre* [read *Bazaar*] in December, Singing Valentines in February, selling entertainment books and candy, were some of the fund-raisers this year." Michelle McGrier, "Lake Zurich High Choir Visits New York," *Daily Herald* (Chicago), 21 Mar. 2002, Neighbor §, at 3.
- "Verona United Methodist Church, 798 Herron Ave., will hold its 16th annual Christmas and Homespun *Bizarre*

[read *Bazaar*] beginning at 9:30 a.m. Saturday." "Valley Notes," *Pitt. Post-Gaz.*, 9 Oct. 2002, at E4.

See WORD-SWAPPING.

LANGUAGE-CHANGE INDEX
bizarre misused for *bazaar*: Stage 1

black, vb.; blacken. Both verbs mean "to make or become black," but *black* is confined to the narrow, physical sense of using black polish <Frank blacked his boots>, whereas *blacken* is used in all other physical senses <the sky blackened> as well as in figurative senses <the candidate's mood blackened when the indictment was unsealed>.

But the most common figurative sense—in which *blacken* means something like "to vilify, defame"—is widely avoided because of its invidious association with race.

blackmail referred initially to rent payable in cattle, labor, or coin other than silver (i.e., *white money*). Originating in Scotland from Old Norse *mal* (meaning "lawsuit"), it came to denote a kind of protection money: payment that robbers extorted from landowners for exemption from their raids. Today the word applies to any menacing demand made without justification—i.e., extortion generally.

Since at least the late 19th century, the word has been a verb as well as a noun—e.g.: "Watergater E. Howard Hunt *blackmailed* the White House into paying him hush money." "Stone's 'Nixon' Film Rocks with Conspiracies," *Boston Herald*, 13 Mar. 1995, at 17.

blamable. See **blameworthy (B)**.

***blamableness.** See **blameworthiness**.

blame, v.t. In the best usage, one *blames* a person; one does not, properly, *blame* a thing *on* a person—e.g.: "I *blame* him *for* the fires." (Not: **I blame the fires on him*.) The collocation *blame it on* had no appreciable presence in the language till about 1900. Since then it has steadily become more common, especially in BrE. Blame it on Britons.

LANGUAGE-CHANGE INDEX
blame [the act or outcome] *on* [the actor or cause]

blamed it on him): 4:1

blameful. See **blameworthy (B)**.

blameworthiness; *blamableness. The latter is a NEEDLESS VARIANT.

Current ratio: 413:1

blameworthy. A. And culpable. Though the two words are etymologically equivalent, in 20th- and

21st-century usage the Anglo-Saxon *blameworthy* has tended to be used in noncriminal contexts, the Latinate *culpable* in criminal contexts. E.g.:

- “Are any of them *culpable* and at risk of indictment?” Andrew E. Serwer, “The Fall of a Buffett Wannabe,” *Fortune*, 28 Oct. 1996, at 30.
- “A federal judge in Kansas City levied \$15 million in punitive damages against R.J. Reynolds Tobacco . . . [He] wrote in his decision that ‘Reynolds’ conduct was highly *blameworthy* and deserving of significant punishment.’” Gordon Fairclough, “Reynolds Ordered to Pay \$15 Million,” *Wall Street J.*, 24 June 2002, at A6.

In all phases of Modern English, the Latinate *culpable* has always appeared more frequently than the Anglo-Saxon *blameworthy*.

B. And *blamable*; *blameful*. *Blameworthy* is the usual word meaning “deserving blame.” *Blamable* (so spelled—not **blameable*) is a NEEDLESS VARIANT.

Blameful = imputing blame; blaming. E.g.: “The Sacramento City Teachers Association points a *blameful* finger at the district.” Deborah Anderluh, “City District, Teachers Still at Loggerheads,” *Sacramento Bee*, 8 Mar. 1996, at B1. The word is occasionally misused for *blameworthy*—e.g.:

- “Gambling is not in itself a *blameful* [read *blameworthy*] activity.” David Spanier, “Poker,” *Independent*, 28 Oct. 1994, at 24.
- “Rosenblum also finds the unions *blameful* [read *blameworthy*] . . . They failed to communicate with their members and the community about what was truly at stake.” Stephen Franklin, “Book Reveals Agony Behind Copper Strike,” *Phoenix Gaz.*, 7 Feb. 1995, at D1.
- “‘I voted for it. I’m as *blameful* [read *blameworthy*] as everyone else,’ said Supervisor Roger Quindel.” Steve Schultze, “Million Dollar Pensions Attacked,” *Milwaukee J. Sentinel*, 6 Jan. 2002, at A1.

LANGUAGE-CHANGE INDEX
blameful misused for *blameworthy*: Stage 1

blanch; blench, v.i. The French word *blanc* (= white) is the root of both verbs, which long ago underwent DIFFERENTIATION. To *blanch* is to make (something) white. To *blench* is to become pale or white as blood withdraws from the surface of the skin—typically as a reaction to an emotional shock or stress. Despite the different meanings, AmE speakers long ago made *blanch* do the work of both words and never wholeheartedly embraced *blench*. In BrE, *blench* is rapidly losing ground to *blanch*, which now predominates in print sources by a 4-to-1 ratio.

Because *blench* has a second, older meaning (“to flinch; to shy away”), it can be ambiguous, as in this soliloquy:

I’ll have these players
Play something like the murder of my father
Before mine uncle. I’ll observe his looks.
I’ll tent him to the quick. If he do *blench*,
I know my course.

(*Hamlet* 2.2.557–61.) Did Hamlet expect his uncle to turn pale or to recoil? Either meaning works, but recoil-ing has more dramatic effect than simply blanching.

In AmE, *blanch* is pronounced /blanch/ or /blahnch/; only the latter pronunciation is used in BrE.

blandish; brandish. *Blandish* = to cajole; to persuade by flattery or coaxing. E.g.: “They were pounced on by the [congressional] whips and relentlessly *blan-dished* with promises of favors and political support.” Michael Wines, “The Budget Struggle,” *N.Y. Times*, 6 Aug. 1993, at A1.

Brandish = to wave or shake in a menacing or threatening way. E.g.: “One [raider] *brandished* a gun and the other a knife.” “Shop Raid Terror,” *Daily Record* (Baltimore), 13 Mar. 1995, at 9.

Misuses occur most frequently with the corresponding nouns, especially *brandishment* for *brandishment*—e.g.: “Bargaining with the touts was almost as difficult as staying civil with them; but neither was as difficult as resisting their *brandishments* [read *brandishments*] toward our sweet little thing.” David O. Seal, “Traveling by the Seat of Your Pants,” *News Trib.* (Tacoma), 16 Feb. 1994, Food/Family §, at 3.

LANGUAGE-CHANGE INDEX
brandishment misused for *brandishment*: Stage 1

blasphemous (= seriously insulting to people’s religious beliefs) is pronounced /blas-fə-məs/—not /blas-fee-məs/. Yet the verb *blaspheme* is pronounced /blas-feem/.

blatant; flagrant. Despite a fairly well-defined distinction, each word is misused for the other. What is *blatant* stands out glaringly or repugnantly; what is *flagrant* is deplorable and shocking, connoting outrage. A perjurer might tell *blatant* lies to the grand jury to cover up his *flagrant* breach of trust. Egregious criminal acts are *flagrant* <flagrant arson>, not *blatant*—e.g.: “No self-respecting country can permit the *blatant* [read *flagrant*] murder of four of its citizens to go unpunished.” “Cuban Jets vs. Unarmed Cessnas,” *Baltimore Sun*, 27 Feb. 1996, at A12.

Likewise, *flagrant* is sometimes misused for *blatant*—e.g.: “But all the singing performances were strong—Mary Westbrook-Geha as a *flagrantly* [read *blatantly*] unrepentant penitent.” Richard Dyer, “A Compelling ‘Balcony,’” *Boston Globe*, 15 June 1990, at 33. For the MALAPROPISM of misusing *flagrant* for *flagrant*, see **flagrant**.

The phrase **blatantly obvious* is a REDUNDANCY—e.g.: “That brought to mind—my mind, anyhow—a past convention when network in-house bias was so *blatantly obvious* [read *blatant*] that the GOP brass lodged a formal complaint about it.” Jim Wright, “Your Humble Swami Does It Again! (Applause),” *Dallas Morning News*, 22 Sept. 1996, at J7.

LANGUAGE-CHANGE INDEX
1. *blatant* for *flagrant*: Stage 2
2. *flagrant* for *blatant*: Stage 2

bleary-eyed (= having tired, watery, bloodshot eyes) is the standard spelling. **Blear-eyed* and **bleareyed*

are variants that, once common, have been in decline since the mid-20th century.

Current ratio (*bleary-eyed* vs. **blear-eyed* vs. **bleareyed*): 41:12:1

bleed > bled > bled. So inflected, even in figurative baseball uses—e.g.:

- “Rather than hitting those two-hop grounders to short-stop, I’ve *bled* [read *bled*] a couple through the infield lately.” Rich Rupprecht, “Baseball Spawns Its Own Language,” *Press Democrat* (Santa Rosa), 14 Mar. 1997, at C1.
- “Jeff Cirillo lined a double to left and scored when Matheny *bled* [read *bled*] a single to right.” Vic Feuerherd, “Brewers Squander Chance,” *Wis. State J.*, 31 Aug. 1997, at D5.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX
*bled for *bled*: Stage 1

BLENDS. See PORTMANTEAU WORDS.

blindman’s buff (= a game in which a blindfolded player tries to catch and identify any one of several other players) is the traditional term; it dates from about 1600. But *blindman’s bluff*, a 20th-century variant, is now common and almost equally acceptable.

Current ratio: 3:1

blintz; blintze. American dictionaries are about equally divided between these two spellings for the name of a rolled pancake stuffed with cottage cheese or another filling. But the predominant spelling today is *blintz*, which appears about ten times as often as the original Yiddish *blintze* in modern print sources.

bloc; block. Political groups or alignments are *blocs*, especially when the affiliates vote in lockstep fashion. *Block* serves in all other senses.

blond; blonde. A. As an Adjective. In French, the *-e* is a feminine tag, the spelling without the *-e* being the masculine. This distinction has generally carried over to BrE, so that *blonde* more often refers to women and *blond* more often refers to men. In AmE, though, there is a tendency to use *blond* in all senses—e.g.: “Currently there’s an ‘Absolut Dallas’ ad that pictures a *blond woman’s* tiara-adorned bouffant hairdo in the shape of a bottle.” Melanie Wells, “Absolut’s Eye-Catching Ads Command Teens’ Attention,” *USA Today*, 31 Jan. 1997, at B5.

Sometimes *blonde* is ill-advisedly applied to a man—e.g.: “It looks like these beautiful people are going to ride off into Madison Avenue bliss. But wait. The *blonde man* is kissing someone else. And that someone else is another man.” Cristina Rouvalis, “Ad Fanatics Will Revel in Best-of-Fest Commercials,” *Pitt. Post-Gaz.*, 27 June 1996, at D4.

When the word describes an inanimate object, the *-e* is invariably dropped <blond wooden chairs> <a honey-blond microbrewed beer>.

B. As a Noun. Though we may from time to time see *blond men* and *blond women* in print, when we see a reference to a *blonde* (or a *blond*) we almost always assume it’s a woman. To avoid appearing sexist, it’s best to refrain altogether from using this word as a noun. In fact, some readers will find even the adjective to be sexist when it modifies *woman* and not *hair*. Cf. **brunet(te)**. See SEXISM (D).

blow > blew > blown. So inflected. See IRREGULAR VERBS.

bluish. So spelled—not **blueish*.

Current ratio: 41:1

boast, vb. In the sense “to have (something desirable);” this word is objectionable primarily on grounds of being a CLICHÉ <the town now boasts 300 retail merchants>. It has been STANDARD ENGLISH since the early 19th century.

boatswain (= a ship’s officer in charge of the hull) is pronounced /boh-sən/. **Bosun*, **bo’s’n*, **bos’n*, and **bo’sun* are variant forms.

bobby socks. So spelled—preferably not **bobby sox*.

***bob wire.** See **barbed wire**.

bogey; *bogie; *bogy. *Bogey* = (1) an evil spirit, or (2) one over par on a golf hole. **Bogy* and **bogie* are variant spellings.

Current ratio (in order of headwords): 9:3:1

***boldface lie.** See **bald-faced**.

bologna. See **baloney**.

***boloney.** See **baloney**.

bombastic is sometimes misconstrued to mean “strident” or “violent.” Properly, *bombastic* (lit., “full of stuffing or padding”) means “pompous, highfalutin, overblown.” But the misunderstanding is all too common, perhaps because of the sound association with *bomb*—e.g.:

- “He is Action Man with a human outline, unlike the *bombastic* [read *barbarous*?] brutes incarnated in *Sly* or *Arnie*. As Hollywood is now committed to violent epics of convulsive crisis, unlike the old consensual social dramas the studios used to give us, Reeves is the man to have around.” Alexander Walker, “Kinetic Reeves on a White-Knuckle Ride,” *Evening Standard*, 29 Sept. 1994, at 32.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Only a plane crash. As if we have pushed these *bombastic* [read *dreadful*?] disasters down our hierarchy of fear, well below a new entry: terrorist attacks.” Editorial, “Again, Smoke Blackens the Sky,” *Chicago Trib.*, 13 Nov. 2001, at 18.
- “But the idea that the only legitimate response to that terrible day is to become as blind, bloodthirsty and *bombastic* [read *strident* or *violent*] as the terrorists themselves—the essence of Keith’s song—is insulting.” Julia Keller, “Toby Keith Out of Tune with Reality,” *Chicago Trib.*, 21 July 2002, Arts & Entertainment §, at 2.

LANGUAGE-CHANGE INDEX

bombastic misused in a violent sense: Stage 2

bona fide. A. Meaning. This Latin phrase, meaning “good-faith,” has been used as a legal term for “without fraud or deceit” (*Black’s Law Dictionary* 210 [10th ed. 2014]) since at least the 16th century. Outside legal contexts, its meaning has been subject to SLIPSHOD EXTENSION—from “guileless” to “genuine,” and later to “sincere” and even “very.” The steps are subtle. Most often, for example, “guileless” and “genuine” overlap: a genuine effort is one that is done in good faith. At other times, though, what is genuine (in the sense “authentic”) shows anything but good faith—e.g.:

- “Police said they are treating the incident as a *bona fide* [read *true*] assault.” Jonathan D. Silver, “Former Prosecutor in 2nd Knife Attack,” *Pitt. Post-Gaz.*, 4 Oct. 2002, at A1.
- “2000 Syrah. \$18. . . . A *bona fide* [read *real*] steal.” Paul Gregutt, “Cry Wolfe,” *Seattle Times*, 6 Oct. 2002, Pacific NW §, at 12.

In best usage, *bona fide* should always denote honesty—e.g.: “Consumers can also help further stigmatize the bad guys by supporting *bona fide* Internet marketers.” Robert Schroeder, “How Can We Halt the Spam Onslaught?” *Tulsa World*, 6 Oct. 2002, at G3.

As the extended uses of *bona fide* stray further from this classic sense and into the various meanings of “genuine,” the attachment to “honesty” likewise fades. It may mean “genuine” in the sense of “qualified”—e.g.: “What can a *bona fide* [read *qualified*] cruise expert tell you?” Judi Dash, “Get Your Bearings,” *News & Observer* (Raleigh), 6 Oct. 2002, at H1. Or it may mean “formally recognized”—e.g.: “Only in 1984 was SAD established as a *bona fide* [read *recognized*] medical condition.” Lyn Cockburn, “Fighting Winter Blues,” *Toronto Sun*, 31 Dec. 1995, Lifestyle §, at 46. Or it may just mean “real”—e.g.: “When there is a *bona fide* [read *real*] emergency, a medivac crew must respond faster than an ER doc.” J.B. Orenstein, “From Thin Air,” *Wash Post.*, 8 Oct. 2002, at F1.

In the nether reaches of these extended uses, *bona fide* becomes an amorphous and ornamental replacement for “real,” often with a jocular flavor of “true blue” or lending dignity to the mundane—e.g.:

- “Those who were there now have a *bona fide* [read *classic*] Angels moment about which to tell their children and grandkids.” Bob Keiser, “A Game Fans Will Remember,” *Daily News* (L.A.), 5 Oct. 2002, at S8.
- “As a *bona fide* Jersey Girl . . . I’m here to say that New Jersey has it going on, and then some.” Trish Boppert, “Hey New Jerseyans, Did You Hear the One About . . .,” *Record* (N.J.), 6 Oct. 2002, at O5.

B. Adjective or Adverb. *Bona fide* was originally adverbial, meaning “in good faith” <the suit was brought *bona fide*>. Today it is more commonly used as an adjective <it was a *bona fide* lawsuit>. The phrase is sometimes hyphenated when functioning as a PHRASAL ADJECTIVE, but it shouldn’t be.

C. Misspelled **bonified*. During the late 20th century, the spurious form **bonified* emerged—e.g.:

- “Calvin Klein’s unisex fragrance . . . is more like refreshing citrus water than a *bonified* [read *bona fide* or, better, *genuine*] perfume.” Michelle Trappen, “You Nose How It Is,” *Oregonian* (Portland), 29 Nov. 1995, at D4.
- “Much of the filming was done in a hospital setting, provided by Medstar, complete with a *bonified* [read *bona fide* or, better, *genuine*] nurse on the set to make sure everything was safe and authentic.” John Drybred, “A Meaty TV Role Has Him Passing Up the Hamburgers,” *Lancaster New Era*, 27 Dec. 1996, at 3.

On the reason for preferring *genuine* in those edits, see (A).

LANGUAGE-CHANGE INDEX

bona fide misspelled **bonified*: Stage 1

Current ratio: 676:1

D. Pronunciation. The phrase is pronounced /**boh**-nə fɪd/ or, less often, /**bon**-ə fɪd/. The pronunciation /**boh**-nə fr-dee/ is pedantic outside the law and precious even in legal contexts.

bona fides, n. A. And good faith; bonne foi. Though the adjective *bona fide* has been fully anglicized, the noun phrase *bona fides* has lost much ground—especially in AmE—to *good faith*. The trend should be encouraged. Perhaps the comparative infrequency of *bona fides* results from its pronunciation (/**boh**-nə fr-deez/), which sounds foreign and bombastic in comparison with *good faith*. The GALLICISM *bonne foi*, a variant, sounds still more so; fortunately, it is rare.

B. Meanings. The term *bona fides* has essentially three meanings: (1) “good faith” <he proved his *bona fides* through long dedication>; (2) “authenticity; the fact of actually being what one claims or seems to be” <the diploma proved her *bona fides* as a graduate of Princeton>; and (3) “proof of authenticity; credentials” <she could produce no *bona fides* showing that she was a graduate of the university>.

Sense 1, the traditional use, is now rare.

Sense 2, the product of SLIPSHOD EXTENSION, is fairly common. It can easily be improved with slight editing—e.g.:

- “Zinman long ago established his *bona fides* as a conductor willing [read *willingness* as a conductor] to do almost anything to help a soloist achieve his or her best.” Stephen Wigler, “Ambidextrous Fleisher Joins BSO for an Off-the-Wall Party,” *Baltimore Sun*, 8 Feb. 1996, at E4.
- “In Deloria’s view, Custer established his *bona fides* [read *himself*] as a psychopath by his frenzied assault on Jeb Stuart’s Confederates during the Battle of Gettysburg.” Patricia Ward Biederman, “Symposium Will Take a Closer Look at Custer,” *L.A. Times* (Valley ed.), 8 Aug. 1996, Calendar §, at B1.

And sense 3 follows hard upon sense 2, extending the slipshod extension still further—e.g.: “Having

finished a course of study, like a medieval apprentice he would need to produce something that established his *bona fides* [read *credentials*] in the craft.” “The Drag of Loss, the Flight of Youth,” *Portland Press Herald*, 14 Jan. 1996, at E6.

LANGUAGE-CHANGE INDEX

1. *bona fides* in the sense “authenticity”: Stage 4

2. *bona fides* in the sense “credentials”: Stage 2

C. Number. If the variable meanings of *bona fides*, together with its air of affectation, weren’t enough to make it a SKUNKED TERM, the grammatical dilemma it presents certainly is. Technically, of course, the noun phrase *bona fides* is singular: *this bona fides is*, not **these bona fides are*. Making *bona fides* singular sounds pedantic; making it plural is likely to offend those who have a smattering of Latin. Interestingly, this problem seems to occur only in senses 2 and 3 mentioned in (B)—e.g.:

- “Once the hero’s *bona fides are* [read *credentials are* or *authenticity is*] established, Clancy’s convoluted plot lumbers along like a runaway freight train.” Gene Lyons, “Jack in Action,” *Entertainment Weekly*, 23/30 Aug. 1996, at 115.
- “His campaign turf extends from the Republican hard right, where Dole’s conservative *bona fides are* [read *credentials are*] sometimes questioned.” Karen Hosler, “Kemp Makes Case for Diverse GOP,” *Baltimore Sun*, 14 Sept. 1996, at A1.
- “No matter how Republican the president may sound, Ickes’ liberal *bona fides are* [read *credentials are* or *commitment is*] questioned by none.” Michael Rust, “Dick Morris Leaves a Vacuum,” *Wash. Times*, 30 Sept. 1996, at 14.

Unfortunately, only a few careful writers will consciously avoid this usage. Most writers would never think to use the phrase at all, but the semi-educated—eager to impress—are likely to perpetuate the error.

boned; deboned; boneless. *Boned* describes something with bones either in <big-boned> or out <boned chicken>. In another sense, it is synonymous with *deboned* (which looks deceptively like an antonym) and *boneless*. Any one of these three terms might suffice in each of these sentences:

- “Do your *boneless* chicken breasts come out dry on the grill?” Dale Curry, “What’s New in BBQ?” *Times-Picayune* (New Orleans), 28 June 2001, Food §, at 1.
- “Prudhomme said he created the turducken by layering *deboned* chicken, duck, and turkey with stuffing *between each layer* [read *between the layers*].” Crystal Bolner, “The Stuff of Legends,” *Times-Picayune* (New Orleans), 23 Dec. 2001, Money §, at 1. See **between** (F).
- “Dave’s is the place to pick up *boned* chickens stuffed with crawfish or shrimp or eggplant or sausage.” Mary Tutwiler, “Real Food,” *Times-Picayune* (New Orleans), 28 Apr. 2002, Travel §, at 1.

Today *boneless chicken* is by far the most frequent collocation, followed distantly by *boned chicken* and even more distantly by *deboned chicken*. No bones about it.

boneless. See **boned**.

***bonified.** See **bona fide** (C).

bon mot /bohn moh/ = a well-turned phrase, witticism. The plural is traditionally formed in the French way—*bons mots* (pronounced /bohn mohz/). E.g.:

- “The ambassadorial corps, while justly renowned for *bons mots* and clever embassy patter, was even more brilliant.” Kevin Chaffee, “An Exotic Night in ‘Morocco,’” *Wash. Times*, 11 Dec. 1996, at C12.
- “Miss Piggy weighs in with *bons mots*.” “Picks & Pans,” *People*, 18 Aug. 1997, at 31 (photo caption).

But more commonly, the plural actually used is *bon mots*. This anglicized plural ought to be accepted on the same footing as *cul-de-sacs*—e.g.:

- “And people who imagine him eating canapes, sipping champagne and swapping *bon mots* with movie stars at Cannes and London have it all wrong, Jarvis said.” Thomas R. O’Donnell, “Film Office Director Skips Gritz on Trips,” *Des Moines Register*, 23 Mar. 1997, at 1.
- “The Duchess’s *bon mots* festooned each window, serving as an understated backdrop to some rather gaudy frocks and baubles.” Tunku Varadarajan, “New York Gasps at Wallis and Edward Show,” *Times* (London), 11 Aug. 1997, at 5.

Current ratio (*bon mots* vs. *bons mots*): 1.2:1

See PLURALS (B).

bonne foi. See **bona fides**, n. (A).

bon vivant (/bohn vee-vahn/). **A. And *bon viveur** (/bohn vee-**vuur**/). Both mean “a person who lives well, esp. the companionable type who enjoys good wine and fine food.” *Bon vivant* is standard in AmE and BrE.

**Bon viveur*, a form virtually unknown in AmE, is a BrE variant—but little-known even there. The *OED* labels it a “pseudo-French” substitute for *bon vivant*—e.g.: “A *bon viveur* [read *bon vivant*] who enjoys good wine, he is widely read and has broad interests in the arts and music.” “Hail to the Chief,” *Sunday Telegraph*, 13 Oct. 1996, at 36. *Bon vivant* vastly predominates in all varieties of English.

Current ratio (*bon vivant* vs. **bon viveur*): 6:1

B. Plural Form. The traditional view is that the plural form is preferably the French *bons vivants*—e.g.: “Texas’ problems against Baylor today don’t end with the conclusion of the champagne brunch investigation and the eligibility of its *bons vivants*.” Jonathan Feigen, “Concerns Aplenty Remain for UT vs. Baylor,” *Houston Chron.*, 2 Nov. 1996, Sports §, at 4.

But the phrase is often considered anglicized enough to use the English plural *bon vivants*. Indeed, the English form is far more common—e.g.:

- “When ‘60 Minutes’ reported this so-called ‘French Paradox’ several years ago, vin rouge sales surged as *bon vivants* hoped for some undiscovered antioxidant or a ‘miracle’ nutrient in the vin ordinaire drunk so copiously

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

by the French with their high-fat diets.” Fran Price, “Variety Balances Fatty Diet,” *Richmond Times-Dispatch*, 16 Oct. 1996, at F3.

- “Passengers who have sailed on Marco Polo have described themselves as feeling like *bon vivants* aboard.” Arline Bleecker, “Exotic Cruise Could Become Fashionable,” *Orlando Sentinel*, 27 Oct. 1996, at L4.
- “There were the *bon vivants* who remained anchored to their bar stools, hoisting just one more brew in honor of the Yankees.” Frank Bruni, “World Champs: The Fans,” *N.Y. Times*, 28 Oct. 1996, at C6.

See PLURALS (B).

LANGUAGE-CHANGE INDEX

bon vivants as a plural: Stage 5

Current ratio (*bon vivants* vs. *bons vivants*): 2:1

bookkeeping; accounting. *Bookkeeping* (so spelled, it and *bookkeeper* being the only words in the English language with three consecutive pairs of doubled letters) is the uncritical recording of debts and credits or summarizing of financial information, usually about a business enterprise. *Accounting* differs from bookkeeping because it is not mechanical: it requires judgment about such issues as when a specified type of transaction should be recorded, how the amount of the transaction should be calculated, and how a balance sheet and income statement should be presented.

borborygmus (= intestinal rumbling caused by a gassy stomach) makes the standard plural *borborygmi* /bor-bə-rig-mi/—not **borborygmuses* (a rare variant). Cf. **flatulence**.

born; borne. Both are past participles of *bear*—*borne* for general purposes <she has borne a child> <the burden he has borne> and *born* only as an adjective or as a part of the fixed passive verb *to be born* <she was born in 1987>. *Bear in mind* yields *borne in mind*—e.g.:

- “The trial judge, Justice Tucker, said that the Crown had *born* [read *borne*] in mind that a trial of Mr. Turner before that of Asil Nadir . . . would be ‘lengthy and costly.’” Frank Kane, “Analysts Cast Adrift by Code of Silence,” *Guardian*, 2 Oct. 1993, at 33.
- “That point should be *born* [read *borne*] in mind today as Colorado voters review a long list of important primary elections in races for the U.S. Senate.” *Denver Post*, 13 Aug. 1996, at B6.

This misuse provides evidence of the great difficulty that modern writers have with homophones. Inevitably, the more common form—through confusion—assimilates to the less common form. Hence, although *born* is virtually never mistakenly made *borne*, the opposite error is common—e.g.:

- “They combed student records for anyone who might have *born* [read *borne*] a personal grudge against the academics who received the packages.” Ian Katz, “Death in the Post,” *Guardian*, 15 May 1995, at T2.
- “It is clearly unfair that the bulk of the burden should be *born* [read *borne*] by the owners of existing homes and businesses in the city.” “Phoenix Should Make Developments Pay Their Own Way,” *Ariz. Republic*, 25 May 1995, at B6.
- “Human service agencies that have seen their funding stop have *born* [read *borne*] the brunt of the standoff thus

far.” Karen Langley & Kate Giammarise, “Plan to Override Budget Fails,” *Pitt. Post-Gaz.*, 26 Aug. 2015, at A1.

LANGUAGE-CHANGE INDEX

born misused for *borne*: Stage 1

Current ratio (*borne by him* vs. **born by him*): 31:1

bosk; *boscage; *boskage. All three mean “a thicket.” The first is the standard term. The second and third are NEEDLESS VARIANTS. But if the choice were between **boscage* and **boskage*, the former would be considered the better spelling.

Current ratio (*bosk* vs. **boscage* vs. **boskage*): 4:3:1

both. A. Both . . . and. These CORRELATIVE CONJUNCTIONS must frame matching sentence parts—e.g.:

- “He was trying *both* to establish himself in his new league *and* to justify the contract extension he was given through 2002.” Phil Rogers, “Indians’ Grissom Showing He’s Big-Time Player,” *Chicago Sun-Times*, 11 Oct. 1997, at 3. (The conjunctions frame two infinitives.)
- “Gunshot residue was observed on Mr. Foster’s right hand, consistent *both* with the test firings of the gun *and* with the gun’s cylinder gap.” Jerry Seper, “Starr Probe Finds Foster Killed Himself,” *Wash. Times*, 11 Oct. 1997, at A1. (The conjunctions frame two prepositional phrases beginning with *with*.)
- “Immunocompromise presents unique challenges *both* to the pet lover *and* to the veterinarian involved.” Robin Downing, “Illness Doesn’t Mean Separation,” *Denver Post*, 12 Oct. 1997, at D8. (The conjunctions frame two prepositional phrases beginning with *to*.)

See PARALLELISM.

B. *Both . . . as well as. This construction is both unidiomatic and verbose for *both . . . and*. E.g.:

- “But I think it should be obvious—*both* to the characters *as well as* [read *and*] to the reader.” Denise Gess, “Susan Lucci’s Next Movie of the Week,” *News & Observer* (Raleigh), 14 Sept. 1997, at G4.
- “The bank operations there will include *both* branch business *as well as* [read *and*] the bank’s commercial-vault business.” Mark Mensheha, “First National Bank Plans to Open Branch on North Side,” *San Antonio Bus. J.*, 10 Oct. 1997, at 6.

LANGUAGE-CHANGE INDEX

**both . . . as well as* for *both . . . and*: Stage 2

C. Redundancies with. Several wordings with *both* cause redundancies. One is **both . . . each other*—e.g.:

- “Earlier, *both sides had blamed each other* [read *each side had blamed the other*] for the error that saw tax revenues collected when they shouldn’t have been.” Jerry Graff, “Edinburgh Treasurer Wants Full Tax Report,” *Indianapolis News*, 31 July 1995, at D8.
- “*Both men knew each other* [read *The men knew each other*] and lived in the same general area, authorities said.” “Man, 19, Arrested in Fatal Shooting,” *San Diego Union-Trib.*, 25 May 1996, at B2.
- “Brown said negotiations could produce a good substitute for Proposition L if *both sides treated each other* [read *each side treated the other* or *the two sides treated each other*] with respect, something notably absent in the campaign.” David R. Baker & Edward Epstein, “Brown Suggests Compromise on S.F. Growth Policy,” *S.F. Chron.*, 15 Nov. 2000, at A17.

Another is **both alike*—e.g.: “This makes treating *both alike* [read *the two alike*] difficult” Daniel F. Akerson, “Let the Innovators Innovate,” *Investor’s Bus. Daily*, 8 Apr. 1996, at A2. Still another is **both . . . similar*—e.g.: “In other words, the mission of *both* [read *the two*] state agencies is *similar*.” Garvey Winegar, “Money Source of Friction Between Outdoor Agencies,” *Richmond Times-Dispatch*, 17 Jan. 2001, at E2. See REDUNDANCY.

D. *Both (of) the*. Though the idiom is falling into disuse, *both the* (or *both these*) has a fine pedigree and continues in formal English—e.g.:

- “*Both these* movements are thus defined by Euclid.” James Odell, *An Essay on the Elements, Accents, and Prosody of the English Language* 60 (1806).
- “The hazard, in *both these* respects, could only be avoided, if at all, by rendering that tribunal more numerous.” *The Federalist*, No. 65, at 398 (Alexander Hamilton) (Clinton Rossiter ed., 1961).

The alternative phrasing, *both of the* (or *both of these*), is somewhat more common in AmE.

E. **Both (of) the last; *both (of) the last two*. These phrases are unidiomatic and unnecessarily wordy for *the last two*—e.g.:

- “One aspect of the game the Vikings need to work on is breaking the full-court press, which plagued them in *both of* [delete *both of*] the last two losses.” Jeff Zeigler, “ECSU Hopes to Rebound After Taking Short Break,” *Virginian-Pilot* (Norfolk), 18 Dec. 1994, at 19.
- “The fact that so many municipalities changed hands in *both of the last* [read *the last two*] municipal contests suggests that Paraguayan politics is getting more sophisticated than old stereotypes suggest.” “Burt Wins in a Polarised Capital,” *Latin Am. Weekly Rep.*, 28 Nov. 1996, at 549.
- “Huddersfield have conceded late goals in *both of* [delete *both of*] their last two Championship matches.” “Big Match Guide,” *South Wales Echo*, 11 Sept. 2015, at 54.

***boughten.** See **buy (A)**.

bouillon. See **bullion**.

bountiful; bounteous. *Bounteous* is poetic or literary for *bountiful*, which is generally the preferable and the more frequently occurring term.

Current ratio (*bountiful* vs. *bounteous*): 4:1

bouquet (= [1] a flower arrangement meant to be carried; nosegay; [2] a compliment; or [3] the aroma of a particular wine) is preferably pronounced /bookay/—not /boh-/.

bourgeois; *burgeois. This term, pronounced /boorzwhah/, means “a member of the middle class” (which is called, collectively, *bourgeoisie* /boorzwhah-zee/). The first spelling (with the *-ou-*) is standard; the second is a variant form. Often the term, which is almost always disparaging, is used attributively as an adjective <a philistine petty bourgeois existence>.

The mass noun *bourgeoisie*, by the way, takes a singular verb when it functions as subject <the bourgeoisie is disillusioned>. A loanword from French, *bourgeoisie* (= citizenry) expanded in meaning after the Industrial Revolution to refer to either (1) the middle class or (2) in Marxian theory, the economically supreme class that owns capital, property, and the means of production. The erroneous spelling **bourgeoisie* is surprisingly common:

- “Her examples, drawn from mid-twentieth century Britain, include some of the very, very rich (allowed to spend excessively, have flamboyant divorces, look down on the *bourgeoisie* [read *bourgeoisie*].” Sara Meadows, *The Child as Social Person* (2009).
- “After the hurly-burly and the social animation of Père Lachaise, where many local families go to picnic, we found the Cimetière Montparnasse in the 14th, the burial place of Beckett and his wife, Suzanne, austere and clinical, close to where they had lived, very much the resting place of the haute *bourgeoisie* [read *bourgeoisie*].” Hugh Oram, “An Irishman’s Diary,” *Irish Times*, 25 Apr. 2011, Opinion §, at 15.
- “What the *bourgeoisie* [read *bourgeoisie*] engendered was a Creole industrial enterprise centred on sugar.” G. Roger Knight, *Sugar, Steam and Steel: The Industrial Project in Colonial Java, 1830–1885* 204 (2014).

boutique (= [1] a small shop that sells fashionable items, or [2] a firm that specializes in a narrow array of services) is preferably pronounced /booteek/—not /boh-/.

bowdlerize (= to remove all the passages in a book, play, etc. containing offensive and esp. sexual references) is preferably pronounced /bowd-lə-rīz/—not /boh-d-/. The term derives from the name of Thomas Bowdler (1754–1825), who expunged all the sexual and scatological references from his edition of Shakespeare’s plays (1818).

boycott; embargo. While both terms refer to the suspension of trade with a certain person, company, state, or nation, the difference is how the suspension is imposed. Historically, a *boycott* is an organized popular protest (the word comes from Capt. C.C. Boycott, an English landlord who was stigmatized by his Irish tenants for raising rents in 1880), while an *embargo* is imposed by a government (or, in the case of a *news embargo*, by the originator of the story). So even if the U.S. government were to lift its trade *embargo* against Cuba, the exile community in Miami might still *boycott* Cuba as long as it remained communist.

boyish. See **girlie**.

BRACKETS. See PUNCTUATION (P).

braggadocio (= excessively proud talk) is preferably pronounced /brag-ə-dō-shee-oh/—not /brag-ə-dō-see-oh/.

Brahmin; Brahman; Brahma. For people, the spelling *Brahmin* (or *Brahman*) denotes (1) the highest caste or a member of that caste in classical Indian society; or (2) a member of upper-class New England society. *Brahmin*, the older spelling, is preferred <a Brahmin holy man> <a Boston Brahmin>. The popular breed of cattle originating in India are *Brahman* or *Brahma* cattle. But in reference to a specific sex, the males are almost always *Brahma* bulls, whereas the females may be *Brahma* or *Brahman* cows.

brake; break. A *brake* is a device that slows something, esp. to a halt. *Break* is a multisense word, the most common meanings being (1) a sudden separation into pieces, (2) a snapping off or detachment, and (3) a penetration through the surface of (something).

Sometimes the two are erroneously interchanged, especially in reference to the brakes on a vehicle—e.g.:

- “Police said the truck, driven by LeRoy Anthony Gaul, 59, was approaching an intersection when its *breaks* [read *brakes*] failed.” “Murder Suspect Nabbed in Mason City,” *Des Moines Register*, 14 Oct. 1998, at 3.
- “Survivors told how they shouted at the driver to slow down just before he lost control—he told police on the scene that his *breaks* [read *brakes*] failed.” “Relatives Fly Out as South Africa Crash Probe Launched,” *Evening News* (Scotland), 28 Sept. 1999, at 3.

The words also function, of course, as verbs: a person may *brake* a car (apply the brakes) or *break* a bowl (drop it and watch it smash into pieces). But what does one do to a fall? The traditional idiom is to *break* (i.e., interrupt) a fall. The *OED* cites two 19th-century examples, the earlier being by Thomas Babington Macaulay. Some modern writers, however, have misunderstood the idiom and replaced *break* with *brake* (= to slow down). Though perhaps understandable, the error is an error nonetheless—e.g.:

- “You had no way to *brake* [read *break*] your fall, and spent the post-apex part of the journey screaming in terror as the pavement rushed up.” James Lileks, “I Can’t Warm Up to Work When It’s So Nice Outside,” *Star Trib.* (Minneapolis), 2 May 1999, at B3.
- “That wasn’t enough to *brake* [read *break*] the fall from grace.” Steve Hummer, “Is This Fall Slump Becoming Normal?” *Atlanta J.-Const.*, 27 Oct. 1999, at D1.

Modern technology, here as elsewhere, has complicated this usage. Consider this sentence: “It must then pop a parachute and power on retro-rockets to *brake* [read *break*?] its fall.” Kathy Sawyer, “NASA Goes for a Martian Pole in One,” *Wash. Post*, 3 Dec. 1999, at A3. Since the retrorocket is indeed a kind of *brake*, the sentence straddles two idioms.

LANGUAGE-CHANGE INDEX

1. *break* misused for *brake*: Stage 1
Current ratio (*brake pedal* vs. **break pedal*): 89:1
2. **brake a fall* for *break a fall*: Stage 1
Current ratio (*break their fast* vs. **brake their fast*): 47:1

brandish. See **blandish.**

brand-new, adj. So spelled (and hyphenated)—preferably not **bran-new*. The phrase is sometimes written

bran'-new to show that the *-d* is usually dropped when the word is pronounced. Although sounding the *-d* in speech is more than a little pretentious, the contracted written form is unnecessary.

Current ratio: 80:1

brassiere (the women’s undergarment) is, oddly enough, sometimes confused with *brazier* (= [1] someone who works in brass; or [2] a pan used for holding burning coals), which is pronounced /**bray**-zhər/. In the 1950s, an Oklahoma legislator questioned the president of the University of Oklahoma, George Lynn Cross, about why the taxpayers’ hard-earned money had been spent on women’s undergarments. Cross calmly explained that the Egyptian brazier (in sense 2), along with some burial jewelry, had been acquired for a university museum. Randy Krehbiel, “George Cross: The Inimitable OU President,” *Tulsa Trib. & Tulsa World*, 24 Apr. 1994, at N1.

Although the French pronunciation of *brassiere* is /brah-si-er/, the standard American pronunciation is /brə-**zeer**/. In BrE, it’s /**braz**-yə/.

breach, n.; broach; breech. *Breach* (= [1] n., an opening or gap; or [2] vb., to break open) can be a troublesome word. In general usage, it is confused with two other words: *breech*, n. (= [1] buttocks; or [2] the lower or back part [of something, as a gun]), and *broach*, v.t. (= [1] to make a hole in [something] to let out liquid; or [2] to bring up for discussion). The confusion of *breach* with *breech* occurs most often when writers mistakenly use the latter where *breach* belongs—e.g.:

- “To fill the *breech* [read *breach*], factor in how much income your investments might spin off.” “How to Put a Price Tag on the Retirement You Want,” *Tampa Trib.*, 5 Nov. 1996, Bus. & Fin. §, at 7.
- “She had ordered them all to sit, a *breech* [read *breach*] of protocol, but she wanted them to realize only their tasks of discovery mattered now.” Karen Harper, *The Queen’s Cure* 238 (2002).

But *breech birth* (= the delivery of a baby buttocks-first or feet-first) is sometimes wrongly made **breach birth*, an error that has been on the rise since 1950—e.g.:

- “The AMA wanted the bill altered to allow doctors to perform the procedure if they became afraid for the mother’s life in a *breach* [read *breech*] birth.” Nancy E. Roman, “AMA Backs Bill to Ban Partial-Birth Abortion,” *Wash. Times*, 20 May 1997, at A1.
- “Called Danzante carvings, the panels show a woman writhing during a *breach* [read *breech*] birth.” “Christmas in Oaxaca—Tradition with a Twist,” *Milwaukee J. Sentinel*, 23 Nov. 1997, Travel §, at 1.

For *breeches* (= pants), see **breeches**.

The lapse with *broach* occurs when someone mistakenly writes of **breaching a topic* or *subject*—e.g.:

- “When Faldo *breached* [read *broached*] that subject to his wife of nine years, Gill wasn’t exactly overjoyed.” Steve Hershey, “Changes in Life Agree with Faldo,” *USA Today*, 16 Apr. 1996, at C2.
- “When rumors regarding Kordell Stewart first surfaced, many talk-show callers attempted to *breach* [read *broach*]

the topic.” James M. Rossini Wilkins, “Get the Facts Straight,” *Pitt. Post-Gaz.*, 12 Jan. 2002, at D3.

The meanings of *breach* and *broach* are similar only in reference to dikes or levees or walls (*breach* = to break open; *broach* = to make a hole in). E.g.: “Less than three months ago—in the immediate aftermath of the *breaching* of the Berlin Wall—the Chancellor’s closest aides were predicting that five to eight years might still be needed before unity became a reality.” David Marsh, “Kohl Takes the Burden of Unity on His Shoulders,” *Fin. Times*, 22 Feb. 1990, at 3.

It’s awkward to broach this subject, but sometimes a writer seems thoroughly befuddled. After a well-publicized tiger escape, a journalist led his account with this sentence: “The San Francisco Zoo was closed to visitors Wednesday as investigators tried to figure out how Tatiana *broached* 20-foot-high walls and a 15-foot-wide moat and attacked three men before being shot and killed by police.” Dan Chapman, “Eye on the Tiger,” *Atlanta J.-Const.*, 27 Dec. 2007, at D1. Tatiana got out, to be sure, but not by making a hole in the wall. And how, pray tell, does one “broach a moat”? Tatiana seems to have scaled the wall and crossed the moat.

LANGUAGE-CHANGE INDEX

1. *breech* for *breach*: Stage 1

Current ratio (*breach of protocol* vs. **breech of protocol*): 21:1

2. **breach birth* for *breech birth*: Stage 1

Current ratio (*breech birth* vs. **breach birth*): 9:1

3. *breach* for *broach*: Stage 1

Current ratio (*broached the subject* vs. **breached the subject*): 310:1

breach, v.t. Despite a rumor that some crotchety law professors have been spreading, one can *breach*—not just *break*—a contract, a promise, or the peace. Using *breach* in figurative senses is a very modest extension of the old literal sense “to make a breach in (a wall, boundary, etc.)” Indeed, the *OED*’s first citation for the verb is this one from Boorde in 1547: “[Obliviousness] may come to young men and women when their mind is *breached*” (spelling updated).

And the figurative meaning appears routinely in well-edited writing—e.g.:

- “In August, a jury found the diocese had *breached* its duty to parishioners when it failed to probe claims of sexual abuse.” “News from Every State: Connecticut,” *USA Today*, 8 Sept. 1997, at A16.
- “The lawsuit filed in Washington state court claims that US Airways *breached* its contract with Boeing.” “Briefly,” *L.A. Times*, 13 Sept. 1997, at D2.

breach, more honored in the. Strictly speaking, this phrase refers to an unjust rule that is better broken than obeyed. Hence in Shakespeare’s *Hamlet*, where the phrase originated, Hamlet says that the Danes’ riotous drinking “is a custom / More honored in the breach than in the observance” (1.4.17–18). But

writers frequently misapply the phrase to a just rule that, in practice, is often broken—e.g.:

- “It is an American custom (perhaps *more honored in the breach* [read *more often breached than observed*]) as well as a Chinese one to show respect for one’s elders.” Judith Martin, “Ingenuity Can Overcome This Language Barrier,” *Chicago Trib.*, 8 Oct. 1989, at C6.
- “Fireworks laws, like speeding laws—and increasingly, banking and accounting laws—are ‘customs *more honored in the breach*’ than in the observance, as Hamlet might have put it.” Editorial, “Observing the Breach,” *St. Louis Post-Dispatch*, 3 July 2002, at B6. (The quotation is inapt: the writer couldn’t possibly be encouraging the violation of these laws.)
- “The 1917 Constitution affirmed labor rights, and those rights, though *more honored in the breach than the observance* [read *more often breached than observed*], could be upheld by the state at the expense of capitalists.” Colin Danby, “Firms in a Neoliberal Transition: The Case of Mexico 1990–1994,” *J. Econ. Issues*, 1 Sept. 2002, at 581.

LANGUAGE-CHANGE INDEX

more honored in the breach in reference to an often-broken rule: Stage 4

bread and butter. This construction is most commonly considered a COLLECTIVE NOUN phrase calling for a singular verb—e.g.:

- “An editor must never forget where his *bread and butter* (or cake) *comes* from.” William Targ, “What Is an Editor?” in *Editors on Editing* 4, 27 (Gerald Gross ed., rev. ed. 1985).
- “WestJet’s *bread and butter* is still short-haul flights in the West.” Brent Jang, “Ottawa Must Open the Skies in One-Sided Airline Game,” *Globe & Mail* (Toronto), 4 May 2001, at B9.
- “While most major casino companies base their biggest operations in Las Vegas, Harrah’s *bread and butter* is locals-oriented casinos spread all over the country.” Christina Brinkley & Joseph T. Hallinan, “Riverboat Casinos Are Flush Despite Soft Economy,” *Wall Street J.*, 23 May 2001, at A2.

A plural verb (which appears in print sources only a quarter as often) tends to seem pedantic—e.g.: “Nation didn’t quite throw in the towel on live music . . . , but its *bread and butter are* [read *is*] the dance parties that fill the place Wednesday through Saturday.” Eric Brace, “Some Things That Went Bump in the Nightwatch,” *Wash. Post*, 29 Dec. 2000, at T5. See SUBJECT-VERB AGREEMENT (D).

break. See **brake**.

breakdown = (1) failure <the breakdown of the bus didn’t delay them long>; or (2) subdivision <the breakdown on the financial statement showed which subsidiaries owed the most in taxes>. Sense 1 is much older (ca. 1832) and has long been established. Sense 2 was once considered OFFICIALESE, especially after it first appeared in the mid-20th century, but today is generally viewed as natural and useful.

break-in, n. So hyphenated.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

breath; breathe. The first is the noun, the second the verb. But *breath* (/breθ/) is often mistaken for *breathe* (/breɪθ/)—e.g.:

- “It was as if the questioner could not fathom the fact that the carrier of two X chromosomes would be able to *breathe* [read *breathe*] the same rarefied air as men.” Kitty Kelley, “Washington’s New Wimp Factor,” *N.Y. Times*, 28 Nov. 1992, at 13.
- “After all, to stretch, you have to slow down, *breath* [read *breathe*] deeply, relax.” Theresa McCourt, “Injuries Sometimes Start in the Head,” *Sacramento Bee*, 16 Oct. 1996, at F5.
- “Owen says his daughter’s throat was so swollen she could hardly *breath* [read *breathe*].” Camilla Mortensen, “Kids: Don’t Drink the Toxic Water,” *Eugene Weekly*, 26 May 2011, at N1.

LANGUAGE-CHANGE INDEX
breath misused for *breathe*: Stage 1

breathable. So spelled—not **breatheable*. See MUTE E.
Current ratio: 205:1

breathe. See **breath**.

breech. See **breach**, n.

breeches; britches. The word *breeches* (= pants, esp. short ones) dates from before the 12th century. *Britches*, an altered form of *breeches*, dates from the early 19th century. Both are pronounced /brɪtʃ-ɪz/, and both are used today—e.g.:

- “*Breeches* and jodhpurs are her usual attire.” Catharine Schaidle, “Dunlap Woman Is Fully Trained in Shoeing Horses,” *Peoria J. Star*, 19 Nov. 2000, at B5.
- “Kors’ fox-hunt basics included slim, stretchy *britches* and jodhpurs.” Libby Callaway, “Lauren and Kors Are Hot to Trot,” *N.Y. Post*, 15 Feb. 2001, at 18.

Interestingly, *breeches* is almost a FORMAL WORD, while *britches* verges on DIALECT.

The expression *too big for your britches/breeches* can be read literally to mean that you no longer fit into your pants or, more commonly, that you are overconfident or cocky—e.g.: “One thing we don’t cotton to in Arkansas is getting *too big for your britches*. I’d say ‘breeches,’ but that would be getting *too big for them*.” Anon., “Newly Slim Governor’s Pants Too Tight,” *Arkansas Times*, 13 Oct. 2005, at 18. In this SET PHRASE, the spelling is invariably *britches*, not *breeches*.

breed > bred > bred. So inflected. Yet the ill-bred form **breded* (common in the 18th century but not since then) still sometimes appears. Note that in the following examples, the first two instances are literal, the last two figurative. Either way, the past tenses should be *bred*—e.g.:

- “She also *breded* [read *bred*] and exhibited Afghan hounds.” Mary Thompson, Pilot, Engineer, Autism Activist,” *Boston Herald*, 10 May 1998, at 79.
- “They have been bullied and *breded* [read *bred*] out of existence by cousin trout species.” Mike Taugher, “Recasting Conservation,” *Albuquerque J.*, 23 Aug. 1998, at B1.
- “As confusion about how much reimbursement the township expected *breded* [read *bred*] new misunderstandings Thursday, McKarski confirmed that township fees are about \$25,000.” Matt Assad, “City Officials Fear Demands Could Doom a Landfill Deal,” *Morning Call* (Allentown, Pa.), 20 Feb. 1998, at B1.

- “Phil *breded* [read *bred*] controversy,” Jay Mariotti, “Jackson Gets the Last Word—and It’s ‘No,’” *Chicago Sun-Times*, 22 June 1998, at 82.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX
**breded* for past-tense *bred*: Stage 1
Current ratio (*bred* vs. **breded*): 3,289:1

brethren. The plural form *brethren* has survived most prominently in contexts involving religious, legal, and fraternal organizations—almost always in reference to people who aren’t brothers by birth.

Sometimes, though, *brethren* is used literally or figuratively in the context of tribes, allies, and even colleagues—e.g.:

- “He just wishes more Public League schools would mimic their suburban *brethren* by prominently displaying their trophies the way those institutions do.” Barry Temkin, “New Lift for Old Rivalry,” *Chicago Trib.*, 6 Sept. 1996, Sports §, at 12.
- “They saw their Tutsi *brethren* massacred by the hundreds of thousands in Rwanda in 1994.” “World & Nation Briefs,” *Columbian* (Vancouver, Wash.), 25 Oct. 1996, at A4.
- “The warlord’s superior military might is the main reason the Taliban is prepared to negotiate with him, despite the supposedly intolerable support he almost certainly receives from Russia and his *brethren* in Uzbekistan.” Alex Spillius, “An Opponent the Taliban Would Love to Subdue,” *Daily Telegraph*, 25 Oct. 1996, at 20.
- “These days things have leveled out for the musical *brethren* of Campagna and Carter—both of whom sadly personified the concept of ‘Live fast, die young.’” Hunter Hawk, “And the Punk Band Will Play On,” *Dallas Morning News*, 13 Aug. 2015, at E1.

Is *brethren* male-specific? Although courts have considered the word generic in some contexts, most readers are unlikely to see it as gender-neutral. The word is unlikely to flourish in AmE because of its perceived SEXISM. Nor does *brethren and sistren* seem likely to catch on, *sistren* being the analogous archaic plural of *sister*. Unlike its male sibling, *sistren* is now chiefly dialectal.

Breton. See **Briton** (B).

BREVE. See DIACRITICAL MARKS.

bribery. See **extortion**.

bridal; bridle. These two are sometimes the victims of WORD-SWAPPING. *Bridal*, adj., = of, for, or relating to a bride or wedding. *Bridle*, n., = part of a horse’s harness. But instances do occur in which writers misuse *bridal* for *bridle*—e.g.: “A horse *bridal* [read *bridle*] hangs around her neck like a necklace or dog leash.” Lynn Pyne, “Don’t Chicken Out: See Photos Seized by Cops,” *Phoenix Gaz.*, 28 May 1994, at D3.

The opposite error also occurs—e.g.: “It is also supposed to be symbolic of the canopy once held over the *bridle* [read *bridal*] couple to protect them from the ‘evil eye.’” Monie Heath, “Wedding Customs Have Roots in History,” *Herald-Sun* (Durham, N.C.), 27 Mar. 1994, at G5. But sometimes, as one might expect, the writer isn’t erring at all but is having fun—e.g.: “It was

a wedding with a true *bridle* party. Dillon arrived in a pony-drawn carriage.” Tracey Thomas, “Wedding Captures the Spirit,” *Hartford Courant*, 4 July 1995, at C6.

LANGUAGE-CHANGE INDEX

1. *bridal* misused for *bridle*: Stage 1

2. *bridle* misused for *bridal*: Stage 1

Current ratio (*bridle path* vs. **bridal path*): 20:1

***bride-elect.** See **bride-to-be**.

bridegroom. See **groom**.

brideprice; dowry. *Brideprice* = in marriage customs of some cultures (mostly in Asia), the money or goods that pass from the prospective groom or his family to the bride or her family. *Dowry* = money or goods passing from the bride’s side to the groom’s. Neglected by many dictionaries (though not by *W3* or *RH2*), the term *brideprice* is established among anthropologists. It is an unfortunate label because it helps perpetuate the myth that in some cultures families sell their daughters into marriage. Some scholars have suggested *bride-wealth* and *bridecost* as alternatives, but the misleading label appears, for the time being, to be entrenched. See generally Jack Goody, *The Oriental, the Ancient and the Primitive* (1990). For more on *dowry*, see **dower**.

bride-to-be; *bride-elect. The first form, which outnumbers the second by a 9-to-1 ratio in newspaper wedding announcements, is standard. The second is a preposterous form, no election having taken place—e.g.: “The *bride-elect* [read *bride-to-be*], a graduate of Handels Academy, Wolfsberg, Austria, . . . is chief physical therapist in Kinderspital Zurich-University Children’s Hospital.” “Andrew Nash to Wed in Austria,” *Buffalo News*, 15 Apr. 2001, at E4. Surprisingly, though, **bride-elect* emerged as long ago as the early 19th century and was even more common than *bride-to-be* until about 1915.

LANGUAGE-CHANGE INDEX

**bride-elect* for *bride-to-be*: Stage 2

Current ratio (*bride-to-be* vs. **bride-elect*): 9:1

bridge the gap. This is the established idiom, dating from the 17th century. Through mistaken sound association, some writers use **breach the gap* in place of *bridge the gap*. The result is worse than a broken idiom: it’s a logical absurdity. To *breach* something is to create a gap in it, not to close the gap. As nouns, *gap* and *breach* are synonymous. Still, the error is fairly common—e.g.:

- “His power existed in the gap between the two parties . . . and in the electric anticipation that he might seek to *breach* [read *bridge*] it.” David M. Shribman, “Upheaval in Halls of Power: One Man’s Shift Changes All the Rules of Politics,” *Boston Globe*, 25 May 2001, at A1.
- “He says that his group has reached out to African Americans, but says more could be done to *breach* [read *bridge*] the gaps within the American Muslim community.” Mary Rourke, “One Faith, Two Minds,” *L.A. Times*, 30 Jan. 2002, § 5, at 1.

- “The council’s program is one of several attempts to *breach* [read *bridge*] the widening gap between what children are taught about personal finance and what they need to know.” Julie Tripp, “Econ 101 at Any Age,” *Sunday Oregonian* (Portland), 31 Mar. 2002, at F8.

LANGUAGE-CHANGE INDEX

**breach the gap* for *bridge the gap*: Stage 1

Current ratio (*bridge the gap* vs.

**breach the gap*): 285:1

bridle. See **bridal**.

brilliance; brilliancy. *Brilliance* is now standard in describing a quality or state. *Brilliancy*, not quite a NEEDLESS VARIANT, means “something brilliant” <the brilliancies in Edmund Wilson’s writings> and is generally useful only in the plural.

brimful, adj. So spelled—not **brimfull*.

Current ratio: 34:1

bring. A. Inflected Forms: bring > brought > brought.

The form **brung*, a dialectal word that came to prominence in the 19th century, is not in good use except in variations of the jocular phrase *dance with the one that brung ya*. For example, one politician told a crowd, “The voters of the 25th District are the ones who *brung* me, and they are the ones I want to dance with.” Catherine Candisky, “2 Vying for House Say They Get Things Done,” *Columbus Dispatch*, 25 Sept. 1996, at B6 (quoting Republican Jim Mason of Ohio). See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

**brung* for *brought*: Stage 1

Current ratio (*brought* vs. **brung*): 1,642:1

B. And take. *Bring* suggests motion toward the writer or reader <please bring me a soda>. *Take* suggests motion in the opposite direction <just after you put the soda down, he took it from me>. Cf. **come (B)**.

The distinction might seem to be too elementary for elaboration here, but misuses do occur—e.g.: “If the gentleman wishes to *bring* [read *take*] you somewhere, he should say to the hosts, ‘I have been seeing a great deal of someone whom I would like you to meet,’ and then give them your name so that they can issue you a proper invitation.” Judith Martin, “‘And Guest’ Invitation Irks This Companion,” *Chicago Trib.*, 6 Apr. 1997, at 4.

The rule becomes complicated when the movement has nothing to do with the speaker—e.g.: “When my dad was courting my mom, a single mother of two, he used to *take* her a bag of groceries instead of flowers.” In such a situation, the choice of *bring* or *take* depends on motion toward or away from whatever is being discussed. So in the previous example, *bring* would work as well if the point of view was that of the mother rather than the father.

And despite the direction of the movement, *bring* is the only choice in idioms such as “bring to the table.”

LANGUAGE-CHANGE INDEX

bring misused for *take*: Stage 3

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

bring (an) action against is verbose for *sue*—e.g.: “He said Washington law also allows store and club owners to *bring action against* [read *sue*] juveniles who fake their credentials.” Richard Grimes, “Underage Proposal a Really Good Idea,” *Charleston Daily Mail*, 24 Oct. 1996, at B1. Similar wordiness appears in the kindred phrases *bring legal proceedings against* and *institute legal proceedings against*. *Take action against* is broader, encompassing physical as well as legal action.

brinkmanship (= a method of gaining a negotiating advantage by suggesting a willingness to do something very dangerous or destructive) is written with no -s- after *brink*, though many people mistakenly add it on the analogy of *gamesmanship*. In the mid-20th century, the humorist Stephen Potter invented many facetious formations with -*manship*, including *gamesmanship*, *golfmanship*, and *one-upmanship*. Although he didn’t himself originate *brinkmanship*, he embraced the word and used it in print in 1958.

In modern print sources, *brinkmanship* predominates over **brinksmanship* by a 4-to-1 ratio.

briquette (= a small, compacted block, as of charcoal) is the standard spelling. **Briquet* is a variant.

Current ratio: 4:1

Brit, a colloquial shortening of *Briton* or **Britisher*, is recorded in the *OED* from 1901. As an adjective, it describes anything that is British. Unlike many other national and ethnic CASUALISMS, it is not pejorative—perhaps because it was homegrown. See **Briton (A)**.

Britain. See **Great Britain**.

britches. See **breeches**.

Briticism; Britishism. We have long needed a word to denote any custom or quality associated with British people. Although *Briticism* was prevalent in the 19th century, the two forms have been close contenders in print sources since about 1910. H.W. Fowler preferred *Britishism* on scholarly grounds (*FMEU1* at 57), but it has been mostly the nonscholarly writers who have followed his preference—e.g.:

- “Mr. Bryson writes in snappy, novelistic prose that’s seasoned with little-old-lady *Britishisms*.” Michiko Kakutani, “A Land of Civilities, Achievements and ‘Chumley,’” *N.Y. Times*, 16 Aug. 1996, at C30.
- “Shakespeare & Company stresses native accents, not faux *Britishisms*.” Ed Siegel, “Full-Bawdied ‘Measure’ Comes East,” *Boston Globe*, 12 Sept. 1996, at E2.
- “In this quaint *Britishism*, my identity presented itself.” Mark Harding, “A Kid-Canuck’s Call to the Front,” *Globe & Mail* (Toronto), 14 Oct. 2014, at L8.

Most American desktop dictionaries nevertheless list *Briticism* as the main term. Since about 1980, the two forms have closely vied for predominance in general English-language print sources. Cf. **Scotticism**.

Current ratio: 1.05:1

BRITICISMS. See AMERICANISMS AND BRITICISMS.

***Britisher**. See **Briton (A)**.

Briton. A. And *Britisher. The word *Briton*—the word that Britons themselves recognize—is about seven times as common in print sources as **Britisher*, an Americanism. For that reason, and because Britons often consider **Britisher* a vague insult, *Briton* should be preferred—e.g.: “It would not be a good idea to ask the famously crabby *Britisher* [read *Briton*] if this rush of Stateside success makes the prospect of working in Hollywood, with a decent-sized budget, attractive.” Rod Dreher, “The Secret’s Out,” *Sun-Sentinel* (Ft. Lauderdale), 13 Oct. 1996, at F1. See **Brit**.

LANGUAGE-CHANGE INDEX

B. And Breton. A *Briton* /*brít-ən*/ is a British subject—that is, a native or citizen of Great Britain. A *Breton* /*bret-ən*/ is a native or citizen of the region in northwestern France called Brittany (Fr. *Bretagne*).

broach. See **breach, n**.

broadcast > broadcast > broadcast. So inflected. In his book *Words and Rules* (2000), Steven Pinker condemns Theodore Bernstein, the estimable author of *The Careful Writer*, for his 1965 preference for the past-tense *broadcast* over **broadcasted*. Pinker says that this preference “had long been a losing battle,” and quotes H.L. Mencken in support of **broadcasted*. Back in 1936, Mencken said that **broadcasted* “is what one commonly hears.” Yet with only five minutes’ work on the WESTLAW database, it was possible in 2000 to show that in modern print, the ratio staggeringly favors *broadcast* (19,805 sources) and not *broadcasted* (86) as a past form. (More recently, Google ngrams show the ratio in World English to be still quite overwhelming.) Bernstein was right in 1965, and Pinker should have known better than to rely on a 1936 quotation as his sole evidence against Bernstein—a *New York Times* editor with his ear firmly to the ground—whom he snidely accuses of “hectoring people into sticking with the irregular.” See -CAST & IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX

**broadcasted* for *broadcast*: Stage 1

Current ratio (*had broadcast* vs. **had broadcasted*): 25:1

brokerage; brokage. *Brokerage* = (1) the business or office of a broker <real-estate brokerage is a profession requiring knowledge and experience>; or (2) a broker’s fee <brokerage differs from an underwriting commission>.

The archaic *brokage* (or, alternatively, *brocage*) means “the corrupt jobbing of offices; the bribe unlawfully paid for any office” (*OED*). It’s also a NEEDLESS VARIANT of *brokerage*.

bronco; bronc; broncho. The standard form is *bronco* (= a wild, unbroken horse). *Bronc* is a colloquial clipping. *Broncho* is a variant spelling used for some sports teams; for example, the University of Central Oklahoma calls its players the *Bronchos*, and a few high-school teams use the same spelling. But the spelling

bronco has predominated since the 1950s. Oddly, before that time, *broncho* was the predominant form, but it fell mysteriously into decline in the mid-20th century.

Pl. *brancos*. See PLURALS (D).

brooch; broach, n. The first denotes a type of pinned jewelry. The second is a tool for tapping a cask (or, as a verb, to break through something, such as a barrel's bung or the surface of water). *Brooch* is best pronounced, like *broach*, to rhyme with *coach*. It may also be pronounced to rhyme with *mooch*, although this *-ooch* pronunciation is less common and falling more and more out of favor.

Perhaps because of its dominant pronunciation, *brooch* is sometimes misspelled *broach*—e.g.:

- “Here one can find white gold bracelets for \$1,250 or diamond *broaches* [read *brooches*] for \$520,000.” Ginia Belafante, “With Tribal Chic, Chunky Jewelry Is Back,” *N.Y. Times*, 4 June 2002, at B11.
- “She was wearing an evening gown of pink chiffon joined at one shoulder with a big *broach* [read *brooch*] sparkling with diamonds.” Charlaïne Harris, *All Together Dead* 172 (2007).

Current ratio (*diamond brooch* vs.
**diamond broach*): 18:1

brother. See **brethren**.

brother-in-law. Pl. *brothers-in-law*. See PLURALS (G).

brunette; brunet. Unlike its counterpart *blond(e)*, this word is seldom applied to males, even though the form *brunet* is the masculine in French. Some have suggested that *brunet* appears most often as a noun, while *brunette* is reserved for the adjective. But in fact *brunette* commonly serves both functions, and in frequency it greatly outnumbers the rival form—e.g.:

- Adjective: “Other Folsom friends rooting for the *brunette* pianist are 1st District Police Juror Bernie Willie and his wife, Sharla.” Melissa Bienvenu, “Miss La. Is Familiar Face for Folsom,” *Times-Picayune* (New Orleans), 14 Sept. 1996, at B1.
- Adjective: “The syndicated ‘Real TV’ will include footage of a *brunette* Angie Dickinson from a 1958 appearance on ‘The Bob Cummings Show.’” “Oprah Snares the Mother of All Interviews: Madonna,” *Daily News* (N.Y.), 9 Dec. 1996, at 68.
- Noun: “Miss Lamour played the exotic *brunette* who fell in league with the playboy with the ski-jump nose and his smooth-voiced pal who vied for her attentions.” Annie Shooman, “‘Road’ Movies Actress Dorothy Lamour Dies,” *Chattanooga Free Press*, 23 Sept. 1996, at A7.
- Noun: “Most recently, however, Basinger asked to be made into a *brunette*.” Jeryl Brunner, “French Toast,” *In Style*, Dec. 1996, at 84.

Cf. **blond**. See **SEXISM** (D).

***brung**. See **bring** (A).

bruschetta, referring to a Tuscan appetizer of grilled bread topped with garlic, olive oil, herbs, and

often tomatoes, grew to prominence in the English vocabulary only as recently as the 1980s. The term is preferably pronounced /broo-**sket**-ə/, as in Italian. But in AmE /broo-**shet**-ə/ is disappointingly ubiquitous. Most culinary authorities agree on the recommended pronunciation. Cookbooks by all the following authors admonish their readers to use the /k/ pronunciation, not the /sh/: Jack Bishop, Al Getz, Edward Giobbi, Federico Moramarco, Peggy J. Parks, Judy Pochini, David Rosengarten, Andrew Schloss, and Clifford A. Wright. One writer plumps for the anomalous /broosh-**ket**-ə/. See Mary C. Baker, *Fresh from Dover Canyon* 8 (2003). But that pronunciation is best eschewed /es-**chood**/.

The pronunciation of *bruschetta* has made cameo appearances in more than one novel, most notably here: “I pronounced it *brushetta*, as I had always heard people in restaurants do. She shook her head in pain. ‘*Brusketta*, dear, *brusketta*. Ch in Italian is hard,’ she murmured.” Barry McCrea, *The First Verse* 16 (2005).

brusque; *brusk. The first spelling is standard. In AmE, the term is pronounced /bræsk/; in BrE, it’s /brooksk/.

Current ratio: 60:1

Brussels sprout (= a small, edible bud akin to cabbage) is so spelled and capitalized—not *brussels sprout* and especially neither **Brussel sprout* nor **brussel sprout*.

bucketful. Pl. *bucketfuls*—not **bucketiful*. See PLURALS (G).

Current ratio: 3:1

buck naked; *butt naked. Both forms mean “completely undressed.” The original and standard expression, dating from the 1920s, is *buck naked*—e.g.:

- “With Lucille Ball flair she torches houses and locks herself out of the house *buck naked*.” Tom Cunneff et al., “My Favorite Housewife,” *People*, 24 Jan. 2005, at 38.
- “The current centerfolds, *buck naked* though they may be, communicate almost no suggestion of anything. In Playboy pinups, one is not looking for the note of the divine that one finds in the Venuses of ancient statuary, let alone for the pathos of Rembrandt’s nudes.” Joan Acocella, “The Girls Next Door,” *New Yorker*, 20 Mar. 2006, at 144.

The origin of *buck naked* is a matter of speculation, and many theories are just folk etymology. (See **ETYMOLOGY** (D).) The most prevalent guess is that *buck* derives from Old English terms for male deer, goats, and some other animals. The skin of bare buttocks, presumably, is considered pale and smooth like buckskin. Another theory is that *buck* refers to the racist term for a male African-American—especially in reference to slaves, who were stripped naked for potential buyers to inspect them before an auction. The real answer is probably lost to time.

The form *buck naked* has traditionally been much more common in edited publications than **butt*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

naked. The more graphic version does appear, usually in reported quotations but sometimes not—e.g.:

- “‘Yo, he belongs in the zoo,’ said Wu-Tang Clan’s de facto leader, referring to Jackass’ Steve-O, who paid tribute to ODB by taking the stage with the rapper’s mother, stripping down *butt naked* [read *buck naked*] and performing what he called ‘dirty back flips’—just picture The Silence of the Lambs’ Buffalo Bill strutting his stuff.” Ben Quinones, “Wu-Tang Clan—and a Cast of Thousands,” *L.A. Times*, 7 Aug. 2006, Cal. §, at E3.
- “Burnett and CBS aren’t stupid. They needed people to start buzzing about Survivor again, as they did when some fat guy named Richard Hatch won \$1 million after walking around *butt-naked* [read *buck-naked*] for most of the show.” Kevin D. Thompson, “‘Survivor’ to Play a Sensitive Game,” *Palm Beach Post*, 10 Sept. 2006, TV Post §, at 3.

Outside edited publications, though, the more graphic **butt naked* has outranged the standard phrase in popular usage, judging by hits on Internet search engines.

LANGUAGE-CHANGE INDEX

**butt naked* for *buck naked*: Stage 4

Current ratio (*buck naked* vs. **butt naked*): 1.6:1

budgerigar (= Australian parakeet) is a transliteration of an Aboriginal word common in BrE but rare in AmE, enough so that it is often accompanied by an explanation—e.g.: “[O]ver the years, I’ve seen performing pooches, *Budgerigars* (a small parrot) and any number of other tricked-up critters.” Chris Jones, “Feline Follies,” *Chicago Trib.*, 8 Dec. 2006, On the Town §, at 1.

More familiar to American ears is the shortened form, *budgie*—e.g.: “The English *budgerigar*, also known as a *budgie*, is a larger cousin of the common parakeet.” Greg Okuhara, “Breeder Works to Take Birds to New Heights,” *Houston Chron.*, 2 Apr. 2006, at B3.

As a transliterated term, the word is susceptible to variants in spelling and pronunciation. W2, for example, lists it as **budgereegah* and **budgerygah*—both with the primary accent on the final syllable. Today, the standard spelling is *budgerigar* and the preferred pronunciation stresses the first syllable: /bʊj-ə-ree-gahr/.

budget, vb., forms *budgeted* and *budgeting* in AmE and BrE alike. See SPELLING (B).

budget-making is best hyphenated. See **decision-making**.

buffet. When speaking of the serve-yourself meal, say either /bə-**fay**/ or /boo-**fay**/. When speaking of the pummeling blow, say /bʌf-**it**/. But in BrE, the pronunciation /bʌf-**it**/ is common for both senses.

bulk, n., sometimes causes writers to doubt which form of a verb to use, singular or plural—e.g.: “Although nearly a third of blacks have moved into the middle class, the *bulk* of blacks *fall* [*falls?*] into a troubled underclass, as Andrew Hacker’s *Two Nations* so cogently proves.” Edward T. Chase, “The Trouble with Friendship,” *Nation*, 17 June 1996, at 33. Most writers—who might find support in the principle of SYNESIS—would write *fall* in that sentence. And they have the better position: when the phrase *bulk of the* is followed by a plural count noun, the verb should be plural <the

bulk of the criticisms are valid>. But when it’s followed by a singular mass noun, the verb should be singular <the *bulk of the criticism is valid*>. The form is attested from the early 19th century in historical dictionaries. See COUNT NOUNS AND MASS NOUNS & SYNESIS.

bulk large, an equivalent of *loom large*, is a SET PHRASE (perhaps even something of a CLICHÉ). To use the unidiomatic adverb *largely* is an example of HYPERCORRECTION—e.g.: “The first point I would make is that certain matters which *bulk largely* [read *bulk large*] in ‘incidental’ grammar teaching are not fundamental questions of grammar at all.” Hunter Diack, “A Re-Examination of Grammar,” in *A Linguistics Reader* 152, 154 (Graham Wilson ed., 1967).

LANGUAGE-CHANGE INDEX

**bulk largely* for *bulk large*: Stage 2

Current ratio (*bulk large* vs. **bulk largely*): 4:1

BULLETS. See PUNCTUATION (B).

bullion; bouillon. The first term, referring to an ingot of precious metal, is rarely misspelled. The second, referring to a broth, is often misspelled like the first—e.g.:

- “But some things haven’t changed: rooms with large balconies that overlook the beach, the periwinkle blue-and-white color scheme, bullshots on the beach (*bullion* [read *bouillon*] and vodka) and, upon checkout, a hand-written bill rather than a computer printout.” David Swanson, “Picture Yourself . . . You Can Really Afford It,” *Columbus Dispatch*, 27 May 2001, at F1.
- “She also revealed a recipe secret: adding chicken *bullion* [read *bouillon*] to the dish pumps up the flavor.” Leanne Libby, “Red Delicious,” *Corpus Christi Caller-Times*, 24 Oct. 2001, at B6.

Bullion is pronounced /buul-yən/. *Bouillon* is pronounced /buul-yən/, /buul-yon/, or sometimes /boo-yawn/.

LANGUAGE-CHANGE INDEX

bullion misused for *bouillon*: Stage 1

bulrush, denoting a type of marsh plant, is sometimes misspelled **bullrush*—e.g.: “With *bulrushes* [read *bulrushes*] springing up in the bay where pickleweed once grew, and pressure mounting to do something to help endangered saltwater species, it was only a matter of time before cities like San Jose came to view their sewage as an enticing supply of freshwater, Ritchie said.” Jill Leovy, “Reclaimed Waste Water May Ease State’s Thirst,” *L.A. Times*, 17 Aug. 1997, at A1. The word derives from the Middle English *bulryshe*, from *bol* (= stem). It’s unconnected with *bull*.

LANGUAGE-CHANGE INDEX

bulrush misspelled **bullrush*: Stage 1

Current ratio: 14:1

bumptious (= unpleasantly and loudly arrogant, conceited, and presumptuous) is sometimes misspelled **bumptuous*—e.g.:

- “He is too *bumptuous* [read *bumptious*], pushy and vulgar for claims to full brotherhood.” Murray Kempton, “D’Amato’s Hopes Rest on Senate’s Tender Mercies,” *Newsday* (N.Y.), 7 Mar. 1991, at 11.

- “A *bumptuous* [read *bumptious*] feudal lord, Zardari was accused by political foes of amassing not millions but hundreds of millions through corruption.” Tim McGirk, “Bhutto, Asif Baba and the 40 Thieves,” *Sacramento Bee*, 10 Nov. 1996, at F2.
- “At her funeral, her friend Rupert Everett described her as ‘a one-off . . . your own creation in a world of copycats’ and that *bumptuous* [read *bumptious*] originality shines through here.” Jess Cartner-Morley, “A Head for Fashion,” *Guardian*, 20 Nov. 2013, at 12 (referring to fashion designer Isabella Blow).

Cf. **scrumptious**.

LANGUAGE-CHANGE INDEX
bumptious misspelled **bumptuous*: Stage 1
 Current ratio: 600:1

buncombe. See **bunkum**.

bungee; ***bungy**; **bungie**. When the fad (later sport) of jumping from high places with elastic ropes attached to one’s body or ankles became popular in the 1980s, *bungee* became twice as common in every use <bungee cords> <bungee ropes> as **bungy*, and it is now 20 times as common. It’s the only accepted spelling for *bungee jumping*. The now-rare spelling *bungie* was the 19th-century name for rubber from India and products made from it.

bunkum; **buncombe**. This term refers to political talk that is empty or insincere. It derives from an early-19th-century speech made by a U.S. congressman representing Buncombe County, North Carolina. He felt compelled, despite other pressing business, to “make a speech for Buncombe” during a session of Congress.

Buncombe long remained the standard spelling, and some writers prefer it as recalling the interesting origin of the word. E.g.: “Or would we dig deeply into our stories of neighborliness and *buncombe* and cobble together something almost great?” Thomas Hine, “Don’t Blame Mrs. O’Leary,” *N.Y. Times*, 15 July 1990, § 7, at 13. But beginning in the early 1970s, the spelling *bunkum* overtook the traditional spelling in frequency of occurrence in printed books. It is now the standard form.

The shortened CASUALISM is spelled *bunk* (= nonsense) <that’s all bunk!>. A clipped form of *bunkum*, it dates from the early 20th century. Henry Ford immortalized the word when he said, “History is more or less bunk.”

Current ratio: 2:1

buoy (= a floating object that marks an area in a sea, lake, etc.) is preferably pronounced /**boo**-ee/ in AmE, or /**boy**/ in BrE.

bureau. The better plural form is *bureaus*, which has consistently predominated since the 16th century. The Frenchified plural, **bureaux*, is pretentious. See PLURALS (B).

Current ratio: 21:1

bureaucracy. See GOVERNMENTAL FORMS.

bureaucrat (= an official of a bureaucracy), a word tinged with pejorative overtones, is sometimes misunderstood and misspelled **beaucrocat* (as if it derived from *beau*, instead of *bureau*)—e.g.: “With smooth, almost dapper features and an unassuming air, one could almost dismiss Jerry Nicely as simply a pleasant run-of-the-mill *beaucrocat* [read *bureaucrat*].” Renee Elder, “Nothing Run of the Mill About Nicely,” *Tennessean*, 9 June 1996, at E1.

LANGUAGE-CHANGE INDEX
bureaucrat misspelled **beaucrocat*: Stage 1
 Current ratio: 1,761:1

BUREAUCRATESE (/byuu-rahk-rə-teez/), the JARGON of bureaucrats, is a type of writing characterized by ZOMBIE NOUNS, PASSIVE VOICE, overlong sentences, and loose grammar. Add to that an overlay of DOUBLE-SPEAK and OFFICIALESE, and you end up with bureaucratese at its finest. Here’s an example drawn from a classic work:

Where particulars of a partnership are disclosed to the Executive Council the remuneration of the individual partner for superannuation purposes will be deemed to be such proportion of the total remuneration of such practitioners as the proportion of his share in partnership profits bears to the total proportion of the shares of such practitioner in those profits.

Quoted in Ernest Gowers, *The Complete Plain Words 2* (Sidney Greenbaum & Janet Whitcut eds., 3d ed. 1988).

Cf. OBSCURITY & OFFICIALESE.

***burgeois**. See **bourgeois**.

burgeon literally means “to put forth buds; sprout.” Although some usage experts have considered the word objectionable in the sense “to flourish, grow,” no good reason exists to avoid it in this figurative sense <the burgeoning middle class>. But the word preferably refers to growth at early stages, not to full-blown expansion.

LANGUAGE-CHANGE INDEX
burgeon in the sense “to mushroom”: Stage 4

burglarize; **burgle**. An American coinage from the late 19th century, *burglarize* is defined awkwardly and circuitously by the *OED* as “to rob burglariously.” A better definition is “to go into (a building) with the purpose of stealing something” (*Black’s Law Dictionary* 238 [10th ed. 2014]). The word is still largely confined to AmE.

Burgle, a BACK-FORMATION of comparable vintage, has the same meaning. Although *burgle* is usually facetious or jocular in AmE, it’s standard and colorless in BrE—e.g.: “Do NOT give your address, as burglars often read these and then *burgle* the house when the watch dog is all too clearly absent.” Miles Kington, “Don’t Let That Budgie Destroy Your Life,” *Independent*, 24 Oct. 1996, at 22 (quoting J. Millington Smythe).

In AmE, *burglarize* appears about twice as often as *burgle*—e.g.:

- “A man who dressed in women’s clothing and pretended he was injured so he could enter and *burglarize* homes has pleaded guilty in Hennepin County District Court.” Margaret Zack, “Man Pleads Guilty to Burglary,” *Star Trib.* (Minneapolis), 6 Oct. 1995, at B2.
- “The suspects are not the first to use public transportation to come to the area and *burglarize* homes.” Carl Allen, “Sharp-Eyed Neighbor Leads to Arrests,” *Buffalo News*, 29 Oct. 1996, at B5.
- “Tercero was convicted of fatally shooting Robert Berger, 38, who was in a Houston dry-cleaners shop in March 1997 when Tercero came in to *burglarize* it.” “Texas Court Halts Execution After Defense Says a Witness Lied,” *Wash. Post*, 26 Aug. 2015, at A3.

Current ratio (*burglarized* vs. *burgled* in AmE): 2:1

Current ratio (*burgled* vs. *burglarized* in BrE): 10:1

Current ratio (World English): 1:1

burglary; robbery; theft; larceny. The exact definitions of these terms may vary from jurisdiction to jurisdiction. But it is universal that people and institutions are the objects of *robbery*; places are the objects of *burglary*; and things are the objects of *larceny* and *theft*. The four terms overlap to a degree, but no two are perfectly synonymous.

Burglary = (1) (in the classic common-law sense) the act of breaking and entering another’s dwelling at night with intent to commit a felony (e.g., murder) or—in jurisdictions with statutes making petit larceny a misdemeanor—possibly petit larceny as well; or (2) (in the modern AmE sense) the act of breaking and entering a building with the intent to commit a felony (dropping the requirements that it be [a] a dwelling, and [b] at night).

The other three are less complicated. *Robbery* = the felonious taking of personal property by force or threat of force from the immediate presence of the victim. *Theft* is a statutory wrong that is broader than *robbery*, although nonlawyers often consider the words synonymous. *Theft* means “the taking of personal property without the owner’s consent, and with the intent to deprive the owner of its value.” *Theft* is also broader than *larceny* (= the felonious stealing of personal property; the fraudulent taking and carrying away of a thing without claim of right) because it includes the lawful acquisition and later appropriation of the personal property.

burgle. See **burglarize**.

BURIED VERBS. See **ZOMBIE NOUNS**.

**Burmese; Bamar; Burman; Myanmarese; Myan-
maran.** For any inhabitant of Myanmar (Burma), or for more than one, the label *Burmese* is standard. *Bamar* and *Burman* denote a member of the country’s dominant ethnic group, with *Bamar* being the preferred term. *Burman* has become an outdated variant for *Burmese*—e.g.: “The *Burmans* [read *Bur-
mese*], when they are addressing a superior, introduce a special particle, *taunin* or something similar, into

the verb.” Otto Jespersen, *Mankind, Nation, and Indi-
vidual from a Linguistic Point of View* 130 (1946).

The variant *Myanmarese* appears in BrE sources, especially in Asia. *Myanmaran* is very rare but not unknown. See **DENIZEN LABELS**.

burn > burned > burnt. So inflected—increasingly even in BrE. As a verb, *burnt* is chiefly a BrE form, usually the past participle but sometimes the past tense. In AmE, *burnt* is almost exclusively an adjective <burnt orange> <burnt rubber>. But as a **CASUALISM**, *burned out* (= physically or emotionally exhausted) is preferable to **burnt out*.

burqa; burka; *burkha. *Burqa* (= a loose garment that covers the whole head and body, with an open or veiled slit for vision, usu. worn by Muslim women) is the predominant spelling in all varieties of English. *Burka* is a less common but acceptable variant. **Burkha* is a **NEEDLESS VARIANT**.

Current ratio (in order of headwords): 9:5:1

bursar (= the person at a school or college who deals with accounts and office work) is preferably pronounced /bər-sər/—not /bər-sahr/—in AmE. In BrE, it’s /bə-səl/. AmE is rhotic, so that a final *-r* is enunciated, whereas in BrE it’s silent.

burst > burst > burst. So inflected. As a past-tense or past-participial form, **bursted* is a mistake—e.g.:

- “Among emergencies that agencies and managers name are such things as a *burst*ed [read *burst*] water pipe.” Betty Lonngren, “Rental Rapport,” *Chicago Trib.*, 13 Oct. 1995, at D28.
- “Teaster’s swollen, purple arm *burst*ed [read *burst*], and he began to improve.” “World Converged on Mountain Town to Witness Albert Teaster’s Act of Faith,” *Asheville Citizen-Times* (N.C.), 16 Aug. 1996, at B1.

See **IRREGULAR VERBS**.

The dialectal form *busted* carries an air of jocular-ity. In **STANDARD ENGLISH**, the word is *burst*—e.g.: “McCarthy’s interception was negated by a roughing-the-passer penalty and nine plays later Mark O’Brien *busted* [read *burst*] in from 2 yards.” Cory Nightingale, “Warriors Thwart Upset Bid,” *Boston Globe*, 28 Nov. 1997, at D16.

As a **CASUALISM**, *busted* has many possible meanings: (1) “arrested” <the cops *busted* him>; (2) “caught” (and usu. punished) <*busted* for cheating on an exam>; (3) “broken” <a *busted* arm>; (4) “rendered insolvent” <*busted* by rising expenses>; (5) “demoted” <*busted* to private>; and (6) “physically struck” <*busted* in the face>. Examples of each sense follow:

- Sense 1: “The feds *busted* 11 Bonanno crime-family members and associates yesterday, including the reputed acting underboss, Richard Cantarella.” Denise Buffa, “Bonanno No-No’s,” *N.Y. Post*, 3 Oct. 2002, at 29.
- Sense 2: “Washington assistant Cameron Dollar is the latest college hoops coach to get *busted* for overly aggressive recruiting tactics.” Jon Saraceno, “Jones Can Play the Heavy vs. Ruiz,” *USA Today*, 4 Oct. 2002, at C3.

- Sense 3: “Callers will stay on hold as long as it takes, just to share the latest bits of news from home: a *busted* water pipe, a sick relative, a bad day at work.” Kris Axtman, “Texas ‘Prison Show’ Links Familiar Voices Worlds Away,” *Christian Science Monitor*, 4 Oct. 2002, at 1.
- Sense 4: “The only art class I ever took nearly *busted* me. We were instructed to buy 2 cubic feet of Styrofoam, some dowels, an electric motor, 100 square feet of variously colored tissue paper and 75 feet of string. Do you have any idea how many bowls of chili at the student center that translates into?” Jake Vest, “Keep the Degree—I’ll Just Have Lunch,” *Orlando Sentinel*, 28 Sept. 2002, at H1.
- Sense 5: “On Thursday morning . . . it dwindled from an intense, 145-mph Category 4 hurricane to a more manageable, if still dangerous, Category 2 storm. . . . By Thursday evening, it was *busted* to a tropical storm, with 50-mph wind.” Andrea Elliott & Martin Merzer, “Weakened Hurricane Lili Tears Through Louisiana,” *Miami Herald*, 4 Oct. 2002, at A1.
- Sense 6: “Latrell Sprewell did punch someone. He *busted* Don Chaney right in the chops.” Mitch Lawrence, “Star Player & Fractured Franchise Both Blow It,” *Daily News* (N.Y.), 3 Oct. 2002, at 89.

As might be expected with a jocular casualism, *busted* plays a role in some colorful idioms—e.g.: “‘It takes our graduates six to eight months to land their first real job,’ she said. ‘This happens if they *busted* their butts during art school.’” Karen Cotton, “So You Wanna Be an Artist?” *Wyoming Trib.-Eagle*, 4 Oct. 2002, at B1 (quoting a perky interviewee).

LANGUAGE-CHANGE INDEX

**burstd* for *burst*: Stage 1

Current ratio: 689:1

bus, n. & v.t. The plural form of the noun (meaning “a large vehicle that holds many passengers”) is *buses*. The verb (meaning “to transport by bus”) is inflected *bus* > *bused* > *bused*; the present participle is *busing*. When the *-s* is doubled, the sense is different: *bussed* means “kissed,” and *bussing* means “kissing.” Cf. **gases**. See SPELLING (B).

The verb *bus*, as a BACK-FORMATION from *busboy*, has the additional meanings “to work as a busboy or busgirl” and “to clear dishes from (a table).” Here, too, the better-inflected forms are *bused* and *busing* <he helped pay his way through college by *busing* tables>.

business is universally two syllables in STANDARD ENGLISH: /biz-nəs/. In AmE, the pronunciation /bid-nəs/ is sometimes heard, especially in the South and Southwest; it is dialectal.

busted. See **burst**.

but. **A. Beginning Sentences with**. It is a gross canard that beginning a sentence with *but* is stylistically slipshod. In fact, doing so is highly desirable in any number of contexts, as countless stylebooks have said (many correctly pointing out that *but* is more effective than *however* at the beginning of a sentence)—e.g.:

- “The group of Adversative conjunctions represented by BUT (called Arrestive) very often fulfil the office of relating consecutive sentences. . . . An entire paragraph is not unfrequently devoted to arresting or preventing a seeming inference from one preceding, and is therefore appropriately opened by But, Still, Nevertheless, &c.” Alexander Bain, *English Composition and Rhetoric* 110 (4th ed. 1877).
 - “Objection is sometimes taken to employment of *but* or *and* at the beginning of a sentence; but for this there is much good usage.” Adams Sherman Hill, *The Principles of Rhetoric* 88 (rev. ed. 1896).
 - “Not long ago I had a long and labored letter from an old proofreader who was all worked up over the ‘buts’ and ‘ands’ in a story in the *Saturday Evening Post* . . . [H]e was ready, actually, to fight for his ideas . . . and they were false, ill-founded ideas. They were not good ideas. They represented old, dead styles . . . and style is an affair of the living. Style is life. That proofreader was in a backwater; the eddies moved about him but made no progress; he was going about in circles—moving, but getting nowhere. He was all out of step with the times into which he had lived. He had linguistic arteriosclerosis.” Edward N. Teall, *Putting Words to Work* 28–29 (1940).
 - “*But* (not followed by a comma) always heads its turning sentence; *Nevertheless* usually does (followed by a comma). I am sure, however, that *however* is always better buried in the sentence between commas; *But* is for the quick turn; the inlaid *however* for the more elegant sweep.” Sheridan Baker, *The Practical Stylist* 16–17 (1962).
 - “Of the many myths concerning ‘correct’ English, one of the most persistent is the belief that it is somehow improper to begin a sentence with [*and, but, for, or, or nor*]. The construction is, of course, widely used today and has been widely used for generations, for the very good reason that it is an effective means of achieving coherence between sentences and between larger units of discourse, such as paragraphs.” R.W. Pence & D.W. Emery, *A Grammar of Present-Day English* 106 n.15 (2d ed. 1963).
 - “A student writer will almost invariably give *however* first position in a sentence In any case, *however* works best if it is inside the sentence. Just exactly why this position is best is one of those stylistic mysteries that can’t really be explained. It simply sounds better that way. And the importance of sound can’t be dismissed, even in silent reading.
-
- “Occasionally you will find yourself with a *however* that simply refuses to be tucked into a sentence comfortably. In that case, change it to *but* and put it in first position.” Lucile Vaughan Payne, *The Lively Art of Writing* 85–86 (1965).
 - “If you begin a sentence with *and* or *but* (and you should occasionally), don’t put a comma after it. You want to speed up your prose with those words, and the comma would simply cancel out any gain. The comma is necessary only if a parenthetical clause immediately follows that first word—e.g., ‘But, from all the evidence, that proves to be a sound conclusion.’” John R. Trimble, *Writing with Style* 81 (1975).
 - “*But* works especially well as the opening word of a paragraph.” Maxine Hairston, *Successful Writing* 97 (2d ed. 1986).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The widespread public belief that *but* should not be used at the beginning of a sentence has no foundation but is seemingly unshakeable.” Robert W. Burchfield, *Points of View* 119 (1992).
- “I can’t overstate how much easier it is for readers to process a sentence if you start with ‘but’ when you’re shifting direction.” William Zinsser, *On Writing Well* 74 (6th ed. 1998).
- “If you want to begin a sentence by contradicting the last, use *but* instead of *however*.” Christopher Lasch, *Plain Style* 101 (Stewart Weaver ed., 2002).

For examples of successive sentences starting with *and* and *but*, see **(A)**. See also SUPERSTITIONS (D).

Good writers often begin sentences with *but* and have always done so. Samples from 20th- and 21st-century writers follow:

- “*But* in such a story as *Lispeth*, for example, he succeeds in giving you the tragedy for what it is worth.” Edmund Wilson, “Things I Consider Overrated” (1920), in *From the Uncollected Edmund Wilson* 127, 136 (1995).
- “*But* reading his speeches in cold blood offers a curious experience.” H.L. Mencken, “The Archangel Woodrow” (1921), in *The Vintage Mencken* 116, 119 (1955).
- “*But* the arts of business, too, call all the while for closer application to the work in hand.” Thorstein Veblen, “The Captain of Industry” (1923), in *The Portable Veblen* 377, 384 (1948; repr. 1969).
- “*But* such simplicity of instinct is scarcely possible for human beings.” Bertrand Russell, *Education and the Good Life* 192 (1926).
- “*But* it must not be assumed that intelligent thinking can play no part in the formation of the goal and of ethical judgments.” Albert Einstein, “Science and Religion” (1939), in *Ideas and Opinions* 41, 42 (1954).
- “*But* Joyce manages to do something even more subtle than that.” Vladimir Nabokov, “Ulysses” (ca. 1955), in *Lectures on Literature* 285, 346 (Fredson Bowers ed., 1980).
- “*But* it is a careful, angry, honest film, and nothing it says is less apposite now than it would have been ten years ago, or twenty.” James Agee, *Agee on Film* 206 (1958).
- “*But* it does not follow from this that Betjeman’s work is foolish.” John Wain, “John Betjeman,” in *Essays on Literature and Ideas* 168, 171 (1963).
- “*But* perhaps the more valuable achievement to come out of France for the novel has been a whole body of criticism inspired by the new novelists.” Susan Sontag, *Against Interpretation* 104 (1966).
- “*But* the misdirection of effort remains uncorrected.” I.A. Richards, *So Much Nearer* 69 (1968).
- “*But* if I were asked something easier—to name a good book that we don’t read and that the people of the future will read—I’d be less at a loss.” Randall Jarrell, “An Unread Book,” in *The Third Book of Criticism* 3, 50 (1969).
- “*But* the virtues of the film are many and considerable.” John Simon, *Movies into Film* 78 (1971).
- “*But* the modesty is usually false.” William Safire, *What’s the Good Word?* 44 (1982).
- “*But* he had got used to that and it did not disquiet him.” Ursula K. Le Guin, *The Other Wind* 143 (2001).

These are not good writers on bad days. No: they were having good days. And the list could be expanded a thousandfold.

Some years ago, a researcher found that 8.75% of the sentences in the work of first-rate writers—including H.L. Mencken, Lionel Trilling, and Edmund Wilson—began with coordinating conjunctions (i.e., *And*

and *But*). Francis Christensen, “Notes Toward a New Rhetoric,” 25 *College English* 9 (1963). In a recent survey of *The New York Times* and *U.S. News & World Report*, the figure is about the same. To the professional rhetorician, these figures aren’t at all surprising.

All this enthusiasm for the construction, though, must be tempered to this extent: don’t start consecutive sentences with *But*. E.g.: “It is not now, and I trust it never will become, my purpose to argue that grammatical knowledge is not a *good* in itself. *But*, then, I believe that *any* knowledge is good. *But* [read *Even so*,] I suggest that grammatical knowledge taught as an end in itself, taught without a calculated, relentless focus on its applicability to problems that occur in writing, will have no appreciable value to a student in his writing.” Bertrand Evans, “Grammar and Writing,” in *A Linguistics Reader* 111, 116 (Graham Wilson ed., 1967). Cf. **yet (A)**.

B. More than One in a Sentence. Putting this subordinating conjunction twice in one sentence invariably makes the sentence unwieldy and less easy to read. E.g.: “*But* this opening misleads because the focus dissipates as the play progresses and the scattershot climax drips with sentiment *but* is ultimately unsatisfying.” A. Levine, “Barely Afloat ‘Raft of Medusa,’” *Pitt. Post-Gaz.*, 10 Oct. 1997, at 34. (A possible revision: *But this opening misleads because the focus dissipates as the play progresses. Although the scattershot climax drips with sentiment, it’s ultimately unsatisfying.*)

C. For and. This lapse is surprisingly common. The misuse of *but* for *and* often betrays the writer’s idiosyncratic prejudice. That is, if you write that someone is *attractive but smart*, you’re suggesting that this combination of characteristics is atypical. E.g.:

- “There [was] . . . a *wealthy but nice-looking* [read *wealthy, nice-looking*] family.” Helen Fielding, “Eating Out: A Posher Sort of Poppadom,” *Independent*, 3 Dec. 1995, at 66. (Are wealthy people typically not nice-looking? On the reason for the comma between the adjectives in the revision, see PUNCTUATION (D).)
- “Billy’s father, Dr. Istvan Jonas, . . . is a man of sterling rectitude, *poor but honest* [read *poor and honest*], determined to pass his upcoming naturalization exams.” Michael Wilmington, “‘Telling Lies in America’ Lets Bacon Sizzle,” *Chicago Trib.*, 24 Oct. 1997, at C1. (Is the writer really suggesting that poor people are typically dishonest?)
- “He’s gruff and sensitive, *talented but hard-working* [read *talented and hard working*], plain-speaking but as smart as anyone.” Tom E. Curran, “Andruzzi Has More than Paid His Dues,” *Providence J.-Bull.*, 3 Oct. 2003, at 14. (Are talented people typically lazy? The writer has also made the converse lapse in the first pairing: *gruff and sensitive* are more often viewed as opposites than complements, so *but* would be more appropriate than *and* between them.)

D. Preposition or Conjunction. The use of *but* in a negative sense after a pronoun has long caused confusion: is it *No one but she* or *No one but her*? When *but* is a preposition (meaning “except”), the objective *her* (or *him*) follows. But when *but* is a conjunction, the nominative *she* (or *he*) has traditionally been considered proper.

The correct form depends on the structure of the sentence. If the verb precedes the *but*-phrase, the objective case should be used—e.g.: “None of the defendants were convicted *but him*.” But if the *but*-phrase precedes the verb, the nominative case is proper: “None of the defendants *but he* were convicted.” That sentence is considered equivalent to “None of the defendants were convicted, *but he was convicted*.” (Although that rewording doesn’t seem to make literal sense—given that he was one of the defendants—it serves to show the grammar of the sentence excepting him from the absolute word *none*.) *But* thus acts as a conjunction when it precedes the verb in a sentence, as in this one from Thomas Jefferson: “Nobody *but we* of the craft *can understand* the diction, and find out what [the statute] means.” Here the subject of *can understand* is *nobody*, and the *but* heads the understood clause: *nobody can understand, but we can understand*.

That’s the common explanation. But Edward Teall has filed a dissenting opinion. Although it seems never to have caught on, Teall’s logic seems impeccable: “Here . . . are three examples of ‘but’ and its mischievous pranks: ‘No one but you and I know what is on these notice boards’; ‘And who but he had urged letting Devinish in’; ‘No one but he knew what this had cost him.’ The pronouns after ‘but’ should be in the objective case, being governed by ‘but.’ The defense frequently offered for these wrong nominatives is that the sentence really means ‘No one knew, but you and I knew’—which is silly, because if no one knows, you and I don’t know. ‘Who but he’ and ‘No one but he’ are just dumb errors.” Edward N. Teall, *Putting Words to Work* 165 (1940).

LANGUAGE-CHANGE INDEX
No one but me was there: Stage 5

***but nevertheless.** This REDUNDANCY has been fairly common in the language since the late 17th century. But it is a redundancy nevertheless. Usually you can drop either word. *Nevertheless* is typically the one to drop—e.g.: “Val Kilmer probably agrees, *but nevertheless* [read *but*] he’s committed to an attempt to regain control.” Stephen Hunter, “Stars Reveal a Normal Side,” *Baltimore Sun*, 4 Apr. 1997, at E1.

If special emphasis is needed, either *but . . . still* or a construction with *though* or *although* is the better choice—e.g.: “In Hanover, conditions are not as bad *but are nevertheless* [read *but are still*] considered taxing.” Alexander Reid, “Wanted: New Police Stations,” *Boston Globe*, 2 Apr. 1995, South Weekly §, at 1. Cf. ***but yet**.

but that; but what. These peculiar idioms, used in expressions of doubt, may strike the modern reader as quaint or affected. *But that*, the more literary of the two, is used today most commonly in negative constructions—e.g.: “I do not doubt *but that* you are disappointed.” Most readers would find the *but* in that sentence to be superfluous and would translate the

sentence to read, “I do not doubt *that* you are disappointed.” *But what* is used in the same way, but it’s rarer and more colloquial—e.g.: “I don’t know *but what* it might be the best thing for my own special interest, which is bicycling.” Don Harvey, “A Changing Cycle in Traffic Patterns,” *L.A. Times*, 18 Aug. 1996, at B6.

***butt naked.** See **buck naked**.

buttock. Pronounced /bət-ək/, not /bət-tahk/. See PRONUNCIATION (B).

but which. See **which (D)**.

***but yet** is a REDUNDANCY for *but* or *yet*. Common in the 16th century, this collocation has been falling in use fairly steadily since 1700. Try dropping either word—e.g.:

- “So Close, *But Yet* [read *Yet*] So Far: K.C. Finds Ways to Be Best in West.” Headline, *Denver Post*, 23 Sept. 1996, at D1.
- “She said the fact that Novy voted against raising the property-tax rate *but yet* [read *but* or *yet*] approved a larger budget does not represent a consistent stand.” Lisa Buie, “Novy, Challenger Are Trading Taunts,” *St. Petersburg Times*, 29 Oct. 1996, at 1.

Sometimes *but* and *yet* fall together in a way that creates not a contrast but a MISCUE. In the sentence that follows, *yet* means *still*, but the sentence is easily misread: “Rider, gifted *but yet to decide* [read *but still undecided*] whether he wants to play in the NBA, promptly went into his act, missing this, showing up for that, and was suspended for the season opener.” Mark Heisler, “NBA Preview,” *L.A. Times*, 31 Oct. 1996, at C6. Cf. **as yet**.

buy. A. Inflected Forms: buy > bought > bought. The form **boughten* (= store-bought as opposed to home-made) is an archaic past-participial adjective formed on the analogy of words such as *broken*, *driven*, and *frozen*. In the sense “store-bought,” **boughten* still occurs in dialectal AmE. E.g.:

- “In those days any *boughten* [read *store-bought*] cookie we would see in Maine was made by the Loose-Wiles Biscuit Company, which had a huge brick factory near the railroad tracks in Boston’s North End.” John Gould, “Father Wasn’t the Suing Kind,” *Christian Science Monitor*, 9 Feb. 1990, at 17.
- “Up until [the 1920s], the costs for *boughten* [read *store-bought*] goods always ended in zeros.” Pearl Swiggum, “A Penny Saved Can Mean a Lot,” *Wis. State J.*, 2 Aug. 1993, at D2.
- “The old man hated waste and preferred the Tampa Tribune to store-*boughten* [read *-bought*] toilet paper.” Jeff Klinkenberg, “Cracker Cattle Comeback,” *St. Petersburg Times* (Fla.), 6 July 2002, at D1.

See IRREGULAR VERBS.

LANGUAGE-CHANGE INDEX
**boughten*: Stage 1
Current ratio (*bought* vs. **boughten*): 2,510:1

B. And purchase. As a verb, *buy* is the ordinary word, *purchase* the more FORMAL WORD. Generally,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

buy is the better stylistic choice. As one commentator says, “Only a very pompous person indeed would say he was going to *purchase* an ice-cream cone or a bar of candy.” Robert Hendrickson, *Business Talk* 61 (1984). Traditionally, however, *purchase* has been the preferred word for real estate.

Purchase may also act as a noun; *buy* is informal and colloquial as a noun <a good buy>.

buyout, n. One word.

bye-bye. The informal valediction is so spelled—not **by-by*.

Current ratio: 12:1

byelaw. See **bylaw**.

by-election is the preferred spelling. **Bye-election* is a variant.

Current ratio: 17:1

***bye the bye**. See **by the by**.

bylaw; **byelaw**. Both the spelling and the sense differ on the two sides of the Atlantic. In AmE, *bylaws* are most commonly a corporation’s administrative provisions that are either attached to the articles of incorporation or kept privately. In BrE, *byelaws* are regulations made by a local authority or corporation, such as a town or a railway.

The spelling without the *-e-* is standard in AmE. Though etymologically inferior, *byelaw* (sometimes hyphenated) is common in BrE. Increasingly, though, the spelling *bylaw* is appearing in BrE just as commonly as the longer form.

Current ratio (World English): 10:1

by means of is usually verbose for *by* or *with*—e.g.:

- “Vasectomy is surgical sterilization of a man *by means of* [read *by*] cutting or removing a section of the vas deferens, the tube that carries sperm from the testicle to the urethra.” “Living with Cancer,” *Daily News* (L.A.), 13 Feb. 1994, at L16.
- “The Pithlochaskotee Chapter of the Daughters of the American Revolution is introducing the 2002–2003 American History and Junior American Citizens Programs *by means of* [read *with*] three separate contests.” “Contest, Scholarship Opportunities Are Plentiful,” *St. Petersburg Times*, 2 Oct. 2002, at 3.

byproduct usually appears as a single word in modern print sources, many of which follow the Associated Press and *New York Times* styles. But it also frequently appears in its hyphenated form (*by-product*), sometimes even in the same publication—e.g.:

- “The growing distaste for cheap eateries is a *byproduct* of a larger shift in habits.” Noel C. Paul, “As Tastes Shift, Fast-Food Giants Swallow Hard,” *Christian Science Monitor*, 2 Oct. 2002, at 1.
- “Thus another significant prospective *by-product* [read *byproduct*] of military action against Mr. Hussein could be the liberation of 22 million Iraqis from their stultifying economic and political bondage.” John Hughes, “Do Iraqis Want Invasion?” *Christian Science Monitor*, 2 Oct. 2002, at 9.

by reason of is usually an artificial way of saying *because of*. Although *not guilty by reason of insanity* is a SET PHRASE, in other phrases the words *by reason of* can usually be improved—e.g.: “Joudrie was sent there after being found not criminally responsible *by reason of* [read *because of*] a mental disorder.” Kevin Martin, “Dorothy Joudrie Punched in Face,” *Toronto Sun*, 16 July 1996, at 23.

Sometimes the unidiomatic **by reason that* appears—e.g.: “Respondent’s contention is untenable *by reason that* [read *because*] FCA § 1118 does not make the application of the CPLR automatic.” “FCA Not CPLR Applies Precluding Appeal,” *N.Y.L.J.*, 18 July 1996, at 21 (reporting a judicial opinion).

by the by (= incidentally) has been the standard spelling since the 17th century. **By the bye* (archaic) and **bye the bye* are variants. The phrase in any form is appearing nowadays with less and less frequency.

Current ratio (*by the by* vs. **by the bye* vs. **bye the bye*): 96:65:1

by virtue of. See **virtue of**.

byword (= [1] a proverb or saying; or [2] someone or something representing a specific quality) is best spelled as one word and not hyphenated.

- Sense 1: “In the upper echelons of fashion, personalisation has become the new *byword* for luxury.” Katie Wright, “Fashion Gets Personal,” *Newcastle J.* (U.K.), 18 Aug. 2015, at 21.
- Sense 2: “One of the major internal tasks facing the pope has been the reform of the Vatican Bank, which had become a *byword* for scandal and dysfunction.” Paul Valley, “The Bipartisan Pontiff,” *N.Y. Mag.*, 9 Sept. 2015, at 1.

C

-c-; -ck-. When adding a suffix to a word ending in *-c*, how do you keep the hard sound (/k/) from becoming soft (/s/)? With native suffixes (*-ed*, *-er*, *-ing*, *-y*), you generally do it by inserting a *-k-*. Hence *mimic* becomes *mimicked*, *traffic* becomes *trafficker*, *frolic* becomes *frolicking*, and *panic* becomes *panicky*. An exception exists in both AmE and BrE for the verb *to talc*, which anomalously makes *talced* and *talcing*—still pronounced with a hard *-c-*.

But classical suffixes (*-ian*, *-ism*, *-ist*, *-ity*, *-ize*) don’t take the *-k-* and therefore become soft: *politician*, *cynicism*, *publicist*, and *criticize*.

cabala; **cabbala**; ***cabalah**; ***cabbalah**; ***kabala**; ***kabbala**; ***kabbalah**. Meaning “an esoteric or secret doctrine”—and pronounced /kə-**bah**-lə/ or /kə-**ə**-lə/—this word is preferably spelled *cabala* in AmE, *cabbala* in BrE. The others are variant forms.

cablecast > **cablecast** > **cablecast**. Dating from the mid-1960s, this verb is so inflected. The weak past form **cablecasted* is poor usage—e.g.:

- “The release of ‘Flaming Pie’ was delayed a week to allow the publicity express to rev up on VH-1 (which *cablecasted* [read *cablecast*] a week of McCartney promotions) and the Internet (which featured an online McCartney chat and live audio and video).” “Entertainment Briefs,” *Chicago Sun-Times*, 21 May 1997, at 51.
- “Opening night highlights and an artist’s talk were featured last month on ‘Spotlight on Northbrook Arts,’ a program *cablecasted* [read *cablecast*] on Northbrook’s government channel, NCTV Channel 17.” Karie Angell, “Artist Creates Ketubah for Second Generation of Patrons,” *Northbrook Star* (Ill.), 8 Nov. 2010, News §.

See **-CAST & IRREGULAR VERBS**.

LANGUAGE-CHANGE INDEX

**cablecasted* for past-tense *cablecast*: Stage 1

***cabob**. See **kebab**.

cacao. See **cocoa**.

cache, n.; **cachet**, n. *Cache* /kash/ = (1) a hiding place for money, goods, etc.; (2) a hidden stash of money, goods, etc.; or (3) a type of high-speed computer memory (also, in this sense, termed *cache memory*). Although sense 3 is quite common in computing contexts, sense 2 is the most frequent nonspecialist sense—e.g.: “Schechter was brought to New York from Cambridge, England, where he had established his credentials by rediscovering a *cache* of invaluable literary fragments that had lain for centuries in a Cairo genizah, or storage closet.” Clifford E. Librach, “Does Conservative Judaism Have a Future?” *Commentary*, 1 Sept. 1998, at 28.

Cachet /ka-shay/, borrowed from French in the 18th century and now thoroughly anglicized (except in its pronunciation), originally meant “stamp” or “distinguishing mark.” Today it generally means “popular prestige” or “high commercial or political status”—e.g.: “With their *cachet* and cash, tech executives are in high demand on Capitol Hill.” Jeffrey H. Birnbaum, “Getting to Know the Hill,” *Time*, 14 Aug. 2000, at B12. It also has three other meanings: (1) an official seal, esp. one denoting approval; (2) a commemorative postal design; and (3) a waferlike capsule used to dispense bad-tasting medicine.

As might be expected—given the prevalence of **WORD-SWAPPING**—*cache* is sometimes misused for *cachet*, presumably by writers who mistakenly think that the French word is *caché*. The error has become fairly common and betrays an utter lack of understanding of what the word is intended to denote—e.g.:

- “If Michael Jordan, the new Wizards’ president, wants to use his *cache* [read *cachet*] to attract free agents, he will need cap room.” Selena Roberts, “Howard for Ewing? The Rumor Is Out,” *N.Y. Times*, 2 Feb. 2000, at A25.
- “He maintained his home in the Elderwoods. This alone was enough to give him a certain *cache* [read *cachet*], for

the Elderwoods was considered a sorcerous place, where creatures of myth were known to gallivant about.” Peter David, *Sir Apropos of Nothing* 88 (2001).

- “Once upon a time, there was a certain *cache* [read *cachet*] that went along with being the heavyweight champion of the world, an intrigue, a certain fighting prestige.” Steve Simmons, “Round Peg in Squared Circle,” *Toronto Sun*, 6 June 2002, at S4.

LANGUAGE-CHANGE INDEX

cache misused for *cachet*: Stage 1

Current ratio (*a certain cachet* vs.

**a certain cache*): 12:1

cacophony. So spelled. See **SPELLING (A)**.

cactus. Pl. *cacti* or *cactuses*. Although *cactuses* is more common in ordinary usage, *cacti* predominates in modern print sources, especially in botanical contexts. See **PLURALS (B)**.

Current ratio: 7:1

caddie; **caddy**. *Caddie* = someone who carries a golf bag for a player, esp. for hire. *Caddy* = a box or other container. Occasionally *caddy* is mistakenly rendered *caddie*—e.g.: “In addition to such touches as a bookshelf with travel books and a globe, and a wheeled tea *caddie* [read *caddy*], there must have been upward of 100 pieces of silver plate.” Stephen Harriman, “A Day at the Races,” *Virginian-Pilot* (Norfolk), 20 May 1996, at E1. (For more on *upward* in that example, see **upward(s)**.)

LANGUAGE-CHANGE INDEX

caddie misused for *caddy*: Stage 1

Current ratio (*tea caddy* vs. **tea caddie*): 24:1

cadre (/kad-ree/ or /kah-dray/), meaning “a tightly knit group,” usually takes a plural verb despite being grammatically singular. E.g.: “He intimidates many who work for him, yet a *cadre* of loyal executives has [read *have*?] followed him from company to company.” Betsy Morris, “Big Blue,” *Fortune*, 14 Apr. 1997, at 68, 70. (See **SYNESIS**.) This sentence presents a close call because the writer might have used the singular verb to emphasize the oneness of the group.

In China, a *cadre* (singular noun) is a low-level Communist Party official in charge of a local community or military organization. In the former Soviet Union, a *cadre* was a local cell actively promoting the party line, or a member of such a cell (a sense now moribund).

Caesarean; ***Caesarian**. See **cesarean section**.

cafe; **café**. Originally a loanword from French, *cafe* without the **DIACRITICAL MARK** is three times as common as *café*. Pronounced /ka-fay/, it’s sometimes jocularly pronounced in BrE as /kaf/.

caftan (= a usu. lightweight, loose robe or tunic of Arabic origin) has predominated over *kaftan* in AmE

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

and World English since the 1920s. But in the last few years, *kaftan* and *caftan* have been used almost equally in BrE, *kaftan* being slightly more common.

Current ratio (World English): 2:1

cagey (= sly, cunning) is the standard spelling. **Cagy* is a variant.

Current ratio: 26:1

cake, having and eating. See **you can't eat your cake and have it too.**

calculable. So formed—not **calculatable*. See -ABLE (D) & -ATABLE.

Current ratio: 419:1

calculated = (1) deliberately taken or made <a calculated risk>; or (2) likely <the weather is calculated to slow play in the Masters today>. Sense 2 represents a debasement in meaning that damages the utility of the word in sense 1.

calculate out, a popular phrasing from about 1880 to 1940, is typically verbose for *calculate*—e.g.:

- “Besides trying to *calculate out* [read *calculate*] how much money to count on from SuperMall sales taxes, city budget writers are also trying to figure out how much money they're going to lose from a new tax break.” Patti Epler, “Auburn Budget Swims in a Sea of Unknowns,” *News Trib.* (Tacoma), 17 Oct. 1995, at B1.
- “Once we have identified the relevant coalitions, we then have to *calculate out* [read *calculate*] the power index formula for each one.” Steffen Eckmann & Adrian Widdowson, “Calculating Shareholder Influence,” *Accountancy*, Feb. 1996, at 108.

See PHRASAL VERBS.

Sometimes, though, the phrase means “to amount to a total figure,” as a business-jargon equivalent of the intransitive use of *work out* (which is better). In that use of the phrase, the word *out* is necessary—e.g.: “That *calculates out* [read *works out*] to about the price of a margarita a day.” Scott Burns, “Have You Been Missing Those Margaritas?” *Dallas Morning News*, 21 July 1996, at H1.

***caldron.** See **cauldron.**

calendar; calender. These are separate words. *Calendar*, of course, is the common term, meaning “a register of the days of the year” or “a schedule.” *Calender* means either “a rolling machine used in glazing paper or smoothing cloth” or “a mendicant dervish,” most often the former—e.g.: “Shurtape is one of the nation's top three manufacturers of duct tape, which is produced through a heat and pressurization process on a machine called a *calender*.” J. Thomas Grady, “A Sticky Story: The Uses of Duct Tape Just Seem to Keep Growing,” *Sunday Star-News* (Wilmington, N.C.), 16 Mar. 2003, at E5.

But the ordinary term *calendar* is often misspelled *calender*—e.g.:

- “K.D. Schmidt, an *Austin Daily Statesman* Linotype operator with a stiff mustache and flexible fingers, looks at the *calender* [read *calendar*] to remind himself exactly what

day it is.” Michele Stanush, “1896 News of the Day,” *Austin Am.-Statesman*, 26 Oct. 1996, at C1.

- “A newcomer to the festival scene has stormed its way into the North East *calender* [read *calendar*] announcing that it has completely sold out in only its third year.” Hugh MacKnight, “Hardwick Live Hits Right Note with Sell-Out,” *Newcastle J.* (U.K.), 22 Aug. 2015, News §, at 28.

LANGUAGE-CHANGE INDEX

calendar misspelled *calender*: Stage 1

Current ratio (*calendar year* vs.

**calender year*): 333:1

calf has a silent *-l-*: /kaf/. Pl. *calves* /kavz/. See PLURALS (C).

caliber; caliper. *Caliber* = (1) the diameter of a cylinder, esp. the bore of a gun <a .44-caliber pistol>; or (2) degree of worth or competence; quality <the Wharton School of Business turns out CEOs of the highest caliber>. (The BrE spelling is *calibre*. See -ER (B).) *Caliper* = (1) (usu. pl.) a tool used for measuring thickness or diameter; (2) thickness, as of paper or cardboard; (3) a part of a disc-brake system; or (4) a metal leg brace. **Calliper* is a variant BrE spelling.

Current ratio (*caliper* vs. **calliper*): 15:1

caliphate (= [1] an Islamic theocracy, or [2] a period of Islamic theocratic rule) is pronounced /kal-i-fayt/ or /kal-i-fət/. Through METATHESIS, the term is sometimes mispronounced by bungling news announcers as if it were /kaf-i-layt/.

calisthenics; callisthenics. In all forms of English, the one *-l-* spelling predominates by a 16-to-1 ratio.

calk. See **caulk.**

callous; callus. The first is the adjective (“hardened, unfeeling”), the second the noun (“hardened skin”). Unfortunately, during the early 1990s Dr. Scholl's—the company specializing in foot products—mistakenly advertised **callous removers* instead of *callus removers*, encouraging further confusion.

The plural of *callus* is *calluses*, preferably not **calli*—which, surprisingly enough, predominated until the mid-20th century. See PLURALS (B).

Current ratio (*calluses* vs. **calli*): 3:1

calvary; cavalry. Despite having wholly unrelated meanings, these words are often confused. *Calvary* = (1) (cap.) the place near Jerusalem where Jesus was crucified; (2) (sometimes cap.) a depiction or representation of Jesus' crucifixion; or (3) (l.c.) an experience of intense suffering; an ordeal. *Cavalry* = (1) a military unit mounted on horseback; or (2) a motorized military unit.

The reason for the confusion, of course, is the similarity in sound and spelling—the two words contain the same seven letters. When spoken, the sounds in the word *cavalry* (/ka-vəl-ree/) are sometimes transposed (a process known as METATHESIS), resulting in a mispronunciation of the word as /kal-və-ree/. And because it is misspoken, it is also misused in print—e.g.:

- “Raina feeds him chocolate and when he feels safe enough to talk, he calls the Bulgarian leader of the *calvary* [read *cavalry*] charge ‘an operatic tenor.’” Anne Marie Welsh, “A Wry, Wise Look at the Classics,” *San Diego Union-Trib.*, 8 June 1996, at E5.
- “The third annual Civil War encampment of the Lafayette Artillery Company served up field demonstrations of infantry marches and *calvary* [read *cavalry*] charges, complete with an unexpected horse fall.” Paul Clifton-Waite, “Slice of Civil Strife,” *Union Leader* (Manchester, N.H.), 25 Aug. 1996, at B1.
- “After the second mile into the race, the Franklin Park environ resembled a *calvary* [read *cavalry*] charge with 40 runners near the front.” John Connolly, “In the Long Run, Villanova Too Tough,” *Boston Herald*, 17 Nov. 1996, at B17.

Civilians seem to have to relearn this every time a new war breaks out—e.g.:

- “‘Oh yeah, he’s ready to deploy,’ shouted a hoarse Pfc. Tim Rose, 26, who works on an anti-aircraft battery for the 3rd Armored *Calvary* [read *Cavalry*] Regiment.” Jim Hughes, “Fort Carson Soldiers Enthusiastic as They Watch War Begin,” *Denver Post*, 20 Mar. 2003, at A4.
- “While U.S. Marines and British forces seized the southern port city of Umm Qasr, the Army’s 3rd Infantry Division, 7th *Calvary* [read *Cavalry*] Division and elements of the 101st Airborne Division moved northwest along the Euphrates River.” Thomas Caywood, “Air Attacks Upped as Ground Forces Advance,” *Boston Herald*, 22 Mar. 2003, News §, at 10.

Cf. irrelevant & regiment.

LANGUAGE-CHANGE INDEX
calvary misused for *cavalry*: Stage 1

calyx /kay-likes/ (= the green whorl on a flower that protects it before it opens) predominantly makes the plural *calyces* in all varieties of English. Although the anglicized plural *calyxes* enjoyed predominance in English-language print sources from about 1790 to 1820, it has seriously receded since then.

Current ratio (*calyces* vs. *calyxes*): 4:1

calzone (= a baked or fried turnover made of pizza dough filled with meat, cheese, and sauce) is preferably pronounced /cal-zohn/, as in Italian. But the most common pronunciation in AmE is /cal-zohn-ee/. Cf. **abalone**.

***camarade**. See **comrade**.

camaraderie is routinely misspelled **camraderie*, **comraderie*, and even **comradery* because of a mistaken association with *comrade*—e.g.:

- “Ah, yes, the *camraderie* [read *camaraderie*].” Anthony Flint, “A Return to the Sweatshops,” *Boston Globe*, 21 Feb. 1995, Metro §, at 1.
- “But the *comraderie* [read *camaraderie*] hasn’t spread to the assembly line.” Micheline Maynard, “Strike Stalls GM,” *USA Today*, 29 Sept. 1994, at B1.
- “In a show of *comradery* [read *camaraderie*], McNealy cut his own salary . . . in 1993 after Sun’s stock had dropped

dramatically.” David Einstein, “High Tech Turnover,” *S.F. Chron.*, 13 Jan. 1995, at F1.

Although the words *camaraderie* and *comrade* are etymologically related—both derive from the French *camarade*—the English spellings are well enough established that each of the variant spellings is an error. Of course, careful speakers probably won’t misspell *camaraderie*—it has five syllables: /kəh-mə-rah-də-ree/.

LANGUAGE-CHANGE INDEX
camaraderie misspelled **comraderie*, **camraderie*, or **comradery*: Stage 1
Current ratio (*camaraderie* vs. **comradery* vs. **comraderie* vs. **camraderie*): 1,167:26:7:1

camelopard (= giraffe) is an old-fashioned word still used in Europe. In English-speaking contexts, it is sometimes misspelled through association with *leopard*—e.g.:

- “Some, like Mark Twain’s travelling actor who painted himself with rings and stripes to look like a *cameleopard* [read *camelopard*], have all of a sudden painted themselves like the Russian tricolor flag.” Yevgeny Yevtushenko, “Please, Don’t Panic: Capitalism in Russia,” *New Perspectives Q.*, 22 Mar. 1996, at 8.
- “Jog around our reservoir of dreams, Jackie, diamonds dripping from your eyes as a load of *cameleopards* [read *camelopards*] trot past the Texas Book *Suppository* [read *Depositary*] to what remains of Camelot.” Benjamin Ivry, “At the Jackie Onassis Auction,” *Paris Rev.*, 1 Jan. 2000, at 47.

The word is pronounced /kə-mel-ə-pahrd/.

LANGUAGE-CHANGE INDEX
camelopard misspelled **cameleopard*: Stage 1
Current ratio: 2:1

came near [+ **present participle**], in the sense “almost,” is a CASUALISM that can usually be replaced by *almost* [+ past-tense verb]—e.g.: “Armed with might and mystique, the Cowboys *came near losing* [read *almost lost*] to the NFL’s Tinker Toy team Sunday in Cincinnati.” Frank Luksa, “Looking into the Whys of Cowboys 23, Bengals 20,” *Dallas Morning News*, 1 Nov. 1994, at B2. The phrasing was especially common from about 1850 to about 1950.

campanile (= a high bell tower that is usu. separate from any other building) is preferably pronounced /kam-pə-nee-lee/—not /kam-pə-neel/.

can. A. And may. The distinction between these words has been much discussed over the years, beginning with Samuel Johnson’s *Dictionary of the English Language* (1755). Generally, *can* expresses physical or mental ability <He can lift 500 pounds>; *may* expresses permission or authorization <The guests may now enter>, and sometimes possibility <The trial may end on Friday>. Although only an insufferable precisian would insist on observing the distinction

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

in informal speech or writing (especially in questions such as “Can I wait until August?”), it’s often advisable to distinguish between these words.

But three caveats are necessary. First, educated people typically say *can’t I* as opposed to the stilted forms *mayn’t I* and *may I not*. The same is true of other pronouns <Why can’t she go?> <Can’t you wait until Saturday?>. Second, *you can’t* and *you cannot* are much more common denials of permission than *you may not* <No, you can’t play with any more than 14 clubs in your bag>. Third, because *may* is a more polite way of asking for permission, a fussy insistence on using it can give the writing a prissy tone.

LANGUAGE-CHANGE INDEX
can for *may*: Stage 4

B. And could. These words express essentially the same idea, but there is a slight difference. In the phrase *We can supply you with 5 tons of caliche*, the meaning is simply that we are able to. But in the phrase *We could supply you with 5 tons of caliche if you’d send us a \$5,000 deposit*, the *could* is right because of the condition tacked onto the end; that is, there is some stronger sense of doubt with *could*. See SUBJUNCTIVES.

And in interrogatives, *could* indicates willingness: *Could you meet me at 7:00 PM?* This asks not just whether you’re able, but also whether you’re willing.

In still another circumstance—in the subordinate clause of a complex sentence—the choice between *can* and *could* depends on the sequence of tenses, as does the choice between any other present- and past-tense verb. If the verb in the main clause expresses a past event, *could* appears in the subordinate clause <she asked me to go so that I could meet my great-aunt>. But if the verb in the main clause expresses a present or future event, *can* appears in the main clause <she is asking me to go so that I can meet my great-aunt> <she will ask me to go so that I can meet my great-aunt>. See TENSES (B).

canal, vb. (= to build a canal), is pronounced /kə-**nal**/ and makes *canalled* and *canalling*—not **canaled* and **canaling*. See SPELLING (B).

cancel, vb., makes *canceled* and *canceling* in AmE, *cancelled* and *cancelling* in BrE. Note, however, that in *cancellation* the *-l-* is doubled (*-ll-*) because the accent falls on the third syllable. See SPELLING (B).

cancel (out). See PHRASAL VERBS.

candelabrum (= a branched candlestick with several candles, or a branched lamp with several lights) forms the plural *candelabra*, which appears far more often. Even so, the singular form remains quite common—e.g.:

- “The actor is speaking of his role as Lumiere, a life-size, fully functional *candelabrum*, in the national touring production of ‘Beauty and the Beast,’ which kicked off a four-month stint at the Kennedy Center.” Nicole Arthur, “All for ‘The Beast,’” *Wash. Post*, 9 June 1996, at G1.
- “There is a lustrous warmth to the light that gives forth from the candles on a menorah—the nine-branched

candelabrum used during Hanukkah.” John Nichols, “Festival of Lights,” *Capital Times* (Madison), 7 Dec. 1996, at A11.

- “A footman from the Silver Pantry is adjusting the top of a mid-17th-century 4ft *candelabrum*.” Jessica Salter, “The Queen Awaits,” *Daily Telegraph*, 25 July 2015, at 20.

Three problems arise with this word.

First, some writers use *candelabra* as a singular—e.g.: “The holiday centered on lighting the eight-branch *candelabra* [read *candelabrum*] called the menorah.” Jan M. Brahms, “Alas, Hanukkah Is ‘Jewish Christmas,’” *Capital Times* (Madison), 7 Dec. 1996, at A9.

Second, as a result of the false singular just mentioned, writers are tempted to use the double plural **candelabras* (an error dating from the late 19th century)—e.g.: “The dignity is leavened by some whimsical touches, such as chandeliers and *candelabras* [read *candelabra*] entwined with iron flowers and a giant piggy bank behind the small bar.” B. Samantha Stenzel, “Neighborhood Restaurant Offers Innovative Cuisine,” *Chicago Sun-Times*, 21 Nov. 1997, at 36.

Third, and least seriously, some writers stick to the native-English plural even though the foreign plural has been thoroughly established—e.g.: “But this Hanukkah season, which runs through Dec. 13, Mickey is appearing on menorahs—seven-branch *candelabrum*s [read *candelabra*]—and dreidels—spinning toy tops.” Carl Schoettler, “Pan-Cultural Mickey Mouse Makes a Plug for Hanukkah,” *Chicago Sun-Times*, 8 Dec. 1996, at 35. See PLURALS (B).

The word may be pronounced /kan-də-**lah**-brəm/ or /kan-də-**lay**-brəm/.

LANGUAGE-CHANGE INDEX

1. *candelabra* for *candelabrum* as a singular: Stage 4
Current ratio (*a candelabrum* vs. **a candelabra*): 1.04:1
2. **candelabras* for *candelabra* as a plural: Stage 3
Current ratio (*two candelabra* vs. **two candelabras*): 3:1
3. **candelabrum*s for *candelabra*: Stage 1
Current ratio (*candelabra* vs. **candelabrum*s): 177:1

candidacy; candidature. The first is the standard term in AmE, the second traditionally in BrE. But since the late 1970s, *candidacy* has become the predominant form in British print sources.

Current ratio: 5:1

can hardly; *can’t hardly. The first is STANDARD ENGLISH; the second is DIALECT. E.g.: “We *can’t hardly* [read *can hardly*] blame all those fine doctors for leaving.” Rob Ross, “If We Were Handing Out Awards,” *Pitt. Post-Gaz.*, 4 Mar. 2002, at C2.

There is some debate about **can’t hardly*, only half of which need be taken seriously. Traditionalists call it a double negative—*not* and *hardly* both being negatives—and condemn the phrase on that ground. Descriptive linguists counter (unpersuasively) that *hardly* is not really a negative at all and say that **can’t hardly* is perfectly acceptable.

But regardless of whether it’s a double negative, **can’t hardly* is NOT STANDARD ENGLISH. And the

phrase can always be replaced by a more logical and more direct phrase in one of two ways. If a strong negative is intended, use *can't* (or *cannot*). If a soft negative is intended, use *can hardly* (or, more typically, *could hardly*).

LANGUAGE-CHANGE INDEX

**can't hardly* for *can hardly*: Stage 1

Current ratio (*can hardly* vs. **cannot hardly*): 98:1

canister (= a small container) is the standard spelling. **Cannister* is a variant. Inconsistently enough, though, *cannikin* (= a small can) is the established form in preference to the variant forms **canikin* and **canakin*.

Current ratio (*canister* vs. **cannister*): 39:1

***can might**. See DOUBLE MODALS.

CANNIBALISM. This is H.W. Fowler's term for constructions in which certain words "devour their own kind" (*FMEUI* at 64). Words that commonly fall prey are *as*, *to*, and *that*. E.g.:

- "But the playwright's the thing, and he comes across *as* fascinating, mercurial and doomed *as* any of his fictional creations." Matt Roush, "Hepburn's Holiday Gift," *USA Today*, 19 Dec. 1994, at D3. (The *as* in the phrase *comes across as* has swallowed the first *as* in the phrase *as fascinating, mercurial and doomed as*. A possible revision: *But the playwright's the thing, and he comes across as being as fascinating, mercurial, and doomed as any of his fictional creations*.)
- "Most impressively, however, he power cleans a whopping 485 pounds—more than 100 pounds *than* [read *more than*] the 367-pound Davis." Olin Buchanan, "The Numbers Game," *Austin Am.-Statesman*, 21 Oct. 2000, at F5. (If either [*more than*] is changed to *over* [= more than], then the incompleteness of the phrasing becomes apparent—two *more thans* having been called for in the original sentence. Because that phrasing would be gawky, the sentence needs editing. A possible revision: *Most impressively, however, he power-cleans a whopping 485 pounds—over 100 pounds more than the 367-pound Davis*.)

There are two similar blunders. The first results from omitting *as* after *regard*, *treat*, *accept*, *acknowledge*, and other verbs that are unidiomatic without it (such as the PHRASAL VERB *come across*). E.g.: "We regard him as holy as a saint." Although the strictly correct phrasing would be *regard him as [being] as holy as a saint*, the better course is to use another word: "We consider him as holy as a saint." Or: "We believe [or *To us*] he is as holy as a saint." The second blunder occurs with incomplete comparisons—e.g.: **as bad or worse than*, **as much or more than*. These phrases should be *as bad as or worse than* and *as much as or more than*. E.g.:

- "They compromised at 8 feet, but in many spots the competition among walkers, dog walkers and runners has worn paths *as wide or wider than* [read *as wide as or wider than*] planners sought." Steve Brandt, "Which Path Will Lake Harriet Take?" *Star Trib.* (Minneapolis), 24 Jan. 1996, at B1.

- "Your caladiums should have produced tubers that are *as big or bigger than* [read *as big as or bigger than*] the ones you planted." Dan Gill, "Caladium Conundrum," *Times-Picayune* (New Orleans), 26 Sept. 1997, at E1.

See **as . . . as (E) & ILLOGIC (B)**.

Problems of this kind are most readily spotted by reading aloud. The ear tends to hear them even if the eye doesn't see them. See SOUND OF PROSE.

cannikin. See **canister**.

cannon. Pl. *cannons* or (especially in military jargon) *cannon*. See **canon**.

cannot should not appear as two words, except in the rare instances when the *not* is part of another construction (such as *not only . . . but also*)—e.g.: "His is among very few voices that *can not only* get away with numbers like 'You Are So Beautiful to Me' and a reggae/salsa remake of 'Summer in the City,' but actually make them moving." Jamie Kastner, "Joe Cocker Proves He Can Still Rock 'n' Roll," *Toronto Sun*, 8 Mar. 1995, at 64. *Cannot* is preferable to *can't* in formal writing. See CONTRACTIONS.

cannot help but; cannot help —ing; cannot but. In formal contexts, the last two phrases have traditionally been preferred—e.g.:

- "Engaged in these activities, the critic *cannot but* formulate value judgments." John Simon, *The Sheep from the Goats* xix (1989).
- "When I put this on the list, I *can't help feeling* a little puffed up." V. Diane Woodbrown, "Why Women Need to Speak Up Against Gender Imbalance," *S.F. Examiner*, 8 Jan. 1997, at A15.

Still, because *cannot help being* and (especially) *cannot but be* are increasingly rare in AmE and BrE alike, they strike many readers as stilted.

Cannot help but, which took root during the 20th century, is becoming an accepted idiom <I cannot help but think you did that on purpose>. A less awkward construction is *cannot help —ing* <I cannot help thinking you did that on purpose>. But the first construction should no longer be stigmatized on either side of the Atlantic—e.g.:

- "Experts say Thomas' court performance *cannot help but* be affected by the traumatic Senate confirmation hearings." Aaron Epstein, "Thomas Survives Controversy, Wins Senate Confirmation, 52–48," *Phil. Inquirer*, 16 Oct. 1991, at A1.
- "Texas *cannot help but* consider what its victory over Tech will mean." Jonathan Feigen, "UT Regains Control of Its Fate," *Houston Chron.*, 11 Nov. 1996, Sports §, at 13.
- "One *cannot help but* wonder what producer, geared up to supply supermarkets, got dumped to make way for all those North American berries." Emily Green, "A Load of Coq," *Independent*, 14 Nov. 1996, Features §, at 2.

Occasionally writers twist the phrase not just unidiotically, but illogically—e.g.: "I *cannot help from*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

refraining myself to comment [read *cannot refrain from commenting*] on Ms. Gabor's flagrant disrespect of the law." Letter of Joel Rosen, "Zsa Zsa's Encounter with Police," *L.A. Times*, 24 June 1989, § 2, at 9. If the writer couldn't help refraining, then the letter wouldn't have been written! On the misuse of *refrain* as a reflexive verb, see **restrain**.

2. *cannot help from* for *cannot but*: Stage 1

Current ratio (*cannot but* vs. *cannot help from*): 658:1

canon; cannon. *Canon* = (1) a corpus of writings <the Western canon>; (2) an accepted notion or principle <canons of ethics>; (3) a rule of ecclesiastical law (either of the Roman Catholic canon law or of the Anglican Church); or (4) a cathedral dignitary.

Cannon = (1) a big gun; or (2) the ear of a bell, by which the bell hangs. *Cannon* incorrectly displaces *canon* surprisingly often—e.g.:

- "The state Criminal Justice Commission said yesterday in Wallingford that there was no evidence that Litchfield County State's Attorney Frank Maco violated the *cannon* [read *canon*] of ethics for lawyers by his remarks." "Allen Filing Rejected," *Newsday* (N.Y.), 4 Nov. 1993, at 18.
- "White's friends say her fledgling campaign for retention is hampered by the judicial *cannon* [read *canon* or, more likely, *canons*] of ethics, which *restricts* [or, with *canons*, *restrict*] her ability to defend herself." Andy Sher, "Crime Fears, Death Penalty Debate Stirring Furor over Judge Election," *Nashville Banner*, 22 July 1996, at A1.

LANGUAGE-CHANGE INDEX

cannon misused for *canon*: Stage 1

cantaloupe; cantaloup. The first is AmE /*kan-tə-lohp*/; the second is BrE /*kan-tə-loop*/.

***can't hardly.** See **can hardly**.

can't have your cake and eat it too. See **you can't have your cake and eat it too**.

can't help but. See **cannot help but**.

can't seem. Although this phrase is technically illogical (e.g., "I can't seem to find my coat" is more logically rendered "I seem to be unable to find my coat"), it is also undoubtedly idiomatic. Idiom tends to prefer succinctness over logic, and here the logical construction is verbose. Linguists use the term "raising" to describe the process of moving a negative from a subordinate clause to a main clause. So "I think I will not go" becomes "I don't think I will go." (See **don't think**.) The phrase *can't seem* is one of the more popular instances of raising. It became established in the late 19th century and grew rapidly in popularity during the 20th.

Regardless of its label, this process is quite common, especially in speech. But it also occurs in writing—e.g.:

- "Shaq's mother *can't seem* to remember to give him the pill each morning, so Clifton got a doctor's permission to do

it himself." Mary Jane Fine, "When Hugs Aren't Enough," *Palm Beach Post*, 7 Nov. 1994, at A1.

- "But all the lawsuits in the world *can't seem* to slow down tobacco profits." Dan Beucke, "Week in Business," *Newsday* (N.Y.), 6 Oct. 1996, at F2.
- "The notional premise of this foray into meta-comedy is that the outwardly earnest duo *can't seem* to write a skit they like." Mark Monahan, "Comedy," *Daily Telegraph*, 22 Aug. 2015, at 19.

LANGUAGE-CHANGE INDEX

can't seem: Stage 5

canvas; canvass. *Canvas*, almost always a noun, is the heavy cloth. In its rare verbal sense, it means "to cover with such a cloth."

Canvass, v.t., = (1) to examine (as votes) in detail; (2) to take stock of opinions, esp. those of individuals; (3) to solicit orders or political support; or (4) to discuss or debate. The term is fairly common in all four senses—e.g.:

- Sense 1: "Town cops got a complaint about swastikas and phrases painted on a stately home on Carriage House Lane, and when they *canvassed* the neighborhood, they found anti-Semitic graffiti on three other houses and on a wooden shelter on the golf course, 50 feet away." Patrice O'Shaughnessy, "Marred by Hate," *Daily News* (N.Y.), 17 Nov. 1996, News §, at 6.
- Sense 2: "Before driving east on an unclogged U.S. 50, I *canvassed* people for suggestions of things to do." Jeanette Belliveau, "Beach, with Blanket," *Wash. Post*, 8 Mar. 1995, at B9.
- Sense 3: "Solicitations to the volunteers bring in nearly \$700,000 a year, while the volunteers' door-to-door *canvassing* takes in close to \$300,000 a year." Larry Riggs, "Big Names, Big Changes," *Direct*, 1 Sept. 1996, at 1.
- Sense 4: "Mr. Bolger's soothing New Year comments also *canvassed* the potentially divisive issue of republicanism." "Calm Before Political Storm," *Evening Post* (Wellington), 9 Jan. 1995, at 4.

As a noun, the word *canvass* means "the act of canvassing."

capable. The phrase *is capable of* [verb + -ing] can be (not *is capable of being*) put more simply—typically by writing either *can* [+ verb] or *is able to* [+ verb]. This bit of verbosity is especially common in sportswriting—e.g.:

- "Talk to him for a while and you come to the conclusion that either he *is capable of being* [read *can be*] very calm in difficult circumstances or he's a very good actor." Kent Youngblood, "Two Men, One Opportunity," *Star Trib.* (Minneapolis), 27 Sept. 2001, at C10.
- "Duhon said he thinks that Dunleavy *is capable of being* [read *can be*] an outstanding rebounder." Bill Cole, "Two Goals, Williams, Duke," *Winston-Salem J.*, 15 Nov. 2001, at F1.
- "Quarterback Quincy Carter needs to continue to improve and prove he *is capable of being* [read *can be*] a starter in the NFL." Richard Justice, "Restoring Glory," *Houston Chron.*, 16 Dec. 2001, Sports §, at 1.

capacity; capability. These words overlap, but each has its nuances. *Capacity* = the power or ability to receive, hold, or contain <the jar was filled to

capacity>. Figuratively, it refers to mental faculties in the sense “the power to take in knowledge” <mental capacity>. In law, it is frequently used in the sense “legal competency or qualification” <capacity to enter into a contract>. *Capability* = (1) power or ability in general, whether physical or mental <he has the capability to play first-rate golf>; or (2) the quality of being able to use or be used in a specified way <nuclear capabilities>. See **ability & incapacitation**.

capital, n.; capitol. The first is a city, the seat of government; the second is a building in which the state or national legislature meets (fr. L. *capitoleum*, the Roman temple of Jupiter). Until October 1698, when the Virginia governor specified that *Capitol* would be the name of the planned statehouse in a village then known as Middle Plantation, the word *capitol* had been used only as the name of the great Roman temple at Rome. See Mitford M. Mathews, *American Words* 62–63 (1959; repr. 1976).

Capital, whether as noun or as adjective, is called on far more frequently than *capitol*.

Capitol Hill is where the U.S. *Capitol* (the building) is located in Washington, D.C., the nation’s *capital*.

capitalist; capitalistic. *Capitalist* is the general adjective <capitalist enterprises>; the *-istic* form, a favorite of Marxists, is typically pejorative <for much of the 20th century, Hong Kong was the world’s most capitalistic city>.

CAPITALIZATION. A. Generally. The decision whether to capitalize a word seems simple at first. There are really just three rules: capitalize the first word of a sentence, the pronoun *I*, and proper names. What could be easier?

Then the “yeah-but” bug bites. You’re writing a business letter and you notice that everyone capitalizes *Company* when it refers to your company, even when it’s not used with the company’s name. Isn’t that a common noun that should be lowercase? You read the newspaper and notice that *President* is capitalized when referring to the U.S. president, but not when referring to a foreign president or the president of a corporation. You notice that the newspaper’s headline is capitalized just as in a regular sentence, but a newsletter you receive capitalizes the first letter of every word in its headlines—and the supermarket tabloids you sneak a peek at while waiting in line capitalize every bigger-than-life letter in their screaming headlines.

So what are the standards? For writing that goes into print, the standards—in capitalization more than in most other aspects of written English—lie in house styles. That means that how you capitalize will usually be decided by someone else, not you (unless you’re a publisher, or maybe a poet). Yet some general conventions offer helpful guidance. The most important is

the modern trend away from capitalization, resulting in a minimalist rule: unless there’s a good reason to capitalize, don’t.

But don’t think that this simple rule can answer all your questions. Despite the three simple rules above, there are many other arcane capitalization rules, and you’ll never learn every one any more than you will ever learn how to spell every word in the English language. You’ll always need a dictionary to look up spellings you’re not sure about, and you’ll find a comprehensive resource such as *The Chicago Manual of Style* indispensable for explaining the minutiae and conventions of capitalizing. Other excellent manuals are *The Associated Press Stylebook and Briefing on Media Law* and the venerable but aging *Words into Type*.

There is simply no way to reason out why *Stone Age* is capitalized but *space age* is usually not, why *October* is capitalized but *autumn* is not, why in scientific names the genus is capitalized but the species is not—even when the species name is derived from a proper name <*Rhinolophus philippinensis*>.

Despite all those paradoxes, and many others, the following conventions may prove useful when deciding whether to capitalize:

- Capitalize the first word of a sentence even if the word standing alone would be an exception to the rule to capitalize proper nouns, such as *eBay* <EBay reported higher earnings Tuesday>.
- Capitalize the first word of a complete sentence within a sentence, such as a direct quotation <I said, “Do you want to dance?”>.
- When a common noun is part of a proper name, capitalize it when the entire name appears <Mississippi River>, but not when it is separated from the proper name <the Mississippi and Missouri rivers>. See **NAMES (A)**.
- Capitalize the adjectival form of a noun that is always proper <Keynesian economics> but not one from a noun that can also be common <congressional investigation> or that has lost any connection with the thing described by the combined term <french fries>.
- Usually capitalize all letters of an acronym or initialism (and avoid periods) <NCAA>, but follow the preferred style if it is different <Nasdaq> and any style established by long usage <U.S.> <mpg> <AM> <A.D.>. (See **ABBREVIATIONS (A)**.) This is another area in which a style manual is essential.
- Capitalize compass directions when they refer to identifiable places <the American West>, but not when they are just general directions <go west, young man>.
- Capitalize days of the week <Monday>, months of the year <June>, and holidays <Fourth of July>, but not seasons <fall>, even if used attributively <spring 2004 semester>.
- Capitalize historic eras <the Roaring Twenties>, but not general labels that could apply to many eras <the golden age of radio>.
- Capitalize sparingly to show personification <it’s not nice to fool Mother Nature> or that something is being elevated from the commonplace for some rhetorical purpose <still waiting for that One Big Deal>.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. Overcapitalizing. Inexperienced writers—and overzealous house stylists—often tend to capitalize common nouns inappropriately. As mentioned above, a house style may insist that certain common nouns (e.g., *Company*, *University*, *City*) be capitalized when referring to its own institution. But even this holdout against the modern trend is weakening—the University of Colorado at Boulder recently declared that its internal style is to always make *university* lowercase when it stands alone. A few nouns that are arguably common in form are always capitalized, such as *House* (for House of Representatives) and *Crown* for the British monarchy. But that’s not an excuse to capitalize *federal* or *government*. Again, a style manual is invaluable for handling the exceptions to the rule.

It isn’t always inexperience that leads to overcapitalizing. Sometimes it’s propaganda. As one modern grammarian notes, propagandists “invariably capitalize the name of their philosophy, the title of their leader, the term for the group’s adherents, and so on.” Barbara Wallraff, *Word Court* 80 (2000).

C. Titles. Titles also give writers some trouble. In general, an actual title is capitalized when it comes before a name <Chairman Mao>, but not when it follows a name <Colin Powell, former chairman of the Joint Chiefs of Staff>. Labels that are not titles are never capitalized <physicist Niels Bohr> (but see TITULAR TOMFOOLERY). A well-known nickname may rise to the level of a proper noun and require capitalization <Old Blue Eyes>. A trademark is a proper name akin to a title and should always be capitalized <Dr Pepper> unless the trademark is designated as lowercase <iPod>. Titles of works of art and publications are capitalized like up-style headings (see (D)) <*Gone with the Wind*> <*Journal of the American Medical Association*>.

Styles differ over whether to capitalize an article at the beginning of a name or title. In general, always capitalize an article when it is part of the title of a book, play, or other literary or artistic work <*A Clockwork Orange*> <*The Color Purple*>, but leave it lowercase if it is not part of the title <the Bible>. Do not capitalize *the* at the beginning of a company’s or university’s name <the Chubb Group> <the Heritage Foundation> <the University of Washington>. Rules for articles at the beginning of newspaper and magazine names are not as well settled. Associated Press style is to capitalize *the* when it is a formal part of the name <*The Nation*> <*The New York Times*>, and to leave it lowercase when it is not <the *National Review*> <the *Los Angeles Times*>. While that advice is sensible, it can be burdensome as well. How do you know the formal name of a publication? The World Wide Web makes that task easier and less expensive than the AP’s instruction to buy *Editor & Publisher’s International Year Book*. Finally, *the* is lowercase when referring to many countries and geographic entities <the Marshall Islands> <the Philippines>, but capitalized in the names of some cities <The Pas, Manitoba> <The Dalles, Oregon>. And as *The New York Times Manual*

of Style and Usage points out, the capital of the Netherlands is The Hague.

D. Up-Style Headings. Avoid them. An up-style heading is one in which most words are capitalized. As far as readability is concerned, a block of text set up-style is just slightly easier to read than a block of all-caps text (see (E)).

But the up-style has its place, as in the taglines in this and most other manuals. It also has advantages in marking the hierarchy of headings. This is especially so if the output is straight from a word processor, as most writing in business and academia is. Typesetting for publications gives a lot more flexibility for signaling the structure of a document by layout devices. In a business or academic report, the writer is likely to use just one or two typefaces and sizes. So a bold, centered, up-style heading might signal, for example, that this division in the document is at a lower level than the bold, centered, all-caps heading above, but at a higher level than the down-style, flush-left headings that follow.

When using up-style headings, capitalize the first and last words and all other words except for articles, conjunctions, and short prepositions (usually fewer than five letters). Consider the *to* in an infinitive a preposition or particle and leave it lowercase, too. But don’t fail to capitalize a noun, pronoun, verb, adjective, or adverb just because it is short <It Is Too Easy to Forget>. And remember: many words that are common as prepositions can also serve as adverbs <Stand Out in a Crowd> <Walk out the Door>. In these examples, *out* is an adverb in the first, a preposition in the second.

Two final things. First, always capitalize *that* in up-style headings, whether it is serving as a relative pronoun, demonstrative adjective, or conjunction. This carves out an exception to the usual rules, but it’s simple, handy, and consistent. Second, consider using another exception to the rule by capitalizing the short preposition *with* if it appears close to or parallel with the longer preposition *without*. Otherwise, the result is awkward and confusing, perhaps even misleading by implying significance where none is intended.

E. All Capitals. Avoid them. A block of all caps is hard to read, and the longer the block, the harder it is to read. We learn to recognize words by the shape of the letters, even if we’re not conscious of it. The ascenders and descenders give words their distinctive shapes. Words set in all caps lose those signals.

That said, the all-caps style does have its place, especially in major headings, set in boldface type and never running over one line. Even in this use, however, the style is best confined to simple tags such as **CONCLUSION**. The combination of caps and boldface can help when setting up a hierarchy of heading styles (see (D)).

F. Small Caps. The use of small caps is uncommon in general writing, but for some uses the style is appropriate, and more writers ought to consider adopting it. Specifically, small caps are helpful where large caps

would be unnecessarily obtrusive. For example, 56 B.C. just looks tidier than 56 B.C. Similarly, if the style you must follow requires caps rather than lowercase letters for *a.m.* and *p.m.*, 5:37 PM looks a bit more restrained than 5:37 PM. When you're listing academic degrees, small caps can help prevent the string of abbreviations from overpowering the person's name <Don Hill, B.S., M.B.A., ED.D., J.D., LL.M.>. And in other places where tags and abbreviations are standard, small caps can help lower the volume somewhat <DATE:>. Small caps are also used in citations for specialized writing in certain fields, such as law. For more guidance on using small caps, see *The Chicago Manual of Style*.

G. After Colon. See PUNCTUATION (c).

H. Names. See NAMES (A).

capitol. See **capital**.

Capitol Hill. See **capital**.

capitulatory; *capitulative. The standard adjective corresponding to *capitulation* is *capitulatory* /kə-**pich**-ə-lə-tor-ee/. The form **capitulative*, which is much less common, is a NEEDLESS VARIANT—e.g.: “Solidarity activists and many independent economists maintain that authorities save their most effective weapon of the price campaign for last: *capitulative* [read *capitulatory*] wage hikes above the level of prices for any factory considered a potential trouble spot.” Jackson Diehl, “Poles Await Yearly Rise in Prices,” *Wash. Post*, 25 Jan. 1988, at A15.

Current ratio: 30:1

cappuccino (= Italian-style coffee with steamed milk) has always been so spelled with two doubled consonants. **Cappuccino* and **cappucino* are NEEDLESS VARIANTS.

Current ratio (*cappuccino* vs. **cappuccino* vs. **cappucino*): 185:2:1

capricious (= [1] changing quickly and suddenly, or [2] likely to change one's mind suddenly and to behave unexpectedly) is preferably pronounced /kə-**prish**-əs/—not /kə-**preesh**-əs/. Yet the corresponding noun is *caprice* /kə-**prees**/.

capsize has always been so spelled. Yet the misspelling **capsise* occasionally appears in BrE and World English. E.g.: “Ships at sea are cracked like straws, curraghs and rafts in the lough *capsise* [read *capsize*].” Carolyn White, *A History of Irish Fairies* 92 (2005).

Current ratio: 797:1

captor; *capturer. The latter is a NEEDLESS VARIANT.

caramel (= [1] burnt sugar used to color or sweeten food; or [2] a smooth, chewy, caramel-flavored candy) is the standard spelling. The word is pronounced /**kar**-ə-məl/ (best), /**kar**-ə-mel/ (second best), or

/**kahr**-mə/ (worst). **Carmel* is a misspelling that results from the third pronunciation—e.g.:

- “Another offering is the Cow Pie, which is made of chocolate, pecans and *carmel* [read *caramel*].” Anna Driver, “Kids Sweet on Slimy Gum, Candy Rats,” *Commercial Appeal* (Memphis), 14 June 1997, at B7.
- “The shops in Oak Glen and Yucaipa still offer *carmel* [read *caramel*] apples, peanut brittle, chocolates and salt water taffy.” Gail Wesson, “Carl Granlund, Assemblyman's Father” (obit.), *Press-Enterprise* (Riverside, Cal.), 21 Oct. 1997, at B6A.

Another slight influence leading to this error might be a place name: Carmel, California (which is pronounced /**kahr**-mə/).

LANGUAGE-CHANGE INDEX
caramel misspelled **carmel*: Stage 1

carat; karat; caret. These homophones have distinct meanings. *Carat* = a unit of weight for gemstones, equal to 200 milligrams <a 2-carat diamond>. *Karat* = a unit of fineness for gold <a 24-karat gold bracelet>. *Caret* = a typographic mark (^) used to indicate an insertion <a heavily edited page filled with cross-outs and carets>.

Not surprisingly, the first two words are the most frequently confused—so much so that dictionaries list *carat* as a variant spelling of *karat* (in addition to defining *carat*'s ordinary sense). But the DIFFERENTIATION ought to be encouraged.

The less common error is to misuse *caret* for the unrelated word *carat* or *karat*—e.g.: “Boaters often liked to have the names of their yachts painted in 24-*caret* [read 24-*karat*] gold leaf, as well.” Shannon Oboye, “James Tribbett, Expert at Gold-Leaf Lettering,” *Sun-Sentinel* (Ft. Lauderdale), 15 Mar. 2001, at B15.

LANGUAGE-CHANGE INDEX
caret misused for *karat*: Stage 1

caravanserai (= in eastern countries, an inn with a large open central area where groups of travelers with animals can stay) has been predominantly so spelled since the 18th century. The most common variants are **caravansary* (predominant in AmE in the late 19th century) and **caravansery*. *Caravanserai* is pronounced /kar-ə-**van**[t]-sə-rɪ/.

Current ratio (*caravanserai* vs. **caravansary* vs. **caravansery*): 56:22:1

carburetor; carburettor. The first is AmE (pronounced /**kahr**-bə-ray-tər/ [formally /**kahr**-byə-ray-tər/]); the second is BrE (pronounced **kah**-byə-ray-tə/ [OED] or /kah-byə-**ret**-ə/ [Jones]).

carcass (= the dead body of an animal or, less often, a human) is the standard spelling. **Carcase* is a variant (still occasionally seen in BrE, but not recommended in AmE or any other form of STANDARD ENGLISH).

Current ratio: 6:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

cardinal numbers; ordinal numbers. Cardinal numbers signify quantity (*one, two, three*, etc.); ordinal numbers signify position (*first, second, third*, etc.). To keep the terms straight, associate *ordinal* with *order*. See NUMERALS (F).

card shark; cardsharp. The traditional distinction is that a *card shark* is a skillful player, while a *cardsharp* (usually a closed compound) is a cheat. Here, the terms are used in these senses:

- “He matches the ivied education with a stint working at Christie’s in London, which makes him right for the antiquities game: half tweedy professor, half Texas Hold ’Em *card shark*.” Bo Emerson, “A Herculean Try for Goddess,” *Atlanta J.-Const.*, 2 Jan. 2007, at A1.
- “Pretty soon Eddie’s been beat up, there’s a dead showgirl in a swimming pool, and the pit boss has given up chasing *cardsharps* in favor of chasing hoods.” Kevin Allman, “Get Out of the Way, Gender Benders,” *Wash. Post*, 17 Dec. 2006, Book World §, at T13.

But occasionally a writer will use *card shark* where the sense is that the player cheats. A useful distinction gets obliterated in the shuffle—e.g.:

- “Mr. Kahn took an expansive view of . . . coded communications, from the solution of hieroglyphics and cuneiform writing to hobo chalk markings and the signals used by *card sharks* [read *cardsharps*] to cheat unwitting opponents.” Martin Edlund, “David Kahn Talks About His Life in Code,” *N.Y. Sun*, 30 Mar. 2004, Arts & Letters §, at 16.
- “Supposedly based on the teachings of *card shark* [read *cardsharp*] ‘Dickie Richard,’ the book offers genuine tips for cheating along with a humorously amoral philosophy.” Will Pfeifer, “Know When to Hold ’Em,” *Rockford Register Star* (Ill.), 23 Jan. 2006, at C1.

LANGUAGE-CHANGE INDEX
card shark misused for *cardsharp*: Stage 1

careen; career, vb. *Careen* = (1) v.i., to tip or tilt <the sailboat careened and then sank>; or (2) v.t., to cause to tip or tilt <they careened the ship on the beach to scrape the barnacles and caulk the seams>. *Career* = to move wildly at high speed. E.g.: “His car overturned yesterday after *careering* out of control across three lanes of the motorway.” “M4 Driver Drowns,” *Sunday Telegraph*, 11 Feb. 1990, at 2.

Since the early 20th century, AmE has made *careen* do the job of *career*, as by saying that a car *careened* down the street. On September 7, 1992, in a campaign speech in Wisconsin, President George H.W. Bush said that “product liability has *careened* out of control.” Likewise: “Imagine yourself as Ridge Racer, *careening* in a rocket-powered car through an ever-changing, three-dimensional landscape.” “Fight to the Finish,” *Newsweek*, 12 Dec. 1994, at 56. In frequency of use in AmE, phrases such as *careened off the road* and *careened out of control* have no close rivals with *careering* counterparts. *Careening off course* is now standard.

Concededly, though, a few writers reserve *career* for such uses—e.g.:

- “Monday night, while he [Silvio Berlusconi] reaffirmed his promise to deliver a ‘new Italian miracle,’ supporters

careered through the streets of Rome blasting their car horns and crying ‘Silvio! Silvio!’” Kevin Fedarko, “Knight of the New Right,” *Time*, 11 Apr. 1994, at 59.

- “A hot rod *careered* out of control during a drag race and flew into the grandstand Sunday.” “Out-of-Control Car Kills Woman at Race,” *Chicago Trib.*, 11 Nov. 1996, at 12.
- “A car *careered* out of control last evening and crashed into a knot of people on the sidewalk.” Daniel J. Wagin, “Metro Briefing: Fatal Car Crash,” *N.Y. Times*, 20 July 2001, at B6.

It’s understandable why most people aren’t comfortable with this verbal usage of *career*. The word derived from a Latin term for *road* or *path*, and later denoted a racetrack, but today people think of it only as a noun: the path of a life’s work.

The new use of *careen* may also have been influenced by the word *carom* (= to rebound after colliding)—e.g.: “Among those comforted were seven students, ages 10 to 15, who were riding their bicycles Sunday with Dale Tutkowski when two cars collided and one car *caromed* into the teacher.” Joe Williams & Lisa Sink, “Pupils Who Saw Teacher Hurt Seek Comfort,” *Milwaukee Sentinel*, 18 Oct. 1994, at A1.

LANGUAGE-CHANGE INDEX
careen in the sense “to move swervingly or lurchingly”: Stage 5

caret. See **carat**.

cargo. Pl. *cargoes*. See PLURALS (D).

Caribbean is sometimes misspelled **Caribeian* or **Carribean*. The pronunciation /kar-i-bee-ən/ is preferred because of its derivation from *Carib* /kar-ib/, the name of the native inhabitants of the islands that Christopher Columbus landed on and explored in 1493 (the Lesser Antilles) and of the northern coast of South America. The pronunciation /kə-rib-ee-ən/ is common, however, especially in BrE.

***caricature assassination.** See **character assassination**.

***carmel.** See **caramel**.

carnal knowledge. This is an old legal EUPHEMISM for sexual intercourse—dating back at least to the 17th century. The phrase is often paired, in references to rape, with *ravish*, a word that will strike some readers as romanticizing a horrible criminal act. (See **ravish**.) Except in quotations and historical references, the phrase *carnal knowledge* can be advantageously replaced by *sexual intercourse*.

carnivore, n. Pl. *carnivores* or (less commonly) *carnivora*. Believe it or not, the latter was predominant in print sources up to 1925. See PLURALS (B).

Current ratio (*carnivores* vs. *carnivora*): 13:1

carom. See **careen**.

carousel; carousal. A *carousel* (/ka-rə-sel/) is a carnival merry-go-round or, by extension, another machine that turns in a circle, such as a baggage carousel at an airport or the film-holder on a slide projector.

(**Carrousel* is a variant spelling.) A *carousal* (/kə-**row**-zəl/) is a drunken spree.

The two spellings are occasionally confounded, almost always in the direction of *-el*'s being erroneously changed to *-al*—e.g.:

- “While rocking horses and *carousals* [read *carousels*] abound in a second guestroom, they are outnumbered by dozens of toy mice peeking behind candlesticks and hanging from clocks throughout the house.” Julie Landry, “Busy Fingers Decorate for Tour,” *Times-Picayune* (New Orleans), 3 Dec. 1995, at G1.
- “Today they will dismantle the 40 horses, benches and other items that make up the *carousal* [read *carousel*].” David Connerty, “Nostalgia Loses,” *Portland Press Herald*, 25 Mar. 1997, at B1.

LANGUAGE-CHANGE INDEX
carousal misused for *carousel*: Stage 1

carte blanche; ***carta blanca**. The French form, *carte blanche* (= free permission), is usual—not the Italian **carta blanca*, which is a NEEDLESS VARIANT. The phrase, meaning literally “a white card,” does not take an article—e.g.: “The team’s owner gave the coach *carte blanche* to trade or waive players.” It is pronounced /kahr**t** **blahnsh**/ or /**blahnch**/. The plural is *cartes blanches* (/kahr**t**(s) **blahnsh**/ or /**blahnch**/).

***carven**, adj., is inferior to *carved* because it is a non-traditional revival of a Renaissance form and because it remains rare. E.g.: “Each feature was fine, attenuated, *carven* [read *carved*], the eyelids solemn and the mouth curved and cut like a fruit.” Helen Simpson, “The Bed,” *Cosmopolitan*, Jan. 1993, at 210.

LANGUAGE-CHANGE INDEX
**carven* for *carved*: Stage 1
Current ratio: 32:1

caryatid (= a pillar in the shape of a female figure) is preferably pronounced /kar-ee-**at**-id/—not /kar-ee-**ə**-tid/, /kə-**ri**-**ə**-tid/, or /kar-ee-**ay**-tid/.

case. A. Generally. H.W. Fowler wrote of *case*: “There is perhaps no single word so freely resorted to as a trouble-saver, and consequently responsible for so much flabby writing” (*FMEUI* at 65). Arthur Quiller-Couch condemned it as “jargon’s dearest child.” *On the Art of Writing* 106 (1916).

The offending phrases include *in case* (better made *if*), *in cases in which* (usually verbose for *if*, *when*, or *whenever*), *in the case of* (usually best deleted or reduced to *in*), and *in every case* (better made *always*, if possible). The word *case* especially leads to flabbiness when given different senses in the same passage—e.g.: “The popular image of a divorce *case* has long been that of a private detective skulking through the bushes outside a window with a telephoto lens, seeking a candid snapshot of the wife *in flagrante delicto* with a lover. Such is not exactly the *case*.” Joseph C. Goulden, *The Million Dollar Lawyers* 41 (1978).

B. Meaning “argument.” This meaning is commonplace and is no more objectionable than any other use of the word—e.g.:

- “Lincoln repeated his *case* from town to town in the seven debates with Douglas.” Alfred Kazin, “A Forever Amazing Writer,” *N.Y. Times*, 10 Dec. 1989, § 7, at 3.
- “With Tenet sitting behind him in the Security Council chamber last week, Powell made his *case* in a 77-minute speech interspersed with satellite photographs and recordings of intercepted communications.” Kevin Whitelaw, “Prosecutor Powell,” *U.S. News & World Rep.*, 17 Feb. 2003, at 26.

This is the meaning of *case* in the title of the book (*Making Your Case: The Art of Persuading Judges* [2008]) by Justice Antonin Scalia together with me.

C. Grammatical Case. See PRONOUNS (B) & POSSESSIVES.

D. Meaning “lawsuit.” In legal contexts, the word *case* can be especially slippery. When the word is simply equivalent to *lawsuit*, legal stylists tend to replace the word to avoid potential ambiguity. For example, in the sentence “In this *case*, the argument in favor of comparative negligence is at its strongest,” does the writer mean (strictly) “in this lawsuit” or (more broadly) “in this type of circumstance”? Context may supply the answer, but if the first meaning is intended, it’s best to eliminate the ambiguity by using *lawsuit* instead.

***cash money** is a 19th-century REDUNDANCY that peaked in frequency of use during World War II and has persisted despite a sharp post-War decline—e.g.:

- “The deal also makes Wirtz cough up a pile of valuable *cash money* [read *cash*] (more valuable than oxygen) this year AND next year, making it nearly impossible to trade Roenick.” Steve Rosenbloom, “Views from Out of Bounds,” *Chicago Trib.*, 9 Aug. 1996, Sports §, at 2.
- “He has decided to let Sotheby’s turn [the bones] into *cash money* [read *cash*].” Don Singleton, “T-Rex New Kid on the Block,” *Daily News* (N.Y.), 17 Nov. 1996, at 18.
- “If Jim McElwain is any example, should Mike Bobo bolt for greener (*cash money* [read *cash*]) pastures as soon as he has a 10-win season at CSU?” Benjamin Hochman & Mark Kiszla, “Who Has the Better Head Coaching Job?” *Denver Post*, 9 Aug. 2015, at C2.

-CAST. On the analogy of *broadcast*, many 20th-century NEOLOGISMS arose, such as *cablcast* (1975), *podcast* (2004), *radiocast* (1931), *simulcast* (1948), and *telecast* (1937). They are IRREGULAR VERBS (like *cast* itself) that don’t change in the past tense. Adding *-ed*, though fairly common, is incorrect. For individual treatments, see **broadcast**, **cablcast**, **radiocast** & **telecast**.

cast > cast > cast. So inflected. **Casted* is incorrect as a past-tense or past-participial form—e.g.:

- “For a week, the three men swapped fish tales, told ghost stories, baited hooks, *casted* [read *cast*] both fishing and song lines.” John Harper, “Top Talent Creates ‘Songs and

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Legends' Recording," *Virginian-Pilot* (Norfolk), 2 June 1996, Carolina Coast §, at 22.

- "After 3½ weeks of pain and all kinds of diagnostic tests, the fracture was finally found and the foot *casted* [read *cast*] in plaster up to the knee." Regina Wachter, "Mom's Sprain Strains Family," *Newsday* (N.Y.), 21 Oct. 1996, at B14.

See -CAST & IRREGULAR VERBS.

There does seem to be a tendency to use **casted* when *cast* means "to supply with a lineup of actors," but this should be resisted—e.g.:

- "Hollywood honcho Frederick Golchan, the executive producer of the Richard Gere–Sharon Stone flick 'Intersection,' was in town the other day scouting locations for 'Kimberly.' Golchan's latest not-yet-*casted* [read -*cast*] project is about a woman coxswain who joins a men's rowing team." Gayle Fee & Laura Raposa, "Kerry's Lovelife a People-Pleaser," *Boston Herald*, 4 June 1996, at 19.
- "Klepper recently *casted* [read *cast*] the feature film 'Thinner,' based on Stephen King's book." "Casting Director Holds Workshops at Capital Rep," *Times Union* (Albany), 24 Oct. 1996, at B11.

LANGUAGE-CHANGE INDEX

**casted* for *cast* as a past-tense form: Stage 1

Current ratio (*had cast* vs. **had casted*): 1,484:1

caster; castor. Several terms are represented by these spellings. What follows are the senses recommended for each spelling. *Caster* = (1) someone who casts something; (2) a small wheel fixed on the leg of a piece of furniture so that it may be pushed or pulled in any direction; or (3) a shaker for sprinkling sugar, salt, pepper, etc. *Castor* = (1) an oil made from castor beans (an Old World herb); (2) the herbivorous rodent normally termed *beaver*; (3) a beaver hat; or (4) the perfume ingredient gathered from dried beaver glands.

casual. See **causal (B)**.

CASUALISMS. A. Generally. Some expressions characteristic of speech (but appearing also in writing) declare either freedom from inhibition or an utter lack of solemnity. They may add a relaxed freshness, or they may seem inappropriately unbuttoned. Although they overlap to some degree with **SLANG**, they can't always be so labeled. They make up the least formal type of **STANDARD ENGLISH**, and they're standard only in informal contexts. All the expressions that make up this peculiar subset of English are here termed *casualisms*.

Some of these are on the high side of informality because of their durability. Examples are using *if* to mean *whether* <getting the Boxster depends on if Daddy can afford the insurance> and using terms such as *junkie* (= a drug addict), *poppycock* (= nonsense), *Saturday night special* (= a small pistol), and *washout* (= a fiasco). One might find any of these expressions in informal contexts.

Expressions on the low side of informality often blend into slang, perhaps because the references tend to be uncivil or unpleasant, or to sound adolescent. Examples are referring to a person as a *wuss*, *dork* (or

dorkus maximus), or *pothead*, and referring to the act of vomiting as *hurling*, *blowing chunks*, *snapping your cookies*, *tossing your lunch*, or *talking on the great white telephone*.

Still other expressions are in the middle, such as *cave* for *cave in* <the child pleaded for 30 minutes for the doll, and finally her parents caved>, *futz around* (= to waste time), *gabfest* (= an event where people talk garrulously), *iffy* (= uncertain), *like* as a conjunction <like I said>, *put-up job* (= a deception), *way* used as a synonym for *totally* <way cool!>, *you guys* (a plural for *you*), and *zit* (= pimple).

B. Changes over Time. Like any other expressions, casualisms can undergo appreciation and depreciation. Because casualisms start at the low end of the linguistic spectrum, they typically appreciate in meaning if they move at all. Two words—*flu* and *butt*—illustrate this phenomenon. *Flu* began as an informal shortening of *influenza*, but gradually it took over as the main word to denote the disease. *Influenza* is now considered a hyperformal word; *flu* has become the ordinary word (no longer a true casualism).

Butt presents a different story. In reference to a person's posterior, it was considered rude, even slightly profane, in the mid-20th century. By the 1990s, when the baby boomers had come of age and had children of their own, many were shocked to find that PE teachers were having their children do "butt-lifts" (so called). A dictionary published in 2000 has a label that reads (quite accurately): "potentially offensive, although heard almost everywhere." Richard A. Spears, *NTC's Dictionary of American Slang and Colloquial Expressions* 61 (2000). So *butt* no longer gives offense? What a bummer.

This shifting of register is a recurrent phenomenon, as a linguist noted in the 1960s: "We know that colloquial usage is customarily twenty or thirty years ahead of formal usage and that the border marauders of today may well be the solid grammatical citizens of tomorrow." Dora Jean Ashe, "One Can Use an Indefinite 'You' Occasionally, Can't You?" in *A Linguistics Reader* 63, 65 (Graham Wilson ed., 1967).

C. Shortened Forms. *Butt*, of course, is a shortened form of *buttocks* (/bʌt-əks/). In fact, many casualisms are truncated words. Among the established terms in this category are *auto* (automobile), *bike* (bicycle), *bra* (brassiere), *deli* (delicatessen), *phone* (telephone), *plane* (airplane), *pub* (public house), *temp* (temporary employee), *tux* (tuxedo), and *zoo* (zoological gardens). All of these are high casualisms, being old and established.

Newer truncated forms tend to fall in the middle to low range. Examples abound:

- bro (brother)
- burbs (suburbs)
- carb (carbohydrate)
- carb (carburetor)
- combo (combination)
- cred (credibility)
- cuke (cucumber)

fridge (refrigerator)
 hood (neighborhood)
 limo (limousine)
 natch (naturally)
 nuke (nuclear)
 perp (perpetrator)
 phenom (phenomenon)
 rents (parents)
 TV (television)
 Vegas (Las Vegas)
 veggies (vegetables)

More than ever before, shortenings take the form of acronyms and initialisms. They're also properly classifiable as casualisms, even when formally introduced the first time, as in "chief executive officer (CEO)." Once again, examples abound:

CFO (chief financial officer)
 CIO (chief information officer)
 COO (chief operating officer)
 ER (emergency room)
 HMO (health-maintenance organization)
 HOV (high-occupancy vehicle)
 ICU (intensive-care unit)
 IME (independent medical examination)
 IV (intravenous [tube])
 OR (operating room)
 PC (personal computer or political correctness)
 SUV (sport-utility vehicle)
 VIP (very important person)
 VP (vice president)

See ABBREVIATIONS (A).

D. Proliferation. What accounts for the proliferation of casualisms in modern prose? There seem to be two main causes. First, casualisms reflect the ever-greater sense of speed in modern society. Clipped speech is faster speech. Second, manners have long been moving away from stiff formality, as the Evanses noted:

Forty years ago it was considered courteous to use formal English in speaking to strangers, implying that they were solemn and important people. Today it is considered more flattering to address strangers as if they were one's intimate friends. This is a polite lie, of course; but it is today's good manners. Modern usage encourages informality wherever possible and reserves formality for very few occasions. [DCAU at vii]

Each generation seems a little less formal than the previous one. The Evanses themselves might have been shocked at the habit that today's receptionists and telephone solicitors have of immediately calling people by their first names. When the baby boomers are gone, people might marvel that this was ever considered unduly familiar.

The originator of the term *casualism*, by the way, was the estimable Theodore M. Bernstein, author of *The Careful Writer* (1965). Here's how he summed up his entry on the subject: "The designation *casualism* does not imply that the expression is necessarily unsuitable for serious writing. It is not a red light; it is an orange light" (p. 95).

casualty; *casuality. *Casualty* is an obsolete NEED-LESS VARIANT of *casualty* (= [1] a person killed or hurt in a war or an accident; [2] a chance occurrence, esp. an unfortunate one; [3] the state of being casual; or [4] an incidental charge or source of income). Sometimes the British press seems to use both forms for INELEGANT VARIATION—e.g.: "Observers warned that *casualty* reports were unreliable because both sides tend to exaggerate the other's *casualties* [read *casualties*] while understating their own losses." "Turkish Troops Kill 72 Rebels," *Fin. Times*, 13 June 1996, at 2. In modern prose, **casuality* is either a peculiarly common typographical error or else an affectation by those who erroneously believe Briticisms to be their "speciality." (See AMERICANISMS AND BRITICISMS.) The word itself is a kind of *casualty*—e.g.:

- "We suffered 49,151 *casualties* [read *casualties*] and 12,520 dead, the heaviest toll of the war in the Pacific." Letter of Mike Fancher, "The Atomic Bomb," *Atlanta J.-Const.*, 14 Aug. 2000, at A10.
- "One *casualty* [read *casualty*] is longtime Council Member Michael G. McGuire. Not only did he lose his seat on the Amherst Democratic Committee, but he also lost his place as a delegate to the state committee." Lisa Haarlander, "Infighting Leaves Democrats Scrambling to Regroup," *Buffalo News*, 14 Sept. 2000, at B3.
- "Howard Griffith is the latest *casualty* [read *casualty*], as he's out with a knee injury." Dan Caesar, "Rams Report," *St. Louis Post-Dispatch*, 15 Oct. 2000, at C8.

LANGUAGE-CHANGE INDEX

**casuality* for *casualty*: Stage 1

cataclysm; cataclasm. The meanings of these words are fairly close, especially in figurative senses. A *cataclysm* is a tremendous flood or violent disaster. A *cataclasm* is a tearing down or disruption.

catalogue; catalog. Though librarians have come to use *catalog* with regularity, *catalogue* is still the better and the more frequent form in World English. *Cataloging* makes about as much sense as *plaging*. "If the professionals decline to restore the *-u-* to the inflected forms," wrote Wilson Follett in 1966, "let them simply double the *-g-*" (MAU at 97). But Follett's advice has largely fallen on deaf ears, and in AmE *catalog* and *cataloging* are now prevalent and seemingly unstoppable—e.g.: "There are eighty million boxes down there, all crammed full of paper and *uncataloged* [read *uncatalogued* or, in Follett's view, *uncatalogged*] gifts." Julie Kenner, *Carpe Demon* 241 (2005). Cf. **analog, apologize & epilogue**. For a comment on the decline of the *-ue* form, see -AGOG(UE).

catastrophe forms the plural *catastrophes*—not **catastrophies*.

Current ratio: 71:1

catch fire; *catch on fire. The phrase *catch fire*, dating back to the 17th century, is about six times as common in print sources as **catch on fire*, a late-19th-century

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-ii.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

innovation that has hardly spread like wildfire. The word *on* is a needless particle—e.g.:

- “Tuesday night’s lightning storms temporarily diverted attention for Piedmont when two power poles *caught on fire* [read *caught fire*] after lightning strikes.” Duncan Murrell, “Power Crews See Light at End of Fran Outage,” *Chapel Hill Herald*, 12 Sept. 1996, at 1.
- “Investigators believe Flight 592 *caught on fire* [read *caught fire*] after SabreTech, a ValuJet maintenance contractor, improperly packed and labeled some 150 oxygen generators.” Elizabeth A. Marchak, “ValuJet Victims’ Kin Fault Probe of Hazardous Cargo,” *Plain Dealer* (Cleveland), 21 Nov. 1996, at A22.
- “We need to . . . keep[] water clean and healthy for humans and animals, and definitely not allow it to *catch on fire* [read *catch fire*] again.” Ellen McNulty & Steve Filippek, “In Our Best Interest,” *Ark. Democrat-Gaz.*, 21 Aug. 2015, at 17.

See PHRASAL VERBS.

LANGUAGE-CHANGE INDEX

**catch on fire* for *catch fire*: Stage 3

Current ratio: 6:1

catch-22; Hobson’s choice. Not the same in good usage. *Catch-22* = an insoluble problem in which one must do something to do a second thing, which must be done before one can do the first thing. *Hobson’s choice* = (1) a situation in which one is presented with only one “choice,” and hence no choice at all; or (2) a situation in which either of one’s two choices is bad. See **Hobson’s choice**.

Catch-22 derives from the title of Joseph Heller’s 1961 novel, in which by rule, you can’t fly missions if you’re crazy, but if you don’t want to fly missions you’re not crazy. Today the phrase is not treated as a proper noun, so the standard form is lowercase.

catchup. See **ketchup**.

categorically = without qualification. E.g.: “Sells, a half-Serb, *categorically* condemns the behavior of the Serbian political, military and literary elite.” Istvan Deak, “With God on Their Sides,” *New Republic*, 25 Nov. 1996, at 31.

For a MALAPROPISM involving this word, see ***uncategorically**.

category. So spelled. See SPELLING (A).

cater-corner(ed). See **catty-corner(ed)**.

catholically; *catholicly. Both may mean either “with wide sympathies” or (when capitalized) “in a manner inclined toward Catholicism.” NO DIFFERENTIATION has emerged, but *catholically* (pronounced /kə-**thol**-ik-lee/) is about ten times as common as **catholicly*, which can now be branded a NEEDLESS VARIANT. That form, however, was predominant through the mid-19th century.

catsup. See **ketchup**.

catty-corner(ed); kitty-corner(ed); cater-corner(ed). These terms all mean “located at a diagonal.” The original phrase, in Middle English, was *catre-cornered*

(lit., “four-cornered”)—*catre* deriving from the Latin *quattuor*. Today the forms arrived at through folk etymology, *catty-corner* and *kitty-corner*, are by far the most common. (See ETYMOLOGY (D).) The form *cater-corner*, the preferred form in most dictionaries, is less common but not at all rare. Its past-participial forms are infrequent enough not to be recommended.

Current ratio (*kitty-corner* vs. *catty-corner* vs. *cater-corner*): 29:27:1

Current ratio (*catty-corner* vs. *catty-cornered*): 5:1

caucus, vb., makes *caucused* and *caucusing* in AmE and BrE alike. (See SPELLING (B).) The term is an Americanism.

cauldron; *caldron. The first is the preferred spelling in AmE and BrE alike—and has been so since about 1900. *Cauldron* outnumbers **caldron* by a 5-to-1 ratio in AmE print sources—e.g.:

- “Lebanon, under the rule of a despotic regime . . . , will continue to be a *cauldron* of unrest, criminality, terrorism and war.” Daniel Nassif, “Syria’s Control of Lebanon Is a Danger to All,” *Wash. Times*, 15 Aug. 1996, at A19.
- “Chefs have been working for days, preparing *cauldrons* of a new dish called ‘Boliche Suey,’ to mark the occasion.” Steve Otto, “Big Guava Taken by China!” *Tampa Trib.*, 1 July 1997, Metro §, at 1.
- “He remained in that competitive *cauldron* for 11 years.” Stephen Seplow & Jonathan Storm, “Brandon Tartikoff, TV Wunderkind, Dead at 48,” *Record* (N.J.), 28 Aug. 1997, at L9.

caulk; calk. *Caulk* = (1) vb., to fill (cracks or seams) in order to make airtight or watertight; or (2) n., the pastelike material used for this purpose (also known as *caulking*). *Calk* = (1) n., a piece fitted to a shoe (esp. a horseshoe) to prevent slipping; (2) vb., to fit with calks; or (3) vb., to injure with a calk. Both words are pronounced /kawk/ or /kok/.

Though *calk* is sometimes used for *caulk*, the words have undergone DIFFERENTIATION, so that the spellings should be distinguished according to the definitions above.

causal. A. And causative. These words, though unfortunately muddled by some writers, should be kept distinct. *Causal* = (1) of, relating to, or involving causes; entailing causation <they could find no causal connection between a missile and the crash>; or (2) arising from a cause <three causal conditions>. So in sense 1, the phrases *causal connection*, *causal link*, and *causal relationship* are SET PHRASES—e.g.:

- “The actual research now shows that the percentage of women with immune system-related diseases (such as lupus and scleroderma) is the same within the general population as within the breast implant population. In other words, there’s no *causal connection*.” Sandy Finestone, “Breast Implant Scare Has Lessons for Juries, Journalists,” *Sacramento Bee*, 2 Sept. 1996, at B7.
- “The standard argument was that no scientifically accepted *causal link* between smoking and disease had been demonstrated.” Ron Haybron, “Checking Studies to Make Sure They Are Needed,” *Plain Dealer* (Cleveland), 30 Nov. 1997, at J10.

Causative = (1) operating as a cause; effective as a cause <various causative agents can result in the disease>; or (2) expressing a cause <causative phrase>. Hence one speaks of *causative agents*, *causative factors*, and *causative roles*—e.g.: “Wertheimer drove the streets of greater Denver searching for possible *causative agents* of childhood cancer.” Gary Taubes, “Fields of Fear,” *Atlantic Monthly*, Nov. 1994, at 94.

Causal is occasionally misused for *causative*—e.g.: “While apathy and fear of change allow the system to continue, two *causal* [read *causative*] agents are money and power.” David Lassie, “Public School System Is a Liability,” *Times* (Shreveport), 13 Aug. 2002, at A7.

The opposite mistake likewise appears—e.g.:

- “But Finn Posner, operations engineer with the state DOT’s Bureau of Railroads, said there appeared to be no *causative* [read *causal*] link between the two occurrences.” Peg Warner, “2 Hurt in Train-Truck Wreck,” *Union Leader* (Manchester, N.H.), 2 Oct. 1996, at A1.
- “That means that underwriters would have to show a *causative* [read *causal*] connection between any failure to follow the code and a claimed loss.” “Owner-Friendly Terms Herald a Sophisticated Insurance Market,” *Bus. Times*, 20 Nov. 1996, at 1.

LANGUAGE-CHANGE INDEX

causative misused for *causal*: Stage 1

Current ratio (*causal link* vs. **causative link*): 35:1

B. And *casual*. What is *casual* is informal or relaxed <casual dress>, occasional <casual work>, or unstructured <a casual meeting>. The word has nothing to do with causation. It is a common typographical error to transpose the two middle letters in *causal* and *casual*, whichever one is being used—e.g.:

- “If your supervisor can show he gave other employees scheduling flexibility because they earned it with tenure and quality work, you need to prove a *casual* [read *causal*] relationship between voicing your concerns and his denial.” Lynne Curry, “Workers Reporting Fraud Are Protected,” *Anchorage Daily News*, 5 Aug. 2002, at E1.
- “Make sure employees know the difference between an appropriate *causal* [read *casual*] look and one that is inappropriate.” Sarah Hale, “Groom Yourself for Success,” *Orlando Sentinel*, 9 Sept. 2002, C.B. §, at 20.

Since the late 1970s, many books have mistakenly referred to **causal sex*. Was that a typographical error, or did it cause something (in which event it should be *causative*)? See METATHESIS.

LANGUAGE-CHANGE INDEX

casual misused for *causal*: Stage 1

causal determinism. See **fatalism**.

causality; causation. These words have a fine distinction. *Causality* = the principle of causal relationship; the relation of cause and effect <causality is a very large subject in philosophy>. *Causation* = (1) the causing or producing of an effect <multiple causation complicates the analysis>; or (2) the relation of cause and effect <the

principles of causation weren’t even considered>. True, sense 2 of *causation* overlaps with the meaning of *causality*. But generally that sense is best left to *causality*.

Causation should not be used for *cause*—e.g.: “Similarly, if affirmative action was the *causation* [read *cause*] of White male labor displacement, the unemployment statistics would reflect such displacement.” Byron A. Ellis, “The Displacement Myth,” *Baltimore Afro-Am.*, 5 Aug. 1995, at A5.

LANGUAGE-CHANGE INDEX

causation misused for *cause*: Stage 1

Current ratio (*was the cause of* vs.

**was the causation of*): 7,800:1

causative. See **causal**.

cause célèbre (/kawz sə-**leb**/ or /kohz say-**leb**-rə/) does not mean “a famous cause or ideal,” as it is sometimes used—e.g.:

- “This brief overview just scratches the surface of a tangle of rules and regulations that have accumulated since education reform became the *cause célèbre* [read *principal cause*] in politics 10 years ago.” Ann Melvin, “School Reform Will Focus on Local Control,” *Dallas Morning News*, 26 Nov. 1994, at A33.
- “To some fervent left-wingers, if you’re not with them and their *cause célèbre* [read *cause*], you’re against them.” Richard A. Fisher, “We Must ‘Reinvent Citizenship’ by Using Non-Partisan Values,” *Palm Beach Post*, 1 Dec. 1994, at A19.
- “While the drive to allow women members at Augusta National has become a national *cause célèbre* [read *cause*] in some quarters, there are more fundamental issues facing women golfers in Rhode Island.” Paul Kenyon, “2 R.I. Women’s Golf Groups Should Link Up,” *Providence J.-Bull.*, 11 Sept. 2002, at D1.

The primary meaning has long been “a trial or decision in which the subject matter or the characters are unusual or sensational” (*Black’s Law Dictionary* 266 [10th ed. 2014]). The term has been legitimately extended from the strict legal sense to mean “a famous or notorious person, thing, or event”—e.g.:

- “Her run-in with the law has made Blake a *cause célèbre* in the ranch country near Peyton, a tiny hamlet on old U.S. 24 northeast of Colorado Springs.” Andy Van De Voorde, “Helicopter 54, Where Are You?” *Denver Westword*, 7 Dec. 1994, at 8.
- “As the first clear-cut case of a genetic difference in taste, this phenomenon became a sort of scientific *cause célèbre* in the 1930’s and 1940’s.” John Willoughby, “Taste? Bud to Bud, Tongues May Differ,” *N.Y. Times*, 7 Dec. 1994, at C1.
- “A few years ago, it would have been unimaginable that a shaken-baby case involving a British teenager, a family none of us had heard of before, and murky medical evidence would have become an international *cause célèbre*.” Eric Black, “The Gigastory and Its Lack of Greater Meaning,” *Star Trib.* (Minneapolis), 13 Nov. 1997, at A24.

LANGUAGE-CHANGE INDEX

cause célèbre misused to mean

“famous cause”: Stage 1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

***cause . . . is due to.** This phrasing is redundant—e.g.: “*The cause of crime is largely due to* [read *Crime results largely from* or *Crime is largely due to*] the loss of individual character.” Cal Thomas, “Morals, Not Money, Cure Crime,” *Cincinnati Enquirer*, 9 Aug. 1994, at A6. See **due to** & REDUNDANCY.

cautionary; cautious. *Cautionary* = encouraging or advising caution <cautionary signs>. *Cautious* = exercising caution <cautious drivers>.

cavalry. See **calvary**.

caveat (L. “let him beware”) means, in ordinary speech and writing, merely “a warning”—e.g.:

- “One *caveat*: Don’t keep topiaries out of a sunny spot for too long.” Martha Stewart, “Make an Ornamental Statement—Shape a Topiary,” *Dayton Daily News*, 17 Oct. 1996, *Homelife* §, at 7.
- “This reportedly would help about 10 percent of women. However, there are a few *caveats*. No drinking. And there’s a risk of low blood pressure and fainting.” Ann McFeatters, “Your Government at Work,” *Ark. Democrat-Gaz.*, 22 Aug. 2015, at 16.

The word derives from the Latin phrase *caveat emptor* (= let the buyer beware), which is widely used—e.g.: “The old home-buying legal rule used to be ‘*caveat emptor!*’ (let the buyer beware). But in 1984 a California Court of Appeal was the first to hold a home seller and real estate broker liable for damages to the buyer for failure to disclose unstable soils [that] caused severe home damage.” Robert Bruss, “Disclosure, Insurance Help Sellers Avoid ‘Bad-House’ Lawsuits,” *Chicago Trib.*, 7 Dec. 1996, *New Homes* §, at 2.

The traditional pronunciation of the word (/kay-vee-ah/) is far less common today than /kav-ee-ah/.

caviar (= the preserved roe of large fish, served as a delicacy) had become the standard spelling in AmE by 1915, and in BrE by 1965. Before that, *caviare* was standard in both those varieties of English.

Current ratio: 8:1

cavil, vb. (= to complain over a small point; carp), makes *caviled* and *caviling* in AmE, *cavilled* and *cavilling* in BrE. See SPELLING (B).

Caymanian; Cayman Islander. The first, pronounced /kay-may-nee-ən/, is standard; the second is a common variant. See DENIZEN LABELS.

Current ratio: 20:1

-CE; -CY. Choosing between these two endings can be tricky. Many nouns, of course, have comfortably settled into one form (*avoidance, coincidence, forbearance, intelligence*) or the other (*agency, constancy, decency, vacancy*). But some words can have both endings—and when they do, they often bear quite different meanings: *dependence, dependency; emergence, emergency; excellence, excellency*. When they don’t (as in *buoyancy, buoyance*), one variant usually dominates (here, *buoyancy*). See DIFFERENTIATION.

Unfortunately, no general principles can be accurately deduced from the available specimens. The best

advice is to stay alert to possible distinctions between spellings and to consult a good dictionary.

C.E. See **B.C.**

cease, a FORMAL WORD, can often be replaced by *stop* or *end*—e.g.:

- “The noises *ceased* [read *stopped*] after three or four nights, and we have not seen any raccoons for a week or so.” Alan Lupo, “After Raccoon Revelry Comes the Cleanup,” *Boston Globe*, 11 May 1995, at A1.
- “All the more reason Congress must *cease* [read *stop* or *end*] its partisan bickering and unambiguously back the president.” “Saddam’s Enablers,” *N.Y. Post*, 18 Sept. 2002, at 28.

ceasefire, n. One word in both AmE and BrE.

cede; secede; concede. *Cede* = to give up, grant, admit, or surrender <by treaty, the tribe ceded about 20 million acres of aboriginal land>. *Secede* = to withdraw formally from membership or participation in <South Carolina was the first to secede from the United States>. *Concede* = (1) to admit to be true <I concede your point>; (2) to grant (as a right or a privilege) <in settlement, the landowner conceded a right-of-way to his neighbor>; or (3) to admit defeat (as in an election) <Dole conceded to Clinton in a gracious, moving way>.

CEDILLA. See DIACRITICAL MARKS.

ceiling, used in the sense of “maximum,” is in itself unobjectionable but can sometimes lead to unfortunate mangled metaphors. E.g.: “The task force recommended *increasing* the *ceilings*.” One *raises* a ceiling rather than *increases* it.

An English writer on usage quotes a preposterous example about “a ceiling price on carpets.” In using words figuratively, of course, one must keep in mind their literal meanings. See METAPHORS.

celebrant. A. And celebrator. *Celebrant* best refers to a participant in a religious rite <the celebrant at the baptism>. *Celebrator* is the better word for someone who celebrates—e.g.: “Never let it be said that we last-minute *celebrators* have to be satisfied with the leftovers, the discards, the old and the ugly.” Warren Berry, “Our Favorite Things,” *Newsday* (N.Y.), 16 Dec. 2001, at H5.

Often, however, *celebrant* appears where *celebrator* would be the better word—e.g.: “Enzo & Lucia’s Restaurant . . . will be open Wednesday just in time for New Year’s Eve *celebrants* [read *celebrators*].” “The Briefs,” *Daily Herald* (Chicago), 21 Dec. 2001, at 1. Cf. **confirmand**.

LANGUAGE-CHANGE INDEX

celebrant for “a participant in a celebration”: Stage 3

B. Funeral celebrants. Although *celebrant* simply means “someone who performs a religious rite” and doesn’t necessarily have anything to do with jubilation, its sound association makes it unfit for funeral contexts. Why invite tasteless jokes? That’s the effect of saying that this or that religious figure will be the chief *celebrant* at a funeral—e.g.:

- “The Rev. Stephen Karani will *be the Celebrant of* [read *conduct*] Fanny’s Funeral Mass.” Virginia G. Canfield, “Fanny A. Fusco” (obit.), *Star-Gaz.* (Elmira, N.Y.), 11 Sept. 2002, at C4.
- “His Eminence Bernard Cardinal Law will *be the Principal Celebrant* [read *officiate*] in a funeral Mass at 11 a.m. tomorrow.” “Rev. Robert Flagg of Brighton, Seminary Dean, at 63” (obit.), *Boston Herald*, 29 Sept. 2002, at 71.

So when a rite is for a sad occasion, it’s better to avoid the word, even though one might say that the mourners are celebrating a life. Some reasonable people will consider *celebrant* in such a context offensive.

celebrator. See **celebrant (A)**.

celibate. See **chaste (B)**.

cello. This word is an 18th-century clipping of *violin-cello*; until the late 20th century, it was often printed *cello*. Today the form *cello*, without the apostrophe, is standard. See **violoncello**.

Since 1880, the standard English plural has been *cellos*, not **celli*.

Current ratio (*cello* vs. *cello*): 11:1
 Current ratio (*cellos* vs. **celli*): 13:1

cellphone, a shortened and telescoped form of *cellular telephone*, is increasingly so spelled. There is no good reason to retain the two-word version (*cell phone*), which necessitates hyphenating as a PHRASAL ADJECTIVE (e.g., *cell-phone use* as opposed to *cellphone use*). See **CASUALISMS (C)**.

Celt; Celtic; *Kelt; *Keltic. The Boston *Celtics* will always be /sel-tiks/, but increasingly the early Britons (*Celts*) are called /kelts/, and the things relating to them are *Celtic* /kel-tik/. Historians generally prefer the /k/ sound. **Kelt* and **Keltic* are variant spellings.

Current ratio (*Celts* vs. **Kelts*): 20:1
 Current ratio (*Celtic* vs. **Keltic*): 68:1

cement; concrete. These terms are not technically interchangeable because *cement* is a bonding agent that may be used to join discrete components such as bricks or the aggregate of water, sand, and other elements comprised in *concrete*. *Cement* is pronounced /sə-ment/—not /see-ment/. See **PRONUNCIATION (B)**.

ensor, n.; censor; sensor. The first of these homophones is someone who suppresses; the second is either the vessel in which incense is burned or the person who carries that vessel; the third is something that detects. To compare the nouns *ensor* and *censure*, see **ensor; censure (B)**.

ensor; censure. A. As Verbs. To *ensor* (/sen-sər/) is to scrutinize and revise, to suppress or edit selectively. E.g.: “The news is severely *censored* by the Pentagon and the Arab information agency.” Lucille Povero, “Local Newspaper Is the Best Hope of Getting the Truth,” *St. Petersburg Times*, 11 Jan. 1991, City Times §, at 2.

To *censure* (/sen-shər/) is to criticize severely, to castigate. E.g.:

- “Acting on Steele’s advice, majority members threatened to impeach Keefer, which they could not legally do, but settled for *censuring* her for betraying board confidences and lawyer-client communications.” Roger Stuart, “School Board Censure Has Familiar Ring,” *Pitt. Post-Gaz.*, 21 Nov. 1994, at B1.
- “Hyde was *censured* by the council two months ago after he admitted to violating the city ethics code.” Wayne Snow, “Council to Consider Removing Planning Panel Member,” *Atlanta J.-Const.*, 21 Nov. 1996, Extra §, at M6.
- “Among the tenured professor’s supporters is the American Association of University Professors, a Washington-based academic group that has threatened to *censure* the university if Al-Adrian is dismissed.” Courtenay Edelhart, “Prof Defends Expression of His Beliefs,” *Indianapolis Star*, 12 Sept. 2002, at A34.

The word *censure* was widely mispronounced like *ensor* in Congress during the impeachment proceedings against President Clinton (Dec. 1998–Jan. 1999), when *censure* was much discussed as a lesser measure against the President. The resulting misuse in print, common especially in the verb form, merits *censure*—e.g.:

- “House Ethics Chairman Jim Hansen . . . used his senior standing to nudge colleagues further toward impeachment and away from *censuring* [read *censuring*] the president.” John Heilprin, “Utah Delegation Backs Airstrikes, Questions Timing,” *Salt Lake Trib.*, 17 Dec. 1998, at A1.
- “Meanwhile, House Republicans may pay dearly for their magnificent obsession with William Jefferson Clinton. Once *censored* [read *censured*] or exonerated by the Senate, the president may extend an olive branch to the House.” “We Can Wait,” *News & Observer* (Raleigh), 29 Dec. 1998, at A10.

Sometimes the writer’s intent becomes unclear—e.g.: “A production about her Bavarian adventure was so scandalous that the Lord Chamberlain, who *censured* [read *censored*, probably] plays, banned it.” Michael Alpert, *London 1849: A Victorian Murder Story* 36 (2004). The reader can’t be certain whether the lord routinely banned or panned plays.

LANGUAGE-CHANGE INDEX
ensor misused for *censure*: Stage 2

B. As Nouns. *ensor*, n., = someone who inspects publications, films, and the like before they are released to ensure that they contain nothing heretical, libelous, or offensive to the government. Although it would be nice to pronounce this use of the term obsolete, censors remain prominent in some places. E.g.:

- “A movie made to finesse Chinese *censors* can easily slip through the grasp of Western audiences.” Georgia Brown, “A Time to Live and a Time to Die,” *Village Voice*, 22 Nov. 1994, at 64.
- “A recent American film, *Dangerous Game*, which stars Madonna and Harvey Keitel, has been banned by the film *ensor*, Mr. Sheamus Smith.” Michael Dwyer, “Madonna Film Is Banned by the Censor,” *Irish Times*, 23 Nov. 1994, at 1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Pentagon *censors* scrub TroopTube videos of sensitive footage, profanity, and other content that would be ‘inappropriate for families,’ [Lt. Col. Les] Melnyk says.” Dan Ephon, “A Few Good Viral Videos,” *Newsweek*, 24 Nov. 2008, at 10.

Censure, n., = (1) a judgment of condemnation; or (2) a serious reprimand. Sense 1: “There have long been calls to deny new liver to alcoholics as a form of moral *censure*.” Froma Harrop, “Organ Transplants Raise the Issue of Medical Rationing,” *Sacramento Bee*, 21 Nov. 1996, at B9. Sense 2: “Mack and O’Dell voted against *censure*, which Tobolski said applies to the one incident and can be repeated if legislators do not like Mack’s comments.” Donna Snyder, “Legislator Censured for Calling Leadership Corrupt,” *Buffalo News*, 9 Jan. 1997, at C5.

censorious; censorial. *Censorious* (= severely critical) is the adjective corresponding to the verb *censure*, not *ensor*. E.g.: “Ah well, it was no business of Cadfael’s, nor had he any intention of getting involved. He did not feel particularly *censorious*.” Ellis Peters, “The Price of Light,” in *A Rare Benedictine* 45, 59 (1988). *Censorial* describes the work or attitude of a censor. The two words are occasionally confounded—e.g.: “‘I suspect,’ William added, ‘that this was Shakespeare’s [expurgated] copy for the Master of the Revels. He wished to be free of the Master’s *censorious* [read *censorial*] pen.’” Peter Ackroyd, *The Lambs of London* 100 (2006).

LANGUAGE-CHANGE INDEX
censorious misused for *censorial*: Stage 1

ensorship (= the practice or institution of suppressing the expression of ideas thought to be uncongenial to those in power) is a word whose mention in AmE immediately brings up the First Amendment. It is one of those politically charged **VOGUE WORDS** that people use irresponsibly. It shouldn’t mean simply the denial of governmental largesse; that is, an artist who is denied federal subsidies is not the object of *ensorship*. The word should refer to active suppression, not merely lack of support.

ensure. See **ensor**.

centennial; centenary. In all the anniversary designations (*bi-*, *sesqui-*, etc.), whether used as adjectives or as nouns, the *-ial* forms are preferred in AmE, the *-ary* forms in BrE.

center; centre. The first is the AmE spelling, the second the BrE. See **-ER** (B).

***center around.** Something can *center on* (avoid *upon*) or *revolve around* something else, but it cannot **center around* because the center is technically a single point. The solecism, which began spreading in the early 19th century, is now common—e.g.:

- “They said the debate now *centers around* [read *centers on* or *revolves around*] what price Sandoval should pay for her mistake.” Annie Hill, “Young Mother Sobs as Trial Begins in Tot’s Suffocation,” *Denver Post*, 5 Nov. 1996, at B3.
- “The title story, which concludes the section, *centers around* [read *centers on* or *revolves around*] another strong

male narrator.” Annette Sanford, “Gusher Days,” *Dallas Morning News*, 12 Jan. 1997, at J8.

- “It *centers around* [read *centers on* or *revolves around*] the story of an attorney, Atticus Finch, appointed to defend a black man named Tom Robinson, who is accused of raping a white woman.” Frances Hubbard, “Actress Discusses ‘To Kill a Mockingbird’ Role,” *Daily Press* (Newport News, Va.), 22 Aug. 2015, at A5.

LANGUAGE-CHANGE INDEX

**center around* for *center on* or *revolve around*: Stage 3
Current ratio (*centering on* vs. **centering around*): 4:1

centi-. See **hecto-**.

centimeter (/sen-ti-mee-tər/) is sometimes, in medical JARGON, given a precious pronunciation: /son-ti-mee-tər/. Avoid this.

centre. See **center**.

centripetal; centrifugal. The key to sorting out these science-related adjectives can be found in the Latin roots added to *centri-* (= center). *Petere* (= to go toward; to seek) survives in words such as *impetus* and *compete*. *Fugere* (= to go away from; to flee) survives in words such as *fugitive* and *refuge*. Hence, *centripetal force* attracts something toward the center (think of a falling object pulled by gravity), while *centrifugal force* repels something away from the center (think of riders on a merry-go-round).

Here, the words are used in their traditional, literal senses:

- “There is nothing you can shoot on a satellite that will ‘cut the string’ and it will fall out of the sky. The ‘string’ is *centripetal* force, that balances the gravity pulling down with the satellite’s own speed of motion.” Patrick J. O’Connor, “China Missile Adds to Space Junk, Risks,” *Chicago Sun-Times*, 29 Jan. 2007, Editorial §, at 34.
- “When uranium, in the form of uranium hexafluoride gas, is fed into the cylinder, *centrifugal* forces push it outward against the spinning wall.” Dan Charles, “U.S. Centrifuge Work Revived in Updated Form,” *Wash. Post*, 23 Apr. 2007, at A6.

The words can also bear figurative senses, to mean “tending to unite” (*centripetal*) and “tending to pull apart” (*centrifugal*)—e.g.:

- “[Wal-Mart] is *centripetal* in the lives of millions who shop there, work there, manufacture goods sold there or who formerly worked for—or owned—the competition.” Donna Marchetti, “What Made Us a Nation of Wall-to-Wall Wal-Marts?” *Plain Dealer* (Cleveland), 31 Jan. 2007, at E2.
- “Over the long term, governments usually find it in their interest to bridge the *centrifugal* forces of diversity rather than to exploit them, if only to promote stability.” Eduardo Porter, “The Divisions That Tighten the Purse Strings,” *N.Y. Times*, 29 Apr. 2007, § 3, at 4.

Yet because *centripetal* is a more obscure term than *centrifugal*, using a replacement word would clarify the meaning. The Wal-Mart example above might have benefited from substituting *central* for the highfalutin *centripetal*.

Writers sometimes misuse *centripetal* for *centrifugal*—e.g.:

- “[Niall] Ferguson observes that many nation-states that emerged out of the wreckage of the Ottoman Empire, from Yugoslavia to Iraq, were able to contain those conflicts by ruthless repression. *Centripetal* [read *Centrifugal* or, better, *Faciou*s] energies often exploded once the dictator died or was toppled.” James Traub, “The Way We Live Now,” *N.Y. Times*, 10 Dec. 2006, Mag. §, at 19.
- “Cleverly, subtly, [Colm] Toibin explores the tensions of this expanding world through the relationship between mothers and sons. The *centripetal* [read *centrifugal* or, better, *divisive*] force of prosperity peels and tears at them.” John Freeman, “A Credit to a Grand Tradition,” *Hartford Courant*, 28 Jan. 2007, at G4.

See WORD-SWAPPING.

LANGUAGE-CHANGE INDEX

centripetal misused for *centrifugal*: Stage 1

CENTURY DESCRIPTIONS. Some of us, apparently, forget from time to time that *19th century* describes the 1800s, that *18th century* describes the 1700s, and so on. Take, for example, R.B. Collins’s article titled “Can an Indian Tribe Recover Land Illegally Taken in the Seventeenth Century?” 1984–1985 *Preview of United States Supreme Court Cases* no. 8, p. 179 (18 Jan. 1985), which discusses land acquired by New York from the Oneida Indians in 1795. The title should refer to the 18th century, not the 17th.

What particular years make up the course of a century has also caused confusion. Strictly speaking, since the first century ran from A.D. 1 through 100, every century begins with a year ending in the digits 01. The last year of a century ends in 00. But the popular mind has moved everything back a year, in the belief that 2000 marked the beginning of the 21st century. This confusion is unfortunate but seemingly ineradicable.

One other point merits our attention. As compound adjectives, the phrases denoting centuries are hyphenated; but they are not hyphenated as nouns. Hence, “The 12th-century records were discovered in the 19th century.” See PHRASAL ADJECTIVES (A) & (G).

cerebral. In AmE this word is pronounced /sə-**ree**-brəl/ in all contexts except one—the phrase *cerebral palsy*, which is most often pronounced /**ser**-ə-brəl **pahl**-zee/. This exception derives from an old pronunciation of *cerebral*: in the early 1900s, the preference was for the first syllable to be accented.

ceremonial; ceremonious. The DIFFERENTIATION between these words lies more in application than in meaning; both suggest a punctilio in following the customs and trappings of ceremony. *Ceremonial* is the general word relating to all manner of ceremonies, but is used only in reference to things—e.g.:

- “Don Larsen, who pitched the only perfect game in World Series history, threw out the *ceremonial* first pitch.” Don

Bostrom, “‘Big Daddy’ Is the Big Bopper for Yanks in Post-Season,” *Morning Call* (Allentown, Pa.), 22 Oct. 1996, at C7.

- “A Catholic priest’s *ceremonial* robe apparently protected him from harm Friday when a woman shot him three times in the chest with a pellet gun.” “Priest Shot with Pellet Gun as He Gives Communion,” *Orlando Sentinel*, 23 Nov. 1996, at A20.

Ceremonious, a less common and mildly disparaging word, suggests an overdone formality. It is used in reference both to people and to things—e.g.:

- “Never sentimental or *ceremonious*, [Bernard] Witkin wrote a \$10,000 check a couple of years ago to Rod Duncan, an Alameda County judge facing a recall campaign.” Claire Cooper, “Witkin Left Legacy in Law, Philanthropy,” *Sacramento Bee*, 29 Dec. 1995, at A3.
- “Walking the plank would have been too *ceremonious* for the real pirates, who much preferred slicing their victims up in redblooded swordplay.” Donna Marchetti, “Real Pirates Were Not Swashbuckling,” *Plain Dealer* (Cleveland), 27 Oct. 1996, at I11.

The word is more often seen in its negative adverbial form, *unceremoniously*, where it means “without fanfare”—e.g.: “He has always been a fan favorite and has *unceremoniously* given plenty back to the community.” David Dupree, “‘Glove’ Fits Better Now than Ever,” *USA Today*, 5 Apr. 2002, at C3. It typically connotes abruptness and disrespect—e.g.: “That’s how he learned he’d been *unceremoniously* cut from the preseason roster of a team with one of the strangest nicknames he’d ever heard—the Piranhas.” Carlton Stowers, “Desperate Measures,” *Dallas Observer*, 4 Apr. 2002, at 21.

certainty; certitude. *Certainty* = (1) an undoubted fact; or (2) absolute conviction. Sense 2 is very close to that reserved for *certitude*, which means “the quality of feeling certain or convinced.” E.g.:

- “The decision that thrust the world into the nuclear age and cast doubt on the moral *certitude* of the United States still has the power to incite bitter and contentious debate.” Andrea Ston, “Dissecting a Decision That Shook the World,” *USA Today*, 27 July 1995, at A4.
- “Walter Winchell felt an unambiguous *certitude* in his words and wanted them published in the *Washington Times Herald*, where President Franklin D. Roosevelt and other national leaders could learn from them.” A.E.P. Wall, “Library’s Failure to Provide Pornography Is Not Censorship,” *Orlando Sentinel*, 11 Mar. 1997, at A11.

Justice Oliver Wendell Holmes stated, rather memorably, “*Certitude* is not the test of *certainty*. We have been cock-sure of many things that were not so.” “Natural Law,” in *Collected Legal Papers* 311 (1920). Other writers sometimes echo this aphorism—e.g.: “He was the sort of thinker for whom (to borrow a phrase of Oliver Wendell Holmes) *certitude* was the only proof that *certainty* required.” Louis Menand, “James Family Values,” *New Republic*, 18 Dec. 1995, at 29.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

cesarean section; caesarean section. The first is the standard spelling in AmE for the term denoting the surgical procedure for delivering a baby—with a lowercase *c*-. In BrE the spelling *caesarean section* has predominated since the early 1990s. Apart from surgical birthing, *Caesarean* is the adjective meaning “of, relating to, or involving Caesar”; **Caesarian*, **Cesarean*, and **Cesarian* are variant spellings of *Caesarean*.

cession. See **session**.

ceteris paribus (= other things being equal or the same) is, for the most part, an unnecessary LATINISM. Other things being equal, the common English phrase is better—e.g.:

- “The revenues from the charges can be used either to reduce other taxes or to increase government expenditures on desirable activities without, *ceteris paribus* [read *assuming no other changes*], any further increase in taxes.” Wilfred Beckerman, “Beware Rules and Regulations,” *New Statesman & Soc’y*, 22 Mar. 1996, at 29.
- “Moreover, even if current growth rates are maintained, Argentina is simply not going to develop its way out of the problem, *ceteris paribus* [delete the phrase, which comes as a WEASEL WORD at the end].” Roger Fontaine, “Argentina’s Winter of Discontentment,” *Wash. Times*, 28 Aug. 1996, at A19.
- “These forecasts are *ceteris paribus*—‘other things held constant.’” Michael R. King, “The BoC’s Oil Price Strategy,” *Globe & Mail* (Toronto), 25 May 2015, at B4. (A possible revision: *These forecasts assume that other factors will remain constant.*)

In English the phrase is pronounced /set-ə-ris par-i-bəs/. Cf. *mutatis mutandis*. See SESQUIPEDALITY.

Ceylonese. See **Sri Lankan**.

chad. As the world came to know in the protracted aftermath of the 2000 U.S. presidential election, *chad* is the debris left behind when computer data cards are punched. After emerging in the 1950s, the word was always a mass noun: a pile of thousands of them was just called the *chad* (similar to *chaff*)—e.g.: “The problem with punch cards is hanging *chad*, or little bits of paper that cling to the ballot after being punched out, Clem said.” Michael Kaiser, “Canvassing Board to Consider Recount Request,” *Press J.* (Vero Beach, Fla.), 7 Oct. 2000, at A5. See COUNT NOUNS AND MASS NOUNS.

Until the Florida re-count controversy that followed the 2000 election, there was no need to address the tiny remnants individually. But when the little pieces of paper were individually examined, sometimes with magnifying glasses, *chad* suddenly became a singular count noun with a plural form (*chads*)—e.g.: “Dade elections supervisor David Leahy said a likely reason for the newly found votes were ‘hanging *chads*’—the little paper squares that voters punch through to cast a vote.” Steve Bousquet, Phil Long & Lesley Clark, “As Florida Recounts, Bush Lead Shrinks to Less than 1,000 Votes,” *Miami Herald*, 9 Nov. 2000, at A1. (Note the subject-verb agreement problem in *reason . . . were*. A suggested revision: *David Leahy said the newly*

found votes probably resulted from “hanging chads” (etc.). See SUBJECT-VERB AGREEMENT (B).)

chagrin, vb. See SPELLING (B).

chairman; chairwoman; *chairperson; chair. Sensitivity to SEXISM impels many writers to use *chair* rather than *chairman*, on the theory that doing so avoids gender bias. E.g.: “Jeanie Austin [is the] former national *co-chair* of the RNC.” Dan Balz, “Race for Top GOP Post Has Real Campaign Feel,” *Wash. Post*, 16 Jan. 1997, at A4. Certainly *chair* is better than **chairperson*, which is widely considered an ugly and trendy word.

Many readers and writers continue to believe, however, that there is nothing incongruous in having a female *chairman*, since *-man* has historically been sexually colorless. Hence in 1967, *chairman* was paired with *he or she*: “The Lord Chancellor, following up his proposals about the retiring age for justices, has announced that no one may be elected *chairman* after he or she has reached the age of 70, though existing *chairmen* may continue.” R.M. Jackson, *The Machinery of Justice in England 187* (5th ed. 1967).

In journalistic sources in the 1990s, *chairman* outnumbered **chairperson* by a 100-to-1 margin. Even so, the consciously nonsexist forms are gaining ground and may well prevail within the next couple of decades. If we’re to have a substitute wording, we ought to ensure that *chair* and not **chairperson* becomes the standard term—e.g.: “Mrs. Berman was instrumental in founding the Rhode Island State Nurses Association, District One, and served as *chairperson* [read *chair*] for the Tucks Scholarship Fund.” “Sara Ruth Berman” (obit.), *Providence J.-Bull.*, 15 Jan. 1997, at C6. Some criticize this usage of *chair* as both ugly and absurd, arguing that a *chair* is a piece of furniture. In fact, though, *chair* is not a recent coinage, but a parliamentary term that dates to the mid-17th century.

One caveat: if we adopt a term such as *chair*, it must be used in reference to males and females alike. In recent years, there has been a lamentable tendency to have female *chairs* (or **chairpersons*) and male *chairmen*. That is no better than having *chairwomen* and *chairmen*. After all, in most circumstances in which people lead committees, the sex of the leader is irrelevant. See SEXISM (C).

LANGUAGE-CHANGE INDEX

1. **chairperson* as a gender-neutral term: Stage 2
Current ratio (*chairman* vs. **chairperson*): 13:1
2. *chair* as a gender-neutral term: Stage 5
Current ratio (*chair of the committee* vs. **chairperson of the committee*): 4:1

chaise longue (/shayz long/ or /lawng/), meaning “a couchlike chair,” forms the anglicized plural *chaise longues*—no longer **chaises longues*. That has been true since the 1930s. See PLURALS (B).

Many people commit the embarrassing error of saying or writing **chaise lounge*—e.g.: “Resin manufacturers are now trying to shatter their low-rent

stereotype with ambitious new designs like folding deck chairs and *chaise lounges* [read *chaise longues*] in designer colors like hunter green.” Andrew Page, “More than Just Monoblock, Resin Furniture Moves Upmarket,” *Nat’l Home Center News*, 7 Aug. 1995, at LG32. The problem is that *lounge*, when put after *chaise*, looks distinctly low-rent. See METATHESIS.

LANGUAGE-CHANGE INDEX

**chaise lounge* for *chaise longue*: Stage 3

Current ratio (*chaise longue* vs. **chaise lounge*): 1.4:1

challenged. On the use of this adjective to mean “disabled” or “handicapped” <physically challenged>, see EUPHEMISMS.

chamois. When referring to the leather, this word is pronounced /**sham**-ee/. (It has the variant spellings **chammy*, **shammy*, **shamois*, and **shamoy*.) But when referring to the goatlike antelope, the word may be pronounced either that way or /**sham-wah**/.

chamomile (= an odoriferous plant whose flowers are used for making tea) is the standard spelling. **Camomile* is a variant. Whatever the spelling, the word is pronounced either /**kam**-ə-mil/ or /**kam**-ə-meel/.

Current ratio (*chamomile* vs. **camomile*): 4:1

champ; chomp. The original term for what horses do to their bits is *champ*. *Chomp* is an American variant.

The idiom *chomping at the bit* evokes the image of an impatient horse, especially one eager for a race to start. In contemporary print sources, *chomping at the bit* predominates only in BrE; since the mid-1990s, *chomping at the bit* has become preeminent in AmE. Either phrase, though, must suggest a kind of friskiness that is absent in the following example: “Visitors tie their horses and the animals peacefully *champ* [read *chew*?] their bits.” “Forging a Career Around Horses,” *Tulsa World*, 30 May 1999, Bus. §, at 1.

Otherwise, the two verbs have undergone some degree of DIFFERENTIATION. What one *champs* is not actually eaten, but just bitten or gnawed, nervously. But to *chomp* something is to take a bite out of it and usually to consume it: in DIALECT, *chomp* is colloquially accompanied by the adverb *down* <chompin’ down catfish>.

LANGUAGE-CHANGE INDEX

chomping at the bit for *champing at the bit*: Stage 5

Current ratio (*chomping* vs. *champing at the bit*): 15:1

channel, vb.; *channelize. Because no real DIFFERENTIATION has developed between these terms, **channelize* ought to be branded a NEEDLESS VARIANT. *Channel*, the usual term, means (1) “to form channels in, to groove”; (2) “to guide”; or (3) “to act as a medium through whom the dead (or absent) supposedly speak.” It makes *channeled* and *channeling* in AmE, *channelled* and *channelling* in BrE. See SPELLING (B).

Current ratio (*channeled* vs. **channelized*): 15:1

Chanukah. See **Hanukkah**.

chaotic. See **inchoate**.

chaperon (= a person, esp. an elder, who accompanies others, esp. youngsters, to ensure good conduct) was the standard spelling from the 18th century to about 1950—after the French etymon of the same spelling. *Chaperone* began as a variant form apparently misspelled as a result of the (correct) long *-o-* in the final syllable. That is, because the word is pronounced /**shap**-ə-rohn/ or /**shap**-ə-**rohn**/, some writers mistakenly added the final vowel, and by 1970 that form was predominant in both AmE and BrE print sources. Although most dictionaries still list *chaperone* as only a secondary variant, it is unquestionably now standard—e.g.:

- “When the Mall of America in Bloomington, Minn., . . . announced a curfew and *chaperone* [read *chaperon*] policy for adolescents in September, teenagers seemed well on their way to becoming pariahs.” Ann Hulbert, “Politicians, Like, Really on Teens’ Case,” *USA Today*, 21 Nov. 1996, at A15.
- “A *chaperone* [read *chaperon*] (the word baby sitter was discreetly avoided) was hired to look after the children on tour.” Ted Lambert, “Back to Experimental Theater and Back to Ancient Troy,” *N.Y. Times*, 8 Dec. 1996, § 2, at 5.

In 2003, the lexicographers at Merriam-Webster reversed the positions of *chaperon* and *chaperone*, for the first time giving the variant form primacy in their *W11*. The editors of *NOAD* soon followed suit. And so what had once been a misspelling became the established norm, aided and abetted by the not entirely somnifacient Broadway musical *The Drowsy Chaperone* (2001).

LANGUAGE-CHANGE INDEX

chaperon spelled as *chaperone*: Stage 5

Current ratio (*chaperone* vs. *chaperon*): 3:1

chaplancy; *chaplainship. Though common in the 18th century, the latter is now a NEEDLESS VARIANT.

Current ratio: 72:1

character; reputation. Very simply, the semantic distinction is that *character* is what one is, whereas *reputation* is what one is thought by others to be.

character assassination (= defamation, esp. to create public distrust), a phrase that gained prominence in the mid-20th century, is sometimes rendered **caricature assassination*, usually for comic effect—e.g.: “I limited my comments to what I objected to the most—the line drawing, which I referred to as ‘*caricature assassination*.’” Laurence H. Meyer (quoted by Keith J. Kelly in “After Self-Assessment, Conde Springs for Redesign,” *N.Y. Post*, 7 July 2004, at 32).

At other times, though, the phrase is mangled into a MONDEGREEN—e.g.: “[Tom] DeLay spokesman Jonathan Grella released a statement that accused Democrats of ‘*caricature assassination*’ [read

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

'*character assassination*']." Hans Nichols & Jonathan E. Kaplan, "We Could Have Nixed It, Say Dems," *The Hill*, 15 June 2004, at 1.

LANGUAGE-CHANGE INDEX

**caricature assassination* for *character assassination*: Stage 1

charge, n. & v.t. **A. In the Sense "accusation."** To write that someone has been *accused* of a *charge* is a REDUNDANCY. E.g.: "On May 1, Jackson, the former captain of the women's track team, and the other women went to the Navy Yard in Washington to testify at an Article 32 hearing, the military's version of a grand jury. That night, *she was accused of a charge of her own* [read *she herself was accused or she herself was charged with an offense*]." JoAnna Daemrich, "Mid Charged with Lying," *Baltimore Sun*, 3 June 1996, at B1. See **accuse**.

B. Active and Passive Use. *In charge of* can have either an active or a passive sense—e.g.:

- "The farmhand was left *in charge of* the livestock."
- "The livestock were left *in charge of* the farmhand."

But the usual passive wording is *in the charge of*, which prevents any possible ambiguities. E.g.: "The truck was *in charge of* [read *in the charge of*] Mack Free, who was instructed not to permit any person to ride upon or drive it." To one not accustomed to *in charge of* in the passive construction, the subject and object appear to have been confused—the sentence seems to say that the truck had authority over Mack Free. One more example: "It had been the practice in Texas to assign a Pullman conductor to trains with two or more sleeping cars, while in trains with only one sleeping car that car was *in charge of* [read *in the charge of*] a porter."

chargeable. So spelled—not **chargable*. See MUTE E. Current ratio: 309:1

chargé d'affaires. Pl. *chargés d'affaires*. See PLURALS (B).

charivari; ***shivaree**; ***chivaree**; ***charivaree**. It's not customary now for friends and family to serenade a wedding couple with a boisterous clanging of kettles and blowing of horns. But when it does happen, the standard term for it is *charivari* (from French, deriving from medieval Latin *caribaria* "headache"). The others are variant forms. In English, the term is conventionally pronounced /shiv-ə-ree/.

Current ratio (for first three headwords): 21:3:1

charted. For the mistake of writing **unchartered territory* instead of *uncharted territory*, see **uncharted**.

chartered plane, not **charter plane*, is the traditional form. One specially hires an airplane, ship, bus, or the like by a contract known as a *charter*. Once the contract is in place, the means of conveyance has been *chartered*. During the 20th century, speakers and writers increasingly dropped the *-ed*, but this is neither the best nor the most frequent usage—e.g.: "Scott McInnis, a Colorado representative whose home district is larger than Florida, rides tiny *charter* [read *chartered*]

planes between several far-flung stops." "Sallying Fourth," *N.Y. Times*, 29 June 1997, § 6, at 13.

LANGUAGE-CHANGE INDEX

**charter plane* for *chartered plane*: Stage 4
Current ratio (*a chartered plane* vs. **a charter plane*): 2:1

chary (= cautious) is a FORMAL WORD close in meaning to *wary* (and rhyming with it)—e.g.: "Indonesia, once *chary* of foreign investment, is now worried about losing out to China, Vietnam and other countries." Andrew Pollack, "Companies Rediscovering Indonesia," *N.Y. Times*, 6 Dec. 1994, at D1. The word sometimes implies "sparing, ungenerous" <*chary of praise*>.

chasm is pronounced /kaz-əm/.

chassis. Pl. *chassis*—preferably not **chassises*.

chaste. A. And Gender. *Chaste* (= untainted by unlawful sexual intercourse; virtuous; sexually continent) is a word that applies to males and females alike. E.g.: "As a young and *chaste* boy, Yava said, he would often be called on to help construct the sand painting, lending the power of his purity." Barbara Yost, "Navajos Seek Answer with Help of Old Ways," *Phoenix Gaz.*, 4 June 1993, at A2.

Unfortunately, however, a bias pervades the word's usual applications so that it typically refers to women and girls. E.g.:

- "One view is that a fallen woman who has fully reformed is *chaste*, while another is that chastity before marriage means physical virginity—a woman can be seduced only once. There is nothing unchaste about marital intercourse and hence, under either view, a widow or divorcee may be an unmarried female of previously *chaste* character." Rollin M. Perkins & Ronald N. Boyce, *Criminal Law* 463–64 (3d ed. 1982).
- "President Jackson told the Cabinet that Peggy was '*chaste* as a virgin,' to which Mr. Clay replied, 'Age cannot wither nor time stale her *infinite* virginity!'" "Speakers and Spleen," *Courier-J.* (Louisville), 7 Dec. 1994, at A10.

B. And celibate. There is also some confusion about the sense of *chaste*, as opposed to *celibate*. A person who is *chaste* is innocent of unlawful sex—that is, does not engage in sex with anyone other than the person's spouse. So in both secular law and church law, a person who frequently has sex, but only with his or her spouse, is *chaste*. By contrast, a person who is *celibate* (in the word's original sense and still the only definition in the *OED*) abstains from marrying—and sex, too, but only as a consequence of the choice not to marry. The times have passed that meaning by, and today this traditional sense is obsolescent at best. It may remain current with the vow of celibacy that Catholic priests make (i.e., a promise not to marry). But it is almost universally understood, even in that context, to mean "abstaining from sex"—e.g.: "His case underscores the growing debate within the church over whether there is a place in the priesthood for gay men, even *celibate* ones." Sacha Pfeiffer, "Crisis in the Church," *Boston Globe*, 25 Nov. 2002, at A1.

And while many word extensions result in the loss of a useful and unique term, here the shift in meaning of *celibate* has resulted in the creation of a term that has no good substitute—especially since *chaste* sounds archaic, carries outdated connotations about sex, and has drifted toward becoming gender-specific. It would be difficult, for example, to replace *celibate* in the example above gracefully.

chasten; chastise. These words are close in meaning, but distinct. *Chasten* = to discipline, restrain, punish, subdue. *Chastise* = (1) to punish, thrash; or (2) to castigate, criticize.

Chastise is so spelled; **chastize* is incorrect but not uncommon. See -IZE.

Current ratio (*chastise* vs. **chastize*): 66:1

chauvinism. A. Generally. Traditionally, *chauvinism* (/ʃoh-və-niz-əm/) refers to fanatical patriotism. The word's eponym is Nicolas Chauvin, a French soldier who was ridiculed for being excessively devoted to Napoleon.

By metaphorical extension, the word has been broadened to denote exaggerated belief in the superiority of any group, class, or cause. Today *male chauvinism*, which (as a phrase, not a phenomenon) dates back to the late 1960s, is something of a CLICHÉ, being the word's most frequent application—e.g.: “In 1999, the socialist-feminist magazine *Mother Jones*, hardly a bastion of *male chauvinism*, reported that ‘women report using violence in their relationships more often than men’ and ‘wives hit their husbands at least as often as husbands hit their wives.’” Stephen Baskerville, “A Tool Kit to Destroy Families,” *Wash. Times*, 9 Dec. 2001, at B5.

Indeed, some writers have come to use *chauvinism* as if it were synonymous with *male chauvinism*—e.g.:

- “But a year later, as feminism reached even West Peoria, women began complaining about *chauvinism*.” Phil Luciano, “Mike’s Bar Stands Test of the Times,” *Peoria J. Star*, 31 Oct. 2001, at B1.
- “Madonna says that her husband doesn’t like her wearing see-through tops and tells her not to look like a slapper. Instead of being affronted, she’s clearly delighted by his *chauvinism*.” Lynda Lee-Potter, “Brash, Brave and a Boost for the Feisty Over-Forties,” *Daily Mail*, 28 Nov. 2001, at 13.
- “*Chauvinism* remains in abundant supply in racing, but those who feel in their bones that a man will always outride a woman had a blow struck against their beliefs at the Shergar Cup here on Saturday when female riders beat three other teams composed of male stars from around the world.” Chris Cook, “Sammy Jo Bell Wins Two Shergar Cup Races and Lifts Ascot’s Silver Saddle,” *Observer*, 8 Aug. 2015, Sport §.

To the linguistic traditionalist, these uses (or misuses) are arrant nonsense. But others view the term as a handy, more pejorative alternative to *sexism*.

LANGUAGE-CHANGE INDEX
chauvinism for *male chauvinism*: Stage 3

B. And jingoism. The void left by the shift in the meaning of *chauvinism* from national pride to supposed sexual superiority has been filled by *jingoism*. Essentially synonymous with *chauvinism* in its traditional sense, *jingoism* has the added layer of xenophobic and aggressive attitudes toward foreign policy—e.g.: “Gilmour goes overboard in trying to rationalize and justify Kipling’s racism and *jingoism*. He argues, for example, that ‘white’ in *The White Man’s Burden* does not refer to skin color but rather to ‘civilization and character’ and that Kipling’s imperialistic beliefs were essentially humane and benevolent rather than based on greed, paternalism and self-interest.” Earl L. Dachslager, “The Kipling Paradox,” *Houston Chron.*, 23 June 2002, Zest §, at 19.

Sometimes the word takes on an even softer sense, suggesting a provincialism or regionalism that is broader than national sovereignty—e.g.: “The prime minister’s evident glee that the BA order had gone to a ‘European’ company is mere *jingoism* at bottom.” “New Labour, Old Corporatism,” *Wall Street J. Europe*, 27 Aug. 1998, at 6.

check. A. And cheque. Both denote a written order directing a bank to pay money to a specified person. The first, much older spelling is standard AmE. The second has been used by the British since the early 19th century. Still, the second spelling turns up occasionally in AmE.

B. Check in the amount of. Instead of this wordy phrasing <enclosed is a check in the amount of \$75>, use *check for* <enclosed is a check for \$75>.

cheroot /shə-root/ (= a cigar with square ends) is the standard spelling. **Sheroot* is a little-used AmE variant.

cherub /cher-əb/. This word has two plurals—*cherubs* and *cherubim*—that have undergone DIFFERENTIATION. *Cherubs*, which is six times as common in modern print sources, applies when the reference is either to winged child-angels or to children with chubby red faces. *Cherubim* (a Hebrew plural) applies when the reference is to an entire order of angels. Cf. **seraph**. See PLURALS (B).

The double plural **cherubims* is erroneous—e.g.: “Among the items inside the tabernacle are reproductions of the golden lampstand . . . and the Ark of the Covenant topped by *cherubims* [read *cherubim* or *cherubs*].” Lori Van Ingen, “Mennonite Center’s Tabernacle Hasn’t Moved Since 1975,” *Intelligencer-J.* (Lancaster, Pa.), 13 July 2002, at B4.

LANGUAGE-CHANGE INDEX

Current ratio (*chest of drawers* vs.

**chester drawers*): 595:1

chicanery; chicane, n. In contexts other than those involving horse racing, auto racing, and card games, the noun *chicane* is a NEEDLESS VARIANT of *chicanery* (= trickery). In modern publications, *chicanery* outnumbers *chicane* by a 3-to-1 margin—e.g.: “[T]he fake fireworks, fake singing, allegations of child labor in gymnastics, tape delays and whatever other *chicanery*, artificial ingredients and editing that have shaped impressions of the first week of the Made in China Games did not dent the ratings.” Phil Rosenthal, “Conventions Need Olympic-Style Splash,” *Chicago Trib.*, 17 Aug. 2008, Bus. §, at 2.

As a verb, *chicane* can be useful (though it’s comparatively rare)—e.g.: “Ironically, this is also the age when children desire to belong to organizations whose primary function is to solicit, wheedle and *chicane*.” Tom Miller, “Don’t Kid Yourself—It’s the Attack of the Fund-Raising Urchins,” *Seattle Times*, 4 Dec. 1994, Sunday Punch §, at 6.

Chicanery is pronounced with a /sh/: (/shi-kay-nə-ree/)—not a /ch/.

Chicano; Chicana. See **Hispanic**.

chide > chided > chided. These are the preferred inflections today in AmE and BrE alike. **Chid* is a variant past tense and past participle that was standard until the early 20th century. Like the variant past participle **chidden*, it should be avoided.

The gerund *chiding* acts as the noun <perhaps this chiding will have some effect>. With **chidance*, Fred Rodell was surely punning on *guidance*: “But the thirty-year story of the Court under Holmes’s *chidance* can best be told neither in strict chronological sequence nor in the specific records of specific Justices (other than Holmes).” *Nine Men* 191 (1955). See IRREGULAR VERBS (D).

Current ratio (*chided* vs. **chid*): 7:1

Current ratio (*had chided* vs. **had chidden*): 21:1

chief. In AmE, the comparative *chiefer* and the superlative *chiefest* are archaic—the word *chief* being considered a noncomparable adjective. See ADJECTIVES (B).

But the superlative form still occasionally appears in BrE—e.g.:

- “*Chiefest* of the blue-nose pubs is the Rosevale, partly owned by Rangers manager Walter Smith and run by Paul Burns.” Tom Shields, “Musical Walkers Take Refuge with Old Firm Rivals,” *Herald* (Glasgow), 7 July 1995, at 17.
- “It is doggedness, unglamorous persevering doggedness, which is the *chiefest* quality in winning county championships.” “Cricket: Kent Take Positive Option,” *Sunday Telegraph*, 18 Aug. 1996, at 8.
- “His principal targets are the clergy, and he is not afraid of the *chiefest* among them.” Anthony Cronin, “The Sunday Poem,” *Sunday Independent*, 22 Mar. 2015, at 22 (referring to the 16th-century poet John Skelton).

Chief Justice of the United States. Though usage has varied over time, this is now the generally preferred title—not **Chief Justice of the United States Supreme Court* or **Chief Justice of the Supreme Court of the United States*.

chiffonier (= a tall chest of drawers) is the standard spelling. **Chiffonnier* is a variant. The word is pronounced /shif-ə-neer/.

Current ratio: 4:1

childlike; childish. *Childlike* connotes simplicity, innocence, and truthfulness <childlike faith>. *Childish* connotes puerility, peevishness, and silliness <childish sulking>.

Sometimes *childish* (the negative term) wrongly displaces *childlike* (the positive term)—e.g.:

- “The text rang out with honesty and simplicity, whether voicing Anne’s *childish* [read *childlike*] innocence or her tragic sense of weariness.” Marc Shulgold, “Aspen Music Festival Builds to a Big Finale,” *Rocky Mountain News* (Denver), 21 Aug. 1995, at A42.
- “Some drawings have a delightful, almost *childish* [read *childlike*] simplicity.” Jacqueline Hall, “Sketches Show How Architects Develop Ideas,” *Columbus Dispatch*, 15 Sept. 2002, at G8.

LANGUAGE-CHANGE INDEX

childish misused for *childlike*: Stage 2

Current ratio (*childlike innocence* vs.

**childish innocence*): 3:1

children, the plural of *child*, makes the possessive form *children’s*. The form **childrens’* is erroneous—e.g.: “Clad in water-repellent gear, carrying umbrellas and pulling their *childrens’* [read *children’s*] wagons, they streamed into the park.” Rob Kasper, “Spit Out Those Seeds of Doubt and Plant Watermelon Again,” *Baltimore Sun*, 2 June 2001, at D1. See POSSESSIVES (B).

LANGUAGE-CHANGE INDEX

**childrens’* for *children’s*: Stage 1

Current ratio (*children’s* vs.

**childrens’*): 334:1

child-slaying. For the 19th-century adverb, see **infanticide**.

chili (= [1] a hot pepper; or [2] a spicy beef stew that, when prepared north of Texas’s Red River, often contains beans) is so spelled in AmE—*chilli* in BrE. Avoid *chile*, which is Spanish, not English.

chiliad; chiliast. See **millenarian**.

chillily. For this 19th-century adverb, see **ADVERBS (B)**.

chimera. A. Spelling and Pronunciation. The form *chimera* is now standard, **chimaera* rarely appearing. The word is pronounced /ki-meer-ə/.

Current ratio: 7:1

B. Plural. The better plural is *chimeras*. The form *chimerae* is an affectation—e.g.: “Similarly grotesque creatures can be found in French furniture of the Francis I period (1483–1547), when *chimerae* [read *chimeras*], draped human figures, and stylized scrolls were popular motifs.” Page Talbott, “Allen and Brother, Philadelphia Furniture Makers,” *Mag. Antiques*, May 1996, at 716. See **PLURALS (B)**.

Current ratio (*chimeras* vs. *chimerae*): 38:1

chimpanzee may be pronounced /chim-pan-zee/ or /chim-pan-ze/. The first of those pronunciations now predominates.

***chinchy.** See **chintzy**.

Chinese, n. Although everyone feels comfortable using *Chinese* as an adjective <Chinese restaurants> and as a **COLLECTIVE NOUN** <the Chinese have rich cultural traditions>, a sense of awkwardness arises when using it as a singular noun <he’s a Chinese>. There is a tendency to prefer it as an adjective <he’s Chinese>. The same tendency may be seen in other nationalities denoted with the *-ese* suffix (e.g., Burmese, Sudanese, Vietnamese).

Most dictionaries, however, define *Chinese* as a singular noun meaning “a native of China” or “a citizen of China.” And certainly the need occasionally arises to refer to a person from China, as we use *an American* to refer to a person from the United States (see **American**) or *a Russian* to refer to a person from Russia. And while everyone with any sense knows that *Chinaman* has long been considered derogatory, *Chinese* is not so considered and fills the need—e.g.:

- “As a *Chinese* who grew up in a Chinese society, I shouldn’t feel ashamed if my opinions don’t align with those of most American minorities.” Shu Shin Luh, “A Minority View,” *Wash. Post*, 8 Aug. 1999, at B1.
- “An official—a *Chinese* who would give only his surname, Huo—says construction stalled because Beijing delayed the final batch of funding, worth \$600,000.” Charles Hutzler, “China Fears Melding of Islam, Separatism,” *Houston Chron.*, 27 Aug. 2000, at 34.
- “The only two who failed to vote ‘yea’ were Vitaly Smirnov, a Russian with the good sense to abstain, and He Zhenliang, a *Chinese* who voted against the measure.” Mike Vaccaro, “Golden Ruling for Canadian Pair,” *Star-Ledger* (Newark), 16 Feb. 2002, at 1.

chink (= a fissure or slit, as in armor) derives from the Middle English word *chine*, meaning “crack.” The

SET PHRASE is *chink in the armor*—often elaborated to *chink in [someone’s] armor*. But because the word *Chink* is also a racial slur against the Chinese (dating from the late 19th century), some have begun erroneously writing **kink in the armor*, the word *kink* suggesting an irregularity or imperfection. This unetymological shift in usage may gain acceptance in the end because of racial sensitivities, but it is not yet even close to being standard. E.g.:

- “Two games into the season, Atholton’s softball team has shown no *kinks* [read *chinks*] in its armor.” Stan Rappaport, “Atholton Keeps the Competition Scoreless Again,” *Baltimore Sun*, 25 Mar. 2001, at E17.
- “For the most part, Paragon lives up to its name, with a few minor *kinks* [read *chinks*] in its aspiring armor.” Meredith Ford, “Dining Out,” *Providence J.-Bull.*, 29 Nov. 2001, at L15.
- “Likewise any *kinks* [read *chinks*] in the armor should be taken care of now rather than discovering them out on the water.” Dan Radel, “Cabin Fever? Five Fishing Activities to Avoid It,” *Asbury Park Press*, 12 Feb. 2015, at A7.

But sensitivities understandably run high. On 30 August 2015, *The Wall Street Journal* tweeted a headline: “A Chink in His Armor? Xi Jinping Looks Vulnerable for the First Time.” Within moments it had been untweeted, yet indignant readers had preserved and retweeted it—furiously questioning the *WSJ*’s judgment. People wanted to know whether it was clueless or purposeful. Either conclusion is damning.

LANGUAGE-CHANGE INDEX
kink misused for *chink*: Stage 2

chintz; *chints. *Chintz* is the preferred spelling for fabric originally imported to Great Britain from India, featuring large patterns of flowers or birds. The original spelling, **chints*, is now obsolete.

Current ratio: 107:1

chintzy (= cheap, gaudy) is the standard spelling. **Chinchy* is a variant.

Current ratio: 72:1

chipotle (= a smoked jalapeño pepper used in cooking various dishes, esp. Mexican food) dates in English from the 1950s. Today it is often, through **METATHESIS**, misspelled **chipolte* (and mispronounced that way as well)—e.g.: “The smoky three sisters soup (\$7.50) was chock full of cannellini beans, squash and fresh corn and spiked with *chipolte* [read *chipotle*] and ginger.” Kathleen Allen, “A More Elegant Presidio,” *Ariz. Daily Star*, 11 May 2001, at F9. The word is also occasionally spelled *chilpotle*, which is the etymological spelling of the Nahuatl word (meaning “smoked chili”). But the established spelling in English is *chipotle*. The word is pronounced /chee-**poht**-lay/ or /chi-/.

LANGUAGE-CHANGE INDEX
chipotle misspelled **chipolte*: Stage 1

Current ratio: 155:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

***chiroprody; *chiroprodist.** The first syllable of these words is preferably pronounced /ki/, not /chi/. But /shi/ is common and (barely) acceptable. The words are labeled “factitious” by the *OED*; are less common than their synonyms, *podiatry* and *podiatrist*; and ought to be avoided in most contexts.

chisel, vb., makes *chiseled* and *chiseling* in AmE, *chiselled* and *chiselling* in BrE. See SPELLING (B).

chitterlings (= cooked pig intestines) is the standard term. Despite its spelling, it's pronounced /chit-linz/. As an almost inevitable result, the variant forms **chitlings* and **chitlins* have emerged. Cf. **victuals**.

Current ratio (*chitterlings* vs. **chitlins* vs. **chitlings*): 32:20:1

chivalrous; chivalric. *Chivalrous*, always the more popular term, best applies to a person, *chivalric* to a quality or thing.

Chivalrous is the older term, dating from the 14th century. It describes a valiant knight or, later, a gracious man—e.g.: “At least Kutcher is a *chivalrous* hiking partner. He carries the tape recorder. He offers to carry my bag.” Rachel Abramowitz, “A Career Buff-Up,” *L.A. Times*, 24 Sept. 2006, Cal. §, at E1.

Chivalric dates from shortly before 1800. It best means “of, relating to, or involving chivalry”—e.g.: “[H]e can discourse knowledgeably about rare editions and Old Master prints, work with a fine sensibility at his photographic studies, succor those less fortunate and comport himself with an almost *chivalric* courtesy.” Michael Dirda, “Trust No One in This Accomplished Victorian Suspense Novel,” *Wash. Post*, 1 Oct. 2006, Book §, at T15.

***chivaree; *charivaree.** See **charivari**.

chlorophyll (the green pigment in plants) has been the standard spelling since the word became widespread in the early 20th century. **Chlorophyl* is a variant.

Current ratio: 97:1

choate. See **inchoate**.

chocoholic (= someone who craves chocolate), a slang term dating from the late 1960s, is predominantly so spelled in all varieties of World English—not **chocaholic*.

Current ratio: 19:1

chocolate (the sweet brown delicacy) is preferably pronounced /chawk-lit/ or /chawk-ə-lit/. The two-syllable pronunciation (somewhat preferred) is the result of syncope, by which an internal syllable is collapsed.

chocolaty. So spelled in AmE, but *chocolatey* in BrE.

chomp. See **champ**.

choose between. See **between (D)**.

choosy. So spelled—not **choosey*.

chord; cord. *Cord* (= [1] string, rope; [2] a measure of wood equaling 128 cubic feet; [3] an electrical cable; or [4] a ribbed fabric) is different from *chord*, which is reserved for musical and geometric senses. When the reference is to the voice-producing organs—in which the anatomical part resembles a string or rope—*cord* is the correct word. But writers frequently err—e.g.:

- “I’m crusading for alternatives to the current-traditional paradigm and will continue to do so until either my vocal *chords* [read *cords*], or my pen, or both, give out.” Donald C. Stewart, “Composition Textbooks and the Assault on Tradition,” in *The Writing Teacher’s Sourcebook* 180, 186 (Gary Tate & Edward P.J. Corbett eds., 1981).
- “Miss Anderson still likes to exercise her vocal *chords* [read *cords*] on Irish folk songs.” “Acting Jobs Best at Home,” *Omaha World-Herald*, 25 Feb. 1996, at E1.
- “In the coming months, you will stretch your muscles and vocal *chords* [read *cords*], study the origin of mankind and learn more about yourself.” Tad Bartimus, “A Warm Welcome, Students and Parents, to the Beginning of a Beautiful Friendship,” *Seattle Times*, 15 Sept. 2002, at L2.

And sometimes *cord* displaces *chord* in references to music—e.g.:

- “The sound of the dulcimer reaches lightly to the soul. It strikes a resonant and responsive *cord* [read *chord*] in most people.” Suzanne Stenzel, “In the Heart of Harmony,” *Pitt. Post-Gaz.*, 11 Feb. 1996, at VN1.
- “These statements struck a harsh *cord* [read *chord*] with me.” Al Hohl Evergreen, “Ratings Don’t Reflect a Radio Station’s Impact,” *Rocky Mountain News* (Denver), 14 Mar. 1996, at A47.
- “Though her first song was inspired by poetry that just came to her, Emma said most of the time she’s inspired by *cords* [read *chords*] or a melody.” Linda Murphy, “Westport Junior Composes Original Song for Contest,” *Herald News* (Fall River, Mass.), 14 Sept. 2014, at D1.

LANGUAGE-CHANGE INDEX

1. *chord* misused for *cord*: Stage 3

Current ratio (*vocal cords* vs. **vocal chords*): 4:1

2. *cord* misused for *chord*: Stage 1

Current ratio (*strike a chord* vs. **strike a cord*): 25:1

choreograph, like *orchestrate*, has become a CLICHÉ when used figuratively. In the most jejune modern language, careers are *choreographed* and events are *orchestrated*. See **orchestrate** & **VOGUE WORDS**.

chrestomathy. This word, denoting an anthology of literary passages (especially those from one author), is best pronounced /kre-stom-ə-thee/.

Christian, n., appears unfortunately in contexts in which it seems to be used synonymously with *fundamentalist right-winger*. A letter to the editor in *The New York Times* quite rightly objects: “I was disappointed to read a headline that began ‘As Christians Pull the G.O.P. to the Right’ (news article, June 27). Such broad-brush characterizations [are misleading]. . . . Liberals proud to be Christian include Eugene McCarthy, George McGovern, the Browns of California, Jimmy Carter, Mario Cuomo and the Rev. Jesse Jackson. Of course, it is also true that certain other Christians have heard their religious beliefs

calling them to more conservative causes. But treating this one point on the spectrum as if it stood for a Christian monolith is as offensive as it is misleading.” Letter of A.G. Fortunato, “Don’t Use ‘Christian’ as a Synonym for the Right-Wing Fringe,” *N.Y. Times*, 10 July 1994, at E18.

Christian name. For the meaning of this term, see the discussion at **surname**.

christie (= a high-speed turn in skiing) is the standard spelling. **Christy* is a variant. The word is a shortened form of *Christiana swing*, the place name *Christiana* being an archaic name for Oslo, Norway.

Christmas. See **Xmas**.

chronic is best reserved to describe diseases and physical conditions that persist over time <a chronic backache>. But it is sometimes loosely and unwisely used for *habitual* or *inveterate*—e.g.:

- “High school football coaches are *chronic* [read *habitual*] exaggerators.” Jim Browitt, “Timberline, Lapwai in Crucial CIL Game,” *Lewiston Morning Trib.* (Idaho), 1 Oct. 1993, at B4.
- “Albert’s lawyer, Roy Black, . . . [claimed] that Albert’s accuser had a pattern of threatening past boyfriends, was a *chronic* [read *habitual*] liar and was mentally unstable.” “Albert Pleads Guilty in Sex Case,” *Sacramento Bee*, 26 Sept. 1997, at A1.

The corresponding adverb is *chronically*—not **chronicly*.

At one time, **chronical* was the predominant adjective, but it has been in decline since the 1760s and is now a NEEDLESS VARIANT.

LANGUAGE-CHANGE INDEX

chronic misused for *habitual* or *inveterate*: Stage 3
 Current ratio (*habitual* or *inveterate drinker* vs. **chronic drinker*): 4:1
 Current ratio (*chronically* vs. **chronicly*): 9,939:1
 Current ratio (*chronic diseases* vs. **chronical diseases*): 412:1

chronicle, n. & vb., is frequently misspelled **chronical*—e.g.:

- “Frame your interests with photographs that *chronical* [read *chronicle*] your life and are cherished keepsakes.” Frances Ingraham Heins, “Framed!” *Times Union* (Albany), 23 Jan. 2000, at H1.
- “Her book, ‘God, Dr. Buzzard and the Bolito Man,’ is a detailed, readable *chronical* [read *chronicle*] of Saltwater Geechee heritage on the island.” Steve Hendrix, “Sweet Georgia Coast,” *Wash. Post*, 19 May 2002, at E1.

In its one near-legitimate use, **chronical* is a NEEDLESS VARIANT of the adjective *chronic*.

LANGUAGE-CHANGE INDEX

chronicle misspelled **chronical*: Stage 1
 Current ratio: 5,322:1

CHRONOLOGY. Many writing problems—though described in various other ways—result primarily from disruptions in chronological order. In narrative presentations, of course, chronology is the essential organizer. The brain can more easily process the information when it’s presented in that order. So generally, the writer should try to work out the sequence of events and use sentences and paragraphs to let the story unfold.

Even at the sentence level, disruptions can occur. The following example comes from a handbook for band directors: “Improved intonation often results when students take up their instruments after singing their parts aloud once the director realizes that there are intonation problems.” This is in reverse chronological order. But the sentence can easily be recast: *A director who detects intonation problems should try having the students put their instruments down and sing their parts aloud. Often, when they play again, their intonation will be improved.*

Another elementary example: “Eight people died after being taken to a hospital, and 26 were killed instantaneously, the radio said.” “Crash Kills 34 from Aid Flight,” *Las Vegas Rev.-J.*, 19 July 1995, at A10. (A possible revision: *The radio report said that 26 were killed instantaneously and that 8 others died after being taken to the hospital.*)

But consider the more subtle problem presented by a legal issue phrased (as lawyers generally do it) in one sentence:

Is an employee who makes a contract claim on the basis that her demotion and reduction in salary violate her alleged employment contract, and who makes a timely demand under the Attorney’s Fees in Wage Actions Act, disqualified from pursuing attorney’s fees under this statute without the court’s addressing the merits of her claim?

Now let’s date the items mentioned in that statement:

Is an employee [hired in Oct. 1997] who makes a contract claim [in Sept. 1998] on the basis that her demotion and reduction in salary [in June 1998] violate her alleged employment contract [dated Sept. 1997], and who makes a timely demand [in Aug. 1998] under the Attorney’s Fees in Wage Actions Act, disqualified from pursuing attorney’s fees under this statute without the court’s addressing [in May 1999] the merits of her claim?

The dates (which no one would ever actually want in the sentence) show that the sentence is hopelessly out of order. We improve the story line by highlighting the chronology—and we make the issue instantly more understandable:

Lora Blanchard was hired by Kendall Co. as a senior analyst in October 1997. She worked in that position for eight months, but in June 1998 Kendall demoted her to the position of researcher. Two months later, she sued for breach of her employment contract and sought attorney’s fees. Is she entitled to those fees under the Attorney’s Fees in Wage Actions Act?

Of course, part of the improved story line comes from the enhanced concreteness that results from naming

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

the parties. But the main improvement is finding the story line.

Remember: chronology is the basis of all narrative.

chrysalis. Pl. *chrysalises* or *chrysalides*. Of these two, *-ses* is better because it retains the singular's spelling within it, and the pronunciation likewise reflects that of the uninflected noun. (*Chrysalides* is pronounced /kri-sal-i-deez/.) A third plural, **chrysalids*, should be avoided because it is formed from the noun **chrysalid*, a NEEDLESS VARIANT of *chrysalis*. See PLURALS (B).

chute. See **shoot**.

chutzpah /huut-spə/, a Yiddishism dating from the late 19th century, did not gain widespread use until the 1960s and 1970s. It is a curious word, having both negative and positive connotations in AmE. On the one hand, some consider it unfavorable—e.g.: “Alan Dershowitz, the white knight of religious correctness, should have been a tad more judicious in his choice of a title for his book *Chutzpah*. Leo Rosten’s book *Hooray for Yiddish!* defines *chutzpah* as ‘ultra-brazziness, shamelessness, hard-to-believe effrontery, presumption or gall’—traits that many Jews and Gentiles would hardly classify as desirable.” Letter of Chloë Ross, *New York*, 16 Dec. 1991, at 6.

On the other hand (and perhaps this says something about American culture), many consider *chutzpah* desirable—e.g.: “Team president Matt Millen approached Detroit management late in the week in hopes of landing coach Marty Mornhinweg a contract extension after the Lions went 2–14 last season. . . . Not only didn’t Millen get what he came for, he was told that both he and Mornhinweg would have their positions evaluated at season’s end. Ouch. But we do admire Millen’s *chutzpah*.” Sean Brennan, “Going Deep,” *Daily News* (N.Y.), 9 Sept. 2002, at 12. *W11* defines it first as “supreme self-confidence” but then unnerves us with “nerve, gall.” The word sits uneasily on the fence that divides praise and scorn.

Variant spellings include **chutzpa*, **hutzpah*, and **hutzpa*—all best avoided.

Current ratio (*chutzpah* vs. variants in preceding paragraph): 463:24:5:1

cicatrix (= a scar in tissue where a wound has healed) makes the plural *cicatrices*—not **cicatrixes*. The BACK-FORMATION of the variant plural—the supposed singular **cicatrice*—is to be avoided in AmE and BrE alike.

Current ratio (*cicatrices* vs. **cicatrixes*): 213:1

-CIDE. This suffix denotes either the act of slaying [fr. L. *-cidium* “cutting, killing”] or someone who slays [fr. L. *-cida* “cutter, killer”]. Hence *fratricide* is either the killing of one’s brother or someone who kills his or her brother. Some common words ending in this suffix are these:

- homicide* = the act of killing a person
= the killer of another person
- infanticide* = the act of killing a baby
= one who kills a baby

matricide = the act of killing one’s mother
= the killer of one’s own mother

parricide = the act of killing one’s father
= the killer of one’s own father

patricide See **parricide**.

regicide = the act of killing the king or queen
= the killer of the king or queen

suicide = the act of killing oneself
= one who kills oneself

Though a few others, such as *fratricide* and *sororicide*, are generally known, we also have many less common words ending in *-cide*. For example, *famicide* (= the destroyer of someone’s reputation) was once used as a synonym for *slanderer*. *Prolicide* (= the act of killing offspring either before or soon after birth) is broad enough to subsume both *feticide* and *infanticide*.

The coinages with this suffix, naturally, are no more sex-neutral than words in any other corner of the language. The *OED* records *uxoricide* (= the slayer of one’s wife) but not *mariticide* (= the slayer of one’s husband), which can be deduced only from the adjective *mariticial* (= of, relating to, or involving someone who murders her husband).

Scientists have developed *algicides*, *fungicides*, *germicides*, and *insecticides* (known also as *pesticides*, though this word can be used more broadly than *insecticides*). And to disinfect their combs and other utensils, American barbers commonly use a trademarked product ominously called “Barbicide.” Hence this suffix, like *-EE*, is perhaps losing its literal force.

Naturally, wags have seized on this suffix for jocular purposes to make such words as *suitorcidal* (= fatal to suitors) and *prenticecide* (= the killing of an apprentice). The poet Oliver Wendell Holmes invented a word that some dictionaries label jocular. Perhaps, however, this word ought to be taken seriously: *verbicide*—“That is violent treatment of a word with fatal results to its legitimate meaning, which is its life. . . . Homicide and *verbicide* . . . are alike forbidden.” Oliver W. Holmes [Sr.], *Autocrat of the Breakfast Table* i (1858). One mission of this dictionary is to prevent *verbicide*.

For entries related to this one, see **homicide**, **parricide** & **suicide**.

cider. See **apple cider**.

cigarette; ***cigaret**. The latter is a NEEDLESS VARIANT.
Current ratio: 493:1

cinematographic; ***cinemagraphic**. In modern print sources, *cinematographic*, the traditionally correct form, is about 130 times as common as **cinemagraphic*, the etymologically inferior form. The latter arose through the linguistic process known as syncope—the loss of an unstressed syllable in the middle of a word. Though increasingly common even among filmmakers, **cinemagraphic* is not yet recorded in general dictionaries and ought to be avoided—e.g.:

- “But ‘Dragonheart’ is a beautiful piece of *cinemagraphic* [read *cinematographic*] work.” Joseph Szadkowski, “Big Talent, Miniature Art,” *Wash. Times*, 8 June 1996, at B4.

- “Young as they are, the Wachowskis already have developed a fine sense of *cinemagraphic* [read *cinematographic*] brinkmanship.” Gene Wyatt, “‘Bound’ Not a Film for All,” *Tennessean*, 25 Oct. 1996, at D7.

Cinematographic is pronounced /sin-ə-mat-ə-graf-ik/.

LANGUAGE-CHANGE INDEX

**cinemagraphic* for *cinematographic*: Stage 1

Current ratio (*cinematographic* vs.

**cinemagraphic*): 130:1

cipher (= [1] a nonentity; or [2] a coded message) is the standard spelling. **Cypher* is a primarily BrE variant.

Current ratio: 7:1

circuitous; circuitry. See **circumlocution (A)**.

circularize began as a mid-19th-century NEOLOGISM meaning “to send circulars to” <all the local business owners were circularized>. By extension, it came to mean “to publicize” <the play’s premiere was circularized throughout the city>. In these senses, the word is still considered jargonistic. See **-IZE**.

In the late 20th century, however, the word took on a new meaning in space-flight contexts—a meaning closer to what the word parts suggest: “to make circular.” E.g.:

- “The platform’s orbit will later be *circularized* at about 310 miles for a two- to three-year mission measuring ozone levels throughout the depth of the atmosphere.” “TOMS Launched on Pegasus XL, One Year Late,” *Aerospace Daily*, 3 July 1996, at 22.
- “As *Odyssey* uses the [Martian] atmosphere to *circularize* its orbit, it has encountered sort of a jet stream disturbance over the north pole.” Ann Schrader, “Mars Probe Adjusts to Shift in Atmosphere,” *Denver Post*, 17 Dec. 2001, at A10.

This sense—though absent from most dictionaries—is clearly useful.

CIRCUMFLEX. See **DIACRITICAL MARKS**.

circumlocution. A. Generally. Circumlocution is roundabout speech or language, or else the use of many words where a few would suffice. People who use circumlocutions are generally not admired for doing so, as the following quotations attest:

- “Robb, a genius at *circumlocution*, did his best to avoid offending anybody, at the expense of taking a definable stand on any issue.” Stuart Klawans, “Ollie’s Army,” *Nation*, 8 July 1996, at 35.
- “It’s really grown tiresome, hearing so many versions of the same excuse, so many *circumlocutions* around the truth.” Anita Creamer, “‘Experimenting’ with the Truth,” *Sacramento Bee*, 19 Aug. 1996, at C1.
- “Perhaps that’s because the Prime Minister, with his weird *circumlocutions*—a not inconsiderable degree of—does not come across as a silver-tongued smoothie.” Ann Leslie, “Why Women Find This Man So Smarmy,” *Daily Mail*, 11 Oct. 1996, at 8.

One of the most famous government departments in all literature is Charles Dickens’s “Circumlocution Office” in *Little Dorrit* (1857–1858).

B. And circuitry. *Circumlocution* is not the noun form corresponding to *circuitous*, which means “winding, tortuous, anfractuous”—the noun for *circuitous* being *circuitry*. E.g.: “I bring this up because only now do I recognize the vast *circumlocution* [read *circuitry*] of the route [that] I’ve been cheerfully driving for the past year, a path [that] was anything but a straight line, horizontally or vertically.” Jay Bailey, “Riding on the Disneyland Bypass Road,” *Jerusalem Post*, 6 Sept. 1996, at 10.

LANGUAGE-CHANGE INDEX

circumlocution misused for *circuitry*: Stage 1

C. Adjectival Forms. If the noun corresponding to *circuitous* is seldom used, so is the adjective corresponding to *circumlocution*: *circumlocutory*. E.g.: “He’s impatient with compliments, *circumlocutory* in his answers and cheerfully forthcoming with amusing stories that, on reflection, tell you almost nothing about him.” Ken Ringle, “Fighting Words,” *Wash. Post*, 21 Aug. 1996, at D1.

Avoid the synonymous variants **circumlocutionary* and **circumlocutious*—e.g.:

- “The *circumlocutionary* [read *circumlocutory*] comic has just returned from a stint at Bally’s Casino in Las Vegas.” Michael Blowen, “Carlin Is Cable Ready,” *Boston Globe*, 15 Apr. 1992, at 90.
- “It’s my contention that’s in no small part because Tonks, for all his *circumlocutionary* [read *circumlocutory*] council and committee speeches and media scrums, simply cannot get Metro’s message across.” Dick Chapman, “Metro’s Communications Gap,” *Toronto Sun*, 5 Nov. 1995, at C4.
- “In my *circumlocutious* [read *circumlocutory*] way, I’ve given the impression that the column will be about baseball. No, it’s about redundancy.” Art Trujillo, “Work of Art—A Cheeseburger Con Queso,” *Las Vegas Opt*, 27 Aug. 2013, columns p.

circumnavigate; circumvent. *Circumnavigate* (= to go completely around [something], esp. to sail around the earth) is occasionally displaced by *circumvent* (= [1] to get around [an obstacle or obligation], esp. by creative means; or [2] to encircle)—e.g.:

- “[Gus] McCloud is now attempting to *circumvent* [read *circumnavigate*] the world from pole to pole, [Albert] Rutherford said.” Damiane Ricks, “Pilot Hopes to

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Encourage Others to Fly,” *Advocate* (Baton Rouge), 15 Nov. 2004, at B1.

- “These two 50-somethings from Albuquerque were doing this section of the river as a prerequisite to their lifetime goal: to *circumvent* [read *circumnavigate*] the southern part of North America on water.” Dave Menicucci, “Come Hell or High Water,” *Albuquerque J.*, 21 Aug. 2008, at C1. (An even better edit would be to change *circumvent* to *sail around* and omit *on water*.)

Circumnavigate implies active travel. When no act is involved, *circumvent* (in sense 2) is the better choice—e.g.: “Twenty billion [bottles] . . . If all of them were laid end to end, they would *circumvent* the Earth’s equator 76 times.” Michele Jacklin, “Add Bottled Water to the List of Redeemables,” *Hartford Courant*, 23 Mar. 2005, at A9. Both words involve a way to get around an obstacle. But the obstacle one *circumnavigates* is always physical, while the obstacle one *circumvents* is usually legal or social. See **circumvent**.

LANGUAGE-CHANGE INDEX

circumvent misused for *circumnavigate*: Stage 1

**circumvent the globe*): 62:1

circumscribable; *circumscriptable; *circumscriptible. The first form is standard. Until about 1950, the standard term was **circumscriptible*—but the reversal in word frequency has been so pronounced since then that the older form has become a NEEDLESS VARIANT. See -ABLE (A).

circumstances. A. In or under the circumstances. Some writers prefer *in the circumstances* to *under the circumstances*. The latter is unobjectionable, however, and since 1830 or so has been much more common. E.g.: “*Under the circumstances*, we think that the board made the right decision.”

In 1926, H.W. Fowler wrote that the insistence on *in the circumstances* as the only right form is “puerile” (*FMEU1* at 77). In the mid-20th century, G.H. Vallins agreed: “‘*Under the circumstances*’ has established itself in English idiom; ‘*in the circumstances*’ is merely a proud variant of those who remember their ‘grammar’ not wisely but too well.” G.H. Vallins, *Better English* 61–62 (4th ed. 1957). But Theodore M. Bernstein found a slight DIFFERENTIATION between the two: “*In the circumstances* refers merely to existing conditions, and implies a continuing state of affairs . . . *Under the circumstances* refers to conditions that impel or inhibit action, and implies a transient situation, long or short.” Theodore M. Bernstein, *The Careful Writer* 101 (1965).

LANGUAGE-CHANGE INDEX

under the circumstances: Stage 5

B. *Surrounding circumstances. This phrase, which is about as common in BrE as it is in AmE, has been stigmatized as a REDUNDANCY on etymological grounds. The *OED* confirms this, noting that *circumstance* derives from the Latin *circumstantia* “standing around, surrounding condition.” In AmE, it appears most commonly in legal contexts, though not exclusively so. It shows no signs of disappearing—e.g.:

- “The emotional and physical shock of giving birth, as well as other *surrounding circumstances* [read *circumstances*], led doctors to believe that Kraft was not responsible for stabbing her child.” Heather Wiese, “From ‘Attempted Murder’ to Misdemeanor,” *Des Moines Register*, 17 Oct. 1996, Metro Iowa §, at 4.
- “We try to distinguish saves by *surrounding circumstances* [read *all the circumstances*]. We include the size of the score, the length of time pitched, and the presumed difficulty of the situation.” Leonard Koppett, “Call the ‘Pen, Baseball, to Salvage Saves,” *Seattle Post-Intelligencer*, 2 Aug. 2002, at C5.

C. In some circumstances. This phrase is wordy for *sometimes*. First popular in the 17th century, it waned in the 19th and then surged in the 20th—in both AmE and BrE. But that’s no recommendation of it.

circumvent; undermine. *Circumvent* = (1) to get around or escape from (a requirement) through means that are unusual but defensible; or (2) to hem in; circumscribe. Today sense 1 is more common—e.g.:

- “By calling them sober houses they *circumvent* zoning regulations.” Carole Paquette, “Reining in Rentals of ‘Sober Houses,’” *N.Y. Times*, 8 Dec. 1996, Long Island §, at 1.
- “Senator Mark C. Montigny of New Bedford, who has fought against laws that allow public universities to *circumvent* the public bidding process, said the projects must be subject to strict oversight.” Peter Schworm, “Work on Dorm Goes On Despite AG Ruling,” *Boston Globe*, 20 Aug. 2008, at B3.

Circumvent is more neutral than *undermine*, which means “to impair or weaken, esp. by insidious or stealthy means” <the mole successfully undermined the political campaign>. Cf. **obviate**.

For the misuse of *circumvent* to mean *circumnavigate*, see **circumnavigate**.

cirrus (= [1] a light cloud shaped like feathers, or [2] a flexible appendage or tendril) makes the plural *cirri*—not **cirruses*. See PLURALS (B).

citable. So spelled—not **citeable*. See MUTE E.

Current ratio: 40:1

cite, n. A. As a Casualism for citation. Using *cite* as a noun—in place of *citation*—is a CASUALISM. E.g.: “Check and double-check your *cites*. . . . We are constantly trying to make sense out of erroneous *cites*.” Christopher P. Hamilton, “Trial Management,” *Mass. Lawyer*, 16 Dec. 1996, at B5. The longer form looks more dignified and is much more common in print sources—e.g.: “‘Women in Archaeology’ is professionally produced, with a single bibliography and an index, in distinct contrast to ‘Equity Issues,’ which has multiple (and repetitive) reference lists, no index, and many typographical errors, misspellings (Virginia Wolf!), and incorrect *citations*.” Tracey Cullen, “Equity Issues for Women in Archeology,” *Antiquity*, 1 Dec. 1995, at 1042. Cf. **quote**.

LANGUAGE-CHANGE INDEX

cite as a noun in place of *citation*: Stage 3

B. For site. *Cite* shouldn’t be confused with *site* (= a location or place)—e.g.:

- “The city is looking at several *cites* [read *sites*] for a new business center.” John Gallant, “A Magic Beginning for Center,” *Las Vegas Rev.-J.*, 6 Jan. 1994, at B1.
- “The reunion is set for Sept. 26–28 at several *cites* [read *sites*] in Baton Rouge and West Baton Rouge Parish.” “Reunion Group Planning Meeting,” *Advocate* (Baton Rouge), 12 July 1997, at B4.

The opposite error—*site* for *cite*—is rarely seen outside legal writing (and almost always involves verbs). E.g.:

- “Nevertheless, the existence of mefloquine-resistant/3, berghei and the two *sited* [read *cited*] cases of *P. falciparum* with decreased susceptibility are cause for genuine concern about the future deployment of this new drug.” John M. Mansfield, *Parasitic Diseases* 41 (1984).
- “More materially, the majority *sites* [read *cites*] no authority for its position that a decent law abiding citizen of this State can be criminally convicted based solely on one wobbly inference toddling upon another.” *Frost v. State*, 2 S.W.3d 625, 635 n.7 (Tex. App. 1999).
- “Plaintiff *sites* [read *cites*] no authority supporting a claimed right to prevent the Town from purchasing land abutting his, whether in a buildable lot or a ten-foot strip.” *Welch v. Paicos*, 66 F.Supp.2d 138, 166 (D. Mass. 1999).

LANGUAGE-CHANGE INDEX

1. *cite* misused for *site*: Stage 1
Current ratio (*building site* vs. **building cite*): 1,285:1
2. *site* misused for *cite*: Stage 2
Current ratio (*citing authority* vs. **siting authority*): 5:1

cite, v.t. **A. General Senses and Use.** *Cite*, v.t., = (1) to commend <the mayor cited him for his charitable giving>; (2) to adduce as authority <in arguing the point, he cited the 11th edition of *Encyclopaedia Britannica*>; or (3) to summon before a court of law <he was cited for contempt>.

In sense 2, the object of *cite* should be the authority cited, not the person to whom it is cited. The following loose usage is not uncommon in AmE: “Plaintiff is unable to *cite the court to any Connecticut cases which* [read *cite any Connecticut cases that*] answer this question.” “Property,” *Conn. Law Trib.*, 1 Apr. 1996, at 374 (reporting a law case). See OBJECT-SHUFFLING.

A related problem is using *cite* as an intransitive rather than as a transitive verb—that is, saying that the writer is **citing to a case* rather than *citing a case*. This looseness, common especially among lawyers, results perhaps from the noun form *citation to*—e.g.: “In addition, Thomson will make available to any interested party standardized licenses for a West service called Star Pagination, which is a widely accepted method for *citing to* [read *citing*] Federal and state case law.” “Thomson Acquisition of West Approved,” *Information Today*, 17 July 1996, at 3.

In sense 3, some people have recently begun writing that a person is *cited to court*. In this CASUALISM, *cite* is shorthand for “to summon with a citation” and is surely inferior to *summon*—e.g.:

- “He claimed the hunters knew that their activities were illegal because almost 40 other hunters left before TWRA officers could *cite* [read *summon*] them to court.” Lance Coleman & Dan Cook, “Baited-Field Bust Bags 40+ Area Dove Hunters,” *Chattanooga Free Press*, 4 Sept. 1996, at B2.
- “A sheriff’s deputy charged a South Point woman and a Fort Gay, W.Va., man with possession of drugs (marijuana) and drug paraphernalia in Fayette Township and *cited* [read *summoned*] them into court last week.” “Man Reports Computer, iPod, DVDs, More Stolen,” *Herald-Dispatch* (Huntington, W. Va.), 31 Mar. 2012, at 1.

B. And quote. These words are usefully differentiated. To *cite* an authority is to give its substance and to indicate where it can be found. To *quote* is to repeat someone else’s exact words and to enclose them in quotation marks or block-quotation form. In scholarly writing, citations routinely follow quotations. See **quote**.

citizen. A. And resident. With U.S. citizens, the terms *citizen* and *resident* are generally viewed as being interchangeable in reference to state residency or citizenship. But the words are not interchangeable when other political entities (e.g., cities) are the frame of reference: *citizen* implies political allegiance and a corresponding protection by the state, whereas *resident* denotes merely that one lives in a certain place. It is possible to be a U.S. *citizen* while being neither a *citizen* nor a *resident* of any particular state. (That is, American citizens can reside abroad.) See **citizenship**.

B. And subject. Subject (= a person subject to political rule; any member of a state other than the sovereign) is not merely the BrE equivalent of the AmE *citizen*. A *citizen* is a person from a country in which sovereignty is believed or supposed to belong to the collective body of the people, whereas a *subject* is someone who owes allegiance to a sovereign monarch.

citizenry; citizens. Both are acceptable plurals of *citizen*, but *citizens* is the more general term that is far more prevalent. Two aspects of *citizenry* distinguish it: first, it is a COLLECTIVE NOUN (although it frequently takes a plural verb), emphasizing the mass or body of citizens; and second, it is, as W2 notes, frequently used by way of contrast to soldiery, officialdom, or the intelligentsia. Here it is opposed to one part of officialdom (some might say *intelligentsia*): “The written Constitution lies at the core of American ‘civil religion’; not only judges but also the *citizenry* at large habitually invoke the Constitution.”

citizenship; residence; domicile. The distinctions between these related terms are important. *Citizenship* = the status of being a citizen, with its attendant rights and privileges. *Residence* = (1) the act or fact of living in a particular place for a time <a one-year residence requirement for in-state tuition>; (2) the locale in which one actually or officially lives <he has recently

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

made Nevada his residence>; or (3) a house or home <a two-story residence>. (**Residency* is a NEEDLESS VARIANT of *residence* in senses 1 and 2.) In some legal contexts, the more specific word *domicile* is frequently used in place of the broad sense 2 of *residence*. *Domicile* = a person's fixed, permanent, and principal home for legal purposes.

cityward has always been the standard term in AmE—not **citywards* (which was standard in BrE only through the early 20th century—but no longer). See DIRECTIONAL WORDS (A).

Current ratio: 3:1

civic rights. See **civil rights**.

civilian clothes; street clothes. The first should be reserved for military or paramilitary (e.g., police) contexts. When contrasting with sports uniforms or theater costumes, *street clothes* is better—e.g.:

- “On game days, [Steve] Bono is usually found on the sideline, dressed in *civilian clothes* [read *street clothes*] with clipboard in hand.” Jim Jenkins, “Bono Passes This Screen Test: 49ers’ Third-String Quarterback Aids Defense,” *Sacramento Bee*, 27 Oct. 1990, at D4.
- “Three of the Sharks’ better players were in *civilian clothes* [read *street clothes*] and sat in the press box.” Ron Bergman, “Injury-Plagued Sharks No Match for Flames,” *San Jose Mercury News*, 24 Feb. 1993, at C1.
- “Village police Chief Hugh Flanigan told The Star-Beacon in nearby Ashtabula that the unarmed man in *civilian clothes* [read *street clothes*] repeatedly tried to convince the Youngstown officer that he was a real lawman, but eventually drove away.” “Fake Officer Tries to Pull Over Policeman,” *Charleston Gaz.* (W. Va.), 5 Aug. 2015, at A6.

LANGUAGE-CHANGE INDEX

civilian clothes used in nonmilitary contexts: Stage 2

civil rights; civil liberties; civic rights. Commonly viewed as an Americanism, *civil rights* actually dates back to 16th-century BrE. After two centuries of sporadic use, it gained popularity again by 1750 in BrE and then sprang to worldwide attention in AmE in the 1770s. But the phrase reached its zenith in frequency of occurrence in the late 20th century, beginning in the 1960s. In AmE, the phrase refers generally to the individual rights guaranteed by the Bill of Rights and by the 13th, 14th, 15th, and 19th Amendments, as well as by legislation such as the Voting Rights Act. These rights include freedom of speech and religion; the right to vote; freedom from involuntary servitude; the enjoyment of life, liberty, and property; the right to privacy; due process; and equal protection of the law. Some of these rights, such as the right to vote, are restricted to citizens; others, such as due process and equal protection, apply equally to anyone within the state's jurisdiction.

The phrase *civil liberties*, a less frequent term, refers generally to the liberties guaranteed to everyone by law or custom against undue governmental interference. *Civil rights* is also sometimes used in this broader sense: “The subject was ‘*civil rights*,’ that is, the liberties of man as man and not primarily as an

economic animal.” Robert G. McCloskey, *American Supreme Court* 170 (1960).

Civic rights is a much less common phrase. It sounds at once less weighty than the other two phrases and less idiomatic. When it appears, it often verges on being a NEEDLESS VARIANT of *civil rights*—e.g.:

- “Lincoln [was] unwilling to alienate a public opinion that everywhere in the North was implacably, savagely opposed to giving slaves movement or *civic rights* [read *civil rights*].” Alfred Kazin, “A Forever Amazing Writer,” *N.Y. Times*, 10 Dec. 1989, § 7, at 3.
- “The peace deal signed on Aug. 13 by the Macedonian and ethnic Albanian parties in Macedonia's government grants ethnic Albanians many of the greater *civic rights* [read *civil rights*] the rebels say they have sought.” Ian Fisher, “Report Says Macedonians Killed Civilians in Revenge,” *N.Y. Times*, 5 Sept. 2001, at A1.
- “The walk started June 1 with O’Neal, *civic rights* [read *civil-rights*] legend Bob Zellner, college and graduate students from out of state, and other civil activists.” “Thomasville Pastor Walks to D.C. to Support Rural Hospitals,” *News & Record* (Greensboro), 4 July 2015, News §.

-CK-. See -C-.

clamor (= to cry out loudly; raise an uproar) is now sometimes, through WORD-SWAPPING, misused for *clamber* (= to climb, usu. with great effort)—e.g.:

- “As they left the road to descend into Junior's bottomland, a three-legged, patch-haired dog of the terrier kind *clavored* [read *clambered*] out from under the porch and ran low to the ground and completely soundless on a trajectory straight to Inman, who had learned to heed a silent dog more than a barking dog.” Charles Frazier, *Cold Mountain* 202 (1997). (The error is especially salient in this sentence because the dog is “soundless.”)
- “When we returned to the house, we opened the large windows, let the ocean breeze roll in, and *clavored* [read *clambered*] up the oak staircases to bed.” Melissa A. Trainer, “Mobile Guide: Camping in Comfort,” *Wall Street J.*, 2 Sept. 1997, at A16.
- “Venus [Williams] then *clavored* [read *clambered*] up into the stands to briefly join the fun.” Charles Bricker, “Venus at Her Brightest,” *Sun-Sentinel* (Ft. Lauderdale), 9 July 2000, at C1.

What's the best way to stop this spreading error? Whenever you see or hear it, *clamber* up on a soapbox and *clamor* about it. By the way, the two words aren't homophones: *clamber* is pronounced /**klam**-bər/.

LANGUAGE-CHANGE INDEX

clamor misused for *clamber*: Stage 1

clandestine is best pronounced /**klan-des**-tɪn/ or /-tən/, not /**klan-des**-tɪn/ or /**klan-də**-stɪn/.

clangor (= a loud sound that continues for a long time) is the AmE spelling, *clangour* the BrE. (See -OR; -OUR.) The word is preferably pronounced /**klang**-ər/—not /**klang**-gər/.

clapboard (= a long, narrow board that is thicker at the bottom so that it may be used for siding) is pronounced /**klab**-ərd/.

claret (= a red wine from the Bordeaux region, or a similar wine from elsewhere) is pronounced /**klar**-ət/.

It's an English word that was borrowed from French and anglicized in Middle English. Some people today mistakenly give it a Frenchified pronunciation (/kla-**ret**/ or, worse, /kla-**ray**/). Cf. **Meritage**.

clarinetist. So spelled in AmE, *clarinettist* being standard in BrE.

class is not interchangeable with *kind* or *type*. We may have a type or kind of *thing*, but a class of *things*. E.g.:

- “His work . . . [on] ionic crystals extended considerably our understanding of *this class of material* [read either *this class of materials* or *this type of material*].” Harvey Flower, “Professor Peter Pratt,” *Independent*, 17 Mar. 1995, at 20.
- “Traditionally, this *criteria* [read *criterion*] has revolved around the *class* [read *type*] of vehicle (e.g., sports car vs. family sedan; 8 cylinder vs. 4 cylinder), driver behavior (e.g., number of speeding tickets, the expected annual miles to be driven), and driver characteristics (e.g., age, gender).” “System and Method for Insurance Underwriting and Rating” in Patent Application Approval Process,” *Insurance Business Weekly*, 23 Aug. 2015, at 170. (See **critterion**.)

The second example just above illustrates travel JARGON, in which *class* refers to the level of luxury.

class act. See **classy**.

CLASS DISTINCTIONS. Many linguistic phenomena discussed in this book—especially those involving vocabulary and pronunciation—are explainable partly under the heading of “class.” That is, many linguistic pratfalls can be seen as class indicators—even in a so-called classless society such as the United States. Several books and essays address the subject, including (most famously) Alan S.C. Ross’s essay “U and Non-U,” in *Noblesse Oblige* (Nancy Mitford ed., 1956; repr. 1974); Charles C. Fries’s *American English Grammar* (1940); T.H. Pear’s *English Social Differences* (1955); Richard Buckle’s *U and Non-U Revisited* (1978); Thomas Pyles’s “The Auditory Mass Media and U,” in Pyles, *Selected Essays on English Usage* 103 (John Algeo ed., 1979); and Paul Fussell’s *Class* (1983).

Professor Ross’s influential essay divided traits in England into U (upper-class) and non-U (not upper-class—meaning “vulgar” or sometimes “typical of social climbers who put on airs”). Among the linguistic markers he listed were the following:

<i>U</i>	<i>Non-U</i>
black tie	tuxedo, tux
civilized (of a person)	cultivated, cultured
lunch	dinner (midday meal)
dinner, supper	evening meal
sick	ill
have a bath	bathe, take a bath
How do you do?	Pleased to meet you!
jam	preserves
vegetables	greens
rich	wealthy
She’s a nice woman	She’s a nice lady
He’s a nice man	He’s a nice gentleman

Ross listed these items as an anthropologist might—not to prescribe what people should do but to describe the way in which speech and writing were class indicators in the England of the 1950s.

American etiquette books have contained similar lists, but with a prescriptive purpose. Emily Post’s *Etiquette: The Blue Book of Social Usage* contained such a list for Americans (the headings having been supplied here merely for convenience):

<i>U</i>	<i>Non-U</i>
I would like to buy	I desire to purchase
I suppose	I presume
big house	mansion
good food, delicious food	lovely food
beautiful house	elegant home
formal clothes	formals
curtains	drapes, draperies
flowers	corsage

Other writers have other lists, and other lines of demarcation. The American writer Paul Fussell, for example, puts “proles” on the bottom rung of the ladder: they unselfconsciously engage in poor usage such as double negatives (*I don’t have no butter*) and subject-verb disagreements (*he don’t have no butter*). Ross and Post are pretty well unconcerned about proles. In the middle, according to Fussell, is the insecure middle class, whose language is often inflated (see OFFICIALESE & BUREAUCRATESE) and pretentious (see EUPHEMISMS, FORMAL WORDS & HYPERCORRECTION). At the top are the upper-middle and upper classes, whose language is typically relaxed and straightforward—a plainspoken style.

There is perhaps greater fluidity between classes with AmE speakers than with BrE speakers. But T.H. Pear’s observations about the process of changing classes in England apply equally to the United States: “As soon as members of the lower classes rise socially, they tend to adopt, and when ‘middle-middles’ become ‘upper-middles’ they, in their turn, drop, middle-class euphemisms; for unless they do, they may find their ascent of the social ladder hindered by people at both ends of it.” *English Social Differences* 90 (1955). Part of the rise, of course, depends on educational level, and to that degree the word *prole* corresponds with *lowbrow*; *middle-class* corresponds with *middlebrow*; and *upper-middle-class* and *upper-class* correspond with *highbrow*.

But taste as well as education enters the assessment, as Fussell observes, and speech is the telltale sign:

[T]here is a tight system of social class in this country, [and] linguistic class lines are crossed only rarely and with great difficulty. A virtually bottomless social gulf opens between those who say “Have a nice day” and those who say, on the other hand, “Goodbye,” those who when introduced say “Pleased to meet you” and those who say “How do you do?” There may be some passing intimacy between those who think *momentarily* means *in a moment* (airline captain over loudspeaker: “We’ll be

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

taking off momentarily, folks”) and those who know it means *for a moment*, but it won’t survive much strain. It’s like the tenuous relation between people who conceive that *type* is an adjective (“She’s a very classy type person”) and people who know it’s only a noun or verb. The sad thing is that by the time one’s an adult, these stigmata are virtually unalterable and inefaceable.

Paul Fussell, *Class* 198 (1983).

That conclusion—that class indicators are “unalterable and inefaceable”—offers little hope for those who believe in education. The critical phrase, though, is *by the time one’s an adult*. Somebody who has shown no interest in language through early adulthood is unlikely to acquire the habit later. And to the extent that language reflects class, one’s class is pretty well set in early adulthood. But there is surely some hope even beyond that point.

Most usage guides are silent on the subject of class. If they serve as useful guides, they typically reflect upper-middle-class preferences, as this book generally does. For that is the class into which most even modestly intellectual achievers fall, and the class to which the ambitious members of the middle class most aspire. The following charts list some of the obvious markers.

Vocabulary Markers in AmE

<i>U</i>	<i>Non-U</i>
before	*prior to
between you and me	*between you and I
a criterion	*a criteria
died	passed away, passed on
drinks	beverages
driver	chauffeur
feel bad	*feel badly
fewer items	*less items
if I had	*if I would have (or would’ve)
if I hadn’t been there	*if I hadn’t have been there
in regard to, with regard to	*in regards to, *with regards to
John saw my brother and me	*John saw my brother and I
later	subsequently
lie down	lay down
May I help you?	How may I assist you? May I be of assistance?
more fun, most fun	*funner, *funnest
my partner and I or my partner and me	my partner and myself
not too big a box	*not too big of a box

classic; classical. *Classical* refers to anything relating to “the classics” (whether in Greek or Latin literature, English literature, or music); *classic* may also serve in this sense, although not in phrases such as *classical education* and *classical allusion*. *Classic*, an overused word, has the additional sense “outstandingly authoritative or important.”

The adverb *classically* can be ambiguous because it answers to both *classic* and *classical*.

classy; class act. These terms are distinctly *déclassé*: “I . . . instantly dismiss anyone who tells me that some other person ‘has class,’ ‘is classy,’ or ‘is a class act,’ the last of these being the most arrogant. What these speakers are telling you is that since they are among the few people who recognize class, it is their obligation to point it out to sorry-ass folks like you.” George Carlin, *Brain Droppings* 142 (1997).

claustral. See **cloistral.**

clean, v.t.; **cleanse**. *Clean* is literal, *cleanse* usually figurative. Hence *cleanse* is often used in religious or moral contexts—e.g.:

- “Subsequently, a traditional Navajo medicine man and a Hopi spiritual leader conducted a *cleansing* ceremony that returned the spirit of the student’s mother to its resting place.” Norine Dresser, “Remaining Safe from the Remains,” *L.A. Times*, 20 Apr. 1996, at B7.
- “Wetli has also delved into such exotic religions as voodoo and Santeria, even attending ceremonies where he was rubbed with chickens to *cleanse* him of evil spirits.” Mark Mooney, “Medical Examiner Steps into a Harsh Lighthouse,” *Daily News* (N.Y.), 22 July 1996, at 4.
- “Online, meanwhile, authorities struggled to *cleanse* a raging conversation that attacked the official response and the system that had allowed such a disaster to happen.” Nathan Vanderklippe, “Rage Against Leaders Builds in Wake of Tianjin Blast,” *Globe & Mail* (Toronto), 17 Aug. 2015, at A1.

Marketers and advertisers no doubt understand the subtle distinction between *clean* and *pure* in promising shampoo that “cleanses your hair” and in naming toilet-bowl cleaners *cleansers*. So do propagandists in euphemizing mass slaughter and banishment as “ethnic cleansing.”

cleanliness; cleanness. *Cleanliness* (the more frequently used word) refers to people and their habits, *cleanness* to things and places.

cleanly. This word can be either an adverb or an adjective. Most commonly, it functions as an adverb meaning “in a clean manner”—e.g.:

- “Even when it hits off-center (as it does this month) instead of *cleanly*, the moon manages a total eclipse.” Bob Beman, “Earthly Shadows,” *Discover*, Sept. 1996, at 35.
- “I like the taut lines of the A8’s *cleanly* styled body.” Richard Truett, “1997 Audi A8,” *Orlando Sentinel*, 21 Nov. 1996, at F1.
- “No one could accuse Ritchie of not then striking the ball *cleanly*.” Jason Burt, “Benteke Earns Rebuilt Liverpool a Flawed Victory,” *Daily Telegraph*, 18 Aug. 2015, at 2.

In this sense, the word is pronounced /**kleen**-lee/.

But sometimes *cleanly* functions as an adjective—and is pronounced /**klen**-lee/—in a sense corresponding to the noun *cleanliness*. It means either (1) “(of a person) habitually clean”; or (2) “(of a place) habitually kept clean.” In sense 2, a simple *clean* is surely preferable. In the first and second examples that follow, sense 1 applies. In the third, sense 2 applies:

- “Owing to the leaning and handling of dirty persons, tobacco-spitting, the deposit of broken fruit and waste of all sorts of eatables, and other filthy practices voluntary or otherwise, the summer houses, seats, balustrades, balconies of the bridges are frequently forbidding to *cleanly* persons, who are thus deprived of what they deem their rights upon the Park.” Elizabeth Barlow, “Rebuilding the Olmsted,” *N.Y. Times*, 9 May 1981, § 1, at 23 (quoting

Frederick Law Olmsted, one of Central Park’s designers and its original administrator, from a writing dated 1860).

- “The people who park here are very *cleanly* people. They don’t leave any cans or bottles,” he said.” Estela Villanueva, “Fair Neighborhood Fares Well,” *Des Moines Register*, 28 Aug. 1996, ATE §, at 1 (quoting Bob Wilcox).
- “Our whole approach to quality assurance is not cracking the whip but to point out why things like dusting the pictures, a *cleanly* [read *clean*] room, are important,” [Ray] Sawyer said.” Timothy N. Troy, “Budget Host Cultivates Quality,” *Hotel & Motel Mgmt.*, 15 Aug. 1994, at 3.

Note that the first example is antique and that the second and third examples occur in reported speech. Today *cleanly* is more common in speech than in writing.

cleanness. See **cleanliness.**

cleanse. See **clean.**

clearly. Exaggerators like this word, along with its cousins (*obviously*, *undeniably*, *undoubtedly*, and the like). Often a statement prefaced with one of these words is conclusory, and sometimes even exceedingly dubious. As a result—though some readers don’t consciously realize it—*clearly* and its ilk are WEASEL WORDS. Just how much *clearly* can weaken a statement is evident in the following example, in which the author uses the word to buttress a claim about his own state of mind: “*Clearly*, I am not to be convinced that this is a small matter.” Stephen White, *The Written Word* 3 (1984). See OVERSTATEMENT, SENTENCE ADVERBS & **very**. Cf. **obviously**.

cleave, v.t., = (1) to divide or separate, split; or (2) to adhere to firmly. In other words, it has opposite meanings. (See **CONTRONYMS**.) In sense 1, *cleave* yields the past tense *cleft* (or, less good, *clove*) and the past participle *cleft* (or, again less good, *cleaved*). The past-participial adjective is *cloven*. Hence: “He cleft the Devil’s cloven hoof with a cleaver.” In sense 2, the verb is inflected *cleave* > *cleaved* > *cleaved*. Hence: “Antoinette’s tongue *cleaved* to the roof of her mouth, and she said nothing.” Wayne Thomas Batson, *The Final Storm* 279 (2006).

The COD sanctions, for BrE usage, *cleave* > *clove* > *cloven* for all senses, though *cleft* is used adjectivally in SET PHRASES such as *cleft palate* and *cleft stick*. Luckily, the term is literary, so that generally only literary scholars must trouble themselves with these inflections. See **IRREGULAR VERBS**.

The past form **clefted* is an infrequent solecism—e.g.:

- “*Clefted* [read *Cleft*] sandstone floors, hand-troweled walls, rough-hewn beams and distressed wood furnishings add to the western feel, says Wood.” Sherri Vasquez, “Scale and Natural Materials Define the Mode That’s Known as Western,” *Rocky Mountain News* (Denver), 31 Mar. 1996, at D19.
- “He doesn’t quite nail the subtleties of Ian’s inner conflicts, but he’s got a fascinating-looking face, with a hugely

clefted [read *cleft*] chin and an aspect that seems radically different when shot from different angles." Matthew Gilbert, "'Saint' Saved from Soap by Small Touches," *Boston Globe*, 21 Nov. 1998, at C1.

- "Adding to the confusion is the fact that the valleys in this deeply *clefted* [read *cleft*] buffer zone between Austria and the rest of Italy seem to function as discrete cultural entities." Ben Ross, "Italy's Adventure Centre," *Independent*, 14 Apr. 2012, at 4.

See IRREGULAR VERBS.

**clefted* misused for *cleft*: Stage 1

Current ratio (*cleft* vs. **clefted*): 151:1

clematis (= a flowering plant that attaches itself to trees, buildings, or fences as it grows) functions as both singular and plural—**clematises* and **clemati* being rare variants, the latter of which is downright wrong.

Current ratio (*clematis are* vs. **clematises are*): 21:1

clench. See **clinch**.

clerk. The AmE pronunciation is /klɜrk/. The BrE is /klaɪrk/.

claw. See **clue**.

cliché, n. & adj.; **clichéd**, adj. As a noun, *cliché* was borrowed from French in the mid-19th century to denote a printer's stereotype block (= a metal printing plate that is stamped or cast from a mold). The process was used to send ads, illustrations, and other matter to be printed, especially in multiple publications. By the end of the 1800s, *cliché* and *stereotype* were both being used figuratively, the first for a saying grown trite from overuse, the second for an oversimplified generalization.

Clichéd and *cliché* are both used as adjectives corresponding to *cliché* and meaning "trite" or "stale." Both are 20th-century coinages: the *OED* dates *clichéd* from 1928, *cliché* from 1959. And both have their detractors.

Clichéd is spelled like a regular English verb's past participle, although it does not correspond to any such verb. But probably because past participles often serve as adjectives, *clichéd* sounds comfortable to English ears.

In French, *cliché* is participial in form (analogous to *distingué*, *outré*, and *passé*), answering to the verb *clicher* (= to click). So while *clichéd* sounds like an English participial adjective but traditionally isn't one, *cliché* is a participle in fact—just not in English. And *clichéd* might be called a double past participle.

Yet both forms are well established in English as adjectives. And the *cliché* spelling is becoming more popular all the time.

LANGUAGE-CHANGE INDEX

1. *cliché* as an adjective: Stage 5

2. *clichéd* as an adjective: Stage 3

Current ratio (*clichéd image* vs. *cliché image*): 4:1

CLICHÉS. Writing pundits frequently warn against clichés:

- "The purpose with which these phrases are introduced is for the most part that of giving a fillip to a passage that might be humdrum without them; they do serve this purpose with some readers—the less discerning—though with the other kind they more effectually deserve it." H.W. Fowler, *FMEUI* at 224.
- "Modern writing at its worst does not consist in picking out words for the sake of their meaning and inventing images in order to make the meaning clearer. It consists in gumming together long strips of words [that] have already been set in order by someone else, and making the results presentable by sheer humbug." George Orwell, "Politics and the English Language," in *Modern Essays on Writing and Style* 98, 103–04 (Paul C. Wermuth ed., 1964).
- "Don't use [clichés] unwittingly. But they can be effective. There are two kinds: (1) the rhetorical—*tried and true, the not too distant future, sadder but wiser, in the style to which she had become accustomed*; (2) the proverbial—*apple of his eye, skin of your teeth, sharp as a tack, quick as a flash, twinkling of an eye*. The rhetorical ones are clinched by sound alone; the proverbial are metaphors caught in the popular fancy. Proverbial clichés can lighten a dull passage. You may even revitalize them because they are frequently dead metaphors . . . Avoid the rhetorical clichés unless you turn them to your advantage: *tried and untrue, gladder and wiser, a future not too distant*." Sheridan Baker, *The Practical Stylist* 243–44 (8th ed. 1998).

As Baker suggests, you'll sometimes need clichés. They're occasionally just the ticket, but only when no other phrase fills the bill. Despite that standard, you'll find more clichés in modern writing than you can shake a stick at. Some common ones are these:

at the end of the day
blissful ignorance
but that's another story
comparing apples and oranges
conspicuous by its absence
crystal clear
far be it from me
fast and loose
get with the program
his own worst enemy
if you catch my drift
innocent bystander
moment of truth
more in sorrow than in anger
more sinned against than sinning
my better half
nip in the bud
on the same page
pulled no punches
sea change
six of one, half a dozen of the other
throw the baby out with the bathwater
viable alternative

In deciding whether to use a cliché, consider the following approaches.

First, you might occasionally pun with the final word of a cliché to arrive at a new kind of memorable truth: a drink might be *conspicuous by its absinthe*; a dirt-talking disc jockey might be *his own worst enema*; a farmer might tend to his *better calf*; bankruptcy is sometimes a *fate worse than debt*. But if you're going

to play with a cliché, it should usually be with a pun: don't simply change one word to arrive at the same meaning. That is, don't write *more in sorrow than in outrage* or *comparing apples and pomegranates*. And don't twist the cliché out of shape or extend it and think it becomes fresh again, as one newscaster read from her script about an official's resignation: *It was the ultimate straw that broke the conscience of everyone's back*.

Second, when a cliché suggests itself, you would do well to follow these guidelines: use it only if (1) you work to replace it but can't find a good substitute, and (2) it doesn't strike your ear as being stale. Cf. SET PHRASES.

For more on the subject, see Robert Hartwell Fiske, *The Dimwit's Dictionary: 5,000 Overused Words and Phrases and Alternatives to Them* (2002); Christine Ammer, *Have a Nice Day—No Problem!* (1992); Walter Redfern, *Clichés and Coinages* (1989); Peggy Rosenthal & George Dardess, *Every Cliché in the Book* (1987); Eric Partridge, *A Dictionary of Clichés* (1940; repr. 1963).

client. A. And customer. By definition, a *client* is someone who engages the services of a professional, whereas a *customer* gives custom or trade to a business, often with regularity. An accountant or a lawyer has *clients*; a grocery store or telephone company has *customers*.

Yet the line of demarcation between these two words has shifted considerably in recent years. By the 1980s, Massachusetts bureaucrats had begun calling welfare recipients their "clients." See Jon Keller, "Massachusetts's Strange Protest Vote," *Wall Street J.*, 20 Sept. 1990, at A14. By the 1990s, things had gotten worse. For example, the *Sunday Times* writes of two prostitutes: "Both women took *clients* to their flats." John Davison & Michael Durham, "Prostitutes Go in Fear of London 'Ripper,'" *Sunday Times* (London), 18 Aug. 1991, § 1, at 5.

The bad trend continues—e.g.:

- "Many years ago, in a small-claims court in Los Angeles, there was a suit brought by a bookmaker—in an illegal profession—against a *client* [read *customer*] who owed him several thousand dollars." Bill Christine, "Bettors Having Trouble Getting Out of the Gate," *L.A. Times*, 17 Feb. 2002, Sports §, at 8.
- "Yesterday's manslaughter conviction marks the first time in Norfolk County history that a drug dealer has been held accountable for contributing to a *client's* [read *customer's*] death." Dave Wedge, "Man Jailed for Supplying Fatal Drug Dose," *Boston Herald*, 28 June 2002, News §, at 28.
- "Police examined documents belonging to prostitutes and their *clients* [read *customers*] on a road near Naples in Southern Italy in July." "Some Are Fearful as Italy Weighs Legalizing Brothels," *Boston Globe*, 15 Sept. 2002, at A6 (photo caption).

B. Plural Form: *clients*; *clientele*; **clientage*; **clientelage*; **clientry*. *Clients* is the best choice because

it is the least pretentious and by far the most common. *Clientele* has degenerated somewhat in meaning, having been widely used in nonprofessional contexts. E.g.: "Ella B. Sunshine operated a thriving business as a custom dressmaker for an exclusive *clientele* in Greater Cleveland for 25 years." "Ella B. Sunshine, 99, Custom Dressmaker" (obit.), *Plain Dealer* (Cleveland), 27 Jan. 1995, at B11. Indeed, the profession for which *clientele* is perhaps most often used today is the oldest one—e.g.: "Police said the alleged sex-for-sale operation used Asian prostitutes and served an exclusively Asian *clientele*." Peyton Whitely, "Global Links Sought in Alleged Sex Ring," *Seattle Times*, 1 Feb. 1995, at B3.

**Clientage*, **clientelage*, and **clientry* are NEEDLESS VARIANTS of *clientele*.

Current ratio (in order of headwords in (B)):
230,399:11,202:398:4:1

climactic; climacteric; climatic. Until the mid-20th century, *climactic* (/kɪl-mak-tik/) was thought to be inferior to *climacteric* (/kɪl-mak-tə-rik/). But by the early 1950s, the shorter word had eclipsed the longer variant as the adjective corresponding to *climax*—e.g.:

- "As the band breaks at the climax, out of the sudden silence Curtis Fowlkes bursts into a solo even more *climactic*." Robert Bourne, "Goin' to 'Kansas City,'" *Down-Beat*, Mar. 1996, at 22.
- "In the *climactic* trial, Roxie beats the rap, only to be abandoned by reporters rushing on to the next case." Richard Zoglin, "That Old Razzle-Dazzle," *Time*, 25 Nov. 1996, at 102.

Having fallen into disuse as a NEEDLESS VARIANT OF *climactic*, *climacteric* is now to be avoided in this sense. It lives on as a rare scientific term: a *climacteric* fruit is one that can be picked unripe and then induced to ripen in the presence of a hormone-bearing ethylene gas that the fruit itself produces. Apples are *climacteric* fruits and can be forced to ripen (or even spoil) in a paper bag.

But *climacteric* also has legitimate uses as a noun: (1) "an epochal event or critical turning point"; (2) "menopause, or the male phase corresponding to menopause"; or (3) "years of human life marked by multiplying by 7 the odd numbers 3, 5, 7, and 9, the resulting periods occurring at ages 21, 35, 49, 63—some add 81." In sense 3, the ages 63 and 81 are both called the *grand climacteric*.

Climatic (/kɪl-mat-ik/) is the adjective corresponding to *climate*—e.g.: "Long-term weather forecasts, which have been feeding the corn price frenzy, are seen by some as ominous because they include certain *climatic* events associated with droughts in the recent past." John Schnittker, "Thought for Food," *Wash. Post*, 1 May 1996, at A19.

Occasionally, though, *climatic* becomes a MALAPROPISM for *climactic*. This error became widespread in print sources only in the late 20th century—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “In a *climatic* [read *climactic*] finish to more than four hours of questioning, prosecutor Chris Darden asked Lopez if she had told her friend Sylvia Guerra that she was going to be paid \$5,000 for her testimony.” William Carlsen, “Prosecutor Raises Possibility of Bribe in Alibi for O.J.,” *S.F. Chron.*, 3 Mar. 1995, at A1.
- “It became *anticlimatic* [read *anticlimactic*] less than a lap later, however, when Mike Wallace’s engine let go, dumping oil on the track.” Tom McCollister, “Jarrett Adds Brickyard to 1996 Trophy Case,” *Atlanta J.-Const.*, 4 Aug. 1996, at C1.
- “But others are like rocks . . . that plop into the narrative so loudly that subsequent revelations become *anti-climatic* [read *anticlimactic*].” Nancy Pate, “Quindlen Delivers Some Pleasures,” *Orlando Sentinel*, 17 Sept. 2002, at E1.

- Current ratio (*anticlimactic* vs. **anticlimactic*): 28:1

climb. A. Declension: *climb* > *climbed* > *climbed*. The past-tense **clumb* or **clomb* and the past-participial **clumb* are dialectal. They sometimes occur in reported speech, especially **clumb*—e.g.:

- “In ‘The Busher Pulls a Mays,’ Keefe writes to ‘Friend Al’ that ‘the way we been going you would think we *clumb* in to 1st.’” Jerry Klinkowitz, “Let the Games Begin,” *Chicago Trib.*, 23 Apr. 1995, at C1.
- “Mr. Wimberly, who’s 73, says he hasn’t ‘*clumb* a tree’ and used a cane pole since his 40s.” Nancy Kruh, “The Path to Pecan Pie,” *Dallas Morning News*, 23 Nov. 1995, at C1.
- “Like Lt. Zebulon Pike said when he discovered it in 1806, ‘I seen it and I *clumb* it,’ we *clumb* it too, and thrilled to a midsummer snowball fight.” Larry Alexander, “‘Little Monsters’ Head West,” *Intelligencer J.* (Lancaster, Pa.), 25 July 2001, at 1.

See **IRREGULAR VERBS (D)**.

LANGUAGE-CHANGE INDEX

- *clumb* for *climbed*: Stage 1
- Current ratio (*climbed* vs. **clumb*): 2,969:1

B. Climb down. Although some purists have branded this phrasing illogical, in fact it is perfectly idiomatic—and certainly more natural-sounding than *descend*. E.g.: “When he [Esteban Toledo] was 8, he used to hide in the trees on the golf course in Mexicali. He would *climb down*, fish golf balls out of a pond with his toes, then clean the balls and sell them back to the golfers at the country club.” Thomas Bonk, “Behind the Ball,” *L.A. Times*, 7 Dec. 1996, at C1. This phrasing became widespread beginning about 1850.

LANGUAGE-CHANGE INDEX

climb down: Stage 5

clinch; clenched. These words are historically identical: one word with two spellings. But by 1900 they had undergone **DIFFERENTIATION**, and they are now distinct words. *Clinch* is figurative, and *clenched* physical. Hence you *clinch* an argument, case, or debate, but you *clenched* your jaw, or your teeth, or your fists—e.g.:

- “But one claim . . . would really *clinch* the argument.” Stephen Jay Gould, “Planet of the Bacteria,” *Wash. Post*, 13 Nov. 1996, at H1.

- “Janet *clenched* her teeth together, the way she did when Lynnanne was being snide, and took a step forward.” Patricia C. Wrede, “The Lorelei,” in *Book of Enchantments* 128, 143 (1996).
- “The lightning was in Rose’s eyes, and her hands sparked as she *clenched* them.” Ursula K. Le Guin, *Tales from Earthsea* 129 (2001).

Although *clenched* is traditionally transitive, it is occasionally used in intransitive constructions to good effect—e.g.: “Her stomach *clenched* in fear.” Kathy Lynn Emerson, *Face Down Under the Wych Elm* 8 (2000).

The exceptions to the *clinch-clenched* distinction occur in boxing, carpentry, and metalworking: clutching one’s opponent in boxing is *clenching*, and fastening something with a screw or a rivet is likewise *clenching*. Apart from these specialized meanings, *clinch* should be reserved for nonphysical contexts. Here it is used ill-advisedly: “After their speeches, Mr. Bentsen and Mr. Clinton *clinched* [read *clenched*] hands together with Gov. Ann Richards on the stage of the party’s state convention as ‘Deep in the Heart of Texas’ played over the loudspeakers.” Sam Attlesey & Wayne Slater, “Bentsen Strongly Endorses Clinton,” *Dallas Morning News*, 6 June 1992, at A1.

cling > clung > clung. So inflected—as it has been since the verb first appeared in Old English more than a thousand years ago. *Cling* to the strong past forms, despite the pitiable shift toward weakening them. It doesn’t matter whether the usage is literal or (as in the first and third examples below) metaphorical—e.g.:

- “They were characterized by maudlin string arrangements and the cries of pedal steel guitars that *clinged* [read *clung*] to the pain in her voice.” Dave Hoekstra, “Country’s Queen: Wynette’s Voice Carried Pain, Soul,” *Chicago Sun-Times*, 8 Apr. 1998, at 52.
- “A young woman *clinged* [read *clung*] to his arm for support.” Jonathan D. Rockoff, “A Peaceful Life Cut Short by Violence,” *Providence J.-Bull.*, 28 Sept. 2001, at B1.
- “Central *clinged* [read *clung*] to a 14–13 lead.” Jeffrey Reinhart, “‘Manheim Magic’ Strikes Again,” *Lancaster New Era*, 6 Oct. 2001, at B1.
- “With the blaze escalating, Francesca—crying and coughing—climbed onto the window ledge and *clinged* [read *clung*] to the roof to avoid being burned.” Bill Hoffman, “In the Line of Fire,” *N.Y. Post*, 27 Dec. 2001, at 9.

See **IRREGULAR VERBS**.

LANGUAGE-CHANGE INDEX

- *clinged* for *clung* as a past tense: Stage 1
- Current ratio (*he clung* vs. **he clinged*): 19,030:1

clique (= a small group of people who keep to themselves and treat others as outsiders) is pronounced either /kleek/ or /klik/ (the former being the preference of most cultivated speakers). The corresponding adjective is *cliquish* (/kleek-ish/ or /klik-ish/), meaning “snobbishly confining one’s interests to a small in-group.” E.g.: “Jews and homosexuals appear in

the hater's mind as small, *cliquish* and very powerful groups, antipathetic to majority values." Andrew Sullivan, "When Plagues End," *N.Y. Times*, 10 Nov. 1996, § 6, at 52. **Cliquey* (sometimes also spelled **cliquy*) is a NEEDLESS VARIANT.

Current ratio (*cliquish* vs. **cliquey* vs. **cliquy*): 131:78:1

clitoridectomy; *clitorectomy. *Clitoridectomy* is the traditional and predominant spelling of the term denoting the surgical removal of part or all of the clitoris. It appears more than ten times as often as **clitorectomy*, which was virtually unknown before the mid-20th century.

clitoris is traditionally and preferably pronounced /*clit-ə-ris*/, though /*cli-tor-is*/ is listed as an alternative pronunciation in most current dictionaries. The corresponding adjective is *clitoral* (/k*l*i-t-ə-rəl/)—preferably not **clitoric*.

Current ratio (*clitoral* vs. **clitoric*): 1,238:1

cloistral; claustral. *Cloistral* is the preferred adjective answering to the noun *cloister* in the literal sense. That is, *cloistral* typically refers to spatial confines—e.g.:

- "From this *cloistral* complex, with its neo-Gothic clock tower, grassy quadrangles and vaulting archways painted primrose yellow, Maharishi, speakerphone at hand, is supervising what he believes to be the salvation of the human race." David Friend, "The Return of Mister Bliss," *Life*, Nov. 1990, at 82.
- "Another home, Casa Prieto López, is larger than the architect's own house, more monumental, and is set amid *cloistral* walled gardens for which enchanted is no empty adjective." Guy Trebay, "Elaborate, Multicolored Altars of Mexico City," *Int'l N.Y. Times*, 14 June 2014, at 23.

Claustral is a Latinate equivalent that is best confined to the metaphorical sense "isolated from the world"—e.g.: "Bosworth's account does have its share of booze, pills, closeted homosexuality and suicide, but instead of a dark and *claustral* world of furtive incest, hers is a story told against the broad landscape of mid-20th-century American politics." *L.A. Times*, 11 May 1997, Book Rev. §, at 9.

***clomb.** See **climb (A).**

closable. So spelled (traditionally) in AmE and BrE alike—not **closeable* (a spelling that has inexplicably surged in recent years). See MUTE E.

Current ratio: 1:1

close proximity is a REDUNDANCY that sprang to popularity in the late 19th century and has not receded.

closure; cloture. The general noun corresponding to the verb *close* is *closure*. E.g.: "Don't expect *closure*—an end to the argument over whodunit—if O.J. Simpson's first feverishly hyped day on the witness stand Friday means anything." Bill Boyarsky, "The Spin: More

Ambiguity than Answers," *L.A. Times*, 23 Nov. 1996, at A21.

In AmE, *cloture* is standard in but one narrow sense: "the procedure of ending debate in a legislative body and calling for an immediate vote." E.g.: "In one Congress in which he was Senate majority leader, the minority leader, Robert Byrd, tried eight times to win *cloture* and break a Republican filibuster on campaign finance reform." "A Promise of Reform," *Wash. Post*, 22 Oct. 1996, at A18. *Closure* is usual in BrE in this parliamentary sense.

clothes is pronounced /kloh*z*/. To pronounce the *-th* is to engage in HYPERCORRECTION.

cloture. See **closure.**

clove; cloven. See **cleave.**

clubbable (= fit for membership in a club) is the standard spelling. **Clubable* is a variant that vied for supremacy throughout the 19th century and early 20th but had clearly lost by 1950.

Current ratio: 4:1

clue; clew. *Clue* is the only current spelling for the sense "a hint; a bit of evidence." The spelling *clew* survives as a nautical term ("the lower corner of a sail") and in some literal and mythological references to thread and the like ("a ball of thread").

Clue is construed with *to* or *about*, not *as to*—e.g.:

- "Documents handed over to defense attorneys for Robert Tulloch, 17, and his best friend, James Parker, 16, contain no *clues as to* [read *clues to* or *clues about*] why the pair would kill Half and Susanne Zantop." Franci Richardson & Jack Sullivan, "Link for Suspects, Victims Lacking in Dartmouth Case," *Boston Herald*, 14 Mar. 2001, at 14.
- "She dislikes talking about her playing career and is guarded about giving many *clues as to* [read *clues to*] how good she might have been." Alan Hart, "A Sports Star Still Shines in Schuylerville," *Times Union* (Albany), 27 Mar. 2001, at F7.

See **as to.**

Current ratio (*no clues* vs. *no clews*): 8:1

cluing. So spelled (traditionally) in AmE and BrE alike—not **clueing* (which, like **closeable*, has mysteriously swelled in popularity since about 1980). See MUTE E.

***clumb.** See **climb (A).**

c/o. This abbreviation for *in care of* has legitimate uses and odd misuses. If Vicki Jackson of Los Angeles is visiting Bob Lindsay, one of her bankers in Dallas, and someone has sent a package to her in Dallas for midday delivery, then the address should probably read: "To Vicki Jackson, c/o Bob Lindsay, InterSecure Bank." That way, if the receptionist doesn't know who

Vicki Jackson is, at least the package will be drawn to Bob Lindsay's attention.

But there are also nonsensical uses. For example, a letter to Bob Lindsay shouldn't be addressed to "InterSecure Bank, c/o Bob Lindsay." The address should be simply to "Bob Lindsay, InterSecure Bank."

co- **A. Hyphenation with.** Generally, this prefix—which means "together with" or "joint"—does not take a hyphen (e.g., *coauthor*, *cohost*, *cosponsor*). The hyphen should appear only when the unhyphenated form might lead the reader to mistake the syllables (e.g., *co-occurrence*, *co-organizer*) or when the writer thinks that a word is a new form or NEOLOGISM (e.g., *co-golfer*, *co-secretary*). See PUNCTUATION (J).

B. Attaching to Noun Phrase. This creates an awkward construction but is sometimes almost inevitable, as in *copersonal trainer*. Some writers and editors would make this *co-personal trainer*, which is hardly an improvement. Yet the hyphen is necessary because *co-* modifies the two-word phrase *personal trainer*, not just *personal*. The best solution is simply to avoid the choice altogether, as by writing *fellow personal trainer*.

C. When Unnecessary. The *co-* prefix can be distracting (some people find it impossible to read *coworker* without thinking *cow*, for example), and it's usually best to leave it off when it adds nothing to the meaning of the sentence. It is always redundant in some words <copartner> and often redundant in others <co-conspirator>. And when the meaning is plain from the context, the *co-* prefix is unnecessary and prime for editing—e.g.: "For seven years, the restaurant operated in Belmont—until a recent hefty rent increase chased its *coowners* [read *owners*], Susan Alper and Lauren Speisman, out of that location." "Small Bites," *Boston Globe*, 4 July 2002, *Globe West* §, at 5.

coarse, adj. The word *coarse* (= [1] inferior in quality, or [2] unrefined, rude, and vulgar) is sometimes misspelled *course* (through confusion with the noun, of course). It's a vulgar, unrefined instance of WORD-SWAPPING—e.g.:

- "Never use *course* [read *coarse*] sandpaper! The grit imbeds itself in the contact metal." Vaughn D. Martin, "Troubleshooting for Boaters," *Electronics Now*, 1 June 1996, at 41.
- "Allow to cool, peel skin off and grate potato with *course* [read *coarse*] grater." "Chef's Choice," *Newcastle Herald*, 14 Apr. 1999, at 32.
- "Since it was developed last spring, 'Action' has raised eyebrows among insiders for its *course* [read *coarse*] language and references to sex." Richard Huff, "'Action' Up for Tough Rating," *Daily News* (N.Y.), 22 July 1999, at 104.

Originally, it is true, *coarse* and *course* were the same word. But the difference in spelling and in meaning emerged in the 18th century, and the words have long since gone their separate ways.

LANGUAGE-CHANGE INDEX
course misused for *coarse*: Stage 1

coauthor, vb. See **author**, v.t. (A).

coaxial (= sharing an axis) <coaxial cable> is the standard spelling. **Coaxial* is a variant.

Current ratio: 194:1

cockscornb; coxcomb. A *cockscornb* is the fleshy red growth on a rooster's head. A *coxcomb* is either a hat resembling a cockscornb (formerly worn by jesters) or a foolishly conceited dandy or fop. Both terms are pronounced /koks-kohm/. The figurative *coxcomb* has always been the more frequently used term in Modern English. Its corresponding noun, *coxcombr*, means "foppery."

cockswain. See **coxswain**.

cocoa; cacao. *Cocoa* is a brown chocolate powder or a drink made from this powder. *Cacao* is the tree or the seeds that are the source of cocoa powder. *Cocoa butter* and *cacao bean* are the standard terms—not **cacao butter* and **cocoa bean*.

co-conspirator. See **conspirator** & CO-.

coconut is sometimes spelled **cocoanut* (which was actually the standard spelling up to about 1920)—e.g.: "The bar offers . . . appetizers, salads, sandwiches and pizza, including spicy *cocoanut* [read *coconut*] calamari and sashimi." Susan F. Yim, "Maui, Hawaii," *Star Trib.* (Minneapolis), 16 Feb. 1997, at G8. Unless you're writing a historical novel, stick to *coconut*.

Current ratio: 7:1

code (= [1] a collection of rules <penal code>; [2] a system of symbolic communication <Morse code>; [3] a system of encryption <*The Da Vinci Code*>; or [4] computer programming <machine code>) can be a mass or a count noun. A mass mailing, for example, might target specific ZIP *codes*—there, *code* is a plural count noun. But in sense 4, *code* is preferably a mass noun referring to the entire set of instruction lines in a piece of software, and it's singular in form. E.g.: "[M]any game developers now accept product placements for milk, DVDs and other wares, embedding them deep into the game's software *codes* [read *code*]." Rachel Konrad, "Like Product Placement in Movies, Companies Are Hiding Brands in Secret Code in Video Games," *Houston Chron.*, 16 Jan. 2007, Bus. §, at 4. See COUNT NOUNS AND MASS NOUNS.

codex. Although the more easily understandable plural of this noun—meaning "a bound sheaf of manuscript leaves, esp. of an ancient or classic work or of the Scriptures"—might be *codexes*, the form *codices* is standard: it greatly predominates in print sources. See PLURALS (B).

Current ratio (*codices* vs. *codexes*): 60:1

codify is best pronounced /kɒd-ə-fi/, not /kɒh-də-fi/. This word, like *codification*, was one of the philosopher Jeremy Bentham's NEOLOGISMS; it dates from around 1800.

coed. This word (which has been traced back to 1875) is quite acceptable as an adjective <coed dormitory>.

but not as a noun <a 23-year-old coed>. Why? Two reasons: (1) the noun use almost invariably denotes a female student in a way that strikes many as sexist (men are just called *students*), and (2) the usage dates back to the time when female college students were relatively rare. See *SEXISM* (E).

***coemployee** is a NEEDLESS VARIANT of *coworker*.

coequal, n. & adj., often means nothing that *equal* does not also mean; it should be rejected in those contexts. And while styles vary, it is best spelled without a hyphen (see *CO-*). E.g.:

- “The Founders of this country were wise enough to know that by establishing three *co-equal* [read *equal*] branches of government, they were also creating an inherent tension.” “Courts for the Future,” *Baltimore Sun*, 6 Oct. 1996, at F2.
- “Make [actress Meagan] Good more prominent, or at least *coequal with* [read *equal to*] the lead.” Verne Gay, “Just Cut ‘Mr. Robinson’s Class,’” *Newsday* (N.Y.), 5 Aug. 2015, at B20.

Yet this word, in frequent use from the 17th century on, can be useful in implying the standard of comparison. For example, in “the co-eternal and coequal Son,” a snippet quoted in the *OED*, if only *equal* had been used the reader would wonder, Equal to what? *Coequal* implies the second and third divinities with which the Son is said to be equal. That type of comparison should always be implicit with this word, even when used as a noun—e.g.: “My company is a large, liberal-minded institution that thrives on convivial collegial consensus among persons who . . . are complete *coequals* right up to the time an actual disagreement occurs. At this point, the rules change slightly. We go from Candy Land to rock–paper–scissors. Editors are rock. Writers are those gaily colored wussy plastic paper clips.” Gene Weingarten, “Below the Beltway,” *Wash. Post*, 12 May 2002, Mag. §, at W3. This nuance is fairly rare, however; for most purposes, *equal* suffices. Still, it is simplistic to say, as William Safire does, that “today’s usage frowns on *coequal* as redundant.” “Send in Sovereign for Socialist,” *N.Y. Times*, 6 Jan. 1991, § 6, at 8, 10. Cf. ***copartner**.

Although *equal* usually takes the preposition *to*, *coequal* takes *with*.

coercible. So spelled—not **coerceable*. See *-ABLE* (A).

coercion, though originally applicable only to physical force, is now commonly used to describe moral and economic pressures. E.g.: “[People are debating] whether ‘economically disadvantaged’ volunteers can fairly weigh the health risks of tests, or whether the lure of being paid \$85 a day, plus room and meals, amounts to economic *coercion*.” Chris O’Malley, “NIH Takes Look at Lilly’s Drug Tests,” *Indianapolis Star*, 24 Nov. 1996, at E1. Such uses are a natural extension of

the original sense (“the control by force of a voluntary agent or action”).

coffee klatch. *Kaffeeklatsch*, a German loanword borrowed in the late 19th century, means “a coffee-drinking group that engages in leisurely conversation.” It has been anglicized to *coffee klatch*, which since the 1960s has been standard in AmE and BrE alike. In English-speaking contexts, **kaffeeklatsch* (despite its being the etymon) is a mere variant, as is **coffee klatsch*.

Current ratio (*coffee klatch* vs. **kaffeeklatsch* vs. **coffee klatsch*): 7:2:1

cognition; cognation. *Cognition* = thinking; use of the intellect. *Cognition* = a cognate relationship.

cognitive; *cognitional. *Cognitive* (= of, relating to, or involving cognition, or to the action or process of knowing) is the standard term. **Cognitional* is a NEEDLESS VARIANT.

Current ratio: 801:1

cognizant; *cognisant. The *-z-* spelling is standard in AmE and in BrE. Not until the 1940s did BrE begin shedding the *-s-* spelling.

Current ratio: 8:1

cognoscente; cognoscenti. This word, almost always used in the plural (*-ti*), is often spelled incorrectly. The misspellings are varied—e.g.:

- “You’ll also find a *cognoscenti’s* [read *cognoscente’s*] lexicon of ferret lingo.” Dan Kincaid, “Magazines,” *Ariz. Republic*, 25 Aug. 2002, at E4.
- “He was never a favorite of design *cognoscente* [read *cognoscenti*], museum curators and theorists of design.” Gary Mullinax, “Raymond Loewy,” *News J.* (Wilmington, Del.), 25 Aug. 2002, at H10 (quoting a museum director).
- “When the preseason polls come out, don’t be surprised if a fair number among the hockey *cognoscenti* [read *cognoscenti*] figure that the Bruins won’t make the playoffs.” Kevin Paul DuPont, “I Love a Parade but Stanley Cup Party for Bruins Is Only a Dream,” *Boston Globe*, 13 Sept. 2002, at D1.

Generally, *experts* or *authorities* will suffice, either one being easier to spell—not to mention to pronounce: /kon-yə-shen-tee/, /kohn-yə-shen-tee/, or /kog-nə-shent-ee/.

cohabit, the verb for *cohabitation*, is analogous to *inhabit*—e.g.: “To cohabit is to dwell together,” says one treatise, “so that matrimonial cohabitation is the living together of a man and woman ostensibly as husband and wife.” Joel P. Bishop, *Marriage, Divorce, and Separation* § 1669, at 694 (1891).

**Cohabitate* is a misbegotten BACK-FORMATION that has never seriously competed with *cohabit* in print sources. It appears only sporadically in edited English—e.g.: “There’s little evidence that tax rates are pushing people to *cohabitate* [read *cohabit*] rather than marry (most *cohabitating* [read *cohabiting*]

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

relationships end within two years).” Maggie Gallagher, “Too Much Talk,” *Wash. Post*, 5 Oct. 1997, at C3.

LANGUAGE-CHANGE INDEX

**cohabitare* for *cohabit*: Stage 2

Current ratio (*cohabiting* vs. **cohabitating*): 8:1

cohabitant; ***cohabitee**; ***cohabitor**. **Cohabitee*, though increasingly common (especially in BrE) for a person living with another as if married, is etymologically the poorest form. (See -EE.) It ought to be avoided in favor of *cohabitant*, which is more frequent anyway and has long been so—e.g.: “From July, married people who file for divorce will have a legal right to claim part of their ex-spouse’s pension; but *cohabitees* [read *cohabitants*] will still have no such right, irrespective of how long their relationship lasted.” Jean Eaglesham, “Plan Ahead for an Even Break,” *Independent*, 5 May 1996, at 16. Not only is *cohabitant* etymologically preferable because it is derived from the present participle of the Latin verb, it is also much more common, especially in AmE. **Cohabitor* is a NEEDLESS VARIANT that seldom occurs.

LANGUAGE-CHANGE INDEX

**cohabitee* for *cohabitant*: Stage 2

Current ratio (in order of headwords): 38:10:1

***cohabitare**. See **cohabit**.

cohabitation. See **adultery** (A).

cohabitative; ***cohabitive**. The first, long the prevailing form, is morphologically superior. The general rule is that in Latinate nouns of this type, the adjectival form derives from the noun form. Hence *cohabitative* follows from the noun *cohabitation*. Cf. **interpretative**.
Current ratio: 3:1

***cohabitee**. See **cohabitant**.

***cohabitive**. See **cohabitative**.

***cohabitor**. See **cohabitant**.

coherent (= [1] clear and reasonable, or [2] connected or united by common goals or beliefs) is preferably pronounced /koh-**heer**-ənt/—not /koh-**hair**-ənt/.

cohort(s). Most traditionally, *cohort* has been a mass noun denoting “a band of warriors.” It was extended to nonmilitary uses <the baby-boom cohort>. Some critics, such as Wilson Follett, can accept that extension but regard anything further as a SLIPSHOD EXTENSION:

[I]f the word is to retain its force it should observe two requirements: (1) it should designate members, too numerous to be conveniently counted, of some sort of united group, and (2) it should imply some sort of struggle or contest. *No one of the candidates succeeded in completely marshaling his cohorts before the first ballot / To the legion of the lost ones, to the cohort of the damned—in such uses the sense of the word is preserved.*

MAU at 99.

This is a very conservative view of the word, especially given that the sense of a singular “colleague, associate, companion” dates from the 18th century

and has been by far the more common meaning since the mid-20th. E.g.: “Senator Biden and his *cohorts* didn’t hear, but it appears that thousands of others did.” “Mr. Bork’s Book,” *Wall Street J.*, 8 Dec. 1989, at A10. Still, this newer meaning has remained a rather informal one for this respectable word, which in formal writing often retains its older sense.

Follett’s sense 1 is common in phrases such as *birth cohort*, which is defined as a “group, born in the same year, selected for study as the individuals march through time so that researchers can assess the nature and influence of factors affecting their behavior.” Dermot Walsh & Adrian Poole, *A Dictionary of Criminology* 22 (1983).

LANGUAGE-CHANGE INDEX

cohort in reference to an individual: Stage 5

coiffeur; **coiffure**. A *coiffeur* is a male hairdresser; the word is pronounced /kwah-**fər**/. (A female hairdresser is a *coiffeuse* /kwah-**fyuuz**/.) A *coiffure*—sometimes shortened to *coif*—is a hairstyle; the word is pronounced /kwah-**fyuur**/.

coin a phrase. To *coin* is to mint afresh, to invent, or to make current—e.g.: “Whoever said money can’t buy happiness sure knew how to *coin a phrase*.” Tom Weber, “U.S. Mint Causing Two-Bit Ire,” *Bangor Daily News*, 20 Aug. 2002, at B1. The phrase doesn’t mean “to use,” as some writers have mistakenly thought since the mid-20th century—e.g.:

- “To *coin a phrase* [read *borrow a phrase*] from the movie, ‘Rudy,’ he’s six-foot nothing and a hundred and nothing.” Roger McAfee, “Maturing Merricks Gives Bulldogs Boost,” *Intelligencer J.* (Lancaster, Pa.), 28 Feb. 2002, at C1.
- “Rocker kicks it up a notch, *to coin a phrase* [read *as they say*].” Tom Walter, “Who Is This Helen West?” *Commercial Appeal* (Memphis), 8 June 2002, at E1.
- “To *coin a phrase* [read *use a cliché*], ‘Knowledge is power.’” Joseph R. Cernuto III, “Port St. Lucie City Council District 3,” *Stuart News/Port St. Lucie News* (Stuart, Fla.), 1 Sept. 2002, Martin County §, at V36.

You can’t coin an old phrase. See **WORD PATRONAGE**.

Here something is truly (though clumsily) coined: “It will be the age of, to *coin* a rather clumsy neologism, countrycules.” Edwin M. Yoder Jr., “Strange New World: The Rise of the Modern Micro-State,” *Wash. Post*, 24 June 1990, at C2. (On the use of -*cule* in *countrycules*, see **DIMINUTIVES** (B).) But technically, to *coin a neologism* is redundant. See **NEOLOGISMS**.

Although it is typically the writer who is doing the coining when this phrase is used, it may well be someone else instead—e.g.: “Nearly two years before Neil Armstrong would *coin the phrase* as he stepped onto the lunar surface, the first Saturn V flight—AS-501, in NASA parlance—was truly a ‘giant leap’ in America’s race to the moon.” Timothy R. Gaffney, “Saturn V a ‘Giant Leap,’” *Dayton Daily News*, 4 Nov. 2002, at B1.

LANGUAGE-CHANGE INDEX

coin a phrase misused to mean “borrow a phrase”: Stage 3

coitus (= the act of having sex) is pronounced /kɒh-ɪ-təs/—not /kɒh-ɪ-təs/ or /kɔɪ-təs/.

colander (= a bowl having holes in the bottom and sides for removing liquid, esp. water, from food) has been predominantly so spelled since about 1850. Before that, **cullender* was a frequent variant.

Current ratio: 30:1

coleslaw. So spelled—not **coldslaw*. Yet the mistake isn't uncommon—e.g.:

- “A mound of French fries and a big bowl of creamy *coldslaw* [read *coleslaw*] arrived.” Robert Lindsey, “Correspondent's Choice,” *N.Y. Times*, 30 Oct. 1983, § 10, at 10.
- “When Tyler's Place burned earlier this year, Orange Mounders lost more than a place to go for great and delicious hamburgers and hot dogs with Glover's famous secret *coldslaw* [read *coleslaw*] recipe.” Whitt A. Sengstacke Jr., “Tyler's Place, Orange Mound Landmark, Rising from Ashes to Former Beauty,” *Tri-State Defender* (Memphis), 20 May 1998, at B8.
- “This week, Jamie Oliver sets out to make enough fried chicken, *coldslaw* [read *coleslaw*], sticky potato wedges and charred corn to feed a family of four—for just £10.” “Best Documentary,” *Irish Independent* (Belfast), 28 June 2014, at 46.

The error derives from folk etymology, the mistaken notion being that the term refers to the temperature at which the dish is ordinarily served. The true etymology is that *coleslaw* comes from the Dutch *koolsla* [*kool* “cabbage” + *sla* “salad”]. See ETYMOLOGY (D).

LANGUAGE-CHANGE INDEX

coleslaw misspelled **coldslaw*: Stage 1

Current ratio: 438:1

coliseum; colosseum; Colosseum. For the amphitheater of Vespasian in Rome, *Colosseum* is the proper name. For any other large building or assembly hall, the word is traditionally *coliseum* (AmE) or *colosseum* (BrE). But since 1970 or so, BrE has tracked AmE on this point, so that *coliseum* is preferred in both the primary varieties of English.

collaborate. For the confusion of this word with *corroborate*, see **corroborate** (C).

collaborator. The phrase **fellow collaborator* is a REDUNDANCY—e.g.: “According to longtime set designer and *fellow collaborator* [read *collaborator*] Catherine Martin, Luhrmann succeeds in leaving his mark on a film whose title insists only on the mark that ‘William Shakespeare’ has left on the Romeo and Juliet legend.” Courtney Lehmann, *Shakespeare Remains* 145 (2002).

collage is pronounced /kə-**lahzh**/.

collapsible. So spelled—not **collapsable*. See -ABLE (A).

Current ratio: 184:1

collate (= [1] to compare critically; [2] to assemble in order; or [3] to verify the order of) is best pronounced /kɒl-ayt/ or /kə-**layt**/, not /kɒh-**layt**/.

collect is a verb sometimes loosely used in the press. As any lawyer will confirm, being awarded damages is quite a different thing from collecting them: “Under Thursday's ruling, plaintiffs could *collect* [read *seek* or *receive*] damages from local governments only if they proved that discrimination resulted not from the act of an individual but from an official policy.” William Choyke, “High Court Backs DISD in Rights Suit,” *Dallas Morning News*, 23 June 1989, at A1. Perhaps most local governments would be good for most judgments, but to use *collect* in this way is sloppy thinking about the law. *Receive*, which sounds akin to *collect*, is actually quite different because it connotes a giver (the jury).

collectible; collectable. First, the adjectival uses. The *-ible* spelling, long the predominant form, is much more common than the *-able* spelling in AmE. But in BrE, *collectable* has prevailed in print sources since about 1935. See -ABLE (A).

With the noun uses, especially as a plural, the story is different. The spelling *collectibles* is predominant in both BrE and AmE—more strongly so in AmE. That has been so since the noun use came to prominence in the 1970s.

Current ratio (*highly collectible* vs. *highly collectable*): 2:1

Current ratio (*collectibles* vs. **collectables*): 13:1

COLLECTIVE NOUNS. A. Number. A collective noun names an aggregate of individuals or things with a singular form. For example, *ensemble*, *group*, and *team* refer to several people, but each word is singular.

The main consideration in skillfully handling collective nouns is consistency in the use of a singular or plural verb. If, in the beginning of an essay, the phrasing is *the faculty was*, then every reference to *faculty* as a noun should be singular throughout the whole. On the other hand, a writer who wishes to emphasize the individual members more than the body of people may decide to write *the faculty were*, though *members of the faculty were* is preferable because it's more accurate.

But switching back and forth between a singular and a plural verb is lamentably common: “Mark Pattison's *Memoirs* is not strictly speaking an autobiography . . . His *Memoirs* do not so much tell the story of his life . . . Mark's father, as the *Memoirs* make plain, dominated his son's early years . . . The *Memoirs* describes clearly. . . .” V.H.H. Green, Introduction, Mark Pattison, *Memoirs of an Oxford Don* 1, 6 (1988). Here, the problem seems to arise because the writer can't decide on a consistent use of the common

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

noun *memoirs*, which may be used as a plural noun but should not be capitalized, and the proper noun *Memoirs*, which is the singular title of a book.

Apart from the desire for consistency, there is little “right” and “wrong” on this subject: collective nouns sometimes take a singular verb and sometimes a plural one. The trend in AmE is to regard the collective noun as expressing a unit; hence, the singular is the usual form. When the individuals in the collection or group receive the emphasis, the plural verb is acceptable <that deconstructionist school were not wholly in error>. But generally in AmE, collective nouns take singular verbs, as in *the jury finds, the panel is, the committee believes, the board has decided*, etc.

B. BrE vs. AmE. Just the opposite habit generally obtains in BrE, where collective nouns tend to take plural verbs. The British tend to write, e.g., “*The board have considered the views of the shareholders.*” BrE has gone so far in some contexts that many Americans would suspect a typographical error: “Oxford were the winners of the 136th University Boat Race, but many will say that Cambridge were the heroes.” Richard Burnell, “Oxford Hold Off Brave Light Blues,” *Sunday Times* (London), 1 Apr. 1990, at B1. See **CONCORD (A)**.

In the days after the American Revolution, not surprisingly, American practice was closer to the prevailing British practice. E.g.: “The House of Representatives shall chuse *their* [modernly, *its*] Speaker and other Officers; and shall have the sole Power of Impeachment.” U.S. Const. art. I, § 2.

The reversal in practice has become so firmly established in AmE that it is hardly wrong to say that with certain collective nouns, singular verbs are preferred. But you can’t be doctrinaire on this point of usage. The dilemma frequently occurs with nouns such as *couple, faculty, majority, and press*—e.g.:

- “The French press *have* [read, in AmE, *has*] said he is too expansion-minded.” Judi Bevan, “Lafarge’s Conquering Hero,” *Daily Telegraph*, 30 Nov. 1997, at 3.
- “And *faculty are* [or *the faculty is*] committed to improving curriculum based on information from a variety of sources.” Sarah A. Derks, “State Nursing Panel OK’s Shelby State,” *Commercial Appeal* (Memphis), 4 Dec. 1997, at A19.

These are questions more of local idiom than of correct or incorrect grammar. See **COUNT NOUNS AND MASS NOUNS**.

collectivize (= to confiscate private property, esp. means of production and arable land, for government use) has long had strongly negative connotations. E.g.: “The history of the Ukrainian famine—in which Moscow’s requisitioning of the Ukrainian harvest, along with its orders to *collectivize* agriculture, caused the starvation of millions of people—was long caught in the disinformation and silence imposed by Stalin.” Felicity Barringer, “A City of Memorials Finds Itself Filling Up,” *N.Y. Times*, 20 Dec. 2006, at A12.

But lately the term has been acquiring senses more positive—e.g.: “Group shows can be lacking in cohesion, but they can also *collectivize* a definite vibe, a current in art or society.” Rosemary Ponnokanti, “Quilts, Nativity House Artists Reflect Societal Contrasts,” *News Trib.* (Tacoma), 5 Nov. 2006, at E5. Given the word’s history, however, a substitute such as *generate* would serve better in such a sentence.

collegial; collegiate. It would serve the purposes of **DIFFERENTIATION** and would accord with educated usage to reserve *collegial* as the adjective for *colleague*, and *collegiate* as the adjective for *college*—e.g.:

- “By forging a *collegial* triumvirate with Senate President Stanley Rosenberg and Speaker of the House Robert DeLeo, Baker and his legislative colleagues created budgetary solutions under dire circumstances.” “Baker Continues to Earn Our Endorsement,” *Enterprise* (Brockton, Mass.), 16 Aug. 2015, at 6.
- “A 2014 study of youth joblessness . . . found roughly 8.5 percent of college graduates between the ages of 21 and 24 were unemployed. . . . It tells us that the post-*collegiate* job market, just like the rest of the labor market, certainly isn’t nearly back to normal.” “Another Education Subsidy,” *Courier* (Findlay, Ohio), 19 Aug. 2015, at 4.

Both words are pronounced with a soft *-g-* sound (like *-j-*). *Collegiate* usually doesn’t present a problem, since *college* also takes a soft *-g-* sound. (Note, though, that the three-syllable pronunciation /kə-lee-jət/ is preferred over the four-syllable /kə-lee-jee-ət/.) But sometimes *collegial* is mispronounced with a hard *-g-*, probably on the influence of *colleague*. Resist that sort of peer pressure.

collide is construed with *with* or *against*. Although *with* is more common today, the *OED* provides historical evidence of *against*, and that usage still sometimes appears—e.g.: “In the eighth he collided *against* the outfield wall while chasing a drive by Missouri designated hitter Jake Epstein.” Rick Cantu, “Aspito’s 3-Run Homer Saves Longhorns,” *Austin Am.-Statesman*, 20 Feb. 1999, at C3.

Current ratio (*collide with* vs. *collide against*): 86:1

collodion; *collodium. *Collodion* /kə-loh-dee-ən/ (= an alcohol-ether solution used as a coating for wounds or photographic film) is the standard term. **Collodium* is a **NEEDLESS VARIANT**.

Current ratio: 67:1

colloque; *collogue. Both are informal and relatively rare words meaning “to confer (with another) in private.” One usage authority labeled **collogue* “colloquial for *talk confidentially*.” George P. Krapp, *A Comprehensive Guide to Good English* 152 (1927). Either would be useful as a verb corresponding to the noun *colloquy*. Because it is already more common, *colloque* is more likely to gain wide acceptance—e.g.: “That won’t and shouldn’t prevent members who share interests from *colloquing* [read *colloquing*], but it will make at least a small dent in the House budget.” “A Tall Wall for the Deficit Cutters,” *L.A.*

Times, 12 Dec. 1994, at B6. *Colloque* is pronounced /kə-**loh**k/. See **colloquy**.

Current ratio: 23:1

colloquial. A good deal of confusion has surrounded this word. Traditionally, lexicographers used it to denote that a word so labeled is typical of cultivated conversation or informal speech, as opposed to the most formal style of written prose. E.g.: “The sensible man *speaks* colloquially most of the time. When he wants to be formal or unusually impressive he tries to speak as he thinks he writes. But on these occasions he often makes a pompous ass of himself.” Bergen Evans, “Your Speech Is Changing” (1959), in *Readings in the Language Arts* 4, 8 (Verna Dieckman Anderson et al. eds., 1964).

But many dictionary users mistook the label as indicating a departure from high grammatical standards—even though the dictionary writers who used the label had no such intention. Hence *colloquial*, and especially the corresponding noun *colloquialism*, gradually took on negative connotations. In the second half of the 20th century, most lexicographers dropped the labels. At the same time, mediocre writers strove for hyperformal stiffness, as another authority noted: “Most of us, when we write, have a fear of dropping into colloquialism, and so go to almost any lengths of stilted periphrasis to avoid it.” G.H. Vallins, *Good English: How to Write It* 145 (1951).

Things have gradually changed, partly as a result of the electronic age: modern communications are increasingly informal. We have come closer to developing a style of speakable writing—one that is natural, idiomatic, and comfortable. Perhaps, after a period of degenerate connotations, *colloquial* will become a term of praise. See **CASUALISMS**.

colloquy; colloquium. *Colloquy* (/kahl-ə-kwee/) means “a formal discussion,” as between diplomats or between a judge and counsel. E.g.: “His curious *colloquy* with a 17-year-old boy on sentencing day in a marijuana case got more than the boy’s attention.” David Doege, “Crawford at Center Court,” *Milwaukee J. Sentinel*, 24 Nov. 1996, at 1. Pl. *colloquies*. For the verb corresponding to *colloquy*, see **colloque**.

Colloquium (/kə-**loh**-kwee-əm/)—meaning “an academic conference or seminar”—is frequently misspelled **colloquim*. Most American dictionaries prefer the plural *colloquiums*, but *colloquia* has always been predominant in both AmE and BrE. See **PLURALS** (B).

Current ratio (*colloquia* vs. *colloquiums*): 10:1

collusion (= an agreement between two or more people to trick or defraud another) always has the flavor of deceit. Occasionally the word is misunderstood to mean “collaboration,” as opposed to “collaboration in wrongdoing”—e.g.:

- “Golding’s style has the effect of exposing the person of the novelist, as if writer and reader were *working in collusion* on [read *collaborating in*] a tricky moral quest.” Jonathan Raban, “The Paper Men,” *Atlantic Monthly*, Apr. 1984, at 142.
- “What Mr Boyle calls disappointment (and incentive to renunciation) many readers will surely see as an appetite for more and more, an appetite whetted in a man like Goethe by poetry and real experience, *working in collusion* [read *collaborating*] till the point of death.” “A Man of Girth,” *Economist*, 11 Mar. 2000.

Is it possible to defraud yourself? No, although writers occasionally try this trick—e.g.: “By working until midnight, you enable your boss to give you assignments late without consequences. No one can take advantage of you without your *collusion* [read *acquiescence*].” Lynne Curry, “Rein in Chaotic Manager,” *Anchorage Daily News*, 16 Sept. 2002, at D1.

LANGUAGE-CHANGE INDEX

collusion misused for *collaboration*: Stage 1

collusive (= involving a secret agreement for illegal, esp. fraudulent, purposes) is the preferred form. **Collusory* is a **NEEDLESS VARIANT**.

Current ratio: 1,251:1

Colombian, adj.; **Columbian**. *Colombian* = of, relating to, or involving the South American country of Colombia. *Columbian* = of, relating to, or involving America or Christopher Columbus.

The adjective *pre-Columbian* (= of, relating to, or involving America before Columbus’s arrival) should be so written—not **precolumbian*.

COLONS. See **PUNCTUATION** (C).

Coloradan; Coloradoan. These two names vie closely for predominance. *Coloradan* has had the slight edge since the 1860s, but there have been periodic reversals in frequency of use in print sources. *Coloradan* is the safest editorial choice for now, even though *Coloradoan* has recently shown signs of resurgence. See **DENIZEN LABELS**.

Current ratio (*Coloradans* vs. *Coloradoans*): 3:1

colosseum. See **coliseum**.

Columbia; Colombia. Both proper nouns honor Christopher Columbus. The difference in spelling depends on whether the noun derives from Latin or Italian. In North America, the Latin *Columbus* is the basis of *Columbia*, as in the District of Columbia and Columbia University. In South America, the Italian form (*Colombo*) prevails as the name of the nation—Colombia.

Columbian. See **Colombian** & **DENIZEN LABELS**.

Columbusite. See **DENIZEN LABELS**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

columnist. In pronouncing this word, be sure to sound the *-n-*: /kɒl-əm-nɪst/.

comatose. Although the pronunciation /kɒm-ə-tohs/ was once thought preferable, the word is almost universally /kɒh-mə-tohs/ in AmE today. It got that way by analogy with *coma*.

combat is pronounced /kɒm-bat/ as a noun, /kəm-bat/ as a verb. Although some authorities accept the inflected forms *combating* and *combated*, those spellings suggest the pronunciations /kəm-bay-ting/ and /kəm-bay-təd/. *Combatting* and *combatted* are more in keeping with general principles of English word formation: the stress is on the /bat/ syllable before and after the suffix is added. See SPELLING (B). Admittedly, however, the spellings *combated* and *combating* predominate in actual usage—perhaps coinciding with a tendency to stress the first syllable. See PRONUNCIATION (C).

Current ratio (*combating* vs. *combatting*): 22:1

combustible. So spelled—not **combustable*. (See -ABLE (A).) **Combustible engine* is a mistake for *combustion engine*. In fact, it erroneously suggests that the engine is flammable (or, as we used to say, *inflammable*—see **flammable**). E.g.:

- “Terrill said the use of *combustible* [read *combustion*] engines, such as those running chain saws, lawnmowers and weed eaters, should be curtailed, as should campfires.” Larry D. Hatfield, “Hot Winds Fan New Fire Fears,” *S.F. Examiner*, 13 Oct. 1995, at A1.
- “Can El Nino explain this hot winter? La Nina? Or is it our *combustible* [read *combustion*] engines, our coolants, our C.F.C.s?” D.T. Max, “Ominous Clouds,” *N.Y. Times Mag.*, 13 Mar. 2002, § 6, at 19.
- “The international summit on energy and environmental issues is taking place in the city that made its name and fortune from the *combustible* [read *combustion*] engine.” Alejandro Bodipo-Memba & Suzette Hackney, “Energy Leaders to Meet in Detroit,” *Detroit Free Press*, 1 May 2002, Domestic News §, at 1.

LANGUAGE-CHANGE INDEX

Current ratio (*combustible* vs. **combustable*): 736:1

**combustible engine for combustion engine*: Stage 1

Current ratio (*combustion engine* vs.

**combustible engine*): 303:1

come. A. *Come* > *came* > *come*. So inflected. Nonstandard past forms <he come here yesterday> <she hasn't come yet> typify DIALECT. For a good discussion, see Sali Tagliamonte, “*Come/Came* Variation in English Dialects,” 76 *Am. Speech* 42, 42–43 (2001).

B. **And go.** Usually, *come* denotes movement toward the speaker's current location <come here, Fido>, while *go* is the opposite <you should go now>. But as with *take* and *bring*, there is room for nuance in using these words. For example, *I'll come over at 8 tonight* is far more idiomatic than *I'll go over at 8 tonight*. One who hears the first sentence knows exactly where the speaker is going, but one who hears the second sentence doesn't. So especially in conversation, it is

point of view that determines word choice rather than notions of movement.

For an analogous problem with *bring* and *take*, see **bring (B)**. See also **immigrate**.

C. **In Subjunctive Uses.** In the phrases *come what may* and *I'll be ready come Friday*, the word *come* exemplifies a persistent use of the SUBJUNCTIVE mood.

D. **For cum.** See *cum*.

comedian; comedienne. In AmE, the word *comedian* is generally used in reference to comic actors or entertainers of either sex—e.g.:

- “The *comedian* fears she has caught herself saying the wrong thing in discussing her one-woman show.” Margot Ebling, “Intimate Exposure,” *Village Voice*, 26 Nov. 1996, at 86.
- “*Comedian* Amy Schumer wrote and stars in this funny vehicle as a selfish, rude jerk whose pro-pleasure, anti-romance outlook is tested when she meets a nice sports doctor.” “Now Showing,” *Long Beach Press-Telegram*, 19 Aug. 2015, at 3.

But *comedienne*, despite its sex-specific nature, remains quite common—e.g.: “Clad in a sweater set and black slacks, the five-foot-nothing Deirdre Flint looks more like a kindergarten teacher than a rabble-rousing musical *comedienne*.” Lisa Suhay, “Strudel Is This Comic Singer's Muse,” *Christian Science Monitor*, 4 Apr. 2003, Features §, at 16. See **SEXISM (D)**.

comedic. See **comic**.

comedienne. See **comedian**.

come off it. This colloquial idiom is as old as Chaucer. For some reason, a few writers who use it feel inclined to make it **come off of it*, which is unidiomatic—e.g.:

- “There are some presenters who, without ever knowing it, prompt their audiences to think, ‘Oh, *come off of it* [read *come off it*].’” Ron Hoff, “*I Can See You Naked*” 97 (1992).
- “Now, we have people who are saying we shouldn't attack these people due to the fact we will accidentally kill civilians. *Come off of it* [read *Come off it*], people; wars and soldiers do not try to pick the civilians as targets, they end up that way.” Letter of William Reinhart, *Chattanooga Times/Chattanooga Free Press*, 10 Oct. 2001, at B8.
- “He also rejected the notion that passing a farm bill would guarantee civilian and military food security. ‘Let's *come off of it* [read *come off it*],’ Lugar demanded. ‘To imply somehow we need a farm bill in order to feed our troops, to defend our nation, is ridiculous.’” Deroy Murdock, “Pork-Barrel Spending Cuts into War Dollars,” *Deseret News* (Salt Lake City), 14 Oct. 2001, at AA7.

comeuppance (= a just rebuke or minor retaliation) is the standard spelling of this Victorian coinage. **Comeupance* is a rare variant.

Current ratio: 761:1

comfort. See **solace**.

comic; comical; comedic. These words are confusingly similar. *Comic* and *comical* both mean “funny” or “humorous.” *Comic* is generally used, however, for what is intentionally funny, and *comical* for what is unintentionally funny. Hence the latter term may mean “laughable” in a derisive sense—e.g.: “Kaelin, a struggling actor who was a shaggy-haired, *comical* figure at Simpson’s criminal trial, appeared with his hair cut and neatly combed, wearing a white shirt, green tie and dark green sport coat.” Linda Deutsch, “Kaelin: Simpson Brooded About Ex-Wife’s Sex Life,” *Austin Am.-Statesman*, 20 Nov. 1996, at A5.

Comedic = of, relating to, or involving the form or nature of a dramatic comedy—i.e., a play that ends as the audience would wish (as the opposite of *tragic*). E.g.:

- “Director Paula Welter compares the W. Randolph Gavin play to the *comedic* style of television’s ‘Mad About You.’” Thomas Becnel, “‘Heavenly Body’ Opens Artspace Theatre Season,” *Sarasota Herald-Trib.*, 30 Aug. 1996, at T18.
- “His enormous *comedic* talents were known throughout the industry.” Valerie Burgher, “Color Bind,” *Village Voice*, 26 Nov. 1996, at 82.

Sometimes *comedic* is misused for *comical*—e.g.: “Their first attempts to navigate the creek were *comedic* [read *comical*]—an aquatic, slapstick skit of unintended rammings and beachings.” Paul McHugh, “Canoeists Discover Bay Secrets,” *S.F. Chron.*, 18 Dec. 1997, at D7.

LANGUAGE-CHANGE INDEX
comedic misused for *comical*: Stage 1

***comingle.** See **commingle**.

comity = a practice among political entities (as countries, states, or courts of different jurisdictions), involving esp. mutual recognition of legislative, executive, and judicial acts (*Black’s Law Dictionary* 324 [10th ed. 2014]). E.g.: “The appeals court also held that *comity* prohibited the State judge from conducting an independent hearing on the same factual questions considered by the federal judge.” Jennifer P. Heimmel, “State Conviction Reversed After Finding That It Was Obtained by Federal Plea Agreement Breach,” *N.J.L.J.*, 18 Mar. 1996, at 29.

The word is sometimes (especially in BrE) mistaken as meaning “league” or “federation,” especially in the phrase *comity of nations*. That use typifies SLIPSHOD EXTENSION and involves euphemizing: the vagueness of the phrase seems better to the writer than the directness of a substitute such as *community of nations* or *the family of civilized nations*, which begs the question, Which nations are civilized? Examples of this loose sense follow:

- “It is globally important to bring China into full partnership in the *comity of nations* [read *community of nations*], in spite of recent saber-rattling.” “Shocking Position,” *Baltimore Sun*, 7 Sept. 1995, at A15.

- “But those settlements did succeed in bringing France and Germany into the *comity* [read *family*] of European nations, despite the suspicions left by decades of conflict.” Rodric Braithwaite, “The West Has a Russia Problem It Isn’t Facing,” *Int’l Herald Trib.*, 3 Dec. 1996, at 8.

Very occasionally, the phrase *comity of nations* appears in a correct sense (“courtesy afforded by countries to one another’s political entities”)—e.g.: “Furthermore, he said, under the concept of *comity of nations*, or a mutual respect for other countries’ laws, a successful overseas liability claim could be subsequently brought against the company in a U.S. court.” Judy Greenwald, “Exports Create Unique Exposures,” *Bus. Ins.*, 2 Dec. 1996, at 2.

commemorative; *commemoratory. The first has been standard since the 16th century; the second is a NEEDLESS VARIANT.

Current ratio: 724:1

commence; begin; start. Except in describing formal ceremonies or exercises, or legal actions, *commence* is usually unnecessarily stilted for *begin*, with which it is denotatively equivalent. The *OED* notes that “*begin* is preferred in ordinary use; *commence* has more formal associations with law and procedure, combat, divine service, and ceremon[y].” Often *commence* appears where *begin* would be better—e.g.: “Scungio was told that if she hoped to build a house before the town *commenced* [read *began*] work on the road . . . , she should propose what sort of gravel thoroughfare she could pay for.” Barbara C. Potter, “Planning Board Approves Hartford Pike Rezoning,” *Providence J.-Bull.*, 6 Mar. 1997, at D6. See **begin** (B).

Stylists have long condemned *commence* if it introduces an infinitive, *begin* being preferable—e.g.: “She trekked into the wilds of Africa and *commenced* to live among and study [read *began* to live among and to study or *began living among and studying*] mankind’s closest relations.” Michael Kilian, “Grunt Work,” *Chicago Trib.*, 3 Sept. 1995, at C1.

Definite nuances exist with *start* as opposed to *begin* or *commence*. Usually used of physical movement, *start* suggests an abruptness not present in the

other two words <gentlemen, start your engines>. See **institute**.

commendable; commendatory. The former means “praiseworthy, laudable” <a commendable achievement>, and the latter means “expressing commendation, laudatory” <a commendatory letter of appreciation>. Like other differentiated pairs ending in *-able* and *-atory*, these words are sometimes confused. Most commonly, *commendatory* erroneously displaces *commendable*—e.g.:

- “It is reprehensible . . . to write a brief primarily to express an uncomplimentary opinion of one’s adversary; it is *commendatory* [read *commendable*] to write a brief for the purpose of advising the court; it is neither reprehensible nor *commendatory* [read *commendable*] to write a brief because the client insists—merely good business.” Mortimer Levitan, “Confidential Chat on the Art of Briefing,” 1957 *Wis. L. Rev.* 59, 60.
- “Responses of American business to disaster have included some *commendatory* [read *commendable*] actions.” James Russell, “Kind Acts Abundant in Wake of Storm,” *Miami Herald*, 17 Sept. 1992, at C3.
- “‘It is very *commendatory* [read *commendable*] that Dr. [Philip] Conn has put the interests of the university ahead of his own interests; [J. Wade] Gilley said.’” “Martin Chancellor Requests Reassignment,” *Chattanooga Times/Chattanooga Free Press*, 19 Sept. 2000, at B5.

LANGUAGE-CHANGE INDEX

commendatory misused for *commendable*: Stage 1

Current ratio (*commendable* vs. *commendatory*): 12:1

commensurate. A. And commensurable. In all but mathematical contexts, *commensurable* is a NEEDLESS VARIANT of *commensurate*. *Commensurable* legitimately means “having, or reducible to, a common measure; divisible without remainder by the same quantity” (*OED*). *Commensurate* (/kə-**men**-shuur-ət/) means (1) “coextensive”; or (2) “proportionate.”

B. Confounded with commiserate. Through WORD-SWAPPING, writers sometimes confuse *commensurate* with *commiserate* (kə-**mi**-zə-rayt), which is properly a verb meaning “to sympathize with.” E.g.:

- “For the first time, the Daytona 500 purse is *commiserate* [read *commensurate*] with the race’s stature as one of America’s premier sporting events.” Tony Fabrizio, “Underpaid Drivers Finally Get Due,” *Fla. Times-Union*, 12 Feb. 1998, at C5.
- “No major labor implications, though pay *commiserate* [read *commensurate*] with additional responsibilities could be an issue for the Seattle Police Management Association.” Kimberly A.C. Wilson, “Schell, Stamper Outline Police ‘Action Plan,’” *Seattle Post-Intelligencer*, 21 Sept. 1999, at A1.
- “Lauren LePage, 22, will serve as assistant to the governor’s chief of staff, John McGough—a position that administration officials describe as entry-level and is *commiserate* [read *commensurate*] with her experience, work history and education.” Kevin Miller, “LePage Gives Staff Position to Daughter,” *Bangor Daily News*, 23 Dec. 2010, at 1.

LANGUAGE-CHANGE INDEX

commiserate misused for *commensurate*: Stage 1

Current ratio (*is commensurate with* vs.

**is commiserate with*): 459:1

comment; commentate. The longer form is a BACK-FORMATION from *commentator*, but an established one dating from the late 18th century. If *commentate* were only a NEEDLESS VARIANT of *comment*, its existence would be unjustified. But it enjoys the DIFFERENTIATION of meaning “to give a commentary on” or “to expound persuasively or interpretatively.” Meanwhile, *comment* implies brevity. Hence scholarly commentators typically *commentate* rather than *comment* when expounding their disciplines. The word is, of course, grandiose when used of television journalists and, more so, sportscasters. Still, it is too late to object to their being called *commentators*.

Both verbs are traditionally intransitive <she commented favorably on the book> <he commentated for ABC Sports during the U.S. Open>. *Commentate* is now sometimes used as a transitive verb <he commentated the U.S. Open>, but the newfangled usage is not recommended.

yours of even date

Books on business writing have long admonished writers to avoid these mind-numbing wads of verbiage—e.g.: “All stereotyped words [that] are not used in talking should be avoided in letter writing. There is an idea that a certain peculiar commercial jargon is appropriate in business letters. The fact is, nothing injures business more than this system of words found only in business letters. The test of a word or phrase or method of expression should be, ‘Is it what I would say to my customer if I were talking to him instead of writing to him?’” Sherwin Cody, *How to Do Business by Letter* 20 (19th ed. 1908). Cf. **OBSCURITY**.

For more on the subject, see the following books:

- L.E. Frailey, *Handbook for Business Letters* (2d ed. 1965).
- Maryann V. Piotrowski, *Effective Business Writing* (1989).
- Gary Blake & Robert W. Bly, *The Elements of Business Writing* (1991).
- Charles T. Brusaw et al., *The Business Writer's Handbook* (4th ed. 1993).
- Bryan A. Garner, *HBR Guide to Better Business Writing* (2013).

comminate; comminute. The first means “to denounce,” the second “to pulverize.” Which verb is more frequently used? *Comminute*—from the 18th century on.

commingle; *comingle. *Commingle* (= to mingle together) has been the accepted spelling since the 18th century. In contemporary print sources, it is about 17 times as common as **comingle*, which, though slightly older, has failed to become standard. E.g.: “Humor and pathos *comingle* [read *commingle*] evenly.” “Rich, Relevant ‘Raisin,’” *Seattle Times*, 28 Oct. 1994, at H25. When **comingle* does appear, it’s often unnecessarily hyphenated—e.g.: “Sexuality and violence *co-mingle* [read *commingle*] here, so this is not for the squeamish.” Kim Morgan, “‘Fudoh’ Highlights Mike’s Intoxicating Violence and Humor,” *Oregonian* (Portland), 18 Oct. 2002, Arts & Living §, at 20.

There are two diametrical tendencies: (1) the growing prevalence of the spelling *commingle*; and (2) the shift in popular pronunciation away from the preferred /kə-**ming**-gəl/ and toward /kə- for the first syllable. These two tendencies are at odds with each other; they seem certain to keep usage unsettled.

Although *mingle* has also been used in reference to combining funds, *commingle* is the more usual term—e.g.: “You do not want to *mingle* [read *commingle*] these funds with other IRA accounts.” Carla Lazzareschi, “How Co-ops Differ from Condos,” *L.A. Times*, 8 May 1994, at D4.

LANGUAGE-CHANGE INDEX

**comingle* for *commingle*: Stage 1

Current ratio (*commingle* vs. **comingle*): 17:1

comminute. See **comminate**.

commiserate. See **commensurate (B)**.

***commissible.** See **committable**.

commitment; commission; committal. *Commitment* = (1) dedication; devotion to a special task or purpose <the company’s unwavering commitment to the black community>; (2) an engagement to fill a future obligation <she has several commitments this month>; or (3) the action of committing an insane or mentally retarded person to the charge of another <his mental illness led to commitment to an asylum>.

Commission = (1) the authority to perform a task or function <this action exceeded the delegate’s commission>; (2) a group of people entrusted with this authority, usu. by appointment <the health commission’s meeting lasted all day>; (3) a military appointment <the cadet received his commission on the eve of battle>; (4) a payment made to an agent or broker, usu. as a percentage of a sale <Joyner received a 4% commission>; or (5) the action of doing or perpetrating (a crime, etc.) <the commission of a felony>.

Committal is a NEEDLESS VARIANT of the other two terms in all but two senses. First, it bears the sense “the action of burying a body in a grave”—e.g.: “*Committal* services and burial will take place at a later date in Cold Spring Cemetery, Cape May.” “Gretchen Neubrand” (obit.), *Stuart News/Port St. Lucie News* (Stuart, Fla.), 20 Mar. 1997, at B4. Second, in BrE *committal* refers to the imprisoning of a debtor as a way of enforcing a court’s judgment.

committable; *commissible; *committible. The first has been the established form since the early 18th century. E.g.: “That leaves Mata, who has had many psychological evaluations since being extradited to Minnesota, in limbo. He is neither competent nor *committable*.” Margaret Zack, “Man Is Incompetent to Stand Trial, but Also Uncommittable,” *Star Trib.* (Minneapolis), 22 July 1997, at B1. The other forms are NEEDLESS VARIANTS. See -ABLE (A).

Current ratio (*committable* vs. **commissible*): 14:1

committal. See **commitment**.

committee. So spelled. See SPELLING (A).

***committible.** See **committable**.

common. See **mutual (A)**.

commonality; commonness; commonalty; commonage; *commonty. The common character of these words may cause confusion. The ordinary words are *commonality* and *commonness*. Although historically the two have overlapped, they are best kept separate in accordance with the following definitions. *Commonness*, the general noun corresponding to *common*, may mean: (1) “the state or quality of being common” <the commonness of cable television>; (2) “the quality of being public or generally used” <the commonness of the thoroughfare>; (3) “the state of being run-of-the-mill” <the commonness of his writing>; or (4) “vulgarity” <the commonness of a sot>. *Commonality* = the possession of an attribute in common with another <stressing commonality rather than divisiveness>.

The remaining words are more easily distinguished. *Commonalty* = (1) commoners; the general body of the community (excluding nobility); (2) a municipal corporation (a sense to be avoided with this word

because *corporation* is the ordinary term); or (3) a general group or body. In the following sentence, the writer may be using *commonalty* in sense 3—in which case it's a REDUNDANCY—or may have intended *commonality*: “The Alabama code stood as a statement of the rules of the game that a family of professionals . . . adhered to in recognition of their *commonalty* [read *commonality*?] and because it might, by forcing an affiliation, help keep them out of trouble.” Jethro K. Lieberman, *Crisis at the Bar* 56 (1978). But *commonalty* probably displaces *commonality* as often as it does because it is a typo that spell-checkers can't catch and that proofreaders easily miss—e.g.: “The two candidates—incumbent Leon Young and challenger Walter Lanier—also say they want to create more programs tailored to the youths in the area, but that's where the *commonalties* [read *commonalities* or, better, *similarities*] between the two end.” Felicia Thomas-Lynn, “Battling Democrats Agree on Profiling,” *Milwaukee J. Sentinel*, 4 Sept. 2002, at B5.

Commonage = (1) the right to pasture animals on common land; (2) the condition of land held in common; or (3) an estate or property held in common. **Commonty*, in its existing uses, is a NEEDLESS VARIANT of *commonage*.

LANGUAGE-CHANGE INDEX

commonalty misused for *commonality*: Stage 1

common-law marriage has one meaning in AmE and another in BrE. In American law, the phrase generally denotes an agreement to be married, followed by cohabitation and a public recognition of the marriage. Common-law marriages are valid in many states, such as Texas, though others have abolished the institution, as New York did in 1932.

In England, *common-law marriage* now refers only to a marriage celebrated according to a common-law form in a place where the local forms of marriage cannot be used (e.g., a desert island) or are morally unacceptable to the parties (e.g., because of religious differences), or where no cleric is available. Additionally—and more commonly in BrE—the phrase refers to an illicit union of some duration. As Sir Robert Megarry writes, “The so-called *common-law marriage*, little known in England save as a polite verbal cloak for fornication or adultery of the less ephemeral type, has a respectable ancestry in America.” *A Second Miscellany-at-Law* 210 (1973).

commonness. See **commonality**.

common noun. See **proper noun**.

commonsense, adj. A. And commonsensical; *commonsensible. The adjective *commonsense* (always solid as this part of speech) dates from the mid-17th century and vastly predominates over the other two, both of which date from the mid- to late 19th century. *Commonsense* should generally be preferred over *commonsensical* or **commonsensible* <a commonsense approach>—though *commonsense* may cause a MIS-**CUE** if it does not immediately precede the noun it

modifies <an approach that is commonsense>. That is, it may be read as a noun when it functions as a predicate adjective.

As between *commonsensical* and **commonsensible*, one might suspect that *-ible* would be the more usual: the dictionaries have traditionally listed it first, and it's modeled on the existing word *sensible*. (*Sensical* is rare.) In fact, though, *commonsensical* predominates in print sources by a more than 120-to-1 ratio—e.g.: “But Kim argued that his actions regarding Flores's artwork were simply practical and *commonsensical*.” Celeste Katz, “Culture Clash,” *Providence J.-Bull.*, 6 Nov. 1997, at D1. But again, *commonsensical* should be confined to uses—as in the example just quoted—in which a noun doesn't immediately follow.

Current ratio (*commonsense reasons* vs. *commonsensical reasons*): 7:1

Current ratio (*commonsensical* vs. **commonsensible*): 122:1

B. And common sense, n. Although the adjective is one word, the noun is two: *common sense*.

***commonty.** See **commonality**.

commonweal; commonwealth. *Commonweal* = the general welfare or common good. E.g.: “It has become shorter than a Chicago spring, this post-election respite when politicians have some small latitude to do what is necessary for the *commonweal* rather than what is necessary to get re-elected.” John McCarron, “Buckling Down to Work,” *Chicago Trib.*, 4 Nov. 1996, at 21.

Commonwealth = a nation, state, or other political unit <the British Commonwealth>. E.g.: “While no one in the police department or the *commonwealth's* attorney's office could remember a case in which a convicted criminal actually harmed a witness, the threats have intimidated witnesses into retracting testimony or disappearing.” Gordon Hickey, “Witness's Safe Houses Sought,” *Richmond Times-Dispatch*, 26 Nov. 1996, at B3. Among the 50 states, four are traditionally known as *commonwealths*: Kentucky, Massachusetts, Pennsylvania, and Virginia. See **territory**.

communicative; *communicatory. The latter has been a NEEDLESS VARIANT since the 17th century.

Current ratio: 633:1

commute. A. And commutate. The latter is a technical term meaning “to regulate the direction of (an electric current).” *Commute* = (1) to travel back and forth regularly, esp. over a significant distance and esp. to one's job; (2) to exchange (a punishment or penalty) for one of less severity; or (3) to change (one kind of payment) into or for another.

B. And pardon. In sense 2, to *commute* a punishment or penalty is to reduce it, or to substitute in its place a milder punishment or penalty. To *pardon* someone who has been convicted or punished is to excuse the person without exacting any further penalty.

compact, n., adj. & v.t. The noun is accented on the first syllable, the verb on the second. The adjective is rendered both ways, preferably /kəm-**pakt**/ except in reference to a midsize car.

compactible; compactable. Since the mid-20th century, the first has been predominant in AmE, the second in BrE. See -ABLE (A).

comparable; comparative. *Comparable* is stressed on the first syllable (/kəm-pə-rə-bəl/); *comparative* is stressed on the second syllable (/kəm-**par**-ə-tiv/ or /-**pair**-/). *Comparable* = capable of being compared; worthy of comparison <comparable salaries>. *Comparative* = (1) of, relating to, or involving comparison <a comparative discourse on economics>; (2) involving comparison <the field of comparative religion>; or (3) estimated by comparison <comparative distances>.

Occasionally *comparative* is used where *comparable* is called for—e.g.: “This industry, from the capital standpoint, is quite *comparative with* [read *comparable to*] the banking industry.” John M. Boyle, “The Role of Capital in the Banking Industry,” *Am. Banker*, 2 Dec. 1980, at 4. Though the *OED* documents this use of *comparative* with four examples ranging from the early 17th to the early 19th century, it labels the usage obsolete.

For a common mispronunciation of *comparable*, see PRONUNCIATION (B).

LANGUAGE-CHANGE INDEX

comparative misused for *comparable*: Stage 1

COMPARATIVES AND SUPERLATIVES. A. Choice Between Comparative and Superlative. When two items are being compared, a comparative adjective is needed <the greater of the two>; when more than two are being compared, the superlative is needed <the greatest of the three>. The blunder of using the superlative adjective when only two items are being compared is increasingly common, especially in AmE—e.g.:

- “The *tallest* [read *taller*] of the two pyramids is nearly 500 feet.” Alan Byrd, “Pyramids? Not in My Backyard, Foes Say,” *Orlando Bus. J.*, 30 Sept. 1994, at 1.
- “He has raced in *worst* [read *worse*] conditions, of course, and often won.” Samuel Abt, “Rain Plagues Tour de France,” *Austin Am. Statesman*, 2 July 1995, at C8.
- “With the first half of the game over, the *most* [read *more*] important half is yet to be played—this time on the voter’s turf.” Dan Luzadder & Lynn Bartels, “Broncos Score Upset on Political Field,” *Rocky Mountain News* (Denver), 12 May 1996, at A5.
- “The *youngest* [read *younger*] of Jean’s two children from a previous marriage, a 16-year-old boy, lived with the couple until about a year ago.” Nancy Lewis, “Crafts a Lucrative Outlet for Legally Blind Woman,” *Virginian-Pilot* (Norfolk), 10 Oct. 1996, at 15.

One idiomatic exception occurs when we put our *best foot forward*, since (of course) we have only two.

LANGUAGE-CHANGE INDEX

Superlative with two objects <best of the pair>: Stage 4

B. Which to Use—Suffixes or *more* and *most*?

Apart from irregular forms such as *good* > *better* > *best*, comparatives and superlatives are formed by either (1) adding the suffixes *-er* and *-est* (e.g., *broader*, *broadest*), typically when the adjective is one or two syllables; or (2) using the additional words *more* and *most* (e.g., *more critical*, *most critical*), a form required with words having three or more syllables and typical with two-syllable words. It was once possible to write *interestinger* and *honestest*, but no longer. Several words have a choice of forms (e.g., *commoner*, *-est* or *more*, *most common*; *tranquil(l)er*, *-est* or *more*, *most tranquil*; *stupider*, *-est* or *more*, *most stupid*; *naiver*, *-est* or *more*, *most naive*). The terminational forms are usually older, and some of them are becoming obsolete.

Still, if a word ordinarily takes either the *-er* or the *-est* suffix—and that formation sounds more natural—it’s poor style to use the two-word form with *more* or *most*. E.g.:

- “Few things in this world short of yard work are *more dull* [read *duller*] than watching animated characters play basketball.” Daniel Neman, “Double Drivel,” *Richmond Times-Dispatch*, 15 Nov. 1996, at C1.
- “The answers we sought proved *more simple* [read *simpler*] than we imagined.” Mike Swift & Deborah Petersen Swift, “The Road Opened Our Hearts,” *Hartford Courant*, 7 Jan. 1997, at A1.

C. Be-Verbs Repeated After Comparatives. It usually isn’t necessary to repeat the verb *to be* before the second element of the comparison—e.g.: “Thus, full-scale intervention is much *less likely than is* [read *less likely than*] subversion or other covert activities in such cases.” Richard K. Herrmann & Michael P. Fischerkeller, “Beyond the Enemy Image and Spiral Model,” *Int’l Organization*, 22 June 1995. And if the *be*-verb is repeated, it usually shouldn’t go immediately after *than*. The preceding example, then, might read: *Thus, full-scale intervention is much less likely than subversion or other covert activities are in such cases*. See INVERSION & **than** (A).

D. The Double Comparative. Among literate speakers and writers, the double comparative is fairly uncommon. But it does occasionally appear in print—e.g.: “Does it mean that change will be a bit *more slower* [read *slower*], a bit more careful, a bit more reasoned than totally revamping the health care system? Yes.” Leonard Marcus, “New Approach Needed to Restore System’s Balance,” *Am. Medical News*, 2 Dec. 1996, at 45. (If the writer of that sentence wanted the PARALLELISM of three *mores*, then the first phrase should have been *more slow*.)

LANGUAGE-CHANGE INDEX

**more slower* for *slower*, etc.: Stage 1

For an example of the double superlative, see ***least worst**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

E. Greater of A (or) (and) B. Logic loses to idiom when deciding whether to use the conjunctive *and* or the disjunctive *or* in phrases such as *the greater of A [and? or?] B*. Logic would seem to demand *and* to include all the options in the comparison before one is singled out as being the *lesser, biggest, oldest, latter*, etc. But in fact, since the early 20th century *or* has been about ten times as common in print as *and* with this type of phrasing.

F. Absolute Adjectives. See ADJECTIVES (B).

compare and contrast. See **contrast** (B).

compare with; compare to. The usual phrase has for centuries been *compare with*, which means “to place side by side, noting differences and similarities between” <let us compare his goals with his actual accomplishments>. *Compare to* = to observe or point out only to likenesses between <he compared her eyes to limpid pools>. Cf. **contrast** (A).

Compare and contrast is an English teacher’s tautology, for in comparing two things (one thing *with* another) one notes both similarities and differences.

COMPARISONS, FALSE. See ILLOGIC (B).

compatible. So spelled—not **comptable*. See -ABLE (A).

Current ratio: 2,714:1

compel; impel. *Compel* is the stronger word, connoting force or coercion, with little or no volition on the part of the one compelled. *Impel* connotes persuasive urging, with some degree of volition on the part of the one impelled—e.g.: “He moved like a sleepwalker, like one *impelled*.” Ursula K. Le Guin, *The Lathe of Heaven* 88 (1971).

compendious means “abridged, succinct,” not “voluminous,” as writers often mistakenly believe—e.g.:

- “In an archive at Harvard he found a *compendious* [read *bulky?*], multivolume, handwritten journal entitled ‘Amos Webber Thermometer Record and Diary.’” Jonathan Yardley, “His Place in Time,” *Wash. Post*, 4 Feb. 1996, Book World §, at 3.
- “She has a *compendious* [read *comprehensive?*] knowledge of the novels of Jane Austen.” Bill Workman, “A Woman of Means,” *S.F. Chron.*, 20 Sept. 1996, Peninsula Friday §, at P1.
- “Even if you knew nothing of Mencken, coming to him by way of this fresh new collection, ‘H.L. Mencken on American Literature,’ you would hardly be surprised to learn that in mid-career he published an enormous linguistic study, ‘The American Language,’ whose ever-expanding revisions and *compendious* [read *extensive*] supplements preoccupied him nearly to the end of his long life.” Brad Leithauser, “Mencken’s World of Words,” *L.A. Times*, 16 June 2002, Book Rev. §, at 6. (Notice the REDUNDANCY of *fresh new*, either one of which suffices.)

Perhaps the error stems from the idea that a *compendium* is, at best, a fairly comprehensive abridgment. But properly speaking, the emphasis falls on *abridgment*, not on *comprehensive*. And some would say that the word does not at all suggest

comprehensiveness: “‘The Penguin Book of Irish Fiction’ doesn’t carry a guarantee of mauling you if you read it. But thanks to Colin Toibin, who should have been included (one understands why he wasn’t) in the anthology as well, we have the best *compendium* of Irish fiction since ‘The Field Day Anthology of Irish Writing,’ a *more comprehensive* work published in 1991.” Mike Lanagan, “In Toibin’s Compendium, the Luck of the Irish,” *Buffalo News*, 12 Mar. 2000, at F5.

LANGUAGE-CHANGE INDEX

compendious misused for *comprehensive*: Stage 3

compendium forms either of two plurals: *compendiums* or *compendia*. The native-grown plural was prevalent from the 17th century to the mid-20th. Since about 1950, the Latinate plural has enjoyed a resurgence. But many sensible editors haven’t enjoyed it—e.g.:

- “Far too many of these books are *compendia* [read *compendiums*] of facts designed to provide tidbits for cocktail-party chatter.” Martin Morse Wooster, “The Special Problems with Special Education,” *Wash. Times*, 11 Sept. 1994, at B6.
- “One of the chief shortcomings of *compendiums* like this is finding what you want quickly.” Ranny Green, “Need a Gift Idea for That Cat Owner? Then Read On,” *Seattle Times*, 20 Nov. 1994, at H6.

See PLURALS (B). For the sense of the word, see **compendious**.

Current ratio (*compendia* vs. *compendiums*): 3:1

compensable; *compensatable; *compensible. The adjective *compensable* correlates to the noun *compensation*. **Compensible* is a fairly common misspelling. No major dictionary records the NEEDLESS VARIANT **compensatable*, which since 1913 has infrequently displaced *compensable*. See -ABLE (A); -ATABLE.

Current ratio (in order of headwords): 418:16:1

compensate. A. Transitive or Intransitive. *Compensate* may or may not take *for*, and either way means “to make up for, to counterbalance (a loss).” The modern tendency is to omit *for*, but the sound of a sentence may outweigh the interests of concision. E.g.:

- “The International Commission of Jurists . . . concluded that the women’s physical and emotional suffering both during the war and afterwards must be *compensated for* by the Japanese government.” “Slave Compensation,” *Atlanta J.-Const.*, 23 Nov. 1994, at A8.
- “The Army Corps does address mitigation, but not all wetland and wildlife losses can be *compensated*” “Isle of Wight Coal Storage,” *Virginian-Pilot* (Norfolk), 24 Nov. 1994, Suffolk Sun §, at 6.

B. And recompense. These verbs are almost precisely synonymous <to recompense a victim for injuries>, but *recompense* is a FORMAL WORD less commonly used. Until about 1750, though, the two were about equal in frequency of use. See **recompense**.

compensatory; *compensative. The latter has been a NEEDLESS VARIANT since the 17th century.

Current ratio: 269:1

competence; competency. Though H.W. Fowler considered *competency* a NEEDLESS VARIANT, since the late 19th century these terms have come to exhibit a DIFFERENTIATION that should be encouraged. *Competence* usually bears the general sense “a basic or minimal ability to do something.” E.g.: “Inman got his reputation in the first place. Was it based on the ability of Washington insiders to judge the character and *competence* of public officials?” Jeff Greenfield, “Inman Exit Shows Insiders Can Err,” *Chicago Sun-Times*, 24 Jan. 1994, at 23.

Today *competency* is unnecessary in all but its legal sense: “the ability to understand problems and make decisions; the ability to stand trial.” A severely mentally retarded person, an incompetent, is said to have legal *incompetency*. The usual phrase is *competency to stand trial*. See **incompetence**.

Avoid INELEGANT VARIATION with these two terms—e.g.: “But the primary suggestion is that counselor *competency* [read *competence*] is a matter of personal *competence* and independence, relying on counselor abilities and sensibility to boundaries of loyalty.” Ralph D. Barney & Jay Black, “Ethics and Professional Persuasive Communications,” *Public Relations Rev.*, 22 Sept. 1994, at 233. (This incompetent sentence, of course, does not quite contain a comprehensible thought—as, perhaps, the variation strives unsuccessfully to disguise.)

complacency; *complacence. *Complacency*, the preferred form, occurs in print sources 21 times as often as **complacence*, a NEEDLESS VARIANT since the 17th century.

Current ratio: 21:1

complacent; complaisant. *Complacent* (/kəm-**play**-sənt/) means “self-satisfied; smug.” E.g.: “One thing for sure about the calm response: It does not mean that Dayton is *complacent* about its place in the world.” Martin Gottlieb, “Dayton Remains Calm,” *Dayton Daily News*, 17 Nov. 1996, at B13. See ***self-complacent**.

Complaisant (/kəm-**play**-zənt/) means “obliging; tending to go along with others.” E.g.: “The moans and groans out of Wall Street are echoed by a *complaisant* financial press that monitors and blows out of proportion (or often misinterprets) every economic indicator or statistic.” Hobart Rowen, “Fed’s Anti-Inflation Mindset Could Spell Trouble for the Economy,” *Wash. Post*, 9 Oct. 1994, at H2. Today it is a rare word. But until about 1830 it was more common than *complacent*.

compleat is an archaic variant of *complete* with no place in modern contexts, unless facetiousness is intended. Even so, it is a one-word CLICHÉ.

***complected.** See **complexioned**.

complement. See **compliment & supplement**.

complementary. See **complimentary**.

complete. See ADJECTIVES (B).

completely, an intensive adverb, is often superfluous, as in the phrase *completely superfluous* (made doubly superfluous by further REDUNDANCY in the sentence that follows): “There’s a *completely superfluous* [read *superfluous*] lemon-basil sauce on and around the fish *that’s really not necessary* [delete phrase], but sopping it up with bread is nice.” Nicki Pendleton, “Caffe Milano,” *Nashville Banner*, 19 June 1996, at C3.

Indeed, the word *completely* creates redundancies when coupled with myriad adjectives—e.g.:

- “For 12 long minutes the board was *completely silent* [read *silent*], seemingly stunned by this news.” Joseph Nocera, “Investing in a Fool’s Paradise,” *Fortune*, 15 Apr. 1996, at 86.
- “Naturally, the software industry wants to see this change happen, because no software is ever *completely perfect* [read *perfect*].” Ed Foster, “The Gripe Line,” *InfoWorld*, 28 Oct. 1996, at 60.
- “No gallery of pictures can ever show the true breadth of Christmas because it is celebrated in a *completely unique* [read *unique*] and original manner within the heart of each person who treasures it.” Charles Hirshberg, “Christmas Around the World,” *Life*, Dec. 1996, at 24.

See ADJECTIVES (B).

***completely obsolescent.** For this phrase, see **archaic**.

complexioned; *complected. The first has been standard since the 17th century; the second, a 19th-century Americanism, has been a NEEDLESS VARIANT since it first appeared. Today, *complexioned* is about four times as common in print sources—e.g.:

- “I had hoped to tease some comments from our big-boned, ruddy-*complexioned* tour guide, who stood in the middle of the gardens as if he were fixed to that dry landscape like a stubborn cactus.” Chris Card Fuller, “Sailing into New Waters,” *L.A. Times*, 24 Nov. 1996, at L8.
- “Her daughter caught a glimpse of the salesman, who was described at the time as a dark-*complexioned* man in his mid-20s, wearing beige slacks and a dress shirt and tie.” Josh Dulaney, “Gunned Down at Her Front Door,” *Long Beach Press-Telegram*, 26 July 2015, at 8.

Still, an editor could make a good case for dropping *complexioned* altogether in those two sentences and instead using *dark* and *ruddy*. And one wonders whether *dark-complexioned* is merely a roundabout wording for *black* or *African-American*.

But the word **complected*—an irregularly formed word, since the noun is *complexion* and not *complection*—still occasionally appears. It should be edited—e.g.: “What is it about this rosy-*complected* [read *-complexioned* or, better, *-faced*] man that sends CEOs into rages?” Julie Schmit, “Lerach: Silicon Valley’s Nightmare,” *USA Today*, 23 Oct. 1996, at B1.

LANGUAGE-CHANGE INDEX

**complected* for *complexioned*: Stage 2

Current ratio (*complexioned* vs. **complected*): 4:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

complicit; *complicitous. Neither term was much used until the late 1960s. Although **complicitous* is the older term (dating from the mid-19th century), it appears only rarely in comparison to *complicit*, which is a BACK-FORMATION made on the analogy of *implicit*. It dates from about 1950. Though most dictionaries don't include the word, it has become quite common—e.g.:

- “The murders have come mostly from the right, but from the left, as well, and it is widely felt that the government has been at least *complicit* in the deaths of several liberals.” Nicholas Lemann, “How Realpolitik Undid One Diplomat,” *Wash. Post*, 6 July 1980, at A1.
- “Far from attacking racism at its root, Mr. Freedman charges, Finch was *complicit* in it.” David Margolick, “Chipping at Atticus Finch’s Pedestal,” *N.Y. Times*, 28 Feb. 1992, at B1.
- “‘Shanghai Knights,’ like ‘Shanghai Noon,’ was written by Alfred Gough and Miles Millar, and opens once again in the Forbidden City, where a pretender to the British throne becomes *complicit* in a dastardly deed.” Joe Morgenstern, “In ‘Shanghai Knights,’ Chan Plays It for Kicks,” *Wall Street J.*, 7 Feb. 2003, at W1.

Because it is at least as well formed as its alternative and has now established itself as the more common form, *complicit* should be accepted as standard. **Complicitous*, despite its promising beginnings, should now be regarded as a NEEDLESS VARIANT.

Current ratio: 14:1

compliment; complement. Both as verbs and as nouns, these words are often confounded. *Compliment* = (1) vb., to praise <she complimented the book lavishly>; or (2) n., a laudatory remark <her generous compliments emboldened the young author>. *Complement* = (1) vb., to supplement appropriately or adequately <special Thai desserts complemented the curries nicely>; or (2) n., an adequate supplement <the flowering plants are a splendid complement to the trees offered at the nursery>.

Compliment sometimes displaces *complement*, especially in the phrase *full complement* (= a complete set)—e.g.:

- “The Contract Appeals Board has never had a full *compliment* [read *complement*] of five administrative judges, the task force said, noting that the agency ‘at times has had difficulty achieving a quorum because of understaffing.’” Vernon Loeb, “Task Force Assails D.C. Procurement System,” *Wash. Post*, 15 Feb. 1996, at B3.
- “The West Brookfield Police Department now has a full *compliment* [read *complement*] of six full-time police officers.” J.P. Ellery, “2 Full-Time Officers Appointed,” *Telegram & Gaz.* (Worcester), 13 Nov. 1996, at B2.
- “Effective July 2008, this new law provides for the full *compliment* [read *complement*] of APNs, regardless of specialty, to credential with the Colorado Medicaid Services and open new channels to health care access.” Tay Kopanos, “Government Affairs and Public Policy Committee,” *Colorado Nurse*, 1 Dec. 2008, at 13.

The reverse error, *complement* for *compliment*, is rare but does occur—e.g.: “The letter from Tiger *complimented* [read *complimented*] Laddie Boy for sticking

by his master despite the hard times and accusations.” Stanley Coren, *The Pawprints of History* 269 (2002).

LANGUAGE-CHANGE INDEX

1. **full compliment* for *full complement*: Stage 1
Current ratio (*full complement* vs. **full compliment*): 14:1
2. *complement* misused for the verb *compliment*: Stage 1
Current ratio (*complimented her on* vs. **complimented her on*): 32:1

complimentary; complementary. This pair of adjectives is even more susceptible to confusion than the corresponding nouns. When a mistake occurs, *complementary* usually displaces *complimentary*—e.g.:

- “[William M.] Finkelstein knows his parents can handle it—and then some. ‘If they catch wind of somebody saying some less than *complementary* [read *complimentary*] remarks about the show, they hunt them down,’ he said, laughing.” Deborah Seibel, “Creator Draws on His Past to Conduct ‘Civil Wars,’” *Chicago Trib.*, 15 Mar. 1992, TV Week §, at 3.
- “His teacher thought he was quite intriguing and original, and sent the manuscript to Faber in London, who published it, sent him the customary ten copies, *complementary* [read *complimentary*] author’s copies, while he proceeded to get out on the street and try to sell.” William Gaddis, *The Rush for Second Place* 127 (2002).
- “During their stays, guests will be given *complementary* [read *complimentary*] access to the Queen City Racquet and Fitness Center.” Jenny Callison, “Business Notes,” *Cincinnati Enquirer*, 13 Apr. 2003, at D3.
- “Casino host Sam Boyd, son of Boyd Gaming Chairman Bill Boyd, keeps the players comfortable with *complementary* [read *complimentary*] rooms and other amenities as the game stretches from hours into days.” Jeff Simpson, “Big Games Bring In Big Money, Big Names,” *Las Vegas Rev.-J.*, 13 Apr. 2003, at E1.

LANGUAGE-CHANGE INDEX

complementary misused for *complimentary*: Stage 1

comply. A. Preposition with. Since the 17th century, *comply* has taken the preposition *with*, not *to*—e.g.:

- “Vickers already *complies to* [read *complies with*] U.S. Department of Defense standards.” Kelly Russell, “U.S. Companies Fall in Line with Europe to Guarantee Product Quality,” *Miss. Bus. J.*, 9 Jan. 1995, at 1.
- “In this case its power is further weakened because the Postal Service is not an actual federal agency and *complies to* [read *complies with*] the preservation act voluntarily.” Tom Angleberger, “Post Office Closing Won’t Be Delayed,” *Roanoke Times*, 8 Aug. 1997, at NRV1.

LANGUAGE-CHANGE INDEX

**comply to* for *comply with*: Stage 1
Current ratio (*comply with* vs. **comply to*): 185:1

B. For follow. *Comply* suggests a hierarchy of authority: an inferior *complies with* an order from a superior. That’s certainly not the case when the Arizona Supreme Court decides not to follow a recommendation of the Arizona Commission on Judicial Conduct: “In its 23-year history, the commission has only once recommended that a judge be removed from office. The Supreme Court did not *comply with*

[read *follow*] that recommendation.” Joe Salkowski, “Jett Shouldn’t Be Removed, Panel Is Told,” *Ariz. Daily Star*, 15 Jan. 1994, at A1, A2.

compose. See **comprise (A)**.

compound, v.t., has been the victim of a SLIPSHOD EXTENSION arising from its primarily legal sense. The word has four basic meanings: (1) “to let a fund grow by adding interest earned to the principal, thereby earning more interest”; (2) “to put together, combine, construct, compose” <to compound sand and gravel>; (3) “to settle (any matter) by a money payment, in lieu of other liability” <to compound a debt>; and (4) “to forbear from prosecuting in exchange for a bribe, or to cause (a prosecutor) so to forbear” <to compound a felony>. For senses 3 and 4—the legal senses—the noun corresponding to this verb is *composition*.

The word has been sloppily extended because “non-lawyers have misapprehended the meaning of *to compound* a felony. . . . [The word] is now widely abused to mean: to make worse, aggravate, multiply, increase.” Philip Howard, *New Words for Old* 19 (1977). No doubt the interpretation follows an analogy with savings growing as the interest compounds. Examples of this usage now abound—e.g.:

- “The Sandbridge shoreline has been retreating throughout all recorded history, and buying a little more time while gambling on federal support only *compounds* [read *worsens*] the city’s problems.” Letter of H. Pritchard-Rudnick, “Sandbridge Sticker Shock,” *Virginian-Pilot* (Norfolk), 17 Dec. 1996, at A18.
- “To *compound* [read *aggravate*] the problems for the Tar Heels, Vince Carter, who suffered a hip pointer in the loss to Wake Forest, is doubtful for Saturday’s matchup with Virginia.” Carter Strickland, “Around the Atlantic Coast Conference,” *Morning Star* (Wilmington, N.C.), 10 Jan. 1997, at C3.
- “The daftness was *compounded* [read *worsened*] by the caption, which treated this legendary archetype on the same level as a colour photograph of Kinnear.” Guy Keleny, “Lies, Damn Lies and Pork Pies Might Damage Your Health,” *Independent*, 22 Aug. 2015, at 39.

Most American lawyers probably don’t understand the phrase *to compound a felony* when they see it in older lawbooks. It is not quite true, then—at least in the United States—that “to write ‘he *compounded* the offence’ (when what is meant is that he did something to aggravate the offence) is to vex every lawyer who reads the sentence, and to provoke numbers of them to litigious correspondence in defence of their jargon.” Howard, *New Words for Old* at 20.

“aggravating a felony”: Stage 4

COMPOUND ADJECTIVES. See PHRASAL ADJECTIVES.

COMPOUND SENTENCES. See SUBORDINATION AND COORDINATION.

comprehensible. So spelled—not **comprehensible*. See -ABLE (A).

Current ratio: 6,135:1

compressible. So spelled—not **compressible*. See -ABLE (A).

Current ratio: 2,447:1

comprise. A. And compose. Correct use of these words is simple, but increasingly rare. The parts *compose* the whole; the whole *comprises* the parts. The whole is *composed* of the parts; the parts are *comprised* in the whole. *Comprise*, the more troublesome word in this pair, means “to contain; to consist of”—e.g.:

- “It will be seen that this little book *comprises* three sections not unusual in a college handbook.” John Crowe Ransom, *A College Primer of Writing* iii (1943).
- “In 1989 the second edition of the *OED* *comprised* twenty large volumes.” Anthony Burgess, *A Mouthful of Air* 343 (1992).
- “Summit Hall Farm *comprises* several hundred acres on the exterior portion of the original settlement of the Gaither family.” Lana White Austin, “History and High Tech in Montgomery,” *Wash. Times*, 30 May 1997, at F41.

B. Erroneous Use of *is comprised of. The phrase **is comprised of* is increasingly common but has long been considered poor usage. It was not a frequent collocation until about 1950. Replace it with some other, more accurate phrase—e.g.:

- “The Rhode Island Wind Ensemble *is comprised of* [read *comprises* or *has*] 50 professional and amateur musicians, ranging in age from 15 to 82.” “At the Colleges: Brown University,” *Providence J.-Bull.*, 14 Sept. 1997, at H3.
- “This group *is comprised of* [read *comprises* or *is made up of*] the 160,000 uninsured residents of Nassau County and an estimated equivalent number of under-insured.” Letter of Rosemarie C. Guercia, “Providing Health Care,” *Newsday* (N.Y.), 6 Oct. 1997, at A33.
- “Moreover, the crowd in the mysterious room *was comprised of* [read *comprised* or *was composed of*] adults, and Harry knew there were not nearly that many teachers at Hogwarts.” J.K. Rowling, *Harry Potter and the Goblet of Fire* 584 (2000).

LANGUAGE-CHANGE INDEX
**is comprised of* for *comprises*: Stage 4

Current ratio (*comprises* vs. **is comprised of*): 6:1

C. Comprise for make up or constitute. If the whole comprises the parts, the reverse can’t be true—e.g.:

- “Of the 50 stocks that *comprise* [read *make up*] the index, 40 had gains, 8 had losses and 2 were unchanged.” “Market Finishes Monster Week,” *Fla. Today*, 15 June 1997, at E2.
- “The 18 countries that *comprise* [read *constitute* or *make up*] APEC represent some of the fastest growing economies in the world.” “U.S. Ties to Asia: Why Should We Care?” *Daily News* (L.A.), 25 Nov. 1997, at B1.

LANGUAGE-CHANGE INDEX
comprise misused for *are comprised in*
or *constitute*: Stage 3

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

D. Comprise for are. This is an odd error based on a misunderstanding of the meaning of *comprise*. E.g.: “They *comprise* [read *are*] three of the top four names in the batting order of the 30 most influential sports people in B.C. for 1997.” Mike Beamish, “B.C.’s Top Guns,” *Vancouver Sun*, 22 Feb. 1997, at G1.

E. Misspelled *comprize. This is an infrequent error—e.g.: “Hence, if a sample *were comprized* of [read *comprised*] a wide diversity of organizations, drawn from several industries, an accounting firm classified as having an ‘elite’ culture in this study may be classified as having a ‘collegial’ culture compared to other organizations included in another study.” Scott Holmes & Stephen Marsden, “An Exploration of the Espoused Organizational Cultures of Public Accounting Firms,” *Accounting Horizons*, Sept. 1996, at 26.

LANGUAGE-CHANGE INDEX

comprise misspelled **comprize*: Stage 1
Current ratio (*comprised* vs. **comprized*): 683:1

F. Compromise for comprise. See DOUBLE BOBBLES.

comptroller (= a government official in charge of finance, audits, and the like) is really the same word as *controller* (the spelling used for the equivalent person in private business). The word is pronounced /kən-**trōh**-lər/—the same as *controller*. Sounding the -p- has traditionally been viewed as semiliterate. (See PRONUNCIATION (B).) *Comptroller* is more common in AmE than in BrE, where it is archaic.

The strange spelling of *comptroller* originated in the zeal of 15th-century Latinists who sought to respell medieval French loanwords on the “purer” Latin model. Hence *account* became *acctpt*, and *count* became *compt*. *Comptroller* is one of the few survivals among such respellings, and it is also one of the bungles perpetrated by those ardent Latinists: the *con-* in *controller* was mistakenly associated with the word *count*, when in fact it is merely the Latin prefix. So the respelling (which was never supposed to affect the pronunciation) should never have been. But we are several centuries too late to correct it, the result being that many people have difficulty pronouncing the word.

LANGUAGE-CHANGE INDEX

comptroller mispronounced /**komp**-trōh-lər/: Stage 4

compute; *computate. The first is standard. The second is a back-formed NEEDLESS VARIANT—e.g.: “The OSRAP gives logisticians the ability to vary the parameters used in *computating* [read *computing*] requirements.” John R. Millard, “Computing Requirements for a Changing Army,” 33 *Army Logistician*, Mar. 2001, at 21. See BACK-FORMATIONS.

LANGUAGE-CHANGE INDEX

**computate* for *compute*: Stage 1
Current ratio (*compute* vs. **computate*): 18,445:1

COMPUTERESE, the JARGON of computer wizards, is making inroads into STANDARD ENGLISH. Thus *access* and *format* and *sequence* have become verbs, *input* has enjoyed widespread use as both noun and verb,

and *online* and *user-friendly* have begun to be used as models for NEOLOGISMS (e.g., *on-stream* used of an oil well, *reader-friendly* used of well-written documents). No one can rightly object, of course, to computerese in computing contexts, where it is undeniably useful. But many computer terms have acquired figurative senses, thereby invading the general language. Careful users of language are wary of adopting any of these trendy locutions. Although some of the terms may remain and become standard, many others will keep their jargonistic stigma. Still others will thrive for a time and then fall into disuse. Such are the vagaries of the English vocabulary. See OBSCURITY.

computerize. See -IZE.

comrade; *camarade. The latter, an archaic GALLICISM, is a NEEDLESS VARIANT. See **camaraderie**.

Current ratio: 12,486:1

comstockery (often cap.) refers to prudish censorship, or attempted censorship, of supposed immorality in art or literature. In 1873, Congress passed the so-called Comstock Law—a federal statute to control obscenity, pornography, abortion, and the use of contraceptives—pushed through by one Anthony Comstock (1844–1915), who was a leader of the New York Society for the Suppression of Vice. George Bernard Shaw invented the word *comstockery*, pejorative from the first, when he wrote in *The New York Times* in 1905: “*Comstockery* is the world’s standing joke at the expense of the United States.”

concede. See **cede**.

concededly. See -EDLY & SENTENCE ADVERBS.

***concensus.** See **consensus**.

concept; conception. Both may mean “an abstract idea.” *Conception* also means “the act of forming abstract ideas.” H.W. Fowler wrote that *conception* is the ordinary term, *concept* the philosophical term (*FMEU1* at 88). But the words have undergone a reversal since he was writing in 1926, and today *concept* is the ordinary term.

True, *concept* is sometimes just a high-flown equivalent of *design*, *program*, *thought*, or *idea*—e.g.:

- “Like everyone else familiar with ‘Star Trek,’ Frakes has his own thoughts about the longevity of the *concept* [read *program* or *idea*], which debuted on television 30 years ago this fall.” Ron Weiskind, “Frakes to Helm Next ‘Trek’ Film—Behind the Camera,” *Chicago Sun-Times*, 12 Apr. 1996, Weekend Plus §, at 58. (On the use of *helm* as a verb, see **helm**.)
- “That is good news for [Senator] Kerry, who was dragged kicking and screaming to the *concept* [read *idea*] of a long series of debates that began in April.” Geeta Anand et al., “Defying Assumptions, Poll Shows Debates Helped Kerry with Voters,” *Boston Globe*, 8 Sept. 1996, at B7.
- “The basic *concept* [read *idea*] is to activate a string while lightly touching one of its nodes—a point where the string divides into fractional lengths.” Muriel Anderson, “Sweeping Palm Harmonics,” *Guitar Player*, Dec. 1996, at 146.

But the word is becoming so commonplace that it has lost most of the original distinction.

When the reference is to a way of conceiving or a manner of thought, as opposed to some straightforward idea, *conception* is the right word—e.g.:

- “Economists are often too narrow or mechanical in their *conception* of risk, viewing it simply as the variance or standard deviation of the expected return.” Charles Cathcart, “Broader Implications of the Information Age,” *Global Investor*, Feb. 1996, at 42.
- “The wider audience attracted to ‘Going Public’ on Friday had the advantage of comparing very different *conceptions* of dance.” “A ‘Public’ Service,” *Wash. Post*, 19 Nov. 1996, at D9.
- “In addition, he returns to Murger’s *conception* of the central character of Mimi, giving her a sexy, tempestuous, flirtatious character as well as making her a heroin addict.” Ellen Pfeifer, “‘Boheme,’ Callas Get Worked Over,” *Boston Herald*, 24 Nov. 1996, at 43.

conception, immaculate. See **immaculate conception.**

conceptual; conceptualistic; conceptional; conceptive. These words are very close. *Conceptual* and *conceptional* both mean “of, relating to, or involving a conception or idea”—*conceptual* being the usual term. E.g.: “The *conceptual* design work, funded by the Transportation Trust Fund, is scheduled for completion next summer.” Pat R. Gilbert, “Bergen to Get Rte. 4 Project, Light-Rail Study,” *Record* (N.J.), 7 Nov. 2002, at A3.

When not simply a NEEDLESS VARIANT of *conceptual*, the word *conceptional* serves as the adjective corresponding to a different kind of conception, namely, the fertilization of an egg—e.g.:

- “It is not easy to reconcile this attitude with the papal concession of some kinds of anti-*conceptional* measures.” Glanville Williams, *The Sanctity of Life and the Criminal Law* 69 (1957; repr. 1972).
- “Retardation of neuronal maturation in premature infants was compared with term infants of the same post-*conceptional* age.” Naomi Breslau et al., “Psychiatric Sequelae of Low Birth Weight at 6 Years of Age,” *J. Abnormal Child Psychology* 385 (1996).

Conceptualistic = (1) of, relating to, or involving the philosophical or psychological doctrine of conceptualism; or (2) employing or based on conceptions. In sense 2, *conceptualistic* bears a pejorative sense—e.g.: “This highly *conceptualistic* reasoning is not only difficult to square with the language of section 2(c); it also impedes efforts to interpret that provision.” Arthur H. Travers, “Commercial Bribery and the Antitrust Laws,” 40 *Antitrust Bull.* 779 (1995).

Conceptive = of, relating to, or involving the process of mental conception (i.e., forming thoughts and ideas). E.g.: “Contemporary genetic research continues to reveal how profoundly other more ‘spiritual’ traits of the person, such as intelligence and emotive temperament, are molded by one’s *conceptive* history.”

John J. Conley, “Narcissus Cloned,” *America*, 12 Feb. 1994, at 15. Sometimes, though, *conceptive* appears in contexts in which *conceptional* would be better—e.g.: “Early methods of *preconceptive* [read *preconceptional*] sex selection—which, in contrast to *post-conceptive* [read *postconceptional*] selection, seem to afford greater latitude to human ingenuity—may be roughly sorted into biologic and symbolic techniques.” Owen D. Jones, “Bringing the Child of Your Choice into the Future,” *Recorder* (S.F.), 31 Aug. 1993, at 8.

conceptualize, a 19th-century coinage, is often a bloated word that can be replaced by *conceive*, *envision*, *think*, *understand*, or *visualize*—e.g.:

- “Like Veblen, Innis *conceptualizes* [read *conceives* of or, better, *sees*] the price system as an active social force.” Fletcher Baragar, “The Influence of Thorstein Veblen on the Economics of Harold Innis,” 30 *J. Econ. Issues* 667 (1996).
- “His ability to *conceptualize* [read *conceive* or, possibly, *understand* or *see*] and demarcate diverse legal systems opened the world of comparative law to generations of students.” Wolfgang Saxon, “Rudolf Schlesinger, 87, Expert on the World’s Legal Systems,” *N.Y. Times*, 22 Nov. 1996, at D19.
- “Class 29 is seeking an artist or landscape architect to *conceptualize* [read *design*] and fabricate the monument.” Amanda Purser, “Local Briefs,” *Pensacola News J.*, 14 Aug. 2015, at A4.

concern, n., merits editorial attention when used in either of two ways. First, it is sometimes used in the sense of “company,” “firm,” or “business.” In this use, the word smacks of old-fashioned BUREAUCRATIC and should usually yield to a more precise word—e.g.:

- “He [Erskine Boyce Bowles] has long been the President’s first choice to succeed Mr. Panetta, but he had to be persuaded, having just last January started a merchant banking *concern* [read *firm*] that specializes in buying mid-sized companies on behalf of investors.” Todd S. Purdum, “After the Election: The Players,” *N.Y. Times*, 9 Nov. 1996, § 1, at 1.
- “Other researchers charged that the Nazis sold leather from Jewish factories to the Swiss shoe *concern* [read *company*] Bally.” Nomi Morris, “Nazis, Gold—and Justice,” *Maclean’s*, 11 Nov. 1996, at 32.

The word is more defensible when it refers to more than just businesses, as in this example where the *concerns* might also include interests such as land or mineral rights that are leased to the businesses: “Of West Virginia’s 34 senators, . . . [4] have interests in oil, gas and timber *concerns*.” Scott Finn, “Legislators’ Conflicts Can Cut Both Ways,” *Sunday Gaz. Mail* (Charleston, W. Va.), 28 May 2000, at A1.

Second, the word is sometimes otiose—e.g.: “This has become one of the most troubling aspects of the Clinton tenure, its across-the-board willingness to subvert national agencies charged with law enforcement and security *concerns* [delete *concerns*].” “Integrity of the Institutions,” *Wall Street J.*, 20 Mar. 1997, at A16, A20. The word adds nothing to that sentence.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

concerning. For this word as an acceptable dangling modifier, see DANGLERS (E).

concerto (= a musical composition for orchestra and a solo instrument) has two plurals: *concertos* (preferable) and *concerti* (pretentious). The anglicized plural has greatly predominated since the 18th century. Both *Grove's Dictionary of Music and Musicians* (Eric Blom ed., 5th ed. 1954—as well as later editions) and the *Harvard Dictionary of Music* (Willi Apel ed., 1972) use the plural form *concertos*. But in foreign phrases where the Italian plural is unavoidable, it is quite proper: *concerti grossi, concerti ecclesiastici*, etc. See PLURALS (B).

Occasionally the incorrect form **concertoes* appears—e.g.: “When I work on Mozart *concertoes* [read *concertos*], for example, there has to be a minimum of time expended—long periods.” Jeff Simon, “Keith Jarrett: A Rare Interview,” *Buffalo News*, 25 Aug. 1996, at F1 (attributing the statement to Keith Jarrett).

LANGUAGE-CHANGE INDEX

1. *concertos* as a plural (as opposed to *concerti*): Stage 5

Current ratio: 9:1

2. *concertos* misspelled **concertoes*: Stage 1

Current ratio: 25,893:1

cessionnaire (= the owner or manager of a refreshment stand at a recreational facility) is the standard term. **Concessioner* and *cessionary* are NEEDLESS VARIANTS.

concessive; concessionary; concessional. *Concessive* = (1) tending to concede <a concessive stance in negotiating>; or (2) expressing the idea of concession <whereas is commonly a concessive word>. *Concessionary* = of, relating to, or involving concession or concessions <concessionary companies—e.g., food vendors at the fairgrounds>. *Concessional* is the usual word in financial contexts when the reference is to a concessional loan, one offered on favorable terms—e.g.: “Generous *concessional* treatment of debt-burdened African economies is essential if the continent’s development crisis is to end.” “Aid and Reform in Nigeria,” *Fin. Times*, 6 Jan. 1992, at 10.

LANGUAGE-CHANGE INDEX

**concessional* for *concessive*: Stage 1

conch (= the spiral shell of a large mollusk) is pronounced either /konk/ (preferred) or /konch/. The plural form depends on which pronunciation is used. Those who say /konk/ make the plural *conchs*; those who say /konch/ make the plural *conches*. Historically, *conchs* has been the usual plural in both AmE and BrE, but *conches* has recently surged ahead, especially in BrE.

Current ratio (*conches* vs. *conchs*): 1.5:1

concierge /kon-see-**airzh**/ is frequently mispronounced /kon-see-**air**/ by those affecting a French pronunciation. In French, though, the -g- is pronounced /zh/ because the vowel -e follows it. So the word is not like many other French words—*lait* and *rendezvous*, for example—in which the final consonant is silent.

Still, an informal survey at hotels in major American cities suggests that about half of all hotel employees use the incorrect pronunciation. See PRONUNCIATION (B) & HYPERCORRECTION (K).

LANGUAGE-CHANGE INDEX

concierge mispronounced /kon-see-**air**/: Stage 2

conciliatory; *conciliative. *Conciliatory* = (1) tending to conciliate; or (2) of, relating to, or involving conciliation or mediation. **Conciliative* has been a NEEDLESS VARIANT for centuries.

Current ratio: 1,394:1

concision; conciseness. Drawing a fine distinction, H.W. Fowler wrote: “*Concision* means the process of cutting down, and *conciseness* the cut-down state” (*FMEU1* at 295). In fact, though, the two are generally used as synonyms for the cut-down state—e.g.:

- “Pagels’ footnotes are a model of erudition and *conciseness*.” Shalom Goldman, “Elaine Pagels Traces the Religious Roots of the Tendency to Demonize the Other,” *Newsday* (N.Y.), 4 June 1995, at 29.
- “The type is undoubtedly familiar to Kennedy, a former newspaperman who has successfully transferred the virtues of clarity and *concision* to fiction.” R.Z. Sheppard, “Living with the Ashes,” *Time*, 13 May 1996, at 92.
- “The second of the pair seems to me one of the finest things Knussen has ever done, a miracle of *conciseness* and profundity that is all over in less than three minutes.” Andrew Clements, “Classical CD of the Week,” *Guardian*, 22 Nov. 1996, at T20.
- “Tempchin’s best songs, whether vintage or on his lovingly crafted new album, are marvels of *concision*.” George Varga, “Parts of Tempchin’s Past Re-Emerge as New Path Opens,” *San Diego Union-Trib.*, 9 Aug. 2015, at E7.

Both words are common today, *conciseness* a little more so in both BrE and AmE. When *concision* appears, it is typically used in a sense that Fowler implicitly disapproved. This frequency might reflect the influence of *precision*, by analogy.

What ruling, then? If any DIFFERENTIATION is now possible, the word *conciseness*—like other *-ness* words—emphasizes a quality, whereas *concision* emphasizes a static condition. This is a fine distinction indeed, and one that not all writers will be able to apply. When the distinction is hard to make, let euphony govern. But it would be a mistake (and a bootless one) to brand either word a NEEDLESS VARIANT.

conclusive; conclusory; *conclusionary; *conclusional. *Conclusive* (the common word) = authoritative; decisive. *Conclusory* (a common legal term) = expressing a factual inference without stating the facts or reasoning on which the inference is based <conclusory allegations>. The other two words are NEEDLESS VARIANTS of *conclusory*.

Current ratio (*conclusory* vs. **conclusionary* vs. **conclusional*): 108:7:1

concomitance; *concomitancy. Though neither is common, *concomitance* is standard. **Concomitancy* is a NEEDLESS VARIANT.

Current ratio: 27:1

CONCORD = grammatical agreement of one word with another to which it relates. Concord embraces number, person, case, and gender. It applies most often to (1) a subject and its verb; (2) a noun and its pronoun; (3) a subject and its complement; (4) a noun and its appositive; (5) a relative pronoun and its antecedent; and (6) an adjective and its noun. Errors in concord for (1), (2), and (3) are examined at (A), (B), and (C) below; for (4), see **APPOSITIVES**; for (5), see (D) below and **REMOTE RELATIVES**; for (6), see (E) below.

A. Subject–Verb Disagreement. Errors in **SUBJECT–VERB AGREEMENT** are, unfortunately, legion in AmE, especially in speech—e.g.:

- “Every one of us *have* [read *has*] a role to play . . .” President Bill Clinton, State of the Union Address, 23 Jan. 1996, at 8:49 PM CST.
- In reference to Haiti: “The flow of desperate refugees to our shores *have* [read *has*] subsided.” President Bill Clinton, State of the Union Address, 23 Jan. 1996, at 8:56 PM CST.
- “The price of sports tickets *are* [read *is*] rising.” Barbara Kingsley, “Soaring Ticket Prices Test Fans’ Loyalty,” *Seattle Times*, 19 Jan. 1997, at D6.
- “When one of us *suffer* [read *suffers*], all of us *suffers* [read *suffer*].” President George W. Bush, speech to the Victory 2002 Luncheon, Charleston, S.C., 29 July 2002.

But the error does occasionally find its way into edited publications, too—e.g.:

- “Because words *is* [read *are*] my business, I knew most of the examples on the Web page, though I had to look up ‘oubliette.’” Mel White, “Words Qua Words,” in *Active Years*, Nov. 2004, at 64.
- “Obviously, gryphon and human *wasn’t* [read *weren’t*] the only *thing* [read *things*] in its mix.” Keri Arthur, *Full Moon Rising* 217 (2006).

The most common error occurs with the **EXPLETIVE** *there*, and especially when it’s contracted with the verb *is* (e.g., *There’s two ways we can go* instead of *There are two ways we can go*). This error also occurs with the adverbs *here* (e.g., *Here’s your menu and wine list* instead of *Here are your menu and wine list*) and *where* (e.g., *Where’s my wallet and keys?* instead of *Where are my wallet and keys?*). The grammarian Ed Good, who trains technical writers, calls this “[t]he biggest grammar mistake in the United States.” C. Edward Good, *A Grammar Book for You and I . . . Oops, Me!* 301 (2002). For more on this error, see **there is (B)**.

The agreement mistake can also come up in relative clauses—e.g.: “‘We must not be silent,’ said German Chancellor Angela Merkel at a memorial ceremony in Berlin’s renovated Rykestrasse synagogue, one of the few that *was* [read *were*] not burned down that night by the Nazis . . .” Bret Stephens, “‘Tolerance’ Is Not the Lesson of Kristallnacht,” *Wall Street J.*, 11 Nov. 2008, at A15. (The antecedent of the relative pronoun *that* is *few*, not *one*, so the pronoun takes on the

number of its antecedent.) See **one of the [+ pl. n.] who (or that)**.

Are these merely symptoms of the decay of modern English? Consider: “The adequate narration may take up a term less brief, especially if explanation or comment here and there *seem* [read *seems*] requisite to the better understanding of such incidents.” Herman Melville, *Billy Budd* 73 (1891; repr. [Signet ed.] 1979).

Quoting Melville is not to excuse lapses of this kind: every generation can be more vigilant about its subjects and verbs. But we shouldn’t consider these problems to have been unthinkable two or three generations ago. Slips of the pen can be found in the works of writers from Shakespeare to the present.

The British—oddly to American eyes and ears—consider organizations, especially sports teams, plural—e.g.:

- “On the field, England *were* going through their ritual reincarnation . . . England *are* beset by similar urges.” Kevin Mitchell, “Terrace Provides a Few Horse Laughs,” *Observer*, 25 July 1997, Sport §, at 2.
- “When the rain arrived yesterday, Australia *were* 201 runs ahead.” Graham Otway, “Aussies Turn the Screw,” *Sunday Times* (London), 27 July 1997, § 2, at 1.

Kingsley Amis defends this construction: “Anybody with a tittle of wit knows that country-plus-plural refers to a sporting event or something similar. This is precisely what the verb is doing in the plural. It shows that a number of individuals, a team, is referred to, not one thing, a country.” Kingsley Amis, *The King’s English* 59–60 (1997). But Americans are no more accustomed to saying *England are* than they are to writing *anybody with a tittle of wit*. It’s pure BrE, and *England are* surely isn’t BrE at its best.

B. Noun–Pronoun Disagreement. Depending on how you look at it, this is either one of the most frequent blunders in modern writing or a godsend that allows us to avoid sexism. Where noun–pronoun disagreement can be avoided, avoid it. Where it can’t be avoided, resort to it cautiously because some people may doubt your literacy—e.g.: “You can only teach a person something if that person can comprehend and use what is being taught *to them* [delete *to them*].” J.M. Balkin, “Turandot’s Victory,” *2 Yale J. Law & Humanities* 299, 302 (1990).

This type of disagreement in number is especially common in BrE—e.g.:

- “Under new rules to be announced tomorrow, it will be illegal for *anyone* to donate an organ to *their wife*.” Aileen Ballantyne, “Transplant Jury to Vet Live Donors,” *Sunday Times* (London), 25 Mar. 1990, at A3.
- “Anyone can set *themselves* up as an acupuncturist.” Sarah Lonsdale, “Sharp Practice Pricks Reputation of Acupuncture,” *Observer Sunday*, 15 Dec. 1991, at 4.
- “A starting point could be to give more support to the company secretary. *They are*, or should be, privy to the confidential deliberations and secrets of the board and

the company.” Ronald Severn, “Protecting the Secretary Bird,” *Fin. Times*, 6 Jan. 1992, at 8.

As this seeming sloppiness mounts—and invades edited AmE—the complaints mount as well. For example: “Columnist James Brady . . . noted on page 38 that Richard F. Shepard was grammatically incorrect when he wrote, ‘Nobody remembers a journalist for *their* writing.’ Perhaps it was Mr. Shepard who wrote the headline for the AT&T ad that appeared on Page 37 of the same issue: ‘This florist wilted because of *their* 800 service.’” Letter of Jerry Galvin, *Advertising Age*, 4 Nov. 1991, at 26.

Why is this usage becoming so common? It is the most convenient solution to the single biggest problem in sexist language—the generic masculine pronoun. A recent advertisement says, “Every student can have *their* own computer,” so as to avoid saying *his own computer*—a phrasing that would probably alienate many consumers. *The Macmillan Dictionary of Business and Management* (1988) defines *cognitive dissonance* as “a concept in psychology [that] describes the condition in which a *person’s* attitudes conflict with *their* behavior” (p. 38). In his 1991 State of the Union address, President George Bush said: “If *anyone* tells you that America’s best days are behind her, then *they’re* looking the wrong way.” And one of the best-edited American papers allows this: “If the newspaper can’t fire him for an ethical breach surely *they* [read *it*] can fire him for being stupid.” Michael Gartner, “U.S. Law Says We Have to Kill Saddam Hussein the Hard Way,” *Wall Street J.*, 31 Jan. 1991, at A15. In all varieties of World English, resistance to the singular *they* is fast receding.

For related discussions, see **each (A)**, **PRONOUNS (D)** & **SEXISM (B)**.

C. Subject–Complement Disagreement: Mismatched Number in Cause and Effect. Another common mistake, in AmE and BrE alike, is to attribute one result to two separate subjects, when logically a separate result necessarily occurred with each subject—e.g.:

- “In school, seats are not assigned, yet students tend to sit in the same seats or nearly the same each time, and sometimes feel vaguely resentful if *someone else gets* [read *others get*] there first and *takes ‘their’ seat* [read *take ‘their’ seats*].” Robin T. Lakoff, *Talking Power: The Politics of Language in Our Lives* 121 (1990). (This might be broken into two sentences, the second of which would read: *They sometimes feel vaguely resentful if “their” regular seats are taken by others.*)
- “Designated hitter Jason Layne, already sporting a black eye, was hit by a *pitch* [read *pitches*] twice.” Rick Cantu, “Texas Baseball Team Thumps Favorite Tech,” *Austin Am.-Statesman*, 15 Mar. 1996, at C1, C9. (The grammar here misleadingly suggests that the batter was hit twice by the same pitch.)

A related problem occurs in the following sentence, in which *both* is followed by a singular complement (*candidate*): “Today, both camps were enthusiastic about how *their candidate* fared.” Richard L. Berke, “Rival Camps in Final Debate Faced Subtle and Basic Aims,” *N.Y. Times*, 18 Oct. 1996, at A1, C21. The error

could have been corrected by saying *each camp was . . . its candidate* or *both camps were . . . their candidates*.

This is not an infallible rule, however. When the complement is not a concrete noun, the singular is usually required <the compromise let both adversaries retain their dignity>. The singular is also needed with mass nouns, of course <both cities get their water from the same reservoir>. And sometimes neither the singular nor the plural can prevent ambiguity. As one authority pointed out, in *Both men rely heavily on their wives*, the men may or may not be bigamists; but if the sentence is written *Both men rely heavily on their wife*, then she most certainly is one. Barbara Wallraff, *Word Court* 127–28 (2000).

D. Relative Pronoun–Antecedent Disagreement. This problem doesn’t often arise, but a relative pronoun is supposed to agree with its antecedent in both number and person. So it’s correct to say *It is I who am here*, not **It is I who is here*. Because *I* is first-person singular, *who* must also be first-person singular, and the verb—it naturally follows—must be *am*. Strictly speaking, the following forms are correct:

- *I who have made*;
- *one who has*;
- *they who have*; and
- *I who am*.

E.g.:

- “I have said ugly things about gay people, and I’ve laughed at gay jokes. I, *who am* female and black, and *who know* firsthand the sting of contempt.” Betty Winston Bay, “Facing One’s Own Anti-Gay Bias,” *Courier-J.* (Louisville), 10 Apr. 1997, at A11.
- “In fact, it is *they who have* been let down.” Randy Harvey, “Robinson Proved Only That He Should Move On,” *L.A. Times*, 24 Nov. 1997, at C2.

E. Adjective–Noun Disagreement. Some agreement problems arise between an adjective and the noun or nouns it modifies—e.g.: “In an outpouring of grief such as is seldom seen, the ‘beloved community’ of Martin Luther King’s dream, Tony Brown’s ‘Team America’ came to say good-bye to Barbara [Jordan]. People of *all races*, *social class* [read *classes*], *national origin* [read *origins*] and *sexual orientation* [read *orientations*] joined in mourning her death.” Rosemary Simmons, “Barbara Jordan’s Example Inspires Texas,” *Daily Texan*, 21 Feb. 1996, at 4. But that sentence might read better if *all* were replaced by the “singular” adjective *every* and if each of the nouns were made singular: *People of every race, social class, national origin, and sexual orientation . . .*

F. Possessive Noun as Antecedent. See **POSSESSIVES (K)**.

concrete. See **cement**.

concupiscence (= inordinate lust; extreme sexual desire) is pronounced /kən-kyoo-pi-sən[t]s/.

concussion; contusion. *Concussion* = (1) violent shaking; (2) shock caused by a sudden impact; or (3) injury to the brain caused by a heavy blow.

Contusion = a bruise; an injury resulting from a blow that does not break the skin.

condemn; contemn. To *condemn*, in one sense, is to render judgment against (a person or thing) <the court condemned the accused to life in prison>. The word has passed from legal into general usage mostly in the figurative sense “to disapprove forcefully; to declare reprehensible”—e.g.: “Spiritual rites and modern development clashed when members of a Native American tribe *condemned* the way the Irvine Co. on Wednesday reburied ancient artifacts unearthed in 1994 during the building of a Newport Beach housing development.” Tina Nguyen, “Chief Unhappy with Reburial of Tribal Artifacts,” *L.A. Times*, 28 Nov. 1996, at B1.

In AmE, *condemn* has the additional legal sense “to pronounce judicially (land, etc.) as converted or convertible to public use, subject to reasonable compensation.” E.g.:

- “In *condemning* the structure, city inspectors said large sections of the roof and walls had collapsed.” Will Tracy, “Council Approves Spending to Raze State Theater,” *Hartford Courant*, 26 Apr. 1994, at B3.
- “They fear a massive Everglades restoration project—which includes plans to *condemn* property and raise the water table—will drive them from their land.” “Property Rights: Quiet Revolt,” *Fla. Times-Union* (Georgia ed.), 16 Sept. 2002, at B4.
- “Government should *condemn* property only as a last resort. It should *condemn* only to acquire property it cannot otherwise get that is necessary, not merely desirable, for the public good.” Editorial, *Salt Lake Trib.*, 19 Sept. 2002, at A18.

Contemn = to hold in contempt; to disregard; esp., to treat (as laws or court orders) with contemptuous disregard. The *OED* notes that it is “chiefly a literary word”—e.g.:

- “Rooted as he was in the idiom of Shakespeare and Donne, he *contemned* such trendy ploys.” “Richard Burton, RIP,” *Nat'l Rev.*, 7 Sept. 1984, at 17.
- “From Henry James through John O’Hara, the Irish, once much *contemned* in American life, were sensitively attuned to the horrors of snobbery and stimulated by the delights of social attainment.” Joseph Epstein, *Commentary* (Book Rev.), Nov. 1994, at 52.
- “The best regime would recognize the duty to evaluate all human beings on an equal basis, regardless of nationality, and to respect or to *contemn* persons strictly in accordance with their virtue.” Thomas L. Pangle, “Justice Among Nations in Platonic and Aristotelian Political Philosophy,” *Am. J. Political Science*, 1 Apr. 1998, at 377.

In legal contexts, the corresponding agent noun *contemnitor* is common. But see **contemner**.

condemned, n. As a matter of FUNCTIONAL SHIFT, the past-participial adjective *condemned* is often used as a noun <the condemned were given one last wish>. Occasionally writers erroneously use the word *condemn* in this sense—e.g.: “The drop from the gallows was designed to break the *condemn’s* [read

condemned’s] neck (ensuring near instant death).” Rhett Morgan, “Gallows at Fort Smith Still Attracting Attention,” *Tulsa World*, 28 June 2001, at 9.

LANGUAGE-CHANGE INDEX
condemn misused for the attributive
noun *condemned*: Stage 1

condemner; condemnor. The *-er* spelling (/kən-dem-ər/) is preferred in the general sense “one that disapproves.” But in AmE, *condemnor* (/kon-dem-nor/) or /kən-dem-nər/) predominates in the sense “a public or semipublic entity that expropriates private property for public use.” See *-ER* (A).

condensable. So spelled—not **condensible*. See *-ABLE* (A).

Current ratio: 7:1

condole, v.i.; **console**, v.t. To *condole* is to express sympathy; one *condoles with* another *on* a loss. The verb is intransitive. Although the corresponding plural noun, *condolences*, is quite common, the verb form is rare, especially in AmE. E.g.:

- “Our king could devote himself to *condoling* with flood victims and boosting American products abroad.” Stephen Budiansky, “Putting Monarch Envy in Its Rightful Place,” *U.S. News & World Rep.*, 27 May 1991, at 12.
- “Thompson, though *condoling* with Ned on his father’s death, hopes that Ned might be persuaded to host a reception for the organisation.” “Guinness Peer Wants to Ban Bomb,” *Evening Standard*, 22 June 1992, at 8.

To *console* is to comfort (another), especially in grief or depression. E.g.:

- “Clinton—who *consoled* victims’ families earlier in the day—ordered that more baggage be screened or hand-searched and that aircraft making international flights be fully inspected.” “Experts Key In on Brief Noise in Cockpit Voice Recorder,” *Detroit News*, 26 July 1996, at A1.
- “Fisher *consoled* the parents at the home and later met with them at All Children’s Hospital in St. Petersburg, where the child was taken.” Phuong Nguyen, “Agency for Victims Seeking Volunteers,” *Sarasota Herald-Trib.*, 29 Nov. 1996, at B1.

Occasionally, *condole* is misused for *console*—e.g.: “And as always, countrymen everywhere can continue *condoling* [read *consoling*] the forlorn Cubs, from sea to shining sea.” Thomas Stinson, “Baseball ’94: It’s a Brand New Ballgame!” *Atlanta J.-Const.*, 1 Apr. 1994, at E21.

LANGUAGE-CHANGE INDEX
condole misused for *console*: Stage 1
Current ratio (*consoling the* vs. **condoling the*): 33:1

condominium. Pl. *condominiums*. See PLURALS (B).

condonation; *condonance; condonement. *Condonation* = (1) the pardoning of a fault or misdeed, esp. when the pardon is merely implicit, as when a person who has been wronged acts toward the offender as if the offense is forgotten; or (2) in law, the complete

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

forgiveness and wiping out of a marital offense, esp. adultery. Today, in both AmE and BrE, the word is fairly rare—smacking of SESQUIPEDALITY—and in law is usually confined to discussions of matrimonial offenses.

**Condonance* is a NEEDLESS VARIANT. *Condonement* is a technical term in certain card games.

Current ratio (*condonation* vs. **condonance*): 389:1

conduce to, though slightly bookish, is often a better and always a shorter way of saying *be conducive to* (something desirable)—e.g.: “Writing,’ Mamet says in his book, ‘is a magnificently solitary occupation. One works by oneself all day long, wondering, dreaming, supposing. All attitudes to which Vermont *conduces*.’” Tim Rutten, “National Geographic Travels on Literary Paths,” *L.A. Times* (Home ed.), 19 July 2002, Living §, at 1. See BE-VERBS (B).

When the result referred to is undesirable, *lead* or *contribute* is typically a better word choice—e.g.:

- “Finally, the scheme might well *conduce to* [read *lead to*] the creation of separatist schools that reject the American civic culture even more forcefully than conventional public schools, under the spell of multiculturalism, are already doing.” Chester E. Finn Jr., “Can the Schools Be Saved?” *Commentary*, Sept. 1996, at 41, 44.
- “[A conditional sentence is] weak, and nothing *conduces* [read *contributes*] more certainly to giving the impression that one is a windbag.” Reid Buckley, “The 10 Commandments of Public Speaking,” *Forbes*, 18 Nov. 1996, at 61.
- “This disorientation—or spiritual anomie—stems from strategic loss in history. It *conduces to* [read *leads to*] an insufficiency of self-belief and self-confidence.” Irvin Studin, “Coequal Status for Aboriginals Vital to Our Future,” *Toronto Star*, 28 Dec. 2014, at A11.

conductive; conducive. *Conductive* describes a thing’s ability to conduct energy <conductive wire> <heat-conductive>. *Conducive* describes the quality of promoting, contributing to, or helping to bring about some outcome <conducive to success> <conducive to growth>. *Conductive* is sometimes misused for *conducive*—e.g.:

- “The [University of Michigan’s] witnesses emphasized repeatedly that . . . a diversity of viewpoints, experiences, interests, perspectives and backgrounds . . . creates an atmosphere most *conductive* [read *conducive*] to learning.” Ward Connerly, “Q: Does Diversity in Higher Education Justify Racial Preferences?” *Insight*, 14 May 2001, at 40.
- “Ever the competitor, Tiger Woods said he would not bet on himself to win the 2001 U.S. Open, but that’s only because the short odds are not *conductive* [read *conducive*] to a big payday.” Damon Hack, “Transcending the Sport,” *Newsday* (N.Y.), 13 June 2001, at A70.
- “State parks have the type of terrain that’s not necessarily *conductive* [read *conducive*] to cell phones,” said Tim O’Neill, a Delavan police captain and emergency medical technician.” Anita Clark, “Pay Phones Going Back in at Parks by July 4,” *Wis. State J.*, 1 July 2001, at A1.

LANGUAGE-CHANGE INDEX

conductive misused for *conducive*: Stage 1

Current ratio (*conductive to health* vs.

**conductive to health*): 77:1

conduit is pronounced /*kon*-doo-it/ in AmE, /*kon*-dit/ or /*kən*-dit/ in BrE.

confectionary; confectionery. Despite some overlap, these terms are usefully distinguished. *Confectionary*, an adjective, means (1) “of, relating to, or resembling a confection”; or (2) “of, relating to, or involving confectioners.” *Confectionery*, always a noun, means (1) “confections collectively; candy”; or (2) “a confectioner’s business or place of business; candy store.” The latter is the more frequently used term.

confederation; federation. The distinction between these two words is subtle, but it’s crucial to understanding the nature and history of American political power.

A *confederation* is a league of states, each of which retains its sovereignty. The states may delegate some rights and powers to a central authority—but they do not delegate supremacy over their internal affairs, including the right to withdraw from the confederation. A *federation* is a union of states with a strong central authority and no true regional sovereignty. In the United States, we speak of the *sovereign states*, and they do retain extensive rights and powers of their own. But they are always subject to the U.S. Constitution (the fundamental law of the land) and to the powers it gives to the national government.

William Safire has observed that in 1789 the United States changed, in Northerners’ minds, from a confederation to a federation. But to Southerners, the country retained the characteristics of a confederation. Later, of course, in 1860, Southerners thought that the union could be dissolved. When the Southern states seceded, they chose the word *confederation* to describe their own grouping—although they did not put a right to secede in their own constitution, an inconsistency noted in the North. See William Safire, “Confederacy Rises Again,” *N.Y. Times*, 29 Sept. 1991, § 6, at 18.

confer. In Latin, *confer* means “to compare,” whence the present English meaning of the abbreviated form of *compare*, namely, *cf.* The unabbreviated form *confer* no longer has this meaning; today it means (intransitively) “to come together to take counsel and exchange views” or (transitively) “to bestow, usu. from a position of authority.”

In this latter (transitive) sense, one *confers* something *on*, not *in*, another. E.g.:

- “Web-surfing most likely will not *confer* jurisdiction *in* [read *on*] that service’s home state.” Dale M. Cendali & James D. Arbogast, “Net Use Raises Issues of Jurisdiction,” *Nat’l L.J.*, 28 Oct. 1996, at C7.
- “He said lower interest costs will *confer* benefits *on* all borrowers.” Barry Flynn, “Fed Slashes Rates by Hefty Half Point,” *Orlando Sentinel*, 7 Nov. 2002, at A1.

LANGUAGE-CHANGE INDEX

**confer in* for *confer on*: Stage 1

conferee = (1) a member of or participant in a conference; or (2) one on whom something is conferred. Although this word has the look of a NEOLOGISM, it

predates the Declaration of Independence. Sense 1 is now usual—e.g.:

- “Multipoint communication that supports up to eight *conferees* is essential for videoconferencing to be accepted, he said.” Justin Hibbard, “NetMeeting Gets Videoconferencing,” *ComputerWorld*, 9 Dec. 1996, at 8.
- “In July, Republican House and Senate *conferees* quickly discarded a similar \$3 billion fund designed to help states do exactly that.” Jeffrey L. Katz, “Small Change,” *New Republic*, 9 Dec. 1996, at 14.
- “Attractions like golf—a second course is planned—a beach club built around a man-made lake and beach and the nearby plantations would entice the *conferees* to bring families and stay longer.” Chris Fink, “State Money OK'd for Resort Complex,” *State-Times/Morning Advocate* (Baton Rouge) (Metro ed.), 21 Sept. 2002, at A1.

**Conferree* is a variant form best avoided.

conferencing. Although the *OED* records *conferrence* as a (rare) verb from 1846, the *SOED* and *W3* omit it. Increasingly common in AmE, *conferencing* is often a bloated NEEDLESS VARIANT of *conferring*. The word has also become rather widespread in the forms *teleconferencing* and *videoconferencing*, favorite activities in American business. The word is likely to survive in those forms.

LANGUAGE-CHANGE INDEX

1. *conference* as a verb: Stage 4

Current ratio (*conferring* vs. *conferencing*): 2:1

2. *conference* in the compounds *teleconferencing* and *videoconferencing*: Stage 5

conferment. See **conferral**.

conferrable. So spelled. It is pronounced with the stress on the second syllable: /kən-fər-ə-bəl/. Throughout the 19th century, the spelling **conferrible* was common—but that was superseded by 1900. Cf. **referable**.

Current ratio: 16:1

conferral; conferment. The question is a straightforward one: are we to model the noun after *referral* or *deferment*? Most linguistic questions like this were settled centuries ago, but *confer* is one of those verbs for which English speakers have less frequently needed a corresponding noun.

Dictionaries suggest that *conferral* is a NEEDLESS VARIANT of *conferment* and that it ought to be treated as such. But American sources suggest otherwise. In denoting the act of conferring, *conferral* appears in hundreds of federal-law cases (more than 20 times as often as *conferment*) and in hundreds of state cases (almost 6 times as often). Judicial usage, then, inclines dramatically toward *conferral*. E.g.: “A distinct feature of our Nation’s system of governance has been the *conferral* of political power upon public and municipal corporations for the management of matters of local concern.” *Owen v. City of Independence*, 445 U.S. 622, 638 (1980).

In the popular press, likewise, *conferral* appears today nearly twice as often as *conferment*, which predominated for most of the 20th century.

If a distinction between the terms is possible, it is that *conferral* refers to the awarding of an honor or title <the evening concluded with the conferral of an honorary degree on the graduation speaker>, while *conferment* refers to the event where a *conferral* takes place <the annual conferment dinner will be held on June 16>. This DIFFERENTIATION seems worth encouraging.

confess. A. Confess to for confess. Traditionally, people *confess* crimes, guilt, weaknesses, faults, and the like. Less traditionally—though at least since the 18th century—people have *confessed* to these things. Euphony should govern the phrasing. In the following three examples, *confess* to sounds better than *confess* alone would have:

- “Did ever anybody seriously *confess* to envy?” Herman Melville, *Billy Budd* 39 (1891; repr. [Signet ed.] 1979).
- “I *confess* to never having attended a tractor pull.” William Safire, “Virile Women Target Tobacco Men,” *N.Y. Times*, 11 Mar. 1990, § 6, at 18.
- “But worse, he was convicted even after the lead witness against him, Ivan F. Boesky, *confessed* to keeping millions of dollars in ill-gotten profits.” “Adding Insult to Injury,” *N.Y. Times*, 15 July 1990, at F2.
- “In this episode, the recipient of the coveted single date, who *confesses* to being a bit ‘high-maintenance,’ gets to don a bikini and go stand-up paddleboarding.” Sue Yeap, “Remote Patrol,” *West Australian*, 19 Aug. 2015, at 5.

Cf. **admit**.

Current ratio (*confessed* *guilt* vs. **confessed* to *guilt*): 10:1

B. *Confess innocence for profess innocence. This misusage is nothing short of a MALAPROPISM (probably influenced by the similar-sounding *confess ignorance*)—e.g.:

- “Kathleen Turner . . . *confesses* [read *professes*] innocence when two neighbors . . . confront her.” Philip Wuntch, “Serial Mom,” *Dallas Morning News*, 15 Apr. 1994, at C1.
- “Exactly six months ago, Daniel Strader stood before 2,000 members of his father’s congregation and *confessed* [read *professed*] his innocence.” Thomas Roe Oldt, “Strader Took Investors’ Trust to the Bank, Then to Big House,” *Ledger* (Lakeland, Fla.), 30 July 1995, at F5.

LANGUAGE-CHANGE INDEX

**confess innocence* for *profess innocence*: Stage 1

confessedly = (1) by general admission or acknowledgment; or (2) by personal confession (*OED*). Wilson Follett too narrowly declared that “the test of legitimacy for an adverb made from an adjective is that it fit the formula in [*x*] manner” (*MAU* at 279), a formula that *confessedly* does not fit. Follett’s primary objection was to *reportedly*, the earliest recorded use of which was in 1901. *Confessedly* has been used since

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

at least 1640, however, and is undeniably (or perhaps confessedly) useful. Still, adverbs ending in *-edly* can assuredly be overworked.

Following are two typical—and unobjectionable—uses of *confessedly*:

- “Ask the *confessedly* road-weary singer that question as she sits in a Minneapolis hotel room, and another one presents itself.” Mike Boehm, “O.C. Pop Beat: Kirsty MacColl on Her Own Terms,” *L.A. Times*, 6 Apr. 1995, at F1.
- “Biographies may become more like portraits, he says, less academic, more *confessedly* subjective.” Jerome Weeks, “The Bio Boom,” *Dallas Morning News*, 14 Jan. 1996, at C1.

See **-EDLY**.

***confess innocence**. See **confess (B)**.

confession. See **admission (B)**.

confidant; confidante; confident, n. The forms *confidant* and *confidante* have an interesting history. Until 1700 or so, the English word was *confident* (= a trusty friend or adherent), the correct French forms being *confident* and *confidente*. But early in the 18th century, English writers began substituting an *-a-* for the *-e-* in the final syllable, perhaps because of the French nasal pronunciation of *-ent* and *-ente*.

Today the forms *confidant* and *confidante* predominate in both AmE and BrE, though *confidante* is falling into disuse because of what is increasingly thought to be a needless distinction between males and females. Despite the poor ETYMOLOGY, one can be confident in using *confidant* (/kon-fi-dahnt/) for either sex, as it is predominantly used in American writing—e.g.:

- “In softer profile, [Hillary] Clinton comes across as a well-organized working mother and her husband’s closest *confidant*.” Kenneth L. Woodward, “Methodist Influence on Hillary Clinton,” *Plain Dealer* (Cleveland), 29 Nov. 1994, at E1.
- “Her admiration for Richard Nixon, whom she served as adviser and *confidant* for the last four years of his life, led her to believe that revealing the words he spoke in their private conversations would help restore his reputation.” Myron A. Marty & Dale Singer, “Politics,” *St. Louis Post-Dispatch*, 28 Nov. 1996, at 13.

See **SEXISM (D)**.

In any event, it’s wrong to make *confidante* refer to a male—e.g.:

- “The executive producer job went to Jeff Zucker, a Katie Couric *confidante* [read *confidant*], but someone who is hardly a favorite of Gumbel’s.” “Fox TV Reported Seeking ‘Today’ Host Bryant Gumbel,” *Plain Dealer* (Cleveland), 30 Nov. 1994, at E10.
- “He was the *confidante* [read *confidant*] of five U.S. presidents, from Woodrow Wilson to Franklin Roosevelt.” “Humorist-Performer Rogers Remembered,” *Tampa Trib.*, 30 Nov. 1994, Baylife §, at 4.
- “The leadership he applied to the process, the attention to contrary stratagems, was evident even earlier to another *confidante* [read *confidant*] who found himself suddenly consulted by Mr. Powell about the political art of a strategic retreat.” Francis X. Clines, “Variation on a War Game: How Powell Arrived at No,” *N.Y. Times*, 12 Nov. 1995, at 1, 12.

LANGUAGE-CHANGE INDEX

1. *confidant* for either sex: Stage 5
2. *confidante* for a male: Stage 3

confide in; confide to. *Confide in* (= to trust or have faith in) is the more common phrase in general usage—e.g.: “While she didn’t *confide in* Dallek, she did write a paper on Morris’ twenty-year friendship with Clinton.” “Morris the Catch,” *Texas Monthly*, Dec. 1996, at 21.

Confide to = (1) to communicate (something) in confidence to; (2) to entrust (an object of care or a task) to. Except in legal contexts <responsibilities confided to the legislature>, the phrase occurs most commonly today in sense 1—e.g.:

- “He does some cooking, he said, and *confides* his thoughts and fears to compassionate staff members.” Cynthia Hubert, “New AIDS Retreat Enables Resident to Savor Life,” *Sacramento Bee*, 23 Apr. 1995, at B1.
- “In ’90s fashion, he *confides* to another that he’s now a vegetarian.” Jennifer Phelps, “Heartburn Hotel,” *Des Moines Register*, 14 Aug. 1996, Today §, at 3.

confinable. So spelled—not **confineable*. See MUTE E.
Current ratio: 24:1

confirmand (/kon-fər-mənd/) = a person confirmed or to be confirmed in a religious rite supplemental to baptism. E.g.:

- “Her church’s group of 12 included members of the confirmation class. Several of the other 13 participating churches had *confirmands* participating.” Steve Snyder, “Bumper Crop Walk Held,” *Harrisburg Patriot*, 21 Oct. 2002, at B16.
- “At church, Jonathan, Steffanie and Michael are in the second year of a two-year confirmation program, and all *confirmands* are required to do a . . . service project.” Clare House & Diane M. Bitting, “A Gift of Reading,” *Lancaster New Era*, 19 Dec. 2002, Teen Weekend §, at 5.

The word is analogous to **honorand* (= a person to be honored), a word now generally displaced by *honoree*. See **honoree**.

Perhaps because the Latinate suffix *-and* (meaning “about to be”) is rather unusual in English, many writers misspell *confirmand* as if it had a different suffix: **confirmant*. This mistaken form isn’t recorded as a word in the *OED* or most other dictionaries. Hence it’s a NONWORD—e.g.:

- “Among those gathered at the church was the family of Arlova Vorm, whose grandson, Dustin Vorm, is a sixth-generation *confirmant* [read *confirmand*] of the church.” Terry Turner, “Re-created Circuit Ride Celebrates Origins of Church,” *South Bend Trib.*, 27 Sept. 2001, Local §, at 1.
- “The Bishop is at Grace Church this weekend to confirm and receive new members into the church. He will meet with the *confirmants* [read *confirmands*] and their mentors following dinner.” “Religion in the Twin Tiers,” *Star-Gaz.* (Elmira, N.Y.), 9 Nov. 2002, at C4.

If **confirmant* were appropriate at all, it would refer to the priest or minister performing the rite (the celebrant)—not to the person being confirmed. Cf. **celebrant**.

LANGUAGE-CHANGE INDEX

- **confirmant* for *confirmand*: Stage 1
- Current ratio (*the confirmands* vs. **the confirmants*): 23:1

confirmation; conformation. *Confirmation* (= verification) is occasionally displaced by *conformation*

(= [1] correspondence with norms; or [2] compliance with regulations)—e.g.:

- “For multiple orders, indicate the name of each recipient, telephone number and include a stamped, self-addressed envelope for *conformation* [read *confirmation*] ticket and number.” “My Communities,” *Honolulu Advertiser*, 8 Dec. 2008, at B3.
- “The university had not received a *conformation* [read *confirmation*] from [Loy] Vaught, and The Press was unable to contact him.” “Hughes to Join Celebration,” *Grand Rapids Press*, 17 Jan. 2009, at D3.

Conformation is most commonly found in sense 1, especially denoting the match between an animal and the ideal attributes of its breed—e.g.: “The amateur competition continues at 8 a.m. today in the Coliseum, with the horses doing a reining pattern and then working a cow before they are judged on their *conformation*.” Ann Schrader, “Horses Show Ranch Skills for a Bit of Glory,” *Denver Post*, 15 Jan. 2009, at B5. Sense 2 verges on OFFICIALESE—e.g.: “[County planning director Brian] Clifton said the county doesn’t usually require a bond in issuing a location *conformation* permit, but SME offered to post it.” Karl Puckett, “MEIC Asks Judge to Void Plant Zoning,” *Grand Falls Trib.*, 28 Oct. 2008, at M1.

confirmatory; ***confirmative**. The latter is a NEED-LESS VARIANT.

Current ratio: 31:1

confiscable. So formed—not **confiscatable*. See -ABLE (D) & -ATABLE.

Current ratio: 25:1

confiscatory (/kən-fis-kə-tor-ee/) is the adjective corresponding to the verb *confiscate*. It means “of, relating to, or involving confiscation; tending to confiscate.” And it most often crops up in the context of taxes—e.g.:

- “But the party, with a long history of *confiscatory* taxation and state intervention, is still not trusted on the economy.” “Labor Party Shifts Its Economic Approach,” *Rocky Mountain News* (Denver), 28 Sept. 1994, at A31.
- “Economic reform means eliminating hyperinflation and revising a totally capricious tax system that does not work domestically and is *confiscatory* on firms owned abroad.” Christopher Ogden, “Back in the Fray,” *Time* (Int’l ed.), 18 Nov. 1996, at 28.

Colloquially, the word bears the sense “stealing with legal authority” <confiscatory landlords>.

confit; **confiture**. Both derive from the French verb *confire*, meaning “to prepare.” A *confit* (/kahn-fee/) is a preparation of meat or poultry stewed in its own fat with seasonings and then congealed. The retained French pronunciation reflects the fact that the word *confit* did not enter the English language until the mid-20th century. A *confiture* (/kahn-fi-chuur/) is a confection of candied fruit—a preserve or jam. The pronunciation was anglicized shortly after the word entered English in the early 19th century.

conflicted, adj.; **conflictual**. *Conflicted* means “affected by conflicting emotions, allegiances, duties, or the like.” The word dates back only to the late 1960s. By the 1990s, it had become a VOGUE WORD—e.g.:

- “Many Asian Americans—who see all too few nonstereotypical images of Asian Americans in popular media—are *conflicted* over Liu’s character.” Annie Nakao, “She’s No Madame Butterfly,” *Record* (Northern N.J.), 29 Mar. 1999, at L7.
- “Even Arkansans *are conflicted* about Clinton and his legacy, much like other Americans.” Bill Nichols, “Ark. Caps Clinton’s Sentimental Journey,” *USA Today*, 18 Jan. 2001, at A8.
- “When the teams split a doubleheader two weeks ago in Winona, Minn., Tschida expected to feel *conflicted* and maybe even slightly uncomfortable, but he had no such emotions.” Jason Wolf, “Coach Makes Smooth Move,” *Star Trib.* (Minneapolis), 17 Apr. 2001, at C5.

Conflictual, a much rarer term, means “of, relating to, or characterized by conflict.” The word is documented in the *OED* from 1961—e.g.:

- “The conflict in Kashmir was renewed just as the Berlin Wall fell, and both countries continued their *conflictual* habits without reference to the wider world.” Paula Newberg, “India vs. Pakistan,” *San Diego Union-Trib.*, 22 May 1994, at G4.
- “Whether a marriage is openly *conflictual* or relentlessly harmonious, a marriage that is unable to adapt to changes like births, economic ups and downs, departures of children and retirement will become stressed.” Hugh Leavell, “Don’t Avoid Conflict—Manage It,” *Palm Beach Post*, 22 Nov. 1996, at F3.

The more popular of these words, *conflicted*, should be avoided in watered-down senses. For example, if the simple word *disagree* will work, then use it—e.g.: “Analysts *are conflicted about* [read *disagree*] whether the economic slowdown will help or hurt club growth.” Mark Albright, “Expanding the Club,” *St. Petersburg Times*, 4 June 2001, at E8.

conflict of interest. Today the phrase “ranges from being a euphemism for the result of outright bribery to describing a situation in which one subject to a duty takes a position inconsistent with that duty.” John T. Noonan Jr., *Bribes* 446 (1984).

conform takes the preposition *to* or *with*. H.W. Fowler objected to *conform with*, but most authorities find it quite acceptable. E.g.: “Libya said the investigations *conformed with* international law and did not violate its sovereignty.” Paul Lewis, “Libya Offers Some Cooperation in Plane Bombings,” *N.Y. Times*, 15 Feb. 1992, at A5. Even so, *conform to* is the far more frequent collocation in all phases of Modern English.

Current ratio (*conforms to* vs. *conforms with*): 11:1

conformation. See **confirmation**.

conformity; **conformance**. *Conformity* has always been the usual term, *conformance* being confined

largely to senses regarding technical compliance—e.g.: “Dan Korus, division manager, said that the registration by Underwriters’ Laboratories is . . . part of an overall plan to bring all major facilities of Vishay Electronic Components into *conformance* with ISO 9000 quality guidelines.” Bernard Levine & Fred Guinther, “Vishay’s Dale Electronics, Inc.,” *Electronic News*, 15 Apr. 1996, at 32. In a related use, *conformance* often functions as an adjective in phrases such as *conformance testing*—e.g.: “We’re urging the FCC to issue strong regulations governing the areas of network interconnection, unbundling, portability, mutual traffic exchange, pricing standards and *conformance* standards.” Heather Gold, “Perspective—The FCC Better Shape Up Those Monopolies,” *CommunicationsWeek*, 15 Apr. 1996, at 49.

In other uses, *conformance* might justifiably be labeled a NEEDLESS VARIANT. E.g.: “Antista . . . [added] that the fish and game commission, when permitting new wildlife refuges and rescue services, routinely requires applicants to show *conformance* [read *conformity*] with local zoning codes.” “Wildlife in the City,” *Sarasota Herald-Trib.*, 25 Nov. 1996, at A8.

Like its corresponding verb, *conformity* takes either *to* or *with*—the latter being more common since the 1820s. E.g.:

- “They attempted to reform the church to be in greater *conformity with* the Bible that—they believed—forbade such things as wedding rings, Sabbath sports and Christmas celebrations.” Diana Butler, “‘Holy Day’ Isn’t Just for Puritans,” *Plain Dealer* (Cleveland), 28 Nov. 1996, at B7.
- “It *harkens* [read *harks*] back to years before the mid-2000s when people could eat food without having to consider whether their choices were in *conformity with* their chosen subculture.” Andrew Edwards, “Contemplating the Cultural Cachet of Curious Chips,” *Long Beach Press-Telegram*, 8 Aug. 2015, News §, at 3. (See **hark back**.)

confusable. So spelled—not **confusable*. See -ABLE (A).
Current ratio: 11:1

confute. See **refute**.

congé; congee. *Congé* (/kon-zhay/ or /kon-jay/) = (1) formal permission to leave; (2) a formal bow signaling goodbye; or (3) a farewell. E.g.: “It seems that between 1991, when Mr. Clark signed up, and 1996 when he was given his *congé*, age withered his prospects.” “Ageism Pays,” *Fin. Times*, 17 Oct. 1996, at 19. The word is a GALLICISM that some private American schools use in an annual alumni party called *all-school congé*, which doesn’t necessarily coincide with graduation. **Congée* is a variant spelling.

Congee (/kon-jeel/) = a rice porridge characteristic of some Asian cuisines. E.g.:

- “A teacher once beat him with a ruler for eating *congee* with dried shrimp for breakfast instead of more traditional American fare.” Michael O’Regan, “Chinese-American Hero Makes History,” *South China Morning Post*, 7 Nov. 1996, at 4.
- “Hope Key . . . offers an irresistibly wide variety of serious seafood dishes (including frog and snail dishes) as

well as comfort foods such as chow foons (thick noodle dishes), hot pots and *congees* (rice porridge).” Eve Zibart, “A Clarion Call for Clarendon,” *Wash. Post*, 22 Nov. 1996, Weekend §, at 25.

congenial; genial. A subtle difference exists and should be promoted. *Congenial* = (1) having similar tastes; compatible; kindred <a congenial married couple>; or (2) to one’s liking; suitable; pleasant <a congenial workplace>. *Genial* = affable; friendly; cordial <her usual genial disposition>. Hence *genial* applies to individuals, while *congenial* is generally reserved for people collectively or for environments.

The DIFFERENTIATION is less pronounced with the noun forms, the word *congeniality* often doing the work for both adjectives—hence “Miss Congeniality” (not “Miss Geniality”). But *geniality* remains current, and there is no reason why beauty-pageant usage—though well established—should control what careful writers do. *Congeniality*, then, might usefully be reserved for groups of people and environments, *geniality* for individuals.

congeries (= a collection; aggregation) is ordinarily a singular noun—e.g.:

- “Multiculturalism, by contrast, casts the world as a *congeries* of particularisms; and it regards the idea of an all-embracing humanity with suspicion.” Sean Wilentz, “Sense and Sensitivity,” *New Republic*, 31 Oct. 1994, at 43.
- “The microchip is a formidable accomplishment, too—one that is also a *congeries* of some of the most advanced technologies and talents of this age.” Owen Edwards, “The Basilica Chip,” *Forbes*, 7 Oct. 1996, at 140.

As both examples show, the word frequently has a slightly pejorative cast, suggesting “a perplexing bunch of things.”

The form **congerie* (sometimes spelled **congery*) is a false-singular noun recorded by the *OED* and *W3*, a kind of BACK-FORMATION made on the mistaken assumption that *congeries* is the plural of such a noun. E.g.:

- “The greatest effect of the closing will be what happens to the land under the century-old *congerie* [read *congeries*] of industrial buildings.” Anthony DePalma, “Town Quandary: 20 Acres, RIV VU,” *N.Y. Times*, 20 Feb. 1983, § 8, at 1.
- “When a *congerie* [read *congeries*] of women’s organizations announced that this was the ‘Year of the Woman’ and that they were going to do their utmost to get more women into Congress, the media instantly took up the cry.” Richard Grenier, “Yearning to Look Down on Someone,” *Wash. Times*, 18 July 1992, at C3.
- “It is already a *congery* [read *congeries*] of standard practices that constitutes assisted suicide or euthanasia in disguise.” William Joseph Buckley et al., “Ethics of Palliative Sedation and Medical Disasters,” 28 *Ethics & Medicine* no. 1, 1 Apr. 2012, at 35. (On the relative pronoun *that* in this example, see REMOTE RELATIVES.)

In fact, although the singular *congeries* is most frequent, the word can also be a plural—e.g.: “I learned [economic theory] all as *congeries* of interrelated propositions.” H.W. Arndt, *A Course Through Life: Memoirs of an Australian Economist* 3 (1985).

The word is pronounced /**k**on-jə-reez/ or /kən-**jir**-eez/ or /kon-jə-**reez**/ in AmE; and /kən-**jeer**-eez/ or /kən-**jeer**-i-eez/ in BrE.

LANGUAGE-CHANGE INDEX

**congery* or **congerie* as false singular of *congeries*: Stage 1

Current ratio (*a congeries* vs. **congerie* vs. **congery*): 90:3:1

congratulate. The traditional idiom is to *congratulate* a person *on* or *for* something. The verb shouldn't be construed with a *that*-clause—e.g.:

- “Keno should be *congratulated that he was* [read *congratulated on being*] able to keep the donation down to \$35,000.” Jim Driskill, “Facts on Candidate Hawker Weren't All on Table,” *Ariz. Republic*, 14 Mar. 2000, at 4.
- “Board members should be *congratulated that they realize* [read *congratulated for realizing*] this need.” “Workers as Administrators,” *Salt Lake Trib.*, 24 Oct. 2000, at A12.
- “Catherine Zeta Jones is to be *congratulated that she now bears* [read *congratulated for now bearing* or *congratulated now that she bears*] the name of one of Scotland's famous families.” R. Morton Douglas, “Flemish Factor,” *Daily Telegraph*, 24 Nov. 2000.

This verb is sometimes also the victim of OBJECT-SHUFFLING. You're supposed to congratulate people for their virtues, not congratulate the virtues themselves. This error occurs in BrE more often than in AmE—e.g.:

- “As one who was in the Forum when the bomb arrived, he *congratulated the vigilance of staff* [read *congratulated the staff for their vigilance*].” Gerry Moriarty, “Army Defuses ‘Crude but Viable’ Parcel Bomb Sent to UK Unionist Party Leader,” *Irish Times*, 25 July 1997, at 6.
- “People grasped him by the hand, *congratulated his courage* [read *congratulated him for his courage*], skill and foresight.” Sue Denham, “The Things People Will Do for a Union Card,” *Sunday Times* (London), 21 Mar. 1999, at 21.

The word should be pronounced /kən-**grach**-ə-layt/, not /-graj-/.

LANGUAGE-CHANGE INDEX

1. *congratulate* construed with a *that*-clause: Stage 3
2. *congratulate* with an inanimate object: Stage 2

congratulatory; *congratulant; *congratulative. *Congratulatory* is the usual word. The other forms are NEEDLESS VARIANTS.

Current ratio (in order of headwords): 4,514:3:1

***congregate together** is a REDUNDANCY that was common in the mid-19th century but has since retreated. Cf. ***associate together**.

Congress does not require an article, except in references to a specific session <the 104th Congress>. Although some congressional insiders use the phrase, **the Congress* is a quirk to be avoided in polished prose. The possessive form is preferably *Congress's*—e.g.: “Ms. Rosen said it is *Congress's* responsibility because it gave

regulators the framework for RESPA.” “HUD Supports RESPA Review,” *Nat'l Mortgage News*, 4 Nov. 1996, at 16. See POSSESSIVES (A). Cf. **Parliament**.

congressional, like *constitutional*, should be written with a lowercase *c*-, even though the noun corresponding to the adjective is capitalized.

***Congressperson** is an unnecessary substitute for *representative*, *congressional representative*, *member of Congress*, *Congressman*, or *Congresswoman*. E.g.: “Be sure to check out the upcoming vote on the amendment just to see if your *congressperson* [read *representative*] has the guts to vote against something enormously popular and incredibly dumb.” Molly Ivins, “Budget Amendment Is Popular—and Dumb,” *Idaho Statesman*, 20 Nov. 1996, at A11. See SEXISM (C).

LANGUAGE-CHANGE INDEX

**Congressperson*: Stage 2

Current ratio (*Congressman/-woman* vs. **Congressperson*): 34:1

congruent; congruous. Although these words are largely synonymous—meaning “in agreement or harmony; appropriate”—interesting distinctions have arisen. *Congruous* (/kɒŋ-**g**roo-əs/)—once thought to be the more widely used term—is actually quite infrequent in the sense “appropriate, fitting; marked by harmonious agreement.” But it does occasionally occur—e.g.: “She made it her first priority to create an interior that would be *congruous* with the exterior, giving the house a more authentically Mediterranean feel.” Glynis Costin, “A House of Her Own,” *Town & Country*, July 1996, at 68. The negative form *incongruous* (“not in harmony; unfitting”) is far more common. See **incongruous**.

And oddly enough, the word *congruent* (/kɒŋ-**g**roo-ənt/ or /kən-**g**roo-ənt/) has largely taken over as the antonym of *incongruous*. True, it has always had legitimate uses in math and physics, and has long been prevalent in the sense “coinciding throughout; in accordance with.” But today it is also the usual term in the broadest senses—e.g.:

- “Such idiosyncratic experiments in style were hardly *congruent* with official pressure to honor the ascent of socialism through prescriptive prose about the beauty of collective farming.” Cynthia Ozick, “The Year of Writing Dangerously,” *New Republic*, 8 May 1995, at 31.
- “His pro-choice and pro-death penalty provisions are *congruent* with majority opinion in California.” Patrick Reddy, “Slim Pickings for Dole in California,” *Sacramento Bee*, 15 Sept. 1996, at F1.
- “Like the *congruent* decor in our homes or the finely trimmed shrubs dotting our manicured lawns, many of us severely limit the range of our feelings.” Philip Chard, “Embracing Chaos of Life Is Difficult for Most of Us,” *Milwaukee J. Sentinel*, 3 Dec. 1996, Good Morning §, at 1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

The corresponding nouns are *congruence* and *congruity*. **Congruency* is a NEEDLESS VARIANT.

conjoin generally provides no nuance not included in *join* or *combine*—e.g.:

- “In consequence, homosexuality and secrecy were *conjoined* [read *joined*] inseparably in a place that became known as the closet.” “A Love That Dares Speak Its Name,” *Economist*, 15 July 1995, at 68.
- “Those events, *conjoined* [read *combined*] with the current DSO season’s unremarkable programing and the orchestra’s inconsistent music-making through the season’s first half, might lead one to wonder where the maestro’s head really is.” Lawrence B. Johnson, “Notes of Caution,” *Detroit News*, 30 Nov. 1996, Accent §, at C1.
- “Lewis required that Paramount bust down the walls of two adjacent soundstages so he could *conjoin* [read *combine*] them to build his massive, all-inclusive set for his second work.” Robert Koehler, “Revered or Reviled, Lewis Made a Mint for Par,” *Variety*, 15 July 2002, “Paramount at 90” Supp., at 56. (For more on the use of *bust*, see **burst**.)

W11 defines *conjoin* as “to join together (as separate entities) for a common purpose.” *Join together* is, of course, a venial REDUNDANCY, just as *conjoin* is something of a one-word redundancy. But these phrases do slightly shade *join*. Perhaps on those rare occasions when you want the precise nuance suggested by *W11*’s definition—combining for a common purpose—*conjoin* is the proper word.

Further, the phrase *conjoined twins* has emerged as a nonethnic substitute for *Siamese twins*. And in this literal sense, the word seems appropriate—e.g.:

- “*Conjoined twins* occur when a single fertilized egg fails to divide completely to form identical twins.” Dick Stanley, “St. David’s Physicians to Separate Joined Twins,” *Austin Am.-Statesman*, 6 July 1995, at A1.
- “*Conjoined twins* less than a week old took their first airplane ride yesterday.” Sandra Dibble, “Conjoined Twins Are Flown to Mexico City,” *San Diego Union-Trib.*, 2 Aug. 1996, at 7.

CONJUNCTIONS. A. Starting Sentences with. Wilson Follett called the notion that sentences shouldn’t start with conjunctions a “prejudice [that] lingers from a bygone time The supposed rule is without foundation in grammar, logic, or art” (*MAU* at 64). Good writers have long made use of the clear signals that short conjunctions give to the reader—e.g.: “Tell her you love her. *And* you couldn’t resist telling her what you’d like to do with or without custard. *But* tell her that you’re married to Matey and any hint of scandal would seriously damage the Chambers image. *So* you’ll both just have to be extraordinarily brave about it. That way you won’t come out as an idiot who can’t manage his e-mail and she’ll still feel loved.” John Mortimer, “Rumpole and the New Year’s Resolutions,” in *Rumpole and the Primrose Path* 38, 57 (2003). See **and, but, for & so**.

B. Correlative Conjunctions. See CORRELATIVE CONJUNCTIONS.

C. As Prepositions. See FUNCTIONAL SHIFT (G).

D. Subordination and Coordination. See SUBORDINATION AND COORDINATION.

conjure. In its usual sense (“to play the sorcerer”), the first syllable of this verb is stressed: /**k**on-jər/. In its rare sense (“to supplicate, beseech”), the stress is on the second syllable: /kən-**j**oor/.

By idiom, the word most often appears with the particle *up*—e.g.: “The process uses gamma rays, electrons or X-rays to kill pathogens such as E. coli and salmonella. But to some, the process and the word *conjures up* images of radioactive food that has been zapped with nuclear energy.” Cindy Skrzycki, “Zapping a New Label on Irradiation?” *Wash. Post*, 5 Nov. 2002, at E1. But it can also stand alone—e.g.: “Mead. The very word *conjures* carousing Vikings around a leaping fire, or cryptic Celts melting into the shadows of an ancient forest.” James P. DeWan, “The Buzz of Bees,” *Chicago Trib.*, 6 Nov. 2002, Good Eating §, at 3.

conjurer; *conjuro; *conjurator. *Conjurer*—not **conjuro*—is the preferred spelling for the word meaning “magician; juggler.” E.g.: “Though once considered the domain of alchemists and other soul-bargaining *conjurers* . . . , glasshouses, or greenhouses, soon became proof of a homeowner’s modernity and wealth.” Mitchell Owens, “At Home with Books,” *N.Y. Times*, 5 Dec. 1996, at C1. **Conjurator* is an obsolete word meaning “one joined with others by an oath; a co-conspirator.”

Current ratio (in order of headwords): 5,231:2,657:1

connectable; *connectible. The first is standard in both AmE and BrE. It’s much more common than the second in modern print sources. See -ABLE (A).

Current ratio: 9:1

Connecticut is pronounced /kə-**net**-i-kət/. The medial -c- is silent.

Connecticuter. See **Nutmegger**.

connection; *connexion; connexity. The spelling *-tion* is standard in AmE; *-xion* is an almost obsolete spelling formerly preferred in BrE. Up to 1967, the Oxford dictionaries used the spelling **connexion*, with an -x-; in that year, the switch was made to *connection*. (This despite the predominance of *connection* in BrE by 1850!) The word means basically (1) “the act of connecting” <the connection of loose ends>; (2) “the state of being connected” <the connection of these events>; or (3) “a connecting part” <the bridge’s connection with the land>.

Some writers use *connexity* in a distinct way, synonymously with *connectedness* (= the quality of being connected). E.g.: “John’s storytelling has the virtues of economy, *connexity*, and depth.” Thomas D’Evelyn, “Looking at the Bible as Literature,” *Christian Science Monitor*, 21 Oct. 1987, at 19. British writers use it much more often than American writers—e.g.:

- “Here’s a group of small green landscapes. Here are some monumental bodies. Here are two still-lives, both with fruit and a vessel. Here are some seated nudes. Now compare and contrast, note likenesses and differences. This unrelenting *connexity* can be a bit nagging, and the connections are sometimes slight.” Tom

Lubbock, “Two of a Kind?” *Independent*, 17 May 2002, at 9.

- “In the same decade of the 1990s that gave the US the strength and size of Behemoth and the rapidity and *connexity* of Ariel, we tried once more to develop an international rule of law; a rule of law that would cover the benign superpower as well.” John Lloyd, “America, with Relish, Spits on Britain,” *New Statesman*, 8 July 2002, at 18.

At times, though, *connexity* acts as a NEEDLESS VARIANT of *connection*—e.g.: “There should be some *connexity* [read *connection*] between this defendant and this crime.” Huey L. Golden, “Knowledge, Intent, System, and Motive,” 55 *La. L. Rev.* 179, 207 (1994).

Connexity also had a brief—very brief—life as a label for the intent of the new young generation (aka Gen Y) on remaining “wired” at all times. A 1999 study by the ad agency Saatchi & Saatchi tried to coin two new terms, in fact, in the title of its report on “The *Connexity* Generation: America’s New Digital *Prosumers*.” But in pop language, those who coin phrases often see them fall through the boardwalk.

Current ratio (*connection* vs. **connexion*): 29:1

connection with, in. See **in connection with.**

***connect together** is a REDUNDANCY that was common especially in the 18th and 19th centuries. If the intended sense is “to connect with one another,” *connect* or *interconnect* is usually the better choice—e.g.:

- “All of the individual elements are *connected together* [read *connected* or *interconnected*] to perform one function.” Byron Miller, “Fuzzy Logic,” *Electronics Now*, May 1996, at 29.
- “Check the markings of your electrical decorations to determine the maximum number of decorative lights (light strings) and decorations that may be *connected together* [read *strung together*].” Phil Mulkins, “Underwriters Laboratories Sheds Light on Lighting,” *Tulsa World*, 20 Nov. 1996, at A2.
- “Technology problems like Wednesday’s that temporarily knock out vital services and conveniences of modern life are likely to become more common as computers and other electronic devices increasingly *connect together* [read *interconnect*] over the Internet.” Michael Liedtke & Steve Rothwell, “Tech World Takes a Tumble,” *Times Union* (Albany), 9 July 2015, at A1.

Why isn’t *interconnect* a one-word redundancy? Because it connotes several things, as in the first example, where *interconnected* gives a better picture than *connected* (which has a one-to-one implication) would. See **together**.

connect up. In this phrase, which is common especially in computing contexts, the word *up* is usually unnecessary—e.g.: “Paths and steps link the various levels of our landscapes and *connect up* [read *connect*] our gardens and houses.” Susan Heeger, “The Hard Stuff,” *L.A. Times* (Mag.), 23 Oct. 1994, at 32. See PHRASAL VERBS.

***connexion; connexity.** See **connection.**

conniption. So spelled. See SPELLING (A).

connivance (fr. L. *connivĕre* “to wink at”) is not, as popularly supposed, “conspiracy to act together for an illegal end,” although it is a form of collusion. *Connivance* is passively allowing another to act illegally or immorally, especially when one has a duty to stop or report the action—silence and neglect when one should be vocal and monitor. E.g.: “Already the Bosnians are smuggling in heavy weaponry with the *connivance* of Turkey and Iran.” Jacob Heilbrunn, “Flirting with Disaster,” *New Republic*, 2 Dec. 1996, at 28.

connive = (1) (with *at*) to avoid noticing something that one should report, oppose, or condemn; to passively cooperate (esp. in wrongdoing) by closing one’s eyes as it happens; or (2) (with *with*) to cooperate secretly.

Sense 1 is traditional—e.g.: “Most of the money being wasted on these nostrums comes from the pockets of people who have *connived* at their own fleecing.” Katherine A. Powers, “The Honest Truth About Hokum,” *Boston Globe*, 2 Dec. 2001, at E3. This construction is more common in BrE than AmE—e.g.: “Edward Heath railroaded Britain’s entry into Europe through Parliament, courtesy of revolting Labour Europhile MPs who cheerfully *connived at* the deception Heath was perpetrating upon British voters.” Melanie Phillips, “Europe Is a Poisoned Chalice,” *Observer*, 2 June 1996, at 6.

In sense 2, the connotation is usually milder than *conspire*, more venial and less blameworthy. Because it is a SLIPSHOD EXTENSION, it can usually be improved on—e.g.:

- “A shipment of Norton McNaughton shirts and jackets still bore their original tags and enough unscrupulous shoppers *connived* [read *managed*] to get ‘refunds’ at department stores that some of Pittsburgh’s better department stores called to complain.” Patty Tascarella, “Gabriel’s Expands No-Frills Discount Clothing Chain,” *Pitt. Bus. Times & J.*, 12 June 1995, at 4.
- “Navarrette remembers how he and Bustamente, who would one day become his college roommate, *connived* [read *contrived*] to get into a class that West Hills Community College didn’t offer.” Phoebe Wall Howard, “Bustamente Ushers In a New Era,” *Fresno Bee*, 17 Nov. 1996, at A1.
- “Public-choice theory taught that bureaucrats *connived* [read *conspired*] to expand their pomp and powers by spending ever more.” Kenneth Clarke’s Triumph,” *Economist*, 23 Nov. 1996, at 63.

Perhaps because of the suffix and the word’s unsavory, even criminal connotations, *connive* is sometimes used to mean something like *con*, a SLIPSHOD EXTENSION that should be discouraged—e.g.:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Facing bankruptcy and eviction, and discovering that Etheline is being courted by her longtime accountant (Danny Glover), Royal *connives* [read *plots*] to move back into the family brownstone.” Dan Webster, “Anderson and Wilson Take Viewers to *Alternate* [read *Alternative*] Reality,” *Spokesman-Rev.* (Spokane), 12 July 2002, Weekend §, at 7. See **alternate (b)**.
- “Protected but not coddled by a loving mom (Helen Mirren), the crippled, odd-looking and hence ‘unemployable’ Bill Porter ingenuously *connives* [read *works*] his way into people’s hearts—and eventually their homes—through dogged persistence.” Mike McDaniel, “Macy Sells Story,” *Houston Chron.*, 14 July 2002, Television §, at 2.
- “Set in Florida, it tells the story of a white developer who tries to *connive* [read *con*] the predominantly black beach community of Plantation Island into selling a strip of ocean-front land on which he plans to build condominiums.” John Petkovic, “The Characters Are Tasty, but the Plot Isn’t Done,” *Plain Dealer* (Cleveland), 2 Aug. 2002, Friday Mag. §, at 46.

LANGUAGE-CHANGE INDEX

1. *connive* misused for *conspire* or *contrive*: Stage 4
2. *connive* misused for *plot* or *con*: Stage 2

connoisseur (= an authority, esp. on matters of taste) is best pronounced in three syllables (/kahn-ə-sər/) to rhyme with *sir*. As pronunciation connoisseur Charles Harrington Elster puts it, “there is no *sewer* in *connoisseur*.” *BBBM* at 105. Although traditionally a noun <a wine connoisseur> <a connoisseur of Flemish art>, it is often used attributively (that is, as an adjective)—e.g.: “By the time a marathon of bidding ended early Saturday morning, a record \$755,185 had been paid for *connoisseur* [or *fine*] wines, trips to exotic destinations, banquet meals to be cooked by star chefs and a broad selection of what were grouped as ‘luxury items.’” William Rice, “A Rich Toast to Lyric,” *Chicago Trib.*, 26 Feb. 2003, Good Eating §, at 2.

connote. **A. And denote**. *Connote* (/kə-noht/) = to imply something in addition to the literal meaning, esp. some emotional response such as tone, flavor, or association. *Denote* (/di-noht/) = to convey literal meaning. The nouns are *connotation* and *denotation*. *Denote* is rarely if ever misused. *Connote*, however, is becoming rarer by the day in its traditional sense, illustrated here: “In careful usage, ‘notoriety’ carries a *connotation* of wickedness, evil, or gravely bad conduct.” James J. Kilpatrick, “A Little Refresher Course,” *Tulsa World*, 25 Nov. 1996, at A8.

How are *connote* and *connotation* misused? They are frequently confused with *denote* and *denotation*, just as *literally* is often misused for *figuratively*. E.g.:

- “Webster’s Dictionary gives ‘din’ the negative *connotation* [read *definition* or *denotation* or *sense*] of ‘a welter of confused or discordant sounds.’” Geoffrey Himes, “Chris Whitley’s Shift Reflects His Concept of the Blues,” *Dallas Morning News*, 22 Mar. 1995, at C4.
- “Surfing (an overused term) *connotes* [read *denotes*] unstructured Net browsing for fun or profit.” Gabriel Goldberg, “Surfing the Internet and Other Sources of

Enterprise Information,” *Enterprise Systems J.*, July 1996, at 44.

See **literally**.

Moreover, only words and other symbols can *connote*, not acts. *Connote* isn’t a general-purpose equivalent of *suggest* or *associate*, nor is *connotation* a replacement for *overtone* or *implication*—e.g.:

- “I believe that Sayles did a good job with his flashbacks. Most of them *connoted* [read *suggested*] feelings of tension and empathy.” “A Salute to ‘Lone Star’ Movie,” *Times-Picayune* (New Orleans), 28 July 1996, at B6.
- “Morrison says when belly dance originated in the Middle East, sexual *connotations* [read *overtones*] were never the intention.” Jeff Commings, “Dancers Belly Up to World Festival,” *Albuquerque Trib.*, 20 Sept. 2002, at C2.
- “Clawson said he thinks someone from the skeet shooting party, several of whom did not know Hatfill, told the FBI about the joke, which took on far more sinister *connotations* [read *implications*] as agents desperately searched for the anthrax killer.” Wayne Washington, “Fighting Terror Global Impact; Anthrax Probe Raises Doubts on FBI,” *Boston Globe*, 23 Sept. 2002, at A1.

B. And *connotate. **Connotate* is a NEEDLESS VARIANT of *connote*—e.g.:

- “Other factions wanted to eliminate ‘National’ from NCTE’s name because it *connnotated* [read *connoted*] ‘nationalism.’” Carol Innerst, “Language Groups Call All English Dialects Valid,” *Wash. Times*, 12 Mar. 1996, at A3.
- “As with the PT Cruiser and New Beetle, two other popular, low-priced, four-cylinder offerings introduced during the past five years, Mini styling is best described as retrospective, or heritage, or whatever word *connotates* [read *connotes*] a bygone era.” Dave Boe, “Two Vehicles Earn Journalistic Honors at Detroit Show,” *Daily Herald* (Chicago), 20 Jan. 2003, Auto Plus §, at 1.

See **BACK-FORMATIONS**.

LANGUAGE-CHANGE INDEX

**connotate* for *connote*: Stage 1

consanguineous; consanguine; *consanguineal; consanguinean. The general adjective corresponding to *consanguinity* is *consanguineous* (= related by common ancestry). E.g.: “The boy suffered from a rare form of dwarfism called pyknodysostosis, which is more common in children of *consanguineous* parents than of others.” Robert Wernick, “A Little Man Who Brought a Parisian Era to Vivid Life,” *Smithsonian*, Nov. 1985, at 64.

By **HYPALLAGE**, the phrase *consanguineous marriage* denotes a marriage between blood relations (cousins and other close relatives). E.g.: “These marriages, called *consanguineous*, are now prohibited in 30 states—although not in California—and carry heavy criminal penalties in nine.” Thomas H. Maugh II, “More Kissing Cousins Are Marrying, New Studies Find,” *L.A. Times*, 15 Feb. 1993, at A10.

If *consanguineous* is relatively rare—confined mostly to those who engage in **SESQUIPEDALITY**—the other terms are even rarer. *Consanguine* and **consanguineal*

have been taken up by anthropologists and linguists and differentiated from the primary adjective. *Consanguine* = based on an extended group of blood relations esp. of unilinear descent and constituting the functional familial unit in a society (W3). **Consanguineal* shares this sense and is a NEEDLESS VARIANT. *Consanguinean* is a Roman-law term meaning “having the same father.” It is opposed to *uterine* (= having the same mother).

For related words (true blood relations), see **sanguine**.

conscience’ sake; conscience’s sake. The traditional and overwhelmingly predominant form is *conscience’ sake*, which is parallel to *goodness’ sake*. Many writers, though, have made it *conscience’s sake*, which is hard to speak—e.g.: “She knows it won’t make a difference, but she has to go through the motions for *conscience’s sake* [read *conscience’ sake*].” Nelson Pressley, “Emotional Jackpot Eludes ‘Boomtown,’” *Wash. Times*, 10 Nov. 1994, at C16. See POSSESSIVES (N).

Current ratio: 6:1

conscionable is not a mere NEEDLESS VARIANT of *conscientious* in its sense of “being guided by one’s conscience,” though some dictionaries so suggest. And indeed, it sometimes performs that unnecessary role—e.g.: “Otherwise *conscionable* [read *conscientious*] members of a different party hint that ethics and morality have little, if any, bearing on one’s appropriateness and aptitude for elected leadership.” Donna Madden, “People, Not Parties, Define Values,” *Chicago Trib.*, 31 Oct. 1996, at 26.

As a positive correlative of *unconscionable*, the word *conscionable* means “agreeable to a good conscience; just and reasonable” and refers to things as opposed to people <a conscionable bargain>. E.g.:

- “If any politician from a non-tobacco state is going to come to the aid of the country’s least *conscionable* industry, it stands to reason that it would be America’s least honorable governor.” Steve Wilson, “Symington’s Call to Snuff Tobacco Suit Defies Explanation,” *Ariz. Republic*, 20 Oct. 1996, at A2.
- “It is no more *conscionable* to indulge in monetary bondage for laborers today than it was to accept human bondage in the past.” “A Little Humility Recommended,” *Tulsa World*, 24 Nov. 1996, at G2.
- “In another time, though, the business on the bend was even less *conscionable*—for decades, it was the site of the city’s slave pens and auction blocks.” Nicholas Mancusi, “Review: ‘Murder, D.C.’ by Neely Tucker,” *Miami Herald*, 3 July 2015, at 680.

For a mistake involving the negative form, see **unconscionably**.

consensual; consentaneous; consentient. *Consensual*, by far the most common of these terms, means

“having or expressing or made with consent.” *Consentaneous* and *consentient* are both used in that sense, as well as in two others: (1) “unanimous”; and (2) “agreeing.” When used for *consensual*, either of the other two words is a NEEDLESS VARIANT. And when used in either of the other two senses, each is easily simplified—as the defining words above suggest. Gorham Munson said as much in the mid-20th century: “Take the word ‘consentaneous’ . . . [I]t is a good word in a rich prose pageant. But in a simple style among workaday companions ‘consentaneous’ is as out of setting as a man in evening dress would be in the bleachers at an afternoon baseball game.” Gorham Munson, *The Written Word* 93 (rev. ed. 1949).

Current ratio (in order of headwords): 149:1:1:1

consensus = a majority opinion or generally accepted view. Hence two common phrases, **consensus of opinion* and **general consensus*, are prolix. E.g.: “It’s not a surprise that the possibility of war with Iraq has been the hot topic among these veterans lately, and after a few minutes of conversation, it’s easy to understand the *general consensus* [omit *general*] at Sweeney Post.” Katharine McQuaid, “Local Sweeney Post Veterans Support American Military Action Against Iraq,” *Union Leader* (Manchester, N.H.), 20 Sept. 2002, at A18. In the following sentence, we’re accosted by a double REDUNDANCY: “While there is no way of knowing for sure, it appears the *general consensus of opinion* [omit *general* and *of opinion*] is that hunting accidents have been reduced by requiring hunter education in a majority of states before hunters can purchase that first license.” Warren Cloninger, “Were Good Ol’ Days That Good?” *Lewiston Morning Trib.* (Idaho), 28 Sept. 1995, at C2.

Because a *consensus* is the collective unanimous opinion of several people, there should be more than two sides agreeing. Strictly speaking, a consensus of two is impossible—e.g.:

- “Oxygen reimbursement cuts have been one of the few areas where the two sides have *reached consensus* [read *agreed* or *reached an agreement*].” “Clinton Administration to Cut Home-Oxygen Payments,” *Orange County Register*, 20 Jan. 1996, at C2.
- “In the days before the talks broke down, both sides had *reached consensus* [read *agreed*] on water rights, new housing permits and several other issues.” “Walking Away from Peace,” *St. Petersburg Times*, 4 Nov. 1996, at A10.

Consensus is unrelated to *census*, but that word nevertheless frequently causes the misspelling **concensus*—e.g.: “The emphasis on developing leadership capacity in all students, he says, is reflected in corporations where *concensus building* [read *consensus-building*] and working in teams have replaced the old style of centralized authority.” Nina McCain, “Striving

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

consent. See **assent**.

consentaneous; consentient. See **consensual**.

consequent; consequential; subsequent. *Consequent* means “following as a direct result” <consequent injuries>. *Consequential* (a rarer term) means “following as an indirect or secondary result” <consequential costs>. In its other proper sense, *consequential* may serve as an opposite of *inconsequential*, thus meaning “important” (or, occasionally, “self-important”). In the following sentences it means “important, of consequence,” a sense prematurely labeled obsolete by the *OED*:

- “Bob Dole promised a campaign ‘about *consequential* things, things that are real,’ but he’s giving us one based on that ephemeral question, ‘What does your soul look like?’” Maureen Dowd, “Liberties: Fillet of Soul,” *N.Y. Times*, 26 May 1996, § 4, at 11.
- “Looking back on it now, I see clearly that it was the single most *consequential* thing that ever happened to me professionally.” Pete Dexter, “Decision 20 Years Ago Made All the Difference,” *Sacramento Bee*, 18 Nov. 1996, at C2. (On the use of *single most* in that sentence, see **single most**.)
- “A contemporary said of Chief Justice John Marshall—the most *consequential* American never to be president—that ‘he hit the Constitution much as the Lord hit the chaos, at a time when everything needed creating.’” George Will, “Stuck to the U.N. Tar Baby,” *Wash. Post*, 19 Sept. 2002, at A27.

In all other senses, *consequent* is the correct term where the choice is between the shorter and longer forms. Usually, *consequent* is just a fancy equivalent of *resulting*—e.g.:

- “South Barrington . . . has five major state highways passing through the village and a *consequent* high volume of truck traffic.” Joseph Sjostrom, “Trucks Take Heat for Flying Debris,” *Chicago Trib.*, 5 Sept. 1996, at D1.
- “The other 20 percent arise from broken blood vessels and *consequent* hemorrhaging into brain tissue.” Paul Donohue, “First Step for Stroke,” *St. Louis Post-Dispatch*, 11 Dec. 1996, *Everyday Mag.* §, at E2.

Consequent is frequently misused for *subsequent*, perhaps partly because of the logical fallacy *post hoc, ergo propter hoc* (“after this, therefore because of this”)—a trap for those who equate sequence with causation, thinking that if one event occurred after another, the first event must have caused the second. The word *consequent* expresses a causal relation and

usually a temporal relation as well <she couldn’t contain the scandal and couldn’t prevent her consequent demotion>; *subsequent* is solely temporal <this all came after her elevation to the Senate and subsequent reputation as a coalition-builder>. See **subsequently**.

consequently. This heavy connector is often best replaced by *so*. See SENTENCE ADVERBS. Cf. **accordingly**.

conservational; conservative; conservatory, adj. These words are to be distinguished. *Conservational* = of, relating to, or involving conservation. *Conservative* = characterized by a tendency to preserve or keep intact or unchanged; believing in the maintenance of existing political and social institutions. *Conservatory* (rarely used as an adjective) = preservative. For an error with *conservative*, see **conservative**.

conservatism (= the political philosophy that favors preserving what has been firmly established and opposes changes in orthodoxy) is the standard term. **Conservativism* is a NEEDLESS VARIANT.

Current ratio: 62:1

conservative is surprisingly often, through a kind of visual METATHESIS, printed **conservative*—e.g.: “The Hoover Institution, a *conservative* [read *conservative*] California-based think tank at Stanford University, also found that the hijackers were eligible to vote in state and federal elections.” Katrice Franklin, “Immigrants Trapped by DMV Requirements,” *Virginian-Pilot & Ledger Star* (Norfolk), 23 July 2002, at B1. For the meaning of *conservative*, see **conservational**.

LANGUAGE-CHANGE INDEX

conservative misspelled **conservative*: Stage 1
Current ratio: 22,906:1

conservatory. See **conservational**.

consider, when used alone, most often means “to think of as being” <she considered him rude>. The phrasing *consider as* is usually redundant. It has only one legitimate use, when meaning “to treat as for certain purposes” <this Dylan song, when considered as poetry, is a masterpiece>. It’s usually desirable to drop *as* from *consider as*—e.g.:

- “In resigning as board chairman, David Ambrose cited what he *considered as* [read *considered*] unethical business practices.” Mary McGrath, “Finance Chief Resigns,” *Omaha World-Herald*, 8 Aug. 1995, at 16.
- “Historically, pain has not been *considered as* [read *considered*] a symptom unto itself that requires treatment.” Richard J. Leth, “New Pain Treatments,” *Des Moines Register*, 11 Oct. 1997, at 8.
- “The drug Depo Provera inhibits the sex drive and has been *considered as* [read *considered*] a kind of ‘chemical castration’ for chronic offenders.” M.W. Guzy, “Can We Isolate Sexual Predators?” *St. Louis Post-Dispatch*, 27 Mar. 1998, at B7.

considerable, used adverbially, is dialectal—e.g.:

- “The 5th Street Deli actually has *considerable* [read *considerably*] more aesthetic charm than its predecessor.” Lisa Kingsley, “Deli Delivering Delightful Dressings, Savory Salads,” *Des Moines Register*, 15 Aug. 1996, at 19.

- “Guys such as Gwynn admitt[ed] that Montreal’s defeat at Atlanta on the scoreboard was of *considerable* [read *considerably*] more interest than the Chargers’ score updates against the Raiders.” Mike Downey, “The Padres Are Hardly *Shaking* [read *Quaking*] in Their Boots,” *L.A. Times*, 23 Sept. 1996, at C1.

LANGUAGE-CHANGE INDEX
considerable misused adverbially
 for *considerably*: Stage 1
 Current ratio (*considerably more* vs.
 **considerable more*): 95:1

considering. For this word as an acceptable dangling modifier, see DANGLERS (E).

consignee (= one to whom goods are consigned) is pronounced /kon-si-**nee**/ or /kon-si-**nee**/. Cf. **consignor**.

consignor; consigner. *Consignor* is the technical—and *consigner* the nontechnical—correlative of *consignee*. A *consignor* (or *consigner*) dispatches goods to another on *consignment*. Perhaps because the very nature of this relationship is legal and technical, the *-or* spelling has been much more pervasive since the terms came into common use about 1800. The two words are often pronounced differently: *consignor* /kon-si-**nor**/ or /kən-si-**nor**/; *consigner* /kən-si-**nər**/. Cf. **consignee**.

Current ratio (in order of headwords): 28:1

consistency; *consistence. The former has been standard since about 1800, before which time the two words tussled for preeminence. The latter is now a NEEDLESS VARIANT—e.g.:

- “Though Natrone Means was unable to run with his usual *consistence* [read *consistency*], Ronnie Harmon was often effective in the backfield and Eric Bieniemy contributed one stirring sortie.” Welton Jones, “Bowled Over, Could a Sequel Be Super?” *San Diego Union-Trib.*, 31 Jan. 1995, at E1.
- “The award was given to developers who exhibited *consistence* [read *consistency*] in excellence and quality.” Leon M. Tucker & Chris Tisch, “Builder Accused of Lying to Buyers,” *St. Petersburg Times*, 1 Feb. 2002, N. Pinellas Times §, at 1.

Cf. **inconsistency**.

LANGUAGE-CHANGE INDEX
 **consistence* for *consistency*: Stage 1
 Current ratio (*consistency* vs. **consistence*): 58:1

consist of; consist in. American writers often ignore the distinction. *Consist of* is used in reference to materials; it precedes the physical elements that compose a tangible thing. The well-worn example is that concrete *consists of* sand, gravel, cement, and water.

Consist in (= to have as its essence) refers to abstract elements or qualities, or intangible things. Hence a good moral character *consists in* integrity, decency, fairness, and compassion. This construction is literary in tone and is not often seen today in general writing. Sad to say, it may now seem creaky to most readers.

The following sentences demonstrate the traditional use of *consist in*:

- “He hailed the new ‘trans-Atlantic relationship’ as *consisting in* ‘certain Enlightenment ideals of universal applicability.’” Samuel Francis, “Loyalties Tilting Closer to Home,” *Wash. Times*, 19 Nov. 1991, at F1. (On the spelling of *transatlantic*, see **transatlantic**.)
- “Received wisdom has it that nationhood *consists in* a kind of quasi-mystical union between a people, their culture and their land.” James Geary Oxford, “Making History: Norman Davies’ New Europe,” *Time* (Int’l ed.), 16 Dec. 1996, at 54.
- “E.M. Forster had published three novels before he had any clear idea of what the sex act *consisted in*.” Louis Menand, “The Women Come and Go,” *New Yorker*, 30 Sept. 2002, at 126, 127.

By traditional standards, *consist of* wrongly displaces *consist in* here: “The beginning of wisdom *consists of* [read *consists in*] recognizing that a balance needs to be struck.” Henry Kissinger, “How to Achieve the New World Order,” *Time*, 14 Mar. 1994, at 73, 74.

The opposite error—using *consist in* for *consist of*—is rare but does occur: “Typically [the bill of complaint in equity] *consisted in* [read *consisted of*] three parts: the narrative, the charging, and the interrogative parts.” Fleming James, *Civil Procedure* § 2.4, at 64 (1965).

LANGUAGE-CHANGE INDEX
 1. *consist of* misused for *consist in*: Stage 4
 2. *consist in* misused for *consist of*: Stage 1

console. See **condole**.

CONSONANCE. See ALLITERATION.

consort is pronounced /kon-**sort**/ as a noun and /kən-**sort**/ as a verb.

consortium is pronounced /kən-**sor**-sh[ee]-əm/ and now also, in BrE, /kən-**sor**-tee-əm/. The plural *consortia* has been standard since the 18th century. The plural *consortiums* didn’t come into common use until the late 20th century, and it is still far less frequent than *consortia*. See PLURALS (B).

Current ratio (*consortia* vs. *consortiums*): 7:1

conspectus; prospectus. These terms are not synonymous. A *conspectus* is a comprehensive survey, summary, or synopsis. (The plural is *conspectuses*.) A *prospectus* is a document describing the chief features of something that is forthcoming. (The plural is *prospectuses*.) See **prospectus**.

Avoid the hypercorrect plural **conspecti*—attested from the early 19th century. The etymon is a fourth-declension Latin noun whose plural doesn’t change form: *one conspectus, two conspectus*. So **conspecti* is false Latin and ridiculous English. Make it *conspectuses*. See PLURALS (B) & HYPERCORRECTION.

conspicuousness; *conspicuity. The latter is a NEEDLESS VARIANT that occasionally appears. Typically,

the sentence can be advantageously reworded—e.g.: “Experts claim that, because daytime running lights do *increase the conspicuity of motor vehicles* [read *make motor vehicles more conspicuous*], they must also be increasing safety on the road.” “Daytime Running Lights Are Standard on Some New Cars,” *Times Union* (Albany), 1 Feb. 1996, at T2.

Current ratio: 1.2:1

***conspirational**. See **conspiratorial**.

***conspirative**. See **conspiratorial**.

conspirator; ***conspiratorialist**; **coconspirator**. *Conspirator* (= one engaged in a conspiracy) finds a NEEDLESS VARIANT in **conspiratorialist*—e.g.: “He ordered Christic and its chief *conspiratorialist* [read *conspirator*], Daniel Sheehan, to pay \$1 million toward the defendants’ legal bills.” L. Gordon Crovitz, “Lawyers Make Frivolous Arguments at Their Own Risk,” *Wall Street J.*, 20 June 1990, at A17.

The term *coconspirator* (unlike **copartner*) is not always redundant. When speaking or writing of conspirator A and referring to conspirator B, it is far easier to use *coconspirator* than, say, *fellow conspirator*.

LANGUAGE-CHANGE INDEX

1. **conspiratorialist* for *conspirator*: Stage 1

Current ratio (*conspirator* vs.

**conspiratorialist*): 919:1

2. *coconspirator* meaning “fellow conspirator”:

Stage 5

conspiratorial; ***conspiratory**; ***conspirational**; ***conspirative**. The first is standard; the others are NEEDLESS VARIANTS.

Current ratio (in order of headwords): 189:2:1.5:1

***conspiratorialist**. See **conspirator**.

***conspiratory**. See **conspiratorial**.

conspire together is almost always redundant—e.g.:

- “That kind of dramatic, sensory evidence could help prosecutors move their case beyond one of focusing largely on circumstantial clues that suggest that McVeigh and Nichols *conspired together* [read *conspired*] to plan and carry out the attack.” Richard A. Serrano & Ronald J. Ostrow, “Government Builds Its Oklahoma Bombing Case with Video, Audiotape,” *Fresno Bee*, 31 Dec. 1995, at A8.
- “The two agents, by Washam’s own account, did not *conspire together* [read *conspire*], however.” Jamie Satterfield, “Washam Wrote Explanation of Troubles,” *Knoxville News-Sentinel*, 18 Aug. 2015, at A1.

See **together**.

Sometimes, though, a word such as *together* seems necessary to complete the thought or to create PARALLELISM with another idea in the sentence—e.g.:

- “[Those accused] have denied *conspiring together* and with four others to defraud the Department of Social Security.” “Immigrants in Benefit Fraud Trial,” *Daily Telegraph*, 27 Oct. 1994, at 6 (*and with four others* completes the thought).
- “Federal prosecutors oppose severance, arguing that McVeigh and Nichols *conspired together* and should be

tried together on charges of blowing up the federal building in Oklahoma City on April 19, 1995.” Gaylord Shaw, “Bomb Suspects at Odds,” *Newsday* (N.Y.), 2 Oct. 1996, at A4 (*conspired together* is parallel with *tried together*).

constitute. See **comprise** (c).

constitutional should not generally be capitalized, though *Constitution* (in reference to the U.S. Constitution) should be. The adjective has two meanings: (1) “of, relating to, or involving the Constitution” <constitutional rights>; and (2) “proper under the Constitution” <constitutional actions by the police>. Thus sense 1: “The diversion of a job to a competitor is not an invasion of a *constitutional* right.” And sense 2: “The Wisconsin statute, which is similar to the Norris-LaGuardia Act, has also been held *constitutional*.” The opposite of *constitutional* in sense 1 is *nonconstitutional*, and in sense 2 *unconstitutional*. See **nonconstitutional**.

constitutionalist; ***constitutionist**. The standard form of the term is *constitutionalist* (= [1] someone who studies or writes on the Constitution; or [2] a supporter of constitutional principles). The form **constitutionist* is a NEEDLESS VARIANT. E.g.: “*Constitutionists* [read *Constitutionalists*] could manage to gain a strong enough foothold in Congress to back a president who would use his legitimate veto power to curtail spending.” “Perils of the Line Item Veto,” *Wash. Times*, 29 Sept. 1996, at B5.

LANGUAGE-CHANGE INDEX

**constitutionist* for *constitutionalist*: Stage 1

construct (= to build) for *construe* (= to interpret) occurs fairly frequently because the word *construction* serves as the noun for both verbs. (See **construction**.) As a result, writers sometimes use *construct* as a kind of BACK-FORMATION—e.g.:

- “In his historical interpretation of the Supreme Court’s role in *constructing* [read *construing*] the United States Constitution, the late Robert G. McCloskey divided constitutional law into three periods.” Barbara H. Craig, *Chadha* vii–viii (1988).
- “Conservative judges do not make law. . . . Rather they *construct* [read *construe*] the laws and Constitution in accordance with the intent of the Founders and Framers, resisting the temptation to graft their own philosophy into the law.” Commentary, “Senatorial Cherry Picking,” *Wash. Times*, 18 Nov. 2001, at B5.

LANGUAGE-CHANGE INDEX

construct misused for *construe*: Stage 1

construction is the noun corresponding to both *construct* and *construe*. In law, *construction* usually corresponds to *construe*. One might think that the *construction of statutes* is the business of legislatures, since lawmakers *construct* (i.e., build) statutes. But *construction* in that phrase means “the process of *construing*,” which is the business of the courts. For an extended discussion of confusion wrought by the fact that *construction* answers to both *construe* and *construct*, see Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts* 13–15 (2012).

constructive; constructional. These terms are not to be confused. *Constructive* = (1) of, relating to, or involving the creation of something <the painstaking constructive process that resulted in the opera>; (2) designed to promote improvement <constructive criticism>; or (3) (of an act, statement, or other fact) having a given effect in law—because a court so declares—though the effect may not exist in fact <constructive fraud> <constructive trust>.

Constructional = (1) of or relating to building or the construction business; or (2) of, relating to, or involving the act or process of construing. Sense 1: “He retired as a *constructional* inspector from the Naval Base and was an Army veteran of World War II.” “Nelson B. Clark” (obit.), *Virginian-Pilot* (Norfolk), 16 Sept. 1996, at B4. Sense 2: “This court is aware of the general *constructional* preference in favor of a surviving spouse.” “Estate of Marvin P. Middlemark,” *N.Y.L.J.*, 1 Oct. 1996, at 26.

construe, vb. For the meaning, see **construct**. For the noun form, see **construction**.

consul; counsel; council. *Consul* (/kɒn-səl/) = a governmental representative living in a foreign country to oversee commercial matters. *Counsel* (/kəʊn-səl/) = a legal adviser or group of legal advisers. (See **counsel & lawyer**.) *Council* (/kəʊn-səl/) = a body of representatives. (See **council**.)

consulate; consulship. *Consulate* = the office, term of office, jurisdiction, or residence of a consul. *Consulship* = the office or term of office of a consul. *Consulate* is the more common and (therefore) the broader term. *Consulship* may be useful in conveying one’s meaning precisely.

Because *consulate* most often means “the office or official premises of a consul,” the phrase **office of the consulate* is a REDUNDANCY—e.g.: “Starting Tuesday, people wishing to pay their respects may sign the book in the *offices of the consulate* [read *consulate* or *offices of the consul*], on the 13th floor of the south tower of the building, at 400 N. Michigan.” Brenda Warner Rotzoll, “Chicago Bids Farewell,” *Chicago Sun-Times*, 1 Sept. 1997, at 3.

LANGUAGE-CHANGE INDEX

**office of the consulate* for *consulate*: Stage 1

consul general. Pl. *consuls general*. See PLURALS (G) & POSTPOSITIVE ADJECTIVES.

consulship. See **consulate**.

consult, as an intransitive verb, takes the preposition *with* (another person), or *on* or *about* (a matter). The verb may also be used transitively <to consult the document itself>. As with *invite* (for *invitation*), avoid the casual use of the verb to mean “consultation.”

For a brief mention of *consult* as a noun in place of *consultation*, see **disconnect**. Cf. **invite**.

consultation. The English writer Philip Howard has stated that in BrE, *consultation*

can mean a conference at which the parties, for example, lawyers or doctors, *consult* or deliberate. Modern legal usage confines this sense to meetings with more than one counsel present. You can have a *consultation* with your doctor on your own. But you must be able to afford the fees of at least two lawyers simultaneously before you can properly describe your meeting with them as a *consultation*.

Philip Howard, *Weasel Words* 57 (1979).

So in BrE, *consultation* refers to a meeting of two or more counsel and the solicitor who instructs them by leading the discussion and giving advice on their findings.

No such restrictive meaning is given the term in AmE. If you consult with your lawyer on a certain matter, that act is *consultation*.

consultative; *consultive; *consultatory; *consultory. Both *consultative* and **consultive* are old: the former is recorded from 1583, the latter from 1616. But *consultative* is preferable because it matches the stem of its related noun, *consultation*. Though *consultative* is also over 200 times as common as **consultive*, the latter does occasionally appear in print—e.g.: “Her intention is to get council members involved in coordinating and *consultive* [read *consultative*] roles with the citizens drafting the 37 neighborhood plans.” “A Workable Connection for Neighbors, City Hall,” *Seattle Times*, 17 Feb. 1996, at A15. Like **consultive*, the forms ending in *-ory* are NEEDLESS VARIANTS.

Current ratio (in order of headwords): 5,541:24:2:1

consummate as an adjective is pronounced /kən-səm-it/, and as a verb /kɒn-sə-mayt/. To pronounce the word /kɒn-sə-mət/ as an adjective is acceptable, but that pronunciation has long been considered an inferior one.

Consummate is sometimes misspelled **consummate*—e.g.: “Widely regarded as a *consummate* [read *consummate*] professional and bridge builder with a reputation for mediating potentially explosive disputes, Scott, 59, said yesterday he is leaving to spend more time with his family.” William K. Rashbaum, “No. 2 City Cop Plans to Retire in December,” *Newsday* (N.Y.), 27 Oct. 1994, at A62.

LANGUAGE-CHANGE INDEX

consummate misspelled **consummate*: Stage 1

Current ratio: 210:1

contact, v.t. Many language authorities vehemently objected to this verb in the first half of the 20th century, as H.L. Mencken observed: “When *to contact* dawned in the early ’20s a howl went up from the

American Holoferneses, and presently it was echoed *fortissimo* in England, and to this day it reverberates from crag to crag of the precipices of Athene. I must confess at once that I share this priggish loathing, and never use the word myself, just as I never use *alright*, but the plain fact remains that there is plenty of excuse for it in the genius of the English language, and that many other verbs in daily use are no more legitimate.” H.L. Mencken, “The Birth of New Verbs,” in *Aspects of American English* 92, 93 (Elizabeth M. Kerr & Ralph M. Aderman eds., 1963). As Mencken suggested, *contact* is now firmly ensconced as a verb. Brevity recommends it over *get in touch with* or *communicate with*; it should not be considered stylistically infelicitous even in formal contexts. E.g.:

- “One former Palatine village official *contacted* during the investigation called the BGA report a ‘sleazy witch hunt.’” John Carpenter & Becky Beaupre, “Panel Slams Palatine Probe,” *Chicago Sun-Times*, 21 Nov. 1997, at 6.
- “The Goodmans *contacted* Searle and presented him with a detailed record of their claim to the painting.” Adam Zagorin, “Saving the Spoils of War,” *Time*, 1 Dec. 1997, at 87.

If, however, the meaning is clearly either *call* or *write*, the specific verb is preferable.

LANGUAGE-CHANGE INDEX
contact as a verb meaning “to get in touch with”: Stage 5

contagious; infectious. These words are misused even by educated writers and speakers when discussing diseases. Germs and viruses that cause *contagious* diseases, such as influenza and head colds, are easily transmitted from person to person (or animal to animal, as with foot-and-mouth disease). Those that cause *infectious* diseases, such as cholera and typhoid, are usually spread through the environment (e.g., contaminated food or water). Some infectious diseases, such as sexually transmitted ones, can be passed from person to person through certain types of direct contact, but not through indirect or casual contact. See **infectious**.

contemn. See **condemn**.

contemner; contemnor. Most dictionaries list the spelling ending in *-er* as predominant; it was overwhelmingly so in 19th-century BrE and AmE, but is less so today. The *-or* spelling now predominates by a slight margin. See **-ER** (A).

Current ratio (*contemnor* vs. *contemner*): 1.1:1

contemplative is preferably accented on the second syllable: /kən-**tem**-plə-tiv/.

contemporary; contemporaneous. Both refer to coinciding periods of time. *Contemporaneous* usually refers to either actions or things, *contemporary* to people. But *contemporary* also commonly refers to things in the sense “current”—a sense to be avoided in contexts referring to past times, lest the word give rise to a **MISCUE** or outright ambiguity—e.g.:

- “He believes Italy is the best place to sample the major styles of Western architecture, from ancient Greek and Roman temples to medieval, Renaissance and *contemporary* [read *current*] styles.” Thomas W. Gerdel, “Relationships with His Clients Inspire Architect’s Designs,” *Plain Dealer* (Cleveland), 13 June 1995, at C4. (*Contemporary* could be momentarily misread as referring to styles flourishing in medieval and Renaissance times.)
- “Fantasy fiction . . . is medieval in atmosphere, 19th-century in its concerns, *contemporary* [read *current*] in its manners.” Edward Rothstein, “Flaming Swords and Wizards’ Orbs,” *N.Y. Times*, 8 Dec. 1996, § 7, at 60. (*Contemporary* might be read as referring to the 19th century.)
- “Italian art, too, has enjoyed a renaissance—in appreciation for the old masters and for *contemporary* [read *today’s*] artists.” Helen Forsberg, “It’s Italian,” *Salt Lake Trib.*, 8 Dec. 1996, at J8. (*Contemporary* might be read as referring to lesser artists working at the same time as the old masters.)

When no other time frame is mentioned, then we may infer “contemporary with us” to denote current rather than historical contexts.

Cotemporaneous does not precisely mean “simultaneous”; rather, it means “belonging to the same time or period; occurring at about the same time.” Hence the following sentences are correct:

- “Replete with notes and chronologies of both Dos Passos’ life and of the world events *cotemporaneous* with the action of the novels, its edition of ‘U.S.A.’ is one to savor.” Roger Miller, “A Grand Sweep of America, in 1,288 Pages,” *Milwaukee J. Sentinel*, 6 Oct. 1996, Cue §, at 9.
- “Thus, if Paula Jones’s case ever came to trial, a jury would have to decide if they believe her—and her six *cotemporaneous* witnesses—or Bill Clinton and his state trooper.” Carl M. Cannon, “Days of Reckoning,” *New Republic*, 2 Dec. 1996, at 34.
- “An attempt by the Star to match known fatal confrontations with *cotemporaneous* media reports left too many gaps.” Rosie DiManno, “Thorny History of Race Statistics,” *Toronto Star*, 18 Aug. 2015, at A2.

Cotemporaneous* is a **NEEDLESS VARIANT of *cotemporaneous*; likewise, **cotemporary* is a **NEEDLESS VARIANT** of *contemporary*.

contempt; contemptibility; contemptuousness; contumacy. These words are quite distinct. *Contempt* = (1) (generally) the act or state of despising; the condition of being despised; (2) (in law) action interfering with the administration of justice. *Contemptibility* = the quality or fact of being worthy of scorn. *Contemptuousness* = the quality of being scornful or disdainful. *Contumacy* = willful contempt of court (**contumacity* being a **NEEDLESS VARIANT**). For more, see **contumacy**.

contemptuous. A. And contemptible. *Contemptuous* = expressing contempt. *Contemptible* = worthy of contempt or scorn. See **-ABLE** (A).

B. And contumacious. These words are often interchangeable, but while *contumacious* may connote scorn, it strictly denotes only willful disobedience. *Contemptuous* is much more common in print—e.g.: “Mr. Milosevic appears *contemptuous* of the judges and prosecutors, reserving his interest and civility for those senior politicians, diplomats and generals from

the West who have testified. To them he sometimes even seems ingratiating.” Marise Simons, “Reviving Memories of Yet Another Evil,” *N.Y. Times*, 22 Sept. 2002, § 4, at 3.

In the sense “recalcitrant,” *contumacious* is chiefly a literary word—e.g.: “The children are unattractive characters, brimming with the misguided assurances of youth. They are proud, naively optimistic, *contumacious*, disagreeable.” Bill Eichenberger, “Small-Scale Life Looms Larger in *Visitors*,” *Columbus Dispatch*, 1 Feb. 1998, at H7.

contemptuousness. See **contempt**.

contend. See **allege & contest**, v.t.

content, adj.; **contented**, adj. These two words are essentially synonyms, though *content* is somewhat more common as a predicate adjective <I’m feeling quite content>, and *contented* somewhat more common as an adjective preceding a noun <contented workers>.

content, n. **A. And contents.** When referring to written matter or oral presentation, *content* refers to the ideas or thoughts contained (in words) as opposed to the method of presentation. Wilson Follett disapproved of the modern tendency to use *content* as well as *contents* for “what is contained” (*MAU* at 107), but the usage is old and is now common. It got a boost with the growth of the World Wide Web, being commonly used to refer to the material on websites. And the DIFFERENTIATION it represents—as explained below—is genuinely helpful.

Whereas *content* invariably refers to nonmaterial things, *contents* refers most commonly to material ingredients—e.g.: “Birthdays, holidays and special occasions, Forman is usually greeted with that flat skinny box that makes no secret of its *contents*.” “Sticking Their Necks Out,” *Times-Picayune* (New Orleans), 13 Aug. 1996, at F1. But sometimes it refers to non-material ingredients, especially when the suggestion is that many items are being considered—e.g.: “Kirkland police improperly kept secret the *contents* of a crime report on Northeast District Judge Rosemary Bordlemay and were ordered by a court to release the document.” Kevin Ebi, “City Loses Suit, Bid to Shield Jurist,” *Seattle Times*, 29 Dec. 1995, at B1.

B. And contentment. In the sense “the fact or condition of being fully satisfied (i.e., contented),” the word *contentment* is now standard. *Content* is reserved for a single idiom: *to (one’s) heart’s content*. But as an adjective it is frequently seen—e.g.: “She was *content* with her arrangement.” See **content**, adj.

contentious. See **tendentious** (c).

conterminous; coterminous; *coterminant; *coterminate; *coterminial. *Conterminous*, the oldest and

until 1900 the most prevalent of these words, means “having or enclosed within a common boundary.” E.g.: “One district is *conterminous* with Cook County, and three justices are elected at-large from there.” Doug Finke, “Redrawing of Court Boundaries Shaky,” *State J.-Register* (Springfield, Ill.), 6 Dec. 1996, at 13. Cf. **contiguous**.

Coterminous, now the most frequently used of these words, is an altered form of the original *conterminous*. It, too, means “coextensive in extent or duration.” For the sake of DIFFERENTIATION, *coterminous* should be confined to this figurative or metaphorical sense, and *conterminous* reserved for physical and tangible senses—e.g.:

- “What should trouble Democrats most is the prospect of an avalanche of defections polarizing Southern politics along racial lines, so that being Republican and white and Democrat and black become *conterminous* [read *coterminous*].” Ross K. Baker, “A Dixie Democrat Bails Out,” *Sacramento Bee*, 19 Apr. 1995, at B9. (The word’s meaning is creaky at best in that sentence.)
- “Forests blanket the reservation and follow its and the county’s *coterminous* [read *conterminous*] boundaries so tightly that American astronauts once spotted it from space and asked what they were seeing.” Michael Hirsley, “Native American Stereotypes Live On in Sports Logos, Rituals,” *Chicago Trib.*, 24 Oct. 1995, at 1.

**Coterminant*, **coterminate*, and **coterminial* are NEEDLESS VARIANTS.

contest, v.t. **A. And contend.** In the sense “to fight,” *contest* is almost always transitive <to contest an election>, and *contend* is intransitive <to contend against an opponent>. *Contend* may be transitive when it means “to maintain, assert” and is followed by a *that*-phrase <the striking workers contend that the pension fund is inadequate>.

B. Pronunciation. The noun is pronounced /kɒn-test/; the verb is pronounced /kən-test/.

contested election, in AmE, means either (1) “an election the validity of which has been challenged,” or (2) “a political race with more than one candidate.” Sense 2 is the sole meaning in BrE.

context of, in the; in a . . . context. These phrases are often used superfluously. “During the seventh century B.C., Egypt was repeatedly though always briefly occupied by Assyrian armies and *later infiltrated by Greek and other Aegean elements in a military and subsequently a commercial context* [read *later infiltrated militarily and then commercially by Greek and other Aegean elements*].”

contextual, not *contextural*, is the adjective corresponding to *context*. But the intrusive *-r-* often appears—e.g.:

- “For choreographers, *contextural* [read *contextual*] issues are at risk. In a bar setting, the cultural context calls for

humor; anything else seems out of place.” Gia Kourlas, “A New Stage for Modernists: the Nightclub,” *N.Y. Times*, 30 Sept. 2001, § 2, at 33.

- “Buildings have been limited to 35 feet in height or three stories since the 1970’s, but now there is talk of *contextural* [read *contextual*] zoning, which would honor the local character.” Nancy Beth Jackson, “City Island; Close-Knit Waterfront Enclave in Bronx,” *N.Y. Times*, 14 Apr. 2002, § 11, at 5.

For similar mistakes, see **contractual & pretextual**. For more on the intrusive *-r-*, see PRONUNCIATION (c).

It is true, however, that *contextural* is a bona fide adjective formed from *contexture* (a close synonym of *texture* meaning “a weaving together of elements into a whole”). It’s pretty rare, but it does sometimes occur—e.g.: “As for the rating, the ensemble concept, the *contextural* solos, and the subtle variety add a star.” Owen Cordle, “Blue Motion: Sound Recording Reviews,” *Down Beat*, June 1994, at 38.

LANGUAGE-CHANGE INDEX
contextual misspelled *contextural*: Stage 1
Current ratio (*contextual information* vs.
**contextural information*): 2,742:1

contiguous means not merely “close to” or “near,” but “abutting; sharing a boundary.” It is commonly misused in the phrase *the 48 contiguous states*, which is illogical because only a few states can be *contiguous* to one another. (And *neighboring* is surely better than *contiguous*—it’s more down-to-earth.) The counterargument might be that the *lower 48* (another illogical idiom since they are not as “low” in this sense as Hawaii) are the only ones that are *contiguous* with any other state. But that’s a stretch. Even the *continental United States* is incorrect (though common) because as it is understood it does not include Alaska, a sizable state on the northwest corner of the North American continent. Technically speaking, the proper way to put the idea would be *the 48 conterminous states* (see **conterminous**). But there’s not much chance of that phrase catching on, so we’re stuck with the illogical idioms. And of those, *contiguous states* and *continental United States* are about equally common. See ILLOGIC.

Contiguous to for *next to* is sometimes a pomposity. *Contiguous* should always be construed with *to*—not *with*.

contingency; *contingence. The latter is a NEED-LESS VARIANT.

Current ratio: 166:1

continual; continuous. *Continual* = frequently recurring; intermittent. E.g.: “And [the police are] removing [the homeless]—by police rides to the edge of town, by *continual* issuing of citations for camping, by mass towing of vehicles and by routine discarding of people’s belongings.” Paul Boden, “Where Can Homeless Go?” *USA Today*, 3 Dec. 1997, at A24. *Continuous* = occurring without interruption; unceasing. E.g.: “Crow Canyon archaeologists want to study the 12th- and 13th-century village to determine exactly when it was inhabited and whether it was occupied

continuously or intermittently.” Nancy Plevin, “Dirt, Sweat and Blisters,” *Santa Fe New Mexican*, 8 Sept. 1996, at E1. A good mnemonic device is to think of the *-ous* ending as being short for “one uninterrupted sequence.”

The two words are frequently confused, usually because *continuous* horns in where *continual* belongs—e.g.:

- “Minutes after the arrest, Wayne Forrest, a Deputy Attorney General helping prosecute the case, told the presiding judge, Charles R. DiGisi, that the sheriff’s office had been engaged in a ‘*continuous* [read *continual*] course of misconduct’ in the Spath case.” Robert Hanley, “Court-house Arrest Roils Trial of Officer in Teaneck Killing,” *N.Y. Times*, 18 Jan. 1992, at 9.
- “The variety of tactics included *continuous* [read *continual*] nagging, crying, screaming, embarrassing parents in public, sulking and emotional blackmail.” Maggie Brown, “Children ‘Put Pressure on Adult Buying,’” *Independent*, 30 Apr. 1992, Home News §, at 3.
- “*Continuous* [read *Continual*] interruptions are frustrating because *it often means* [read *they often mean*] you have to warm up all over again or don’t get a complete workout.” Nick Lackeos, “Getting into Shape,” *Montgomery Advertiser*, 1 Jan. 1996, at B1.

The phrase **almost continuous* indicates that *continual* is the right word—e.g.: “The antidepressant Prozac has been in the news *almost continuously* [read *continually*] since it was introduced in Belgium in 1986.” Jennifer Barrs, “Prozac on the Front Page,” *Tampa Trib.*, 24 Nov. 1996, at 8.

A related mistake is to use *continuous* for something that happens at regular (e.g., annual) intervals—e.g.: “The White House tree-lighting ceremony has been held *continuously* [read *annually*] since 1923.” “Lighting the National Christmas Tree,” *Herald-Sun* (Durham, N.C.), 6 Dec. 1996, at A1.

LANGUAGE-CHANGE INDEX
continuous misused for *continual*: Stage 3

continuance. A. Opposed Senses. *Continuance* has conflicting senses in lay and legal usage. Generally, it means (1) “keeping up, going on with, maintaining, or prolonging”; or (2) “duration; time of continuing.” E.g.: “Every citizen also wants lower taxes and a *continuance* of any and all federal spending programs that directly have some positive impact on each one’s lives.” Larry A. Smith, “Future Shock: It’s Entitlements, Stupid,” *Fresno Bee*, 16 Nov. 1996, at B7. (For more on *each one’s lives* in that sentence, see CONCORD (B).)

But in American law, *continuance* means “postponement; the adjournment or deferring of a trial or other proceeding until a future date” <motion for continuance>. E.g.: “Her trial is scheduled for late next month but a *continuance* is expected.” Anne Koch, “Teen Says She Didn’t Kill Pickup Driver,” *Seattle Times*, 17 July 1996, at B3.

B. And continuation; continuity. *Continuation* is the general word meaning “continued maintenance; carrying on or resumption of (an action, etc.); that by which a thing is continued” (COD). E.g.:

- “By putting more money in the public schools each year, the state has allowed the *continuation* of ‘a bureaucratic system that seems incapable of improving itself.’” “GOP Expected to Push for School-Choice Bills,” *Herald-Sun* (Durham, N.C.), 2 Dec. 1994, at C14.
- “The budget proposed by Pierce contains no new employees and a *continuation* of programs and infrastructure projects.” Hal Dardick, “Attempt Will Be Made to Cut Mayor’s Levy Hike,” *Chicago Trib.*, 2 Dec. 1996, at D3.

Continuity = connectedness; unbrokenness; uninterruptedness. E.g.: “The transition is as seamless as possible, and the retirement causes little or no interruption of service to the customers. Such *continuity* is vital in order for companies to maintain a good reputation and a competitive edge.” James E. Challenger, “Wanted: A Better Way to Retire,” *Houston Chron.*, 1 Dec. 1996, Outlook §, at 1.

***continue on** is a minor but bothersome REDUNDANCY—e.g.:

- “We *continued on* [read *continued* or *went on*] and found that the wolf stayed with the marked path.” Chris Welsch, “Making Tracks,” *Star Trib.* (Minneapolis), 4 Dec. 1994, at G1.
- “As he *continued on and on* [read *went on and on* or *continued*], uninterrupted by me, he proceeded to answer his own objections.” “To Manage Employees Better, Manage to Listen,” *Indianapolis Bus. J.*, 8 July 1996, at 68.
- “Big drops were soon followed by big gains and the market would *continue on* [read *continue*] its six-year run.” “Stocks Plunge over China Slowdown,” *Detroit News*, 22 Aug. 2015, at A5.

See PHRASAL VERBS.

LANGUAGE-CHANGE INDEX

**continue on*: Stage 3

continuity. See **continuance (B)**.

continuous. See **continual**.

continuum. Pl. *continua* or *continuums*. The former has always predominated in print sources—and continues to today. See PLURALS (B).

Current ratio (*continua* vs. *continuums*): 6:1

contracept, v.i., is a BACK-FORMATION that rose to prominence in the late 20th century but is not yet included in most dictionaries. It is a jargonistic word popular among social activists. E.g.:

- “Feminist rights include feminist responsibilities; the right to obtain an abortion brings with it the responsibility to *contracept*.” Naomi Wolf, “Our Bodies, Our Souls,” *New Republic*, 16 Oct. 1995, at 26.
- “Put starkly, Buchanan argues in his new book, ‘The Death of the West,’ that white people are too rich, selfish, godless and guilt-ridden to have children, and so are *contracepting* themselves out of existence.” “Godless and Childless,” *Wash. Times*, 25 Jan. 2002, at A2.

contraceptionist. See **contraceptor**.

contraceptive, n.; **abortifacient**, n. A *contraceptive* is a device or drug designed to prevent conception. An *abortifacient* is a device or drug intended to produce a miscarriage. Neither term should be used to include the other.

contraceptor; contraceptionist. What is the agent noun corresponding to *contraception*? William Safire prefers *contraceptionist* (“On Language,” *N.Y. Times*, 30 Dec. 1990, § 6, at 6). But *contraceptor* is five times as common in modern print sources, and usage suggests a worthwhile distinction: a *contraceptor* is someone who uses contraception, while a *contraceptionist* is someone who advocates its use.

CONTRACTIONS. A. Generally. Many writers, especially those who write in formal situations, feel uncomfortable with contractions. And perhaps contractions don’t generally belong in solemn contexts.

But why shouldn’t writers use them in most types of writing? Some excellent writers use contractions to good effect, even in books—e.g.:

- “I *won’t* offer an analysis of the passage and its working; some of the main points are fairly obvious.” F.R. Leavis, *The Common Pursuit* 102 (1952).
- “The ideal book reviewer[’s] . . . own literary quality should be obvious in his prose. If he is an academic, he *shouldn’t* allow this to show through.” Joseph Epstein, “Reviewing and Being Reviewed,” in *Plausible Prejudices: Essays on American Writing* 44, 56 (1985).
- “If I *hadn’t* [paid Billy a compliment], I doubt *wed* ever have become friends. In fact, if I *hadn’t*, he might just have shot me.” Larry McMurtry, *Anything for Billy* 14 (1988).
- “It’s no longer the sheepish effusions that score for Byron, but his goatish satires and letters.” John Simon, *The Sheep from the Goats: Selected Literary Essays* xviii (1989).
- “Did sloths make a chirping sound? Tina *didn’t* think so, but she *wasn’t* sure.” Michael Crichton, *Jurassic Park* 14 (1990).
- “Deep-seated conflict in the North was another story—it *wasn’t* supposed to exist.” Nicholas Lemann, *The Promised Land* 117 (1991).
- “I felt almost wonderful. If it *hadn’t* been for the other occupant of my publisher’s waiting room, *there’d* have been no ‘almost.’” Phyllis A. Whitney, *Woman Without a Past* 1 (1991).
- “Victims *don’t* occupy a higher moral plane. *They’ve* just suffered more.” Jonathan Rosen, “The Trivialization of Tragedy,” in *Dumbing Down: Essays on the Strip Mining of American Culture* 270, 280 (Katharine Washburn & John F. Thornton eds., 1996).
- “Weinstein *doesn’t* doubt that the Hollywood establishment wishes him ill, but he *doesn’t* think *it’s* personal.” Ken Auletta, “Beauty and the Beast,” *New Yorker*, 16 Dec. 2002, at 81.

The common fear is that using contractions can make the writing seem breezy. For most of us, though, that risk is nil. What you gain should be a relaxed sincerity—not breeziness. Among the wisest words on the subject are these:

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “*I don’t* and *you don’t* and *we don’t* are easy and proper, except where high dignity is required.” Edward N. Teall, *Putting Words to Work* 32 (1940).
- “Don’t start using . . . contractions . . . at every single opportunity from here on. It’s not as simple as that. Contractions have to be used with care. Sometimes they fit, sometimes they don’t. It depends on whether you would use the contraction in speaking *that particular sentence* (e.g. in this sentence I would say *you would* and not *you’d*). It also depends on whether the contraction would help or hinder the rhythm that would suit your sentence for proper emphasis. So don’t try to be consistent about this; it doesn’t work. You have to go by feel, not by rule.” Rudolf Flesch, *The Art of Readable Writing* 97 (1949; repr. 1967).
- “Such common contractions as *it’s*, *that’s*, *they’re*, and *she’ll* are correct in almost all written communications in business and the professions. Whether or not you choose to use them is a matter of personal preference.” David W. Ewing, *Writing for Results in Business, Government, and the Professions* 358 (1974).
- “Use occasional contractions. They’ll keep you from taking yourself too seriously, tell your reader that you’re not a prude, and help you achieve a more natural, conversational rhythm in your style.” John R. Trimble, *Writing with Style* 78 (1975).
- “Your style will be warmer and truer to your own personality if you use contractions like *won’t* and *can’t* when they fit comfortably into what you’re writing.” William Zinsser, *On Writing Well* 75 (6th ed. 1998).

B. Ill-Advised Forms. While you can use contractions such as *can’t*, *don’t*, and *you’ll* to good advantage, you may stumble if you contract recklessly. A few contractions that occur in speech don’t translate well into writing because they’re not instantly readable—the mind’s tongue trips over them, however briefly. Examples of ones generally to avoid (except perhaps in quoted speech) include **I’d’ve*, **it’d*, **she’d’ve*, **there’re*, and **who’re*. Two in particular—*should’ve* and *would’ve*—are common CASUALISMS that can’t be strongly condemned.

Two mistakes commonly occur with such contractions. First, the reduced *have* in several of these forms is sometimes mistaken for an *of*. (See **of (D)**.) Second, the conditional past perfect (*if I’d [= I had] known*) is sometimes mistakenly given a superfluous *-’ve* (**if I’d’ve known*)—e.g.: “If *I’d’ve* [read *I’d*] passed up on the date *he’d’ve* [read, perhaps, *he’d have*] been in like Flynn.” Will Self, “A Novella in Several Live Performances,” *Independent*, 7 June 2000, at 7. See ***had have & TENSES (A)**.

One last point. The form **who’re* is particularly ugly because of its visual resemblance to *whore*: “How is it that many people *who’re* [read *who are*] convinced that Oliver Stone’s *JFK* was a documentary about a right-wing plot to get Jack Kennedy are satisfied that Vincent Foster’s peculiar death in Fort Marcy Park was an open-and-shut case of suicide?” William P. Cheshire, “You Don’t Have to Be Oliver Stone to Wonder About Foster’s Death,” *Ariz. Republic*, 29 Sept. 1994, at B6.

C. Miscue with Contracted is. Be careful about contracting *is* with a noun (*the President’s going back to Washington*) as opposed to a pronoun (*he’s going*

back to Washington). A MISCUE commonly results because it reads at first as if it’s a possessive: “If *Baker’s spitting* [read *Baker is spitting*] into the wind anyhow, he might as well have a little fun. . . . But *Baker’s anything* [read *Baker is anything*] but a quietist.” David Gates, “Paper Chase,” *N.Y. Times* (Book Rev.), 15 Apr. 2001, § 7, at 8, 9.

D. Mispronounced Contractions. See PRONUNCIATION (B).

contractual is sometimes erroneously written (or pronounced) **contractural*, with an intrusive *-r-*. E.g.: “KCTS refused to release the budget figures, citing *contractural* [read *contractual*] obligations.” Chuck Taylor, “KCTS Confronts Its Future,” *Seattle Times*, 17 Nov. 1996, at M1. For similar mistakes, see **contextual & pretextual**.

LANGUAGE-CHANGE INDEX

contractual misspelled **contractural*: Stage 1
Current ratio: 663:1

contradict. See **gainsay**.

contradictory; ***contradictive**; ***contradictional**; **contradictious**. *Contradictory* = opposite, contrary. **Contradictive* and **contradictional* are NEEDLESS VARIANTS of *contradictory*.

Contradictious = inclined to contradict or quarrel. The word is applied to people—e.g.: “But General Gordon had always been a *contradictious* person—even a little off his head, perhaps, though a hero; and besides he was no longer there to contradict.” Carol Brightman, “Character in Biography,” *Nation*, 13 Feb. 1995, at 206.

contraindicate is medical JARGON meaning “to make (a treatment, practice, etc.) inadvisable.” In nonspecialist contexts, though, a simpler, more straightforward term is better—e.g.:

- “Researchers concluded that prophylactic pseudoephedrine is useful for preventing barotrauma, but since the medication is *contraindicated in* [read *inadvisable for*] patients with many medical conditions . . . a consultation with your own doctor is recommended.” Allan Bruckheim, “Health Line,” *Chicago Trib.*, 28 Mar. 1995, at C7.
- “Although medical professionals stress the health benefits of breast-feeding, there are instances in which it is *contraindicated* [read *inadvisable or not recommended*].” Melanie Choukas-Bradley, “Babes in Arms Get a Hand,” *Wash. Post*, 1 Oct. 1996, at D5.

Cf. indicated, to be.

And when the subject does not relate directly to health, the word is often a MALAPROPISM—e.g.:

- “At this time we find nothing in our investigation at this point to *contraindicate* [read *contradict*] the medical examiner’s report.” Tommy Perkins, “Autopsy Shows S.C. Man Drowned,” *Morning Star* (Wilmington, N.C.), 23 June 2000, at B2. (Note the REDUNDANCY in *at this time* and *at this point*, which are symptoms of OFFICIALESE.)
- “‘What I have been told is that we generally take our lead from the regional office (of the Department of Public Welfare), and the regional office had come out with nothing to *contraindicate* [read *warn against*] sending

children there,' Stoffa said." David Slade, "Foster Mom/Dad Probe Widens," *Morning Call* (Allentown, Pa.), 24 Sept. 2000, at A1 (quoting John Stoffa, county director of human services).

contralto. Pl. *contraltos*, preferably not **contralti* (an affectation). From 1850 (when the term first became fairly common) to the present day, *contraltos* has seriously outranged the Italianate plural in frequency of use. See PLURALS (B).

Current ratio: 21:1

contrary. A. *Contrary to or* **contrary from*. *Contrary* takes the preposition *to*. **Contrary from* has never been standard. E.g.:

- "The facts of a cynical European political elite, defending Mr. Arafat, are *contrary to* the facts on the ground." Amos Perlmutter, "Distress Signals . . . Amid Mideast Turbulence," *Wash. Times*, 1 Oct. 1996, at A15.
- "*Contrary to* two breathless reports in a local weekly newspaper, 'Mars Attacks!' was not filmed in Richmond." Daniel Neman, "Execution of 'Mars' Less Great than Idea," *Richmond Times-Dispatch*, 13 Dec. 1996, at C5.

B. On the contrary; to the contrary; quite the contrary. *On the contrary* marks a contrast with a statement or even an entire argument just made. It has always been the most usual phrasing—e.g.:

- "I hold neither of those views. *On the contrary*, I argue that biochemical systems—as well as other complex systems—were designed by an intelligent agent." Letter of Michael J. Behe, "And God Saw That It Was Good," *Newsweek*, 7 Oct. 1996, at 24.
- "Yet it has no real conclusion. *On the contrary*, several narrative threads are conspicuously left dangling." Madison Smartt Bell, "Southern Shadows," *Chicago Trib.*, 10 Nov. 2002, Books §, at 1.

To the contrary marks a contrast with a specific noun or noun phrase just mentioned. E.g.: "The answer is not a mystery. It is, *to the contrary*, quite simple and can be given quite simply." Bob Dole, "Bob Dole's Acceptance Speech," *Wash. Monthly*, Oct. 1996, at 20. (The contrast is with the noun *mystery*.)

Quite the contrary can do the job of either of the other two phrases. The phrase is usually either a verbless sentence or a verbless clause followed by a semicolon—e.g.:

- "Don't think that if you have been had once, your luck has to change. *Quite the contrary*; you probably have gotten yourself on a list with others who have been defrauded and are now a prime target." Jonathan N. Axelrod, "Get Poor Quick," *Pitt. Post-Gaz.*, 7 Oct. 1996, at B7.
- "This is not to suggest that Peres sought to provoke a Lebanon crisis during March and April, though. *Quite the contrary*. All the evidence indicates that . . . Peres was trying to maintain calm." Jonathan Marcus, "Toward a Fragmented Policy?" *Wash. Q.*, Autumn 1996, at 19.

contrast. A. **Prepositions with.** One *contrasts* something *with*—not *to*—something else. But it's

permissible to write either *in contrast to* or *in contrast with*. Cf. **compare with**.

B. Compare and contrast. This is an English teacher's REDUNDANCY.

C. Pronunciation. As a noun, *contrast* is accented on the first syllable: /**kon**-trast/. As a verb, it's accented on the second syllable: /kən-**trast**/.

contravene. A. **And violate.** *Contravene* = (1) (of people) to transgress, infringe (as a law); to defy; or (2) (of things) to be contrary to, come in conflict with. E.g.: "While the matter has been in the courts, the U.S. Department of Transportation issued a letter saying the airport's regulation *contravenes* federal law and policy." Howard Pankratz, "Centennial Injunction Voided," *Denver Post*, 13 Dec. 1996, at A24. The word can usually be advantageously replaced by the simpler word *violate*.

In AmE, *contravene* is less usual than *violate*, but in BrE just the opposite is true. Whereas Americans think of *contravene* as a fancy equivalent of *violate*, to Britons it (like its corresponding noun, *contravention*) is more an everyday word—e.g.:

- "The origins of the dispute lie in the leakage to the market of Russian diamonds, *contravening* Russia's agreement with De Beers." Kenneth Gooding, "Diamond Cartel Cuts Up Rough," *Fin. Times*, 24 Aug. 1995, at 17.
- "Its action is a blatant *contravention* of the 1951 refugee convention, whose signatories are bound not to repatriate refugees by force." "Border Trouble," *Fin. Times*, 24 Aug. 1995, at 11. (In this latter example, note the unpleasant ring of *contravention/convention*.)

In AmE, a simpler, more direct writing style favors *violate* over *contravene*.

B. And controvert. *Contravene* shouldn't be confused with *controvert* (= to dispute or contest; to debate; to contend against or oppose in argument). Although *controvert* is mostly confined to legal contexts, it does appear elsewhere—e.g.:

- "In the Information Culture we flip from one momentous medical theory to another the next day. The second absolutely *controverts* the first, and it all seems normal because our heads are spinning with data." Jim Klobuchar, "Screaming, Hissing and Moaning Over Election Campaign," *Star Trib.* (Minneapolis), 27 Oct. 1994, at B3.
- "Perry is an expert at producing numbers persuasive to his case. They are not easy to *controvert*." Greg Heberlein, "Fearing the Worst? Relax, It Won't Be That Bad," *Seattle Times*, 29 Oct. 1995, at F1.
- "At one point in the tour of Sprague, prisoners hollered about the facility's dismal conditions. Jail officers did not *controvert* them." Christopher Collins, "County Jail System Needs Reform," *Times Record News* (Wichita Falls, Tex.), 5 July 2015, at A1.

C. And ***controvene.** This error, dating from the late 19th century, results from confusion of *contravene* with *controvert*. E.g.: "The State's use of a jail-house informant to elicit inculpatory information

from Wilson *controvened* [read *contravened*] his right to counsel.” *Wilson v. Henderson*, 742 F.2d 741, 748 (2d Cir. 1984). The same problem occurs in the noun form: “The Long Island Bank is seeking a court order declaring that the Comptroller acted ‘in *controvention* [read *contravention*] of the law’ and that his approval is ‘null and void.’” “Citibank Branch Target of Suit,” *Am. Banker*, 6 July 1979, at 3.

LANGUAGE-CHANGE INDEX
contravene misspelled **controvene*: Stage 1
Current ratio: 1,619:1

D. And **contravent*. This form is a misbegotten BACK-FORMATION used by writers who, reaching for the verb corresponding to *contravention*, forget that *contravene* is the correct form—e.g.:

- “You should say that it is clear from the letter that it expects your current code to produce an overpayment, and that consequently it *contravents* [read *contravenes*] regulation 7(e).” “New Tax Code for Widow,” *Fin. Times*, 28 Dec. 1985, at vi.
- “[The] decision appears to *contravent* [read *contravene*] the clear legislative intent of IEEPA.” Jules Lobel, “Emergency Power and the Decline of Liberalism,” 98 *Yale L.J.* 1385, 1417 n.175 (1989).

LANGUAGE-CHANGE INDEX
**contravent* for *contravene*: Stage 1
Current ratio (*contravene* vs. **contravent*): 4,946:1

contribute. For the MALAPROPISM in which this word is confused with *attribute*, vb., see **attribute**.

contributory; *contributory; contributive; contributiorial; contributorial. *Contributory* = (1) making contribution; contributing to a common fund <contributory donations>; or (2) bearing a share toward a purpose or result <contributory negligence>. **Contributory* is a NEEDLESS VARIANT of *contributory*. *Contributive* = having the power of contributing; conducive <exercise is contributive to health>. *Contributiorial* = of, relating to, or involving a contributor <contributiorial recognition>. *Contributorial* (a rare word, rarely necessary) = of, relating to, or involving a contribution <contributorial achievements>.

Current ratio (*contributory* vs. **contributory*): 319:1

controller. See **comptroller**.

CONTRONYMS. A surprising number of words can bear contradictory senses. They’re known as “contronyms,” or “autonyms.” Typically, context eliminates any real possibility of ambiguity. A truly recondite contronym is *anabasis* (/ə-**nab**-ə-səs/), which (according to *W11*) can mean either a military advance or a military retreat. Xenophon (ca. 431–352 B.C.) used the word in reference to Cyrus the Younger’s attack on his brother, Artaxerxes, in 401 B.C. (The Cyrus army advanced and the Artaxerxes army retreated: it’s all a matter of perspective.) The word has been recorded in English from 1706, mostly in reference to advances. Following are some less erudite examples:

- *Appropriate* = (1) to take exclusive possession of <appropriate land for a public school>; or (2) to give over to

another person or group for its own use <appropriate funds for the biology department>.

- *Cleave* = (1) to stick together <Shall a man cleave unto his wife?—Genesis 2>; or (2) to split apart <cleave the logs with a hatchet>.
- *Dispose of* = (1) to get rid of; or (2) to have the use of.
- *Draw* = (1) to open <please draw the curtains>; or (2) to close <please draw the curtains>.
- *Drift* = the general direction of an argument. But when an argument *drifts*, it has no general direction.
- *Dust* = (1) to sprinkle powder over <dust the pastries with powdered sugar>; or (2) to remove the dust from <you haven’t dusted the shelves yet>.
- *Fast* = (1) in rapid motion <she ran fast>; or (2) motionless <the ship is tied fast to the dock>.
- *Let* = (1) to allow or permit <let our guests see the painting>; or (2) (archaically) to prevent or hinder <the sheriff’s pursuit was let by the suspect’s accomplice>.
- *Oversight* = (1) an obligation to supervise <the committee has oversight over the project>; or (2) failure to be vigilant <it was an oversight—just a silly oversight>.
- *Ravel* = (1) to disentangle <ravel a tall tale>; or (2) to entangle <become raveled in a fraud>.
- *Sanction* = (1) to express approval <the league sanctioned a new tournament>; or (2) to express disapproval <the city council sanctioned the city manager for the unauthorized expenditures>.
- *Scan* = (1) to read hastily <just scan the street signs>; or (2) to examine carefully <scan the map and plot our course>.
- *Torsibility* = (1) capability of being twisted; or (2) resistance to being twisted.
- *Trim* = (1) to add to the edges of <she trimmed the dress with lace>; or (2) to cut off the edges or tips <trim your hair>.

controversial is preferably pronounced /kon-trə-vər-shəl/, not the affected /kon-trə-vər-see-əl/.

controversy is pronounced /kon-trə-vər-see/ in AmE and BrE, but sometimes also /kən-**trah**-və[r]-see/ in BrE. The word appears surprisingly often in the mangled form **controversary*. One example suffices: “It is only fitting that we delve into Irish history to relate a tale fraught with *controversary* [read *controversy*] for lo these past 144 years.” Max Haines, “A Scream from the Past,” *Toronto Sun*, 17 Mar. 1996, at 5.

LANGUAGE-CHANGE INDEX
controversy misspelled **controversary*: Stage 1
Current ratio: 18,339:1

controvert. So spelled—not **contravert*, a misspelling that litters much legal writing. See **contravene** (B).
Current ratio: 90:1

controvertible. So spelled—not **controvertable*. See -ABLE (A).

Current ratio: 313:1

contumacious. See **contemptuous** (B).

contumacy; *contumacity; contumely. Of the two forms of the noun corresponding to *contumacious*, *contumacy* (/kon-tyuu-mə-see/) is the usual term, meaning (1) “rebellion against authority”; or (2) “willful contempt of court.” Sense 1 is the nonlegal sense—e.g.:

“But he was a backslider, and finally was removed from the rolls [of the church] in 1880 for *contumacy*.” Perre Magness, “Church Celebrates a Colorful 150 Years,” *Commercial Appeal* (Memphis), 21 Apr. 1994, Neighbors §, at ME2. **Contumacy* is a NEEDLESS VARIANT. For the corresponding adjective, see **contemptuous (B)**.

Contumely (/kon-tyoo-mə-lee/), easily confused with *contumacy*, is a literary word meaning “rude and haughty language.” Shakespeare wrote, in *Hamlet*, of “the proud man’s *contumely*” (3.1.70). More recent examples are not common, but the word does still appear—e.g.:

- “With considerable vituperation, *contumely* and plain old harrumphing, members of the General Assembly finally passed a couple of ethics bills affecting public officials.” “All’s Quiet . . .,” *Columbus Dispatch*, 2 Feb. 1994, at A10.
- “Targets for *contumely* include the Labour MP Russell Kerr (‘a drunken boor’), the journalist John Junor (‘an unamiable . . . old swine’), and his fellow Tory MP Robin Maxwell-Hyslop (whom he describes variously as ‘an unpleasant . . . eccentric,’ ‘a nasty bit of work,’ and ‘always . . . a man to avoid’).” Gerald Kaufman, “Elegy to a Political Career,” *Sunday Telegraph*, 2 Oct. 1994, Books §, at 11.

Contumely can properly refer not just to scornful language but to scorn itself—e.g.:

- “And congressional concern over subsidized art calculated to arouse *contumely* or hatred of racial, ethnic, gender, religious, or other groups or values reflects a legitimate goal.” Bruce Fein, “Dollars for Depravity?” *Wash. Times*, 19 Nov. 1996, at A14.
- “But the point to be examined isn’t whether Mr. Gingrich suffers the *contumely* of much of the public.” William F. Buckley, “GOP Future Needs Aye of Newt,” *Cincinnati Enquirer*, 22 Nov. 1996, at A10.

Current ratio (*contumacy* vs. **contumacy*): 100:1

contusion. See **concussion**.

conundrum. Pl. *conundrums*. The mistaken form **conundra* sometimes appears—e.g.: “The rhythms of baseball, unlike those of more hectic games, often induce in the spectator long thoughts and provide ample opportunity to tackle *conundra* [read *conundrums*] that have long stumped philosophers for millennia.” George W. Hunt, “What Are Hyenas Laughing at Anyway?” *America*, 13 Apr. 1996, at 2. (If the author was trying to make **conundra* parallel to *millennia*, the echo hardly works.) See PLURALS (B).

LANGUAGE-CHANGE INDEX

**conundra* for *conundrums*: Stage 1

Current ratio (*conundrums* vs. **conundra*): 38:1

convener; *convenor. *Convener* has been standard for centuries. Although the *-or* spelling inexplicably surged in the 1990s, it remains a NEEDLESS VARIANT. See -ER (A).

Current ratio: 1.3:1

convention(e)r. Today the usual term for one attending a convention is *conventioneer*. It has been standard since the 1930s.

Current ratio (*conventioneer* vs. *conventioner*): 132:1

conversable; *conversible; convertible. *Conversable* = easy to talk with; enjoyable as a conversationalist. E.g.: “Friends say Ethel Kropf was as likable as they come—kind, thoughtful, *conversable*, quick with a compliment and full of stories.” Alex Tizon, “Ethel Kropf, 97, Was Full of Stories,” *Seattle Times*, 20 June 1995, at B6.

**Conversible* is a NEEDLESS VARIANT OF *convertible* (= capable of being converted). E.g.: “As well as Comcast’s deal, an issue for The Limited, the U.S. women’s clothing chain, also had a success with a \$50m *conversible* [read *convertible issue*] paying a 6¾ per cent coupon with a put option to give a 9.48 per cent yield after five years.” Maggie Urry, “Low-Cost Borrowing Via a Convertible,” *Fin. Times*, 2 Sept. 1985, § II, at 20. See -ABLE (A).

conversant in; conversant with. Although at times these phrasings have been interchangeable, a DIFFERENTIATION appears to be emerging. *Conversant in* suggests “thoroughly versed in” and connotes a good deal of expertise—e.g.:

- “The MSI show is a means for any user—nonusers, too—to become more fluent with the ‘techie’ concepts and terms used by people more *conversant in* the computer revolution.” Mike Conklin, “Networld Shows the Way,” *Chicago Trib.*, 3 Apr. 2001, at 3.
- “Sophisticated, savvy and stylish, fluent in French and *conversant in* history, Jacqueline Kennedy may not have been the greatest first lady—a title historians tend to bestow on Eleanor Roosevelt.” Lisa Anderson, “Museum Exhibit Explores Jackie Kennedy’s Impact,” *Seattle Times*, 24 Apr. 2001, at A9.
- “The cosmopolitan Negroponte—London-born, Greek American, Yale-educated, *conversant in* five languages—should placate U.N. members who sense a rise in American jingoism.” Jay Branegan, “With Friends Like These Can a New Envoy Bring the U.S. and U.N. Together?” *Time* (Int’l ed.), 21 May 2001, at 25.

Conversant with (since 1800 the more usual phrasing) tends to suggest somewhat less expertise—that is, a general familiarity with something. E.g.:

- “From an early age he [John Adams] read and relished Greek and Latin, was *conversant with* Thucydides and Tacitus, as avaricious a bookman as his immortal correspondent Thomas Jefferson.” Edwin M. Yoder Jr., “The Amiable Classicist,” *Wash. Post*, 27 May 2001, Book World §, at T3.
- “The company ultimately benefits from an education system that has better teachers who are *conversant with* the area’s dominant business.” Mark Simon, “Win-Win Program Needs More Sponsors,” *S.F. Chron.*, 29 May 2001, at A13.
- “Chafee said Mr. Bush, plainly *conversant with* the political challenges ahead, pointed out that although the GOP must

defend more seats in 2002, there are several vulnerable Democrats running for reelection in states that he carried last year." John E. Mulligan, "Chafee Foresees Stalemate for Senate, Bush," *Providence J.-Bull.*, 8 June 2001, at A1.

conversationalist; ***conversationist**. The standard term is *conversationalist*. Older authorities preferred **conversationist*, but that obsolescent word (predominant till about 1850) is now almost never used.

Current ratio: 43:1

converse, n.; **obverse**, n.; **inverse**, n.; **reverse**, n. In logic, these words denote various types of opposition. *Converse* = a statement derived from another statement by transposing the terms on each side of an antithesis <honor without courage; courage without honor>. *Obverse* = an equivalent statement made by negative inference <no person is immortal; all people are mortal>. *Inverse* = a statement made by inference from an original negative proposition by changing the subject but keeping the predicate the same <no comedy is drama; some noncomedies are drama>. *Reverse*, the broadest of these terms, means simply "the contrary"—and embraces the other three.

converse, vb.; ***conversate**; ***conversationalize**. *Converse* (/kən-ˈvɜːrs/) is the standard verb corresponding to the noun *conversation* <she converses with ease in several languages>.

The dialectal variant **conversate*, a BACKFORMATION, is sometimes heard, as reported here: "The Westerfield case had its cast of characters whose testimony made them local celebrities—the friends of the van Dams, the bartender at Dad's Cafe who kept using the word 'conversate' on the witness stand." Alex Roth, "Guilty on All Counts," *San Diego Union-Trib.*, 22 Aug. 2002, at A1. During the trial referred to in that quotation, the bartender received an anonymous hate letter over his use of this word; the writer expressed "outrage that he [the bartender] hadn't spoken proper English." Alex Roth, "Westerfield Trial: Dad's Uneasy with Notoriety," *San Diego Union-Trib.*, 21 July 2002, at A1. (A serious breach of decorum: proponents of good English should always remain civil. Hate mail isn't the way.)

In print, this NONWORD almost always appears in reported speech—e.g.:

- "Sometimes, Charles admits, he misses the old life. Or certain things that came with the old life. 'I miss just walking around. I like *conversating* with people.'" Bill Marvel, "Cast into the Darkness," *Dallas Morning News*, 28 Jan. 2001, at F1.
- "Since I'm traveling a lot, we *conversate* via e-mail." Mike McGraw, "Rose to Honor Father," *Daily Herald* (Chicago), 16 Apr. 2002, at 7 (quoting Jalen Rose).
- "During a College World Series game, she heard a sportscaster say the coach was '*conversating*' with the pitcher." "Smiley Anders," *Advocate* (Baton Rouge), 24 June 2002, at B1.

Meanwhile, **conversationalize* (along with cognates such as **conversationalization*) is a piece of bureaucratic mumbo jumbo—e.g.: "[C]*onversationalization*'

. . . [occurs when] the presenter is constructed as an ordinary bloke talking to ordinary people, sharing with them . . . a commonsense world of ordinary experience." Norman Fairclough, *Media Discourse* 10 (1995). No ordinary bloke would use the word. See -IZE & BUREAUCRATESE.

Current ratio (*converse*, vb., vs. **conversate*): 498:1

***conversible**. See **conversible**.

convertible. So spelled—not **convertable*. See -ABLE (A) & **conversible**.

Current ratio: 1,745:1

conveyance, n. **A. Meaning "vehicle."** *Conveyance* is sometimes used as a FORMAL WORD for *car* or *vehicle*—a pomposity to be avoided. E.g.: "Parents of bused students who are unhappy with the county's transportation arrangements always have the option of getting their children to school in *private conveyances* [read *their own cars*]." "Children Are Parents' Responsibility," *Sun-Sentinel* (Ft. Lauderdale), 21 Sept. 1995, at A18.

B. And *conveyal. *Conveyance* is the better noun corresponding to the verb *convey*. **Conveyal* is a NEEDLESS VARIANT.

conveyor is the general spelling for "a person or thing that conveys." In mechanical uses, however, as in *conveyor belt*, the -or spelling is standard.

convict, v.t. A person is *convicted* of a crime, for the act of committing a crime, or on a particular count. But a person is not **convicted in a crime*: "A Palestinian suspected in the bombing of Pan Am Flight 103 was *convicted* today along with three co-defendants *in* [read *for*] a series of attacks in northern Europe four years ago." "Pan Am Bombing Suspect Convicted *in* [read *for*] Other Attacks," *N.Y. Times*, 22 Dec. 1989, at 3.

convictable. So spelled in AmE and BrE alike—not **convictible*. See -ABLE (A).

convince. See **persuade**.

convolvulus (= a morning glory having funnel-shaped flowers and triangular leaves) predominantly forms the plural *convolvuli* (/kon-ˈvɒl-vyə-lɪ/) in all varieties of English. The plural *convolvuluses* is a variant.

Current ratio: 2:1

coolly. So spelled—not **cooly*. E.g.: "It's a nicely restrained, *cooly* [read *coolly*] observant effort." Lloyd Sachs, "'Boys Life' Even Better the Second Time Around," *Chicago Sun-Times*, 15 Aug. 1997, at 30.

LANGUAGE-CHANGE INDEX
coolly misspelled **cooly*: Stage 1

Current ratio: 40:1

co-op. The shortened form of *cooperative* (= an organization owned by and run for the benefit of those who use its services), *co-op* is hyphenated even though the longer form isn't. Without the hyphen, it looks like the word for a chicken pen.

cooperate; *co-operate. AmE did away with the hyphen about 1910; BrE took till about 1980. The word is solid.

Current ratio: 6:1

co-opt. This word, from the Latin *cooptare* “to choose or elect,” has an obligatory hyphen because without it a MISCUE almost certainly takes place. *Coöpt* is an old-fashioned variant. The word means (1) “to recruit (someone) as a member,” (2) “to gain the allegiance of (an opponent or potential opponent),” or (3) “to absorb or assimilate; to make use of.”

Co-opt is sometimes wrongly written *co-op* (which is properly only a shortening of *cooperative*): “The danger here is clear—people trying to *co-op* [read *co-opt*] the campaign finance reform issue and pass off fake reforms as real.” Alison Mitchell, “McCain Returns to an Uneasy Senate,” *N.Y. Times*, 20 Mar. 2000, at A19 (quoting Fred Wertheimer). See **co-op**.

LANGUAGE-CHANGE INDEX

co-op misused for *co-opt*: Stage 1

Current ratio (*to co-opt the* vs. **to co-op the*): 193:1

COORDINATE ADJECTIVES. See ADJECTIVES (C).

coowner. Because the general AmE practice is not to hyphenate prefixes, some writers prefer *coowner*. For example, the American Law Institute has used the term *coownership* in the title of one of its restatements of the law. The question whether the better form is *coowner* or *co-owner* is largely one of familiarity. To some writers—particularly lawyers—*coowner* and *coownership* are everyday words. But other writers think that the solid versions are visually jarring, so they write *co-owner* and *co-ownership*. See CO- & PUNCTUATION (J).

copacetic; *copasetic; *copesetic; *copesettic. The first is the standard spelling for this tongue-in-cheek term meaning “first-rate; quite satisfactory.” The word is slangy and jocular. Its ETYMOLOGY—variously attributed to Italian, Creole French, and Hebrew—is unknown. The second, third, and fourth spellings are variant forms (the last one especially rare). See SLANG.

Current ratio (first three headwords): 33:21:1

***copartner** need not exist alongside *partner*. The joint relationship (i.e., that the existence of one partner implies the existence of one or more other partners) is clear to all native speakers of English. Because **copartner* adds nothing to the language, it should be avoided as a NEEDLESS VARIANT. E.g.: “In her firm, which she shares with Amy Newman, Rakinic feels it’s a plus having a woman as a *copartner* [read *partner*].” Leslie M. Clouden, “Suburbs Are a Welcome Home for Women Out on Their Own,” *Legal Intelligencer*, 10 July 1996, at S1. Cf. **coequal**.

LANGUAGE-CHANGE INDEX

**copartner* for *partner*: Stage 1

Current ratio (*partner* vs. **copartner*): 2,052:1

***copartnership** is a NEEDLESS VARIANT of *partnership*—e.g.: “Beyond the despotism and repression at home, China’s foreign policy isn’t worthy of the expanded *copartnership* [read *partnership*] with the United States that Mr. Glickman advocates.” “Too Soon for MFN Status,” *Wash. Times*, 14 Nov. 1993, at B5.

LANGUAGE-CHANGE INDEX

**copartnership* for *partnership*: Stage 1

Current ratio (*partnership* vs. **copartnership*): 377:1

***copasetic; *copesetic; *copesettic.** See **copacetic**.

copse; coppice. In the mid-18th century, Samuel Johnson defined *coppice* as “low woods cut at stated times for fuel; a place overrun with brushwood.” (*A Dictionary of the English Language* [1755].) In the etymological note, he added: “It is often written *copse*.” In other words, *coppice* (a Latinized spelling) and *copse* (an anglicized phonetic spelling arrived at through the linguistic process known as syncope) are the same word. Both spellings date from the 16th century, and modern desktop dictionaries define the term as “a thicket, grove, or growth of small trees” (*W11*) or “a thicket of small trees or shrubs” (*WNWCD*).

But the two leading desktop dictionaries disagree about which spelling predominates: *W11* puts the main entry under *coppice*, while *WNWCD* puts it under *copse*—each with a cross-reference to the alternative spelling. So which lexicographic team has it right? Merriam-Webster or Webster’s New World? The latter. *Copse* outnumbers *coppice* in modern print sources by a 2-to-1 ratio. And so we debouch from the linguistic thicket.

Finally, a tip for scatologically minded word-lovers: many of the most weirdly cognate and thoroughly obscene, cloacal, and stercoraceous words in the English language appear in unabridged dictionaries between *coppice* and *copse*.

Current ratio (*copse* vs. *coppice*): 2:1

copula; cupola. *Copula* = (1) a linking verb, such as *be*, *feel*, or *seem*, that expresses a state of being rather than action; or (2) a link or connection in general—e.g.: “This is the age of parsing, a word that once referred to the grammatical analysis of sentences. Now it means playing games with words, as Bill Clinton did with the *copula* ‘is’ in worming his way out of charges of illicit copulation.” Rob Morse, “Outlawing Cock and Bull Stories,” *S.F. Chron.*, 31 Aug. 2001, at A2. *Cupola* = an arched or domed roof, as on an astronomical observatory.

Through an odd sort of METATHESIS, *copula* wrongly displaces *cupola* fairly often, probably by writers not versed in architecture—e.g.:

- “Each has its own *copula* [read *cupola*], Boston Gables, as well as numerous peaks with windows galore, all topped by a metal roof.” Karl Kell, “Abita Man Wakes Up Every

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Day in the House of His Dreams,” *Times-Picayune* (New Orleans), 30 Sept. 2001, Slidell §, at 4.

- “The home . . . features six bedrooms, six full baths and two half baths, a three-story porch and an octagonal *cupola* [read *cupola*].” Brennan Kearney, “For a Family, a House with History and Walls That Seem to Speak,” *N.Y. Times*, 17 May 2002, at F7.
- “Naming opportunities remain. . . . [Y]ou could donate \$40,000 to name the Garden Café *Cupola* [read *cupola*].” Maryalice Koehne, “Donations Campaign Takes Root,” *Milwaukee J. Sentinel*, 26 May 2002, at N8. (Since the cupola hasn’t been named yet, there’s no need to capitalize *cupola* in that sentence as a proper noun.)

LANGUAGE-CHANGE INDEX
cupola misused for *cupola*: Stage 1

COPULAS, ADVERBS OR ADJECTIVES AFTER. See ADJECTIVES (E).

copy, v.t., in the sense “to send a copy to” <he copied me on the letter>, is a voguish CASUALISM to be avoided in formal contexts—e.g.: “It is therefore legitimate to *copy* [read *send a copy to*] the recipient’s boss.” Mark H. McCormack, *What They Don’t Teach You at Harvard Business School* 138 (1984).

LANGUAGE-CHANGE INDEX
copy as a verb meaning “to send a copy to”: Stage 4

copyeditor; copyediting; copyedit, vb. Each is now preferably a single unhyphenated word—e.g.:

- “‘Copyediting’ is one of those made-up words that somehow needed to be written that way. I—and many others before me—made the term one word, even though *Webster’s* says that ‘copy editor’ is two. With ‘proofreading’ indisputably one word, it seems appropriate that ‘copyediting’ should be also. And ‘copyeditor.’ As we shall see, a copyeditor *copyedits* copy. Throughout this book, then, ‘copyeditor’ and ‘copyediting’ will be one word.” Karen Judd, *Copyediting: A Practical Guide* 1 (1982).
- Elsie M. Stainton, *The Fine Art of Copyediting* (1991).
- “A *copyeditor* found the following ubiquitous error.” Mary Newton Bruder, *The Grammar Lady* 126–27 (2000).

copyright, n. & vb., is so spelled. **Copywrite* is a not infrequent mistake for the verb—e.g.:

- “You said you didn’t know the author’s name. Well, she’s Portia Nelson, and her piece was *copywritten* [read *copyrighted*] in 1985.” Jeffrey Zaslow, “Woman Wants to Marry but Boyfriend Says ‘No,’” *Chicago Sun-Times*, 1 Dec. 1992, § 2, at 36.
- “Most of the really vicious stuff said, sung and written these days is the work of professional scumbags, syndicated, *copywrited* [read *copyrighted*], mass-marketed and protected by free-speech guarantees.” Jack Kislring, “No Joke—It’ll Make You Want to Kill,” *Denver Post*, 24 Nov. 1996, at H3.
- “Companies also must have formal business plans that outline their potential for increasing jobs and capital investment in the state, and must feature intellectual properties that are patented, *copywritten* [read *are copyrighted*] or are pending for either process.” Deborah M. Todd, “House Bill Proposes Tax Break for Angel Investors,” *Pitt. Post-Gaz.*, 4 Nov. 2011, at A1.

Still another mistake is **copywright*—e.g.:

- “Barsky is a partner in Sonnenschein Nath & Rosenthal, where he practices and specializes in intellectual property, trademark and *copywright* [read *copyright*] matters.” Jerry

Berger, “Shaping Up at City Hall Won’t Be by Jenny Craig,” *St. Louis Post-Dispatch*, 8 May 1996, at E1.

- “Raptors forward Walt (The Wizard) Williams was asked if he had the foresight to *copywright* [read *copyright*] the moniker.” Bill Harris, “Raptors Watch,” *Toronto Sun*, 8 Dec. 1996, Sports §, at 14.

For a similar error, see **playwriting**. For *copyright* as an adjective, see **copyrighted**.

LANGUAGE-CHANGE INDEX

1. **copywrite* for *copyright*: Stage 1

Current ratio (*copyright* vs. **copywrite*): 12,146:1

2. **copywright* for *copyright*: Stage 1

Current ratio (*copyright* vs. **copywright*): 35,979:1

copyrighted; copyright, adj. For the sense “secured or protected by copyright,” *copyrighted* is the better and by far the more usual form. As an adjective, the form *copyright* is uncommon enough that it does not sufficiently announce what part of speech it is playing—e.g.: “Thanks and appreciation for the use of *copyright* [read *copyrighted*] material.” Jefferson D. Bates, *Writing with Precision* xviii (rev. ed. 1985; repr. 1988).

copyrighter. See **copywriter**.

copywriter; copyrighter. A *copywriter* is a person who writes copy, especially for advertisements and public relations. A *copyrighter* is a person who obtains or owns the copyright to an expressive creation. In that correct sense, the word is a shorter but obscure variant of *copyright owner* or *copyright holder*. It is frequently, however, misused for *copywriter*—e.g.: “About a dozen people turned out. One of them was Robert Montecalvo, a 63-year-old advertising *copyrighter* [read *copywriter*].” Richard Salit, “North Providence Republicans Looking to Get Back in Race,” *Providence J.-Bull.*, 28 Feb. 2001, at C1.

LANGUAGE-CHANGE INDEX
copyrighter misused for *copywriter*: Stage 1

coquette /koh-ket/ (= a flirtatious girl or woman) is the standard spelling. *Coquet*, a variant, is uncommon—no doubt because, in English, this term has historically been sex-specific. See SEXISM (D).

But *coquet* is perfectly good as a verb meaning either (1) “to behave as a coquette,” or (2) “to consider (something) jestingly but not as a serious possibility.” Sense 2 isn’t sex-specific, but sense 1 usually is—e.g.: “The band is tight. Sharon’s rich, sensuous voice *coquets* above the piano, the drums, the bass.” Arthur Allen, “When It Comes to Twins, Sometimes It’s Hard to Tell the Two Apart,” *Wash. Post*, 11 Jan. 1998, Mag. §, at W6. The verb is inflected *coquetted* and *coquetting*.

cord. See **chord**.

cornet; coronet. *Cornet* (/kor-net/) = a brass wind instrument somewhat smaller than a trumpet. *Coronet* (/kor-ə-net/) = (1) a crown; (2) the joint of skin and horn at the top of a horse’s hoof; or (3) (cap.) any of various brands of products, such as Dodge cars or paper towels. The second term is sometimes misused for the first—e.g.: “He played *coronet* [read *cornet*] in the Modern

Woodman's Band and the Browningsville Band." "Garner W. Duvall Sr." (obit.), *Wash. Post*, 31 Aug. 2002, at B9.

LANGUAGE-CHANGE INDEX

coronet misused for *cornet*: Stage 1

Current ratio (*cornet player* vs. **coronet player*): 32:1

cornetist (= a cornet player) has been the standard spelling since the word was first used in the 19th century. **Cornettist* is a variant.

Current ratio: 14:1

cornucopia (= a horn-shaped container filled with fruit and flowers, intended to represent a time of bounty and prosperity) has always (from the 18th century) formed the plural *cornucopias* in AmE. In the late 19th century, the Latinate plural *cornucopiae* became predominant in BrE; that preference has persisted in BrE up to this day. The AmE plural is pronounced /kɔrn-yə-koh-pee-əz/, the BrE plural /kɔrn-yə-koh-pi-ee/.

corollary; correlation. A *corollary* is a subsidiary proposition inferred from a main proposition—or, by extension, a practical consequence or result. E.g.: "Remember the axiom that says that the bureaucracy expands to use the money available to it? And the *corollary* . . . that if money is not expended, then next year's budget will be trimmed to meet the lesser needs?" James R. Stone, "Use It or Lose It," *Fresno Bee*, 12 Apr. 1999, at B6. A *correlation*, by contrast, is an interdependence between existing phenomena. E.g.: "There doesn't seem to be a proven *correlation* between the rise of baby-proofing and the decline of injury." Mark Stewart, "Locking In Safety," *Wash. Times*, 13 Apr. 1999, at E1.

In recent years, unfortunately, *corollary* has come to be misused for *correlation* (the word far more frequently needed)—e.g.:

- "Rizzo . . . does not see a logical *corollary* [read *correlation*] between accidents, injuries, and a total ban on fireworks sales." Richard Duckett, "Firefighters on Guard for the Fourth," *Telegram & Gaz.* (Worcester), 5 July 1996, at A1.
- "Researchers have found a direct *corollary* [read *correlation*] between the number of hours children watch TV and the number of pounds they weigh." "Not Just Vanity: Obesity Is a Health Problem," *Syracuse Herald-J.*, 2 Nov. 1998, at A6.
- "While there are a lot of *corollaries* [read *correlations*] between where Hardee's is now and where Carl's was four or five years ago, there's one profound difference: Hardee's is a significant player in the breakfast business—something Carl's never was." Greg Johnson, "The Persuaders," *L.A. Times*, 21 Jan. 1999, at C6.

A corollary to the second bulleted example above: there might be a correlation between the number of hours that someone watches TV and that person's tendency to misuse *corollary* for *correlation*.

LANGUAGE-CHANGE INDEX

corollary misused for *correlation*: Stage 1

Current ratio (*a correlation between* vs.

**a corollary between*): 474:1

coronet. See **cornet**.

corpora. See **corpus**.

corporal; corporeal. These terms have undergone DIFFERENTIATION. *Corporal* (/kɔr-pə-rəl/) = of or affecting the body <corporal punishment>. *Corporeal* (/kɔr-pɔr-ee-əl/) = having a physical material body; substantial. E.g.: "Actual people aren't images, but substantial, physical, *corporeal* beings with souls." Larry Woiwode, "Television: The Cyclops That Eats Books," *USA Today* (Mag.), Mar. 1993, at 84.

Corporeal sometimes wrongly displaces *corporal*—e.g.:

- "*Corporeal* [read *Corporal*] punishment is cruel only if it is applied arbitrarily." Edward C. Lanfranco, "A Little Humility and Public Exposure for Taggers Would Be Justified," *Fresno Bee*, 30 Apr. 1994, at B7.
- "The Chapel Hill-Carrboro City Schools is one of about 30 N.C. school systems that have banned *corporeal* [read *corporal*] punishment." Merri Petrovits, "Spanking Issue Continues to Generate Heat," *Chapel Hill Herald*, 3 Jan. 1996, at 6.

LANGUAGE-CHANGE INDEX

**corporeal punishment* for *corporal punishment*: Stage 1

Current ratio (*corporal punishment* vs.

**corporeal punishment*): 47:1

corporeality; corporeity. A distinction is possible. *Corporeality* (/kɔr-pɔr-ee-əl-i-tee/) = bodily existence. *Corporeity* (/kɔr-pə-ray-i-tee/) = materiality itself; substantiality; the quality of having substance.

corps. The singular *corps* is pronounced like *core*. The plural form—also spelled *corps*—is pronounced like *cores*. President Barack Obama created a minor furor in February 2010 when he referred to Navy *corpsmen* as /kɔrps-mən/ instead of /kɔr-mən/.

corpulence; *corpulency. The predominant literary synonym for obesity was **corpulency* in the 18th century. But in the 19th century *corpulence* gradually became the standard term in print sources—first in BrE (about 1850) and then in AmE (about 1870).

Current ratio: 3:1

corpus (= body, either literally or figuratively) traditionally forms the plural form *corpora*. This is the usual plural found in linguistic, legal, medical, and other technical contexts—e.g.:

- "Structural linguists had confined themselves, at least in theory, to describing the sentences found in *corpora*." Graham Wilson, Foreword, *A Linguistics Reader* xxiv (Graham Wilson ed., 1967).
- "There is surely no legal impediment to the distant heirs of that Mongolian potentate adding to the *corpora* of whatever trusts may strike their fancy." David B. Young, "The Pro Tanto Invalidity of Protective Trusts," 78 *Marq. L. Rev.* 807, 835 (1995).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Inside the penis are two long expandable chambers, filled with spongy tissue, called the *corpora cavernosa*.” Steve Sternberg, “Impotence Treatment Keeps Urologists Busy,” *Wash. Post*, 5 Nov. 1996, Health §, at 8.

Occasionally the form **corpuses* appears. It might be more immediately recognizable to most people, but it's still rare. See PLURALS (B).

Current ratio (*corpora* vs. **corpuses*): 69:1

corpus delicti—meaning “the body of a crime” and emphatically not “dead body”—is generally outmoded in law, but it still occasionally appears there and elsewhere. In cases of felonious homicide, the *corpus delicti* is usually evidence of a death and of a criminal agency as its cause. This *corpus delicti* is usually established by proof of the dead body and evidence that the death didn't result from natural causes. But the dead body isn't necessary to establish a *corpus delicti*.

Both in and outside law, the phrase is sometimes misspelled **corpus delecti*, a sort of macabre etymological double entendre (Latin *delecti* means “of delight”). E.g.: “The medical examiner will no longer examine the *corpus delecti* [read *corpus delicti*].” Dominic J. Baranello, “E Pluribus Unum? (Or Something),” *N.Y. Times*, 15 Sept. 1996, Long Island §, at 19.

LANGUAGE-CHANGE INDEX

**corpus delecti* for *corpus delicti*: Stage 1

Current ratio (*corpus delicti* vs. **corpus delecti*): 14:1

corral, vb. *Corralled* and *corralling* are so spelled—not **corraled* and **corraling*. See SPELLING (B).

correctable. So spelled—not **correctible*. See -ABLE (A).

Current ratio: 17:1

correctional; corrective. *Correctional* = of, relating to, or involving correction, usu. penal correction <correctional officer>. E.g.: “Jack L. Webb, 59, of Haymarket, Va., and Jeffress A. Wells, 60, of Fuquay-Varina, N.C., were fined \$2,500 and sentenced to 30 days in a community *correctional* facility and two years' supervised probation.” Ruth Larson, “2 Ex-Agriculture Aides Get Jail Time for Clinton Fund Raising,” *Wash. Times*, 14 Dec. 1996, at A2. The phrases *correctional facility* and *correctional institution* are really just EUPHEMISMS for *jail* or *prison*.

Corrective = tending to correct <corrective measures>. E.g.:

- “Among its charges, he said, are identifying regulations that should be streamlined or eliminated and developing *corrective* legislation.” Raymond W. Vodicka, “Sen. Bond Seeking to Help Businesses,” *St. Louis Post-Dispatch*, 15 Dec. 1994, at 1.
- “[There was a] woman with one leg longer than the other, which caused her to walk sideways. The elves arranged for *corrective* surgery.” Stacy Downs, “Elves Set to Work This Year's Miracles,” *Kansas City Star*, Olathe §, 14 Dec. 1996, at 1.

correctness; correctitude. *Correctness* is the standard noun corresponding to the adjective *correct* in most senses—e.g.:

- “I cannot come to any conclusion as to the *correctness* of one term over another—‘hot dog’ or ‘frank.’” Paul Donohue, “Hope, Skepticism on Arthritis Diets,” *St. Louis Post-Dispatch*, 24 Aug. 1995, at G5.

- “But the U.S. believes there is an inherent *correctness* and conviction in its positions with which the rest of the world invariably should agree.” Adonis Hoffman, “Increasingly, U.S. Finds Itself Whistling Alone,” *Christian Science Monitor*, 13 Dec. 1996, at 18.

Correctitude is a PORTMANTEAU WORD—a blend of *correct* and *rectitude*. It refers to what is proper in conduct or behavior, and it has moralistic overtones, especially in BrE. E.g.:

- “The local political allies of the west tend to be unrepresentative, dissolute or repressive rulers . . . Against them Islam seems to provide certainty of belief and *correctitude* of behaviour.” Godfrey Jansen, “The Soldiers of Allah,” *Economist*, 27 Jan. 1979, at 45 (but since *correctitude* refers to behavior, the last phrase is redundant).
- “It is to Henry VIII that Prince Charles owes the monarchy's anomalous position as supreme head of the Church, Defender of the Faith, by which was meant, at the time, the Catholic faith, in all its Catholic *correctitudes*.” Brian Sewell, “Charles and the Rich Royal Legacy of Lust,” *Evening Standard*, 3 Sept. 1996, at 11.

In AmE, *correctitude* often has the connotation of too much rectitude—e.g.: “This is period instrument playing of the dour, forbidding sort, all grainy sonorities and joyless *correctitude*.” Joshua Kosman, “An Early ‘Silla’ in Time for Mozart Fest,” *S.F. Chron.*, 17 Mar. 1991, Datebook §, at 45.

Since the early '90s, *correctitude* has also sometimes been the choice to form the noun corresponding to *politically correct*. Perhaps the *rectitude* root connotes the elevation of political views to the level of religious fervor—e.g.:

- “One response to PC has been the National Association of Scholars, or NAS, which aims to counter what it sees as the excesses of political *correctitude* with a devotion to what it sees as traditional scholarly values.” “‘Multiculturalism’ Leads to Multifactionalism as Tradition and Change Battle on America's Campuses,” *Boston Globe* (City ed.), 7 Apr. 1991, at A23.
- “Political *correctitude* just isn't a worthy goal for any thinking person. And to seek political *correctness* in art is to see art through a distorted prism.” Mick LaSalle, “Unreleased Movie on AFI List,” *S.F. Chron.*, 4 Jan. 2015, at M26.

Still, *political correctness* remains the usual and preferred phrase. See POLITICAL CORRECTNESS.

correlation (= a proportional correspondence between things) is the standard spelling. **Corelation* is a variant.

For the misuse of *corollary* for *correlation*, see **corollary**.

Current ratio (*correlation* vs. **corelation*): 3,726:1

CORRELATIVE CONJUNCTIONS, or conjunctions used in pairs, should join structurally identical sentence parts, sometimes called “matching parts.” Simple nouns never cause problems <neither fish nor fowl>. When we use constructions with phrases and clauses,

however, PARALLELISM may become a problem. Following are examples with some of the more common correlative conjunctions:

- **Both . . . and:** “As with the 1983 news coverage, it is through this sort of presentation that horror video watching becomes *both symptomatic* [read *a symptom*] of sickness *and* the precursor of despicable forms of behavior.” Peter Fraser, “Nasty . . . But Naughty,” *Guardian*, 9 May 1992, at 26. See **both (A)**.
- **Either . . . or:** “But here’s where the obscenity surfaces: Whenever a black is hired to run anything in professional sports, the inference is always there that he was hired *either* because of affirmative action *or* because of a fluke.” Terence Moore, “See Green’s Résumé, Not His Color,” *Atlanta J.-Const.*, 15 Jan. 1992, at D2. See **either (C)**.
- **Neither . . . nor:** “There is little reason to hold manufacturers strictly liable for injuries caused by the misuse of firearms that are *neither* negligently produced *nor* defective in design.” Bruce Kobayashi, “Gun-Liability Lawsuits Aim at the Wrong Targets,” *San Diego Union-Trib.*, 5 July 1996, at B7. See **neither . . . nor**.

Some of the other common correlatives in English are:

- *although . . . nevertheless;*
- *although . . . yet;*
- *as . . . as;*
- *as . . . so;*
- *if . . . then;*
- *just as . . . so (also);*
- *not only . . . but also;*
- *notwithstanding . . . yet;*
- *since . . . therefore;*
- *so . . . that;*
- *when . . . then;*
- *where . . . there; and*
- *whether . . . or.*

correspondent; co(-)respondent. A *correspondent* is a person who communicates regularly in writing with another person or a (usu. professional) person who makes reports or sends dispatches from a place where something significant is taking or has taken place. In American law, a *correspondent* (so spelled, without a hyphen) is (1) a coparty who responds to a petition; (2) (only in some states) a coparty who responds to an appeal; or (3) in a divorce case, a paramour who is named or sued by the injured spouse. Only sense 3 of *co-respondent* (so spelled) applies in BrE.

corrigendum; erratum. These words are used synonymously to denote an error made in printing discovered only after the work has gone to press. *Corrigendum* (lit., “a thing to be corrected”) is perhaps technically more accurate (since a correction is being made). But *erratum* (lit., “error”) is older in English and more common. The plurals are *corrigenda* and *errata*—and they occur more frequently than the singulars. See **errata**.

corroborate. A. Senses and Uses. *Corroborate* = (1) to support (a statement, argument, etc.) with evidence

that is consistent; to confirm; or (2) to confirm formally (a law, etc.). Sense 1 is more common—e.g.: “Experts said a major issue when recovered-memory cases go to court is the lack of *corroborating* evidence, often because the allegations date so far back.” Jeremy Olson, “Repressed Memories a Gray Area,” *Omaha World-Herald* (Midlands ed.), 25 Sept. 2002, at A1.

In either sense, this verb is transitive <the last witness corroborated the testimony of other witnesses>. Hence **corroborate with* is inferior to *corroborate*. In the PASSIVE VOICE, the phrasing *corroborated by* is usual—e.g.: “The novelists Gaskell and Disraeli and Hardy were not so naive, and their realism is *corroborated by* this book.” “Compassionate Curiosity,” *Economist*, 25 Jan. 1975, at 96. See -ABLE (D), -ATABLE & SPELLING (A).

B. Pronunciation. In October 1991, during Justice Clarence Thomas’s confirmation hearings, Senator Joseph Biden and other members of the Senate Judiciary Committee consistently mispronounced this word as if it were *cooperate*—like *cooperate* with a -b- instead of a -p-. The correct pronunciation is /kə-rob-ə-rayt/.

C. And collaborate. The word *corroborate* is occasionally used where *collaborate* (= to work jointly with [another] in producing) belongs—e.g.: “The family *corroborated* [read *collaborated*] on a project to replicate a 1705 microscope.” Edythe Jensen, “Family Turns Hobbies into Businesses,” *Ariz. Republic/Phoenix Gaz.*, 5 Nov. 1994, Tempe §, at 1.

The opposite error (*collaborate* for *corroborate*) is also all too frequent—e.g.: “[Suicide expert Frank] Campbell said it was insulting that the board discounted the woman’s testimony that was *collaborated* [read *corroborated*] by an outside licensed professional counselor.” Amy Wold, “Suicide Agency Official Appeals Decision on Violations,” *Advocate* (Baton Rouge), 31 Aug. 2001, at A14.

LANGUAGE-CHANGE INDEX

1. *corroborate* misused for *collaborate*: Stage 1
Current ratio (*collaborated on* vs. **corroborated on*): 78:1
2. *collaborate* misused for *corroborate*: Stage 1
Current ratio (*was corroborated by* vs. **was collaborated by*): 158:1

corroborative; *corroboratory. The first is standard; the second is a NEEDLESS VARIANT. Despite the supremacy of *corroborative*, the phrase *corroborating evidence* is now much more common than *corroborative evidence*.

Current ratio (*corroborative* vs. **corroboratory*): 28:1

corroding (= susceptible to corrosion) is so spelled—not **corrodable*. Another variant form, **corrosible*, is less than desirable because it doesn’t readily suggest the underlying verb, *corrode*; it is also less common. See -ABLE (A).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

corrupter; ***corruptor**. The *-er* spelling has always predominated and is therefore preferred. See *-ER* (A).

Current ratio: 4:1

corruptible. So spelled—not **corruptable*. See *-ABLE* (A).

Current ratio: 689:1

cortex (= the outer layer of a bodily organ, esp. the brain) has predominantly formed the plural *cortices* since the 17th century. *Cortexes* is a latecoming variant. In print sources today, *cortices* predominates. The corresponding adjective is *cortical* /**kor-ti-kəl**/.

Current ratio: 30:1

***cosey**; ***cosie**. See **cozy**.

cosset. *Cosseted* and *cossetting* are so spelled—not **cos-setted* and **cossetting*. See *SPELLING* (B).

cost > **cost** > **cost**. This is the normal way to inflect this verb. But when the sense is “to determine the cost of,” the past tense and past participle both become *costed*—e.g.: “Its plan to rebuild the Royal Shakespeare Theatre at Stratford, originally *costed* at £80 million, is also one of three Lottery projects still earmarked for Arts Council support.” Penny Layden, “£50m Lifeline for Arts Gives New Hope to ‘Ailing’ RSC,” *Evening Standard*, 5 Jan. 1999, at 9. This usage is especially common in BrE; in AmE the common choice is *estimated*.

The past-participial adjective likewise appears frequently—e.g.: “Birmingham’s National Exhibition Centre put in a full *costed* bid for a green-field site on the edge of the city.” Chris Gray, “Charles Falconer,” *Birmingham Post*, 8 Jan. 1999, at 13. See *IRREGULAR VERBS*.

cost-effective; **cost-efficient**. These are the current jargonistic adjectival phrases for *economical*. *Cost-effective* is about 12 times as common in modern print sources as *cost-efficient*. See *VOGUE WORDS*.

***cosy**. See **cozy**.

***cotemporary**; ***cotemporaneous**. See **contemporary**.

cotenant. In AmE, no hyphen appears: *cotenant*, not *co-tenant*. In BrE, the hyphenated form predominates.

coterminous; ***coterminant**; ***coterminate**; ***coterminal**. See **conterminous**.

could. See **can** (B).

***could care less**. See **couldn’t care less**.

***could might**. See *DOUBLE MODALS*.

could not help but. See **cannot help but**.

couldn’t care less is the correct and logical phrasing, not **could care less*—e.g.: “The American people *couldn’t care less* [read *couldn’t care less*] who’s White House Chief of Staff.” George Will, on *This Week with David Brinkley*, 3 July 1994. If you *could* care less, you’re

saying that you do care *some*. Invariably, though, writers and speakers who use the phrase mean that they don’t care at all.

In modern AmE print sources, *couldn’t* (or *could not*) *care less* predominates over **could care less* by a 2-to-1 margin. And the erroneous version is even rarer in published BrE.

Although some apologists argue that **could care less* is meant to be sarcastic and not to be taken literally, a more plausible explanation is that the *-n’t* of *couldn’t* has been garbled in sloppy speech and sloppy writing. As a linguist explains: “A listener has not heard the whole phrase; he has heard a slurred form. *Couldn’t care* has two dental stops practically together, *dnt*. This is heard only as *d* and slurring results. The outcome is *I cd care less*.” Atcheson L. Hench, “Could(n’t) Care Less,” 48 *Am. Speech* 159, 159 (1973). For a careful seven-step explication of the loss of this alveolar closure, see James Sledd, “[kūt] [kūt] Be [kūt], [kūt] It?” 68 *Am. Speech* 218–19 (1993). See *ILLOGIC* (A) & **underestimate**.

LANGUAGE-CHANGE INDEX

**could care less* for *couldn’t care less*: Stage 4

Current ratio (*couldn’t care less* vs.

**could care less*): 2:1

***could of**. See **of** (D).

council; **counsel**. *Council* (= a deliberative assembly) is primarily a noun. *Counsel* (= to advise) is primarily a verb, but in legal writing it’s commonly used as a noun meaning “a legal adviser or group of legal advisers” <counsel for the corporation>. See **counsel** & **consul**.

councillor; **counselor**. A *councillor* is a member of a council. (**Councilor* is a variant spelling.) A *counselor* is either someone who gives advice (such as personal advice) or a lawyer. (In BrE, it’s spelled *counsellor*.) See **lawyer**. Cf. **counselor**.

councilmanic, a 19th-century AmE coinage, is the unfortunate—and the only—adjective corresponding to *councilman*. E.g.: “Bill Cirocco was appointed at that time to fill her vacant *councilmanic* seat.” Nancy Gish, “Murdoch Sworn In to First Full Term,” *Buffalo News*, 2 Jan. 1997, at B5. Of course, *council seat* or *seat on the council* would be much better in that sentence. See *SEXISM* (C).

council member. Two words for now, but there is a trend to join them into one.

counsel. **A. Scope of Term**. In BrE, *counsel* is used only of barristers (litigators), whereas in AmE it is frequently used of office practitioners (e.g., *general counsel*) as well as of litigators. See **lawyer**, **consul** & **council**.

B. Number. *Counsel* may be either singular or plural. In practice it is usually indeterminate <right to counsel> or plural <all counsel were present>—e.g.:

- “I’m always hesitant to interfere with cases, especially where you have two *counsel* present.” “A Conversation with Judge H. Terry Grimes,” *Pa. Law Weekly*, 5 Dec. 1994, at 7.

- “Dickstein, Shapiro & Morin, one of Washington’s largest law firms, said yesterday that it has hired 13 partners and three *counsel* and made offers to more than 20 associate attorneys from Anderson Kill Olick & Oshinsky.” David Segal, “New York Insurance Law Specialists Defect to Dickstein, Shapiro & Morin,” *Wash. Post*, 13 June 1996, at D11.

But examples of the singular are common enough—e.g.:

- “There is no excuse for a *counsel* who has obtained a thorough understanding of the case at bar . . . presenting to the court a statement [that] has no definite plan, [that] mingles material and immaterial facts, and [that] is verbose and discursive.” William M. Lile et al., *Brief Making and the Use of Law Books* 370 (3d ed. 1914).
- “*Counsel* arguing a case is permitted to assert that a precedent has had unhappy consequences.” Michael Zander, *The Law-Making Process* 239 (2d ed. 1985).
- “Bondi submitted a response to a motion last month to the appeals court that claims opposing *counsel* is not ‘entitled to appellate attorney’s fees’ because she dropped her appeal after the U.S. Supreme Court legalized same-sex marriage.” “Bondi’s Bills for Crusade Coming Due,” *Tampa Bay Times*, 9 Sept. 2015, at A8.

Counsels is sometimes mistakenly used as a plural of *counsel*—especially when nonlawyers are writing about the law. Part of this tendency comes from the popularization of the phrases *independent counsel* and *general counsel*. At the federal level, there are occasionally calls for an *independent counsel* to be appointed. And if two are needed, the tendency is to say *two independent counsels*. That makes the third example below understandable—even acceptable—but it doesn’t excuse the first two:

- “This might seem a strange approach for *counsels* [read *counsel*] responsible for representing not just Valeo and Henshaw but the interests of their employers, the U.S. House and Senate, as well.” Barbara H. Craig, *Chadha: The Story of an Epic Constitutional Struggle* 73 (1988).
- “Four lawyers were named Nov. 25 to serve as legal *counsels* [read *counsel*] for the transition.” “Clinton’s Justice Review Team Named,” *Nat’l L.J.*, 7 Dec. 1992, at 2.
- “Independent *counsels* were created under a 1978 law that Congress allowed to expire in 1992.” Tony Mauro, “The Investigators: 2 Types of *Counsels*,” *USA Today*, 13 Jan. 1994, at A5.

counsel of perfection = (1) orig., advice of Jesus on ways to strive for perfection, given in Matthew 19; (2) consequently, the virtues of obedience, chastity, and charity appearing in the vows of monastic orders; or (3) a noble but unattainable ideal.

While the phrase itself is uncommon in general use, the allusive sense 3 comes up occasionally—e.g.: “A professor at my seminary, Jacob Rader Marcus, once said, ‘It may well be that we cannot love our neighbor as we love ourselves—that is a *counsel of perfection*—but the least we can do is to tolerate him and his differences.’” James A. Gibson, “Muslims Grievously

Offended by Caricatures of Mohammed Are Justified,” *Pitt. Post-Gaz.*, 12 Feb. 2006, at J1.

The phrase is furthest from perfection when it merely denotes casual advice—e.g.: “In Cantonese Roasted Duck (\$14.95), the skin had been rendered almost free of fat, while remaining richly flavored. In a *counsel of perfection*, some of the meat was a little dry but tender and revealing solid depth of flavor.” John Batchelor, “This Experience Is Worth the Wait,” *News & Record* (Greensboro), 17 Aug. 2006, at GT27. One wonders at the writer’s intention there.

counselor, counsellor; counseled, counselled; counseling, counselling; counselable, counsellable. The preferred spellings are *counselor, counseled, counseling,* and *counselable* in AmE, and *counsellor, counselled, counselling,* and *counsellable* in BrE. See SPELLING (B). For the sense in which *counselor* means “lawyer,” see **lawyer**. Cf. **councillor**.

counterfeit; imitation; forgery. These words overlap to some degree. Although something *counterfeit* is always an *imitation*, an *imitation* may not be *counterfeit*. A *counterfeit* article is an imitation produced in violation of a law. For example, if the law requires a license to reproduce or copy something or forbids representing a reproduction or copy as genuine, or altogether forbids an item’s reproduction, then an item made or sold in violation of the law is *counterfeit* <the flea-market seller said the counterfeit “Gucci” handbags from China were discounted factory seconds from Italy>.

An *imitation* is an exact copy, or a thing made to resemble something else. It is usually identified as a copy <the label says “imitation leather”>.

A *forgery* is a document made or altered in a way that harms another’s rights. Before the advent of paper money, the distinction between *forgery* and *counterfeiting* was clear because *counterfeiting* referred only to the making of false metallic coins. Once money began to grow on trees, however, criminals looked for ways to copy it—and this activity also came to be known as *counterfeiting*. Today, the usual expressions are *counterfeit a \$20 bill* and *forge a check*.

counterterrorism. See **antiterrorism**.

countless applies only to count nouns. So you might refer to *countless bags* but not to **countless baggage*. See COUNT NOUNS AND MASS NOUNS.

COUNT NOUNS AND MASS NOUNS. Count nouns are those that denote enumerable things and that are capable of forming plurals (e.g., *cranes, parties, minivans, oxen*); mass (noncount) nouns are often abstract nouns—they cannot be enumerated (e.g., *insurance, courage, mud*). Many nouns can be both count <he gave several talks> and mass <talk is cheap>, depending on the sense. These are few, however, in

comparison to the nouns that are exclusively either count or mass. Use of these two types of nouns may introduce problems with number, especially when the use of count nouns strays into a use of mass nouns or vice versa. See PLURALS (J).

coup de grâce /koo də ɡraʃ/ means “a blow of mercy,” a compassionate act that puts a mortally wounded person or animal out of misery. The phrase is sometimes mispronounced /koo də ɡrah/, as if the last word were spelled *gras* (as in *pâté de foie gras*). But worse than that, the phrase is sometimes mistakenly written **coup de gras*—e.g.:

- “Lady Thatcher may not be indestructible, but her memoirs show that anyone seeking to apply the *coup de gras* [read *coup de grâce*] will have to pay highly for the privilege.” Philip Ziegler, “Thatcher Memoirs,” *Daily Telegraph*, 18 Oct. 1993, at 4.
- “Keith pulled up and hit a wide-open Chris Federico for the *coup de gras* [read *coup de grâce*] and a 19–7 lead with 6:50 remaining in the game.” John Devlin, “A League Title on the Horizon,” *Denver Post*, 22 Oct. 1994, at D4.
- “Lori’s win was the *coup de gras* [read *coup de grâce*] of Troy’s 13–5 victory over Sunny Hills, which had won 20 straight league championships until this year.” Craig Outhier, “The Judds: Mother-Daughter Tennis Duo Help Propel Troy into Playoffs,” *Orange County Register*, 14 Nov. 1996, at 18.

Even the sense is sometimes mangled. To make *coup de grâce* cruel, bloody, and painful is to torture the phrase—e.g.: “I saw a fox being torn to pieces by a pack of hounds. It was the final act, *the coup de gras* [delete erroneous phrase] in what we call a country sport.” Michael Herd, “This Land of No Hope and Gory Pursuit,” *Evening Standard*, 30 Dec. 1993, at 46.

LANGUAGE-CHANGE INDEX

1. *coup de grâce* mispronounced /koo də ɡrah/: Stage 2

2. **coup de gras* for *coup de grâce*: Stage 1

Current ratio (*coup de grâce* vs. **coup de gras*): 75:1

couple. A. Number. *Couple* (= pair) is a COLLECTIVE NOUN like *team*, *company*, or *faculty*. As a rule, a collective noun in AmE takes a singular verb unless the action is clearly that of the individual participants rather than collective. When two people form a couple, they may act as individuals <the couple plan to take jobs in Philadelphia> or as a single entity <the couple is buying a house>. But unlike other collective nouns, *couple* should take a plural verb far more often than a singular one. The plural construction is also far more convenient because it eliminates the need to find a suitable pronoun.

Other collective nouns don’t present this problem. When the noun is, say, *team*, we have no trouble referring to *its* win–loss record. But the neuter pronoun *it* feels too impersonal to use with as intimate a word as *couple*. So we sometimes see a sentence with *couple* as a subject, a singular verb, and a plural pronoun—e.g.: “In the pilot, one *couple* is having a sexual ‘dry spell’ in their marriage.” “Looking for Laughs This TV Season?

Keep Flipping,” *Austin Am.-Statesman*, 15 Sept. 2002, Show World §, at 4. There is no graceful fix in these situations—the grammatically correct one, changing *is* to *are*, is especially jarring here because *one couple* seems to demand *is*. It is possible, however, to rewrite: *In the pilot, one of the married couples is having a sexual ‘dry spell.’* See PREVENTIVE GRAMMAR.

B. For a few. As a noun, *couple* has traditionally denoted a pair. (As a verb, it always denotes the joining of two things.) But in some uses, the precise number is vague. Essentially, it’s equivalent to *a few* or *several*. In informal contexts this usage is quite common and unexceptionable—e.g.:

- “This slick, cozy shop, which underwent a makeover a *couple of years* back, is a hybrid of takeout and restaurant.” A.C. Stevens, “Why Cook Tonight?” *Boston Herald*, 15 Sept. 2002, Food §, at 65.
- “Those most anxious should practice at least once in front of a *couple of people* to be comfortable with an audience.” Molly Williamson, “Unlocking the Power of Public Speaking,” *Milwaukee J. Sentinel*, 15 Sept. 2002, at L12.

C. With or Without of. The traditional use of *couple* has been as a noun, usually meaning “two” (but see (B)). As a noun, it requires the preposition *of* to link it to another noun <a couple of dollars>. Using *couple* as an adjective directly before the noun has been very much on the rise since the late 20th century <a couple dollars>. This innovation strikes many readers as unidiomatic and awkward—or perhaps downright wrong. But the change will doubtless continue. That is, the age-old expression *a couple of people* will become **a couple people*. For now, the traditional phrasing is still eight times as common as the adjectival use in modern print sources—e.g.:

- “Philip Walker’s press clippings singing the bluesman’s praises take *a couple of people* to lift.” Dan Nailen & Jesus Lopez Jr., “Out & About,” *Salt Lake Trib.*, 21 June 2002, at E12.
- “I was blocking the view of *a couple of people* in the rows behind me.” Judith Martin, “Taking the Other Root,” *Wash. Post*, 14 Aug. 2002, at C11.

But the clipped phrasing, a low CASUALISM, does surface in print—e.g.: “I mentioned to *a couple people* [read *a couple of people*] that the golf courses get paid whether people play or not.” Bob Bestler, “Fair Weather Finds a Way During Event,” *Sun-News* (Myrtle Beach, S.C.), 29 Aug. 2002, at B1.

When the phrasing is changed, the relative frequency in usage changes. The phrase *couple of things* is about eight times as common in print sources as **couple things*—e.g.: “We will always be able to look back and say *a couple of things*.” Joe Logan, “Andrade Holds On,” *Phil. Inquirer*, 15 Sept. 2002, at D1. But *couple of hundred things* is not even twice as common as *couple hundred things*. When a numerical term follows *couple*, many writers delete the idiomatic *of*. Examples can be found of both types (the *of* versions consistently appearing 30–40% more often than the *of-less* versions)—e.g.:

- “De Bizefont sells only to interior designers and other members of the trade, at wholesale prices ranging from a *couple of hundred* dollars to several thousand.” Kim Boatman, “For a Warm, Homey and Colorful Touch, Try Fabric,” *Chicago Trib.*, 8 Sept. 2002, at 10.
- “Every Wednesday and Friday a *couple of dozen* members turn out for boozy money games.” Alan Shipnuck, “Life of the Party,” *Sports Illustrated*, 9 Sept. 2002, at 52.
- “A *couple of thousand* fans were in the stands.” Paul Meyer, “Notebook,” *Pitt. Post-Gaz.*, 12 Sept. 2002, at D3.

In each of those sentences, some writers wouldn’t use the *of* after *couple*.

This shift in usage may be fully acceptable someday. Perhaps everyone will come to use *couple* as an adjective. (See FUNCTIONAL SHIFT (B).) Words can and often do change their parts of speech. After all, the word *couple* is firmly established in one adverbial use (see (D)). But idiom has not yet admitted this casual expression as standard.

For the foreseeable future, editors will be justified in editing sentences such as the following:

- “A *couple things* [read *couple of things*] need to be mentioned.” Mark Knudson, “Items That Need Sorting,” *Ft. Collins Coloradoan*, 8 Sept. 2002, at D2.
- “Auto makers offer GPS in their new cars as an upgrade, for a *couple thousand* [read *couple of thousand*] dollars.” Elliot Spagat, “Hand-Held Homing Devices,” *Wall Street J.*, 11 Sept. 2002, at D2.
- “Only a *couple dozen* [read *couple of dozen*] members signed up.” Bruce Mohl, “War Fears Put Pressure on Heating Oil Prices,” *Boston Globe*, 15 Sept. 2002, at C3.

For just the opposite tendency—the intrusive *of*—see **of (B)**. Cf. **type of**.

LANGUAGE-CHANGE INDEX

**couple things* for *couple of things*: Stage 2
Current ratio (*couple of things* vs. **couple things*): 8:1

D. With Words of Comparison. When *couple* is used with comparison words such as *more*, *fewer*, and *too many*, the *of* is omitted <have a couple more shrimp>. In the predicate of the previous example, *shrimp* is the direct object. It is modified by the adjective *more*, which in turn is modified by the adverbial phrase *a couple*. There is no place in the example for *of* (neither **a couple of more shrimp* nor **a couple more of shrimp* makes sense). But if the informal sentence structure can be slightly inverted, the *of* becomes idiomatic again <I’ll have a couple of shrimp more>. E.g.:

- “The way Padraig Harrington sees it, he played nothing but good shots at the par-5 13th hole, just a *couple too many*.” Phil Richards, “Palmer’s Final Round Not Quite Finished,” *Indianapolis Star*, 13 Apr. 2002, at D8.
- “He launched a *couple more* ringers from his black-gloved hands before calling it a day just after 1 p.m. Saturday.” Justin Kmitch, “Last Day for Last Fling,” *Daily Herald* (Chicago), 2 Sept. 2002, Neighbor §, at 1.

coupled with, like *together with* and *accompanied by*, is used with a singular and not a plural verb when the first of the two nouns is singular <a cup of coffee, coupled with two eggs over easy, makes up her morning ritual>. See SUBJECT-VERB AGREEMENT (E).

couple (of) dozen, hundred, etc. See **couple (c)**.

coupon should be pronounced /**koo**-pon/, not /**kyoo**-pon/. The mispronunciation betrays an ignorance of French and of the finer points of English. Imagine *coup d’état* pronounced with /kyoo/ as the first syllable. See PRONUNCIATION (B).

LANGUAGE-CHANGE INDEX

coupon pronounced /kyoo/ instead of /koo/: Stage 4

courtesan (= a prostitute who caters to rich customers) is the standard spelling. **Courtezan* is a variant. It is pronounced /**kor**-tə-zən/.

Current ratio: 32:1

courthouse. One word.

court judgment. See **judgment (c)**.

court-martial. A. Generally. *Court-martial* (= an ad hoc military court convened to try and to punish those accused of violating military law) is hyphenated both as noun and as verb. The *OED* lists the verb as colloquial, an observation now antiquated. As to spelling, in AmE the final *-l* is not doubled in *court-martialed* and *court-martialing*, although in BrE it is. (See SPELLING (B).)

The plural of the noun is *courts-martial*. See PLURALS (G) & POSTPOSITIVE ADJECTIVES.

B. And court marshal. One meaning of *marshal* is “a judicial officer who provides court security, executes process, and performs other tasks for the court” (*Black’s Law Dictionary* 1121 [10th ed. 2014]). It’s therefore not surprising that *court marshal* has become a frequent phrase—e.g.:

- “He became *court marshal* in 1989 and would start each court session by calling, ‘Oyez, oyez.’” “Cancer Kills High Court Marshal,” *Charleston Gaz.*, 7 July 1995, at C2.
- “Mr. Moskowitz and the construction workers refused to leave until last week’s visit by *court marshals*.” Mark Francis Cohen, “At Former Synagogue, Proper Burial an End to Seamy Chapter,” *N.Y. Times*, 26 Jan. 1997, § 13, at 7.

Not surprisingly, therefore, the phrase *court-martial* is now often mistakenly written **court marshal*—e.g.:

- “A lieutenant gave him a summary *court marshal* [read *court-martial*], fined him \$25 and booted him out of headquarters.” Tom Bell, “I Was Patton’s Barber,” *Anchorage Daily News*, 27 July 1995, at E1.
- “A veritable platoon of foot soldiers from both sides have been whistled off on enforced leave, whether by official *court marshal* [read *court-martial*] or injury in action.” Mike Davidson, “Calling Time on This Unhealthy Obsession,” *Daily Mail*, 3 Mar. 1997, at 61.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “The Civil War re-enactment will include demonstrations of battles, house-to-house skirmishes, a *court marshal* [read *court-martial*] and an execution.” Barri Bronston, “Parents and Children,” *Times-Picayune* (New Orleans), 3 Mar. 1997, at C3.

See **marshal**.

LANGUAGE-CHANGE INDEX

**court marshal* for *court-martial*: Stage 1
Current ratio (*court-martialed* vs. **court-marshaled*
vs. **court-marshalled*): 78:1:1

court of appeals; court of appeal. Both forms occur in AmE, but *court of appeals* is more common. (*Court of appeal*, though, is the only form in BrE.) The correct form is the one that is statutorily prescribed or customary in a given jurisdiction. For example, although most appellate courts in the United States are individually called a *court of appeals*, the term in California and Louisiana is *court of appeal*.

The plural forms are *courts of appeals* and *courts of appeal*. The singular possessive forms are *court of appeals'* and *court of appeal's*; the plural possessives are *courts of appeals'* and *courts of appeal's*.

Court of St. James's = the British royal court. Although one sometimes encounters **Court of St. James*, even in BrE, the better and more traditional form is *Court of St. James's*. E.g.: “In 1938, Mrs. Kennedy accompanied her husband to the Court of St. James [read *James's*] and was formally welcomed by King George VI.” Robert D. McFadden, “Rose Kennedy, Political Matriarch, Dies at 104,” *N.Y. Times*, 23 Jan. 1995, at A1, B7. Despite appearing to be a redundant double possessive, *Court of St. James's* is historically accurate because the former seat of the British court in London is St. James's Palace. So in *Court of St. James's*, the term *Palace* has historically been an UNDERSTOOD WORD at the end. Cf. POSSESSIVES (D).

LANGUAGE-CHANGE INDEX

**Court of St. James* for *Court of St. James's*: Stage 4

courtroom. So spelled—without a space or a hyphen.

cousinhood; cousinage. *Cousinage* has the disadvantage of possible confusion with an unsavory homophone, *cozenage* (= fraud). So *cousinhood* might therefore be considered preferable. In any event, *cousinhood* greatly predominates in modern print sources.

***couth**, a BACK-FORMATION from *uncouth*, has long been disapproved by usage authorities. The *OED* records the word as a Scotticism meaning “kind, affable, agreeable, pleasant,” from the 14th century. But its new incarnation (in the sense “cultured, civilized”) first appeared in the late 19th century as a direct antonym of *uncouth*. In short, some people consider **couth* an uncouth word. Its popularity ebbed over the course of the 20th century.

LANGUAGE-CHANGE INDEX

**couth* as an antonym of *uncouth*: Stage 4

coverage. This word has traditionally been used in the singular as a mass noun, but in modern insurance

parlance it has increasingly come to be used in the plural as a count noun. This example shows both uses—e.g.: “Today, 24-hour *coverage* is generally the centralized, and, in some cases, integrated management and administration of the separate insurance *coverages* that are packaged as a product.” Edward Zutter, “Agents, Brokers Must Respond to 24-Hour Challenge,” *Nat'l Underwriter*, 23 Sept. 1996, at 19. Here, *coverage* is a mass noun like *protection*, but *coverages* is a count noun like *policies*. (Also, in the quoted sentence the phrase *and, in some cases, integrated* should be placed in parentheses or set off by em-dashes—without the comma before *and*.) See COUNT NOUNS AND MASS NOUNS & PLURALS (J).

covert was traditionally pronounced like *covered*, except with a *-t* at the end: /kəv-ərt/. Still, /kɒh-vərt/, nearly rhyming with *overt* (but for the stress), is the more common pronunciation in AmE nowadays.

covetous /kəv-ə-təs/ is so spelled—not **coveteous*.

coworker. So spelled—without a hyphen. Cf. **co- & coowner**.

cowrie (= [1] a gastropod that inhabits warm seas and produces a brightly colored shell, or [2] the shell of this creature, esp. as once used as a medium of exchange in parts of Africa and Asia) has been predominantly so spelled since the 1920s. **Cowry* is a variant spelling.

cowrite. See **author**, v.t. (A).

coxcomb. See **cockscorb**.

coxswain; *cockswain. Both spellings are pronounced /kɒk-sən/. The word denotes a sailor who steers the ship and is in charge of the crew. Most dictionaries, American and British, correctly list *coxswain* as the main headword. It has greatly predominated since the 18th century.

Current ratio: 7:1

coyote. In standard American speech, this word is pronounced /ki-yoh-tee/. But in the western United States, the pronunciation /ki-oh-t/ is often heard.

According to Charles Harrington Elster, both pronunciations have been acceptable since the word was first recorded in dictionaries in the late 19th century. The two-syllable version dominated until the 1960s, when “the weight of authority . . . shifted” to the latter, with the two-syllable version “heard chiefly in the western United States.” *BBBM* at 113. Unsurprisingly, the mascot of the University of South Dakota is pronounced /ki-oh-t/.

cozen /kəz-ən/ is a literary and archaic word meaning “to cheat”—e.g.:

- “We’re being had, you know. *Cozened*, gulled, bamboozled, and led up the garden path by the usual suspects.” Walter Stewart, “At the Mercy of Money Traders,” *Toronto Sun*, 30 Jan. 1995, at 11.

- “Street-smart prisoners may think they are clever enough to outsmart any cop, but they can often be *cozened* by detectives who know their culture, as it were.” Nat Hentoff, “Yes, Officer, I Want to Confess,” *Village Voice*, 26 Mar. 1996, at 9.
- “Contrived complexity is at the heart of almost all white-collar fraud. Corporate *cozeners* are praying that the public will soon tire of legal polysyllabics, and go looking for activity that can be capsulized in four-letter words.” Don Bauder, “Bored by Boardrooms, Bedazzled by Bedrooms,” *San Diego Union-Trib.*, 14 July 2002, at H2.

But some writers, engaging in a recent misusage, have apparently misinterpreted the word as if it meant “coddled” or “pampered”—e.g.:

- “These plants will acquire strength and size until they are ready to be sent into the fields to continue their new life. They will be *cozened* [read *coddled* or *nurtured*?] just as a new child in the family would be flattered and protected.” “Truckpatch Remembered,” *Wash. Post*, 1 Mar. 1995, Food §, at E1.
- “Today’s car is designed to soothe and placate victims of road angst; it is a place where naked id is cuddled, coddled and *cozened* [read *cozied*?].” Bob Wiemer, “Dump Car Phones, but Keep the Fuzzy Dice,” *Newsday* (N.Y.), 12 Feb. 1996, at A26.
- “Strictly for women, it *hearkens* [read *harks*] back to the days when very rich, very *cozened* [read *pampered*?] women arrived by chauffeured limo with Louis Vuitton trunks stuffed with cocktail dresses for dinner.” Cynthia Robbins, “Guilty Pleasures,” *S.F. Examiner* (Mag.), 14 July 1996, at M15. (For the reason for changing **hearkens* in that sentence, see **hark back** (A).)
- “Coupled with Matamoros’ gift for stillness, it all creates a *cozening* [read *comfortable* or *cozy*?] bed of sound in which memories blossom and occasionally burst into flame in ways we’ve rarely seen before.” John Coulbourn, “A New Moon Rising,” *Toronto Sun*, 1 Nov. 1996, at 7.

Other writers seem to want the word to mean “summon”—e.g.:

- “Barkers *cozened* [read *hailed*?] her as she passed—“Step right up! Step right up and have a go!” Annette Curtis Klause, “The Hoppins,” in *Short Circuits* 183, 186 (Donald R. Gallo ed., 1992).
- “She stood staring at her own ring finger, remembering as if *cozening* [read *summoning*?] back a dream . . .” Nancy Springer, “Mariposa,” in *Firebirds* 107, 120 (Sharyn November ed., 2003).

LANGUAGE-CHANGE INDEX

1. *cozen* misused for *coddle*: Stage 1

2. *cozen* misused to mean “summon”: Stage 1

cozy (= warm and comfortable) is the standard spelling. (The covering for a teapot is a *tea cozy*.) **Cosy*, **cosey*, **cosie*, **cozie*, and **cozey* are variant forms.

Current ratio (in order of spellings within entry):
4,057:1,903:186:9:4:1

-CRACY. See GOVERNMENTAL FORMS.

craft brewery. See **microbrewery**.

cramp one’s style. This is the SET PHRASE meaning “(of an outside influence) to interfere with one’s freedom to act”—e.g.: “Producers say the minimum requirements *cramp* artistic style and lead to the unnecessary hiring of additional musicians.” Tania Padgett, “Broadway Musician Walkout Looming,” *Newsday* (N.Y.), 2 Mar. 2003, at A16.

Some writers change *cramp* to *crimp* (= to make pinched or bent), perhaps because the phrase *put a crimp in* has a similar meaning: “to hurt (something’s) chances.” But it isn’t idiomatic to say that something **crimps someone’s style*, much as the writers may complain that this stricture is *cramping* their style—e.g.:

- “Bush . . . seems determined to avoid letting new fears for his safety *crimp* [read *cramp*] his style.” Mike Allen, “In Wyo., Bush Opts Not to Catch Their Drift,” *Wash. Post*, 10 Feb. 2002, at A5.
- “Health-conscious Americans might suspect the new rules are an effort to shield non-smokers from second-hand smoke, or to *crimp* [read *cramp*] the style of smokers.” James Brooke, “Tokyo Blows Smoke Indoors to Keep Streets Tidy,” *Chicago Trib.*, 11 Dec. 2002, News §, at 35.
- “Wealthy people and business owners aren’t going to let a little recession *crimp* [read *cramp*] their style.” James McNair, “Charter Jet Company Flies in Face of Weak Economy,” *Cincinnati Enquirer*, 2 Mar. 2003, at D1.

LANGUAGE-CHANGE INDEX

**crimping one’s style* for *cramping one’s style*: Stage 1

Current ratio (*cramp your style* vs. **crimp your style*): 26:1

crane, v.t., = (1) to lift as if by a machine made for the purpose; or (2) to stretch (one’s neck) for the purpose of seeing better. The word is sometimes wrongly written **crain*, which is a NONWORD—e.g.:

- “Restrained by yellow ropes and signs that read, ‘Please Look, Don’t Touch,’ spectators *crained* [read *craned*] necks to get a few glimpses of the car’s spotless interior.” Susan Howard, “A Love Affair with Cars of Their Youth,” *Newsday* (N.Y.), 12 Sept. 1988, at 21.
- “Hundreds of people stood three and four deep along the rail, and hundreds more *crained* [read *craned*] from upper levels of the shopping mall as the Zamboni machine finished smoothing the ice surface for Harding’s solo practice.” Michael Janofsky, “Always Tonya: Cool as Ice, but Troubled in Her Quest,” *N.Y. Times*, 7 Feb. 1994, at B5, B6.

This blunder obscures the METAPHOR in the phrase *to crane one’s neck*, as the long-necked bird does when reaching out.

LANGUAGE-CHANGE INDEX

**crain* for *crane*: Stage 1

cranium. Pl. *craniums* or *crania*—the latter being especially common in medical texts. See PLURALS (B).

crape. See **crepe**.

crape myrtle (= a colorful East Indian shrub commonly grown in the southern and southwestern U.S.)

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

is often misspelled **crepe myrtle*, perhaps by those who mistakenly relate the word to the French delicacy *crepe* (/krep/). *Crape* (= a band made of thin twill fabric and worn on the upper arm as a sign of mourning) is a 17th-century anglicized spelling of the French word; it's pronounced /krap/. E.g.:

- “You can grow a *crepe* [read *crape*] myrtle—lilac of the South—in DeWitt, but only if it's sheltered by other trees or structures.” Jim Reilly, “Tree Search,” *Syracuse Herald Am.*, 4 Oct. 1998, at AA1.
- “Tree-huggers were chaining themselves to *crepe* [read *crape*] myrtles.” “Mass Transit,” *Fla. Times-Union*, 19 Nov. 1998, at B4.
- “The gardens are sprinkled with red, yellow and purple blooms adding an array of color to the scene. Flowering plants include black-eye susans, impatiens and *crepe* [read *crape*] myrtles.” “Magnolia Forest Garden Club's ‘Garden of the Month,’” *Times-Picayune* (New Orleans), 16 Aug. 2015, at H1.

See **crepe**.

LANGUAGE-CHANGE INDEX

**crepe myrtle* for *crape myrtle*: Stage 4

Current ratio (*crape myrtle* vs. **crepe myrtle*): 1.04:1

crappie (= a freshwater sunfish found in the central and eastern United States) is the standard spelling. **Croppie*, a variant, is closer to a phonetic spelling. Both words are pronounced /krop-ee/, though some dictionaries list *crappie* as /krap-ee/.

Current ratio: 66:1

crashworthy. See -WORTHY.

crawfish; crayfish. Although *crayfish* has traditionally been considered standard AmE—and *crawfish* a dialectal variant—things have changed. With the rise in popularity of Cajun cuisine in the 1980s came a general awareness of such dishes as *crawfish étouffée*. And today, most people who buy the freshwater crustaceans for cooking call them *crawfish*. But in other contexts—for example, among zoologists—*crayfish* remains standard. *Crawdad*, another dialectal variant, is still current in parts of the South.

LANGUAGE-CHANGE INDEX

1. *crawfish* for *crayfish*: Stage 5

Current ratio (*crayfish* vs. *crawfish*): 2:1

2. *crawdad* for *crayfish*: Stage 2

Current ratio (*crayfish* vs. *crawdad*): 20:1

cream cheese; *creamed cheese. Although **creamed cheese* was the original phrase, *cream cheese* has been standard since the 18th century. See ADJECTIVES (F).

Current ratio: 522:1

crèche (= [1] a scene representing the birth of Jesus, [2] a foundling hospital, or [3] a daycare center) is so spelled with a grave accent—not a circumflex (**crêche*). Sense 3 applies almost exclusively in BrE, where the accent is typically dropped. See DIACRITICAL MARKS.

credal. See **creedal**.

credible; credulous; creditable. *Credible* = believable; *credulous* = gullible, tending to believe; *creditable* = worthy of credit, laudable. See **incredible**.

credit, v.t. See **accredit**.

credo (= a formal statement of a person's or group's basic beliefs) is pronounced either /kray-doh/ or /kree-doh/.

credulity (= gullibility) should not be confused with *credibility* (= believability), as it is in the phrase **it strains credulity*—e.g.:

- “Several aspects of the play strain *credulity* [read *credibility*], particularly the ease with which total strangers gain admittance to the beleaguered heroine's basement apartment.” Everett Evans, “Wait, Wait, Wait,” *Houston Chron.*, 25 July 1994, Houston §, at 1.
- “And in all honesty, the story veers into an over-the-top territory that strains *credulity* [read *credibility*].” Deirdre Donahue, “Kellerman's ‘Web’ Mystery Weaves Trouble into Paradise,” *USA Today*, 18 Jan. 1996, at D4.

Credulity did originally mean “belief,” but that sense has long been obsolete.

credulous. See **credible**.

creedal; credal. In AmE, *creedal* is the standard spelling of the adjective corresponding to *creed*. In BrE, it's *credal*.

creep > crept > crept. So inflected. Yet the weak form ending in *-ed* has been creeping along as a variant form, especially in nonstandard usage, since the 18th century. Avoid it. E.g.:

- “Furber acknowledged that their grocery store prices have *creeped* [read *crept*] up.” Patricia Wen & Bruce Mohl, “Grocery-Shopping Services in Tough Battle for Limited Clientele,” *Boston Globe*, 18 Oct. 1998, at B2.
- “As their car *creeped* [read *crept*] home, the couple noticed dim lights glowing near their house.” David Templeton, “Dondora's Doomsday Message,” *Pitt. Post-Gaz.*, 29 Oct. 1998, at F1.
- “Hints of the old Wrexham *creeped* [read *crept*] in during the second half at Kidderminster.” “Why N.Wales Is Rediscovering Its Love for Dragons,” *Daily Post* (Liverpool), 21 Aug. 2015, at 21.

See IRREGULAR VERBS.

Although *crept* is the standard form, the slang PHRASAL VERB *creep out* (= to frighten or disgust) forms *creeped out*—e.g.: “Completely *creeped out* by the events, acting commissioner Bud Selig put a halt to the winter meetings.” Larry Stone, “Trades: The Talk at Winter Meeting,” *Seattle Times*, 11 Dec. 1998, at D1. See SLANG.

LANGUAGE-CHANGE INDEX

creeped misused for *crept*: Stage 1

Current ratio (*crept in* vs. **creeped in*): 345:1

crepe; crape. A *crepe* (/krep/ or /krap/) is either a thin, French-style pancake or a type of thin crinkled fabric. In the pancake sense, the word often appears with the circumflex: *crêpe*. (See DIACRITICAL MARKS.) A *crape* /krap/ is a band made of that fabric and worn around the arm as a sign of mourning. See **crape myrtle**.

crept. See **creep**.

crescendo, n., refers to a gradual increase in the volume of sound, not to a blast or even to a peak. To say that

something **reaches a crescendo* is woolly-minded—e.g.: “The tension reached a *crescendo* [read *peak* or *climax*] last January, when, in a move to restore peace, Nicastro did not reappoint one of the new board members, Denise Murphy, and replaced her with the Rev. William Barnes.” Loretta Waldman, “Library Board Member Announces Resignation,” *Hartford Courant*, 11 Jan. 2001, at B1. Pl. *crescendos*. See PLURALS (D).

The plural is *crescendos*—preferably not the Italianate **crescendi*.

LANGUAGE-CHANGE INDEX

1. *crescendo* in reference to a climax or peak: Stage 4
 2. **crescendi* as a plural: Stage 2
- Current ratio (*crescendos* vs. **crescendi*): 10:1

crevice; crevasse. These two words are often confused. A *crevice* is a narrow crack or break, as in the ground, a sidewalk, or a wall. E.g.: “They are curious animals, nosing into cracks and *crevices* with their pointy snouts.” Nancy J. Smeltzer, “Hedgehogs Curling Up in More Homes,” *Columbus Dispatch*, 15 Dec. 1994, at C1.

A *crevasse* is a large split or rupture, as in a levee, glacier, or embankment. E.g.: “The 48-year-old climber would rappel down the deepest *crevasse*, haul himself up the deepest slope and slide into a sleeping bag to warm a victim of hypothermia.” Mike Tharp, “Traveler’s Death Still a Mystery,” *Rocky Mountain News* (Denver), 5 Dec. 1994, at A26.

Crevice is pronounced /krev-is/; *crevasse* is pronounced /kra-vas/.

***criminate.** See **incriminate**.

crimp. See **cramp one’s style**.

crisis forms the plural *crises*, not **crisises*—e.g.:

- “To be sure, a good case can be made that this restricting legacy of the Gulf of Tonkin resolution may not be in the nation’s best interest in terms of a swift resolution of *crisises* [read *crises*].” Thomas V. DiBacco, “Anguished Legacy of Tonkin Resolution,” *Orlando Sentinel*, 7 Aug. 1994, at G3.
- “Earlier this year, the Organization of African Unity (OAU) discussed setting up a rapid intervention force for such *crisises* [read *crises*] but shelved the idea.” Judith Matloff, “Crisis in the Heart of Africa,” *Christian Science Monitor*, 30 Oct. 1996, Int’l §, at 7.
- “Teens act out because their hormones have gone crazy. I can only wonder if someone is getting big money to discover that the same thing happens to women with PMS, and men having mid-life *crisises* [read *crises*].” Linda Stasi, “What Are Those Kids Thinking?” *N.Y. Post*, 30 Jan. 2002, at 63.

LANGUAGE-CHANGE INDEX

- *crisises* for *crises*: Stage 1
- Current ratio (*crises* vs. **crisises*): 4,477:1

crit^{erion}. **A. And the Plural Form *criteria*.** *Crite^{ria}* is the plural, *crit^{erion}* the (originally Greek) singular. A Ph.D. in linguistics once defended *criteria*

as a singular because “not everyone knows that the singular is *crit^{erium}*”! (Indeed.) (See (c).) The plural **crit^{erions}* is occasionally seen, but it has failed to become standard. Infrequently, though not infrequently enough, one even sees **crit^{erias}*. Here are the correct forms:

- “The commission . . . has published its *criteria* for eligibility. Its central, repeated *crit^{erion}* for participation in the debates: ‘the realistic chance of being elected.’” William Safire, “Three’s a Crowd at the Debates,” *Cincinnati Enquirer*, 6 Sept. 1996, at A18.
- “Melissa Knierim wants an opera house in the Poconos, and if determination and hard work are the *criteria* for getting one, order your tickets now.” Gail Scudder, “There’s an Opera in the Air,” *Morning Call* (Allentown, Pa.), 19 Dec. 1996, at N1.

But especially since 1950 or so, writers have sometimes wanted to make *criteria* a singular—e.g.:

- “Grade your business from ‘A’ to ‘F’ on each *criteria* [read *crit^{erion}*].” Scott Clark, “Self-Test Helps Tell If Your Firm Meets Media’s Grade,” *Ariz. Bus. Gaz.*, 2 Feb. 1995, at 23.
- “As Beebe met *every criteria* [read *every crit^{erion}* or *all the criteria*] for such a designation—scenic views, mature trees, stone walls, crossings over waterways, a width of less than 20 feet and a dirt surface—the request was granted last October by the planning and zoning commission.” Claudia Van Nes, “Saving the Roads Less Traveled,” *Hartford Courant*, 17 Nov. 1996, at B1.
- “The *criteria* [read *crit^{erion}*] is fatalities per driver.” Jim Sullivan, “Artful Viewing,” *Boston Globe*, 10 Oct. 2001, at C4.

Cf. media & phenomenon. See PLURALS (B).

LANGUAGE-CHANGE INDEX

- criteria* as a false singular for *crit^{erion}*: Stage 2
- Current ratio (*a crit^{erion}* vs. **a criteria*): 14:1

B. Crit^{erion} Misused as a Plural. Oddly, perhaps because *criteria* is so often wrongly thought to be singular, the correct singular and plural forms have—in some writers’ minds—done something of a role reversal. So *crit^{erion}* is sometimes incorrectly used as the plural form—e.g.:

- “A state law adopted in 1959 outlines many *crit^{erion}* [read *criteria*] for consolidation, but no communities have ever met all the *crit^{erion}* [read *criteria*].” Kimberly Garcia, “Town, Village Cooperate for a Change,” *Wis. State J.*, 31 Oct. 1994, at B1.
- “State law lists several *crit^{erion}* [read *criteria*] for what defines residency.” Stacie Oulton, “Kane Offers Residency Proof,” *Denver Post*, 20 July 1996, at B2.

LANGUAGE-CHANGE INDEX

- crit^{erion}* as a false plural for *criteria*: Stage 1
- Current ratio (*several criteria* vs. **several crit^{erion}*): 134:1

C. And *crit^{erium}*. Since about 1970, *crit^{erium}* has denoted “a bicycle race of a specified number of laps on a closed course over public roads closed to normal traffic” (*W11*). The word was borrowed from the French, in which *crit^{erium}* means “competition.” E.g.:

- “Jonathan [Page], 17, won the 72-mile road race and placed fourth and fifth, respectively, in the *criterium* and the time trials in the 17- and 18-year-old division at the national junior cycling championships.” “Faces in the Crowd,” *Sports Illustrated*, 24 Oct. 1994, at 26.
- “He also races in dirt *criteriums*, road races, road *criteriums* and road time trials.” James Ensign, “Rider of Year’s Wheels Keep Turning,” *Des Moines Register*, 18 Dec. 1996, at 8.

As the second example illustrates, the plural of *criterium* in the sense just given is *criteriums*, not *criteria*.

Occasionally, writers confuse *criterium* with *critirion*—e.g.:

- “In that case, a major *criterium* [read *criterion*] for breaking ties would be conference records, and the Cardinals would have one of the worst in the group.” Kent Somers, “Playoff Chances Too Tough to Call,” *Ariz. Republic*, 13 Dec. 1994, at C1.
- “My sole *criterium* [read *criterion*] was this: Did he make a difference?” Rick Ryan, “Wuerffel Whiffs on One Man’s Heisman’s Ballot,” *Charleston Gaz.*, 14 Dec. 1996, at C5.

LANGUAGE-CHANGE INDEX
criterium misused for *criterion*: Stage 1

critique, n. & v.t. Until recently, this word was almost always a noun. But in the late 20th century (beginning especially in the 1980s), the verb became quite common as a neutral equivalent to the word *criticize*, which had by then acquired negative connotations. In fact, though, the verb *critique* dates from the mid-18th century.

The verb is conjugated *critiqued* and *critiquing*. Some writers mistakenly write **critiquing* (perhaps from the poor influence of *cataloging* [see **catalog(ue)**])—e.g.:

- “The sometimes animated *critiquing* [read *critiquing*] . . . is intended only to help a 24-year-old quarterback get better.” “Holmgren: Favre Not Perfect,” *Capital Times* (Madison), 25 Oct. 1993, at B3.
- “While lacking any sexually graphic details, Ruth gets downright dirty while describing, and unavoidably *critiquing* [read *critiquing*], her meals with Andrews.” Braden Keil, “Terminal Gets Some Dim Sum,” *N.Y. Post*, 11 Apr. 2001, at 39.

LANGUAGE-CHANGE INDEX
critique as a verb: Stage 5

crocus (= a spring-blooming flower of the iris family, usu. in purple, yellow, or white) has predominantly formed the plural *crocuses* since the early 19th century—not the Latinate **croci*.

Current ratio: 5:1

***crosier**. See **crozier**.

croupier. So spelled. See SPELLING (A).

crow, v.i. A cock *crow*s. But if you want to describe what a cock has already done, do you say *crowed* or *crew*? The modern preference is for *crowed*—e.g.:

- “Above the din of car horns, a cock *crowed*.” David Arnold, “Cooped Up in the Suburbs,” *Boston Globe*, 15 Dec. 1994, at 1.
- “Early-bird discounts encouraged shoppers to splash through crowded parking lots to save a few bucks before

the cock *crowed*.” Becky Tiernan, “Stores Lure Big Crowds,” *Tulsa World*, 30 Nov. 1996, at A1.

But until about 1920, published instances of the collocation *cocks crew* were more common than those of *cocks crowed*; in BrE, the two collocations were about equal. In the 1920s, that changed in both varieties of English, and *crowed* came to predominate as the past-tense form.

Occasionally today, *crew* pops up in allusion to the King James Version—e.g.: “And immediately the cock *crew*.” Matthew 26:74. Or sometimes the writer needs a rhyme, as in the following title: “When the Cock *Crew*, the Neighbors Started to Sue,” *Smithsonian*, Aug. 1988, at 113.

Current ratio (*cocks crowed* vs. *cocks crew*): 3:1

crozier; ***crosier**. Although *crozier* (= a bishop’s ornate staff resembling a shepherd’s crook) has been the predominant spelling since the early 20th century in all varieties of World English, some American dictionaries have been slow to recognize its preeminence and continue listing the word under the variant spelling **crosier*.

Current ratio: 5:1

crudité. The raw vegetables served with a dip or dips are called *crudités*. Calling them *crudities* (= things that are rough and unrefined) is shockingly unrefined:

- “The Blythwood Square menu offers an excellent range of afternoon teas, including . . . the Tea Tox Afternoon Tea, consisting of delicious healthy options such as vegetable *crudities* [read *crudités*] and a detox salad.” Sophie Hughes, “Britain’s Best Teas,” *Daily Telegraph*, 13 Aug. 2014, Lifestyle §.
- “I also liked this hybrid between hummus and guacamole for a new dip to serve with fresh vegetable *crudities* [read *crudités*], crackers, or tortilla chips.” Nancy Lindahl, “Tis Now the Season of Pointy Green Things,” *Marin Independent J.* (Cal.), 28 Apr. 2015, Features §.

cruel, adj., makes *crueler* and *cruellest* in AmE, *crueller* and *cruellest* in BrE.

crummy; **crumby**. When the meaning is “worthless” or “inferior,” the spelling is *crummy*. When the meaning is “consisting of or giving off crumbs,” the spelling is *crumby*. But some writers err by using *crumby* when they mean *crummy*—e.g.:

- “You . . . are on the highway unsuccessfully trying to get [the tire] off with the *crumby* [read *crummy*] wrench that came with your car.” Tom Incantalupo, “New Car, New Year,” *Newsday* (N.Y.), 1 Jan. 1996, § II, at B30.
- “Perhaps he was one of the new generation of get-rich-quick entrepreneurs—you know the sort of thing—set up a *crumby* [read *crummy*] little chain of theme restaurants or pubs, float it on the stock market, then as the idea begins to pale and lose its appeal, sell to the highest bidder.” Jeremy Warner, “Ten Years After the Big Bang, Little Has Changed,” *Independent*, 26 Oct. 1996, at 23.

LANGUAGE-CHANGE INDEX
crumby misused for *crummy*: Stage 1

crystallize. So spelled—not **crystalize*.

cubiclize. See -IZE.

cuckoo (= silly, crazy) is sometimes misspelled **coocoo*—e.g.: “I assumed Mr. Nelson’s prolonged isolation had brought on that endemic Maine malady known sometimes as *cabin-coocoo* [read *cabin-cuckoo*] and sometimes as woods-nutty.” John Gould, “From Rosy Bower to Pulpit Pond,” *Christian Science Monitor*, 23 May 1980, at 20. Likewise, the correct form is *cuckoo clock*—e.g.: “The new girl found orphanage life like living in a *coocoo* [read *cuckoo*] clock.” R.H. Growald, “Girls Didn’t [Care] About Orphanage Director,” *San Diego Union-Trib.*, 18 Apr. 1991, at B2.

LANGUAGE-CHANGE INDEX
cuckoo misspelled **coocoo*: Stage 1
Current ratio: 345:1

cudgel, vb., makes *cudged* and *cudgeling* in AmE, *cudgelled* and *cudgelling* in BrE. See SPELLING (B).

cue; queue. **A. As Nouns.** Though pronounced the same, these words have different meanings. *Cue* = (1) a signal to begin; a hint; or (2) a stick used in billiards, pool, or shuffleboard. *Queue* = (1) a line of people or things waiting their turn; or (2) a hanging braid of hair. See (C).

Not surprisingly, the two are sometimes confused—e.g.:

- “Like most birds, teal don’t start their migration based on air temperatures, but take their *queue* [read *cue*] to head south from the shortening hours of daylight.” Bob Marshall, “Teal Season Starts Perfectly,” *Times-Picayune* (New Orleans), 25 Sept. 1994, at C16.
- “People were forced to stand in long *cues* [read *queues*] at five emergency water stations in Amagasaki” “Kansai Striving to Recover from Effects of Devastation,” *Daily Yomiuri* (Japan), 19 Jan. 1995, at 3.

LANGUAGE-CHANGE INDEX
1. *queue* misused for *cue*: Stage 1
2. *cue* misused for *queue*: Stage 1
Current ratio (*long queues* vs. **long cues*): 86:1

B. Cue up; queue up. To *cue up* a videotape, an audiotape, a compact disc, or a DVD is to have it ready for playing at a particular point. E.g.:

- “His brother *cued up* the tape, the rousing theme song from ‘Rocky.’” Mark Pazniokas, “Out of Prison, Santopietro Welcomed Home,” *Hartford Courant*, 17 Sept. 1996, at A3.
- “You can bet your remote control clicker that every network has already *cued up* video of the glowering Dole, eyes flitting, hanging that warmonger tag on an astonished Mondale.” David Nyhan, “Should Dole Go for the Jugular?” *Boston Globe*, 4 Oct. 1996, at A19.

To *queue up* is to line up—e.g.:

- “On my way to a week’s cruise in the Galapagos on the Albatros, a luxurious 80-foot dive boat, I *queued up* in the airport in Quito, Ecuador.” Karen Misuraca, “Where the Wild Things Are,” *S.F. Examiner*, 4 Dec. 1994, at T5.

- “Florida State students *queued up* for probably the most prized ticket they would ever use.” Tim Layden, “No. 1 vs. No. 2,” *Sports Illustrated*, 2 Dec. 1996, at 36.

C. In Pigtails. The braid of hair is spelled *queue*, not *cue*. E.g.: “Instructed by French dancing masters in the stately steps and deep curtsies of the minuet, the young men had indeed to mind their peds (feet) and *queues* (pigtails) to keep from losing their balance or their huge wigs.” Laurie Lucas, “Anniversaries,” *Press-Enterprise* (Riverside, Cal.), 15 Nov. 1995, at D4.

But of course, some writers get it wrong—e.g.: “The pigtail or ‘cue’ [read ‘queue’]—as cultivated by sailors—was hair twisted or plaited, commonly prettied up by a binding of spun yarn and the whole applied with a dose of Stockholm tar which gave its gravity-defying look.” Letter of William Wood, “Tarred Pigtail,” *Daily Telegraph*, 9 July 1992, at 16.

LANGUAGE-CHANGE INDEX
queue (= pigtail) misspelled *cue*: Stage 1

cueing. So spelled—not **cuing*. See MUTE E.

cuisine is pronounced /kwi-**zeen**/ or /kwee-**zeen**/—not /kyoo-**zeen**/.

cul-de-sac. Pl. *cul-de-sacs*—not **culs-de-sac* (a common variant until about 1940). See PLURALS (B).

Current ratio: 4:1

-(C)ULE. See DIMINUTIVES (B).

culinary is pronounced /kyoo-lə-ner-ee/ or (less good) /kəl-ə-ner-ee/.

culpable; *inculpable; *culpatory; *culpose. *Culpable* (= guilty, blameworthy) is the ordinary word among this group. E.g.:

- “Merritt said yesterday that Christian conservatives were not *culpable* in North’s defeat.” Kent Jenkins Jr., “Uncertainties Arise on Morning After GOP Triumph,” *Wash. Post*, 10 Nov. 1994, at C1.
- “Roberts’ husband, who is not being held *culpable*, was at sea on a Norfolk, Va.-based ship at the time of the baby’s death.” Dennis O’Brien & Stephanie H. Davis, “Mom at Base Is Held in Baby’s Death,” *Chicago Trib.*, 15 Nov. 1996, Metro Lake §, at 1.

See **blameworthy** (A).

**Inculpable* is ambiguous. Avoid it as a CONTRONYM. It may mean (1) “(of a person) able to be inculpated [i.e., guilty]”; (2) “(of a statement or action) pointing toward guilt”; or (3) “(of a person) not culpable [i.e., innocent].” The word has traditionally borne sense 3, but in fact it is used in all three ways—e.g.:

- “On the other hand, it’s nice to know I can join the ranks of those who have excuses that render them *inculpable* [i.e., guiltless] for their behavior.” Tami Plyler, “Excuses, Excuses, Excuses,” *Union Leader* (Manchester, N.H.), 7 Mar. 1995, at A5.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “During the period of custodial questioning, the defendant made numerous *inculpable* [i.e., guilt-pointing] as well as potentially exculpable statements.” *People v. James Biggs*, *N.Y.L.J.*, 7 Nov. 1995, at 25.

See **inculpable**.

The other two terms are rare. **Culpatory*, meaning “expressing blame,” is a NEEDLESS VARIANT of *inculpatory*. (See **inculpatory**.) **Culpose*, the rarest of all, means “characterized by criminal negligence.” Neither has anything to recommend it.

***culs-de-sac**. See **cul-de-sac**.

cultivable; ***cultivable**. The first (pronounced /kəl-tə-və-bəl/) predominates in AmE usage, being eight times as common in print as **cultivable*, which has become a NEEDLESS VARIANT—e.g.: “Kenneth Hobbie, president and CEO of the U.S. Feed Grains Council in Washington, said that by 2050, Asia will have nine times more people than the Western Hemisphere per *cultivable* [read *cultivable*] acre.” Ann Toner, “Exports Only Part of Ag Success Story, Official Says,” *Omaha World-Herald*, 9 Nov. 1996, at 34. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX

**cultivable* for *cultivable*: Stage 2

Current ratio (*cultivable* vs. **cultivable* in World English): 12:1

cultivated. See **cultured**.

cultural diversity = (1) diversity within a culture; pluralism; or (2) diversity among cultures. The phrase often masks this ambiguity. Sense 1 is more common—e.g.: “The United States Air Force Band of Liberty [will play] songs highlighting America’s musical and *cultural diversity*.” “Live This Weekend,” *Providence J.-Bull.*, 7 June 2001, at L28.

Some have unconvincingly argued that sense 1 represents a self-contradiction. An English professor, for example, argues that a culture is based on shared values and beliefs. That is, *culture* is what brings us together and makes us one, while diversity is what separates us from one another. So people who share values and beliefs, the reasoning goes, are not diverse, and a culture made up of unshared values and beliefs is not a culture. See David Pichaske, “There Is No Such Thing as ‘Cultural Diversity,’” *Monitor* (Minn. State Univ. Student Ass’n), Feb. 1995, at 9. Regardless of the merits of the argument, *cultural diversity* is a useful term in a melting-pot society, and if it falls by the wayside it won’t be because it is illogical.

As practiced on college campuses, *cultural diversity* often takes on sense 2. That is, in the name of cultural diversity, curricula today often emphasize works from outside the Western tradition.

cultured; **cultivated**. Correctly, the former is used in reference to people and pearls, the latter in reference to the mind, tastes, speech, or behavior. A *cultured* person has refined tastes; a *cultivated* mind is well trained and highly developed.

-**CULUS**. See DIMINUTIVES (B).

cum (/kəm/ or /koom/) is a Latin preposition meaning “with.” In English, it bears that same sense, or sometimes “along with being; and.” It’s usually hyphenated before and after—e.g.:

- “Such changes have done nothing to tame the fundamental irreverence, particularly among the young, for the high Confucian-*cum*-communist culture of the mainland.” Andrew Higgins, “Shuffling the Cards of Identity,” *Guardian*, 28 June 1996, at 14.
- “The hit television show ‘The Simpsons’ sporadically highlights the dull-normal antics of Cletus and his stripper wife, Brandine, a ’90s version of the hillbilly-*cum*-trailer trash archetype.” Richard Morin, “Unconventional Wisdom,” *Dallas Morning News*, 26 May 1997, at C10.
- “Or splurge and join the Explorers Club for a conference-*cum*-cruise on the last weekend of May.” J.A. Lobbia, “Summer in the City,” *Village Voice*, 3 June 1997, at 2.

But some writers confuse this word with *come*, as Fritz Spiegl notes: “A film critic in the *Sunday Times* recently described the character of Thomas Jefferson in a new film as ‘a sort of founding father *come* speak-your-weight machine.’ Twice: once in the body of the text, and again in the caption to the picture.” Spiegl, “Usage and Abusage,” *Daily Telegraph*, 8 July 1995, at 32.

***cumbrance**. See **encumbrance**.

cumin; ***cummin**. *Cumin* (= a carrot-like herb whose seeds are used as a spice esp. in Mexican and Indian cooking) became the predominant spelling in AmE about 1930 and in BrE a few years later. Pronounced /kyoo-min/, *cumin* has universally replaced the older spelling **cummin* (pronounced /kəm-in/).

Current ratio: 13:1

cummerbund (= a wide waistband worn with tuxedos and other formal dress) is the standard spelling. **Kummerbund* is a variant. **Cummerbun*, **cumberbun*, and **cumberbund* are simply errors—e.g.:

- “Long, elegant dresses, bow ties, *cummerbuns* [read *cummerbunds*] and corsages” Kai Fawn Miller, “The Real Deal on Wheels,” *Times & Eagle* (Reading, Pa.), 16 May 1996, at 14.
- “A man dressed in a black tuxedo jacket, red dress shirt, purple and pink *cumberbun* [read *cummerbund*] and black pants asked the employee at the Edwards Theater if he could buy some popcorn.” “Costa Mesa Police Blotter,” *Orange County Register*, 8 Aug. 1996, at 5.
- “‘Sometimes,’ [Josh] Penn said shortly after midnight, drink in hand and *cumberbund* [read *cummerbund*] pressed firmly against the Monty bar, ‘the show has to follow the script.’” Mike Scott, “‘Beasts of the Southern Wild’ Makers Look to the Future After Shutout,” *Times-Picayune* (New Orleans), 27 Feb. 2013, Living §, at C1.

The pronunciation is /kəm-ər-bənd/.

LANGUAGE-CHANGE INDEX

cummerbund misspelled **cummerbun*,

**cumberbun*, or **cumberbund*: Stage 1

Current ratio (*cummerbund* vs. **cumberbund* vs. **kummerbund*): 69:1.2:1

***cummin**. See **cumin**.

Cummings, E.E. The poet Edward Estlin Cummings (1894–1962), a shy man, early in his career used the lowercase *i* for the first-person singular pronoun. (This habit, now commonplace in Internet exchanges, was highly unusual.) Cummings's critics then began referring to him sarcastically in print as *e.e. cummings*. The practice stuck, and that was how his name appeared on book covers. Does this mean we should all use lowercase letters in spelling his name? Those most familiar with the man think not, and they use ordinary CAPITALIZATION. Norman Friedman, the founder and then president of the E.E. Cummings Society, summed up the poet's "philosophy of typography" this way: "that *he* could use caps and lowercase as he wished, but that when others referred to him by name they ought to use caps." *Spring: The Journal of the E.E. Cummings Society*, 1992, at 114–21. Nor is it true that Cummings legally changed his name to lowercase letters. That story appeared in the preface to a biography about Cummings, but his widow angrily denied it. See **NAMES** (A).

***cumquat**. See **kumquat**.

***cumulate**; **cumulative**. See **accumulate**.

cumulus. Pl. *cumuli*. (See **PLURALS** (B).) Although the corresponding adjective is *cumulous*—and although the noun *cumulus* itself means "cloud"—the standard phrasing is *cumulus cloud*. E.g.:

- "The type of clouds that cross Wisconsin changes seasonally, and you find more *cumulus clouds* this time of the year." John Malan, "Today Is Likely to Be More Typical of a Day in June," *Milwaukee J. Sentinel*, 5 June 1996, Sports §, at 8.
- "Above, a ceiling fan turns lazily, barely disturbing the *cumulus clouds* of smoke." Linda Federman, "Music for Folks at an Irish Pub," *Wash. Times*, 14 Dec. 1996, at B1.

The phrase *cumulous clouds*, though not strictly wrong, is certainly unusual—e.g.: "South of town, puffy white *cumulous* [read, preferably, *cumulus*] clouds began to explode upwards." Rob Schneider, "Some Students Do All Their Studies in the Classroom," *Indianapolis Star*, 16 June 1996, at A1.

Current ratio (*cumulus clouds* vs. *cumulous clouds*): 15:1

cuneiform (= [1] wedge-shaped; [2] written in wedge-shaped characters; or [3] the wedge-shaped characters themselves) is pronounced in four distinct syllables (/kyoo-nee-ə-form/ or /kyoo-nee-ə-form/), not in three (/kyoo-nə-form/). Probably because of the mispronunciation, the word is occasionally misspelled **cuniform*—e.g.: "His price: Reportedly between \$4.5 million and \$7 million, depending on how the Sumerian *cuniform* [read *cuneiform*] in the contract translates into English."

Jim Slotek, "Ace Ventura: Stinking Rich," *Toronto Sun*, 22 Mar. 1994, at 42.

LANGUAGE-CHANGE INDEX
cuneiform misspelled and mispronounced
**cuniform*: Stage 1
Current ratio: 308:1

cunnilingus; ***cunnilinctus**. The standard spelling of this term, dating from the late 19th century, is *cunnilingus*. **Cunnilinctus*, a variant form that appears in some dictionaries, almost rivaled the standard form in print sources of the 1930s, but it ebbed and is rarely used today. Cf. **anilingus**.

Current ratio: 26:1

cupful. Pl. *cupfuls*—not **cupsful*. See **PLURALS** (G).

Current ratio: 33:1

cupola (= a round structure on the top of a building, usu. shaped like an upside-down bowl) is pronounced /kyoo-pə-lə/—not /kyoo-pə-loh/or /koo-pə-lə/. It has universally formed the plural *cupolas* since the 18th century—not **cupolae*. The inflected form is *cupolae* <a cupolae building>. For a mistake sometimes made with this word, see **cupola**.

curative; ***curatory**; **curatorial**. For the meaning "of, relating to, or involving the cure of diseases," *curative* is preferred over **curatory*, which is a NEEDLESS VARIANT. *Curatorial* = of, relating to, or involving a curator. E.g.: "The entries by the museum *curatorial* staff are brief but intelligent." David Bonetti, "The Pick of the Art Books," *S.F. Examiner*, 10 Dec. 1996, at D1.

curb; **kerb**. *Curb* is the AmE spelling; *kerb* is a BrE variant. And BrE makes an interesting distinction: the physical sense of a raised stone or concrete edge for a road or path is a *kerb*, while anything that metaphorically halts or checks is a *curb*—e.g.:

- "The chances are you would stumble before even stepping off the *kerb*." "Computers That Run Themselves," *Economist*, 21 Sept. 2002, Tech. Q. §, at 26.
- "In Germany, the government wants to encourage more part-time working and remove *curbs* on self-employment." Tony Major, "Germany Drags Europe Down," *Fin. Times*, 27 Feb. 2002, at 4.

AmE uses *curb* in all senses.

cure; **heal**. Both words are commonly used in medical senses. To *cure* is to successfully treat or remove (an illness, disease, or disorder), especially with medicine <an antibiotic will cure that infection>. It is often used as a passive-voice verb meaning "to get well again" <I'm cured!>. *Cure* is invariably transitive.

Heal may be either transitive or intransitive. As a transitive verb, it is essentially synonymous with *cure* but is used less frequently. As an intransitive verb, it generally denotes recovery from wounds or injuries <that cut needs time to heal> <broken bones heal

slowly>. *Heal* is the word more often used in figurative senses <time heals all wounds>, but at law one *cures* a title defect, delivery of nonconforming goods, and other legal problems.

curio. Pl. *curios*. See PLURALS (D).

curiously. See SENTENCE ADVERBS.

current, n.; **currant**. A *current* is (1) a steady flow of a fluid element, such as water, air, or electricity, in a definite direction <wind currents>, or (2) metaphorically, the movement of something intangible <the current of time> <the current of conversation>. A *currant* is a fruit, either (1) a very small raisin produced from a Mediterranean variety of seedless grapes, or (2) the dried, edible berry of a Eurasian shrub. As homophones, the words are occasionally confounded—e.g.:

- “Some [fruits] to consider include apples, apricots, banana chips, blueberries, cranberries, *currents* [read *currants*], figs, ginger, mango, pears, peaches, plums, raisins, and strawberries.” Maurie Markman et al., *Cancer Nutrition and Recipes for Dummies* 248 (2013).
- “They had nothing to do but stare at ocean *currants* [read *currents*].” D.L. Faughn & S.D. Schakel, *Below Gravity III: The Resurrection* 56 (2015).

currently. See **at the present time & presently**.

curriculum. Pl. *curricula* or *curriculum*s. The Latin plural remains much more common. E.g.:

- “These *curricula* don’t ‘radically change the way students learn how to add, subtract, multiply and divide.’” “Bethlehem’s Math Program Gives Students an Edge,” *Morning Call* (Allentown, Pa.), 24 Sept. 2002, at A12.
- “Even as many other colleges and universities have abandoned their core *curriculum*s, Columbia University has held fast.” Karen W. Arenson, “Science May Soon Join Core Courses at Columbia,” *N.Y. Times*, 26 Sept. 2002, at B3.

See PLURALS (B).

Current ratio (*curricula* vs. *curriculum*s): 19:1

curriculum vitae. See **vita**.

CURSING. See PROFANITY.

cursor; **cursorial**. *Cursor* = perfunctory, superficial. E.g.:

- “Fire investigator Charles D. Chamberlain of the State Fire Marshal’s Office said [that] he would be looking for a cause but [that] nothing appeared suspicious on a *cursor* view.” “Fire Destroys Bar Outside Meredith,” *Union Leader* (Manchester, N.H.), 20 July 1996, at A5.
- “Building inspector Chuck Vincent told the board that owner Michael Kilpatrick has made *cursor* repairs to the house and failed to meet the Oct. 9 fix-it-up deadline set by the board during the summer.” Ruth Laney, “Board Tries to Quiet Noise Fight,” *Advocate* (Baton Rouge), 14 Nov. 1996, at B4.

Cursorial = (1) of, relating to, or involving running; or (2) (of an animal) adapted for running. E.g.:

- “Challenging this is the ‘ground up,’ or *cursorial* theory, which maintains that small, running dinosaurs developed wings and flight to control themselves while leaping off

the ground to snag prey or escape from predators.” David F. Salisbury, “Searching for Key to Bird Flight Amid Tree-Dwelling Dinosaurs,” *Christian Science Monitor*, 15 June 1984, at 3.

- “On this basis, Archaeopteryx appears to have been a perching bird, not a *cursorial* predator.” Alan Feduccia, “Evidence from Claw Geometry Indicating Arboreal Habits of Archaeopteryx,” *Science*, 5 Feb. 1993, at 790.

curtail means “to cut back,” not “to stop completely.” Therefore, the phrases **completely curtailed*, **totally curtailed*, and similar others are misuses—e.g.:

- “Their halcyon days of wine and roses, if not *totally curtailed* [read, perhaps, *totally over*], certainly would be cramped beyond recognition.” “Commission Needs More Catalysts to Change,” *St. Petersburg Times*, 22 Aug. 1990, at 2.
- “But fans will be glad to hear he hasn’t *completely curtailed* [read *completely stopped*] performing.” Beth Wood, “His Tendinitis Is Nothing to Fret About,” *San Diego Union-Trib.*, 28 Dec. 1995, Night & Day §, at 12.
- “The weather has greatly reduced the fishing and seems to have *completely curtailed* [read, depending on the sense, *curtailed* or *stopped*] the fish stories.” Dennis Chapman, “Fishing Report,” *Palm Beach Post*, 6 Feb. 1996, at C9.

But *curtail* is the right word when there is only a scaling back—e.g.:

- “Banking and government offices will be closed or services *curtailed* in the following countries and their dependencies this week because of national and religious holidays.” “This Week’s Holidays,” *L.A. Times*, 27 Nov. 1994, at L3.
- “A number of court decisions *curtailed* such blatant bias in the public schools by the 1970s.” Stephanie Spellers, “Faith Enters the Classroom,” *Knoxville News-Sentinel*, 23 Nov. 1996, at B1.

CURTAILED WORDS. See BACK-FORMATIONS.

curtsy. So spelled—preferably not **curtsey*.

Interestingly, the *OED* records *courtesy* as an obsolete form of *curtsy*. Yet it’s not quite obsolete. It occurs many times in a 21st-century book, in each instance as a NEEDLESS VARIANT of *curtsy*—e.g.:

- “She was making her *courtesy* [read *curtsy*] to him. He bowed to her. They both straightened up and stood in silence.” Ursula K. Le Guin, *The Other Wind* 162 (2001).
- “Lebannen bowed. ‘Your presence honors us, Princess.’ She performed a deep, straight-backed *courtesy* [read *curtsy*] and said, ‘Thank you.’” *Ibid.* at 201.

LANGUAGE-CHANGE INDEX
courtesy misused for *curtsy*: Stage 1

curvaceous. So spelled—not **curvacious*.

Current ratio: 110:1

CUSSING. See PROFANITY.

customer. See **client** (A).

cut > cut > cut. So inflected. The past form **cutted* is erroneous. See IRREGULAR VERBS.

cut-and-dried, the age-old PHRASAL ADJECTIVE, is sometimes wrongly written **cut-and-dry*—e.g.: “The gift dilemma is further complicated currently by

companies' increased activity in international markets, where the ethical questions tend to be much less *cut-and-dry* [read *cut-and-dried*]." Diane Trommer, "Supply Chain Model Poses New Ethical Challenges," *Electronic Buyers' News*, 4 Aug. 1997, at E26. (For more on the word choice in that sentence, see **dilemma**.)

LANGUAGE-CHANGE INDEX

**cut-and-dry* for *cut-and-dried*: Stage 2

Current ratio (*cut-and-dried* vs. **cut-and-dry*): 8:1

cut in half is the idiom except in cooking, where *cut into halves* emphasizes the two parts of something, both of which are to be dealt with—e.g.:

- "Cut the cantaloupes *into halves*, scoop out the seeds and turn them upside down to drain." "What's Under the Rind Makes Terrific Soup and Salsa," *Fresno Bee*, 31 July 1996, Food & Life §, at 5.
- "To assemble: *Cut the cake into halves* lengthwise." Sarah Fritschner, "Romanian Connection Brings Exotic to Church Fair," *Courier-J.* (Louisville), 11 Dec. 1996, at D1.
- "Peel and devein the shrimp; *cut in halves*." "Make Short Order of Dinner with This Shrimp Linguine," *Times-Picayune* (New Orleans), 12 Dec. 1996, at F2.

Perhaps because *cut in half* is synonymous with *halve*, some writers fall into the error of writing **cut in halve*—e.g.: "If a recipe calls for seeded tomatoes, *cut them in halve* [read *halve them* or *cut them in half*] crosswise and squeeze each tomato half gently to force out the seeds." Martha Stewart, "Vine-Ripened Tomatoes Beg for Picking, Devouring," *Dayton Daily News*, 8 Aug. 1996, at 8. (Stewart was not victimized by a local editor; the syndicated piece appeared throughout the nation in this form.)

LANGUAGE-CHANGE INDEX

**cut in halve* for *cut in half*: Stage 1

-CY. See -CE.

cyclone. See **hurricane**.

cyclopean; ***cyclopiian**. This word—meaning (1) "of or like a cyclops"; or (2) "huge, gargantuan"—is now almost uniformly spelled *cyclopean* or *Cyclopean*. The spelling **cyclopiian* is a variant.

The word has two acceptable but very different pronunciations: /sɪ-klɒ-**pee**-ən/ and /sɪ-**kloh**-pee-ən/. The former predominates and is preferred. See **cyclops**.

Current ratio (*cyclopean* vs. **cyclopiian*): 34:1

***cyclopedia**; ***cyclopedic**. During the 20th century, these forms were superseded by *encyclopedia* and *encyclopedic*. The words **cyclopedia* and **cyclopedic* are now NEEDLESS VARIANTS.

In BrE the tendency has been to spell all forms of these words *-paed-* or *-pæd-*, but today the *-ped-* spellings are very much on the rise because of the AmE influence. See **AE**.

***cyclopiian**. See **cyclopean**.

cyclops. Pl. *cyclopes* /sɪ-**kloh**-pee-z/ or *cyclopeses* /sɪ-**klop**-sə-z/. The classically formed plural, *cyclopeses*, still predominates in AmE and BrE alike—e.g.:

- "Post-apocalyptic *cyclopes* line the wall of a sewer like bats in black leather, and Siamese-twin sisters who suggest taloned ravens cackle over sinister purposes." Jay Carr, "Dungeonlike 'City' Casts Eerie Spell," *Boston Globe*, 9 Sept. 1995, at 65.
- "Coverage of the Champions League final was more one-eyed than a *Cyclopes*' convention for which only Polyphemus has bothered turning up." Robin Scott-Elliott, "Holding's Honeyed Growl Drowned Out by Sky's Chelsea Cheerleaders," *Independent*, 21 May 2012, at 20.

Although most dictionaries don't list the plural *cyclopeses*, it is becoming common. Indeed, *cyclopeses* ought to be fully accepted as standard—e.g.:

- "We are bombarded with vainglorious descriptions and fantastic illustrations of dragons, giants, *cyclopeses*, griffins (lashed to a flying machine), the anthropophagi and men whose heads grow beneath their shoulders." "Still Questing for the Holy Grail," *Fin. Times*, 20 July 1996, at 16.
- "Meanwhile, soldiers with unpronounceable names challenge creatures that look like *cyclopeses*, furry what-chamacallits (dubbed furballs) or crosses between vultures and alligators." Charan Levitan, "Cool Fights with a Scummy Sorcerer," *Sun-Sentinel* (Ft. Lauderdale), 1 Nov. 1996, Showtime §, at 12.

See **PLURALS** (A).

It's wrong, by the way, to make *cyclops* itself into a plural—e.g.: "Other highlights I remember: Sinbad battling a baby croc and its gigantic mother, several *cyclops* [read *cyclopeses* or *cyclopes*] and a fire-breathing dragon." Jim Bawden, "Movie Previews," *Toronto Star*, 3 Mar. 1997, Starweek §, at 8.

LANGUAGE-CHANGE INDEX

cyclops as a false plural for *cyclopeses* or *cyclopes*: Stage 2

***cypher**. See **cipher**.

cypress (= a cone-bearing tree) shouldn't be confused with *Cyprus* (= the Mediterranean island nation south of Turkey). Yet it sometimes is—e.g.:

- "On the way home, past olive groves, Romanesque bell towers and rows of lovely *cyprus* [read *cypress*] trees that jut from the landscape like giant swaying plumes, I see light glowing." Pamela Gerhardt, "In the Hills of Tuscany, a Family Discovers That Living like a Local Can Be a Joy," *Wash. Post*, 10 Mar. 2002, at E1.
- "A pilot who walked away from a helicopter crash and later slammed his plane into a *cyprus* [read *cypress*] swamp was legally intoxicated at the time of his death, officials said Monday." "Pilot Crashes Twice," *Cincinnati Post*, 18 June 2002, at A2.

And the errors go both ways—e.g.:

- "Last year Wright played for a club team, Apoel, on the island of *Cypress* [read *Cyprus*], Greece." Mark Rosner, "Joey the Greek," *Austin Am.-Statesman*, 20 July 1994, at C1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-ii.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Best of all, Saga does not charge a single supplement on many of its tours to places such as Greece and the Greek Islands, Malta, Majorca, Spain, Portugal, Sicily, *Cyprus* [read *Cyprus*], Turkey, Nicaragua, Great Britain, Ireland, depending on departure date.” Gene & Adele Malott, “Savvy Solo Seniors Can Avoid Supplement Fees,” *Grand Rapids Press*, 1 Mar. 1998, at K6.

Consider the challenges that travel writers face: Los Angeles has a suburb named *Cypress*, and *cypress* trees grow both there and on *Cyprus*.

D

-²D. See -ED.

dachshund is pronounced /**dahk**-sənd/ or /**daks**-huunt/. It's occasionally mispronounced /**dash**-ənd/, and it's occasionally misspelled **daschund* or **dachsund*.

Current ratio (*dachshund* vs. **daschund* vs. **dachsund*): 256:2:1

daemon; demon. Both are pronounced /**dee**-mən/. The spelling *daemon* distinguishes the Greek-mythology senses of supernatural being, indwelling spirit, etc. from the modern sense of devil's helper (*demon*). E.g.: “The *daemon* in him played the game just as it wrote the poems.” Jeffrey Meyers, “Poets and Tennis—Drop Shots and Tender Egos,” *N.Y. Times*, 2 June 1985, § 7, at 24. *Daemon* is also a term of art in the field of information technology, referring to a background process or thread (primarily in UNIX).

dais is generally pronounced /**day**-is/ (preferably not /**dr**-is/)—but it may be pronounced, especially in BrE, to rhyme with *pace*.

Dalmatian. So spelled (and capitalized)—not **dalmatian* or (worse yet) **dalmation*. E.g.: “Large, muscular and energetic, *dalmations* [read *Dalmatians*] typically require a lot of open space to rove and frolic.” Clint Thomas, “*Dalmation* [read *Dalmatian*] Owners Urged to Provide Proper Environment,” *Charleston Gaz.*, 12 Feb. 1997, at 15 (misspelled throughout article). As with many other dog breeds, such as German shepherds and French poodles, the name reflects a place of origin: Dalmatia, now a region of northern Croatia.

LANGUAGE-CHANGE INDEX

Dalmatian misspelled **Dalmation*: Stage 1
Current ratio: 46:1

damage(s), n. The singular *damage* refers to loss or injury to person or property; the plural *damages* refers to monetary compensation for such a loss or injury.

czar; tsar. Outside academic circles, the spelling *czar* is overwhelmingly predominant in AmE and always has been. *Tsar*, which is closer to the Russian form, is the preferred form in BrE and in academia. It is also the form traditionally used with Russian emperors and monarchs <Tsar Nicholas II>. Americans' colloquial use of *czar* to denote a person of great power or authority (often with a suggestion of tyranny) is hardly new—it dates back to the mid-19th century. And even the specialized sense of a person appointed to steer policy and enforcement in a certain field <drug czar> <energy czar> <car czar> goes back at least to the early 1930s.

damn, adj. & adv., for *damned*—as in *that damn cat*—though attested from the 18th century, remains something of a CASUALISM. Yet it occurs with great frequency—e.g.:

- “Let the student choose [subjects] himself, and make *damn* [read *damned*] sure he says something *about* the subject—rather than merely turning in a description or summary or noncommittal analysis of it.” Martin Russ, *Showdown Semester: Advice from a Writing Professor* 31 (1980).
- “It was very *damn* [read *damned*] dark in the mid-1930s when I was born and biology was destiny with a vengeance.” Jill Tweedie, “Strange Places,” in *On Gender and Writing* 112, 112 (Micheline Wandor ed., 1983).
- “It's not easy to single out what has made so perennially fascinating the whole Boomer Heaven mix of self-righteous anger, hormonal overdrive, orange bean bags and *damn* [read *damned*] good music.” Katherine Knorr, “Live, Loud, in Your Face: Welcome to the '60s,” *Int'l Herald Trib.*, 23 Mar. 2001, at 24.

The wretchedly misspelled form *dam*, too, sometimes appears—e.g.: “It seems every year we need a plumber because the house sewer system has an inadequate one-way relay instead of two, and the *dam* [read *damned*] thing gets overloaded.” Carole Hall, “Multiple Sclerosis: Keeping Your Perspective,” 3 *Real Living with Multiple Sclerosis* 6 (May 1996). If this is intended as a EUPHEMISM, it is a particularly ineffective one. Cf. **goddamned**.

Current ratio (*damn thing* vs. *damned thing*): 3:1
2. *dam* for *damned*: Stage 1
Current ratio (*damned thing* vs. **dam thing*): 58:1

damned, adj. & adv. See **damn**.

damnedest is so spelled—preferably not **damndest*.
Current ratio: 4:1

damp, v.t.; dampen. Both may mean “to make damp, moisten,” but each word carries at least one additional sense. *Damp* = (1) to stifle or extinguish <damp the

furnace>; or (2) to deaden the vibration of (a piano string). *Dampen* = to check, diminish, or depress <the news of Mr. Ratliff's illness dampened our spirits>. The words sometimes overlap in these additional senses, but they are best kept distinct.

dandruff is sometimes misspelled **dandriff*—which was actually a variant spelling in the early 19th century, but it had been sloughed off by 1900.

Current ratio: 156:1

danger. A. In danger of life; in danger of death. Curiously, these phrases are synonymous. *Life* is the only exception to the idiom requiring *in danger of* to be followed by the peril and not by what is exposed to it. Thus, we say *in danger of losing his honor, in danger of being thrown from the bridge, etc.*

B. *Running the danger. Idiomatically speaking, one runs a *risk*, not a *danger*—e.g.:

- “If you parody your bland role model with utter brilliance, then you *run the danger* [read *run the risk*] of being too clever for your own good.” Barry Walters, “‘Brady’ Sequel Is Like One Long Episode,” *S.F. Examiner*, 23 Aug. 1996, at D3.
- “I *run the danger* [read *run the risk*] myself of oversimplifying.” James M. Klurfeld, “Politicians’ Economic Plans Simplistic,” *Fresno Bee*, 25 Aug. 1996, at B7.
- “Begin the shot, but it is not until the club is fully drawn that you can set the downward swing to begin. Get any of this wrong and you *run the danger* [read *run the risk*] of your shot falling short, heading into a hazard or massively overshooting your target.” Cheryl Mullin, “Rory’s First Game on Par with Tiger,” *Birmingham Mail* (U.K.), 18 July 2015, at 10. (On *shot falling short* for *shot’s falling short*, see FUSED PARTICIPLES.)

DANGLERS. A. Generally. So-called dangles are ordinarily unattached participles—either present participles (ending in *-ing*) or past participles (ending usually in *-ed*)—that do not relate syntactically to the nouns they are supposed to modify. That is, when the antecedent of a participle doesn’t appear where it logically should, the participle is said to “dangle”—e.g.: “*Watching* from the ground below, the birds flew ever higher until they disappeared.” In effect, the participle tries to sever its relationship with its noun or pronoun and thus to become functionally a preposition. Gerunds may also dangle precariously—e.g.: “By *watching* closely, the birds became visible.” (See (D).) Usually, recasting the sentence will remedy the ambiguity, ILLOGIC, or incoherence: “Watching from the ground below, we saw the birds fly higher until they disappeared.” / “By watching closely, we were able to see the birds.”

Most dangles are ungrammatical. In the normal word order, a participial phrase beginning a sentence (“Walking down the street,”) should be directly followed by the noun acting as subject in the main clause (“I saw the house”). When that word order is changed, as by changing the verb in the main clause to the PASSIVE VOICE, the sentence becomes illogical or misleading: “Walking down the street, the house was seen.” It was not the house that was walking, but the speaker.

Some dangles, though, are acceptable because of long-standing usage. Examples are easy to come by: “*Considering* the current atmosphere in the legislature, the bill probably won’t pass.” But avoiding the dangle would often improve the style: “With the current atmosphere in the legislature, the bill probably won’t pass.” Several other examples are discussed below in (E).

Despite the sloppiness of dangles in general, they have been exceedingly common even among grammarians. For example, a biographical entry on Lindley Murray (1745–1826), the best-selling grammarian of the early 19th century, condemned his participial habits: “[In] spite of his proverbial credit as an authority, his own style was by no means a model of excellence; it was not impeccable even on grammatical grounds, the ‘misallied participle’ being only too frequent.” 3 *Chambers’s Cyclopaedia of English Literature* 740 (1903). The same habit can be found in other grammarians of repute—e.g.:

- “By *habituating* themselves to the practice of pointing, their attention will naturally be directed to clearness of thought.” John Wilson, *A Treatise on Punctuation* 3 (23d ed. 1871).
- “*Never having been* taught as a system in any school, but only as a division of some other branch, no special importance was ever attached to [punctuation].” Edmund Shaftesbury, *One Hundred Lessons in Punctuation* 5 (1893).
- “*In answering* the questions, it has always been my aim to present opinion and state facts in the most workably helpful way.” Edward N. Teall, *Putting Words to Work* viii (1940).
- “*Being a lexicographer* rather than a philologist—if indeed the name of lexicographer may be extended to include those who make compilations from the dictionaries of others—my interest has been more especially aroused by two aspects of linguistic study which lie somewhat outside the scope of the strict philologist.” Logan Pearsall Smith, *Words and Idioms* vi–vii (5th ed. 1943).
- “*In speaking* to a child or about a child, it is usual to add the ordinary diminutive suffix.” Otto Jespersen, *Mankind, Nation, and Individual from a Linguistic Point of View* 131 (1946).
- “Even *admitting* that a really compelling style is the result of years of cultivation, much scholarly writing is certainly worse than it needs to be.” Donald J. Lloyd, “Our National Mania for Correctness,” in *A Linguistics Reader* 57, 57 (Graham Wilson ed., 1967).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Likewise, dangles have appeared in the work of reputable fiction writers. For example, Herman Melville's famous short story "Bartleby the Scrivener" (1856) contains seven dangles. See Leedice Kissane, "Dangling Constructions in Melville's 'Bartleby,'" *36 Am. Speech* 195 (1961).

All this has led one commentator to suggest that dangles are mere peccadilloes: "The loosely related participle phrase occurs pretty frequently in modern usage. Though grammar, insisting on the pure adjectival relationship, is against it, tradition is on its side; and, provided the result is not patently incongruous, it is not too lightly to be condemned." G.H. Vallins, *The Pattern of English* 56–57 (1956; repr. 1957). Other commentators are less forgiving:

- "In my daily work [as an editor], the presence of a participle at the portals of a statement is as ominous as the buzzing of a rattlesnake in my path." Eugene S. McCartney, *Recurrent Maladies in Scholarly Writing* 59 (1953).
- "Failures to look ahead and consider the grammatical compatibility of the following clause are exceedingly common, especially in unscripted speech." Robert W. Burchfield, *Points of View* 93 (1992).

B. Present-Participial Dangles. In the sentences that follow, mispositioned words have caused grammatical blunders. The classic example occurs when the wrong noun begins the main clause—that is, a noun other than the one expected by the reader after digesting the introductory participial phrase. E.g.: "The newspaper said that *before being treated* for their injuries, General Mladic forced them to visit the wards of wounded at the Pale hospital, telling them, 'here's what you have done' and 'you have also killed children.'" Marlise Simons, "Report Says Serbs Tormented 2 French Pilots," *N.Y. Times*, 29 Dec. 1995, at A5. That wording has General Mladic being treated for others' injuries. Hence dangles reflect a type of bad thinking. See ILLOGIC (C).

Another manifestation of this error is to begin the main clause with an EXPLETIVE (e.g., *it* or *there*) after an introductory participial phrase:

- "Applying those principles to the present situation, *it* is clear that the company must reimburse its employee." (A possible revision: *If we apply these principles to the present situation, it becomes clear that . . .* Or better: *Given those principles, the company must . . .*)
- "Turning to England, *it* ought to be noted first that that country, though late in doing so, participated fully in the medieval development sketched above." Grant Gilmore & Charles L. Black Jr., *The Law of Admiralty* 8 (2d ed. 1975). (A possible revision: *Although England was late in doing so, it participated fully in the medieval development sketched above.*)
- "After reviewing the aforementioned strategies, *it* becomes clear that there is no conclusive evidence regarding their success." Bernard J. Putz, "Productivity Improvement," *SAM Advanced Mgmt. J.*, 22 Sept. 1991, at 9. (A possible revision: *Even a detailed review of those strategies provides no conclusive evidence about how successful they are.*)

As in that last example, dangles occurring after an introductory word are just as bad as others but are harder for the untrained eye to spot—e.g.: "I

have always found John Redwood thoughtful, intelligent and rather convivial. I sincerely hope that we can remain friends after the dust has settled. He has conducted a skilled campaign. Yet, *being* a thoughtful man, I suspect that in his heart of hearts he wishes some of his supporters . . . would just disappear." Jerry Hayes, "A White-Knuckle Ride I Cannot Join," *Independent*, 30 June 1995, at 21. (The writer here seems to attest to his own thoughtfulness. A possible revision: *Yet because he is a thoughtful man, I suspect that in his heart of hearts he wishes . . .* Or: *Yet I suspect that, because he is a thoughtful man, in his heart of hearts he wishes . . .*)

C. Past-Participial Dangles. These are especially common when the main clause begins with a possessive—e.g.: "Born on March 12, 1944, in Dalton, Georgia, Larry Lee Simms's qualifications . . ." Barbara H. Craig, *Chadha: The Story of an Epic Constitutional Struggle* 79 (1988). (Simms's qualifications were not born on March 12—he was. A possible revision: *Born on March 12, 1944, in Dalton, Georgia, Larry Lee Simms had qualifications that . . .*)

D. Dangling Gerunds. These are close allies to dangling participles, but here the participle acts as a noun rather than as an adjective when it is the object of a preposition:

- "By *instead examining* the multigenerational ethnic group, it becomes clear that the Irish had fully adjusted to American society by the time of the First World War." Michael Cottrell, Book Rev., *Canadian Hist. Rev.*, Sept. 1994, at 453. (A possible revision: *By instead examining the multigenerational ethnic group, we see that the Irish . . .*)
- "Without *belaboring* the point, the central premise of this article is that the average pharmacist, preparing myriad prescriptions each day, does not have the time to provide CPS." Matthew M. Murawski, "Introduction to Personnel Management," *Drug Topics*, 10 June 1996, at 170. (A possible revision: *In brief, the central premise of this article . . .*)

E. Acceptable Dangles, or Disguised Conjunctions. Any number of present participles have been used as conjunctions or prepositions for so long that they have lost the participial duty of modifying specific nouns. In effect, the clauses they introduce are adverbial, standing apart from and commenting on the content of the sentence. Among the commonest of these are *according*, *assuming*, *barring*, *concerning*, *considering*, *given*, *judging*, *owing to*, *regarding*, *respecting*, *speaking*, *taking* (usu. *account of*, *into account*). Thus:

- "Horticulturally *speaking*, the best way to prune the tree is probably to remove some of the lowest branches by cutting them off at the trunk." Mary Robson, "Pine Needles Won't Harm," *Seattle Times*, 14 Aug. 1994, at G3.
- "Assuming everyone shows up who's supposed to (not a given in this sport of last-minute scratches), this could be the finest assemblage of talent for a Long Island road race in a decade." John Hanc, "Cow Harbor Still Attracts Big Names," *Newsday* (N.Y.), 18 Sept. 1997, at A94.
- "Considering how hated Belichick was in Cleveland, it's incredible that another owner would want him as a head coach." John McClain, "John McClain's NFL Report," *Houston Chron.*, 7 Dec. 1997, at 24.

For an arguable example, see **except (B)**.

F. Ending Sentences with Dangers. Traditionally, grammarians frowned on *all* danglers, but during the 20th century they generally loosened the strictures for a participial construction at the end of a sentence. Some early-20th-century grammarians might have disapproved of the following sentences, but such sentences have long been considered acceptable:

- “Sarah stepped to the door, looking for her friend.”
- “Tom’s arm hung useless, broken by the blow.”

Usually, as in the first example, the end-of-the-sentence dangler is introduced by a so-called coordinating participle: *looking* is equivalent to *and looked*. Similarly:

- “Vexed by these frequent demands on her time, she finally called upon her friend, *implo*ring him to come to her aid.” (*Implo*ring = *and implo*red.)
- “The New Orleans-bound steamer rammed and sank the freighter ten miles from her destination, *send*ing her to the bottom in ten minutes.” (*Send*ing = *and sent*.)
- “She died before her brother, *leav*ing a husband and two children.” (*Leav*ing = *and left*.)

A few editors would consider each of those participles misattached, but in fact they are acceptable as coordinating participles. As for the few who object, what would they do with the following sentence: “The boy ran out of the house *cry*ing?”

danse macabre; dance macabre. An art form meant to remind people of their mortality and of death as a social equalizer, *danse macabre* is more than ten times as common as *dance macabre*, an upstart spelling from the 19th century. Because macabre is a POSTPOSITIVE ADJECTIVE, the plural is *danses macabre* or *dances macabre*. See PLURALS (G).

dare. A. Generally. It’s been called “one of the subtlest and most variegated verbs in the language” (Robert W. Burchfield, *Points of View* 123 [1992]) and also “one of the trickiest” (William Safire, “Love That Dare,” *N.Y. Times*, 17 May 1987, § 6, at 10). The subtleties arise because *dare* is both an ordinary verb <he dares you to pick up the snake> and a modal verb <he dare not do it himself>. And the form it takes (*dares* vs. *dare* in those examples) changes with that grammatical function.

B. As a Full Verb. When *dare* is used as a full verb, it behaves just like most other verbs: it takes an *-s* with a third-person-singular subject <Robert always speaks his mind bluntly and *dares* anyone to disagree>. The form is identifiable by the presence of an explicit infinitive (with *to*) after *dare* (here, *to disagree*).

C. As a Modal. *Dare* was an Old English modal. When it is used as an auxiliary verb (like the modern modals *will*, *must*, and, more closely, *ought*), the infinitive either is missing its *to* <*Dare* he disagree with Robert?> or is missing altogether but understood <He *dare* not!>. This occurs chiefly, but not only, in

interrogative or negative sentences. In those sentences, the form *dares*—although sometimes used mistakenly in striving for correctness—would be unidiomatic, because *dare* in this usage behaves like other uninflected modals <*Will* he disagree with Robert?> <he *must* not>.

D. Past Forms. As a modal verb, *dare* raises an interesting question of tense: in reference to past time, should one write (1) *Although challenged to do it, he dare not*, or (2) *Although challenged to do it, he dared not*? The *OED* endorses the first and calls the second “careless,” but that advice was written when that part of the great dictionary was published in 1894 (and the dandy but now archaic *durst* was still available—see (E)). More recent grammarians are more lenient—e.g.:

- “‘Dare’ in the sense of ‘challenge’ has formed a new past tense *dared*. . . as ‘He *dared* not go.’” J.C. Nesfield, *English Grammar Past and Present* 355 (rev. ed. 1924; repr. 1948).
- “We may say *I do not dare* and *do you dare?*, or we may use the older forms and say *I dare not* and *dare you?* Some grammarians feel that this is license enough and object when the new forms are used in the old construction, that is, without the *to* of the infinitive, as in *he dares go, he dared go, I don’t dare go*. . . . But the best writers and speakers have not agreed with them.” *DCAU* at 126.
- “As a modal, *dare* exhibits abnormal time reference in that it can be used, without inflection, for past as well as present time: ‘The king was so hot-tempered that no one *dare* tell him the bad news.’ The main verb form *dared* (*to*) might also occur here.” Randolph Quirk et al., *A Comprehensive Grammar of the English Language* § 3.42, at 138 (1985).
- “The marginal modal auxiliary *dare* has a past form *dared* <esp. BrE>.” *Ibid.* § 10.68, at 797 n.(b).

These more modern grammarians’ analyses are borne out by actual usage—e.g.:

- “A male screener wanded the woman’s breasts—twice, even though a female screener was hanging around just steps away; the angry husband said he *dared not* complain lest they miss their flight.” Edwin Black, “Travel Security,” *Chicago Trib.*, 2 Dec. 2001, at 1.
- “Mayo said he *dared not* declare it a little blue heron without confirmation from others.” Steve Grant, “Bird Count Turns Up a Few Surprises,” *Hartford Courant*, 23 Dec. 2001, at B1.
- “Another of their quirks is a proclivity for skinny-dipping—something they *dared not* attempt at the beaches around Flinders.” David Wroe, “Fridge Magnet Car Attracts the Curious,” *The Age*, 31 Dec. 2001, at 4.

It is odd, however, to see the past-tense form in the SET PHRASE *how dare you*—e.g.: “‘How *dared* you!’ Jon shouted, waving his arms for emphasis. ‘That dish was ours, the property of the entire Order! How *dared* you even *think* to appropriate it for your own uses!’” Patricia C. Wrede, *Mairelon the Magician* 91 (1991). Most writers and editors would insist on making those phrases *How dare you!* See (F).

E. And *durst*. The form *durst*, which is a past indicative and past SUBJUNCTIVE along with *dared*, is

obsolete in AmE. In BrE, it still occurs rarely, always in a negative sentence or conditional clause in which there is an infinitive either understood or having no *to* <none *durst* answer him>. In AmE (and almost always in BrE), *dared* would substitute: *durst* today is strictly jocular—e.g.: “How ’bout giving Puffy a ring? With these haggard elders on board, none *durst* judge the wily ol’ plagiarist’s heart.” Keith Harris, “Souled Out,” *Village Voice*, 25 June 2002, at 65. See ARCHAISMS.

F. How dare. This exclamatory construction involves an INVERSION: *How dare he do that!* is an idiomatic phrasing of the interrogative *How (does/did he) dare (to) do that?* The subject–actor (*he*) appears after the verb (*dare*) and is always in the nominative case—e.g.: “How dare *she* tell taxpayers to take on more responsibility to help neighborhood kids. How dare *she* be right!” Denise Smith Amos, “It’s Up to Us to Ensure Kids Are OK,” *Cincinnati Enquirer*, 18 Aug. 2002, at 2. Some people mistakenly think that a pronoun following *dare* must be in the objective case, apparently misconstruing it as an object of the verb *dare*—e.g.: “[I]n a state that has predictable and documented needs, how dare *us* [read *we*] claim that the responsible public policy was handing out \$30 here and \$300 there to families that have desperate needs for not the dollars but the services?” Gwyneth K. Shaw, “Improving Children’s Well-Being,” *Orlando Sentinel*, 22 May 2001, at A1. On the use of the past-tense *dared* in this phrase, see (D).

LANGUAGE-CHANGE INDEX

**how dare us* (or **how dare him*) for *how dare we* (or *how dare he*): Stage 1

daredevilry; daredeviltry. The latter has become a NEEDLESS VARIANT—though it was predominant in AmE print sources from 1900 until the 1990s. Perhaps AmE was influenced by BrE, in which *daredevilry* has always been standard. See **deviltry**.

Current ratio: 3:1

daresay; dare say. Four points merit attention. First, the term (meaning “to venture or presume to say”) is now generally spelled as one word in AmE, two in BrE. Second, the term is now confined to first-person uses <I daresay she’ll be late>. Third, the term is increasingly rare and formal-sounding. Fourth, *daresay* should not ordinarily be followed by the conjunction *that*—e.g.:

- “Further, without imagination, I *daresay* there would be no knowledge or civilization for inventions, and education itself depends upon an open and active mind.” Kellye Dubard, “Gwinnett Ideas: The Meaning of Santa Claus,” *Atlanta J.-Const.*, 25 Dec. 1994, at J9.
- “Sounds as if they’re selling anything that’s not tied down. Any chance I could pick up one of those antique phones? I *daresay that* [read *daresay*] in some houses in rural America you could still find them.” Michael Balhoff & Matthew Boyle, “Qwest Passes His Test,” *Fortune*, 30 Sept. 2002, at 178.

Of course, as a demonstrative pronoun or adjective, *that* after *daresay* is unobjectionable <I daresay that’s right> <I daresay that plan is doomed>.

DASHES. See PUNCTUATION (G), (H).

dastard. A. Confusion with *bastard*. *Dastard* (= coward) is commonly muddled because of the sound association with its harsher rhyme, *bastard*. Although H.W. Fowler insisted that *dastard* should be reserved for someone who avoids all personal risk (*FMEUI* at 103), modern writers tend to use it as a printable EUPHEMISM for the more widely objectionable epithet—e.g.:

- “Samuel Ramey is the *dastard* of the piece, the treacherous, lecherous, murderous Assur.” Herbert Glass, “On the Record: Cheryl Studer Scores as Semiramide,” *L.A. Times*, 22 May 1994, at 51.
- “Along with heroes, villains have changed, too. My guys’ enemy was always a scheming *dastard* so obsessed with the bottom line that in a modern adventure film he would be the hero.” Jack Kislung, “Remakes I’d Rather Not See,” *Denver Post*, 26 July 1994, at B7.
- “We hate seeing our friends and countrymen beheaded by a bunch of thugs and hate the fact that our reaction to those ugly pictures is that we want to kill those *dastards*, no matter what the cost. But we also hate the idea of sending our brave men and women to war again so soon after the last one got so mucked up.” Brian Greenspun, “Our Nation’s Role in Striving for Goodwill Toward All Men,” *Las Vegas Sun*, 14 Dec. 2014, at 1.

British writers, on the other hand, have remained truer to the word’s original sense—e.g.: “Last week I moved house from London to Brighton but like a genuine spineless *dastard* I flatly denied its implications on personal relationships to the last.” Lynne Truss, “Au Revoir Is So Much Easier than Saying an Irrevocable Goodbye,” *Times* (London), 8 Feb. 1994, Features §.

Recent American dictionaries record one meaning of *dastard* as being “a person who acts treacherously or underhandedly.” So the new meaning should probably now be considered standard.

LANGUAGE-CHANGE INDEX

dastard in the broad sense “a despicable person”: Stage 5

B. Corresponding Adjective: *dastardly*. Like the noun form, the adjective *dastardly* has been subjected to SLIPSHOD EXTENSION. Although most dictionaries define it merely as “cowardly,” it is now often used as if it meant “sneaky and underhanded; treacherous”—e.g.:

- “Like her aunts and a long line of female relatives before her, she’s a witch. A white one, which means that no matter how much havoc Sabrina may create until she gets a handle on her powers, she’s not likely to use them for anything more *dastardly* than cute boy-trappage.” Claire Bickley, “Sabrina Simply Enchanting,” *Toronto Sun*, 26 Sept. 1996, at 65.
- “He’s b-a-a-a-c-k. *Dastardly* J.R. Ewing and his oft-manipulated clan rise from TV dustdom to air three times a day on TNN, Cable Channel 37, beginning Monday.” Rita Sherrow, “Weekend TV Highlights,” *Tulsa World*, 27 Sept. 1996, at 20.
- “Of course that project would now have to be put on hold for the time being. Another grievance against the

dastardly intruder.” Fred Saberhagen, *A Coldness in the Blood* 209 (2002).

data (/dat-ə-/ or /day-tə/) is a SKUNKED TERM: whether you write *data are* or *data is*, you’re likely to make some readers raise their eyebrows. Technically a plural, *data* has, since the 1940s, been increasingly treated as a mass noun taking a singular verb. But in more or less formal contexts it is preferably treated as a plural—e.g.:

- “While recent U.S. Census *data show* that the average working woman’s pay has declined in the ’90s, highly educated, high-paid women keep gaining ground.” Jeanhee Kim, “The New Way to Get Rich? Get Married!” *Money*, Oct. 1996, at 141.
- “The *data are* derived from tests performed on expectant mothers.” “The Plague,” *Economist*, 24 Mar. 2001, at 53.

Many writers use it as a singular, however, risking their credibility with a small minority of readers—e.g.:

- “There *isn’t* any *data*.” Graham Wilson, Foreword, *A Linguistics Reader* ix (Graham Wilson ed., 1967).
- “No *data is* offered to suggest that women are being adversely hit by the dearth of articles.” “A Woman’s Place Is in the Law,” *Globe & Mail* (Toronto), 24 Aug. 1993, at A14.
- “But now NRG, hit by charges that its *data isn’t* reliable, has some competition.” “Gallup Goes to Hollywood,” *Newsweek*, 28 Mar. 1994, at 43.
- “Browsing the World Wide Web these days is less like surfing than like crawling: *data drips* like molasses onto your computer screen, sometimes taking several minutes to create a single page of text.” Michael Krantz, “Wired for Speed,” *Time*, 23 Sept. 1996, at 54.

One context in which the singular use of *data* might be allowed is in computing and allied disciplines. See COMPUTERESE.

In one particular use, *data* is rarely treated as a singular: when it begins a clause and is not preceded by the definite article. E.g.: “*Data* over the last two years suggest that the rate at which gay men get AIDS has finally begun to flatten out.” Lawrence K. Altman, “Who’s Stricken and How: AIDS Pattern Is Shifting,” *N.Y. Times*, 5 Feb. 1989, at 1.

Datum, the “true” singular, is sometimes used when a single piece of information is referred to—e.g.:

- “We accept the law as a necessary *datum*, but that is not to say that we are required to accept it in abeyance of our critical faculties.” F.R. Leavis, *The Common Pursuit* 166–67 (1952).
- “The inclination of the orbital plane to our line of sight is another desirable *datum*.” Philip A. Charles & R. Mark Wagner, “Black Holes in Binary Stars,” *Sky & Telescope*, May 1996, at 38.
- “Confident that my brain—assuming it had any blood left in it—would react hysterically to any syllables remotely sounding like ‘eject,’ I took comfort in this *datum*.” Christopher Buckley, “How I Went Nine Gs in an F-16 and Only Threw Up Five Times,” *Forbes*, 23 Sept. 1996, at 116.

Still, in nonscientific contexts, *datum* is likely to sound pretentious.

Because *data* can be either a plural count noun or a singular mass noun, both *many data* and *much data* are correct—e.g.:

- “Numerous expert and representative interests are consulted, and *many data* assembled, often over a long period.” Carleton K. Allen, *Law in the Making* 433 (7th ed. 1964). (The verb *are* is understood after *data*. See UNDERSTOOD WORDS.)
- “But *much of the data* in present personnel files is highly subjective.” William O. Douglas, *Points of Rebellion* 21 (1970).
- “Finding out exactly how *much digital data* makes its way from smartphone apps or an Internet-connected PC to data brokers and digital advertisers is an uphill battle.” Deborah Todd & Chris Potter, “Privacy Takes a Hit While Digital *Data Is* Scooped Up, Passed Around,” *Pitt. Post-Gaz.*, 6 Sept. 2015, at A1.
- “The transfer of soil data to digital format has allowed a wide range of interpretations, but *many data are* still not freely available as *they* are held by a number of different bodies.” “Reports on General Science Findings from University of Ft. Hare Provide New Insights,” *Science Letter*, 21 Aug. 2015, at 534.

See COUNT NOUNS AND MASS NOUNS.

As a historian of the English language once put it, “A student with one year of Latin [knows] that *data* and *phenomena* are plural.” Albert C. Baugh, “The Gift of Style,” 34 *Pa. Bar Ass’n* 101, 105–06 (1962). And that’s what makes the term skunked: few people use it as a plural, yet many know that it is technically a plural. Whatever you do, if you use *data* in a context in which its number becomes known, you’ll bother some of your readers. Perhaps 50 years from now—maybe sooner, maybe later—the term will no longer be skunked: everybody will accept it as a collective. But not yet. See PLURALS (B).

LANGUAGE-CHANGE INDEX
data as a mass noun: Stage 4

Current ratio (*The data are* vs. *The data is*): 2:1

database. One word. See SPELLING (D).

datable (/dayt-ə-bəl/). So spelled in AmE and BrE alike—not **dateable*. See MUTE E.

Current ratio: 11:1

data processing. Two words.

DATES. A. Order. One may unimpeachably write either *May 26, 2009*, or *26 May 2009*. The latter—the BrE method, which is also used in the American military—is often better in prose, for it takes no commas. It appears in dates throughout this book.

Of the usual AmE method—*May 26, 2009*—the first editor of the *OED* said: “This is not logical: 19 May 1862 is. *Begin* at day, *ascend* to month, *ascend* to year; not *begin* at month, *descend* to day, then *ascend* to year.” James A.H. Murray, as quoted in *Hart’s Rules for Compositors and Readers at the OUP* 18 n.1 (39th ed. 1983).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. Month and Year. *February 2010* is better than *February of 2010*. Stylebooks have long agreed that no comma should appear between the month and the year. Among the mountains of evidence that might be amassed are these sources: *The Washington Post Deskbook on Style* 127 (1978); Kate L. Turabian, *A Manual for Writers of Term Papers, Theses, and Dissertations* 30 (5th ed. 1987); *The Chicago Manual of Style* 176 (15th ed. 2003); *Publication Manual of the American Psychological Association* 63 (4th ed. 1994); *Scientific Style and Format* 227 (6th ed. 1994); Joseph Gibaldi, *MLA Handbook for Writers of Research Papers* 70 (1999); Allan M. Siegal & William G. Connolly, *The New York Times Manual of Style and Usage* 101 (1999); *Webster's New World English Grammar Handbook* 161 (2001).

It may therefore seem strange to encounter an article in *The New Yorker*, one of our best-edited literary magazines, in which *January, 2000* and *March, 2000* appear on the first page, and then five similar references appear throughout the piece. (See Scott Turow, "To Kill or Not to Kill," *New Yorker*, 6 Jan. 2003, at 40–47.) This seems anomalous: almost every professional editor would immediately delete the superfluous commas. Yet seasoned readers of *The New Yorker* know that these little bacilli in month–year references are one of the unfortunate conventions of the journal's house style.

C. As Adjectives. Modern writers have taken to making adjectives out of dates, just as they do out of place names—e.g.: "His July 1998 book contract resulted in a record advance." The more traditional rendering of the sentence would be: "In his book contract of July 1998, he received a record advance." Although occasionally using dates adjectivally is a space-saver, the device should not be overworked: it gives prose a breezy look.

And the practice is particularly clumsy when the day as well as the month is given—e.g.: "The court reconsidered its July 12, 2001 privilege order." Stylists who use this phrasing typically omit the comma after the year, and justifiably so: in the midst of an adjective phrase (i.e., the date), it impedes the flow of the writing too much. Still, that second comma sometimes surfaces—e.g.: "Harvey is accused of murder, robbery and burglary in the *June 16, 1985*, [read *June 16, 1985*] slaying of Irene Schnaps, 37, who suffered 15 blows to the head with a hatchet in her Hunters Glen apartment." Jim O'Neill, "12 Potential Jurors Get Boot at Murder Trial," *Star-Ledger* (Newark), 29 Oct. 1994, at 19.

The idea of the comma after the year, as it has commonly been taught, is that the year is in apposition, so the second comma is required. But if that year is an appositive, it's unlike other APPOSITIVES; it certainly isn't interchangeable with the noun (the date) that precedes it. The more plausible argument—supporting the absence of the comma after the year—has two parts. First, the comma is really just separating the two numerals, so if a second comma isn't syntactically required, then it doesn't belong <a November 17, 2001 meeting>. Second, the comma after the date marks a nonexistent pause: when a full date is used adjectivally, a knowledgeable speaker of the phrase

marches toward the noun instead of pausing after the year. An adjective represents a surge forward, while a comma represents a backward-looking pause. It makes little sense to punctuate a forward-looking adjective with a pause at the end of it.

Most usage books that call uniformly for a comma after the year in a full date, by the way, don't address the question raised just above. They show the comma without illustrating what happens when the date functions as an adjective. In other words, they illustrate the easy cases, not the more difficult ones. That's probably because the date-as-adjective phenomenon didn't really come into full flower until the late 20th century. Even after the shift was well underway, most usage guides ignored the problem.

D. 2010s vs. 2010's. When referring to decades, most professional writers today omit the apostrophe: hence, *2010s* instead of *2010's*. That's the dominant style (although *The New York Times* uses the apostrophe). See PLURALS (K) & PUNCTUATION (A). On whether a decade is singular or plural, see SUBJECT-VERB AGREEMENT (L).

Current ratio (*1990s* vs. *1990's*): 65:1

E. Spans. Although a span of time may be denoted with an en-dash (*1997–2002*), the dash should not appear if the word *from* introduces the numbers: *from 1997 to 2002* (not **from 1997–2002*).

datum. See **data**.

daylight-saving(s) time. Although the singular form *daylight-saving time* is the original one, dating from the early 20th century—and is preferred by most usage critics—the plural form is now extremely common in AmE. E.g.: "When *daylight savings time* kicks in, a guard will be posted from 5 to 10 p.m." Christine Bordelon, "Kenner Post Office Getting Update," *Times-Picayune* (New Orleans), 15 Sept. 1996, at D1.

The rise of the plural form (*daylight-savings time*) appears to have resulted from the avoidance of a MIS-USE: when *saving* is used, readers might momentarily puzzle over whether *saving* is a gerund (the saving of daylight) or a participle (the time for saving). Also, of course, we commonly speak of how to "save time" (of saving time), and this compounds the possible confusion. Using *savings* as the adjective—as in *savings account* or *savings bond*—makes perfect sense. But in print sources, the singular form still appears twice as often as the plural. Cf. **saving(s)**.

Saving is commonly omitted when used with the names of time zones <Pacific Daylight Time>, and when used as a general term to distinguish from standard time <2 PM daylight time>.

Regardless of whether you use the plural or the singular, you can prevent most miscues by hyphenating the PHRASAL ADJECTIVE: *daylight-saving time* or *daylight-savings time*.

LANGUAGE-CHANGE INDEX
daylight-savings time for *daylight-saving time*: Stage 5
 Current ratio (*daylight-saving time* vs. *daylight-savings time*): 2:1

D-Day; *D-day. Originally (from about 1918) a military codeword denoting any operation, the term is most famously associated with 6 June 1944, when during World War II the Allies landed in France to begin the spread of their forces throughout Europe under the command of General Dwight D. Eisenhower. By metaphorical extension, the term is sometimes used to refer to any day when an important event is to take place.

The initial *D* in *D-Day* is simply an abbreviated form of *day*. The term was already in somewhat popular use before 1944—from about 1941—in BrE and AmE alike. From the beginning, it has predominantly been written with both *D*'s capitalized: *D-Day*, not **D-day*.

Current ratio: 6:1

de. See NAMES (D).

***deaccelerate.** See **decelerate**.

deadline is one word; formerly it was hyphenated. The term comes from the American Civil War era, when it denoted a line outside a prison beyond which inmates could be shot as escapees.

deadly; deathly. *Deadly* = able to cause death <deadly venom>. *Deathly* = like death <deathly ill>. The phrase *deadly dull* has vastly predominated over *deathly dull* since the 18th century—e.g.: “Any critical biography with the words ‘the Rise of Modern Criticism’ as part of its title had better be comprehensible if it is to escape being *deadly dull*.” James E. Person Jr., “Glimpses of Brooks’ Life Are Still Revealing,” *Virginian-Pilot* (Norfolk), 15 Sept. 1996, at J2.

Current ratio (*deadly dull* vs. *deathly dull*): 18:1

deal. A. Past Tense and Past Participle. *Deal* makes *dealt*, not *dealed*, but the erroneous form sometimes occurs—e.g.: “Recently, Salerno *dealed* [read *dealt*] in secret to get an arena for the Florida Panthers built in the city just south of Oakland Park Boulevard and the Sawgrass Expressway.” Rafael Lorente, “Sunrise Slashes Rates in Trash Contract,” *Sun-Sentinel* (Ft. Lauderdale), 21 Aug. 1996, at 3. The only context in which *dealed* is standard is in the rhyming SET PHRASE *wheeled and dealed*—e.g.: “Big as a linebacker and sometimes brusque as a bully, he *wheeled and dealed* and wined and dined with a swagger.” Bob Sexter, “New Lifestyle to Begin for Rostenkowski,” *Chicago Trib.*, 22 July 1996, at N1. See IRREGULAR VERBS (D).

Current ratio (*has dealt* vs. **has dealed*): 23,595:1

B. Deal with; deal in. People in business *deal in* what they buy and sell <he deals in stocks and bonds>, but they *deal with* other people (but see below). *Deal* should not be used transitively where *deal in* is intended.

Yet in one context *deal* is transitive, in a phrase originating in the language of the underworld. We say that a person *deals drugs*, not **deals in drugs*—e.g.:

- “Two Barnesville brothers have been charged with growing marijuana in their yard and *dealing drugs* from their home in Vulcan Village, state police at Frackville said.” “Two Brothers Charged by Police Drug Raiders,” *Morning Call* (Allentown, Pa.), 6 Sept. 1996, at B3.
- “A husband had been arrested for *dealing drugs*, which meant the lady’s tips went straight to his lawyer and she couldn’t leave town before trial.” Edward Hoagland, “Sex and the River Styx,” *Harper’s Mag.*, Jan. 2003, at 49, 53–54.

Perhaps this exception exists because *dealing drugs* is reprehensible; to say that one *deals in* contraband would sanitize it, as if it were an alternative to dealing in cosmetics or foodstuffs. Or perhaps the phrasing is a metaphorical extension: *dealing drugs* as one might *deal cards*.

Deal with is a vague PHRASAL VERB for which there is almost always a better, more specific substitute—e.g.: “If called [in a civil case], defendants are required to testify under oath, and can be *dealt with* [read *treated*] severely by judges if they refuse.” “Son of Simpson Trial Is No Rerun,” *Baltimore Sun*, 20 Sept. 1996, at A2.

But when *deal with* is roughly equivalent to *handle*, it is unobjectionable: “He pointed out that since Singapore was SIA’s home base, the office *dealt with* a wide range of routes and services.” Rahita Elias, “SIA Expects Outbound Sales to Grow 10%,” *Bus. Times*, 20 Sept. 1996, at 18.

dearly (= deeply, fondly) presents no problem when it modifies a verb <she dearly loved music>. As a modifier of an attributive past participle, it is familiar in the SET PHRASE *dearly beloved*. Acting on that model, though, writers sometimes paint themselves into an unidiomatic corner—e.g.: “Zulu, owner of Zulu Tattoo in Los Angeles, says tattoos have become like lockets, those tiny trinkets of gold or silver hung from thin necklaces that held a portrait or a lock of hair of the *dearly* [read *dear*] departed.” DeNeen L. Brown, “Indelible Link: Lives Lost to Tragedy Linger in the Flesh of Those Left Behind,” *Wash. Post*, 31 Aug. 2008, at M1. (Really, the whole phrase should be rewritten, perhaps by making it *a lock of hair of a departed loved one*.)

dearth = scarcity <there was a dearth of Americans at the festival>. But the word is commonly misunderstood as meaning a complete lack or absence of something. This misunderstanding is revealed especially in the nonsensical phrase **complete dearth*, which has lurked in the linguistic shadows since the early 19th century. E.g.:

- “Approximate number of calls logged by the ‘O.J. Hotline’ before it was disconnected due to a *complete dearth* [read *the lack or the absence*] of concrete leads pointing to other suspects: 250,000.” Richard Roeper, “The O.J. Trial . . . Again: This Time by Numbers,” *Chicago Sun-Times*, 4 June 1995, Show §, at 2.

- “But the pile of circumstantial evidence against Jewell is in stark contrast to the *complete dearth* [read *absence* or *lack*] of direct incriminating evidence that has surfaced so far.” Ralph Ranalli, “Guilty or Not, Bomb Suspect Lives a Nightmare,” *Boston Herald*, 4 Aug. 1996, at 1.
- “In many parts of the country, there was a *complete dearth* of [read *were no*] sales and little construction activity during the downturn.” Cynthia M. Fraser, “True Value?” *Nat'l Real Estate Investor*, 1 Nov. 2014, at 44.

LANGUAGE-CHANGE INDEX

**complete dearth* for *absence* or *lack*: Stage 1

death; demise; decease, n.; surcease. *Death* is the common word, the other three being FORMAL WORDS (in order of increasing formality) that act almost as EUPHEMISMS. There is nothing wrong with the word *death*, although it has inherently unpleasant connotations. But that is the nature of the subject, and writing *decease* or *surcease* is only a little less ridiculous than writing *going to meet his Maker*.

Deceased, adj., is quite acceptable, having been established by usage and not striking most readers as circumlocutory. For an odd misusage, see **diseased**.

deathly. See **deadly**.

debacle is pronounced /di-**bahk**-əl/ or (less good) /di-**bak**-əl/—not /**deb**-i-kəl/.

debar. See **bar**.

***debarcation.** See **debarcation**.

***debark.** See **disembark**.

debarcation; *debarcation. The former has always been the standard spelling in AmE and BrE alike: it means “getting off the ship (the bark, or barque).”

Current ratio: 36:1

debauch; debouch. These words are liable to confusion. *Debauch* /di-**bawch**/, the more prevalent word, means “to defile; to seduce away from virtue; to corrupt.” E.g.: “More pervert than poet, this character *debauches* the cycle boy’s sister, forcing her into sado-masochistic acts with paying clients, some merely disgusting, others so arcane I couldn’t tell what was behind them.” Alexander Walker, “Confusion Reigns on a Ride to Trouble,” *Evening Standard*, 21 Mar. 1996, at 26. The corresponding noun is *debauchery*.

Debouch /di-**boosh**/ = to emerge or cause to emerge; to come out into open ground—e.g.:

- “A group of humpback whales began routinely to feed near the bay’s mouth in 1991—as many as 19 in a winter—in the food-rich plume of water *debouching* from the bay, fed by runoff from the bay watershed.” “Whales in Delmarva Area,” *Baltimore Sun*, 22 Sept. 1996, at B12.
- “We *debouched* from the carriage and instructed the hackman to return to the village and return for us in the morning.” Richard A. Lupoff, “The Incident of the Impecunious Chevalier,” in *My Sherlock Holmes* 3, 13 (Michael Kurland ed., 2003).

The word, which has a military origin, shouldn’t refer to going *into* a place—e.g.: “We *debouched into* [read

went into] the hotel dining room and suddenly there was a surge in Sharpe’s popularity.” Tom Sharpe, “A Blot in My Life,” *Daily Telegraph*, 9 Sept. 1995, at 1. The corresponding noun is *debouchment*.

debility; debilitation. *Debility* = weakness; feebleness. *Debilitation* = the act of making weak or feeble. It is a fairly common error to misuse *debilitation* for *debility*—e.g.: “Although [Fidel Castro] could yet reappear in the halls of power in Havana, the evidence of his physical *debilitation* [read *debility*] and cognitive inconsistencies suggests that if he does return, it will be in an emeritus capacity.” Brian Latell, “Raul Castro: Confronting Fidel’s Legacy in Cuba,” *Wash. Q.*, Summer 2007, at 53.

LANGUAGE-CHANGE INDEX

debilitation misused for *debility*: Stage 1

debonair (= suave, urbane) is the standard spelling. It’s pronounced /deb-ə-**nair**/. **Debonaire* is a variant spelling.

Current ratio: 23:1

deboned. See **boned**.

debouch. See **debauch**.

debridement (= [1] the operation of cutting away dead or contaminated tissue, or [2] the enlargement of a passage for pus to flow from an abscess) is a GAL-LICISM used chiefly by surgeons and dentists. It is pronounced /di-**breed**-mənt/—not /di-**brīd**-mənt/.

debris (= [1] pieces of waste material, or [2] the pieces of something left after the thing has been destroyed in an accident, explosion, etc.) is pronounced /də-**bree**/ in AmE and /**deb**-ree/ or /**day**-bree/ in BrE. The acute accent is now normally omitted from the *-e*.

debtor. See **bankrupt (B)**.

decathlon. See **-athlon**.

decease, n. See **death**.

decease, v.i., = to die. “He *deceased* without children.” This verbal use of *decease* is even more pompous than the noun use. The straightforward *die* is usually better. See **diseased**. Cf. **death**.

deceased. See **diseased**.

deceive; defraud. To *deceive* is to induce someone to believe in a falsehood. The deceiver may know the statement to be false or may make it recklessly. To *defraud* is to cause some kind of injury or loss by deceit. *Defrauding* leads a person to take action, whereas *deceiving* merely leads a person into a state of mind.

decelerate is sometimes erroneously remade into **deaccelerate*, especially in speech.

Current ratio: 357:1

deceptive; deceitful. Although both words connote “misleading,” *deceptive* does not necessarily indicate

dishonesty. A person or thing may mislead another with bad intent <deceptive business practice> <deceptive answer> or with no bad intent <appearances can be deceptive>. But someone or something *deceitful* always has an underlying intent to lie, cheat, or defraud by misleading <deceitful story> <deceitful game>.

deceptively (= misleadingly) can itself be a deceptive word: it is inherently ambiguous and should therefore be avoided entirely as a SKUNKED TERM. When it modifies an adjective, it might indicate that something is not what it appears to be, but the nature of that discrepancy is not immediately clear. For example, what is *deceptively smooth* might be either (1) rough in appearance but actually smooth, or (2) smooth in appearance but actually rough—e.g.: “At a *deceptively smooth* spot I let off the brakes and attempted to catch up. Instantaneously, my front tire hit a huge leaf-covered rock, nearly bringing me to a standstill.” Jeb Tilly, “Wild Today, Gone Tomorrow?” *Wash. Post*, 16 Nov. 2001, at T64.

Many writers use *deceptively* as if to enhance the adjective, but the resulting phrases can be even more ambiguous—e.g.:

- “So sure, we need to goad our reluctant governor and state agencies and state Legislature to take the *deceptively dangerous* issue of waste tires more seriously.” Fred Lebrun, “A Smoking Mound of Problems,” *Times Union* (Albany), 12 Mar. 2002, at B1. (Is something here dangerous or not? And is it the issue or the tires?)
- “The building is *deceptively large*—12,000 square feet of potential office space—and it has an advantage that many older businesses, designed for a different time, do not: ample parking.” Roger Williams, “Where We Live: Census Tract 10,” *News-Press* (Ft. Myers, Fla.), 1 Sept. 2002, at G1. (Is the building larger or smaller than it looks?)
- “Until that changes, even a new interest-rate cut by the Fed could fail to stop the *deceptively serious* downturn.” David Leonhardt, “Downturn Lasts as Fed Meets,” *Chattanooga Times*, 24 Sept. 2002, at C1. (Is the economic downturn worse than it appears or really nothing to worry about?)

Sometimes context can clarify what *deceptively* means—e.g.:

- “Lowhead dams are *deceptively dangerous* and can range from a drop-off of six inches to as much as 25 feet,” said John Wisse of ODNR. “State Issues Boating Advisory for Rivers, Streams,” *Dayton Daily News*, 16 May 2002, at D7. (The dams can be more dangerous than they look.)
- “The creek, though narrow, is *deceptively deep*. Sailing ships brought supplies and goods to a landing here, making it a thriving port.” Molly Murray, “Discovering Delaware,” *News J.* (Wilmington, Del.), 23 Sept. 2002, at A1. (It’s deeper than it looks.)

The word often signals verbosity, introducing a phrase that might be distilled to a single word—e.g.:

- “It’s Charlie Brown country—a *deceptively easy* [read *enjoyable*?] place to spend a couple of hours.” Evan Henderson, “Comic Genius; Schulz’s Immortal Characters

Captured in ‘Charlie Brown,’” *Daily News* (L.A.), 16 Aug. 2002, at U19. (The sentence appeared at the end of a glowing review.)

- “The river looks *deceptively well-watered* [read *full*?] as it makes its way through Albuquerque, its appearance at odds with the reality of New Mexico’s long-term drought.” “Keeping the Rio Alive,” *Albuquerque Trib.*, 21 Sept. 2002, at A1 (photo caption).

Sometimes simply omitting the word improves the sentence—e.g.: “I like to think I have a good sense of humor, but what is considered funny is so *deceptively subjective* [read *subjective*].” Ramsey Campbell, “Humor Is in the Mind of the Beholder, Despite British Study,” *Orlando Sentinel*, 13 Oct. 2002, at K10.

decimate. Originally this word meant “to kill one in every ten,” but this etymological sense, because it’s so uncommon, has been abandoned except in historical contexts. Now *decimate* generally means “to cause great loss of life; to destroy a large part of.” Even allowing that extension in meaning, the word is commonly misused in two ways.

First, the word is sometimes mistakenly applied to an obliteration or utter defeat—e.g.:

- “When he did reach Preston Flats the town looked not only uninhabited but deserted, as if plague had swept through and *decimated* it [read *destroyed* it or, perhaps, *killed everybody*].” Cormac McCarthy, *Outer Dark* 131 (1968).
- “Incidentally, this particular cyclamen is one of the species that had been nearly *totally decimated* [read *obliterated*] in its native Mediterranean lands by mindless digging for commercial gain.” Joan Lee Faust, “Caution: Ants at Work (Watch Your Step),” *N.Y. Times*, 3 Jan. 1993, N.J. §, at 6.
- “If you’ve watched American Hogs you know boars are known to be vicious and territorial animals that breed like crazy and *decimate* [read *destroy*] land.” “Wishful Thinking for Animal Lovers,” *Caledon Enterprise* (Can.), 19 Aug. 2015, Opinion §, at 1.

Second, the word is misused when it is used lightly of any defeat or setback, however trivial or temporary, especially when applied to inanimate things—e.g.:

- “With her slingshot she even *decimates* [read *breaks*?] their searchlight.” Jerry Tallmer, “Wartime France Turned Deadly Cute,” *Record* (N.J.), 30 Aug. 1996, Lifestyle §, at 39.
- “The Steelers may be *decimated* [read *hampered* or *plagued*] by injuries, but they possess great depth on defense.” “The Bettor’s Edge,” *Boston Herald*, 6 Sept. 1996, at 76.
- “House Republicans have eagerly attacked and, as of last year, effectively *decimated* [read *wiped out*] family-planning funds.” Sara Engram, “Preserving the World’s Families,” *Plain Dealer* (Cleveland), 7 Sept. 1996, at B11.

And sometimes the METAPHOR is simply inappropriate—e.g.: “He said he had watched lung cancer *decimate* [read *emaciate* or *ravage*] his sister’s body.” Phoebe Wall Howard, “Gore: Ticket Is ‘Bridge to the Future,’” *Fresno Bee*, 30 Aug. 1996, at A1.

In fact, though, the word might justifiably be considered a SKUNKED TERM. Whether you stick to the

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

original one-in-ten meaning or use the extended sense, the word is infected with ambiguity. And some of your readers will probably be puzzled or bothered.

LANGUAGE-CHANGE INDEX

1. *decimate* for large-scale destruction: Stage 5
2. *decimate* for complete destruction: Stage 3
3. *decimate* for the figurative destruction of a single thing or person <she was decimated by the news>: Stage 4
4. *decimate* for *hammer* or *plague*: Stage 3

decision, take a. See AMERICANISMS AND BRITICISMS (C).

decisioning for *deciding* or *decision-making* is symptomatic of JARGON in two fields—banking and boxing. The term gained prominence beginning in the latter half of the 20th century. In banking, *decisioning* is the term for deciding whether to extend credit—e.g.:

- “Officials said the system has an ‘expert *decisioning*’ capability, which automatically obtains access to relevant returned check data and makes the pay/no-pay decision.” Steven Marjanovic, “Mellon to Test Return Item Processing Plan,” *Am. Banker*, 8 June 1995, at 13.
- “On-line credit verification and evaluation systems quickly and accurately assess creditworthiness without the drawbacks of manual *decisioning*.” Philip N. Burgess Jr., “Instantaneous Credit Reporting Offers Economical Gains to Credit,” *Business Credit*, Feb. 1996, at 25.
- “Banks can incorporate new data sources and analytics into their *decisioning* processes over time, achieving continual performance improvements and incremental cost savings and revenue gains.” Roger Ahern, “Originations: Where Cost, Risk, and Profit Start,” *Collections & Credit Risk*, 3 Jan. 2005, at 42.

In boxing cant, the verb *decision* means “to defeat (an opponent) not by knockout but by a decision of the judges.” Sportswriters are much enamored of the word—e.g.:

- “David Diaz (139) became an Olympian by *decisioning* Zabdiel Judah.” Michael Holley, “Mesi Win a Stunner: Hartford’s Clay-Bey Upset at US Boxoffs,” *Boston Globe*, 20 Apr. 1996, at 82.
- “Germany’s Ralf Rocchigiani (39–7–7) successfully defended his WBO cruiserweight title for the fourth time, *decisioning* Nigeria’s Bashiru Ali (41–14) in Essen, Germany.” “U.S. Tops Japan for 2–0 Lead in Federation Cup,” *Palm Beach Post*, 14 July 1996, at C2.
- “Hector Camacho looked so bad in *decisioning* Arturo Nina the other night, it makes it a lock that Sugar Ray Leonard will come back.” Barry Horn, “From Overstated Media Guides to Overweight Boxers,” *Dallas Morning News*, 24 Aug. 1996, at B2.

decision-making, n., is a generic term for *deciding* and, though useful in some contexts, is much overworked in modern prose—especially in the redundant BUREAUCRATESE *decision-making process*. The word smacks of business JARGON and is often merely a grandiloquent way of saying *deciding*: after all, when one makes decisions, one decides.

It is now frequently spelled as one word, even by the U.S. Supreme Court. One sees the same one-wordism tendency at work in the terms **budgetmaking* and

**policymaking*. These compounds are too bulky to look like anything but jargonistic English; a simple hyphen does a lot.

declaim; disclaim. To *declaim* is to speak formally in public (hence the adjective *declamatory*). To *disclaim* is to disavow, deny, or renounce (as a manufacturer sometimes does in its warranties). Both words can be transitive, but what one declaims is one’s opinion or message, not what one is denouncing. In that context the preposition *against* is needed—e.g.: “Though some, including the National PTA, *declaim* [read *declaim against* or *denounce*] the use of children as fund-raisers, most parents recognize that the profits support necessary programs and defray costs such as travel and uniforms.” Stephanie Dunnewind, “Beyond Bake Sales,” *Seattle Times*, 31 Aug. 2002, at E1.

LANGUAGE-CHANGE INDEX

declaim misused for *denounce*: Stage 1

declarative; declaratory; declamatory. Both *declarative* and *declaratory* mean “having the function of declaring, setting forth, or explaining”; their DIFFERENTIATION lies in established uses, not in meaning. We speak of *declarative* sentences in grammar, but *declaratory* judgments in law.

Declamatory, which is sometimes confused with *declaratory*, means “haranguing; of, relating to, or involving declaiming oratorically.” Here it’s correctly used: “By contrast, the *declamatory* rhetoric of ‘War Scenes’—a 1969 setting of excerpts from Walt Whitman’s diaries—felt rather hectoring, marked by ungainly leaps in the vocal line and a striving after effect.” Joshua Kosman, “Rorem in the Afternoon Offers Few Challenges,” *S.F. Chron.*, 26 Sept. 1994, at E3.

declination; *declinature; declension. All three words are used in denoting the act of courteously refusing, but *declination* now far outstrips the other two in frequency of use. In referring to the act of declining, **declinature* and *declension* ought to be considered NEEDLESS VARIANTS of *declination*.

But even *declination* is open to ambiguity because it also means (1) “a downward bend or slope”; (2) “a deterioration; falling off”; or (3) “a deviation.” *Declension* has the same problem because it may mean “a downhill slope”; (2) “a decline or decrease”; or (3) “a grammatical inflection or class of words.”

Current ratio (*declination* vs. **declinature*): 120:1

decline, v.i. & v.t. This verb has two distinct senses and yields two noun forms. *Declination* derives from *decline* in the sense “to refuse.” *Decline, n.*, derives from *decline* in the sense “to go downhill.”

décolletage, n.; décolleté, adj. *Décolletage* = (1) the top edge of a woman’s dress cut very low to show cleavage and shoulders; or (2) the full dress itself, so cut. *Décolleté* = (1) (of a woman) wearing a strapless or low-cut dress; or (2) (of a dress) having a low-cut neckline. Both words are normally not italicized but retain their DIACRITICAL MARKS.

The etymologically related verb *decollate* (= to behead) dates from the 15th century—but it is rarely associated with these GALICISMS. *Décolleté* was popular in the late 18th century, but mostly in phrases such as *décolleté gowns*, *décolleté women*, etc. The noun *décolletage* came into the language in the late 19th century in such phrases as *deep décolletage*, *modest décolletage*, *daring décolletage*, and *extreme décolletage*.

Both words are pronounced in a French way: for *décolletage*, either /day-kol-ə-tahzh/ or /day-kol-tahzh/; for *décolleté*, either /day-kol-ə-tay/ or /day-kol-tay/.

deconstruction (= a method of reading by which one finds the subtext beneath the text and inverts their importance) for *destruction* is an odd error—e.g.: “Fire is an extremely fast and effective means of *deconstruction* [read *destruction*]. All urban fires are in some sense man-made.” Thomas Hine, “Don’t Blame Mrs. O’Leary,” *N.Y. Times*, 15 July 1990, § 7, at 13.

LANGUAGE-CHANGE INDEX
deconstruction misused for *destruction*: Stage 1

decorous (= proper; in good taste) is pronounced with the primary accent on the first syllable: /dek-ə-rəs/.

decry; decry. *Decry* = to denounce or disparage. E.g.: “Party fund-raisers, while *decrying* the amounts spent this year, say both parties are caught in a financial version of an arms race.” Leslie Wayne, “Campaigns Exploiting Financial Loopholes,” *Austin Am.-Statesman*, 8 Sept. 1996, at A1.

Decry = to see in the distance; discern with the eye. Today it is most often used figuratively—e.g.:

- “From the nine peaks of this series, we can *decry* and yearn to climb other pinnacles.” David Elliott, “Middleman’ Delivers the Diamond,” *San Diego Union-Trib.*, 4 Apr. 1994, Night & Day §, at 24.
- “I was wondering if you might conceivably *decry* significance in the fact that it happened soon after those comets started banging into my favorite planet, Jupiter.” Daniel Seligman, “Ask Mr. Statistics,” *Fortune*, 5 Sept. 1994, at 113.
- “So anxious are boomers about their careers that some experts *decry* a whole new genre of midlife crisis.” Ronald Henkoff, “So, You Want to Change Your Job,” *Fortune*, 15 Jan. 1996, at 52.

Occasionally writers misuse *decry* for *decry*—e.g.: “As much as we *decry* [read *decry* or *condemn*] such acts, we should come to grips with some fundamental truths.” Terry Plumb, “What Did He Look Like?” *Herald* (Rock Hill, S.C.), 12 Feb. 2006, at E1. And in some sentences, the word *decry* is barely intelligible, a fancy trinket dragged in to dress up the sentence—e.g.:

- “On Friday, she sported a sign *decrying* [read *proclaiming*?] ‘Fur Is Dead’ along with her mistress, whose sandwich board carried a gruesome message.” John Ure, “‘Fur Free Friday’ Brings 100 to Protest at Two S.L. Malls,” *Salt Lake Trib.*, 26 Nov. 1994, at B2.

- “Hugh Burns asked rhetorically if Williams’ portrayal of Abu-Jamal as a highly intelligent and articulate individual made him less *decrying* [read *critical*?] of the death penalty than an average man who committed murder.” Samuel B. Fineman, “Abu-Jamal Hearings Conclude,” *Legal Intelligencer*, 12 Sept. 1995, at 1.

LANGUAGE-CHANGE INDEX
1. *decry* misused for *decry*: Stage 1
2. *decry* misused for *proclaim*: Stage 1

dedicatory; *dedicative; *dedicatorial. The first form is standard; the other two are NEEDLESS VARIANTS.

Current ratio: 857:5:1

deduce. A. And deduct. The former means “to infer,” the latter “to subtract.” *Deduct* is sometimes misused for *deduce*—e.g.: “Ideal methods in thought and research, logically observed and *deducted* [read *deduced*] for possible changes in light of different circumstances were foreign to him.” Letter of George E. Hayney, “What’s Ahead for the U.S. Supreme Court?” *St. Petersburg Times*, 14 July 1991, at D3. See **adduce & deducible**.

LANGUAGE-CHANGE INDEX
deduct misused for *deduce*: Stage 1

B. And induce. To *deduce* is to reason from a general principle to a specific conclusion. To *induce* is either (1) to reason from many specific observations to a general principle or (2) to cause (a result)—sense 1 being the one at issue in discussions of logic. As it happens, although reasoning by *induction* is as commonly referred to as reasoning by *deduction*, the verb *induce* is much less common than *deduce*. The following examples, though, show how the two verbs are sometimes contrasted:

- “The research logic is predictive; future manifestations of a phenomenon are *deduced* from theoretical laws and axioms or *induced* from historical antecedents.” Craig L. Thompson et al., “Putting Consumer Experience Back into Consumer Research,” 16 *J. Consumer Research* 133 (1989).
- “A success theory of value will ultimately be *induced* from the world of facts instead of *deduced* from a set of [general] premises.” Diane Swanson, “A Critical Evaluation of Etzioni’s Socioeconomic Theory,” 11 *J. Bus. Ethics* 545 (1992).
- “The answers to these questions will be *induced* from the level of class and national consciousness expressed through direct political intervention, not *deduced* from abstract economic formulas about the ‘Crises of World Capitalism.’” James Petras, “U.S. Empire-Building,” *Canadian Dimension*, Mar. 2003, at 9.

deducible; deductible. The former means “inferable.” E.g.: “Attorneys can make statements in opening and closing arguments that are reasonably *deducible* from allowed evidence . . .” “Alabama,” *USA Today*, 15 Oct. 1992, at A8. The word is sometimes misspelled **deduceable*. See -ABLE (A).

Deductible, a favorite word during the tax season, means “capable of being (usu. lawfully) subtracted”—

e.g.: “On Wednesday, for example, [Michael J. Coles] held a news conference to encourage Mr. Gingrich to call for the release of a draft report about claims that the Speaker improperly used tax-*deductible* donations to finance a college course he taught in 1993.” Kevin Sack, “Entrepreneur Sets His Sights on Gingrich,” *N.Y. Times*, 18 Sept. 1996, at A19. The word is sometimes misspelled **deductable*.

deduct. See **deduce (A)**.

deduction; induction. See **deduce (B)**.

deem is a FORMAL WORD that imparts the flavor of ARCHAISM. It frequently displaces a more down-to-earth term such as *consider*, *think*, or *judge*—e.g.:

- “*Deeming* [read *Finding*] them ‘fatally flawed,’ the Howard County School Boundary Line Committee put two elementary school redistricting plans out of their misery last night during its final meeting,” Tricia Bishop, “Boundary Panel Puts End to 2 Elementary Redistricting Plans,” *Baltimore Sun* (Howard ed.), 11 Oct. 2002, at B3.
- “The authorities have in several cases used rape charges to imprison religious leaders *deemed* [read *thought*] to be a menace.” Rik Eckholm, “3 Church Leaders in China Are Sent to Prison for Life,” *N.Y. Times*, 11 Oct. 2002, at A10.

de-emphasize. This word is traditionally hyphenated, since the reader may at first see *deem*. See PUNCTUATION (J).

Current ratio (*de-emphasize* vs. *deemphasize*): 1.1:1

deep-freeze > deep-froze > deep-frozen. **Deep-frozen* should be *deep-sixed*—e.g.: “[One] time Jordan, hot-shot rookie, was *deep-frozen* [read *deep-frozen*] by jealous teammates.” Ian O’Connor, “The Star’s Fever Rages,” *Daily News* (N.Y.), 8 Feb. 1998, at 58. See IRREGULAR VERBS (E). Cf. **freeze**.

LANGUAGE-CHANGE INDEX

**deep-frozen* for *deep-frozen*: Stage 1

Current ratio (*deep-frozen* vs. **deep-frozen*): 583:1

deep-seated. So spelled. **Deep-seeded* is a misbegotten METAPHOR, a MALAPROPISM, especially because something truly **deep-seeded* probably wouldn’t be able to grow. The true metaphor derives from horseback riding (deep in the seat), not from planting seeds deeply—e.g.:

- “The small-town tradition has built a fierce sense of community and a *deep-seeded* [read *deep-seated*] suspicion of outsiders, social historians say.” Marcelino Rodriguez, “Vigilante Justice on Rise in Mexican State,” *Dallas Morning News*, 5 July 1994, at A5.
- “The 6-year-old superhorse can’t do anything to solve racetracks’ *deep-seeded* [read *deep-seated*] problems.” Ed Gray, “Keeping Track: Travers Gets Top 3-some,” *Boston Herald*, 18 Aug. 1996, at B24.
- “At the Green Valley Library in Henderson, ‘the wall’ is a place where people go to post messages about *deep-seeded* [read *deep-seated*] secrets, loneliness, worries, aspirations and dreams.” “Library Offers a Different Kind of Wall Post,” *Las Vegas Sun*, 11 Apr. 2012, at 8.

LANGUAGE-CHANGE INDEX

**deep-seeded* for *deep-seated*: Stage 1

Current ratio (*deep-seated* vs. **deep-seeded*): 144:1

defalcate. A. And peculate; embezzle. These words are broadly synonymous, all three meaning “to misappropriate money in one’s charge.” *Defalcate* and *peculate*, the latter being slightly more common today in referring to public moneys, are FORMAL WORDS that describe a bad action about as neutrally as possible. *Embezzle* is the popular word, more highly charged with negative connotations. See **defalcation**.

B. Pronunciation. Several pronunciation guides suggest that the first syllable may be stressed: /def-al-kayt/ or /def-əl-kayt/. See, e.g., John B. Opdycke, *Don’t Say It: A Cyclopedic of English Use and Abuse* 236 (1939). Others suggest that the corresponding noun is pronounced /def-al-kay-shən/. See, e.g., William H. Phylfe, *20,000 Words Often Mispronounced* 244 (1937).

But these pronunciations have a problem. Anyone who hears them is likely to think of *defecate* and *defecation*. Therefore, if one must utter these words at all, the safest course is to use the following pronunciations, which all pronunciation guides accept as standard: *defalcate* /dee-fal-kayt/ or /di-fal-kayt/; *defalcation* /dee-fal-kay-shən/. Pronouncing the second syllable /fawl/ is not standard.

defalcation may refer either to the act of embezzling or to the money embezzled, usually the former—e.g.: “The suspect’s name is not being released by First Commercial, nor are many details of the alleged *defalcation* [i.e., the act].” Mark Anderson, “First Commercial Bank Hit with Alleged Embezzlement,” *Bus. J.—Sacramento*, 12 Sept. 1994, § 1, at 2. See **defalcate**.

By SLIPSHOD EXTENSION, some writers have misused *defalcation* when referring merely to a nonfraudulent default. To be a *defalcation*, a deficiency in money matters must be fraudulent and must be the fault of someone put in trust of the money. To speak of a *loan defalcation* is to fall into ambiguity—e.g.: “Fairfield First Bank submitted a report to the Federal Deposit Insurance Corp. and the state Department of Banking (DOB), detailing the alleged losses caused by White’s ‘loan *defalcations*,’ according to David Tedeschi, a spokesman for the DOB.” Don Dzikowski, “Bank Sues Insurers to Recoup Lost Funds,” *Fairfield County Bus. J.*, 12 June 1995, at 1. That sentence does not reveal just how serious the alleged wrongdoing was: it was either a criminal act or a noncriminal failure to pay on time.

defamation; libel; slander. These three terms are distinguished in law. *Defamation* = an attack on the reputation of another. It encompasses both *libel* (in permanent form, especially in writing) and *slander* (in transitory form, especially by spoken words). See **libel**.

defamatory; *defamative. *Defamatory* is the standard term; **defamative* is a NEEDLESS VARIANT.

default, n. & vb. A *default* is a failure to act when an action is required, especially the failure to pay a debt—either interest or principal—as it becomes due <the account is in default>.

A default is also something that will happen unless something prevents it. It is a common term in

COMPUTERESE, referring to a preference setting that will be used unless a different setting is specified; in this sense it is usually attributive and serves as an adjective <C is the default drive>. But this usage predates computers: in law, for example, a defendant who does not contest a claim may face a *default* judgment.

As a verb, *default* is ordinarily intransitive. And when used intransitively, the verb idiomatically requires the preposition *on* <she defaulted on the loan>. Occasionally, though, writers fall into the unidiomatic—e.g.: “Financed by Credit Lyonnais, Parretti soon *defaulted to* [read *defaulted on*] his loans.” Daniel R. Marcus, “Big Deals: Tracinda et al./MGM,” *Am. Lawyer*, Sept. 1996, at 116.

But transitive uses sometimes crop up <she defaulted the loan>. That usage may have arisen from the common adjectival use of *defaulted*, especially in computer JARGON—e.g.:

- “College officials said they didn’t know the dollar amount of *defaulted* loans.” Deborah C. Whitten, “Penn Valley Plans Loan Program Appeal,” *Kansas City Star*, 3 Sept. 1994, at C4.
- “The company forgave about \$10.5 million in *defaulted* loans by former customers.” Marc Davis, “Court Revives Suit Against Transouth in Used-Car Fraud Case,” *Virginian-Pilot* (Norfolk), 14 Sept. 1996, at D1.
- “Servicing a *defaulted* loan cost an estimated \$2,357 in 2014 compared with just \$134 for a performing loan.” Kate Berry, “Six Takeaways from Big Banks’ Strong 2Q Mortgage Results,” *Nat’l Mortgage News*, 3 Aug. 2015, at 1.

defeasance; *defeasement. *Defeasance* (= an annulment or abrogation), the standard form, is much more common than **defeasement* in modern print sources. E.g.:

- “He said he intended to negotiate a restructuring of FFr3bn in loans from banks to support its FFr13bn off-balance sheet ‘*defeasance*’ of non-performing loans hived off as part of a restructuring earlier this year.” Andrew Jack, “GAN to Prepare for Sell-Off with FFr9bn Sale,” *Fin. Times*, 15 Dec. 1995, at 22.
- “The county is working with bond counsel, Hassenbalg said, to determine what their options and obligations are with respect to that debt and its possible *defeasance*.” Katherine M. Reynolds, “N.J. County Debates Bid to Sell Hospital,” *Bond Buyer*, 18 Dec. 1995, at 6.
- “To sell the facilities, the city would first have to put \$1.3 million into a bond *defeasance* escrow account to repay those who purchased the tax-free revenue bonds issued seven years ago to finance arena improvements.” Judith Davidoff, “Panel Urges Sale of Two Ice Arenas,” *Capital Times* (Madison), 27 Aug. 2002, at A3.

Still, **defeasement*—a NEEDLESS VARIANT—sometimes appears. E.g.: “‘Defeating’ bonds is a highly technical financial maneuver, Puig said, which is necessary in this case because the bonds have a provision that prohibits prepayment for 10 years. In a *defeasement* [read *defeasance*], the county would put the sale money in a special fund that would eventually pay off the bonds.” “Keep Knick, Coyne Writes,” *Times Union* (Albany), 7 June 1995, at B1.

And with all this use of the nouns, it is hardly surprising that writers have felt the need for a corresponding verb: *defease*. It’s a 19th-century BACK-FORMATION from *defeasance*—e.g.:

- “The not-for-profit hospital . . . is being sold to an investor-owned chain in a deal that involved *defeasing*, or replacing the collateral of, the hospital’s tax-exempt bonds.” Sandy Lutz, “IRS Hikes Cost of Buying Tax-Exempts,” *Modern Healthcare*, 3 July 1995, at 18.
- “Last year, the city chose J.P. Morgan Securities Inc. as adviser on the hotel sale, which would involve *defeasing* about \$28 million of outstanding debt issued by the United Nations Development Corp. to finance the hotel.” Christina Pretto, “Mayor Tells How UN Helps N.Y.C., Mum on Hotel Sale,” *Bond Buyer*, 25 Aug. 1995, at 5.
- “Even better, if the dollar turned around, as the Treasury was saying it would, then the U.S. government could score a profit by ‘*defeasing*’ the bonds—a method of calling in the debt.” James K. Glassman, “Why Buy High When Lows Are Out There?” *Wash. Post*, 24 Sept. 1995, at H1.

LANGUAGE-CHANGE INDEX

**defeasement* for *defeasance*: Stage 1

Current ratio (*defeasance* vs. **defeasement*): 530:1

defeasible. So spelled—not **defeasable*. See -ABLE (A).

defect, n. In the best usage, one refers to the *defects* in things and the *defects* of people. For the distinction between a *defect* and a *deficiency*, see **defective**.

defective; deficient; defectible. The primary difference to be noted is between *defective* (= faulty; imperfect; subnormal) and *deficient* (= insufficient; lacking in quantity). The same basic distinction holds for the nouns *defect* and *deficiency*. In the following sentence, *deficiency* is misused for *defect*: “A devastating steam explosion and fuel-core meltdown in Unit 4 was caused by operator errors and reactor design *deficiencies* [read *defects*].” William F. Miller, “Effects of Chernobyl Are Still Felt in Ukraine,” *Plain Dealer* (Cleveland), 20 July 1996, at B4.

Defectible, an extremely rare word, means “likely to fail or become defective.”

LANGUAGE-CHANGE INDEX

deficiency misused for *defect*: Stage 1

defence. See **defense**.

defenestrate (= to throw out a window [lit. or fig.]) is a mid-20th-century BACK-FORMATION from the noun *defenestration*, which dates from the early 17th century. The noun is far more common than the verb.

defense. A. Spelling. *Defense* is AmE; *defence* is BrE (or very antiquated AmE). Modern American writers who use the British spelling are likely to seem affected.

B. Pronunciation. The standard pronunciation has long been with the accent on the second syllable: /di-fen[t]s/. But primarily as a result of sports talk, some have shifted the accent to the first syllable: /dee-fen[t]s/.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l-li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

If you want to sound like a general or a lawyer, use the first of these pronunciations; if you want to sound like a sports announcer or a cheerleader, use the second. Cf. **offense**.

LANGUAGE-CHANGE INDEX
defense pronounced with accent on first syllable:
 Stage 4

C. As a Verb. In the mid-20th century, *defense* came into use as a sports CASUALISM in the sense “to defend against (a play, etc.) effectively.” Because the meaning is sometimes vague and a better word or phrase is available, careful speakers and writers are likely to avoid this usage (which is inarguably more economical and may well become standard)—e.g.:

- “The 49ers also can’t be encouraged by the way they’ve *defensed* [read *defended against*] the pass all season.” Jeffri Chadiha, “49ers Set Sights on Freeman,” *S.F. Examiner*, 3 Jan. 1999, at C5.
- “In addition, Thomas Whitelaw successfully *defensed* [read *defeated* or *defended against*] all of Kyphon’s counterclaims against Pabban for \$17 million.” “Thomas Whitelaw Wins \$15.4M Verdict for Pabban Development,” *J. of Engineering*, 4 June 2014, at 1778.
- “He totaled 63 tackles, seven sacks, three passes *defensed* [read *deflected*], four forced fumbles and one interception.” Mary Kay Cabot, “LB, DB Added to Aid Hamstrung Roster,” *Plain Dealer* (Cleveland), 17 Aug. 2015, at B2.

LANGUAGE-CHANGE INDEX
defense as a verb: Stage 2

defensible. So spelled—not **defensable*. See -ABLE (A).

defer; defer to. *Defer* (= to postpone) yields the nouns *deferral* and *deferment*. (See **deferral**.) *Defer to* (= to give way to) yields the noun *deference*.

deferment. See **deferral**.

deferrable /di-fər-ə-bəl/ is so spelled—not **deferable*. Cf. **inferable** & **transferable**.

Current ratio: 33:1

deferral; deferment. Although *deferment* is the term traditionally listed in dictionaries—and is nearly 300 years older—*deferral* (dating from the late 19th century) is now much more common in print sources from all varieties of English. It ought to be considered standard as the generic noun corresponding to *defer*—e.g.:

- “Under Clinton’s proposal, tax *deferral* would be eliminated.” Gary Klott, “Parts of Clinton Tax-Cut Plan Go Further than Dole’s,” *Houston Chron.*, 16 Sept. 1996, Bus. §, at 2.
- “While many companies use *deferral* in their accounting, it’s the size of AOL’s figure that has made it controversial.” David S. Hilzenrath, “AOL Fights to Retain Subscribers,” *Wash. Post*, 16 Sept. 1996, at A1.
- “The decision on the export licence will be deferred until November 18, and the *deferral* could be extended until February 18 if a serious intention to raise funds to buy the watercolour at the recommended price emerges.” Emily Beament, “UK Buyer Sought for First Picture of Niagara Falls,” *Herald* (Glasgow), 20 Aug. 2015, at 9.

In this particular use, *deferment* is now a NEEDLESS VARIANT.

But *deferment* does have one special use, in the sense “an official postponement of military service.” This use was common when the military draft was in effect, but it has since atrophied.

Current ratio (*deferral* vs. *deferment*): 4:1

defer to. See **defer**.

deficient; deficiency. See **defective**.

definite. A. And definitive. These words are increasingly confused. *Definite* = fixed, exact, explicit. *Definitive* = authoritative; conclusive; exhaustive; providing a binding answer.

The most frequent error is misuse of *definitive* for *definite*—e.g.: “He has some very *definitive* [read *definite*] views on golf-course architecture, and it’s hard not to like what he says.” Michael Mayo, “New Honda Home on Solid Ground with McCumber,” *Sun-Sentinel* (Ft. Lauderdale), 13 Mar. 1994, at C19.

LANGUAGE-CHANGE INDEX
definitive misused for *definite*: Stage 1

B. As Misspelled. The word is often misspelled **definate*. See SPELLING (A).

Current ratio: 6,218:1

definitely. So spelled. See SPELLING (A).

deflection (= the act of making something go to one side) is the standard spelling. **Deflexion* is an archaic BrE variant.

Current ratio: 99:1

deforest; disafforest; *disforest. For the act of cutting down trees, especially clear-cutting, *deforest* has predominated in AmE since the 1860s and in World English since the 1920s. *Disafforest* dominated in BrE until the mid 1980s, when *deforest* inexplicably overtook it to become much more common. The more practical **disforest* was strong in the 19th century but declined as *deforest* rose. It is now a NEEDLESS VARIANT.

Current ratio (in order of headwords): 49:3:1

defraud. See **deceive**.

defraudation; *defraudment. Writers seldom need to use a noun formed from the verb *defraud*, perhaps because the noun *fraud* itself usually suffices. When they find the occasion, however, the word is *defraudation*—e.g.: “The sad reality is that the apathy you encountered when you called county officials undoubtedly would have continued after your *defraudation*, unless your loss towered above the county’s in-house limit, which might be as high as \$150,000.” Fay Faron, “Retiree Was Too Wary for Scam Artist,” *Dallas Morning News*, 13 Sept. 1996, at C8. **Defraudment* is a NEEDLESS VARIANT.

Current ratio: 3:1

***defraudulent** is a NEEDLESS VARIANT of *fraudulent*. See **fraudulent**.

defunct, in a ghastly blunder, is sometimes written **defunk*—e.g.:

- “Several segments of the *defunk* [read *defunct*] ‘Hotel were filmed at the Fairmont.’ ‘Another of Nation’s Landmark Hotels on Auction Block,’ *San Diego Union-Trib.*, 3 Mar. 1989, Bus. §, at 1.
- “The hearings had virtually nothing to do with the murky financial dealings of a *defunk* [read *defunct*] Arkansas savings bank and its ties with Bill and Hillary Clinton.” ‘School for Scandal,’ *Houston Chron.*, 7 Aug. 1994, at 2.
- “The lion’s share of the budget: \$930,000 will go toward accelerating business and industry recruitment . . . and not for the development of the *defunk* [read *defunct*] Commerce Center project.” ‘Business Roundup: Destination Rutherford Not Old Plan,’ *Daily News J.* (Murfreesboro, Tenn.), 2 Mar. 2003, at 10.

The accent is on the second syllable: /di-fəŋkt/.

LANGUAGE-CHANGE INDEX
**defunk* for *defunct*: Stage 1

defuse (= [1] to remove the detonating device from [a bomb, etc.]; or [2] to render less volatile) is the standard spelling. **Defuze* is a variant. For a similar variation in spelling, see **fuse**. For confusion of *defuse* with *diffuse*, see **diffuse**.

degenerative; *degeneratory. The latter is a NEEDLESS VARIANT.

Current ratio: 18,683:1

degree. See **diploma**.

degrees. See **180-degree turnaround**.

deictic (/dɪk-tɪk/) is a literary term meaning “proving or showing by direct demonstration.” Even in scholarly works, writers feel obliged to explain the term—e.g.: “If we accept [Marcel] Duchamp’s part objects as signifiers in this sense, they appear as ‘*deictic*,’ that is to say, as directly pointing to—as demonstrative of—the subject.” Erika Naginski, “Eros-en-Valise,” *Art J.*, 22 Sept. 2007, at 122. For a discussion of deictic terms from a grammatical point of view, see POINTING WORDS.

deign (/dayn/), properly speaking, means “to condescend (to do something) in a way that reveals a perceived affront to one’s dignity.” E.g.: “Before his election as Prime Minister of Israel, Benjamin Netanyahu had sworn he would never *deign* to meet Yasser Arafat, a man he considered little more than a terrorist.” Lisa Beyer, “Netanyahu Meets with Arafat—But That’s All,” *Time*, 16 Sept. 1996, at 54.

When used in the sense “to decide, see fit,” the word has fallen victim to SLIPSHOD EXTENSION—e.g.: “On some nights, during two hours of prime-time coverage, the networks *deigned* [read *decided* or *saw fit*] to show less than half an hour from the podium.” “Conventional Wisdom,” *Christian Science Monitor*, 6 Sept. 1996, at 20.

LANGUAGE-CHANGE INDEX
deign misused for *decide* or *see fit*: Stage 2

deism. See **theism**.

deity /dee-i-tee/ is sometimes misspelled **diety*—e.g.: “Historically, women from the Mithila region of northern India painted images of Hindu *dieties* [read *deities*] on the walls to make their homes safe from the dangers of the outside world.” Elizabeth Barr, “Buying Opportunity,” *Buffalo News*, 2 Jan. 2004, at G24.

LANGUAGE-CHANGE INDEX
deity misspelled **diety*: Stage 1
Current ratio: 303:1

déjà vu is preferably so written—with two accents (but no longer in italics). Originally, this was a technical psychological term referring to the illusion that one has already experienced something that is happening for the first time. In the 1950s and 1960s, the term became popular and the sense of illusion was weakened. That is, *déjà vu* began to apply to situations in which the person knows full well that the precise experience isn’t a repeat of an earlier one, merely that it is similar. That sense is dominant and standard today—e.g.: “As a lifelong Republican, I watched the Republican National Convention with a dismaying sense of *déjà vu*.” Clyde W. Prestowitz Jr., “How Tax Cuts Can Hurt U.S. Abroad,” *Sacramento Bee*, 7 Sept. 1996, at B7. See DIACRITICAL MARKS.

In AmE the phrase is pronounced /day-zhah voo/.

***delapidation.** See **dilapidation**.

delectable. So spelled. But it is sometimes misspelled **delectible*—e.g.: “All three feature menus of the most *delectible* [read *delectable*] seafood to be found on the 200-mile-long estuary.” Kenneth R. Clark, “Virginian Solitude,” *Chicago Trib.*, 19 June 1994, Travel §, at C5. See -ABLE (A).

LANGUAGE-CHANGE INDEX
delectable misspelled **delectible*: Stage 1
Current ratio: 3,787:1

delegable is the word, not **delegatable*. But many writers mistakenly use the latter form—e.g.: “The reality is that oversight simply is not *delegatable* [read *delegable*].” Warren F. McFarlan & Richard L. Nolan, “How to Manage an IT Outsourcing Alliance,” *Sloan Mgmt. Rev.*, Jan. 1995, at 9. See -ABLE (D) & -ATABLE.

LANGUAGE-CHANGE INDEX
**delegatable* for *delegable*: Stage 1
Current ratio (*delegable* vs. **delegatable*): 11:1

delegate. See **relegate**.

deliberate, adj.; deliberative. These words should be differentiated. *Deliberate* = (1) intentional, fully considered; or (2) unimpulsive, slow in deciding. *Deliberative* = of, or appointed for the purpose of, deliberation or debate (COD).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Deliberative is sometimes misused for *deliberate* in both sense 1 and sense 2. Misuse for sense 1: “War thus will be a *deliberative* [read *deliberate*] act, not a reflex.” “More than ‘Consult,’” *Christian Science Monitor*, 22 Oct. 1990, at 20. Misuse for sense 2: “DeLauro came to this decision in a *deliberative* [read *deliberate*], uncharacteristically subdued way for someone known for overly aggressive ways of making her points.” David Lightman, “DeLauro’s View: Don’t Go It Alone,” *Hartford Courant*, 9 Oct. 2002, at A4.

LANGUAGE-CHANGE INDEX
deliberative misused for *deliberate*: Stage 1

delimit; ***delimitate**. *Delimit*, the preferred form, is not merely a fancy variation of *limit*, as many seem to believe. The word means “to define; determine the boundaries of”—e.g.: “Having declared an EEZ, China will now have to *delimit* its disputed sea boundaries with its maritime neighbors—South Korea, Japan and Vietnam.” Mark J. Valencia, “China, and the Law of the Sea Convention,” *Bus. Times*, 29 June 1996, Special §, at 4.

The long form **delimitate*, a BACK-FORMATION from the noun *delimitation*, is a NEEDLESS VARIANT. E.g.: “Each of these areas is further *delimitated* [read *delimited*] by instructive and informative segments.” Paul W. Kittle, “Collision: Theory vs. Reality in Expert Systems,” *Library Software Rev.*, Mar. 1991, at 162.

LANGUAGE-CHANGE INDEX
**delimitate* for *delimit*: Stage 1
Current ratio (*delimit* vs. **delimitate*): 62:1

delineate (lit., “to draw or sketch”) means figuratively “to represent in words; to describe.” It is sometimes misused for *differentiate* (an error on the rise since the 1950s)—e.g.:

- “But considering the individuals involved, it’s difficult to *delineate* [read *differentiate*] between fact and fiction.” Dave Luecking, “Bowman, Keenan 2-Man Head of Bureau of Minds,” *St. Louis Post-Dispatch*, 5 May 1996, at F1.
- “While it’s not always easy to *delineate* [read *differentiate*] between legitimate communication to constituents and distribution of political material, taxpayers certainly have a right to be suspicious when material is distributed shortly before or during a political campaign season.” “Identify Material Publicly Funded,” *State-Times/Morning Advocate* (Baton Rouge), 24 Aug. 1996, at B6.
- “In Burlington’s testimony on Monday, he said he only brought up that comment to *delineate* [read *differentiate*] between the N-word being targeted at someone and the word being discussed in a ‘journalistic context.’” Dan Spinelli, “N-Word Lawsuit Intensifies as Colleague Testifies,” *Phil. Daily News*, 10 June 2015, Local §, at 3.

LANGUAGE-CHANGE INDEX
delineate misused for *differentiate*: Stage 1

delinquent, in AmE, can apply to either things or people <delinquent taxes> <delinquent youth>. In BrE, it applies only to people.

delirium tremens. This phrase—often abbreviated as *d.t.s* or *D.T.s*—should not be used, as it sometimes is,

to describe frenzied drunkenness. In fact, it denotes a mental disease characterized by violent mania, with tremors and hallucinations, usually induced by sudden abstinence from alcohol or another drug after excessive use over a prolonged period. A synonymous phrase is *mania à potu*.

delivery. **A. And *deliverance***. *Delivery*, the more usual word, is used in reference to (1) a transfer or conveyance (of something); (2) an utterance <a stammering delivery of the speech>; or (3) a giving of birth <premature delivery>. *Deliverance* is a legal and religious term usually meaning “rescue, release,” although at one time it overlapped with *delivery* in almost every sense.

B. Cant Uses. It has become vogueish in some circles to use *delivery* of where *providing* or *provision* for would normally appear, especially in reference to services. Like any other trendy expression, it ought to be avoided. E.g.: “It is irrational to equate the cost of total confinement with the alleged harm resulting from a change in method of *the delivery* of [read *providing*] dental services.” See VOGUE WORDS.

Delphi, not **Delphos*, is the place name for the location of the oracle (or shrine) belonging to the Greek god Apollo. The usual phrase is *oracle of Delphi*, *oracle at Delphi*, or *Delphic oracle*. But some writers get it wrong—e.g.: “Even when the all-seeing oracle of *Delphos* [read *Delphi*] pronounces her innocent, the king will not listen.” Peter Haugen, “A Play-by-Play Look at the Season,” *Sacramento Bee*, 3 Mar. 1996, Encore §, at 16. *Delphos* is the name of cities in Kansas and Ohio.

Delphic, adj., = (1) oracular; or (2) ambiguous; cryptic.

LANGUAGE-CHANGE INDEX
**oracle of Delphos* for *oracle of Delphi*: Stage 1
Current ratio (*oracle of Delphi* vs. **oracle of Delphos*): 16:1

delphinium. Although the plural **delphinia* was somewhat common before 1900, the standard plural has been *delphiniums* ever since then.

Current ratio (*delphiniums* vs. **delphinia*): 644:1

deluge (= [1] an overwhelming flood, or [2] a large amount of something that one receives at the same time) is preferably pronounced /del-**yooj**/. The same is true of the verb <they deluged her with Twitter messages>.

delusion. See **hallucination & illusion**.

delusive; delusional; *delusory. *Delusive* = (1) tending to delude, deceptive; or (2) of the nature of a delusion. Usually sense 1 applies. *Delusional* is the more usual term for sense 2—e.g.: “Florence acted under a completely *delusional* perception of reality.” **Delusory* is a NEEDLESS VARIANT of the other two.

deluxe. Although this adjective was originally (from the early 19th century) written as two words—*de luxe*—it became predominantly solidified in AmE

print sources by 1965, in World English by 1970, and in BrE by the late 1980s. Of course, the word means “outstandingly luxurious and high-quality.” The word has undergone some downgrading in sense because of hyperbolic uses—most notably in the description of some very ordinary hotel rooms as “deluxe rooms.” It is preferably pronounced /di-ləks/—not /di-looks/, /di-luuks/, or /dee-ləks/.

Current ratio (*deluxe* vs. **de luxe*): 5:1

demagogue is predominantly a noun meaning “a leader who maintains power through appeals to the mob.” **Demagog* is a variant form, but today it is seen in print much less frequently than the longer form—e.g.: “Most of those whom political *demagogues* [read *demagogues*] call ‘the rich’ are simply people in the top 10 or 20 percent of the income distribution.” Thomas Sowell, “Revealing the Secret Identity of the So-Called ‘Rich,’” *Detroit News*, 17 Apr. 1995, at A10. See -AGOG(UE).

When the word has been used as a verb, it has historically been intransitive, not transitive. That is, one may *demagogue* (= play the demagogue), or one may *demagogue on* an issue (= appeal to the mob on an issue), but one doesn’t *demagogue* an issue. Some writers try to make the verb transitive—e.g.: “Similarly, Rep. Rod Chandler, the Republican candidate for U.S. Senate, has *demagogued* [read *demagogued on*] the issue.” “Unsoeld’s Sound Approach,” *Seattle Times*, 29 Sept. 1992, at A6.

LANGUAGE-CHANGE INDEX
demagogue as a transitive verb: Stage 4

demagoguery; *demagogy. *Demagoguery* (= the practices of a political agitator who appeals to mob instincts) is more than twice as common in print as **demagogy*, which (in the absence of any useful DIFFERENTIATION) ought to be labeled a NEEDLESS VARIANT. E.g.: “Such *demagogy* [read *demagoguery*] aside, there are good grounds to object to this particular venture.” “Skate and Hate,” *Baltimore Sun*, 26 Aug. 1994, at A16. That was not always true: **demagogy* was the usual term in AmE till the early 1950s and in BrE till about 2000.

Current ratio: 2:1

demarcation (= the act of marking limits) is the standard spelling and has been since about 1780. **Demarkation* is a variant.

Current ratio: 75:1

demean; bemean. Formerly, authorities on usage disapproved of *demean* in the sense “to lower, degrade,” holding that instead it really means “to conduct (oneself).” For example, an early-20th-century usage critic wrote that “*demean* signifies ‘to behave’ and does not mean *debase* or *degrade*.” Frank H. Vizetelly, *A Desk-Book of Errors in English* 62 (1909). The meaning “to behave,” now archaic, is infrequently used in

legal contexts—e.g.: “The oath of office now generally administered in all the states requires the lawyer to uphold the law; to *demean* himself, as an officer of the court, uprightly; to be faithful to his trust.” In this sense, of course, the verb corresponds to the noun *demeanor*. It is this sense that also shows up in *misdeemeanor*.

Yet the other sense, which has been with us since at least 1601, is now dominant—e.g.:

- “He was not blessed with a sense of humour, and believed his wife *demeaned* herself when she played the clown.” “Woman of the People and Anarchist of Sorts,” *Daily Telegraph*, 29 July 1995, Books §, at 7.
- “School district officials fired Maria de la Rosa last year after Latino students complained that the Philippines native *demeaned* and verbally abused them with ethnic slurs.” Paul Elias, “Judge Refuses to Reinstate Teacher,” *L.A. Times*, 10 Nov. 1995, at B2.
- “For the Government of Ontario, in turn, to make this about particular individuals (the Prime Minister or Finance Minister, for example) *demeans* the seriousness of the issue.” Lorne Sossin, “Federal-Provincial Sniping over Ontario Pension Plan Has to Stop,” *Globe & Mail* (Toronto), 10 Aug. 2015, at B4.

Meanwhile, the word with which *demean* was confused in arriving at its popular meaning—*bemean* (= to debase)—has become obsolescent.

LANGUAGE-CHANGE INDEX
demean for *debase* or *degrade* (oneself): Stage 5

demesne (= at common law, a lord’s land held as his absolute property and not as feudal property through a superior) is pronounced either /di-meen/ or /di-mayn/. Today in AmE, unless the word appears in a historical context, it is usually either figurative (as in the first two examples) or jocular (as in the third)—e.g.:

- “Describing Heaney as ‘the greatest Irish poet since Yeats,’ critic and Harvard professor Helen Vendler said, ‘It is entirely fitting that Seamus should be in the *demesne* of Homer when this news arrives. He writes with equal attention to the poetic and human law.’” Patti Hartigan, “Irish Poet, Harvard Teacher Seamus Heaney Wins Nobel,” *Boston Globe*, 6 Oct. 1995, at 1. (Vendler echoes Keats’s “On First Looking into Chapman’s Homer,” which refers to a poetic realm of gold “that deep-browed Homer ruled as his *demesne*.”)
- “On one side of the drape is the *demesne* of Western medicine . . . On the other side of the drape, another pair of hands are at work” George Howe Colt, “See Me, Feel Me, Touch Me, Heal Me,” *Life*, Sept. 1996, at 34.
- “I plan to go out somewhere in the *demesne* in which I live soon and plant it.” Roz Young, “Raising Trees Isn’t Easy in Apartment,” *Dayton Daily News*, 11 May 1996, at A13.

But in BrE, the word retains its literal sense, especially in reference to land within a large estate—e.g.:

- “For sheer pathos there is nothing to equal Wanda Ryan Smolin’s article on that exquisite rural *demesne* Killua Castle in Westmeath, the onetime home of the Chapmans of Lawrence of Arabia fame.” “A Splendid Ruin Brought to Life,” *Irish Times*, 20 Jan. 1996, at 15.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “Lavinia, Dowager Marchioness of Cholmondeley, at whose *demesne* the sorry incident occurred, is understood to be mortified.” Walter Ellis, “Windsor Watch,” *Sunday Times* (London), 30 June 1996, Features §.
- “With its vast *demesne* and the modern Robert Trent Jones Senior-designed golf course, Adare Manor also has a die-hard following of well-to-do weekend breakers from Dublin, Cork, Limerick and Galway cities.” Mark Keenan, “Walking on Adare Glass,” *Irish Independent*, 19 June 2015, at 10.

demi- This prefix indicates that a thing is (1) half the size or quality of another (e.g., *demitasse* = a small cup for coffee), or (2) of inferior or less than full rank, size, or status (e.g., *demigod* = a less-important deity). It’s occasionally used pejoratively to belittle someone or something—e.g.: “On and on, painting Stalin a little taller, a bit more substantial, without a withered arm and never, ever with another Party leader, those fatuous *demi-tyrants* who sooner or later were erased from pictures and marched to a cell.” Martin Cruz Smith, *Tatiana* 20 (2013).

demise. See **death**.

democracy. This term, meaning literally “government by the people,” is often employed loosely, sometimes tendentiously and sometimes disingenuously (as when the post–World War II Soviet Union was referred to as a “democracy”). Originally a Greek term, *democracy* was understood by the Greeks very differently from the way we understand it today: Greek democracy was an institution limited to male clan members who were citizens; a huge population of slaves and other subordinated classes were disenfranchised. The same, of course, might be said of the United States before the abolition of slavery and before women gained the right to vote. Notions of democracy change with changing notions of who “the people” are. Throughout history, the term has gradually come to be more and more inclusive. See **GOVERNMENTAL FORMS**.

Democrat. A. And democrat. The capital *D* distinguishes the sense “a member of the Democratic Party” from the broader sense, which is denoted by a lower-case *d*.

B. Democrat(ic), adj. During much of the late 20th century, Republicans were fairly successful in denigrating the noun *Democrat*, which often appeared in such phrases as *tax-and-spend Democrats* and *big-spending Democrats*. Interestingly, though, the adjective *Democratic* didn’t undergo this depreciation in meaning. In the 1980s and 1990s, therefore, some Republicans preferred to refer to the **Democrat Convention* as opposed to the *Democratic Convention*. The former suggests something like a drunken party, whereas the latter suggests dignified proceedings.

The usage has continued, with typical reference to the **Democrat Party* from its GOP opponents, and occasionally in the press—e.g.:

- “Shelby County *Democrat* [read *Democratic*] Party Chairman Linda Montgomery rose to Zerr’s defense.” Jerry Graff, “GOP Contest for Mayor Set,” *Indianapolis Star*, 5 Dec. 2002, at S1.

- “While Democrats outnumber Republicans 52–46 in the state House of Representatives, it will be up to McMorris to offer alternatives to *Democrat* [read *Democratic*] proposals and make sure the minority voice is heard on budget and other issues.” Editorial, “Our Views,” *Olympian* (Olympia, Wash.), 7 Dec. 2002, at A7.

In politics, of course, this type of semantic jockeying is a practice without end, as this columnist well knows: “Talk radio is rewriting the political language. . . . Environmentalists are wackos. The Democratic Party is the *Democrat* Party. Taxation is theft.” Tom Teepen, “Talk Radio Isn’t Just Talk,” *Chattanooga Times/Chattanooga Free Press*, 29 Nov. 2002, at B8. And if *Republic* could somehow be loaded with pejorative connotations, you can be sure the Democrats wouldn’t hesitate to do so.

LANGUAGE-CHANGE INDEX

**Democrat Party* for *Democratic Party*: Stage 2
Current ratio (*Democratic Party* vs.
**Democrat Party*): 31:1

demon. See **daemon**.

demonic; demoniac; *demoniacal. The two primary words are fiendishly close in meaning. *Demonic* /di-mŏn-ik/ = (1) of, relating to, or involving a demon <demonic beings>; (2) savagely wild and cruel <demonic cackling over the bloodshed>. *Demoniac* /dem-ə-nī-ik/ = as if possessed by or influenced by a demon; uncontrolled and evil <now confesses to a more or less demoniac adolescence>. In some of its uses, *demoniac* verges on the senses of *demonic*, which has grown dramatically in frequency of use since the 1930s. Before that time, *demoniac* was the most frequent of all the terms. **Demoniacal* is a NEEDLESS VARIANT of *demoniac*; as between these two, the shorter *demoniac* has predominated in World English since the 18th century.

demonstrable /di-mŏn-strə-bəl/ is the word, not **demonstratable*, a NEEDLESS VARIANT—e.g.:

- “On the issue of funding, there is a very strong, statistically *demonstratable* [read *demonstrable*] correlation between the quality of a public university and the extent to which it is supported by the state.” G.A. Clark, “Low Pay for Professors Devastates State Schools,” *Ariz. Republic/Phoenix Gaz.*, 29 Mar. 1995, Tempe Community §, at 4.
- “Banks still want a solid track record of experience in the business field and, preferably, a *demonstratable* [read *demonstrable*] ability to turn a profit.” Neil Orman, “Improved Lending Still Rides on Prospects for Big Returns,” *Austin Bus. J.*, 13 Oct. 1995, § 1, at 18.
- “In some cases, she said, she gives herself a challenge. For example, can she come up with a skill-and-action game that’s fast-paced and *demonstratable* [read *demonstrable*] on TV?” Don Dodson, “Woman Creates Children’s Games,” *Courier* (Lincoln, Ill.), 25 May 2012, at 6.

See **-ABLE (D) & -ATABLE**.

LANGUAGE-CHANGE INDEX

**demonstratable* for *demonstrable*: Stage 1
Current ratio (*demonstrable* vs.
**demonstratable*): 341:1

demur; demure. *Demur*, v.i., = (1) to object; take exception; or (2) to hesitate or decline because of doubts. Although sense 2 is labeled archaic in *W11* and the *COD*, it appears with great frequency in AmE—e.g.:

- “When offered payment for this essential service, Waterhouse *demurred*, suggesting instead the payment be used to fund an underprivileged child’s attendance at Collier Services’ summer camp.” “Stepping Out,” *Asbury Park Press* (Neptune, N.J.), 1 Sept. 1996, at D6.
- “Clarke lobbied the USTA for a 90-and-over group, and when the organization *demurred* he organized his own annual round-robin event.” Dyke Hendrickson, “Maine Seniors Flock to Games,” *Portland Press Herald*, 1 Sept. 1996, at D11.
- “Johnson *demurred* when asked whether his vision for a new president could be taken as a criticism of Tomlinson.” Jan Herman & Mike Boehm, “Orange County Arts Center Celebrates and Looks Ahead,” *L.A. Times*, 3 Sept. 1996, at F1.

Demure is the adjective meaning (1) “reserved, modest”; or (2) “coy in an affected way.” Sense 1 is somewhat more usual—e.g.:

- “A luminous beauty, both sensuous and *demure*, she [Ingrid Bergman] was a star for more than 40 years.” Jane Sumner, “Jane Sumner’s Picks & Pans,” *Dallas Morning News*, 25 Aug. 1996, Television §, at 43.
- “The photograph is of a *demure* girl wearing a dark blouse and a light, frilly collar, giving the camera a smile that is at once humble and mischievous.” Duncan Murrell, “Family’s Roots Tied I-85 Victim to Area,” *Chapel Hill Herald*, 28 Aug. 1996, at 1.
- “As a *demure* secretary in ‘The V.I.P.s,’ she stole scenes from Richard Burton.” Roger Lewis, “Is Downton Dowager Really Kenneth Williams in Drag?” *Daily Mail*, 21 Aug. 2015, at 50 (referring to Maggie Smith).

The words are also confused in speech, when *demure* /di-**myuur**/ is said instead of *demur* /di-**mər**/.

DENIZEN LABELS. What do you call someone from —? Often that’s not an easy question to answer, whether it’s a city, state, province, or country. Anyone who lives in Columbus, Ohio—or the other Colum-buses in Georgia, Indiana, and Nebraska—is called a *Columbusite*. But someone from the small town of Columbus, Mississippi, is called a *Columbian*. Those inconsistencies can be a little confusing, but at least they’re undisputed within a given locale.

Sometimes the authorities can’t agree about a single locale. Someone from Michigan is (formerly by statute) called a *Michigianian*—but many Michigianians prefer to be called *Michiganders*. Almost no Michigianians want to be called **Michigianites*, but the United States Government Printing Office (which puts out a style manual) specifies **Michigianite*. Best for Michigianians and others to follow the law or local preference—not what some stylesheet-writer in Washington says.

Loose guidelines exist for naming denizens. George R. Stewart, a historian and onomastician, developed seven main guidelines—what H.L. Mencken called “Stewart’s Laws of Municipal Onomastics”—that were cited in the best up-to-date work on this subject, Paul Dickson’s *Labels for Locals* (1997). Here they are: (1) If the place name ends in *-a* or *-ia*, add *-n* <Alaska, Alaskan> <California, Californian>. (2) If the name ends in *-i* or a sounded *-e*, add *-an* <Hawaii, Hawaiian> <Albuquerque, Albuquerquean>. (3) If the name ends in *-on*, add *-ian* <Oregon, Oregonian>. (4) If the name ends in *-y*, change the *-y* to an *-i* and add *-an* <Albany, Albanian>. (5) If the name ends in *-o*, add *-an* <Chicago, Chicagoan>. (6) If the name ends in a consonant or a silent *-e*, add either *-ite* or *-er*, depending on euphony <Maine, Mainer> <New Hampshire, New Hampshireite>. (7) If the name ends in *-polis*, change that to *-politian* <Minneapolis, Minneapolitan>.

What follows are some of the less obvious denizen labels, also known as “demonyms,” in places overriding Dickson’s preferences because additional research showed this to be necessary.

denote (= to indicate) for *denominate* (= to assign a name) is a common error—e.g.: “Teenagers whose parents are home at what the researchers *denoted* [read *denominated* or *called*] ‘key times’—in the morning, after school, at dinner and at bedtime—are less likely to smoke, to drink or to use marijuana.” “What Teenagers Need, Etc.” *Wash. Times*, 14 Sept. 1997, at B2.

For the difference between *denote* and *connote*, see **connote**.

LANGUAGE-CHANGE INDEX

denote misused for *denominate*: Stage 1

denounce; renounce. *Denounce* = (1) to condemn openly or publicly; (2) to accuse formally; or (3) to formally announce the termination of (a treaty or pact). Sense 1 is most common—e.g.:

- “Jack Kemp and I will use the White House as a bully pulpit to *denounce* both drug use and the pushers who sell the poison.” Bob Dole, “One-on-One with the Candidates,” *USA Today*, 23 Sept. 1996, at A10.
- “Alas, a new study (which Mr. Pa *denounces*) suggests that the vaccine is useless.” “Drug Firms; Limited Imagination,” *Economist*, 28 Sept. 1996, at 80.

Renounce = (1) to give up or relinquish, esp. by formal announcement; or (2) to reject or disown. Both senses of this word are common.

- Sense 1: “The burgeoning ‘patriot movement’ [has followers contending that] the federal government holds no power over them once they *renounce* citizenship.” Steve Ryfle, “Broderick Deceived Followers, Jurors Told,” *L.A. Times*, 28 Sept. 1996, at B1.
- Sense 2: “The danger now is that Palestinians will *renounce* Arafat and Netanyahu both.” “Arab and Jew: A Clash That Could Have Been Avoided,” *Star Trib.* (Minneapolis), 27 Sept. 1996, at A20.

Some writers use *denounce* when they mean *renounce*—e.g.:

- “Supreme Court Justice David Souter administered the oath to people who *denounced* [read *renounced*] their Russian, Guyanan and even Bosnian citizenships, among others, to become Americans.” Randy Weston, “375th Anniversary, Growth Issues Mark Event-Filled Year,” *Patriot Ledger* (Quincy, Mass.), 26 Dec. 1995, at 13.
- “They have *denounced* [read *renounced*] their U.S. citizenship and set up their own racist, sexist, frontier society.” Deborah Mathis, “We Deserve Freedom from Montana Freeman,” *Houston Chron.*, 12 May 1996, Outlook §, at 6.

LANGUAGE-CHANGE INDEX
denounce misused for *renounce*: Stage 2

***denouncement.** See **denunciation.**

dentifrice (an old-fashioned, rather fancy word for “toothpaste”) is so spelled—not (through METATHESIS) **dentrifrice*. E.g.: “In children, this condition [fluorosis] has been associated with fluoride supplements, formulas containing fluoride, and fluoride *dentrifrices* [read *dentrifrices*].” Olga M. Sanchez, “Anticipatory Guidance in Infant Oral Health,” *Am. Family Physician*, 1 Jan. 2000, at 115. The word is rarely used outside medical and dental contexts.

LANGUAGE-CHANGE INDEX
dentifrice misspelled **dentrifrice*: Stage 1
Current ratio: 21:1

denunciation; *denouncement. The latter has been a NEEDLESS VARIANT since the 16th century.

deny (= to declare untrue; repudiate; refuse to recognize or acknowledge) is sometimes misused for *refuse* or *decline*. These words are synonymous in certain constructions, such as *He was denied* (or *refused*) *this*. But in modern usage *refuse* or *decline* properly precedes an infinitive, whereas with *deny* this construction is an ARCHAISM—e.g.: “Zimmerman moved that Harmon dismiss herself. She *denied* [read *declined*]

to do so stating, among other things, that the motion should have been filed much earlier.” Deborah Tedford, “Judge Contests ‘Impropriety’ Finding of Appellate Court,” *Houston Chron.*, 18 Apr. 1995, at 12.

LANGUAGE-CHANGE INDEX
deny misused for *decline*: Stage 1

depart. This is a FORMAL WORD typical of AIRLINESE and OFFICIALESE. In traditional idiom, one *departs from* a place. But today many writers ill-advisedly drop the *from*. That is, *depart* has become an ERGATIVE VERB: though the word has traditionally been intransitive, writers are now making it transitive. The *OED* calls this usage “rare” except in the phrase *depart this life*. The resurgence may have begun among headline writers—e.g.: “Lane Departs City Hall,” *Oregonian* (Portland), 16 Oct. 2000, at E3. But it is spreading into usage more generally, especially in reference to local government—e.g.:

- “I’m wondering what 7.5 million New Yorkers will do when this strange man *departs* City Hall.” Joseph Dolman, “False Peace in City Hall Isn’t Good for City,” *Newsday* (N.Y.), 20 Sept. 2000, at A42.
- “His take-charge actions in these lame-duck days have inspired many to wonder what comes next after he *departs* City Hall.” Liz Trotta, “Giuliani Defines Strength, Leadership in N.Y. Crisis,” *Wash. Times*, 14 Sept. 2001, at A4.
- “Term limits may force them out of the City Council, but not all the members—or their staffs—will be *departing* city government.” Frankie Edozien, “Councilors Get New Lease on Political Life,” *N.Y. Post*, 20 Dec. 2001, at 20.

depend. This word typically takes *on* (or, less good, *upon*—see **upon**). When a clausal complement follows the verb, to omit the *on* is a CASUALISM—e.g.:

- “It all *depends when* [read *depends on when*] the hardware gets delivered.” “Comcast to Offer Cable Modems,” *Bus. J.* (Sacramento), 26 May 2000, at 2.
- “So what is this place called? *Depends what* [read *Depends on what*] night you’re there.” Tyler Gray, “By Any Name, Creativity Is Welcome,” *Orlando Sentinel*, 17 Nov. 2000, at 58.
- “It all *depends who’s* [read *depends on who’s*] in the kitchen.” Michael Bauer, “Lovely Grand Cafe Craves Stability,” *S.F. Chron.*, 12 Jan. 2001, at C14.

In English-language print sources, the collocation *depends on what* is much more common than **depends what*—and has steadily been more frequent since the early 18th century.

The truncated phrase *that depends*, without a complement, is often heard in conversation.

LANGUAGE-CHANGE INDEX
depend for *depend on*: Stage 2
Current ratio (*depends on what* vs. **depends what*): 16:1

dependant. See **dependent, n.**

dependence; dependency. These variants have undergone DIFFERENTIATION. *Dependence*, more common

since the 16th century, is the general word meaning (1) “the quality or state of being dependent”; or (2) “reliance.” *Dependency* is a geopolitical term meaning “a territory under the jurisdiction of, but not formally annexed by, a nation.” (See **territory**.) These words are commonly misspelled **dependance* and **dependancy*.

Sometimes *dependency* is misused for *dependence*—e.g.: “Citing the Army’s *dependency* [read *dependence*] on reservists, Mr. Cohen last month postponed a planned reduction of 25,000 Guard and Reservist positions, a 4 percent cut that would have saved \$900 million over the next five years.” Steven Lee Myers, “New Role of Guard Transforming Military,” *N.Y. Times*, 24 Jan. 2000, at A1, A22.

Unfortunately, the distinction is not complete: *dependency* is the term for drug habituation as well. See **addicted**.

LANGUAGE-CHANGE INDEX
dependency misused for *dependence*: Stage 2

dependent, adj. See **addicted**.

dependent, n.; **dependant**. For the noun, the older spelling is *dependant*. The *OED* notes: “from the 18th c. (like the adj.) spelt *dependent*, after L.; but the spelling *-ant* still predominates in the [noun].” *W11* countenances *-ent* over *-ant*. The *COD* continues the Oxonian preference for *-ant*, noting that *-ent* is chiefly American. Certainly the British DIFFERENTIATION in spelling between the adjective and the noun is a useful one, but it remains tenuous in BrE. The AmE preference for *-ent* for both noun and adjective has been strong since 1950.

deplane. This word, like *enplane* and *reinplane*, is characteristic of AIRLINESE, a relatively new brand of JARGON dating from the latter half of the 20th century. Careful writers and speakers stick to such time-honored expressions as *get off*, *get on*, and *get on again*.

LANGUAGE-CHANGE INDEX
deplane for *get off* (an airplane): Stage 4

deport; **disport**. *Deport* = (1) to behave (oneself); or (2) to banish, remove. *Disport* is a reflexive verb meaning (1) “to amuse (oneself);” or (2) “to display (oneself) sportively.” The two are sometimes confounded—e.g.: “It is hard to believe that the same ensemble and conductor who *disported* [read *deported* or, better, *comported*] themselves in so perfunctory a fashion in a showcase tour are the personnel of this expansive, supple, disciplined and engrossing Sixth Symphony.” Lawrence B. Johnson, “Classical Briefs,” *N.Y. Times*, 22 Sept. 1996, § 2, at 40.

LANGUAGE-CHANGE INDEX
disport misused for *deport* or *comport*: Stage 1

deportation; **department**. Both derive ultimately from L. *deportare* (= to carry off, convey away), but to say that these words have undergone DIFFERENTIATION is a great understatement. *Deportation* = the act of removing a person to another country; the expulsion

of an alien from a country <Baraca’s deportation took only two months to process>. *Department* = the bearing, demeanor, or manners of a person <his department hardly suggests his regal lineage>.

Yet *deportation* is sometimes misused for *deportation*—e.g.: “Thurman supported measures that would . . . [m]ake it easier to deport criminal aliens after they serve their sentences and expand the number of crimes for which aliens risk *deportment* [read *deportation*].” Jim Ross, “Thurman Kept Contract with Her Constituents,” *St. Petersburg Times*, 10 Apr. 1995, *Hernando Times* §, at 1.

LANGUAGE-CHANGE INDEX
deportment misused for *deportation*: Stage 1

depository; **depository**; ***depositee**. Most authorities have agreed through the years that *depository* is the better term in reference to people with whom one leaves valuables or money for safekeeping and that *depository* is standard in reference to places. True, lawyers often refer to a *depository bank*, and this phrase has become common in legal parlance. But *depository* has continued to be used consistently for places—e.g.: “Cragg recounted how the central *depository* for stocks in India was recently robbed at gunpoint.” Barry Strudwick & Chris Grant, “Investing Without Geographic Limits Leads Fund Manager to Odd Places,” *Daily Record*, 19 Sept. 1996, at 7. Cf. **repository**.

**Depositee*, a NEEDLESS VARIANT of *depository*, was popular for a time in the mid-19th century. E.g.: “Only Murrieta, at 22.7 percent, showed strong growth in bank deposits . . . Big Bear Lake was the top *depositee* [read *depository*] in San Bernardino County at \$23,160.” Andy McCue, “Latest Stats Reveal Facts About Region,” *Press-Enterprise* (Riverside, Cal.), 3 Sept. 2000, Bus. §, at 11.

LANGUAGE-CHANGE INDEX
**depositee* for *depository*: Stage 1
Current ratio (*depositories* vs. **depositees*): 83:1

depot (= [1] a railway or bus station, [2] a place where buses are kept and repaired, or [3] a place where goods are stored until needed) is pronounced /**dee**-poh/ in AmE and /**dep**-oh/ in BrE.

depravity; **depravation**. *Depravity* is the condition of being corrupt or perverted—e.g.: “For much of the outside world, Barry’s transition from prison inmate to Democratic mayoral nominee is fresh evidence of the *depravities* of life in the nation’s capital.” Howard Kurtz, “At the Post-Mortem, Media Examine Their Wounds,” *Wash. Post*, 15 Sept. 1994, at C1.

The much rarer word *depravation* denotes the act or process of depraving or corrupting—e.g.: “In the candlelight of evening, the dirge-like chant of the book of Lamentations fills our sanctuaries, as we hear the horrors and *depravations* of humanity against humanity.” Linda Joseph, “Tisha B’Av Recalls Calamity,” *Sun-Sentinel* (Ft. Lauderdale) (Boca Raton ed.), 12 July 2002, at 3. Cf. **deprivation**.

Depravation is fairly often misused where *deprivation* (= want; destitution) was intended—e.g.: “The painter, fond of all sorts of geometric shapes, used ladders repeatedly to represent hope and escape from social injustice and economic *depravation* [read *deprivation*].” Ann Hicks, “Over the Line,” *Greenville News* (S.C.), 11 Aug. 2002, at E1. Both words denote hardships, but of a different sort.

LANGUAGE-CHANGE INDEX
depravation misused for *deprivation*: Stage 1

deprecate; depreciate. The first word has increasingly encroached on the figurative senses of the second, while the second has retreated into financial contexts. *Deprecate* means “to disapprove earnestly”—e.g.:

- “‘Well,’ he admitted, *deprecatingly*, ‘one can’t suppress one’s natural instincts altogether; even if one’s reason and self-interest are all the other way.’” Dorothy L. Sayers, *Gaudy Night* 351 (1936; repr. 1995).
- “‘Ah, that was thirty-five years ago! Long before you were born, my dear.’ Herr Landauer shook his head *deprecatingly*, his boot-button eyes twinkling with benevolence: ‘Now I have not the time for such studies.’” Christopher Isherwood, *The Berlin Stories* 150 (1963).
- “There must be a proper balance between urban and rural, industrial and agricultural development. And a spirit of excessive tolerance is to be *deprecated*.” Jonathan Romney, “Apollo 13,” *New Statesman & Society*, 22 Sept. 1995, at 29.

Depreciate, transitively, means “to belittle, disparage”; and, intransitively, “to fall in value” (used in reference to assets or investments). The phrase *self-deprecating* is, literally speaking, a virtual impossibility, except perhaps for those suffering from extreme neuroses. Hence *self-depreciating*, with *depreciate* in its transitive sense, has historically been viewed as the correct phrase—e.g.:

- “You seem to take some special pleasure in making yourself the butt of your own peculiar sense of humor. . . . All day long the same thing. In some little way or other, everything is ironical, or *self-depreciating*.” Philip Roth, *Portnoy’s Complaint* 264 (1969).
- “Sadly, Grizzard did not have the *self-depreciating* humor of a Jeff Foxworthy, the self-proclaimed redneck comedian.” Bill McClellan, “If Southern Writer Were Judging the Games, What Would His Verdict Be?” *St. Louis Post-Dispatch*, 25 July 1996, at B1.
- “In a characteristically *self-depreciating* moment, Romano says, ‘I was so nervous about my acting that I was surprised at how—I’ve got to phrase this just right—at how non-disappointed I was when I saw the pilot.’” James Endrst, “‘Everybody’ Loves Romano,” *Austin Am.-Statesman*, 15 Sept. 1996, at 4.

Unfortunately, the form *self-deprecating*—despite its mistaken origins—is now nearly 25 times as common in print as *self-depreciating*. Speakers of AmE and BrE routinely use *self-deprecating*. However grudgingly, we must accord to it the status of STANDARD ENGLISH—e.g.:

- “He’s smart, articulate, funny, alternately *self-deprecating* and proud of his success.” John Clark, “Call Him Mr. Nice Guy,” *L.A. Times*, 1 Sept. 1996, Calendar §, at 3 (portrait of Howard Stern).
- “Milken doesn’t drive himself much anymore, but he has a *self-deprecating* explanation for why that’s the case: He says he used to do so many things while driving that he kept having collisions.” Jeanie Russell Kasindorf, “What to Make of Mike,” *Fortune*, 30 Sept. 1996, at 86.
- “She arrives in Doc Marten boots and a black playsuit, refreshingly unfiltered, straight-talking and *self-deprecating* from the start. ‘I feel like I’ve gained new sweat pores. I’m sweating in places I’ve never sweated before,’ she laments.” Jane Mulkerrens, “Innocent Abroad,” *Daily Telegraph*, 22 Aug. 2015, at 30.

LANGUAGE-CHANGE INDEX
self-deprecating for *self-depreciating*: Stage 5
Current ratio: 24:1

depreciatory; *depreciative. Both mean either “declining in value” or “disparaging.” In both AmE and BrE, *depreciatory* is the predominant term—e.g.: “Try to find out what you mean—what you would go to the stake for—and put it down without frills or *depreciatory* gestures.” Jacques Barzun & Henry F. Graff, “Clear Sentences: Right Emphasis and Right Rhythm” (1957), in *Perspectives on Style* 3, 19 (Frederick Candelaria ed., 1968). **Depreciative* might reasonably be labeled a NEEDLESS VARIANT.

Current ratio: 3:1

deprivation; privation; *deprival. All three words mean “the action of depriving or taking away.” The words share that general sense as well as specific senses relating to the depriving of an office, position, or benefice. *Deprivation* is the usual word. *Privation* is the more literary word; its primary sense is “the lack of life’s ordinary amenities.”

**Deprival* (noted in the *OED* in four 17th- and 19th-century examples) is merely a NEEDLESS VARIANT of *deprivation*. E.g.: “Confinement of investigation to physically based suffering does not . . . exclude measures such as starvation or *deprival* [read *deprivation*] of sleep.” James Heath, *Torture and English Law* 5 (1982).

For the confusingly similar *depravation*, see **depravity**.

LANGUAGE-CHANGE INDEX
**deprival* for *deprivation*: Stage 1
Current ratio (*deprivation* vs. **deprival*): 329:1

depute, v.t.; deputize. To *depute* is to delegate <these responsibilities she deputed to her agent>. To *deputize* is to make (another) one’s deputy <the sheriff then deputized four men who had offered to help in the search>.

De Quincey, Thomas (1785–1859). Although the *Dictionary of National Biography* (1917) states that “De Quincey himself wrote his name ‘de Quincey’ and

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

would have catalogued it among the Q's" (vol. 5, at 835), the long-established practice was to write *De Quincey* and to catalogue it in the D's. But when the revised edition was published in 2004 as the *Oxford Dictionary of National Biography*, the entry appeared under Q (vol. 45, at 700) without so much as a cross-reference at the appropriate place in D. The rewritten entry appears under "Quincey, Thomas Penson De," and the name throughout is written *De Quincey*.

de rigueur (= proper; required by custom or etiquette) is sometimes misspelled **de rigeur* or **de riguer*—e.g.:

- "If such affirmation of a transcendent order via the assertion of human dignity is *de rigueur* [read *de rigueur*] for tragedy, *Timon* does not qualify." Rolf Soellner, *Timon of Athens* 22 (1979).
- "I was tired of absorbing abuse while paying premium prices and receiving less service and courtesy than are *de riguer* [read *de rigueur*] in most small towns." Susan D. Haas, "Surly Hosts Want Traveling Wallets, Not Real Visitors," *Morning Call* (Allentown, Pa.), 31 Aug. 1996, at A35.

The phrase is pronounced /də ri-*gər*/.

LANGUAGE-CHANGE INDEX

de rigueur misspelled **de rigeur* or **de riguer*: Stage 2
Current ratio (*de rigueur* vs. **de rigeur*): 7:1

derisive; derisory; *derisible. *Derisive* = scoffing; expressing derision. *Derisory* = worthy of derision or of being scoffed at. Although *derisive* and *derisory* at one time overlapped and were frequently synonymous, the DIFFERENTIATION is now complete, and using the two interchangeably is a mistake. **Derisible*—an uncommon word appearing more often in BrE than in AmE—is a NEEDLESS VARIANT of *derisory*.

derogatory; *derogative. The first is standard. The second has been a NEEDLESS VARIANT in all phases of Modern English.

Current ratio: 66:1

derring-do (= daring action) derives, according to the *OED*, from a "chain of misunderstandings and errors." Originally, the term was *dorryng do*, a verb phrase meaning "daring to do." A 16th-century misprint in the poetry of John Lydgate (ca. 1370–1450) made it *derryng do*, which Spenser (1579) misunderstood and used as a noun phrase meaning "manhood, chivalry." Then Sir Walter Scott popularized the phrase in *Ivanhoe* (1820) with the spelling *derring-do*, and this has been the settled spelling ever since. But because of its historical and modern associations with *daring*, writers often use the erroneous spelling **daring-do*—e.g.:

- "A glimpse at Waters' 1972 'Pink Flamingos' is a surprising reminder that for all their scatological *daring-do* [read *derring-do*], the Farrelly brothers are mainstream by comparison." Sid Smith, "As Shock Cinema, 'Mary' Is No 'Flamingo,'" *Chicago Trib.*, 19 July 1998, at 2.
- "Instead, it is also called 'Flower Flange' and has more to do with flowers than fighting and *daring-do* [read *derring-do*]." Joe L. Rosson, "'Dewey' Glass Water Pitcher Patriotic," *Knoxville News-Sentinel*, 25 Sept. 1998, at D2.
- "They spent hours regaling themselves with their motorized *daring-do* [read *derring-do*] while lakefront residents had to close windows and doors." Mark McGarrity,

"Driven to Distraction," *Star-Ledger* (Newark), 11 Oct. 1998, at 7.

LANGUAGE-CHANGE INDEX

derring-do misspelled **daring-do*: Stage 1
Current ratio: 16:1

derringer (= a small pistol) is so spelled even though the person for whom it was named was Henry Deringer (1786–1868), with only one *-r-*. Today **derringer* (sorry, Henry) is only a variant spelling, and neither form is capitalized.

desalination; salinization. *Desalination* is the beneficial process of removing salt from seawater (or occasionally other salty water), rendering it potable. *Salinization* (or occasionally *salinisation* in BrE) is the harmful impact that concentrations of mineral salts in groundwater have on arable land, potentially rendering it barren. Oddly enough, **desalination* and **salination* are NEEDLESS VARIANTS of the two terms. Perhaps the anomalous differences in preferred forms are attributable to the fact that the terms developed in different fields of study (water science vs. agriculture). For whatever reason, *desalination* is nine times as common in modern print sources as its variants, while *salinization* is six times as common as its variants—including the first-recorded form of that term, **salinification*, which has all but disappeared.

Current ratio (*desalination* vs. **desalination*): 9:1

Current ratio (*salinization* vs. **salination*): 6:1

descendant; *descendent. A majority of American desktop dictionaries list *descendant* as the predominant spelling for the noun <a generation of descendants> and **descendent* as the corresponding adjective <a descendent line on the map from northwest to southeast>. In fact, though, the spelling **descendent* is quite rare in comparison with *-ant*—even in adjectival uses—whether in AmE or in BrE. It is therefore properly classifiable as a NEEDLESS VARIANT.

Descendant is sometimes misspelled by omitting the *-s-*, perhaps from confusion with *decident*—e.g.: "I could also recall the fact that after all Frau Brockhaus was a *decendant* [read *descendant*] of Richard Wagner's." Dietrich Fischer-Dieskau, *Reverberations* 360 (Ruth Hein trans., 1989).

LANGUAGE-CHANGE INDEX

descendant misspelled **decendant*: Stage 2
Current ratio (*descendant* vs. **descendent*): 8:1

descendible. Traditionally so spelled—not **descendable*. (See *-ABLE* (A).) But this creates something of an anomaly because *ascendable* has long been preferred over **ascendible*. Such are the vagaries of our language.

Current ratio (*descendible* vs. **descendable*): 13:1

descent /di-sent/ is often mispronounced /*dee*-sent/. See PRONUNCIATION (B).

descry. See *decry*.

desegregation; integration. Although no distinction between a requirement of *integration* and a requirement of *desegregation* is ordinarily observed in legal usage, the distinction may be important in understanding the constitutional law of race and the schools. Certainly it would be useful, in reference to public schools in the United States, if we distinguished between court-ordered *desegregation* (= the abrogation of policies that segregate races into different institutions and facilities) and court-ordered *integration* (= the incorporation of different races into existing institutions for the purpose of achieving a racial balance).

desert, vb.; abandon, vb. You can either desert or abandon a place or a person, but only *abandon* works for plans or efforts. E.g.: “Attempts were also made to use the shredded currency as insulation, mattress filling, and ‘drilling mud’ for oil exploration, but again the material was not suitable and those efforts were *deserted* [read *abandoned*].” Calvin Sims, “In Recycling of Greenbacks, New Meaning for Old Money,” *N.Y. Times*, 22 May 1994, at 1, 12.

LANGUAGE-CHANGE INDEX
desert misused for *abandon*: Stage 1

deserts. See **just deserts**.

deshabille. See **dishabille**.

desiccate. So spelled. See **SPELLING (A)**.

desiderata (= things wanted or needed) is the plural form of *desideratum*—e.g.:

- “‘Honesty,’ ‘sensitivity,’ ‘a sense of humor’ are among the current *desiderata*.” Merle Rubin, “‘Evelina’ Gives Enlightening Look at 18th Century,” *Wash. Times*, 9 Apr. 1995, at B7.
- “At its best his work amply fulfils these *desiderata*.” Vernon Scannell, “Poignant Bawd,” *Daily Telegraph*, 13 July 1996, Books §, at 14.

Although the plural is more common, the singular has many appropriate uses—e.g.:

- “In our time, empirical evidence has become the *desideratum* for belief.” David K. Hart, “The Moral Sense,” *Society*, Mar. 1995, at A75.
- “However it is done, efficiency often leads to loss of another *desideratum*—the personal touch.” Pat Guiteras, “Health Care Changes Mean Few Doctors Do Duty at Office and Hospital,” *Chapel Hill Herald*, 18 Sept. 1996, at 5.

Some writers misuse *desiderata* as a singular—e.g.: “The British were keen to secure a *desiderata* [read, perhaps, *desideratum*—or reword] in Arabia in view of Britain’s ‘special political interests’ in the region.” Clive Schofield, “Eritrea and Yemen at Odds in the Red Sea,” *Jane’s Intelligence Rev.*, 1 June 1996, at 264.

The pronunciation is /də-sid-ə-**ray**-tə/ or /də-sid-ə-**rah**-tə/.

LANGUAGE-CHANGE INDEX
desiderata misused as a singular: Stage 1

Current ratio (*a desideratum* vs. **a desiderata*): 93:1

designer. *Designer*, an agent noun dating from the mid-17th century, has three primary senses: (1) someone who designs or plans; an originator of a plan; (2) (archaic) a plotter against Christ; and (3) someone who makes an artistic plan or design for construction—and, by extension, someone who invents and markets fashionable clothing. Sense 3 gave rise, beginning in the 1960s, to attributive uses: *designer scarves*, *designer labels*, *designer jeans*. And soon, even things other than garments were tagged with this label: *designer cars*, *designer houses*, even *designer water*. In this voguish use, the term is simply intended to connote status and expense. But as the former editor of the *OED* said a couple of decades after *designer* this and that became all the rage, the attributive use looks as if it will be “staying around for a while.” Robert W. Burchfield, *Points of View* 126 (1992).

desirable; desirous. *Desirable* is used in reference to things or people that are desired. *Desirous* is used in reference to the desirer’s emotions. What is *desirable* is attractive and worth seeking; a *desirous* person is impelled by desire.

Occasionally, *desirous* is misused for *desirable*—e.g.: “John Ortego said telephone marketing and sales jobs created in Erie County at Ingram Micro and Softbank Services Group fit the description of *desirous* [read *desirable*] service-sector positions.” James M. Odato, “State’s Business Leaders Urged to Help Spur Economy,” *Buffalo News*, 13 Sept. 1996, at A13.

But even when *desirous* is correct, it usually appears in the wordy phrase (*be*) *desirous of*, which can be shortened to *desire* or *want*—e.g.:

- “The coaches *are desirous of building* [read *want to build*] a winning tradition in each of their sports.” Kevin Lonquist, “Pantego Increases Staff Size,” *Dallas Morning News*, 12 Aug. 1996, at B1.
- “But the competition should heat up as banks, eager to find a new source of loan earnings and *desirous of* [read *desiring* or *wanting*] improved Community Reinvestment Act ratings, plunge into this area.” James B. Arndorfer, “Banks Extending Reach to Compete with Nonbanks,” *Am. Banker*, 26 Aug. 1996, at 10.
- “Obama is gambling that the dynamics of Iranian domestic politics—a young population more *desirous of* [read *interested in*] enjoying the fruits of modernity than in pursuing a revolutionary Islamist agenda—will result in Iran choosing ultimately to play a responsible and stabilizing role rather than an irresponsible and destabilizing one.” Andrew J. Bacevich, “A Deal to Reboot Mideast Policy?” *L.A. Times*, 7 Aug. 2015, at 15. (On *Iran choosing* vs. *Iran’s choosing*, see **FUSED PARTICIPLES**.)

LANGUAGE-CHANGE INDEX
desirous misused for *desirable*: Stage 1

desist, a FORMAL WORD for *stop* or *leave off*, is usually followed by the preposition *from* or (less commonly) *in*—e.g.: “Clinton told congressional leaders that he has sent a written warning to Saddam through the Iraqi

mission at the United Nations in New York to *desist* from all threatening moves against U.S. pilots—or face devastating consequences.” Leo Rennert, “U.S. Force Ordered to Kuwait,” *Fresno Bee*, 18 Sept. 1996, at A1.

desistance—not **desistence*—is the noun corresponding to *desist*, vb.

Current ratio: 16:1

Des Moines (the city in Iowa) is pronounced /də moyn/—and no other way.

despair, v.i., takes the preposition *of* <she despairs of his inability to drive>.

***despatch**. See **dispatch**.

desperado (= a violent criminal not afraid of danger) predominantly forms the plural *desperadoes*—not **desperados*. See PLURALS (D).

Current ratio: 5:1

despite; in spite of. The two are almost always interchangeable. The compactness of *despite* recommends it, and it has greatly predominated in AmE and BrE print sources since the early 1950s.

Current ratio (*despite the fact that* vs. *in spite of the fact that*): 4:1

despoliation; *despoilment. See **spoliation**.

despot (= a cruel and unfair ruler) is pronounced /des-pət/—preferably not /des-pot/.

destination. This word commonly appears in two supposed redundancies—*final destination* and *ultimate destination*. But neither phrase is necessarily redundant. If a shipment has a series of stops or transfers—i.e., a series of “immediate destinations”—it may have a *final* or *ultimate destination*. You might be on your way to Hong Kong, with a stopover in Tokyo. If someone in the airport asked about your destination, you might characterize Tokyo as the *immediate destination* (i.e., the destination of that particular flight) and Hong Kong as the *ultimate destination* (the destination of the entire trip). See REDUNDANCY.

Yet the phrase *final destination* or *ultimate destination* should not be used (as it commonly is) in contexts in which such specificity is not called for—e.g.: “Huard might have been born to be a quarterback. He might have been raised to be a quarterback. He might have dreamed of being an NFL quarterback. But it is Holmgren who can push him to that *final, ultimate destination* [read *destination* or, better, *goal*].” Laura Vecsey, “Huard’s Future in Talented Hands,” *Seattle Post-Intelligencer*, 19 Apr. 1999, at E1. Cf. **final outcome**.

***destroyable**. See **destructible**.

destruct, vb., originated in the 17th century as a NEEDLESS VARIANT of *destroy*. By the early 20th century, it had largely fallen into disuse. In the 1950s, however, the word arose once again—this time as a high-tech espionage term arrived at as a BACK-FORMATION from

the noun *destruction*. Today, it is confined mostly to the phrase *self-destruct*.

destructible. So spelled in AmE and BrE alike—not **deconstructable*. See -ABLE (A). **Destroyable* is a NEEDLESS VARIANT.

Current ratio: 270:1

desuetude (= a state of long-term disuse) is preferably pronounced /des-wi-tyood/—not /di-s[y]oo-i-tood/.

desultory (= done without plan or purpose) is preferably pronounced /des-əl-tor-ee/ or /dez-əl-tor-ee/—not /di-səl-tə-ree/.

***detainment; *detainal**. See **detention**.

detectable. So spelled in AmE and BrE alike—not **detectible*. See -ABLE (A).

Current ratio: 103:1

detector; *detecter. The former spelling is standard in AmE and BrE alike. See -ER (A).

Current ratio: 3,945:1

détente /day-tahnt/ (= a period in which two countries with strained relations relax the tensions between them) is typically so written, with the acute accent but in roman type (not italic). See DIACRITICAL MARKS.

detention; *detainment; *detainal. *Detention* = holding in custody; confinement; compulsory delay. **Detainment* and **detainal* are NEEDLESS VARIANTS.

Current ratio (*detention* vs. **detainment*): 88:1

determent. See **deterrent**.

determinable = (1) capable of being ascertained; or (2) liable to be cut short. The first is the general sense; the second is a term of art in law.

determinacy (= the quality of having fixed rules or being definitely settled), the correct form, is sometimes incorrectly rendered **determinancy*, perhaps under the influence of such words as *permanency*—e.g.: “Economic *determinancy* [read *determinacy*] . . . is a simplistic and reductionist approach to explaining international relations.” Burdin H. Hickock, “Foreign Policy,” *Policy Rev.*, Winter 1982, at 3.

LANGUAGE-CHANGE INDEX

determinacy misspelled **determinancy*: Stage 1

Current ratio: 63:1

determinant. See **determiner**.

determinately; determinedly. *Determinately* (= conclusively, definitively) is sometimes misused for *determinedly* (= with firm resolve or strong will-power)—e.g.:

- “Amid the bloody civil war, with Luanda beleaguered by the Popular Movement’s enemies to the north and the south, Neto *determinately* [read *determinedly*] took the oath of office as president of the first independent government of Angola in a stuffy second-floor room of Luanda’s city hall.” Caryle Murphy, “Rebel Poet-Doctor,” *Wash. Post*, 12 Sept. 1979, at A22.

- “[Jay] Leno, a nightclub veteran, appeared *determinately* [read *determinedly*] unruffled by the negative remarks he read.” Daniel Cerone, “‘Tonight’—Familiar Growing Pains,” *L.A. Times*, 4 June 1992, at F1.

Sometimes, of course, *determinately* is just the right word—e.g.: “Did not Werner Heisenberg in 1927 convincingly argue that the physical universe cannot be measured *determinately* and thus may just be chaotic and without structure?” Simon Oswitch, “Digging Cage,” *L.A. Times*, 29 Mar. 1987, Calendar §, at 95.

LANGUAGE-CHANGE INDEX

determinately for *determinedly*: Stage 1

determination of whether. Although the preposition *of* is unnecessary, it has commonly appeared in this phrase since the mid-20th century. Many skilled editors prefer to remove it. See **whether** (C).

determinedly. See **determinately**.

***determine if.** See **determine whether**.

determiner; determinant. Both mean “that which determines,” but only *determiner* denotes a person who determines. In the general sense, preference might be given to the native-English suffix *-er*, but one could not be faulted for using either term: euphony should be the determiner. And *determinant* often simply sounds better—e.g.: “The use of the traditional business concept of value as the *determinant* of choices would set the environmental debate back decades.” “The Challenge of Going Green,” *Harvard Bus. Rev.*, July–Aug. 1994, at 37.

determine whether; *determine if. Although **determine if* has historically been used by reputable writers, it has never been as common as *determine whether* in edited prose. The *whether* form is considered better because *if* erroneously suggests a conditional statement as opposed to a neutral hypothetical. E.g.:

- “Tests were being done to *determine if* [read *determine whether*] the bees were of the Africanized variety.” “Man, 85, Survives More than 300 Bee Stings,” *Record* (N.J.), 20 Sept. 1996, at L6.
- “Without a clear, consistent method of evaluating the performances of the chief attorney and county administrator, it’s difficult, if not impossible, for the commissioners and the public to *determine if* [read *determine whether*] these two top employees are meeting their goals and objectives.” “Value of Evaluations,” *Sarasota Herald-Trib.*, 20 Sept. 1996, at A14.
- “A seasoned duck hunter and cook can always *determine if* [read *determine whether*] a fowl is taken east or west of I-35.” “Editorial,” *Abilene Reporter-News* (Tex.), 23 Aug. 2015, at G12.

For a similar problem with **doubt if* for *doubt whether*, see **doubt** (A).

LANGUAGE-CHANGE INDEX

**determine if* for *determine whether*: Stage 4
Current ratio (*determine whether* vs. **determine if*): 2:1

determinism. See **fatalism**.

deterrent, n.; deterrence; deterrent. A *deterrent* is something that deters. *Deterrence* is the act of deterring, especially in criminal-law and military contexts. It is more abstract than *determent*, which likewise denotes the act (or fact) of deterring, but usually with the connotation of preventing something on a particular occasion.

dethrone; *disenthroner. The latter has been a NEEDLESS VARIANT of infrequent occurrence since the 16th century.

Current ratio: 249:1

de Tocqueville. See **NAMES** (D).

detoxyfy; *detoxicate. Since the mid-20th century, *detoxyfy* has prevailed in AmE and BrE alike. **Detoxicate* is a NEEDLESS VARIANT.

Current ratio: 125:1

detract; distract. Although *detract* can be transitive (meaning “to divert”) as well as intransitive (meaning “to take something away”), the transitive use—by far less common—encroaches on territory better served by *distract*. So instead of using the phrase **detract attention from*, careful writers say *distract attention from*.

detractive; *detractory. Although neither is common, the latter is a NEEDLESS VARIANT. *Detractive* = tending to detract; defamatory.

Current ratio: 4:1

detriment. The correct idiom is *to the detriment of*. But occasionally it’s mangled—e.g.: “One of the issues about which Justice complained was that Microsoft would bundle its own applications into Windows *at the detriment of* [read *to the detriment of*] competing applications.” David Radin, “Microsoft Puts Java Back into the Mix,” *Pitt. Post-Gaz.*, 12 Sept. 2002, at E12. The writer has conflated *to the detriment of* with *at the expense of*—to the detriment of good usage.

LANGUAGE-CHANGE INDEX

**at the detriment of* for *to the detriment of*: Stage 1
Current ratio (*to* vs. **at the detriment of*): 101:1

Detroit /di-troyt/ is frequently mispronounced /dee-troyt/. See **PRONUNCIATION** (B).

deuterogamy. See **bigamy**.

deviance; *deviancy. See **deviation**.

deviant; deviate. A. As Adjectives. *Deviant* is normal. The first edition of the *OED* (1933) labeled both these adjectives “obsolete” and “rare.” The *OED Supp.* (1972) deleted the tag on *deviant* and cited many examples in the sense “deviating from normal social standards or behavior.” The word is common—e.g.:

- “He wasn’t a young rebel, *deviant*, troubled or neurotic, didn’t die early and wasn’t weirdly erotic.” James Warren, “America’s Love, and Need, for the Duke,” *Chicago Trib.*, 16 Aug. 1996, Tempo §, at 3.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “However, [the drug] does not change an abuser’s proclivity toward *deviant* sex, experts say.” Ellen Hale, “Value of Chemical Castration Doubted,” *Courier-J.* (Louisville), 28 Aug. 1996, at A4.
- “Only the faintest electronic hum, audible to dogs and superhumans, suggested his *deviant* handiwork.” Jeff Turrentine, “The Hotel Dick,” *Forbes*, 23 Sept. 1996, at 41.

Although *deviant* is the predominant adjective, it has had to compete—unfortunately—with *deviate*. The latter, a NEEDLESS VARIANT of *deviant*, is common in AmE—e.g.: “Nora Mae Roberts is charged with one count of first-degree violation of a minor, involving alleged intercourse or *deviate* [read *deviant*] sex with a 17-year-old boy.” Mike Rodman, “Ex-Girls’ Basketball Coach Pleads Guilty to Sexually Violating 3 Players,” *Ark. Democrat-Gaz.*, 15 Feb. 1995, at B1.

LANGUAGE-CHANGE INDEX

deviate used as an adjective in place of *deviant*: Stage 1
Current ratio (*deviant behavior* vs.
**deviate behavior*): 185:1

B. As Nouns. Both *deviate* and *deviant* are used as (generally pejorative) nouns meaning “a person who, or thing which, deviates, esp. from normal social standards or behavior; specif., a sexual pervert” (*OED*). Although the two forms are both common, the noun *deviant*, as in *sexual deviant*, has predominated as a matter of word frequency since about 1970. *Deviant* has the advantage of deriving from the preferred adjective. (See FUNCTIONAL SHIFT.) All in all, *deviate* is best reserved for its verb function.

A few writers use **deviationist*, but that word is uncommon and ungainly enough to be labeled a NEEDLESS VARIANT.

Current ratio (*sexual deviant* vs. **sexual deviate*): 5:1

deviation; deviance; *deviancy. The general term for “an act or instance of deviating” is *deviation* <a ship’s deviation from its voyage route> <deviation from orthodox religion>. *Deviation* is more neutral in connotation than *deviance*, which means “the quality or state of deviating from established norms, esp. in social customs.” **Deviancy* is a NEEDLESS VARIANT.

Current ratio (*deviance* vs. **deviancy*): 10:1

device; devise. *Device*, n., = (1) something devised; or (2) a mechanical or electronic invention. *Devise* is predominantly a verb meaning “to invent or innovate.”

Often, though, *devise* is used when *device* is the intended word—e.g.: “Jeremiah Wood, 6, was hurt Friday evening when he fell off the fender of a tractor driven by a relative and was struck by a brush hog, a mechanical *devise* [read *device*] used for chopping weeds.” Judith VandeWater, “Two Boys Are Injured in Separate Accidents over Weekend While Visiting,” *St. Louis Post-Dispatch*, 4 June 1996, at 1.

As a legal term, *devise* is sometimes used as a noun meaning “a gift of property by will.”

LANGUAGE-CHANGE INDEX

devise misused for *device*: Stage 1
Current ratio (*ingenious device* vs.
**ingenious devise*): 749:1

deviltry; devilyr. Since the early 1800s, *deviltry* has predominated in AmE, *devilyr* in BrE. But both words commonly appear in both varieties. One possible distinction between the two forms is that *deviltry* seems to denote a less serious type of mischief—e.g.: “When it debuted during the grim depths of the war, Coward’s comedy of death and spiritualist *deviltry* drew some criticism as inappropriately morbid for the tough times.” Joan Bunke, “At the Guthrie,” *Des Moines Register*, 28 Sept. 1997, at 5. In the interests of DIFFERENTIATION, the distinction ought to be encouraged. But see **daredevilry**.

devisability; divisibility. The former means specifically “the capability of being given in a will”; the latter, much more common, means “the capability of being divided.”

devise. See **device**.

deviser; devisor; divisor. A *deviser* is someone who invents or contrives. A *devisor* is someone who disposes of property (usually land) by will. *Divisor* is a mathematical term referring to the number by which another number is divided. All three are pronounced /di-**vɪ**-zər/.

devoid, a variant of *void*, adj., is current only in the idiom *devoid of*—e.g.:

- “If voters opt for the elected board, which was drenched in politics and *devoid of* educational inspiration, many of Payzant’s reforms could come undone.” “Class in Session,” *Boston Globe*, 29 Aug. 1996, at A24.
- “Architecturally, a cathedral on this site would remain a free-standing, self-referencing monument, *devoid of* urban context.” Kevin Starr, “Where to Put Cathedral, Recreate L.A.,” *L.A. Times*, 8 Sept. 1996, at M1.

Because this phrase is a favorite of hyperbolists, it should be used cautiously.

To couple this adjective with the adverb *totally* or *completely* is to produce an extremely common REDUNDANCY, since *devoid* is an absolute adjective. (See ADJECTIVES (B).) E.g.:

- “Bursting with excess pride, and *totally devoid* [read *devoid*] of taste or restraint, Mother Ginger harbors a legion of future narcissists who will spend their lives seeking the appreciative applause so reliably delivered by ‘Nutcracker’ audiences.” Barbara Gilford, “At the Heart of ‘The Nutcracker,’” *N.Y. Times*, 4 Dec. 1994, at 22.
- “Despite the fact that Reese writes pretentiously in his column about ‘perspective’ on the Arab-Israeli conflict, in reality his column is *completely devoid* [read *devoid*] of objectivity and balance.” Ted Lapkin, “Reese’s Mideast Views Lack Context,” *Orlando Sentinel*, 18 Nov. 1996, at A11.

devotee. See -EE.

dexterous; *dextrous; dextral. *Dexterous*, the preferred spelling in both AmE and BrE, means “clever, adept, skillful, artful.” The spelling **dextrous* predominated in BrE through the late 18th century but has waned drastically in print sources since about

1800. *Dextral* means “on the right; right-handed.” See **ambidextrous**.

Current ratio (*dexterous* vs. **dextrous*): 6:1

diabetes is pronounced either /dɪ-ə-**bee**-teez/ or /dɪ-ə-**bee**-tis/.

diachronic; synchronic. A *diachronic* study is concerned with changes during a (usually specified) period of time. A *synchronic* study is concerned with the state of a subject at a given time, without reference to its historical antecedents.

DIACRITICAL MARKS, also known as “diacritics,” are orthographical marks that indicate a special phonetic quality for a given character. They occur mostly in foreign languages. But in English a fair number of imported terms have diacritical marks. Sometimes they survive indefinitely, but often they fall into disuse as terms are fully naturalized. (See GARNER’S LAW.) Nobody today, for example, writes *hôtel* or *rôle*. Although those spellings can be found in some 19th-century publications, they were falling out of fashion even then. To the extent that modern readers encounter diacritical marks, the main ones are as follows:

- **acute accent** (´): /ə-**kyoot**/. This mark generally indicates a stressed syllable or rising inflection. It sometimes appears in imported words to show that a final syllable is not silent, especially in words imported from French (as in *flambé* and *résumé*). It also appears over vowels in Spanish either to mark the syllable that has the highest degree of stress or to distinguish words otherwise identical in form but of different meaning.
- **breve** (˘): /breev/ or /brev/. This mark, used most commonly in pronunciations, indicates that a vowel is short or unstressed. That is, /bèt/ in some pronunciation guides signifies the same thing as /bet/ does in this book.
- **cedilla** (¸): /sə-**dil**-ə/. This mark appears under the French and Portuguese *c* when the letter is to be pronounced as an *s* rather than as a *k* (as in *façade*). Generally the cedilla is quickly dropped in English-language contexts—so today *facade* doesn’t usually have one. See **facade**.
- **circumflex** (ˆ): /sər-kəm-fleks/. This mark was used over vowels in ancient Greek to indicate a rising–falling tone. Today it appears most commonly over French vowels after which an *-s-* was once elided (as in *côte* [our *coast*] and *fête* [our *feast*]).
- **diaeresis [umlaut]** (¨): /dɪ-er-ə-sis/ and /uum-lowt/. The diaeresis sometimes appears in English over the second of two adjacent vowels to indicate that the vowel is treated as a second syllable (as in *Chloë* or, archaically, *coöperate* and *naïve*—but see below on the practice at *The New Yorker*). It appears in several Indo-European languages but is generally associated with German (in which it is termed an *umlaut*). See **umlaut**.
- **grave accent** (`): /grayv/. In ancient Greek, this mark signaled a lower inflection, in contrast to the higher inflection called for by the acute accent. In English, the grave is rarer than the acute accent, but it does appear on occasion to indicate a falling inflection or that a final syllable is to

be pronounced separately (as in *blessèd* or *learnèd*). E.g.: “She must retrieve her horse and leave this *cursèd* place.” Candace Robb, *The Riddle of St. Leonard’s* 197 (large-print ed. 1997). The grave accent is sometimes used in French over the vowels *a*, *e*, and *u*, and is also used in Italian.

- **háček** (ˇ): /hach-ek/. In Slavic and certain other languages, this mark is placed over a letter to show modification of the sound.
- **macron** (¯): /may-kron/ or /mak-ron/. This mark, used most commonly in pronunciations, indicates that a vowel is long. That is, in some pronunciation guides, /bôt/ signifies the same thing as /boht/ does in this book.
- **okina** (◌): /oh-kee-nə/. This character (also called a *hamzah*) appears mostly in the Arabic and Hawaiian languages. It marks the glottal stop in the Hawaiian language and is sometimes carried over into English contexts. It is similar to the grave accent but does not appear above a letter. See **Hawaii** (B).
- **tilde** (˜): /til-də/. This mark appears over the Spanish *n* to indicate the palatalized sound apparent in *señor*.

One well-known publication, *The New Yorker*, has the notable idiosyncrasy of using diacritical marks that most publications have abandoned, especially the diaeresis in place of old-fashioned hyphens (or nothing at all). While most American dictionaries recommend *cooperate*, *The New Yorker* insists on *coöperate*—e.g.: “I think if people are open and *coöperate* you get there faster.” Ken Auletta, “Beauty and the Beast,” *New Yorker*, 16 Dec. 2002, at 65, 70. Other examples of the diaeresis emerge frequently in that magazine—e.g.:

- “The postmodern enterprise was even more radical: to resist absorption or *coöptation* by an all-absorbing, all-*coöpting* System.” Jonathan Franzen, “Mr. Difficult,” *New Yorker*, 30 Sept. 2002, at 100, 108.
- “This was when vodka acquired its long-term *doppelgänger*—home brew.” Victor Erofejev, “The Russian God,” *New Yorker*, 16 Dec. 2002, at 56, 58.
- “Optimistic but never *naïve*, she was tough and comforting at the same time.” Roger Angell, “Anna Hamburger,” *New Yorker*, 16 Dec. 2002, at 40.
- “Forget superheroes, or the *reemergence* of wizards with beards down to their belts.” Anthony Lane, “Looking Back,” *New Yorker*, 16 Dec. 2002, at 106.
- “He has *reestablished* his bona fides with the heart of the Party.” Jeffrey Toobin, “Candide,” *New Yorker*, 16 Dec. 2002, at 42, 43.

This house style is out of step with general American usage.

After fretting over when and how often to use diacritical marks, one can sympathize with the mid-20th-century views of Simeon Potter: “By great good fortune English spelling has escaped those tiresome diacritical marks placed above, beneath, before or after the letter, or inserted within it, which in a greater or less degree disfigure French, German, Italian, Spanish, Czech (solely the work of Jan Hus), Polish, Norwegian, Danish, Swedish, and even modern Turkish (unadvisedly introduced by Kemal Atatürk).” *Our Language* 73 (rev. ed. 1966).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

diaeresis; *dieresis. Although American dictionaries can be found supporting both spellings, occurrences of *diaeresis* in print outnumber the competing form by a wide margin. See AE, DIACRITICAL MARKS & **umlaut**.

Current ratio: 4:1

diagnose = to identify, esp. a disease or problem. Strictly speaking, it is the disease or problem that is diagnosed, e.g.: "Eichelman went to the doctor, who didn't *diagnose* the broken bone and told the swimmer he would be back in the pool in a few days." Jason L. Young, "Senior Is Eager to Make Up for Lost Season," *Indianapolis Star*, 7 Dec. 2002, at S4.

It is a common error to make the object of this verb the patient rather than the disease—e.g.: "She helped with his story to raise awareness about Chiari, especially so doctors could *diagnose its victims* [read *diagnose it*] earlier." Jennifer Berry Hawes, "Enduring Together," *Post & Courier* (Charleston, S.C.), 1 Dec. 2002, at G1. It is much more common to see the passive construction followed by a *with*-phrase—e.g.: "It took a full two weeks before Epps was *diagnosed with* West Nile Virus." Charity Vogel, "When a Virus Kills," *Buffalo News*, 2 Oct. 2002, at B1. This idiomatic syntax is too common to be called erroneous, though a careful writer will still avoid it in formal writing. It also acquits itself of logical fault by lending rhetorical punch, since the name of the disease falls at the end of the sentence. See SENTENCE ENDS.

For more on the formation of this verb from the noun *diagnosis*, see BACK-FORMATIONS.

diagnosis; prognosis. There is an important distinction between these words. A *diagnosis* is an analysis of one's present bodily condition with reference to disease or disorder. A *prognosis* is the projected future course of a present disease, disorder, or other disadvantageous situation. E.g.: "Mr. Yeltsin did not specify his *diagnosis* or the type of procedure he will undergo, making it difficult to comment about his *prognosis*, the American doctors said." Lawrence K. Altman, "Russia's Top-Flight Cardiology Hospital," *N.Y. Times*, 6 Sept. 1996, at A6. See **prognosis**.

The plurals are *diagnoses* and *prognoses*.

DIAGONAL. See PUNCTUATION (Q).

diagram(m)er; diagram(m)ing. See **program(m)er** & SPELLING (B).

dial, vb., makes *dialed* and *dialing* in AmE, *dialled* and *dialling* in BrE. See SPELLING (B).

DIALECT. A. Definition. The term *dialect* has two main senses: (1) in the popular sense, it refers to any linguistic variety other than the standard language; (2) in the linguist's sense, it refers to any linguistic variety that is shared by a group of speakers, including the standard variety. Sense 1 tends to be a depreciatory label, since it applies chiefly to nonprestigious varieties; sense 2 tends to be neutral, since it applies to all varieties. To those who adhere to sense 1, *standard*

dialect is an OXYMORON; to those who adhere to sense 2, the phrase makes perfect sense.

Granting the utility of the dialectologist's sense 2, we have nonetheless adopted the popular sense for purposes of this book—though without denigrating the many nonstandard varieties that enrich the English language and its literature.

B. The Nature of Dialect. Dialects are mainly of two types: *regional dialects* and *class dialects*. Regional dialects result from geographic dispersion and settlement patterns. For the United States, the regional types have been carefully catalogued and charted in Frederic G. Cassidy and Joan Houston Hall's *Dictionary of American Regional English*. Class dialects can indicate upbringing or educational level, sometimes both. Over time, class dialects have eclipsed regional dialects in importance: "In the course of the history of the English language regional dialects have become less important as more and more speakers have learned to speak standard English, but class dialects have, for good or ill, become more important." G.L. Brook, *A History of the English Language* 14 (1958).

Because education typically entails the inculcation of standard language (as a result of both classroom learning and peer pressure, often more strongly the latter), what results is often a type of bidialectalism. As Otto Jespersen, one of the great linguists, put it: "People whose minds are awake and developed cannot be confined to a dialect." *Mankind, Nation, and Individual from a Linguistic Point of View* 71 (1946). So a person who grows up speaking dialect may later acquire STANDARD ENGLISH and be able to move comfortably into and out of the two linguistic varieties. This is known to linguists as "dialect-switching" or "code-switching."

No dialect is perfectly homogeneous, and it is difficult to separate regional from class dialects. Although regional variations exist in every social class (see CLASS DISTINCTIONS), these variations become less and less pronounced over the country as a whole toward the top of the social scale, where almost everyone speaks and writes a form of Standard English.

Dialectologists have arrived at two especially important conclusions. First, dialectal differences "arise not from mental or moral inferiority but from differences in cultural experience, and . . . the most divergent dialect, however ill-suited for middle-class conversation, has a dignity and beauty of its own." Raven I. McDavid Jr., "Dialect Differences and Social Differences," in *Varieties of American English* 34, 47 (Anwar S. Dil ed., 1980). Second, "anyone who cannot use the language habits in which the major affairs of the country are conducted, the language habits of the socially acceptable of most of our communities, would have a serious handicap." Charles Carpenter Fries, *American English Grammar* 13 (1940).

This book, of course, is principally about Standard English. So when the text says that a given usage is "erroneous" or "incorrect" or "not preferred," the judgment is expressed from the point of view of Standard

English. Dialectologists often point out that multiple negation (“I didn’t do nothin’”) and similar departures from Standard English are perfectly appropriate to the dialects that are being spoken. That is true enough, but it is not particularly helpful to one who strives to learn and use Standard English. That this standard may have no intrinsic superiority to dialect is beside the point: it is the national standard and the international lingua franca. As Fries put it in 1940, with what some might today consider offensive indelicacy, it is the language used by the “socially acceptable.”

Although some people regret the demise of dialects with the spread of Standard English, others are inclined to believe that this is a good thing. Otto Jespersen was among the latter: “If we think out logically and bravely what is for the good of society, our view of language will lead us to the conclusion that it is our duty to work in the direction which natural evolution has already taken, i.e. towards the diffusion of the common language at the cost of local dialects.” Otto Jespersen, *Mankind, Nation, and Individual from a Linguistic Point of View* 72 (1946). On the other hand, dialects are surprisingly hardy and perennial, as other linguists have noted: “With monotonous regularity writers on dialect say that dialects are passing out of use and that it will soon be too late to record them, but if dialects are dying they are, like King Charles II, taking an unconscionable time about it.” G.L. Brook, *A History of the English Language* 199 (1958).

C. Dialect Exemplified. There are several salient characteristics of dialect: mistakes with irregular verbs (see IRREGULAR VERBS), subject–verb disagreement (see SUBJECT–VERB AGREEMENT), misused pronouns (see PRONOUNS), double negatives, nonstandard word choices, and stigmatized pronunciations (see PRONUNCIATION). The following examples, which can occur in the uneducated speech of virtually all ethnic groups, are a few of the many speech markers that typify dialect. Many of them are not strictly limited by geography within the United States; to determine geographic dispersion, one would have to consult any of the many linguistic atlases that pinpoint the degree of distribution.

Mistakes with Irregular Verbs

- DIALECT: We haven’t drank any water yet. STANDARD: We haven’t drunk any water yet.
- DIALECT: She drug it all the way around the barn. STANDARD: She dragged it all the way around the barn.
- DIALECT: I done it. But I shouldn’t have [or of] did it. STANDARD: I did it. But I shouldn’t have done it.
- DIALECT: If I’d have [or I’d’ve or I’d of] been there, I’d have seen her. STANDARD: If I had been there, I’d have seen her.
- DIALECT: I haven’t tooken anything that didn’t belong to me! STANDARD: I haven’t taken anything that didn’t belong to me!
- DIALECT: I haven’t went there yet. STANDARD: I haven’t gone there yet.

Subject–Verb Disagreement

- DIALECT: They was there because they was going home together. STANDARD: They were there because they were going home together.
- DIALECT: She don’t know. STANDARD: She doesn’t know.
- DIALECT: You wasn’t even there. STANDARD: You weren’t even there.

Misused Pronouns

- DIALECT: Me and John are going now. STANDARD: John and I are going now.
- DIALECT: It’s hisn. No, it’s ourn. It ain’t hern. STANDARD: It’s his. No, it’s ours. It isn’t hers.
- DIALECT: Them books are good. STANDARD: Those books are good.

Multiple Negation

- DIALECT: We don’t have no apples. STANDARD: We don’t have any apples.
- DIALECT: He hadn’t done nothing wrong. STANDARD: He hasn’t done anything wrong.
- DIALECT: It don’t make no never-mind. STANDARD: It doesn’t make any difference.

Word Choice

- DIALECT: This here chili is too hot. STANDARD: This chili is too hot.
- DIALECT: Where’s it at? STANDARD: Where is it?
- DIALECT: My teacher learned me how to add. STANDARD: My teacher taught me how to add.
- DIALECT: Seein’ as how we’re fixin’ to leave, we better eat up. STANDARD: Since we’re getting ready to go, we’d better finish eating.
- DIALECT: He was hollerin’ up a storm. STANDARD: He was yelling quite loudly.
- DIALECT: Lessin you wanna stay here, I’d like you to go with me. STANDARD: Unless you want to stay here, I’d like you to go with me.
- DIALECT: I like to got ran over. STANDARD: I almost got run over.
- DIALECT: I seen him run over yonder. STANDARD: I saw him run over there.

Pronunciations

	STANDARD	DIALECTAL
asked	/askt/	/ast/ or /akst/
can’t	/kant/	/kaynt/ or /kent/

I	/i/	/ah/
there	/thehr/	/thahr/
these	/theez/	/deez/
umbrella	/əm-brel-ə/	/əm-brel-ə/
wash	/wahsh/	/wahrsh/
window	/win-doh/	/win-dər/
wrestling	/res-ling/	/ras-lin/
yellow	/yel-oh/	/yel-ə/ or /yel-ər/

D. Bibliography. There is a rich body of literature on American, English, and other dialects. The following books make for a good starting point:

- G.L. Brook, *Varieties of English* (1973).
- Craig M. Carver, *American Regional Dialects* (1987).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- Frederic G. Cassidy & Joan Houston Hall eds., *Dictionary of American Regional English* (1985–2012).
- Timothy Shopen & Joseph M. Williams eds., *Standards and Dialects in English* (1980).
- Peter Trudgill, *On Dialect: Social and Geographic Perspectives* (1983).
- Harold Wentworth, *American Dialect Dictionary* (1944).
- Walt Wolfram & Natalie Schilling-Estes, *American English* (1998).

dialectal; dialectical; dialectic. These words are frequently confused. The adjective for *dialect* (= a regional variety of language) is *dialectal* (/dɪ-ə-**lɛk**-təl/). The adjective for *dialectics* (= the art of argument) is *dialectical* (/dɪ-ə-**lɛk**-ti-kəl/). Broadly speaking, *dialectical* means “of, relating to, or involving logical argument, historical development, or the resolution of contradictory ideas.” The term is usually confined to philosophical contexts.

The term *dialectical* is often misused for *dialectal*—e.g.:

- “Among the dozens of Russian-English dictionaries in her library, none specifically addressed idiom, that expressive, *dialectical* [read *dialectal*] language unique to a community or class of people.” Paul Grondahl, “No Rushin’ the Russian,” *Times Union* (Albany), 5 June 1995, at C1.
- “‘Waiting on’ is a *dialectical* [read *dialectal*] locution on the rise and splitting its meaning.” William Safire, “On Language,” *N.Y. Times*, 12 Nov. 1995, § 6, at 18.
- “‘Cretin’ is normally thought to come from the Swiss French *dialectical* [read *dialectal*] term *crestin*, usually thought to be the local word for Christian.” Letter of Donald F. McCabe, “‘Cretin’ from ‘Christian,’” *Wash. Post*, 9 May 1996, at A22.

Dialectic—a noun denoting the art of rigorously logical argumentation—is, when used as an adjective, a NEEDLESS VARIANT of *dialectical*.

LANGUAGE-CHANGE INDEX
dialectical misused for *dialectal*: Stage 1

dialogue; dialog; duologue. *Dialogue* = (1) a conversation between two or more people; or (2) the exchange of ideas. The longer spelling is preferred. Despite the common misunderstanding, the prefix is *dia-* (across), not *di-* (two). For a comment on the potential decline of the *-ue* form, see -AGOG(UE). Cf. **catalog(ue)**.

Duologue, most commonly a theatrical term, means “a conversation between two people only.” It is often contrasted with *monologue*—e.g.:

- “Schnittke and his librettist Jurgen Kochel reduce the tale to a series of monologues and *duologues* involving Faust, Mephistopheles and the latter’s female half, Mephistophela.” Andrew Clark, “Schnittke’s ‘Faust’ Premiered—Hamburg Opera,” *Fin. Times*, 29 June 1995, at 13.
- “Originally a virtuoso *duologue*, the material here is divided among eight splendid comediennes under Laura Marchant’s efficient direction.” David C. Nichols, “Fertile Feminist Insight Enlivens ‘Parallel Lives,’” *L.A. Times*, 9 Aug. 2002, at F32.

When used as a verb, *dialogue* is a particularly grating VOGUE word that has risen greatly in popularity since 1960—e.g.:

- “[Karl Ludvig Reichelt] *dialogued* [read *spoke*] with the monks, studied their practices, and participated in their

rituals and meditations, always eager to learn.” Notto R. Thelle, “Changed by the East,” *Int’l Bull. of Missionary Research*, 1 July 2006, at 115.

- “The United States *dialogued* [read *spoke*] with the Soviet Union, even during the most dangerous phases of the Cold War, and the USSR was a far greater threat to world peace than Iran will ever be.” Pierre Atlas, “Cease Fire. Now!” *Chicago Sun-Times*, 6 Aug. 2006, at B2.
- “Together these aspects of engagement help us to better understand the climate of engagement within which this particular online group *dialogued together about* [read *discussed*] their life histories.” Mary Ziegler et al., “Creating a Climate of Engagement in a Blended Learning Environment,” *J. of Interactive Learning Research*, 22 Sept. 2006, at 295.

LANGUAGE-CHANGE INDEX

dialogue as a verb, or **dialoguing* as a gerund: Stage 2

diarrhea; diarrhoea. The term denoting the physical symptom of abnormally frequent bowel movements consisting of watery stools is predominantly spelled *diarrhea* in AmE and *diarrhoea* in BrE. The British spelling was usual from the 18th century through the early 20th, but in AmE *diarrhea* became the predominant spelling about 1915, and that spelling has become predominant today in World English.

Current ratio: 3:1

dice. In formal usage, the numbered cube used in games of chance is called a *die*, and two or more are *dice*. But the word *dice* is often used sloppily as a singular—e.g.:

- “Risks are calculable and can be insured against—for instance, the chance of a normal single *dice* [read *die*] throwing a six is one in six.” Samuel Brittan, “Some Ruminations on Risk,” *Fin. Times*, 11 Apr. 1996, at 12.
- “You win the fight by rolling one *dice* [read *die*] two times.” Dean Weesner, “By Jove Rates an A,” *Wis. State J.*, 23 Apr. 1996, at C2.

Julius Caesar’s *the die is cast* (i.e., one of the pair of dice is thrown) is sometimes mistakenly thought to mean that a machinist’s cutting or stamping device has been cast in the foundry.

LANGUAGE-CHANGE INDEX
dice as a false singular: Stage 2

dicey (= risky; unpredictable) has been so spelled in all varieties of English since the word was coined by mid-20th-century aviators. But the misspelling **dicy* has begun to appear in 21st-century print sources.

Current ratio: 46:1

dicta. See **dictum**.

diction = (1) enunciation; distinctness of pronunciation; or (2) word choice. Often sense 2 is overlooked. This book, in large measure, addresses problems of diction in that sense.

dictum. **A. Generally.** *Dictum* = (1) an authoritative pronouncement; (2) a statement in a court decision that is of lesser authority than law because it is not part of the court’s legal ruling; or (3) a customary saying. The word can carry different connotations, as the varied senses indicate.

In sense 1, *dictum* denotes a statement that carries the weight of a rule—e.g.: “William Morris, the 19th-century British designer, offers one of the best ideals for creating a satisfying home: ‘Have nothing in your house that you do not know to be useful or believe to be beautiful.’ . . . Morris’s *dictum* is constantly reflected in the pages of glossy shelter magazines, where serene, uncluttered rooms have been arranged to perfection by a small army of decorators and stylists and captured on paper by artful photographers.” Marilyn Gardner, “As Trees Shed Leaves, People Shed ‘Stuff,’” *Christian Science Monitor*, 9 Oct. 2002, at 14.

In sense 2, *dictum* is a shortened form of *obiter dictum* (L. “said in passing”) and denotes part of a court ruling that contains discussion and comments that are not a necessary part of the court’s ruling. In this sense, *dictum* is less than a rule: it may be persuasive as an argument, but it is not binding legal precedent—e.g.: “Access Now also cites a 1999 opinion by Richard Posner, the chief judge for the 7th U.S. Circuit Court of Appeals in Chicago. An influential conservative, Posner said in a nonbinding *dictum* that the ADA applies to Web sites.” Matthew Haggman, “South Florida Advocacy Group for Disabled Tests Bounds of ADA with Suits Against Airlines over Web Sites,” *Broward Daily Bus. Rev.*, 2 Oct. 2002, at A1.

In sense 3, the word denotes a truism—e.g.: “The more fastidious response is expressed in the traditional *dictum* ‘Two wrongs don’t make a right.’” Randy Cohen, “Everyday Ethics,” *Chicago Trib.*, 3 Oct. 2002, Tempo §, at 2. (Given this sense of *dictum*, the word *traditional* is redundant in that sentence.)

B. Singular and Plural. The plural of *dictum* is *dicta*. **Dictums* is an uncommon variant that barely sprouted in the latter half of the 20th century. (See PLURALS (B).) *Dicta* is sometimes misused as a singular noun—e.g.: “However, the court’s *dicta*, while reporting its case research in the Farley decision, *places* [read *place*—or else *dictum* . . . *places*] Montana in support of a belief held by approximately 16 states that common minerals mined as construction materials . . . are not minerals for the purposes of conveyance in deeded mineral rights.” R. Lee Aston, “Assays from the Legal Vein,” *Engineering & Mining J.*, July 1996, at N16.

Able writers generally have no difficulty getting the number correct—e.g.:

- “Of course, [Governor George] Allen is a public figure, and his public *dicta* are there for all to hear on television and radio.” Jeff E. Schapiro, “Paramilitary Group Seeks Respectability by Association,” *Richmond Times-Dispatch*, 11 Aug. 1996, at F2.
- “All of this is delivered in a memorably laconic manner, grandfatherly *dicta* and pedantic film-buff citations sitting cheek by jowl.” Iain Bamforth, “Cinema Verities,” *N.Y. Times*, 1 Sept. 1996, § 7, at 11.

LANGUAGE-CHANGE INDEX
dicta misused as a singular in place of *dictum*: Stage 1

***didn’t ought to** is nonstandard for *shouldn’t*—e.g.:

- “The cumbersome procedures will be a very reasonable price to pay for stopping people from doing what they *didn’t ought to* [read *shouldn’t*].” Karl Dallas, “Gupta Technologies Inc.’s Data Base Management System,” *PC User*, 3 July 1991, at 61.
- “Council chairman Peter Randle says Kings has never been King’s, and it *didn’t ought to* [read *shouldn’t*] start now with this apostrophe nonsense.” David Newnham, “Diary: Dotty Tale of the Dot with a Curved Tail,” *Guardian*, 19 Oct. 1994, at 22 (perhaps a facetious example).

Oddly, this expression reached its zenith in frequency of occurrence during the 1920s. It has since subsided. See DOUBLE MODALS.

LANGUAGE-CHANGE INDEX
**didn’t ought to* for *shouldn’t*: Stage 1
Current ratio (*shouldn’t* vs. **didn’t ought to*): 4,889:1

didn’t used to. See **used to (B)**.

die, n. See **dice**.

die, v.i. A. Preposition with. *Die of* (= to die as a result of [a disease or ailment]) is the standard idiom. *Die from* is also common, especially when the death results from physical trauma <died from injuries received in a traffic accident>. *Die with* is nonstandard—e.g.: “And I felt them two years ago, holding me up and keeping me strong at the memorial service after his dad *died with* [read *died of*] cancer.” Sharon Randall, “Memories,” *Topeka Capital-J.*, 19 Sept. 2000, at C1.

Even so, *die with AIDS* is not uncommon: one doesn’t die of it. AIDS weakens the immune system so much that you die of something else. Yet *died of AIDS* is far more common in print than *died with AIDS*.

LANGUAGE-CHANGE INDEX
die with misused for *die of*: Stage 2
Current ratio (*died of* vs. *died with*): 7:1

B. And dye, v.t. The verb *dye* (= tint or treat with a coloring agent) is sometimes mistakenly written *die*—e.g.:

- “Berwyn’s Martinez (29–2), who *died* [read *dyed*] his hair bright green before the bout, scored his 16th knockout.” Larry Hamel, “Martinez Beats Nunez in TKO,” *Chicago Sun-Times*, 15 Nov. 1998, Sports §, at 14.
- “But the slippery editor *died* [read *dyed*] his hair and managed to blend in with fleeing refugees to arrive safely in Macedonia and take up his old post in exile.” Philip Smucker, “Exiled Kosovars Regain Leading Press Voice,” *Pitt. Post-Gaz.*, 27 Apr. 1999, at A4.
- “He *died* [read *dyed*] his hair blond and has used the remarkable resemblance to get in audition doors.” Rick Bentley, “Star Potential,” *Fresno Bee*, 21 Sept. 1999, at E1.

See **dying**.

LANGUAGE-CHANGE INDEX
die misused for *dye*: Stage 1

C. Die off. See PHRASAL VERBS.

die is cast. See **dice & aleatory**.

die off. See PHRASAL VERBS.

***dieresis.** See **diaeresis.**

dietitian (= an expert in how foods affect health) is the standard spelling in all major varieties of English. **Dietician* is a variant.

Current ratio: 3:1

differ. When it comes to one's approach to a subject, to differ *from* a person is merely to be unlike the other. But to differ *with* a person is to take issue explicitly with the other. In the following passage, the meaning is a little obscure. Queenie Leavis, F.R. Leavis's wife, seems less justifiably upset if *differ from* is correctly used: "The trust [the F.R. Leavis Lectureship Trust] appointed a lecturer who ventured to *differ from* Leavis on literary matters, and whose private income aroused Queenie's envy (apparently Leavis did not dare to tell her of the appointment, which made it worse when she found out)." John Carey, "The Prose and Cons," *Sunday Times* (London), 6 Aug. 1995, § 7, at 3. If the lecturer had *differed with* Leavis, then Queenie's upset might be more understandable.

The phrasing *differ from* typically appears whenever two things are unlike—e.g.: "Assisted suicide *differs from* euthanasia, in which the doctor may take an active role in the death, such as by administering lethal injection." Bob Groves, "Doctor-Assisted Suicide Called an Obligation," *Record* (N.J.), 20 Sept. 1996, at A5.

difference; discrepancy; disparity. A difference—not really a discrepancy or a disparity—exists between these words, but it's largely one of connotation. *Difference* is the most general of the three, meaning "the quality or state of being unlike or dissimilar" <a difference of less than \$20> <a difference of opinion>. *Discrepancy* suggests that the difference is between things that should be consistent <a discrepancy in the bank statements>. *Disparity* usually implies that the difference is inequitable or unfair <a disparity in the treatment of men and women>. See **differential** (A).

different. A. **Different from; different than; different to.** *Different than* is often considered inferior to *different from*. The problem is that *than* should follow a comparative adjective (*larger than, sooner than, etc.*), and *different* is not comparative—though, to be sure, it is a word of contrast. *Than* implies a comparison, i.e., a matter of degree; but differences are ordinarily qualitative, not quantitative, and the adjective *different* is not strictly comparative. Hence writers should generally prefer *different from*—e.g.: "He performed to everything from jazz to the bossa nova to Brahms and Scarlatti, establishing a style very *different from* that of Bill (Bojangles) Robinson, Fred Astaire and the Nicholas Brothers." "Paul Draper," *Dayton Daily News*, 21 Sept. 1996, at B3.

Still, it is indisputable that *different than* is sometimes idiomatic, and even useful, since *different from* often cannot be substituted for it—e.g.: "This

designer's fashions are typically quite *different* for men *than* for women."

Also, *different than* may sometimes usefully begin clauses if attempting to use *different from* would be so awkward as to require another construction—e.g.:

- "Life for Swann, who held out to sign a two-year, \$7 million contract in August, is a lot *different than* it was for him in Lynn." Steve Conroy, "Ugly Duckling Becomes Swann," *Boston Herald*, 13 Sept. 1996, at 104.
- "But the Pac-10 and Big Ten might have a *different goal than* we do." Don Borst, "Big 12 Joins Fold for Super Alliance," *News Trib.* (Tacoma), 21 Sept. 1996, at C8 (quoting Bill Byrne).

When *from* nicely fills the slot of *than*, however, that is the idiom to be preferred—e.g.:

- "The spell checker it invokes is completely *different than* [read *different from*] that which the others share." Paul Bonner, "On Windows," *Computer Shopper*, Oct. 1996, at 564.
- "One could argue that . . . Russia is no *different than* [read *different from*] other nations." Max Jakobson, "Finland: A Nation That Dwells Alone," 19 *Wash. Q.* 37 (1996).
- "The selection of the federal jury in Puerto Rico following the state trial would be no *different than* [read *different from*] selecting a second jury for Tsarnaev after his initial death sentence had been publicized." Milton J. Valencia, "Killer's Appeal Could Guide Tsarnaev's Plan," *Boston Globe*, 23 Aug. 2015, at A1.

Different to is common and unobjectionable BrE—e.g.: "The trouble is that attending to the parts is quite *different to* surveying the whole." Rob Cowan, "Classical Review," *Independent*, 5 Dec. 1997, at 22.

LANGUAGE-CHANGE INDEX

different than for *different from*: Stage 3

Current ratio (*different from* vs. *different than*): 11:1

B. Than with Adverbial Forms. With the adverb *differently*, the word *than* often follows—a usage common since the 17th century. This usage is especially common in speech, but it also appears in print—e.g.:

- "In the future, however, HARP will be handling things *differently than* it did in the Quick case." Marion Gammill, "Remodel Morass Has Client Seeing Red," *Fresno Bee*, 1 Sept. 1996, at B1.
- "But he will be going at things a bit *differently than* in past years." Steve Carlson, "Virginia Tech Touts Cornell Brown as Its Best Player Since Bruce Smith," *Virginian-Pilot* (Norfolk), 6 Sept. 1996, at C1.

When no independent clause immediately follows *differently*, though, *from* works well and is preferable—e.g.:

- "Why should artists be treated any *differently than* [read *differently from*] scientists?" Roche Schulfer, "Defending NEA," *Chicago Trib.*, 21 Sept. 1996, at 23.
- "We found that businesspeople who have been dressing casually for five years react to salespeople's dress *different than* [read *differently from*] those who recently have gone casual." John T. Molloy, "Car Dealer Not Sold on Adopting Clients' Casual Style," *Houston Chron.*, 26 Sept. 1996, Fashion §, at 6.

In terms of word frequency in modern print sources, *different from* is more common than *differently than*. The difference is less stark with the adjective *different*

(which more than six times as commonly takes *from* as opposed to *than*).

LANGUAGE-CHANGE INDEX

1. *differently than* preceding an independent clause:

Stage 5

Current ratio (*differently than they did* vs. *differently from how they did*): 21:1

2. *differently than* not preceding an independent clause: Stage 2

Stage 2

Current ratio (*differently from him* vs. **differently than him*): 10:1

C. Three different, etc. When following a number, *different* is sometimes a superfluity <Bennett backed Forbes as a candidate for five different reasons>. Sometimes, however, the word *different* adds a desirable emphasis <scientists examined the problem using three different methods>. The word is emphatic in the same way as *distinct*. In fact, if you wouldn't feel comfortable replacing *different* with *distinct*, you shouldn't be using *different*.

D. And differing. The difference between the adjective *different* and the participle *differing* is the difference between the verb phrases *differ from* and *differ with*. The first describes unlike things <Chevys are different from Fords>. The second describes unlike thinking <Democrats and Republicans have differing opinions>. According to the *OED*, the use of *differing* in the sense of "different" was "very common in the 17th and early 18th" centuries but is now rare or obsolete. That assessment, suggesting a marked DIFFERENTIATION between the words, is unduly sanguine. In fact, the imprudent use of *differing* for *different* is not rare at all in modern print sources—e.g.:

- "Bridge Builders is a program started by Mystrom that brings families from *differing* [read *different*] ethnic backgrounds together in social settings." Don Hunter, "Forceful Personality Creates Fans and Foes," *Anchorage Daily News*, 25 Mar. 2003, at B1.
- "The quarter-horses . . . all leave the starting gate with *differing* [read *different*] sizes and styles." Darren Hunt, "Springing into Action," *El Paso Times*, 26 Mar. 2003, at C1.
- "He objected to the *differing* [read *different*] wage requirements for rural and urban areas, saying it sends a message that rural workers are worth less than urban workers." Leslie Reed, "Measure to Alter Tax Breaks Advances," *Omaha World-Herald*, 26 Mar. 2003, at B1.

differentia (= a distinguishing characteristic), a technical term dating from the 16th century, has predominantly made the plural *differentiae* (/dif-ə-rent-shi-ee/) since the mid-19th century—though *differentias* was in frequent use before that time. See PLURALS (B).

Current ratio (*differentiae* vs. *differentias*): 8:1

differentiable. So formed—not **differentiatable*. See -ABLE (D) & -ATABLE.

Current ratio: 971:1

differential. A. And difference. Traditionally, the noun *differential* had only specialized mathematical, biological, and mechanical senses. As a popularized technicality, it was extended to mean "a difference in wages or prices" <a port differential between tariff rates>. E.g.: "Drivers receive only straight time for the extra day, with no pay *differential*." Michael Davis, "Ryder, Union Still Troubled," *Tennessean*, 15 Jan. 1998, at E1.

But the word's intrusion into the domain of *difference* should stop there. The following use of *differential* was ill-advised: "'Julie's Unicorn' is still another story that deserves whatever time you spend on it. I'd like to hear this one read aloud, and hang the *time differential* [read *time difference* or *difference in time*]." Jim Hopper, "Eccentric Orbits," *San Diego Union-Trib.*, 14 Dec. 1997, Books §, at 7.

B. And different. *Differential*, adj., = (1) of, exhibiting, or depending on a difference; or (2) constituting a specific difference. The adjective is less often misused than the noun. Sense 1 is more usual—e.g.: "Town Council President Paul Ash, who lived in Burbank—where residents get preferential treatment in their own city programs—said while he supported the *differential* treatment there, he doesn't agree with it in Stevenson Ranch." Naush Boghossian, "Is There Fair Play in Parks?" *Daily News* (L.A.), 8 Dec. 2002, at C1.

DIFFERENTIATION is the linguistic process by which similar words, usually those having a common ETYMOLOGY, gradually diverge in meaning, each one taking on a distinct sense or senses. The pair *beside* and *besides* provide a good example. They're etymologically identical (fr. OE *be sidan* "by the side of"). *Beside* has kept the original sense. But *besides*—once interchangeable with *beside*—is now restricted to the sense (1) "other than; in addition to" <we have much more besides books> or (2) "beyond; apart from" <I don't need anything besides this>. Another example: *human* and *humane* were used indiscriminately up to the 18th century. During the 1700s, *humane* took on the sense "merciful," while *human* became the general adjective to describe *Homo sapiens*.

Differentiation may result from differently suffixed forms that develop distinct meanings, as with *derisive* and *derisory*. Or it may result from differently prefixed forms, as with *heritable* and *inheritable*. Many examples involve PHRASAL VERBS that come to mean something different from the base verbs; for example, *die off* is distinguished from *die*; *face up to* from *face*; *lose out* from *lose*; and *pay up* from *pay*. Still others involve a distinction based on the choice of preposition after a verb, as with *acquiesce in* vs. *acquiesce to* (see **acquiesce**).

Although many by-forms undergo differentiation, many others don't. *Investigative* and *investigatory*, for example, have never been semantically marked off

from each other. Nor have *analytical* and *analytic*, *channel* (vb.) and *channelize*, or *demagoguery* and *demagogy*. When no distinction emerges, the less common form can be labeled a NEEDLESS VARIANT.

The true stylist necessarily appreciates why differentiation enriches the language. This appreciation can lead to a continual disenchantment with the forces—such as SLIPSHOD EXTENSION and WORD-SWAPPING—that are constantly being exerted on language. Richard Grant White, a 19th-century usage critic, extolled differentiation and condemned muddle (in the heavy prose typical of the time): “The desynonymizing tendency of language enriches it by producing words adapted to the expression of various delicate shades of meaning. But the promiscuous use of two words each of which has a meaning peculiar to itself, by confounding distinctions impoverishes language, and deprives it at once of range and of power.” *Words and Their Uses, Past and Present* 161 (2d ed. 1872).

What follows is a list of words that, having undergone some degree of differentiation, are discussed in their appropriate places in this book. The entries can be found at the word in the left-hand column:

acquiesce in	acquiesce to	
alien from	alien to	
amalgam	amalgamation	
amicable	amiable	
apology	apologia	
appertain	pertain	
architectural	architectonic	
artist	artisan	
ashen	ashy	
beauteous	beautiful	
carat	karat	
caulk	calk	
ceremonial	ceremonious	
champ	chomp	
cherubs	cherubim	
clinch	clench	
collegial	collegiate	
comment	commentate	
competence	competency	
concision	conciseness	
congenial	genial	
content (n.)	contents	
conterminous	coterminous	
conversant in	conversant with	
corporeal (adj.)	corporeal	
declarative	declaratory	
dependence	dependency	
deportation	deportment	
derisive	derisory	
deviltry	devilry	
disorganized	unorganized	
dissatisfied	unsatisfied	
divestiture	divestment	
dower	dowry	
earthen	earthy	earthy
effect (vb.)	effectuate	
elliptic	elliptical	
emigrant	émigré	
enormity	enormousness	
envision	envisage	

envoi	envoy	
estimable	estimatable	
expectancy	expectation	
farther	further	
fatal	fateful	
feign	feint	
fictitious	fictive	fictional
financer	financier	
gabardine	gaberdine	
heritable	inheritable	
homely	homey	
inadvertence	inadvertency	
incident to	incidental to	
incredible	incredulous	
individualize	individuate	
insurgence	insurgency	
junta	junto	
legitimate (vb.)	legitimize	
lineage	linage	
luxurious	luxuriant	
mandatory	mandatary	
manikin	mannequin	
mayhem	maim	
monotonous	monotonic	
mustache	mustachio	
objectify	objectivize	
observance	observation	
paean	paeon	
peaceable	peaceful	
periodic	periodical	
pommel	pummel	
possessive	possessory	
prize (vb.)	prize	
prohibitive	prohibitory	
refractory	refractive	
reparable	repairable	
repetitive	repetitious	
retaliatory	retaliative	
rhyme	rime	
sarcophagus	sarcophagous	
seise	seize	
sensual	sensuous	
sergeant	serjeant	
spurt	spirt	
sublimate	sublime (vb.)	
suppositious	supposititious	

differently. See **different (B)**.

differently abled. See EUPHEMISMS.

different than. See **different (A)**.

differing. See **different (D)**.

***diffusable.** See **diffusible**.

diffuse; defuse, vb. To *diffuse* something is to disperse it from a single source. To *defuse* is to make something threatening safe, especially a dangerous situation or a bomb (by deactivating it).

Diffuse can have very different connotations, depending on its context, because of how dispersal can work. When dye is dropped into water, as it *diffuses* it both increases (in apparent size) and decreases (in concentration). Similarly, light that is *diffused*, as through a window shade, is made softer. But when

the thing being *diffused* is not diminished by being spread—literacy or religion, for example—it grows in both size and strength. So we find a connotation of building rather than weakening in the Carnegie Foundation's mission of promoting "the advancement and *diffusion* of knowledge and understanding."

The notion that something *diffused* is softened like filtered light may explain why some writers misuse *diffuse* for the similar-sounding *defuse*—e.g.:

- "Leaders were hopeful last week that the agreement would *diffuse* [read *defuse*] the possibility of violence at today's march." Joe Hallett, "Cincinnati: Has Anything Changed?" *Columbus Dispatch*, 7 Apr. 2002, at A1.
- "With almost 1 million troops stationed on both sides of the India–Pakistan border and with Pakistan having recently test-fired another round of missiles, Deputy Secretary of State Richard Armitage and Defense Secretary Donald Rumsfeld were sent to the region for emergency exercises in diplomacy to try to *diffuse* [read *defuse*] tensions." "The India–Pakistan War Machine," *Wash. Times*, 5 June 2002, at A16.
- "Now the three-person squad has a bomb suit, X-ray systems and other sophisticated tools to *diffuse* [read *defuse*] bombs and check suspicious packages." Michelle Sutherland, "Officer Trains for Bomb Team," *Daily Oklahoman*, 13 June 2002, Norman Today §, at 1.

LANGUAGE-CHANGE INDEX
diffuse misused for *defuse*: Stage 1

diffusible (= capable of being readily scattered or spread) has been so spelled since the 18th century—not **diffusable*.

Current ratio: 21:1

dig > dug > dug. The inflections weren't always so. A verse in the King James Version of the Bible reads: "And Isaac *digged* again the wells of water, which they had *digged* in the days of Abraham his father." Genesis 26:18. And another: "He is like a man which built a house and *digged* deep, and laid the foundation on a rock." Luke 6:48. Altogether, 35 biblical verses use *digged*. Today, however, *digged* is dialectal. See IRREGULAR VERBS.

***digamy.** See **bigamy**.

digestible /di-jes-ti-bəl/ is so spelled—not **digestable*. See -ABLE (A).

Current ratio: 145:1

digestion (= [1] the body's transformation of food into useful substances, or [2] the ability of one's body to make food undergo this transformation) is preferably pronounced /di-jes-chən/—not /dɪ-jes-chən/. And the pain known as *indigestion* is preferably /in-di-jes-chən/—not /in-dɪ-jes-chən/.

The corresponding verb *digest* is preferably /di-jest/ and the adjective *digestive* /di-jes-tiv/.

Yet the noun *digest* (= an abstract or synopsis of a book, report, etc.) is pronounced /dɪ-jest/.

digitize; digitalize. *Digitize* has led two lives. In its first, it meant "to point at" or "to manipulate with the fingers." That sense is rare today, but the computer age has found a new use for the word: "to convert into a binary string of data." The connection with the root word *digit* is that the binary on and off signals are represented by zeros and ones in the resulting code.

Digitalize, a medical term dating from the 1920s, means "to give digitalis to," referring to the drug derived from the digitalis plant and used in treating heart conditions. Since the reincarnation of *digitize*, however, *digitalize* has been invading its territory as a variant—e.g.:

- "[Mayor Michael Bloomberg] said the high-tech scheme, which would *digitalize* [read *digitize*] patient records, would save 'hundreds of millions of dollars.'" Stephanie Gaskell & Carl Campanile, "Mike Has \$100M Rx for Healthcare," *N.Y. Post*, 25 Oct. 2005, at 24.
- "The upgrade also included a project to *digitalize* [read *digitize*] the station's archives and uploading broadcast town meetings to the Internet for on-demand viewer access." Derrick Perkins, "Salem Community TV Director Outlines Future Upgrades," *Union Leader* (Manchester, N.H.), 24 June 2008, at B2. (In that sentence, *uploading* should be to *upload* for reasons of PARALLELISM.)

There are two problems with having the two words bear the same meaning. First, because *digitalize* has a distinct (if specialized) sense of its own, keeping the words separate serves DIFFERENTIATION. Second, *digitize* is used more than ten times as often as *digitalize* in the binary-code sense, making the latter a NEED-LESS VARIANT.

LANGUAGE-CHANGE INDEX
digitalize misused for *digitize*: Stage 1

Current ratio (*digitized data* vs.
**digitalized data*): 17:1

dignity. *Dignity* is a quality one possesses. It is not a synonym for *respect*, so it's mangled in the phrase **treat with dignity*—e.g.:

- "Whatever the parent's limitations, Grathwol encourages caregivers to treat him or her with *dignity* [read *respect*]." Gail Rosenblum, "Losing Her Sight, but Not Her Vision," *Star Trib.* (Minneapolis), 3 June 2006, at E3.
- "[T]hose with legitimate needs would like the pleasure of dealing with officials who treat them with *dignity and respect* [read *respect*]." Jarvis DeBerry, "When Did Every Victim Become a Criminal?" *Times-Picayune* (New Orleans), 15 Aug. 2006, Metro §, at 7.

The undignified phrase is spreading in American print sources.

LANGUAGE-CHANGE INDEX
**treat with dignity* for *treat with respect*: Stage 1
Current ratio (*treat with respect* vs.
**treat with dignity*): 10:1

digraph. See **diphthong (B)**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

dike; dyke. *Dike* (= [1] a wall or bank to keep back water and prevent flooding, or [2] a protective barrier or obstacle) is so spelled in AmE—though it is *dyke* in BrE. On this point as on so many others, though, BrE is moving toward the AmE spelling: *finger in the dike* (= a small action to prevent a catastrophe) is the vastly preponderant spelling both in AmE and in World English, and it threatens to become so in BrE.

In AmE, *dyke* is a DYSPHEMISM for *lesbian*. It is best abstained from if one seeks to avoid giving offense.

dilapidation. So spelled. **Delapidation* is a common misspelling.

Current ratio: 68:1

dilation; dilatation. Both forms may mean: (1) “expansion”; (2) “in medical practice, the enlargement of a body part (as a limb, cavity, or vessel)”; or (3) “speaking or writing at length.” Although *dilatation* might be considered etymologically superior, *dilation* is more common today in every sense in most varieties of English, especially AmE. E.g.:

- “A sudden *dilation* of facial blood vessels causes a blush.” Paul Donohue, “Diet May Affect Blushing,” *Sun-Sentinel* (Ft. Lauderdale), 17 July 1994, at E2.
- “Some of those responses are *dilation* of pupils, heart rate increase, contraction of muscles and filling the lungs with air.” “A Collectible Well Worth Saving,” *Fresno Bee*, 5 Sept. 1994, at A2.

Still, *dilatation* often occurs, especially in BrE and in names of medical conditions—e.g.:

- “There were several areas where points that could have been made simply in a couple of sentences seemed to have suffered toxic *dilatation* into whole paragraphs.” Ian Forgacs, “Inflammatory Bowel Disease: From Bench to Bedside,” *Lancet*, 25 June 1994, at 1623.
- “Dog bloat.—The technical term is gastric *dilatation* volvulus, and it’s common in large dogs.” “Dog-Eat-Dog World Breeds Emergencies,” *Rocky Mountain News* (Denver), 29 July 1994, at D2.

Despite its frequency, this longer form might conveniently be labeled a NEEDLESS VARIANT, if it weren’t for its prevalence in medical usage.

Strangely, a misconception is afoot that *dilation of the eyes* means “constriction or narrowing of the pupils,” when in fact just the opposite is meant. To *dilate* on a subject is to expand on it, and for one’s pupils to *dilate* (e.g., from being in the dark or from the use of certain drugs) is likewise for them to expand.

The words are pronounced /dɪ-**lay**-shən/ and /dɪ-lə-**ay**-shən/.

Current ratio (*dilation* vs. *dilatation*): 1.2:1

dilatory (= [1] tending to delay, or [2] tending to cause dilation) is now occasionally misused for *deleterious* (= harmful)—e.g.:

- “Anti-takeover measures often have a *dilatory* [read *deleterious*] effect on a company’s stock.” Heather Harreld, “Stock Dips, Takeover Guard on Deck,” *Triangle Bus. J.*, 21 Apr. 1995, at 1.

- “Pregnant substance-abusing women and their children have been vulnerable, not only because of the potential *dilatory* [read *deleterious*] effects of the drugs on them . . . but especially because of the blameful public attitude toward these women.” David Lewis, “Pregnant Substance Abusers Need Our Help,” *Brown Univ. Dig. of Addiction Theory and Application*, 1 Jan. 1998, at 12.

The pronunciation is /dɪ-lə-tor-ee/.

LANGUAGE-CHANGE INDEX

dilatory misused for *deleterious*: Stage 1

dilemma = a choice between two unpleasant or difficult alternatives. This word should not be used by SLIPSHOD EXTENSION for *plight* or *predicament*. Originally a Greek word meaning “a double assumption,” the word often appears in the colorful CLICHÉ *horns of a dilemma*—e.g.: “News media moguls find themselves on the *horns of a dilemma*. They all feel they must have a presence on the Internet, but none has yet figured out how to make money there.” T.R. Reid & Brit Hume, “All the News That’s Fit to Pay For,” *Buffalo News*, 20 Aug. 1996, at E8. (That situation leaves them with two bad options: be unavailable on the Internet or lose money.)

The adjective is *dilemmatic*—e.g.: “Naturally, working with an interior designer can get you off the *dilemmatic* hook—just drop a few buzzwords like ‘palazzo,’ ‘knotty pine,’ and ‘Regency.’” Victoria Lautman, “Spinning the Style Dial,” *Chicago Trib.*, 22 Sept. 1996, Home Design Mag. §, at 8.

LANGUAGE-CHANGE INDEX

dilemma in reference to a problem or predicament not involving a clear choice between alternative courses of action: Stage 4

dilettante (= someone who just dabbles in a subject or skill and never masters it), an Italian loanword dating from 1748, primarily made the Italian plural *dilettanti* through the mid-20th century. By 1940 the anglicized plural *dilettantes* had become predominant in AmE, and by 1975 in BrE. It has been standard in World English since the mid-1950s.

Current ratio (*dilettantes* vs. *dilettanti*): 2:1

diminish (= to reduce in size, importance, etc.) may be either transitive or intransitive: something or someone diminishes something else, or the thing that gets smaller simply diminishes. But it’s not idiomatic English to say that something or someone **diminishes from* something else: the *from* is superfluous. This error in idiom may result from confusion with *detract from* (= to diminish the desirability of)—e.g.:

- “Army’s first five opponents have a combined record of 7–21. . . . That doesn’t *diminish from* [read *diminish* or *detract from*] the accomplishment of being 5–0.” Charles Bennett, “Cadets Running Over Opponents,” *Times-Picayune* (New Orleans), 18 Oct. 1996, at D6.
- “Most of the 10 miles of trail that run through Hill Forest aren’t traditional footpaths but rather old roads But that doesn’t *diminish from* [read *diminish* or *detract from*] the experience of hiking them.” Joe Miller, “Escape Along the Flat River,” *News & Observer* (Raleigh), 25 Oct. 1996, at 14.

- “For the past two weeks, amid the NBA free-agency frenzy, the Heat mostly have been on mute. But that doesn’t *diminish from* [read *diminish* or *detract from*] the reality of again being a team back in the mix.” Ira Winderman, “A Quiet Summer, but Loud Expectations for Retooling Heat,” *Naples Daily News* (Fla.), 12 July 2015, at C3.

LANGUAGE-CHANGE INDEX

diminish from* for *detract from*: Stage 1diminishment.** See **diminution.**

diminuendo (= a musical direction to become gradually quieter), an Italian loanword dating from 1775, has predominantly made the plural *diminuendos* from 1850 on. The Italianate plural **diminuendi* is pure pretension today. See PLURALS (B).

Current ratio (*diminuendos* vs. **diminuendi*): 5:1

diminution; *diminishment. The latter is a NEEDLESS VARIANT. *Diminution* /dim-ə-nyoo-shən/ or /-noo-shən/ is often mispronounced /dim-yoonish-ən/, by METATHESIS. And it is sometimes erroneously spelled **diminution*—e.g.: “Dilution of talent rarely translates into *diminution* [read *diminution*] of interest.” Bob Verdi, “World Cup Is Great, but the Earth Didn’t Move or Angels Sing,” *Chicago Trib.*, 6 July 1994, Sports §, at 1.

LANGUAGE-CHANGE INDEX

diminution misspelled **diminution*: Stage 1

Current ratio: 250:1

diminutive, meaning “small,” is pronounced /di-min-yə-tiv/—not /di-min-ə-tiv/.

DIMINUTIVES. Many English words have suffixes (such as *-elle*, *-ette*, and *-let*) showing that the words connote small, petty, or inferior things. Often these things are smaller or younger than the referents of unsuffixed words: a *piglet*, for example, is a young *pig*. So-called diminutive suffixes sometimes lead double lives. For example, *-ette* may denote a feminine form <bachelorette> or show that something is an imitation <leatherette>. And a diminutive suffix may appear in a word that is not a diminutive of anything (e.g., a *jerkin* is a sleeveless jacket, not a small *jerk*). The most common diminutive suffixes are discussed below.

A. -aster. In Latin and Romance languages, this suffix expresses a resemblance. In English it is usually—though not always—used pejoratively to connote that something is inferior or petty. It first appeared in this sense in the late 16th century and became common in the 17th century. It is relatively rare today.

criticaster (= an inferior or minor critic)
 grammaticaster (= an inferior grammarian)
 medicaster (= a quack; a medical charlatan)
 philologaster (= an incompetent philologist)
 poetaster (= a poet who writes trash)
 politicaster (= a contemptible politician)

Despite the temptation to think so when a new reality show airs, the pejorative *-aster* is unrelated to the *-caster* in *broadcaster*.

B. -(c)ule; -culus. The first of these came into English from Latin by way of French; the second came directly from Latin. Both suffixes connote something small. The first appeared in the late 16th century, but both became common during the 17th century. Many scientific and medical words have these endings.

animalcule (= a microscopic animal; a bacterium)
 calculus (= lit., a small pebble on an abacus)
 canalicule; canaliculus (= a small duct or canal)
 capsule (= a small cylindrical container)
 corpuscule (= a minute particle of matter)
 flocculus (= a small egg-shaped lobe of the cerebellum)
 globule (= a small round particle; a drop)
 granule (= a small grain; a pellet)
 homunculus (= a small person or humanoid being)
 molecule (= the smallest fundamental unit for a chemical reaction)
 nodule (= a small swelling in the body)
 sacculus (= the smaller of two fluid-filled sacs in the inner ear)

C. -el. This French suffix traditionally denotes something small or of no great importance. It first appeared in the 13th century.

bowel (= small intestine)
 chapel (= a small building for religious worship)
 hovel (= a wretched dwelling)
 pimpernel (= a small flower of the primrose family)
 roundel (= a small disk)
 tunnel (= a narrow tube or pipe)

D. -elle; -ella. The first, older suffix is French; it appeared in the 15th century. The second is Italian, introduced into English in the 18th century. Each connotes something short, small, or insignificant.

bagatelle (= a trifle)
 boccarella (= a small opening to either side of a glass furnace’s main opening)
 brocatelle (= imitation brocade)
 camerelle (= a small chamber)
 chlorella (= a single-celled alga)
 novella (= a short novel)
 vaccinella (= a secondary eruption after vaccination)

E. -en. This Saxon ending became part of the English language before the Norman Conquest. Attached to nouns it connotes either “made of” <wooden> or, especially with a living thing, youth.

chicken (= the offspring of fowl)
 kitten (= a very young cat)
 maiden (= a girl, esp. one too young for marriage)

F. -et; -ette. In Old French, *-ette* was feminine and corresponded to the masculine *-et*. English made no clear distinction, which is why *bassinnet* is sometimes spelled **bassinette* (a spelling that doesn’t exist in French—see **bassinnet**). In the 17th century, *-ette* began to predominate in forming English diminutives.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

ballonet (= a small gas-filled compartment in an airship)
 baronet (= the lowest inheritable English title, denoting a gentleman commoner rather than a nobleman)
 cellaret (= a cabinet for storing wines)
 cigarette (= a slim, short, tobacco-filled cylinder, smaller than a cigar)
 kitchenette (= a very small kitchen)
 nymphet (= a sexually mature girl, esp. one near the age of consent)
 pipette (= a slender pipe used by chemists to measure small quantities of liquid)
 statuette (= a statue or figurine that is smaller than life-size)

G. -ie; -y. These Scottish suffixes began appearing in English in the 16th century and became common during the 17th century. They were used to form diminutives of common nouns and proper names. Except in modern Scottish spellings, both are now restricted mostly to nouns and to some diminutive proper names.

birdie (= a little bird)
 Charlie; Charley (= Charles; Charlene)
 doggy; doggie (= a puppy or small dog)
 Jeanie (= Jean, Jeanette, etc.)
 kitty (= a young cat)
 Kitty (= Catharine, Kathryn, etc.)
 mouseie; mousy (= a mouse, esp. a young or very small one)
 pussy (= a cat)
 Sally; Sallie (= Sarah)
 sonny (= a boy or a young man, esp. one of inferior standing)
 Willie; Willy (= William)

See **veggie**.

H. -ing. Because this Old English suffix has many modern uses, spotting it in its diminutive function is tricky. It mostly appears in words that denote something fractional or something that is part of a larger thing.

farthing (= a quarter-penny)
 riding (= an administrative or political subdivision)
 tithing (= a tenth part)

I. -kin. Although commonly seen in modern English, *-kin* rarely connotes a diminutive anymore. It was derived from Dutch and German, but unlike those languages, English at first used the suffix only for (usually male) diminutive proper names. It survives today in surnames such as *Watkins* (from Walter:Wat), *Dickens* (Richard:Dick), and *Perkinson* (Peter:Perkin). Beginning in the 16th century, the suffix was attached to nouns to form diminutives.

babykins (= an infant)
 cannikin (= lit., a small can; a canister)
 catkin (= derived fr. the Dutch for “kitten”: *katteken*)
 lambkin (= lit., a small or young lamb; used affectionately of young children)
 manikin (= a very small person or a human figure used by an artist)

J. -let. This suffix, borrowed from the French *-elet*, may denote a diminutive when appended to an ordinary noun <booklet, ringlet>. But when it is appended to the name of a body part <arm, neck>, it may refer to an ornament <armlet, necklet>. Yet in the oldest English words ending in *-let* (e.g.,

bracelet, chaplet, gauntlet, hamlet), the suffix is neither a diminutive nor an ornament. Although a few diminutives with *-let* appeared in the 16th century, *-let* wasn't used much until the 18th and 19th centuries. Today it is the most commonly used diminutive suffix for nonce-words.

factlet (= trivia)
 leaflet (= an informative writing on a single piece of paper)
 murrelet (= a small North Pacific auk)
 piglet (= a baby pig)
 rivulet (= a very small stream)
 roundlet (= a small circle or circular thing)
 streamlet (= a narrow river)

K. -ling. Derived from Norse, *-ling* is relatively rare as a diminutive suffix in modern use. When attached to a noun, it may connote (1) ownership by or affiliation with something, usu. a superior thing or person <hireling, underling>, (2) youth <codling, duckling>, or (3) contempt <princeling, godling, moonling>. Apart from sense 2, *-ling* has rarely been used to connote physical smallness.

atheling (= a prince; the eldest son of a Saxon king)
 fosterling (= a foster or adopted child, esp. one treated as inferior to other children)
 foundling (= an abandoned infant who is taken in and cared for, esp. out of charity)
 gosling (= a baby goose)
 lordling (= a petty, insignificant lord)
 sapling (= a small, very young tree)

L. -ock. The origins of this Old English suffix are unknown. The suffix is occasionally used to form diminutive nouns, but not every noun ending in *-ock* is or was a diminutive. Words such as *bullock* (= a castrated bull; a steer) and *hillock* (= a small hill) are clearly diminutives. Some words, especially animal names such as *haddock* (= a species of north Atlantic fish) and *ruddock* (= a robin), may have originated as diminutives. But for other words, such as *mattock* (= a pickaxe-shaped agricultural tool) and *warlock* (= a sorcerer), the suffix may have a different origin.

paddock (= a small pasture or enclosure for animals)
 tussock (= a small bunch or tuft, as of grass or hair)

diocese = a jurisdictional subdivision, esp. of (1) a bishop or (2) a province under control of the Roman Empire after Constantine. Today the word is best pronounced /**di**-ə-sees/ or /-sis/, not /-seez/. The second pronunciation is dominant in BrE and is preferred by some AmE authorities. The third is recorded in W3 but, in the words of one commentator, “has little authority.” Charles Harrington Elster, *BBBM* at 150.

The plural is regular in form (*dioceses*) and is pronounced with four syllables: /**di**-ə-sees-iz/ or /**di**-ə-sis-iz/. But some speakers (most notably newscasters) mistakenly use the three-syllable variant /**di**-ə-seez/ as a plural.

The adjectival form is *diocesan*, pronounced /**di**-ahs-i-sin/ or /-zən/.

For more on the term *diocese*, see **bishopric**.

diphtheria is properly pronounced /dif-**theer**-ee-ə/, not /dip-**theer**-ee-ə/. See PRONUNCIATION (D).

LANGUAGE-CHANGE INDEX

1. *diphtheria* mispronounced /dip-**thir**-ee-ə/: Stage 4
 2. *diphtheria* misspelled **diphtheria*: Stage 1
- Current ratio: 50:1

diphthong. **A. Spelling and Pronunciation.** It's *diphthong* (/dif-thong/), not **diphthong* (/dip-thong/). The word is often misspelled (and mispronounced)—e.g.: “He [Sir Alec Guinness] didn't frighten Americans and colonials with cavernous and well-rounded *diphthongs* [read *diphthongs*], as John Gielgud did.” Ray Conlogue, “A Master of Wit and Subtlety,” *Globe & Mail* (Toronto), 8 Aug. 2000, at R10. See PRONUNCIATION (D).

LANGUAGE-CHANGE INDEX

1. *diphthong* mispronounced /**dip**-thong/ (instead of /dif-thong/): Stage 4
 2. *diphthong* misspelled **diphthong*: Stage 1
- Current ratio: 37:1

B. And digraph. Strictly speaking, *diphthong* is a phonetic term denoting a gliding vowel sound from one simple vowel sound to another within the same syllable, as in *down* or *join*. Some people use the term loosely to denote a digraph (two letters representing a single sound, such as *ph* in *phone* or *ea* in *lean*) or ligature (two or more letters written together, such as *æ* or *œ*)—e.g.: “Use *e* instead of the *diphthongs* [read *digraph*] *ae* or *oe* when the spellings are coequal: *archeology* (but *subpoena*.” Robert A. Webb, *The Washington Post Desk-Book on Style* 146 (1978). [Note that Webb's plural was incorrect: the *or* between *ae* and *oe* makes the object of *use* properly singular.]

diploma; degree. The traditional distinction is worth preserving. Secondary schools award *diplomas* to graduates. Colleges and universities award *degrees* to successful candidates. It's a common hyperbole for writers to overstate the achievement of high-school grads—e.g.:

- “Victor Manuel Bautista Lopez, the mayor, says they hope to launch a high school *degree* [read *diploma*] program for all cops this year, and the town is talking to local universities about a college program.” Sara Miller Llana, “Backstory: The Book ‘Em Club,” *Christian Science Monitor*, 1 Feb. 2007, Features §, at 20.
- “For many workers with only a high school *degree* [read *diploma*], the pay can be transformative.” Johnny Dwyer, “This Hammer for Hire,” *N.Y. Times*, 4 Feb. 2007, § 14, at 1.
- “Evidence of the dramatic link between education and income is seen in the 75 percent gap between the average wages of college graduates and high school graduates and the 42 percent gap between those with high school *degrees* [read *diplomas*] and those without them, he said.” Patrice Hill, “Bernanke Suggests Job Skills to Combat Inequality,” *Wash. Times*, 7 Feb. 2007, Bus. §, at C8.

LANGUAGE-CHANGE INDEX

degree misused for *diploma*: Stage 3

diplomat; *diplomatist. Although the longer form predominated in 19th-century usage, the shorter form had established itself as standard by 1910 in AmE and by 1930 in BrE. Hence **diplomatist* is now a NEEDLESS VARIANT. But it still occasionally appears—e.g.:

- “That's why they wanted to bump off a man who had once ruled his native land with the iron hand of a communist leader, who had the rank of a general in the interior ministry police, who went on to be a respected *diplomatist* [read *diplomat*].” “Shevardnadze's Sad Land,” *Baltimore Sun*, 11 Sept. 1995, at A8.
- “While Kennan needs no introduction to foreign-policy thinkers, *diplomatists* [read *diplomats*] and historians . . . he is less well known to the public.” S.J. Hamrick, Book Rev., *Chicago Trib.*, 14 Apr. 1996, at C6.
- “John's widowed mother Hilda—daughter of the *diplomatist* [read *diplomat*] Sir Maurice de Bunsen—went on to marry Major General Sir Guy Salisbury-Jones, marshal of the diplomatic corps.” “John Yerburgh” (obit.), *Daily Telegraph*, 9 July 2014, at 29.

Current ratio: 8:1

DIRECTIONAL WORDS. A. The Suffix -ward(s). In AmE, the preferred practice is to use the *-ward* form of directional words, as in *toward*, *forward*, and *westward*. Words ending in *-ward* may be either adjectives or adverbs, whereas words ending in *-wards*, common in BrE, may be adverbs only. These are typical preferred AmE forms:

cityward	shoreward
coastward	sideward
downward	skyward
outward	sunward
rearward	toward
seaward	upward

All these are also predominant today in BrE—except, that is, for *towards*. See **toward** (A).

A slight exception in AmE is the adverb *backwards*, which is frequently used (though still much less often than *backward*). (It's anomalous that many people who say *forward* also say *backwards*.) When *backward* and *forward* combine in a phrase (either word coming first), be consistent about using the *-s*; by far the more common AmE usage is to leave it off both words. As an adjective, only *backward* is accepted <a backward move>. See TOWARD (A). Cf. **afterward**.

B. Capitalization. The words *north*, *south*, *east*, and *west* (and compounds such as *southeast*) should not be capitalized when used to express directions <we went north>. They are properly capitalized when used as proper nouns denoting regions of the world or of a country <the Far East> <the Pacific Northwest>.

But when a directional word appears as an adjective before a geographic proper name, it is lowercase <eastern United States> <southern Italy> <south Florida>. If, however, the adjective is part of the proper name, it should be capitalized <North Dakota> <East Anglia>.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

C. Verbose Constructions. To use such words as *easterly* in phrases like *in an easterly direction* is prolix. In fact, the simple word for the direction (*east*) usually suffices in place of the word ending in either *-erly* or *-wardly*. E.g.: “In Portsmouth, when you’re going north on U.S. 17 on High Street, you’re traveling *in a westwardly direction* [read *west*].” Ida Kay Jordan, “Hurricane Escape Plan May Lead Some Down the Road to Confusion,” *Virginian-Pilot* (Norfolk), 5 June 1994, Portsmouth Currents §, at 2.

The one useful distinctive sense that forms such as *southward* and *southerly* convey is that the movement is more or less in the direction indicated—but not in a straight line. E.g.: “Many of the bees escaped from his lab and have moved steadily *northward* ever since.” “Bee Not Afraid?” *Fresno Bee*, 22 Sept. 1994, at B6.

D. An Infrequent Error: *northerly for northerly, etc. Occasionally writers err by making the directional words ending in *-erly* into words ending in *-ernly*—e.g.:

- “The districts of Downstate Democratic Reps. Richard Durbin of Springfield and Lane Evans of Rock Island would move clockwise in *westerly* [read *westerly*] and *northerly* [read *northerly*] directions under the GOP proposal.” Thomas Hardy, “Hispanic District, Fewer Democrats in GOP Map,” *Chicago Trib.*, 30 July 1991, News §, at 3.
- “The models showed that the cloud of nerve gas initially traveled in a *southerly* [read *southerly*] direction from the blast site.” Philip Shenon, “Study Sharply Raises Estimate of Troops Exposed to Nerve Gas,” *N.Y. Times*, 24 July 1997, at A18.

Though the *-ernly* words are recorded in the *OED*, they’re noted as being rare or obsolete. Cf. **nor’easter**.

LANGUAGE-CHANGE INDEX

**northerly*, **southerly*, etc. for *northerly*, *southerly*, etc.: Stage 1
Current ratio (*westerly direction* vs. **westerly direction*): 293:1

directly; direct, adv. *Directly* = (1) in a straight line; without interruption <we flew directly from Dallas to Frankfurt>; (2) immediately <they left directly after the decision>; (3) with no intervening agent <she was directly responsible>; (4) totally <directly on point>; (5) soon <they’ll be going directly>; or (6) as soon as <directly we saw him, we cheered to express our appreciation>. In sense 1, *direct* is interchangeable as an adverb, especially in mid-20th-century BrE <we flew direct from Dallas to Frankfurt>. Sense 5 is typical of southern AmE. Sense 6 is exclusively BrE.

Current ratio (*flew directly to* vs. *flew direct to*): 6:1

directly antithetical. See **antithetical**.

directorial (in five syllables), not **directoral*, is the adjective corresponding to *director*—e.g.:

- “Mr. Wuhl makes his *directorial* [read *directorial*] debut in the film, which opens on Friday,” Michaelin McDermott, “Channel Surfing,” *N.Y. Times*, 5 May 1996, § 2, at 26.
- “One of the most significant *directorial* [read *directorial*] differences between this film and Zwick’s other epics is

that he lets the story tell itself and relies less on musical cues.” Deborah Peterson, “Courage Behind the Camera,” *St. Louis Post-Dispatch*, 12 July 1996, at E1.

- “It is his first *directorial* [read *directorial*] effort since his Oscar-winning debut with 1989’s ‘Dances with Wolves.’” Frank Rizzo, “Dances with Mail,” *Hartford Courant*, 1 Sept. 1996, at G9.

LANGUAGE-CHANGE INDEX

**directorial* for *directorial*: Stage 1
Current ratio (*directorial* vs. **directorial*): 87:1

DIRECT QUESTIONS. See **QUESTIONS, DIRECT AND INDIRECT**.

dis, v.t.; **diss**. *Dis*—also spelled *diss*—is a clipped form of *disrespect*, vb. (or, less likely, *dismiss* or *disparage*). This SLANG term came into existence in the early 1980s and into vogue in the early 1990s—e.g.:

- “In the ‘other body,’ where four GOP members are running for president, Gingrich would like senators to ponder the theoretical possibility of a President Newt before they *dis* the bills he sends them.” Howard Fineman, “President Newt?” *Newsweek*, 19 June 1995, at 34.
- “Thou shalt not *diss* [read *dis*], unless you can afford a Dream Team of morally disengaged attorneys.” Edward P. Moser, “Words to Live By,” *Wall Street J.*, 25 Mar. 1997, at A18.

Of course, the inflected forms are *dissed* and *dissing*—e.g.:

- “The contemporary street sensitivity to being *dissed* immediately emerges in these memories of office humiliation.” Philippe Bourgois, “Workaday World, Crack Economy,” *Nation*, 4 Dec. 1995, at 706.
- “Pucker up: actress Helen Mirren is *dissing* the kissing of Harrison Ford—recently named one of Playgirl’s ‘10 Sexiest Men of 1997.’” Jeanne Beach Eigner, “Public Eye,” *San Diego Union-Trib.*, 4 Dec. 1997, at E2.
- “The Lions receiver *dissed* the victorious Alouettes in a radio interview after the game.” Lowell Ullrich, “Speeches as Stale as the Offence,” *Vancouver Province*, 23 Aug. 2015, at A68.

By 2008 it had already come to feel dated by most people who had earlier used it enthusiastically.

One outcome of the *dis* fad is that the transitive verb *disrespect*, which had fallen into disuse, has been called out of retirement—doubtless by writers (or their editors) who really wanted to use *dis* but just couldn’t bring themselves to do it. E.g.: “Hovan apparently felt *disrespected* by Favre, and their war of words heated up to where Favre was caught on camera giving Hovan a one-finger salute.” Rick Braun, “Several May Get Fines for Post-Game Melee,” *Milwaukee J.*, 12 Dec. 2002, Packer Plus §, at 12.

LANGUAGE-CHANGE INDEX

dis as a verb: Stage 4
Current ratio (*to dis him* vs. *to diss him*): 1:1

disability. A. And inability; liability. These words overlap only slightly but are frequently confounded; they are best keenly distinguished. *Disability* = (1) the condition of being disabled <his disability began after the accident in March 2002>; (2) a disabling injury, illness, or handicap <she has a disability>; (3) legal

incapacity <Ralph's disability disqualifies him from entering into contracts>; or (4) a restriction or disadvantage <not having a car would be a real disability>. *Inability* = the absence of ability; the lack of power or means <our inability to get there on time>. *Liability* = (1) a monetary obligation <some credits and some liabilities>; (2) a drawback <one liability in this plan is that it would have to be approved by a supermajority of shareholders>; (3) a duty or burden <liability for military service>; or (4) probability <What is the liability of having that happen?>.

B. And disablement. *Disablement* = (1) the act of disabling; the condition of being disabled; or (2) the imposition of a legal disability. Sense 1 is more usual—e.g.: “With that, the team has seen 13 players make 16 trips to the DL, surpassing the previous franchise mark of 15 *disablements*.” Nancy Gay, “Giants Deal Leiter to Expos, Lose to Cubs,” *S.F. Chron.*, 31 July 1996, at D1. See (A) for the senses of *disability*.

BrE sometimes uses *disablement* <disablement insurance> in contexts in which AmE would use *disability* <disability insurance>.

disafforest. See **deforest**.

disapprobation, mostly BrE, is a FORMAL WORD meaning “disapproval”—e.g.: “Ever since her [the Queen's] offspring reached maturity—about the time the media regressed fully into immaturity—the family that was supposed to be a model for the British nation, indeed the Commonwealth, has been exposed to ridicule and *disapprobation*.” Elisabeth Ribbans, “London Observer,” *Star Trib.* (Minneapolis), 28 Aug. 1996, at A17. In ordinary prose, this noun—like so many other ZOMBIE NOUNS ending in *-tion*—leads to top-heaviness: “The ooohs and aahs of *disapprobation* [read *disapproval* or *scorn*] must add to the umpires' burdens and tax their objectivity.” Mike Brearley, “Why Must We Play It Again on Screen?” *Observer*, 25 Aug. 1996, at 11. See **approbation**.

disapprove (of). Like *approve*, *disapprove* may be both transitive (without *of*) <The council disapproved the plan> and intransitive (with *of*) <Many readers disapproved of the editorial>. Usually, the transitive *disapprove* suggests formal rejection, while *disapprove of* suggests unfavorable sentiments. Also, *disapprove* alone tends to appear in formal, official contexts; *disapprove of* is the everyday phrasing—appearing about four times as often in print sources as the prepositionless version. Cf. **approve (A)**.

disassemble. See **dissemble**.

***disassociate.** See **dissociate**.

disastrous is so spelled—not **disasterous*, a fairly common misspelling.

Current ratio: 497:1

disbar. See **bar**.

***disbark.** See **disembark**.

disbelief; unbelief; nonbelief; misbelief. *Disbelief* = (1) shocked incredulity; or (2) the mental rejection of something after considering its plausibility. In sense 2, *disbelief* results from active, conscious decision. *Unbelief* denotes the state of doubt, of not having made up one's mind. Thus, while an atheist's state of mind is *disbelief* (sense 2), an agnostic's state of mind is *unbelief* or *nonbelief*. (See **atheist**.) *Nonbelief*, which answers well to *nonbeliever*, might be a NEEDLESS VARIANT were it not so very common as to be uncanceled. A *misbelief* (the rarest of these words) is an erroneous or false belief.

disbursal. See **disburse**.

disburse; disperse. *Disburse*, from the Latin *bursa* “purse,” is used chiefly in reference to distribution of money <the directors disbursed dividends to the stockholders>. *Disperse* is used in reference to distribution of all other things, such as crowds or diseases. In cultivated speech, these words are not homophones. The failure to distinguish them in common speech may have contributed to their confusion in print. *Disburse* sometimes appears erroneously in place of *disperse*—e.g.:

- “A crowd on the campus of Kent State University in Kent, Ohio, is *disbursed* [read *dispersed*] with tear gas on May 4, 1970.” “Fraternity Reunion Offers Insight into Kent State,” *Dallas Morning News*, 13 Nov. 1994, at A12 (photo caption).
- “Sure enough, the car drew a crowd. When they *disbursed* [read *dispersed*], it took me a good 15 minutes to figure out how to remove [the top].” Matt Nauman, “You Might Never Even See One of These Cars!” *Times Union* (Albany), 3 Aug. 1995, at T8.
- “Late in the evening of 5 October, the Vojvodina leaders appealed to the collective federal presidency to order the military to *disburse* [read *disperse*] the crowd.” Louis Sell, *Slobodan Milosevic and the Destruction of Yugoslavia* 59 (2003).

The corresponding nouns—*disbursement* and *dispersal*—are subject to the same confusion. It is quite proper to refer to the *disbursement* (i.e., paying out) of money, but not to the **disbursal* of cards or the “disbursement” of crowds. E.g.:

- “A pilot within the purchasing department would precede a potential *disbursal* [read *dispersal*] of thousands of cards.” Colleen Entenman, “Are You Ready for the Purchasing Card?” *Bus. Credit*, Nov. 1995, at 29.
- “Although they were quick to say that no problems are anticipated, authorities said as many as 60 deputies will undergo an eight-hour training course Thursday—learning crowd control and *disbursement* [read *dispersal*] techniques.” Adam Folk, “Officers Gear Up with Riot Training,” *Augusta Chron.* (Ga.), 28 Oct. 2008, at A3.

Nor is it correct to use the NONWORD **dispersement* when *dispersal* is intended—e.g.: “What concerns Fresno State coach Jerry Tarkanian is the Bulldogs’

potential to be off-balance defensively, at least in the *dispersement* [read *dispersal*] of players on the floor.” Andy Katz, “’Dogs Will Be Going to Work on Mistakes,” *Fresno Bee*, 13 Nov. 1996, at D4.

Nor, finally, is it right to use that same nonword when *disbursement* is the intended word—e.g.:

- “Other than the change of venue, the other major question facing the Presidents Cup will be the *dispersement* [read *disbursement*] of funds.” Barker Davis, “Where Does the Presidents Cup Go from Here?” *Wash. Times*, 11 Sept. 1996, at B1.
- “Completion of the plan was slowed by disagreements among day-care providers over money *dispersement* [read *disbursement*].” Doris Sue Wong, “Day-Care Centers Say Subsidy Hikes Promised in June Still Haven’t Arrived,” *Boston Globe*, 23 Oct. 1996, at D9.
- “[Jay] Goldstone pointed out that the impact on the city’s general fund was negligible, because the single *dispersement* [read *disbursement*—\$914,000 in police and firefighter overtime—was largely reimbursed.” Eleanor Yang Su & Brent Schrottenboer, “Counting the Cost of Staging U.S. Open,” *San Diego Union-Trib.*, 24 Nov. 2008, at A1.

LANGUAGE-CHANGE INDEX

1. *disburse* misused for *disperse*: Stage 1

Current ratio (*disperse the crowd* vs.

**disburse the crowd*): 107:1

Current ratio (*dispersal* vs. **dispersement*): 407:1

3. **dispersement* for *disbursement*: Stage 1

disc. See **disk** (A).

discard, vb. More frequently than might be imagined, this verb is erroneously made **disgard*, perhaps because the -c- is often pronounced as if it were -g-, and perhaps also from the influence of *disregard*. Of course, *discard* began as a card-playing term, but now it appears more often in figurative senses—e.g.:

- “Only 10 percent answered correctly that [the amount of] motor oil *disgarded* [read *discarded*] in the United States is 10 times greater than the amount of oil spilled in Alaska.” Casey Bukro, “Americans Fail Quiz on Pollution,” *Chicago Trib.*, 8 Nov. 1991, at C12.
- “Because the economy is now in recession, however, some housing experts are questioning the wisdom of *disgarding* [read *discarding*] the old 28/36 rule of thumb.” Marilyn Kennedy Melia, “How Much of a Stretch Will You Make for a Mortgage?” *Chicago Trib.*, 9 Dec. 2001, Real Est. §, at 2.
- “If you’re wondering what became of El Guapo’s *disgarded* [read *discarded*], tent-like duds, be advised they have all been put to good use. Harrison took the bags to the nearest Goodwill Industries outlet.” Steve Buckley, “Red Sox Hurler Rich Garces Has Been Growing Along Nicely,” *Boston Herald*, 3 Mar. 2002, at B20.

The error appears to be as common in British as in American publications—e.g.: “For every new chart-buster, there are bound to be a million half-finished fragments which are *disgarded* [read *discarded*] after a few chords.” “Root,” *Times* (London), 10 Oct. 1998, at 4.

LANGUAGE-CHANGE INDEX

**disgard* for *discard*: Stage 1

discernible. So spelled—not **discernable*. See -ABLE (A).

disciplinary; *disciplinatory. *Disciplinary* = (1) related to discipline <disciplinary rules>; or (2) carrying out punishment <disciplinary measures>. **Disciplinatory* has long been a NEEDLESS VARIANT.

Current ratio: 36,968:1

disc jockey has been the standard spelling since the phrase emerged in the mid-20th century. **Disk jockey* is a variant.

Current ratio: 6:1

disclaim. See **declaim**.

discomfit, vb. **A. Meanings and Inflection.** *Discomfit* = (1) to thwart or frustrate, or (2) to disconcert; to put into a state of unease and embarrassment. Sense 2 is relatively new, a result of confusion of *discomfit* and *discomfort* (see (c)). Once considered a usage error, this extension is now the most common usage and is accepted as standard.

Discomfit makes the past tense *discomfited*, not **discomfitted*—e.g.: “Matilde Dembowski . . . obviously had no intention of admitting him to intimacy and . . . was in some ways *discomfitted* [read *discomfited*] by his attentions.” Robert Alter, *A Lion for Love* 146 (1979) (biography of Stendhal).

B. And *discomfiture*. The preferred noun is *discomfiture*. Ill-trained writers use phrases such as **much to his discomfit*, in which either *discomfort* or *discomfiture* is intended.

C. And *discomfort*. *Discomfort* is preferably a noun, not a verb. Writers sometimes use it when they seem really to mean *discomfit* in its newer sense (to disconcert)—e.g.:

- “Not only has it embraced what amounts to a social crusade—something that some journalists find *discomforting* [read *discomfiting*]—but it has set a goal it almost certainly will not meet.” Ellis Cose, “A City Room of Many Colors,” *Newsweek*, 4 Oct. 1993, at 82.
- “These melanist notions and other extremes of Afrocentrism are *discomforting* [read *discomfiting*] to many black educators.” Leon Jaroff, “Teaching Reverse Racism,” *Time*, 4 Apr. 1994, at 75.
- “Sometimes his access was *discomforting* [read *discomfiting*] to the men at the top.” Seymour M. Hersh, “The Wild East,” *Atlantic Monthly*, June 1994, at 61, 62.

LANGUAGE-CHANGE INDEX

discomfort misused for *discomfit*: Stage 2

Current ratio (*discomfited* vs. **discomforted*): 7:1

D. **Discomferture*. **Discomferture* is a NONWORD for either *discomfort* or *discomfiture*—e.g.: “The stubbornness of the owners in repeating their rhetoric in the past made it even harder to believe that they aren’t on their way to re-experiencing their *discomfutures* in [read *discomfort* of or *discomfutures* of] the past.” Murray Kempton, “Schott Tries Patience of the Owners,” *Newsday* (N.Y.), 15 Sept. 1994, at 8.

LANGUAGE-CHANGE INDEX

**discomferture* for *discomfort* or *discomfiture*: Stage 1

discommend is the opposite of *recommend*, not of *commend*. E.g.: “I read in Wednesday morning’s edition of *The Press-Enterprise* that they still *discommend* eating bacon.” Letter of F.D. Richardson, “Riverside Bring on the Eggs,” *Press-Enterprise* (Riverside, Cal.), 17 Nov. 1995, at A10. The verb was much more widely used in the 18th century than it is today.

disconcertion; *disconcertment; *disconcertation. The first is the preferred noun corresponding to the verb *disconcert*. The others are NEEDLESS VARIANTS.

Current ratio: 27:17:1

disconnect, n., (= disconnection) is a VOGUE WORD that arose in the 1980s and became seemingly ubiquitous after about 1995. It is primarily used to label (1) a clash between what is expected and what happens <a disconnect between our mission statement and our admissions policy>; or (2) more mundanely, the failure of a connection such as the Internet, telephone, or utility <I didn’t hang up—we just had a disconnect>.

Disconnect typifies a popular trend in CASUALISMS, by which an established noun is truncated to form a new noun that looks the same as the corresponding verb but differs in pronunciation. The new noun has the accent on the first syllable (/dis-kə-nekt/), while the verb has the accent on the last (/dis-kə-nekt/). This pronunciation scheme follows the pattern of many standard verb–noun pairs, such as *contest* and *progress*.

Other vogue words that have gone through the same process include *consult* and *invite*. The new forms are generally inappropriate in formal writing.

discontinuance; discontinuation; discontinuity. See **continuance**.

discount, vb., meaning “to make a deduction; reduce,” is sometimes used as if it meant “to disregard entirely,” especially in the hyperbolist’s phrase **wholly discount* <the board wholly discounted her version of events>. But this makes a hash of the word’s fundamental sense. The wording is stronger without the WEASEL WORD *wholly*—e.g.:

- “He had *wholly discounted* [read *discounted* or *minimized*] his wife’s genius.” Stefan Kanfer, “Anecdotes from Scheherazade,” *Time*, 15 Nov. 1982, at 90. (In a less malevolent reading, the phrase in that sentence might mean “never noticed.”)
- “But that doesn’t mean that he doesn’t ask many of the right questions, or that the answers he suggests can be *wholly discounted* [read *disregarded*].” John Gross, “Blunt’s Treason: How, How Much, How Long?” *N.Y. Times*, 21 Oct. 1988, § C, at 33.
- “[Gary] Posner . . . *wholly discounts* [read *denies* or, perhaps, *scoffs at*] the ‘powers’ of those who claim to possess some psychic ability.” “Mind Games,” *Dallas Observer*, 7 June 2001, at 8.

discover; invent. To *discover* is (1) to recognize for the first time something that exists, such as electricity or

a law of nature, or has come into existence, such as a new species, or (2) to devise a new use for or application of something already known, such as synthetic silk. To *invent* is usually to consciously create something that did not previously exist and that has not been thought of by anyone else. For example, in creating a new chemical compound, a person may *invent* it by planning its creation (studying the properties of various chemicals and their known interactions and deducing how they will work together). On the other hand, one may accidentally combine chemicals in an unintended amount or manner, and then notice an interesting product, thus *discovering* a new compound.

discrepancy. For the distinctions between *discrepancy*, *difference*, and *disparity*, see **difference**.

discrete; discreet. Although the two words ultimately have the same Latin origin, the spelling *discreet* came into English through French. Today the two spellings are treated as different words. *Discrete* means “separate, distinct” <three discrete land masses>; *discreet* means “cautious, judicious” <a discreet confidant>. *Discreet* is most commonly used in reference to behavior, especially speaking or writing. Until about 1950, *discreet* was the more common word, but today instances of *discrete* outnumber those of *discreet* by a 4-to-1 margin.

The usual error is to misuse *discreet* for *discrete*—e.g.:

- “He is clearly not at home with strategic views, but prefers handling *discreet* [read *discrete*] issues rather than sweeping ideas.” Bernard Gwertzman, “Working Profile: George P. Shultz,” *N.Y. Times*, 17 May 1985, at A16.
- “Having control over a *discreet* [read *discrete*] section of the line fosters a sense of autonomy and pride among workers.” Karen Lowry Miller, “The Factory Guru Tinkering with Toyota,” *BusinessWeek*, 17 May 1993, at 95.
- “It was decided to break down the system into more *discreet* [read *discrete*] sections, as dictated by conditions on the pipeline.” Philip J. Dusek, “Pipeline Integrity Program Helps Optimize Resources,” *Pipeline & Gas J.*, Mar. 1994, at 36.

Sometimes, though, the opposite blunder appears—e.g.:

- “Mr. Bradshaw said almost everything the group did locally was *discrete* [read *discreet*].” Peter Applebome, “Bloody Sunday’s Roots in Deep Religious Soil,” *N.Y. Times*, 2 Mar. 1993, at A8.
- “The selections are tasteful with visceral mayhem, profanity, and sex almost nonexistent, or *discretely* [read *discreetly*] handled.” Jim Bencivenga, “Tales That Sift Fact from Fable,” *Christian Science Monitor*, 25 July 1996, at 21.

See **indiscreet**.

Current ratio (*discrete units* vs. **discreet units*): 43:1
2. *discrete* misused for *discreet*: Stage 2
Current ratio (*discreet distance* vs. **discrete distance*): 8:1

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

discretion, at your. Although *in your discretion* was more common through most of the 19th century, *at your discretion* became the top choice in the 20th century. Since about 1950 it has predominated, and it's about four times as common today. Remember, though, that in the choice of preposition, you have full discretion.

***discriminant, adj.** See **discriminatory**.

discriminate, v.i., = (1) to make a clear distinction; or (2) to make an unfavorable or unfair distinction. In sense 1, the preposition *between* is quite common—e.g.: “Plosser and others warned that interest rate cuts are blunt instruments that do not discriminate *between* investment and consumption.” Peter G. Goselin, “Fed Trims Rates in Bold Move to Avoid Recession Economy,” *L.A. Times*, 19 Apr. 2001, at A1. In sense 2, the verb takes the preposition *against*—e.g.:

- “Sheehan thinks female athletes are being *discriminated against*.” “Mullins Kept His Spirits Up,” *Times-Picayune* (New Orleans), 10 July 1994, at C2.
- “In their suit, the condo residents claim they are being *discriminated against* because single family homes receive curbside pickup.” Theresa Walton, “Goffstown and Condo Owners Ironing Out Compromise on Suit,” *Union Leader* (Manchester, N.H.), 6 Aug. 1994, at 12.

In sense 2, it cannot properly be used transitively—e.g.:

- “‘Men are not being *discriminated* [read *discriminated against*] at the University of Illinois, the swimmers are,’ said Ellen Vargyas, senior counsel for the Women’s Law Center.” Mike Dame, “Men Fight Backlash of Title IX,” *Orlando Sentinel*, 21 Aug. 1994, at C6.
- “Some believe even that the only one being *discriminated* [read *discriminated against*] today is the white male, and that a return to ‘equality’ (i.e. status quo) is in order.” “Race Relations Solutions Offered,” *Press-Enterprise* (Riverside, Cal.), 2 Sept. 1996, at B6.

The same error, by implication, crops up in the past-participial adjective <an illegally discriminated employee>. In this loose usage, which dates from the mid-20th century, *discriminated* is equivalent to *downtrodden*, *oppressed*, or *persecuted*—e.g.:

- “Long after they have left their status as *discriminated minority* [read *oppressed minority*], Jews alone among American immigrant groups retain a loyalty to political liberalism, to governments of compassion and justice.” Marlene A. Marks, “Government Need Not Be the Enemy,” *Sun-Sentinel* (Ft. Lauderdale), 7 Feb. 1995, at A16.
- “Mr. Say was born in Japan of a father who was Korean, a much *discriminated minority* [read *oppressed minority*] in the country, and a Japanese mother who was born in San Francisco.” James Sterngold, “No Place Like Home, Sometimes,” *N.Y. Times*, 22 Nov. 2000, at E1.

LANGUAGE-CHANGE INDEX
discriminate misused for *discriminate against*: Stage 1

discriminated, adj. See **discriminate**.

discriminating. See **discriminatory**.

discrimination. See **discriminatory** (2d paragraph).

discriminatory; *discriminative; discriminating; *discriminant, adj. Of these, only **discriminative* is ambiguous; it is a NEEDLESS VARIANT of both *discriminatory* (= applying discrimination in treatment, esp. on ethnic grounds) and *discriminating* (= keen, discerning, judicious). **Discriminant* is a NEEDLESS VARIANT of *discriminating*.

Because *discriminatory* has extremely negative connotations and *discriminating* (traditionally) quite positive connotations, the noun *discrimination* has suffered from a split personality <discrimination is rampant within the company> <our selections are the result of the finest discrimination in taste>. But the negative sense has largely driven out the positive. At least one usage critic urges that we combat this negative view of *discrimination*: “*Discrimination* can be a very good thing—even the world’s most discriminating people practice it. You don’t tolerate discrimination? Then I guess you’ll be fighting for the rights of the world’s child-molesting day-care workers and nose-picking sandwich makers.” Bill Walsh, *Lapsing Into a Comma* 119 (2000). But the word has undergone seemingly irreversible pejoration.

Current ratio (*discriminatory* vs. **discriminative*): 9:1

discus (= a heavy flat circular object that in sport is thrown as far as possible), a Latin loanword dating from the mid-17th century, makes the plural *discuses*—not **disci*.

discussable. So spelled—not **discussible*. See -ABLE (A).

Current ratio: 3:1

diseased; deceased. The first describes a body that is racked with illness, usually a bacterial or viral infection. The second describes a person or thing that has died. Although a *diseased* person may become *deceased*, it is surprising that either word would ever be misused for the other. It does happen, however, perhaps as a result of computer spelling-checkers—e.g.:

- “It is the only charity golf tournament that raises money for treatment of a *decease* [read *disease*] that affects African Americans.” Charles L. Griggs, “Sickle Cell Tournery Got Me Involved,” *Jacksonville Free Press*, 27 May 1998, at 5.
- “But hypocrisy is a contagious *decease* [read *disease*], especially in the Clinton White House, and why should Richardson be immune?” Miguel Perez, “Opinion: Clinton’s Appointees,” *Record* (N.J.), 19 June 1998, at L11.

LANGUAGE-CHANGE INDEX
decease misused for *disease*: Stage 1

disembark; *debark; *disbark. *Disembark*, the preferred term since the late 18th century, is over ten times as common in modern print sources as the other two forms combined. **Debark* and **disbark* are NEEDLESS VARIANTS.

Current ratio: 3,028:218:1

disembodied; dismembered. *Disembodied* = separated from the physical body, esp. as a spirit. The word is stretched too far when used to describe a body part

severed from the torso—e.g.: “Having said all that, did we really need to see the *disembodied* [read *severed*] heads? In a word: yuck. We got the idea with the hacksaw and the meat cleaver, thanks.” Bill Goodykoontz, “Heading for a Shock,” *Ariz. Republic*, 21 Nov. 2002, at E6.

Dismembered = (1) (of bodily limbs) cut from the torso; or (2) (of a torso) characterized by limbs’ having been cut off. This term does not work well with heads—e.g.: “In a flurry of recent TV appearances promoting his new book on families, the former vice president has been seen . . . floating as a *dismembered* [read *detached*] head in a jar on the Fox cartoon show ‘Futurama,’ where he’s dubbed ‘the inventor of the environment.’” Liz Marlantes, “A ‘New’ Al Gore Returns,” *Christian Science Monitor*, 19 Nov. 2002, at 1.

LANGUAGE-CHANGE INDEX

dismember misused for *sever* or *detach*: Stage 1

disenfranchise; disfranchise. Though *disfranchise* was long favored—from the 18th century to the mid-20th—*disenfranchise* is now much more common in print. It’s the standard term meaning “to deprive of the right to exercise a franchise or privilege, esp. to vote.” E.g.: “Part of this holding back was the result of white men, the persons in power, being unwilling or unable to reach out and bring in persons who traditionally had been *disenfranchised*.” Jai Ghorpade, “California Civil Rights Initiative,” *San Diego Union-Trib.*, 22 Sept. 1996, at G3.

LANGUAGE-CHANGE INDEX

disenfranchise for *disfranchise*: Stage 5

Current ratio (*disenfranchised* vs. *disfranchised*): 5:1

***disenthroned.** See **dethrone.**

***disforest.** See **deforest.**

disfranchise. See **disenfranchise.**

***disfunctional.** See **dysfunctional.**

dishabille /dis-ə-beel/ (= a state of careless or partial dress) is so spelled in AmE—though beginning in 20th-century BrE the usual spelling has been *deshabille*. The word was anglicized in the 17th century and in fairly widespread use through the late 19th century. There was little cause for reverting to the GALLICISM *déshabillé* in the 20th century, even toward the end of that period when more and more people were dressing in a casual and even careless way. To keep things tidy, *dishabille* should be printed in roman type (not italic) and without DIACRITICAL MARKS.

Current ratio (*dishabille* vs. *deshabille*): 1.2:1

disincentive; nonincentive. The former provides an incentive not to do something; the latter is no incentive at all.

***disincentivize** is JARGON for *discourage* or *deter*. It became popular in the mid-1980s and remains so—e.g.: “‘We’re competing with Los Angeles and New York firms for talent,’ Bochner said. ‘We don’t want to *disincentivize* people from coming here because there are huge gaps in salary.’” Jessica Guynn, “Wilson Sonsini Opens Its Purse for Associates: \$5,000 Raises,” *S.F. Daily J.*, 12 Oct. 1995, at 2. See ***incentivize.**

disinformation; misinformation. These words are not synonyms. *Disinformation* = deliberately false information <Soviet disinformation>. *Misinformation* = incorrect information <widespread misinformation about HIV and how it is transmitted>. Sometimes the more pejorative word (*disinformation*) is misused for the less pejorative—e.g.: “Not surprisingly, the low level of scrutiny she was thought to deserve accounts for a significant amount of *disinformation* [read *misinformation*] in reference works.” Susan Staves, “Traces of a Lost Woman,” *Profession*, 1995, at 36 (in an article charging not deliberate lies but oversights).

LANGUAGE-CHANGE INDEX

disinformation misused for *misinformation*: Stage 1

disingenuous. See **ingenious.**

disintegrative; *disintegratory. The latter is a NEED-LESS VARIANT.

Current ratio: 193:1

disinterest; uninterest. *Disinterest* = (1) impartiality or freedom from bias or from chance of financial benefit <the judge showed disinterest in the way that every judge should>; or (2) lack of concern or attention <the team members suffered from the disinterest of their traditional supporters>. Leading writers and editors almost unanimously reject sense 2, in which *uninterest* (recorded fr. 1890) is the better term because it is unambiguous—e.g.:

- “He may empathize with modern American theater, but his *uninterest* in American opera is resounding.” Ned Rorem, “Of Zeffirelli and Carmen: Memories and Reacquaintances,” *N.Y. Times*, 8 Sept. 1996, § 2, at 61.
- “A couple of years back, the Toronto-based alternative folk-pop group Moxy Fruvous released its U.S. major-label debut, ‘Bargainville,’ to overwhelming critical and commercial *uninterest*.” Stephen Thompson, “2 Release Parties on Tap,” *Wis. State J.*, 19 Sept. 1996, at 9.
- “Canadian converts to Islam risk social and religious isolation because of rejection by their families and *uninterest* from inhospitable mosque communities, a new groundbreaking study is revealing.” Chris Cobb, “Islamic Converts Face Rough Road, New Study Says,” *Ottawa Citizen*, 27 July 2015, at A5.

But *disinterest* still predominates in this sense—e.g.: “Nancy Aldera, a Precinct 39 poll worker who had little to do in last Tuesday’s school board election because only 24 people voted, said she doesn’t know why there is so much *disinterest* in voting.” Jonathan

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

Roos, "You Can Lead Them to the Polls," *Des Moines Register*, 15 Sept. 1996, at 1. Reserving *uninterest* for this use would be tidier, but because *uninterest* remains comparatively rare, DIFFERENTIATION seems unlikely to take hold on a broad scale.

disinterested; uninterested. Given the overlapping nouns (see **disinterest**), writers have found it difficult to keep the past-participial adjectives entirely separate, and many have given up the fight to preserve the distinction between them.

But the distinction is still best recognized and followed because *disinterested* captures a nuance that no other word quite does. Many influential writers have urged the preservation of its traditional sense. The typically understated A.R. Orage rhapsodized over the word: "No word in the English language is more difficult [than *disinterestedness*] to define or better worth attempting to define. Somewhere or other in its capacious folds it contains all the ideas of ethics and even, I should say, of religion . . . I venture to say that whoever has understood the meaning of 'disinterestedness' is not far off understanding the goal of human culture." *Readers and Writers (1917–1921)* 29 (1922; repr. 1969).

A *disinterested* observer is not merely "impartial" but has nothing to gain from taking a stand on the issue in question. The illustrative quotations that follow deal with journalists' *disinterest*:

- "In the film, Wexler's directorial debut, a cameraman portrayed by Robert Forster must wrestle with being a *disinterested* observer or becoming emotionally involved with what he sees through his lens." Donald Liebenson, "Finally Coming In from the 'Cool,'" *L.A. Times*, 26 Aug. 1996, at F1.
- "Decisions like the court's 4–1 ruling in a Twin Falls case put everyone on notice that cameras carried by journalists might as well be carried by police. And that erodes the position of *disinterested* neutrality that enables news organizations to cover breaking events without becoming part of them." Jim Fisher, "Public Loses When Journalists Become Arms of Police," *Lewiston Morning Trib.* (Idaho), 2 Sept. 1996, at A8.

Yet *disinterested* is frequently used (or, in traditionalists' eyes, misused) for *uninterested*—e.g.:

- "On a day when seeded players fell by the wayside like overripe tomatoes, Agassi looked sickly and almost *disinterested* [read *uninterested*]." George Gross, "Mighty Have Fallen," *Toronto Sun*, 25 June 1996, at 67.
- "He wants an alternative program that will help disruptive and *disinterested* [read *uninterested*] students." Barbara Behrendt, "Candidates Line Up for School Board Seats," *St. Petersburg Times*, 25 Aug. 1996, at 1.
- "Sales at many chains will look good because they were so poor last year because of the unusually hot weather and *disinterested* [read *uninterested*] shoppers." "Back-to-School Shopping Gets Good Grades," *Tampa Trib.*, 3 Sept. 1996, Bus. & Fin. §, at 6.

LANGUAGE-CHANGE INDEX

disinterested misused for *uninterested*: Stage 4

Current ratio (*uninterested children* vs.

disinterested children): 1:1

disinvestment = (1) consumption of capital; or (2) the withdrawal of investments, esp. for political reasons. Although sense 1 is the traditional one, sense 2 is more common today—e.g.:

- "About half of the 200 American companies in Kenya have *disinvested* and unemployment is growing." Andrew Hogg, "Frightened Moi Vows He Will Cull Democratic 'Rats,'" *Sunday Times* (London), 8 July 1990, at I20.
- "The implications would be significant if it could be shown, empirically, that every new office park, mall and subdivision built 'out there' [in the suburbs] caused *disinvestment* 'back here' [downtown]." "Measuring the Costs of Sprawl," *Chicago Trib.*, 20 Sept. 1996, at 22.
- "We chose to *disinvest* in the health of our center city and mis-invest in the wealth of what was at that time woodlands." Kaya Herron & David Koon, "Bangin': An Oral History of the Little Rock Gang Wars," *Ark. Times*, 16 July 2015, at 12.

For a word similar in meaning—*divestment*—see **divestiture**.

disk. A. And disc. *Disk* is the more usual spelling. *Disc* is the spelling used in four senses: (1) a phonograph record; (2) an optical disk (as an audio compact disc or videodisc); (3) a tool making up part of a plow; and (4) a component of a brake system. Otherwise, *disk* is the preferred spelling for general reference to thin circular objects, intervertebral disks, celestial bodies, and computer disks.

B. And diskette. Both *diskette* and *disk* may refer to computer-data storage media. *Disk* may mean (1) the computer's permanently installed hard drive, (2) a compact disc that contains a program, data, or music (though this is better known as a CD), or (3) the small, flat, portable magnetic medium. *Diskette* always bears this last sense, and unsurprisingly it has been on the wane since about 1990: thumb drives and wireless technology have superseded diskettes. (The synonym *floppy disk* is also rapidly declining in use—probably because the cases that held disks were floppy only for a short period in the 1980s.) *Disk* is commoner and shorter, but neither form can be fairly criticized.

***disk jockey.** See **disc jockey**.

dislodgment; dislodgement. The first spelling predominates in AmE (and historically in English generally, from about 1800); the second has predominated in BrE since about 1950.

dismembered. See **dismembered**.

dismissal; *dismission. The much older word **dismission* (1547) has given way almost completely to the upstart *dismissal* (1778), considered a mere variant in the early 19th century. Today, **dismission* is the NEED-LESS VARIANT.

Current ratio: 66:1

dismissible. So spelled—preferably not **dismissable*. See **-ABLE (A)**.

Current ratio: 3:1

***dismission.** See **dismissal**.

disorganized; unorganized. The first, the more frequently used term today, means “in confusion or disarray; broken up.” The second means “not having been organized,” but in a less pejorative sense.

disorient; *disorientate. The longer form is a NEEDLESS VARIANT of the shorter—e.g.: “There, upset and *disorientated* [read *disoriented*], Berkelbaugh drew the attention of a security guard.” Johnna A. Pro, “Tunnel Vision,” *Pitt. Post-Gaz.*, 2 Feb. 1997, at A1. See **orient**.

LANGUAGE-CHANGE INDEX
**disorientate* for *disorient*: Stage 2
Current ratio: 8:1

disparaging (= slighting, insulting) for *disconcerting* or *discouraging* is a MALAPROPISM. E.g.: “The report found several *disparaging* [read *discouraging*] statistics for the revitalization area, which includes privately owned homes from Ninth to Fourteenth avenues S, and 23rd to 28th streets. [For example, 66% of the residents] live below the poverty level.” Sabrina Miller, “Neighborhood Shapes Its Future,” *St. Petersburg Times*, 9 Aug. 1995, City Times §, at 1.

LANGUAGE-CHANGE INDEX
disparaging misused for *disconcerting* or
discouraging: Stage 1
Current ratio (*discouraging circumstances* vs.
**disparaging circumstances*): 79:1

disparate /dis-pə-rit/ = (1) markedly different <an expert in such disparate fields as economics and literary criticism>; or (2) unequal <before *Brown v. Board of Education*, blacks were subjected to radically disparate treatment in American schools>.

disparity. See **difference**.

dispassionate. See **impassionate**.

dispatch; *despatch. Although these two remain in a tight linguistic race, the former spelling is editorially preferred in both AmE and BrE.

Current ratio: 2:1

dispel. So spelled—not **dispell*. Cf. **excel**, **expel** & **extol**.

Current ratio: 186:1

disperse; dispersal. See **disburse**.

disport. See **deport**.

disposal; disposition. Both mean generally “a getting rid of,” but *disposal* more often has to do with trash or inconsequential items, whereas *disposition* is used in reference to things that are arranged, settled, or otherwise managed. *Disposition* connotes a preconceived plan and an orderly arrangement. *Disposal*, by contrast, bears negative connotations—more so in AmE than in BrE.

Disposition also—and primarily—means “mood; temperament; inclination.”

dispose for *dispose of* is jargonistic phrasing among waste-handlers—e.g.:

- “One goal for residential recycling is to achieve 5 percent per capita reduction in total waste *disposed* [read *disposed of*], McClain said.” Eleni Chamis, “Solid Waste Authority Votes to Join Marketing Co-op,” *Knoxville News-Sentinel*, 18 Aug. 1994, at B6.
- “But Ms. Graves says the numbers are a little skewed because the figures include all the waste *disposed* [read *disposed of*] by a county.” Jeff Selingo, “Lawmakers Relax Rules on Cutting Landfill Trash,” *Morning Star* (Wilmington, N.C.), 21 June 1996, at B1.

For the use of this verb in diametrically opposed senses, see **CONTRONYMS**.

LANGUAGE-CHANGE INDEX
dispose misused for *dispose of*: Stage 1

disposition. See **disposal**.

disproportionate; disproportional. See **proportional**.

disprove > disproved > disproven. So inflected consistently since the 18th century. **Disproven* is a variant past participle that has never been standard in any variety of English. See **proved**.

Current ratio (*had disproved* vs. **had disproven*): 18:1

dispute; disputation. These words should be differentiated. *Dispute* = controversy <goods in dispute>; *disputation* = formal argument or debate <effective disputation involves debunking the major counterarguments>.

disqualified; unqualified. These words have quite different senses. *Disqualified* = disabled; debarred. *Unqualified* = not meeting the requirements. An *unqualified* applicant doesn’t have the skills or training that the job requires. A *disqualified* applicant, even one with the skills and training, can’t be considered because of some rule, such as a policy against nepotism.

disquiet; *disquieten. The standard verb is *disquiet* (= to bother or disturb). The form **disquieten*—not recorded in many dictionaries—is a NEEDLESS VARIANT. It is somewhat more common in BrE than in AmE—e.g.: “What will Europe consist of, and who will decide about the future shape and destiny of that suddenly and dramatically *disquietened* [read *disquieted*] continent?” George Weidenfeld, “What Europe Can Do, What Europe Must Do,” *Independent*, 8 July 1991, at 19.

LANGUAGE-CHANGE INDEX
**disquieten* for *disquiet*: Stage 1
Current ratio (*disquieted* vs. **disquietened*): 444:1

***disremember** (= to forget), dating from 1815 in the *OED*, has long been considered a dialectal term. See **DIALECT**. Cf. **misremember**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

disrespect, vb. See **dis**.

***diss**, v.t. See **dis**.

dissatisfied; unsatisfied. Some DIFFERENTIATION exists between these words. To be *dissatisfied* is to be positively bothered by the lack of satisfaction, whereas to be *unsatisfied* is to be less than completely satisfied. So a person whose accounts are in arrears has debts that are *unsatisfied*—and creditors who are *dissatisfied*.

dissemble; disassemble. *Dissemble*, meaning “to present a false appearance; to conceal the truth,” was a fairly common word through about 1900. It has since become rare, but it does still appear—e.g.:

- “The boy answered [my questions] simply, directly and honestly, unlike most adults, who *dissemble*, ramble or tell you everything but the answer to the question.” Judith S. Johnessee, “The Day a Boy Lost His Cat and Became a Man,” *Plain Dealer* (Cleveland), 15 Dec. 1994, at E9.
- “The problem is that the Pentagon’s credibility is shot. And as it has *dissembled*, it has only increased the confusion and suffering for those who fought the war.” “As Vets Suffer, Pentagon Blows Gulf Investigation,” *USA Today*, 13 Dec. 1996, at A14.

By contrast, the word *disassemble* (= to take apart) didn’t flourish until the mid-20th century. Yet it is now the more frequent word—e.g.:

- “The Edgewood trainees . . . [learn] along the way how to assemble, *disassemble* and repair [the computers].” Neal R. Peirce, “Cyberspace Experiments—in the ‘Hood,” *Baltimore Sun*, 24 July 1995, at A9.
- “On New Year’s Day, the neighbors get together to take the decorations down, *disassemble* the arches and store them for the year.” Leslie Sowers, “City Sidewalks, Pretty Sidewalks,” *Houston Chron.*, 24 Dec. 1996, at 1.

Unfortunately, some writers use *dissemble* when they mean *disassemble*—e.g.:

- “Rushakoff said that he had to spend a lot of money learning how to use the right tools and the right procedures to *dissemble* [read *disassemble*] computers.” Myra Pinkham, “Obsolete Machines Yield New Fortunes,” *Am. Metal Market*, 24 Jan. 1996, at 5.
- “Today, Green ships out . . . tables, computer desks, beds, bookcases, and sofas that can be assembled and *dissembled* [read *disassembled*] in a matter of minutes.” Suzi Parker, “Furniture You Put Together in a Snap,” *Christian Science Monitor*, 19 July 2000, at 19.
- “In the Sikorsky case, the 148-Mbyte assembly was *dissembled* [read *disassembled*] into its 250 component files, which were translated independently and then reassembled.” “Comanche Helicopter Blends CAD Models from 14 Suppliers,” *Design News*, 3 Sept. 2001, at 31.

LANGUAGE-CHANGE INDEX
dissemble misused for *disassemble*: Stage 2

disseminate. So spelled—not **dissiminate*.

Current ratio: 6,482:1

dissent, n.; **dissension**; ***dissention**. *Dissent* refers to a difference of opinion, whether it is citizens dissenting from the decision of a governmental body or a judge dissenting from a majority opinion. A *dissent*, as opposed to *dissent* as a mass noun, refers to a

dissenting judicial opinion—e.g.: “Judge Dennis wrote a brazenly activist *dissent*.” Thomas L. Jipping, “President Clinton’s Judicial Legacy,” *Wash. Times*, 17 Sept. 1996, at A19.

Dissension refers to contentious or partisan arguing—e.g.: “Dr. Mazzullo, who declined to comment about the *dissension* surrounding his contract renewal, has been a lightning rod for some residents’ discontent.” Merri Rosenberg, “Greenburgh Passes School Budget,” *N.Y. Times*, 22 Sept. 1996, § 13, at 4.

**Dissention* is a mistaken form of *dissension*—e.g.: “Their prime-time speeches . . . could help forge the unity that propels the first black man into the presidency. Or they could highlight the splits and *dissention* [read *dissension*] that provide John McCain the opening he needs to win the White House.” Christy Hoppe, “On Obama Ticket, Biden Fills In Blanks,” *Dallas Morning News*, 24 Aug. 2008, at A1.

LANGUAGE-CHANGE INDEX
**dissention* for *dissension*: Stage 1
Current ratio (*dissension* vs. **dissention*): 11:1

dissent, v.i. Idiomatically, this verb takes *from* or (much less commonly) *against*, preferably not *to* or *with*—e.g.:

- “The court also ordered the county to pay White’s legal expenses, although Justice Paul E. Pfeifer *dissented from* that part of the ruling.” James Bradshaw, “Counties Told to Keep Full Records,” *Columbus Dispatch*, 22 Aug. 1996, at D1.
- “Three justices who *dissented from* the majority opinion in the Kiryas Joel case said they would uphold the initial legislation.” “New Law, New Hope in Kiryas Joel Battle,” *N.Y. Times*, 7 Sept. 1996, § 1, at 20.
- “She *dissented against* seven of eight Federal Open Market Committee decisions last year and will vote again on policy in 2016.” Jeff Kearns, “Fed Heads Hint Again of Looming Rate Hike,” *Nat’l Post* (Can.), 22 Aug. 2014, at 3.

dissenter; dissentient, n. *Dissenter* is standard in AmE for “someone who withholds assent, or does not approve or agree.” E.g.: “Reports suggest that one of the three *dissenters* [on the jury] was ‘scared to death’ of precisely the kind of retaliation that put Nee in his grave.” Peter Gelzimis, “Townies Know What Judge’s Bias Refuses to Let Her See,” *Boston Herald*, 8 Sept. 1996, at 10.

Dissentient is somewhat more frequent in BrE, probably because the term *dissenter* (usually with an initial capital) has a special religious and social meaning in British history (i.e., someone who dissents from or refuses to conform—specifically, from the 17th century on—to the tenets and practices of the Church of England).

dissenting; dissentient, adj.; **dissentious**. *Dissentient* is sometimes used in BrE where *dissenting* would ordinarily appear in AmE. E.g.:

- “One and all admire that I had got hold of a good thing. Not a *dissentient* voice.” P.G. Wodehouse, *Right Ho, Jeeves* 28 (1934; repr. 1986).

- “The issue of foreign policy decision making may also be tackled because the Community will remain ineffective in this area unless the present unanimity rule is modified somewhat even if only to the extent of permitting decisions on foreign policy to be taken despite one *dissentient* [read, in AmE, *dissenting*] voice.” Garret Fitzgerald, “Presidency Offers Chance to Keep Goodwill of EU States,” *Irish Times*, 4 May 1996, at 12.

One ambiguity in *dissentient* is that readers might interpret it as a derogatory opposite of *sentient*; the true opposite of *sentient* (= feeling), however, is *insentient*. *Dissentious* (= given to dissension; quarrelsome) is a word that rarely appears.

***dissention**. See **dissent**, n.

dissentious. See **dissenting**.

dissimilar has always preferably taken the preposition *to*, not *from*. E.g.: “In the ’60s, the blue-collar neighborhoods were dominated by gangs of youths not at all *dissimilar from* [read *dissimilar to*] the warring clans of ‘Braveheart’ and ‘Rob Roy,’” Gary Dretzka, “‘Small Faces’ Is Another Grim Picture of Scottish Life,” *Chicago Trib.*, 3 Sept. 1996, at C3.

LANGUAGE-CHANGE INDEX

**dissimilar from* for *dissimilar to*: Stage 2

Current ratio (*dissimilar to* vs. **dissimilar from*): 3:1

dissociate; ***disassociate**. *Dissociate* is the preferred term; **disassociate* is a NEEDLESS VARIANT. *Dissociate* takes the preposition *from*. E.g.:

- “To *dissociate* himself *from* such impairments, Dole released the medical summary of his exam last month.” “What’s Really Up, Doc?” *Plain Dealer* (Cleveland), 26 July 1996, at B10.
- “It is worse to see supposed liberals, such as President Boris Yeltsin’s chief of staff Anatoly Chubais, *dissociating* themselves *from* the deal.” “Beyond Chechnya’s Cease-Fire,” *Wash. Post*, 5 Sept. 1996, at A22.

LANGUAGE-CHANGE INDEX

**disassociate* for *dissociate*: Stage 3

Current ratio: 3:1

dissolution of marriage. See **divorce** (B).

dissolvable; **dissoluble**. The word meaning “capable of being dissolved” was traditionally *dissoluble* (dating from the early 16th century). But since the late 1980s in AmE and the late 1990s in BrE, *dissolvable* has become the predominant form. It seems here to stay.

Current ratio: 1.2:1

dissyllable (= a word of two syllables) has been predominantly so spelled in all varieties of English since the 18th century. Beginning in the 1970s, there was a concerted effort among philologists to use *disyllable*—“the better spelling,” according to Robert W. Burchfield (*FMEU3* at 221)—but the

GALLICISM-like spelling with the *-ss-* has persisted and predominated.

Current ratio: 2:1

distensible (= capable of being distended) has been the standard form since the 18th century—**distendable* and **distendible* being NEEDLESS VARIANTS.

Current ratio (*distensible* vs. **distendable* vs. **distendible*): 201:3:1

distention; **distension**. For the noun corresponding to the verb *distend* (= to become swollen and fully extended), these spellings are close competitors throughout the English-speaking world. AmE tends to prefer *distention*, BrE *distension*.

distill; **distil**. The spelling *distill* is standard in AmE, *distil* in BrE.

distinct; **distinctive**; **distinguished**. The first means “well defined, discernibly separate” <distinct speech>, and the second means “serving to distinguish, set off by appearance” <a distinctive red bow tie>. *Distinct* speech is well enunciated, whereas *distinctive* speech is idiosyncratically accented, different from that of surrounding speakers. *Distinctive* is sometimes misused for *distinguished* (= notable; famous)—e.g.: “Festivities begin Friday night at a Commonwealth Club/Inforum event, where a *distinctive* [read *distinguished*] group of authors will discuss the question ‘Dystopia/Utopia? Can the Bay Area Uphold a New Generation of Writers?’” Heidi Benson, “Litquake a Big One for S.F.,” *S.F. Chron.*, 10 Oct. 2002, at D1.

LANGUAGE-CHANGE INDEX

distinctive misused for *distinguished*: Stage 1

distract. See **detract**.

distract; ***distraite**; **distraught**. *Distract*, a word borrowed from French and pronounced /di-**stray**/, means “distracted or preoccupied, esp. because of anxiety.” Although the word typically refers to a person, it sometimes refers to personified things—e.g.: “As it looks to the start of the 21st century and the end of 14 years under Socialist President Francois Mitterrand, the world’s fifth largest military power and fourth biggest economy is *distract* and irresolute.” Thomas Sancton, “If at First You Don’t Succeed,” *Time*, 24 Apr. 1995, at 46.

Distraite* (pronounced /di-strayt**/) is the feminine version of *distract*. For English-language purposes, it is a NEEDLESS VARIANT not listed in most dictionaries, and it might be considered objectionable partly on grounds of SEXISM—e.g.:

- “In New Zealand, my father’s first posting as a young first secretary, there was the delightfully *distraite* [read *distract*] Lady Cumming-Bruce.” Katie Hickman, “The Dutiful and the Damned,” *Sunday Telegraph*, 9 Oct. 1994, at 1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “She is slightly *distraite* [read *distrat*] in manner, drily amused by life, not easily impressed, and unnervingly sexy.” “Small, Pure and Sexy,” *Sunday Telegraph*, 14 July 1996, at 9.
- “Even Lady Ditherby-Stoat appeared a trifle *distraite* [read *distrat*] as she discussed the novels of Lord Beaconsfield with Mr. Hellespont.” Charlotte MacLeod, “The Mysterious Affair of the Beard-Wynnington Dirigible Airship” (1986), in *It Was an Awful Shame and Other Stories* 178, 187 (2002).

Both words, though, can typically be replaced by an ordinary term such as *distracted*, *preoccupied*, or *absent-minded*—or, if the anxiety level is high enough, by *distraught*, which means either “deeply agitated” or “insane.” E.g.: “Lucy had still been all but bedridden when her neighbor died. And she’d been *distraught* when the news was brought to her that he was dead.” Kathy Lynn Emerson, *Face Down Under the Wych Elm* 8 (2000).

LANGUAGE-CHANGE INDEX

**distraite* for *distrat*: Stage 2Current ratio (*distrat* vs. **distraite*): 6:1

distrustful; mistrustful. The difference here is subtle because both terms mean “having or showing doubt; lacking confidence.” But *distrustful* implies suspicion or wariness based on an informed judgment, whereas *mistrustful* suggests uncertainty or uneasiness. So one might be *distrustful* of a used-car dealer’s puffing, yet *mistrustful* of a stranger’s advice. Note that both adjectives take the preposition *of*.

disyllable. See **dissyllable**.

dive > dived > dived; dive > dove > dived. Although *dove* is fairly common in AmE (on the analogy of *drove*), *dived* has long been considered the preferable past-tense form. But times are changing: since 1986, the frequency of *he dove into* in AmE has surpassed that of *he dived into* (not true of BrE). So it is time to declare *dive > dove > dived* standard AmE alongside the older forms. E.g.:

- “A 23-year-old Severna Park man was in critical condition at Maryland Shock Trauma Center in Baltimore yesterday after he *dove* into a pool and suffered a cervical fracture to his neck, Anne Arundel County fire officials reported.” “Man Is Critically Injured in Dive into Pool During Bachelor Party,” *Baltimore Sun*, 16 July 2001, at B5.
- “Facing Vladimir Nunez, Shinjo lined a ball to the right-center gap, where centerfielder Eric Owens *dove* for the ball but came up empty.” Jason Butler, “Shinjo’s Double Ends Crazy Game,” *Newsday* (N.Y.), 19 July 2001, at A80.
- “After intermission, the four musicians *dove* into Ravel’s only contribution to the quartet repertoire.” Edward Reichel, “Something Old, Something New, Played Masterfully,” *Deseret News* (Salt Lake City), 9 Oct. 2002, at C9. (On the use of *masterfully* in the title of that article, see **masterful**.)

LANGUAGE-CHANGE INDEX

dove for *dived* as a past tense: Stage 5Current ratio (*she dove* vs. *she dived*): 1.2:1

divergence; *divergency. The latter is a NEEDLESS VARIANT.

Current ratio: 172:1

diverse; divers. *Diverse* implies difference, whereas *divers* implies severalty. *Diverse* /di-*vərs*/ means “differing widely; unlike; varied”—e.g.:

- “As Chicago’s religious community becomes even more *diverse*—recent surveys show that there are more Muslims in the Chicago area than Jews, more Thai Buddhists than Episcopalians—the potential for strife increases.” Cathleen Falsani, “2 Suburbs, 12 Faiths Under One Umbrella,” *Chicago Trib.*, 13 Sept. 1996, at 12.
- “Liberia, a nation smaller than New York State, has more than 30 linguistic groups and myriad *diverse* folkways.” Harold McNeil, “Blacks Told of Strategies in Tracing Roots,” *Buffalo News*, 20 Sept. 1996, at B5.

Divers (= various, sundry)—pronounced /di-*vərz*/—remains a part of AmE only as a curiosity. Formerly it meant not only “various,” but “several” as well. For example, in *The Merchant of Venice*, Shakespeare referred to “divers [i.e., ‘several’] of Antonio’s creditors” (3.1.113); in *As You Like It*, he wrote that “time travels in divers [i.e., ‘various’] paces with divers [again, ‘various’] persons” (3.2.308–09).

Today *divers* is an ARCHAISM, and its only accepted meaning is “various,” as in the following examples:

- “The possible perils are precluded by the filing of the notice of pendency which thereafter binds anyone subsequently obtaining an interest in the property, be they fee owners, mortgagees, grantees, tenants or *divers* others.” Bruce J. Bergman, “Who’s Hiding in the House,” *N.Y.L.J.*, 25 Jan. 1995, at 5.
- “[The] literature section . . . is sprinkled with works featuring Yeats, Orpen, Synge and *divers* others of Irish interest.” “O’Connor Leads Impressive List of Works in de Veres Auction,” *Irish Times*, 2 Dec. 1995, at 24.
- “Lee cries four times, Jackson cries twice, and *divers* others Blue and Gray chew up the scenery.” John Stark Bellamy II, “Shaara’s Civil War Prequel Pretty Impressive,” *Plain Dealer* (Cleveland), 18 Aug. 1996, at J11.

divestiture; *divesture; divestment. The standard noun corresponding to the verb *divest* is *divestiture*. E.g.:

- “*Divestiture* of owned production facilities is common in electronics business here—Apple, Hewlett-Packard, IBM and National Semiconductor recently sold facilities with contracts to become their major customers.” “Philips Plans Sale of U.S. TV Plant,” *Consumer Electronics*, 2 Sept. 1996, at 9.
- “Completing *divestitures* already under way and those announced Friday will all but conclude Thomson’s reorganizing process.” “Takeover Target Loewen to Buy Cemetery Company,” *Orlando Sentinel*, 21 Sept. 1996, at C10.
- “The forecast improvement over last year is primarily due to *divestiture* of the crop insurance business and growth in the average credit portfolio.” Jennifer DeWitt, “Deere by Division,” *Quad-City Times* (Davenport, Iowa), 22 Aug. 2015, at 8.

**Divesture* is a NEEDLESS VARIANT—e.g.: “Without the *divesture* [read *divestiture*], Otten would have controlled eight of the largest ski resorts serving skiers in

eastern New England.” Penny Parker, “Gillett Returns to Skiing,” *Denver Post*, 11 Sept. 1996, at D1.

Divestment, not at all uncommon, might seem to be another NEEDLESS VARIANT. Yet it appears in a number of legal phrases, such as *vested interest subject to divestment*. And it appears in many other contexts, usually involving the release of assets—e.g.: “In a few cases, the losers are Japanese companies, part of a multibillion-dollar *divestment* of their American assets.” Verne G. Kopytoff, “Asian Investment Is on the Rise in Los Angeles,” *N.Y. Times*, 22 Sept. 1996, § 9, at 7. To the extent that *divestment* deals more particularly with assets than *divestiture* (a more general word), using it in these contexts serves the cause of DIFFERENTIATION. At this stage, though, the difference is incipient only. Cf. **disinvestment**.

LANGUAGE-CHANGE INDEX

**divesture* for *divestiture*: Stage 1

Current ratio (*divestiture* vs. **divesture*): 49:1

***dividable**. See **divisible**.

divide up. See PHRASAL VERBS.

divisibility. See **devisability**.

divisible /di-**viz**-ə-bəl/ is so spelled—not **divisible*. (See -ABLE (A).) **Dividable* is a NEEDLESS VARIANT.

Current ratio: 1,165:1

divisive (= causing a lot of disagreement between people) is preferably pronounced /di-**vɪh**-siv/, not /di-**vis**-iv/.

divisor. See **deviser**.

divorce. **A. And annulment**. A *divorce* recognizes the existence of a valid marriage, whereas an *annulment* treats the marriage as if it had never existed. Even so, in most jurisdictions the “nonexistence” of the marriage is not considered absolute: any children conceived before the annulment are considered legitimate.

B. And dissolution of marriage. In the 1970s, the word *divorce* was struck from many statutes and replaced by the EUPHEMISM *dissolution of marriage*.

C. And legal separation. A *legal separation* is “an arrangement whereby a husband and wife live apart from each other while remaining married, either by mutual consent (often in a written agreement) or by judicial decree” (*Black’s Law Dictionary* 1572 [10th ed. 2014]).

divorcée; divorcé. The usual word—*divorcée*—properly refers only to a woman. The masculine form is *divorcé*, which has been AmE usage since the late 19th century. But some writers have tried to create male *divorcées*—e.g.:

- “Parents were lulled into security by Martin’s plausible manner and his implied message that, as an ex-police officer, he was a man to be trusted. Gregarious *divorcée* [read *divorcé*] Martin was a familiar figure in Manchester in his open-top sports cars.” “Ex-Policeman Brainwashed Schoolgirls with Drugs,” *Herald* (Glasgow), 13 Sept. 1996, at 3. (On the use of *gregarious divorcée* as a “title” in that sentence, see TITULAR TOMFOOLERY.)
- “She has two men in her life: wealthy *divorcée* [read *divorcé*] Ray Porter (Martin) and struggling musician Jeremy.” “Danes Tries Her Hand in a Counter Culture,” *San Diego Union-Trib.*, 27 Oct. 2002, at F10.

Both words are pronounced /di-vor-**say**/ or /-**see**/.

LANGUAGE-CHANGE INDEX

divorcée misused for *divorcé*: Stage 2

divorcement is now obsolete for *divorce* in the sense “the dissolution of the marriage tie,” although it persisted in this sense up to the mid-20th century. For example, David O. Selznick directed Katharine Hepburn and John Barrymore in the 1932 film *A Bill of Divorcement*. But even with the legal term, *bill of divorce* has been standard since the 18th century.

Divorcement survives in the general figurative sense “the severance or complete separation of any close relation, esp. a business relation”—e.g.: “1941–42 . . . Justice Dept. pursues *divorcement* of theaters from studios.” Keithe Collins, “Reeling in the Years,” *Daily Variety*, 8 Mar. 2001, Special §, at 6.

Current ratio (*a divorce* vs. *a divorcement*): 1,183:1

divulge, v.t., = to make known (esp. something secret); reveal. E.g.: “Yet Mattel executives wouldn’t *divulge* any details of the coming job cuts.” David Robinson, “Mattel Puts Profits Before Morale During Holidays,” *Buffalo News*, 25 Dec. 1994, at 11. The verb should not be used where *say* or *tell* would suffice—e.g.: “What Dunton, a portly man who was dressed in jeans and a striped shirt Wednesday, *divulged* [read *said*] to investigators is unclear.” Matt Krasnowski, “Witness Takes Jail over Talking in Cowlings’ Case,” *State J.-Register* (Springfield, Ill.), 8 Sept. 1994, at 2. The accent is on the second syllable: /di-**vəl**j/.

divulgence; *divulgation; *divulgement. Though the latter two date from the early 17th century, *divulgence*, which dates from the early 19th century, is now the preferred noun corresponding to the verb *divulge*.

Current ratio: 15:11:1

***djinni**. See **genie**.

do, as. See **like** & ANTICIPATORY REFERENCE (A).

do; doh. In the “sol-fa syllables” made famous in *The Sound of Music* (1965)—do, re, mi, fa, sol, la, ti, do—the AmE spelling of the first and last syllable is *do* /doh/. The BrE spelling is said to be *doh* (FMEU3 at 224)—but the linguistic evidence in BrE print sources points to *do*. See **so; sol**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

dock, n. Since the late 19th century, usage commentators have occasionally criticized the landlubber's use of *dock* for *wharf* or *pier*. But this sense has been common since that time. In fact, nautically speaking, *dock* has two senses: (1) "a large structure or excavated basin for receiving ships, equipped with gates to keep water in or out"; and (2) "a landing pier; wharf" (*WNWCD*). Although Theodore Bernstein and Wilson Follett both disapproved of sense 2, most commentators today accept it. It should be considered standard.

doctoral. So spelled—not **doctorial*. E.g.:

- "In World War II, the USO served as a transforming organization, helping create and develop a shared national American culture," says Teri Tynes of Austin, Texas, whose *doctorial* [read *doctoral*] dissertation at the University of Texas, 'A Theater Worth Fighting For,' examined the group." Tom Squitieri, "USO Observes an Active 50th with War in Gulf," *USA Today*, 4 Feb. 1991, at A7.
- "[There will be a] screening of 'Viktor und Viktoria' (1933), introduced by UC Berkeley *doctorial* [read *doctoral*] candidate Sanjay Hukku, at 9 p.m. Fri." Reyhan Harmanci, "Gender Bender," *S.F. Chron.*, 20 Sept. 2007, at G36.

The pronunciation is /**dok**-tə-rəl/, not /**dok-tor**-əl/ or /**dok-tor**-ee-əl/.

LANGUAGE-CHANGE INDEX

**doctorial* for *doctoral*: Stage 1

Current ratio (*doctoral* vs. **doctorial*): 461:1

doctrinal; doctrinaire; *doctrinary. *Doctrinal* (/dɒk-trə-nəl/ or /dɒk-trɪ-nəl/) is the neutral term, meaning "of, relating to, or involving a doctrine." E.g.: "To both Protestants and Catholics, Moon is guilty of grievous *doctrinal* heresies—by preaching, as he does, that Christ's mother, Mary, was not a virgin, and by arguing that he and his wife, the 'True Parents,' are on earth to finish the job Jesus failed to do." Michael S. Serrill, "Moon Beams into Brazil," *Time*, 23 Sept. 1996, at 31.

Doctrinaire (/dɒk-trə-nair/) = slavishly or impractically adhering to dogma; highly dogmatic. "Sad to say, these selections will be made not by the police officers' benefactor but by a *doctrinaire* liberal whose largest campaign contributions from a professional group come from (for God's sake!) trial lawyers." Don Feder, "Crimefighter Bill Much Overrated," *Boston Herald*, 25 Sept. 1996, at 31. **Doctrinary* is a NEED-LESS VARIANT of *doctrinaire*.

Doctrinaire is sometimes misspelled **doctrinaire*, on the apparent analogy of *questionnaire*—e.g.:

- "It does indicate a willingness on the part of the House leadership to negotiate along less conservative *doctrinaire* [read *doctrinaire*] lines." "'Endangered' Moderates," *Times & Eagle* (Reading, Pa.), 4 Nov. 1995, at A6.
- "In *doctrinaire* [read *doctrinaire*] terms the decree stated the fundamentals of the Communist doctrine." Malbone W. Graham, *New Governments of Central Europe* 229 (2007).

Cf. **millionaire & questionnaire**.

doctrinaire misspelled **doctrinaire*: Stage 1

Current ratio: 1,568:1

documentary; *documental. The latter is a NEED-LESS VARIANT.

Current ratio: 117:1

DOCUMENT DESIGN. Traditionally, writers have been relatively unconcerned with the look of their documents. This lack of concern didn't have many horrible consequences in the days of typewriters, when the primary design choices were the width of the margins and the amount of underlining and capitals.

But with the advent of word processing, document design has become much more important as writers are presented with all kinds of new formatting and printing options. Failing to knowledgeably use these options puts the writer at a disadvantage because most readers have become accustomed to well-designed documents. In short, it has become essential to know something about typography and design.

In this space, of course, it's impossible to offer any more than the simplest primer on the subject. But a few particularly important points deserve mention.

A. Readable Typeface. For text, a readable typeface probably means a serif typeface, such as the one used throughout this book, as opposed to a sans-serif (/sanz-**ser**-if/) typeface made up of only straight lines. Serifs are short strokes that project from the ends of the main strokes that make up a character.

This is a serif typeface: Times New Roman.

This is a sans-serif typeface: Univers.

Although sans-serif typefaces often work well in headings and the like, they can be difficult to read in text. Among the better serif typefaces are Bookman, Caslon, Garamond, Palatino, and Times New Roman. One typeface long predominated in American business: Courier. Avoid it at all costs. Courier is an eyesore.

B. White Space. Ample white space makes a page more inviting. The primary ways to create white space on the page are to use generous margins (for example, margins greater than one inch for letters and other business documents), to supply headings and subheadings, and to enumerate items in separate paragraphs, subparagraphs, or bulleted lists.

C. Headings and Subheadings. Artfully employed, headings and subheadings make a document much easier to follow. Not only do they serve as navigational aids for readers, they also help writers organize thoughts more logically than they might otherwise. See **widow**.

D. Avoiding All Caps. See CAPITALIZATION (E).

E. Avoiding Underlines. Generally, italicizing is preferable to underlining, which was traditionally (on a typewriter) nothing more than a poor substitute for italics. The effect of underlining is to take up white space between lines, thereby making the lines harder to read.

F. Listing. Enumerate items by breaking down lists into paragraphs and subparagraphs. Using a tabulated list allows the writer not only to display the points better but also to improve the sentence structure. Make sure that the list falls at the end of the sentence—not at the beginning or in the middle. See ENUMERATIONS.

G. Bullets. On this extremely useful device, see PUNCTUATION (B).

H. Hanging Indents. In most text, when you indent an item to be listed—whether it's a bulleted item or an entire paragraph—don't begin the second line of the item at the left margin. Instead, begin it just below the first line, with the enumerating signal hanging to the left. Examples appear throughout this book in bulleted lists.

I. Ragged Right Margin. Many readability specialists insist that unjustified right margins make text more readable than justified ones do. In letters, contracts, and the like, an unjustified right margin is often desirable.

J. Citations in Footnotes. Citations tend to clutter the text; you can easily minimize this cluttering by moving citations to footnotes (and avoiding footnotes for discussion purposes). See FOOTNOTES.

K. Characters per Line. Ideally, a line of type should accommodate 45 to 70 characters, but the “fine print” that characterizes so many legal documents often spans 150 characters to the line. In text of that kind, the reader's eye tends to get lost in midline or in moving from the end of one line to the beginning of the next. One way to improve a document with a large block of text—and, typically, small margins on each side—is to use a double-column format. That design can be extremely helpful, for example, in consumer contracts such as residential leases.

L. Select Bibliography. For more on this subject, see Philip Brady, *Using Type Right* (1988); Robert Bringhurst, *The Elements of Typographic Style* (1992); and *Words into Type* (3d ed. 1974).

dogged. As a past-tense or past-participial verb, *dogged* is pronounced /dawgd/ or /dogd/ <they were dogged by problems>. But as an adjective, the word is pronounced /dawg-id/ or /dog-id/ <golfers are the dogged victims of an inexorable fate>.

doggerel (= bad, often silly poetry) is the standard spelling. It is pronounced with three syllables (/dawg-ər-əl/). **Doggerel* is a variant form that predominated in BrE until about 1880. It has since become nonstandard.

Current ratio: 12:1

doggy; doggie. Oddly, AmE prefers *doggy* in all uses except the phrase *doggie bag* (attested from 1958). BrE is consistent with *doggy* for all uses of the word.

dogma. Pl. *dogmas* (/dawg-məz/) or **dogmata* (/dawg-mə-tə/). The simple plural is preferred over the Greek **dogmata*—e.g.:

- “If The Union doesn't subscribe to the unisex *dogmata* [read *dogmas*] of our frumpy homogenizers—and I sometimes wonder—such distinctions should be borne in mind.” Letter of R.R. Dalling, “Valley Center Churlish Caricature,” *San Diego Union-Trib.*, 17 Apr. 1985, at B7.

- “Neither of them sat through the gobbledygook that passes for education courses, nor absorbed the *dogmas* of the day that pass for thinking.” Thomas Sowell, “Hardly the Last Word on Education ‘Reform,’” *Tampa Trib.*, 20 Sept. 1996, at 17. (The mispaired *Neither . . . nor* in that sentence will cause a MISCUE for many readers. See **neither . . . nor** (C).)

See PLURALS (B).

Current ratio: 45:1

doldrums, always plural, denotes a state of low energy, boredom, depression, or lifelessness—e.g.: “The annual Spring Flower Show chases away the winter *doldrums* from 9 a.m. until 5 p.m. daily until May 10.” “3 Things We Love About Lincoln Park,” *Chicago Sun-Times*, 9 Feb. 2009, News §, at 3. The word is thought to derive from the Old English *dol* (= dull) and is related to the word *dolt*. The suffix appears to have been influenced by *tantrum*, and it has nothing to do with the percussion instrument. Hence anyone who thinks the word alludes to “dull drums” is engaging in folk etymology. (See ETYMOLOGY (D).)

Substituting *dull* for *dol* makes for a natural if over-used pun—e.g.: “Hope for Summer Movie *Duldrams*.” Headline, *L.A. Times*, 1 May 2008, at E1. But sometimes it's clear error—e.g.:

- “In their continuing effort to snap Shawn Green out of his *duldrams* [read *doldrums*] at the plate, the Dodgers batted their cleanup hitter second vs. the Brewers.” “Baseball Log,” *Pitt. Post-Gaz.*, 26 May 2004, at B5.
- “Marlow also pulled Weston out of its *duldrams* [read *doldrums*] after Dracut (12–8–2) took the initial lead.” Bruce Lerch, “Savio Shakes Off Rust, Tips Salem,” *Boston Herald*, 6 Mar. 2007, Sports §, at 50.

When capitalized, the term denotes an equatorial zone of light winds where sailing ships are prone to becalming—e.g.: “Days blend into one another. We cross the *Doldrums*, the vast belt of low pressure and light wind that girdles the equator.” Matthew Power, “Sailing Toward Paradise,” *N.Y. Times*, 23 Dec. 2007, Travel §, at 1. The *OED* speculates that this sense comes from a misunderstanding of the idiom *in the doldrums* as referring to a physical location.

dollars. When the dollar sign appears with a numeral, using the word *dollars* is redundant—e.g.: “By October this year, Mr. Bradley had raised nearly \$20 million *dollars* [read \$20 million].” James Dao, “Seeking Upset, Bradley Enlists Unlikely Model,” *N.Y. Times*, 27 Dec. 1999, at A1, A12. See REDUNDANCY.

dollhouse; doll's house; *dolls' house. The BrE preference today is for the oldest form, dating from the 18th century: *doll's house*. The strong AmE preference (since about 1970) is for the 19th-century solid form *dollhouse*. The plural possessive **dolls' house* is a variant that has predominance nowhere in World English.

dolma. Pl. *dolmas* or (somewhat pretentiously in English-language contexts) *dolmades*.

Current ratio: 1:1

dolor (= sorrow, distress) is sometimes said to be the AmE spelling, *dolour* the BrE spelling. In fact, though, *dolor* has predominated in all varieties of English print sources since the 17th century. See -OR; -OUR.

Current ratio: 11:1

Domesday Book (= the record of a 1086 survey made under William the Conqueror to catalogue English lands and landholdings) has been predominantly so spelled in all varieties of English since 1800. Before that, the variant *Doomsday Book* was prevalent. That term, however, is subject to serious misinterpretation today. The name is said to derive from the idea that the survey judged all people without bias, just as the Last Judgment is supposed to do.

Current ratio: 13:1

domestic; domesticated. A *domestic* animal is a pet, such as a cat or dog, that lives with the family. A *domesticated* animal is a formerly wild animal that has long been bred for human use (common examples being cattle, pigs, and sheep).

domesticate. See **domiciliate**.

domesticated. See **domestic**.

***domesticize.** See **domiciliate**.

domicile; *domicil. *Domicile* /dom-ə-sil/ is spelled both with and without the final -e, but the better and more common spelling today is with it. The incomplete-looking **domicil* predominated in AmE for most of the 18th century. See **citizenship**.

Current ratio: 18:1

domiciliate; domesticate; *domesticize. *Domiciliate* = to establish a domicile or home. *Domesticate* = (1) to make domestic; (2) to make a member of the household; or (3) to tame (wild animals) or cultivate (wild plants) for human use. **Domesticize* is a NEEDLESS VARIANT of *domesticate*. See -IZE.

Current ratio (*domesticated* vs. **domesticized*): 806:1

dominance; domination. *Dominance* = the fact or position of being dominant. *Domination* = the act of dominating; the exercise of ruling power.

dominant, adj. Just as *predominant* is sometimes ill-advisedly written *predominate* (preferably a verb, not an adjective), so *dominant* is sometimes wrongly written *dominate* (as if it were pronounced /dom-i-nit/ or /-nət/)—e.g.:

- “Thirty-seven respondents reporting information about rental agreements said 50/50 share leases and basic cash rent arrangements remain the *dominate* [read *dominant*] types.” Chris Anderson, “Farmland Pricetags Increase,” *Pantagraph* (Bloomington, Ill.), 9 June 2001, at A12.
- “Jeff Moore divides aloes into three categories based on their *dominate* [read *dominant*] characteristic—form, flowers or foliage.” Mary Hellman James, “Favorites

Grouped by Form, Flowers, Foliage,” *San Diego Union-Trib.*, 20 Jan. 2002, at I25.

- “They will encourage the silent members and try to hold back the verbose, *dominate* [read *dominant*] members.” Charles Lessard & Joseph Lessard, *Project Management for Engineering* 3 (2007).

Dominate (/dom-ə-nayt/) is a verb, not an adjective—or at least no dictionaries have yet recorded an adjectival use.

LANGUAGE-CHANGE INDEX

dominate misused as an adjective in place of *dominant*: Stage 1

Current ratio (*dominant role* vs. **dominate role*): 312:1

dominate. See **predominate, vb.**

domination. See **dominance**.

dominatrix. Although most dictionaries record *dominatrices* as the plural, *dominatrices* is more common in print and should be accepted as standard. See SEXISM (D).

Current ratio: 1.3:1

domino. A. Plural Form. Since the mid-19th century, the standard form has been *dominoes*, not **dominos*. See PLURALS (D).

Current ratio: 4:1

B. Dominoes is. When referring to the game—not to the individual pieces used in the game—the word *dominoes* takes a singular verb <dominoes is a game with long-lasting appeal>.

C. Dominoes are. When referring to costumes—hooded robes with eye masks, or the masks themselves—*dominoes are* is correct <the dominoes that most revelers wear with their Venetian carnival costumes are now unavailable in local stores>.

donate, a BACK-FORMATION from *donation*, was once considered a vulgar substitute for *give*. Today, however, it is a slightly FORMAL WORD that is unexceptionable.

done (= finished), when used as an adjective, is sometimes criticized, but the word has been so used since the 15th century <call me when you’re done>. Many stylists prefer *through* <call me when you’re through>.

don’t. See CONTRACTIONS.

don’t think. This phrasing has sometimes been criticized as illogical. After all, you *do* think: you simply think something negative. But the phrasing is perfectly idiomatic and centuries old—e.g.:

- “I’d always wondered where I’d be when we found the aliens, but I *don’t think* I ever imagined I’d see them on my computer screen.” Wayne Rash Jr., “Rash’s Judgment,” *Communications Week*, 12 Aug. 1996, at 82.
- “I *don’t think* he’s spent much time in New York or San Francisco, but I got his drift.” Christopher Buckley, “How I Went Nine Gs in an F-16 and Only Threw Up Five Times,” *Forbes*, 23 Sept. 1996, at 116.
- “There are a number of countries that are friends and allies of the United States. With our power and friends,

I *don't think* anyone would want to chance our retaliation." Sid Gordon, "Try to Keep the Peace Throughout the World," *Times Union* (Albany), 23 Aug. 2015, at D3.

For more on this phenomenon, which linguists call "raising," see **can't seem**.

donut. See **doughnut**.

Doomsday Book. See **Domesday Book**.

doorjamb. For the confusion of *jamb* with *jam*, see **jam**.

dos and don'ts. This is the logical form—not **do's and don'ts*—because the plural of *do* needs no apostrophe (just as the plural of *don't* needs no apostrophe). See PLURALS (L) & PUNCTUATION (A).

dotage. See **dote**.

dotcom. This word from the computer age refers to a company that does its primary business on the Internet, or provides goods or services to other companies that do. It is written as one word. E.g.: "It seems like only yesterday that *dotcoms* were hotter than hot." Rem Reider, "At the Crossroads," *Am. Journalism Rev.*, Mar. 2001, at 6. It once connoted a company that was raking in investors yet never making a profit, and after the tech bubble burst in 2000 the word was often replaced by *dot bomb*.

dote, vb.; **dotage**, n. These terms apply both to uncritical (and sometimes foolish) affection (such as "puppy love") and to mental impairment (such as senility). But the modern trend is to use the verb *dote* only in the former sense <dote on one's children>, and the noun *dotage* only in the latter sense <the debilities of dotage>.

DOUBLE ADVERBS. See ADVERBS (C).

DOUBLE BOBBLES. A double bobble occurs when somebody reaches for a word—in fact, the *wrong* word—and then mistakes another word for that wrong word. It's a word twice removed from its correct use. Two ready examples are **Hobbesian choice* (when misused for a difficult choice) and *compromise* (when misused for *comprise*).

A *Hobson's choice* is really a take-it-or-leave-it choice. (See **Hobson's choice** (A).) By SLIPSHOD EXTENSION, though, the phrase came to refer to any difficult choice. And to compound the problem, some writers reach for the extended sense and miss entirely: they confuse Thomas Hobson, a relatively obscure man, with his famous contemporary Thomas Hobbes (1588–1679). The resulting MALAPROPISM is amazingly common—e.g.: "There was a *Hobbesian choice* [read *Hobson's choice*] to be made: To get an hour-long 'Letterman,' ABC also would have to kill 'Nightline.'" Verne Gay, "Letterman's One-Night Stand," *Newsday* (N.Y.), 8 July 2002, § II, at B23. See **Hobson's choice** (C).

A similar error occurs when *compromise* is confused with *comprise*, which itself is often misused for *compose* or *constitute*. In strict usage, the parts compose the whole; the whole comprises the parts; the whole is composed of the parts; the parts are comprised in the whole. Hence the phrase **is comprised of* is always poor and should be replaced by *is composed of*, *is made up of*, or *comprises*. See **comprise** (A).

Sometimes, however, the writer wanting the incorrect *comprise* seizes upon a doubly incorrect word, *compromise*—e.g.:

- "The nation's 1.1 million secular Jews, those born Jewish but practicing no religion, *compromise* [read *make up*] 20 percent of the core Jewish population." "A Portrait of Jews in America," *Numbers News* (Am. Demographics, Inc.), Jan. 1994, at 4.
- "Women *compromise* [read *make up*] 60 percent of the 400,000 California adults estimated to have been seriously mentally ill in 1989." Nancy Weaver, "Mentally Ill Women Bear Brunt of State Cuts in Care, Report Says," *Sacramento Bee*, 8 Mar. 1995, at A1.
- "Thomas C. Stevens, managing partner, said David L. Parham will replace Hooker as chair of the litigation practice area, which *compromises* [read *constitutes*] a third of the firm's 335 lawyers." "Business Briefs," *Plain Dealer* (Cleveland), 8 July 1995, at C2.

One more example. There's a difference between the words *forebear* (= an ancestor) and *forbear* (= to refrain). To choose the latter in place of the former, in a noun sense, would be a single bobble. But to morph the word into **forbearer* is a double bobble:

- "We have inherited the animal characteristics of our *forbearers* [read *forebears*]. They in turn inherited the animal characteristics of their *forbearers* [read *forebears*], who also inherited the animal characteristics of their *forbearers* [read *forebears*]." Richard Townsend, *The Evolution of the Mind* 41 (2003).
- "When we academics honor our greatest intellectual *forbearers* [read *forebears*], we presumably carry the highest obligation of fidelity to their ideas." Lief H. Carter, *Law and Politics as Play*, 83 Chi.-Kent L. Rev. 1333, 1334 (2008).

All the misuses discussed here are so spectacularly wrong that they merit their own special name: hence "double bobbles." For other examples, see **euphuism**, ***had have & reek**.

DOUBLE COMPARISONS. See COMPARATIVES AND SUPERLATIVES (D).

double entendre; ***double entente**. The English phrase—sometimes thought to be pseudo-French, but actually 17th-century French—is *double entendre*. The modern French form, **double entente*, is an affectation—e.g.:

- "Martin Booth writes the scripts, funny in a conventional way, with rather more *double entente* [read *double entendres*] than I expected." B.A. Young, "The Man Within," *Fin. Times*, 11 July 1987, at xvii.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “If the Elizabethan herbal *doubles ententes* [read *double entendres*] were still in vogue, Ophelia’s mad scene would provoke even more blushes.” Stan Kelly-Bootle, “Let No Man Steal Your Time,” *Computer Language*, June 1989, at 83.
- “The *double entente* [read *double entendre*]*—*the prison image and baseball*—*makes the name beautiful in the eyes of team management.” “Joliet Slammers: The Coming of a New Franchise,” *Herald News* (Joliet, Ill.), 17 Feb. 2011, Sports §, at 38.

Double entendre originally referred to any ambiguity (usually a pun) giving rise to more than one meaning, but now connotes that one of those meanings is indecent or risqué—e.g.:

- “Sex in an upscale cabaret is never explicit, but *double entendre* is always a welcome visitor.” Michael Barnes, “It’s Cabaret in Austin, Darling!” *Austin Am.-Statesman*, 15 July 1996, at E1.
- “The company has an owl logo, but it ‘acknowledges that its name is considered a slang term for a portion of the female anatomy,’ according to company literature, and the six businessmen who founded Hooters were aware of the *double entendre* when they chose the name.” William Conroy, “A Hooters Near You,” *Asbury Park Press* (Nep-tune, N.J.), 18 July 1996, at C1.
- “The male/female question leads to all kinds of *double entendres*. Jokes about males on top of females. And females on top of males.” Alona Wartofsky, “He Sells Hard Shells,” *Wash. Post*, 7 Sept. 1996, at C1.

The best pronunciation is /dɒb-əl ahn-tahn-drə/.

LANGUAGE-CHANGE INDEX

**double entente* for *double entendre*: Stage 1
Current ratio (*double entendre* vs.
**double entente*): 45:1

DOUBLE GENITIVES. See POSSESSIVES (D).

DOUBLE MODALS. In grammar, a *modal* (short for *modal auxiliary*) is a verb such as *can, could, may, might, must, ought, shall, should, used, will, or would*. A modal is used with another verb to express grammatical mood—that is, to indicate the speaker’s attitude toward the factuality or likelihood of what is being said: (1) the indicative expresses objective fact <Sam can play the piano>; (2) the imperative expresses a command or request <play it again, Sam>; and (3) the subjunctive expresses something hypothetical or contrary to fact <if Sam were up to it, he would play>. (See SUBJUNCTIVES.)

Modal auxiliaries are distinguished from the primary auxiliaries: *am, are, is, was, were, be, being, been, do, does, did, have, has, had*. Primary auxiliaries often team up to indicate tense in a verb phrase <are being stubborn> <have been patient>. Sometimes they team up with modal auxiliaries for the same purpose <will have arrived>.

But in STANDARD ENGLISH, only one modal appears in a verb phrase. A double modal, as the name implies, is a combination of two modals in such nonstandard expressions as these:

*can might *might had better
*could might *might ought

*had ought	*might should
*may can	*might supposed to
*may could	*might’ve used to
*may should	*might would
*may supposed to	*must could have
*may used to	*ought to could
*may will	*shouldn’t ought to
*might can	*should ought
*might could	*used to could

These phrases are not uncommon in regional DIALECT—especially in the South—but they do not belong in STANDARD ENGLISH and rarely appear in print. E.g.: “Although I have only spent one day on the water at Lay Lake, and interviewed perhaps 20 percent of the field, I still believe I *might can* [read *might*] get pretty close.” Steve Bowman, “Expect the Unexpected When Classic Title on Line,” *Ark. Democrat-Gaz.*, 8 Aug. 1996, at C4.

The problem with most double modals, of course, is that only one of the verbs is needed. In the most common double modal, **might could*, the word *might* can usually be dropped without a change in meaning. So unless you’re recording dialect or creating fictional dialogue—or mimicking regional speech for comic effect—don’t use double modals. Cf. ***might should have**.

DOUBLE NEGATIVES. See NEGATIVES (B).

DOUBLE PASSIVES. See PASSIVE VOICE (B).

DOUBLE POSSESSIVES. See POSSESSIVES (D).

DOUBLESPEAK, the language of disinformation, is a subset of EUPHEMISM. In the words of a leading text on the subject:

Doublespeak is language that pretends to communicate but really doesn’t. It is language that makes the bad seem good, the negative appear positive, the unpleasant appear attractive or at least tolerable. Doublespeak is language that avoids or shifts responsibility, language that is at variance with its real or purported meaning. It is language that conceals or prevents thought; rather than extending thought, doublespeak limits it.

William Lutz, *Doublespeak* 1 (1989).

In the language of doublespeak, poor people are *fiscal underachievers*; hobos or “street people” are *non-goal-oriented members of society*; prostitutes are *sexual workers* or *sexual service providers*; graffiti sprayers are *wall artists*; and students whose grades are borderline are *emerging students*.

Although *doublespeak* is commonly associated with George Orwell’s *1984*, the term he used in that book was *Newspeak*. But the idea is the same.

Apart from a few words and phrases that have become very common—for example, *exceptional* used in reference to children with severe learning disabilities or subnormal intelligence (see **exceptional (B)**) and *only* purposely misplaced (see **only (B)**)—doublespeak is not generally the subject of this book. For good treatments, see Lutz’s work cited above and several earlier works: Mario Pei, *Words in*

Sheep's Clothing (1969); Mario Pei, *Double-Speak in America* (1973); Mario Pei, *Weasel Words: The Art of Saying What You Don't Mean* (1978); William Lambdin, *Doublespeak Dictionary* (1979); and Hugh Rawson, *A Dictionary of Euphemisms & Other Doubletalk* (1981).

DOUBLE SUBJECTS. Linguists term it “pronominal apposition”—the use of a dependent pronoun in a sentence such as *My brother he's the president*. Of course, the *he* is unnecessary there, and its use marks the speaker as a speaker of DIALECT.

Interestingly, though, the difference between this substandard usage and standard usage is slight—though quite perceptible. William Labov explains the kinship between the double subject in standard and in nonstandard speech:

[I]t is not always realized that the “nonstandard” aspect is merely a slight difference in intonation. A standard speaker frequently says the same thing, with a slight break after the subject: *My oldest sister—she works at the bank, and she finds it very profitable*. There are many ways in which a greater awareness of the standard colloquial forms would help teachers interpret nonstandard forms. Not only do standard speakers use pronominal apposition with the break noted above, but in casual speech they can also bring object noun phrases to the front, “foregrounding” them. For example, one can say

My oldest sister—she worked at the Citizens Bank in Passaic last year.

The Citizens Bank, in Passaic—my oldest sister worked there last year.

Passaic—my oldest sister worked at the Citizens Bank there last year.

Note that if the foregrounded noun phrase represents a locative—the “place where”—then its position is held by *there*, just as the persons are represented by pronouns. If we are dealing with a time element, it can be foregrounded without replacement in any dialect: *Last year, my oldest sister worked at the Citizens Bank in Passaic*.

William Labov, “The Study of Nonstandard English,” in *Language: Introductory Readings* 543, 547–48 (Virginia P. Clark et al. eds., 4th ed. 1985).

Labov's final examples—with the “foregrounding”—are quite informal, even if they are standard. Some journalists habitually use that type of sentence.

There is, of course, the more formal, oratorical type of double subject, as in *We the people of the United States* . . . See APPOSITIVES.

DOUBLING OF FINAL CONSONANTS. See SPELLING (B).

doubt. A. *Doubt that; doubt whether; *doubt if*. The phrasing *doubt that* (the most common of the three) is used primarily in negative sentences, statements of skepticism, and questions—e.g.:

- “McPherson also *doubted that* the council would want to change the job description from secretary to manager.” Jim Hosek, “Kuchta Retires,” *Pitt. Post-Gaz.*, 4 Sept. 1996, at S1.
- “Consider Ronald Reagan: he was widely considered an amiable, affable fellow—but no one *doubted that* he could be aggressive if he needed to be.” William F. Allman, “The Serotonin Candidate,” *Forbes*, 23 Sept. 1996, at 134.

Doubt whether is used primarily in affirmative statements (again, though, of skepticism)—e.g.:

- “But even if the rules can survive legal challenge, they *doubted whether* David Kessler, the Food and Drug Administration's chief, can reach his goal of cutting youth smoking in half within seven years.” “White House Expected to Attempt to Regulate Tobacco as Drug,” *Tampa Trib.*, 22 Aug. 1996, at 11.
- “[David] Cone went on the disabled list after doctors removed an aneurysm from the right-hander's pitching shoulder, and the Yankee front office *doubted whether* he could return before next spring.” “Big-League Recoveries,” *Record* (N.J.), 4 Sept. 1996, at N6.

Doubt if* is less sound because it suggests a conditional statement. The phrase *doubt that* will usually replace **doubt if*—e.g.: “Dr. Hughes *doubted if* [read *doubted that*] it would be used to screen all women as the test was not 100 per cent accurate.” Bryan Christie, “Premature Births Targeted by New Test,” *Scotsman*, 3 Sept. 1996, at 3. This usage appears most commonly in BrE. Cf. **I'm not sure that & determine whether.

LANGUAGE-CHANGE INDEX

**doubt if* for *doubt that*: Stage 3

Current ratio (*doubt that* vs. **doubt if*): 11:1

B. Followed by a Negative. *Doubt* can be confusing when followed by a negative—e.g.: “I *doubt whether* the company *will not* take the further step when necessary.” This sentence merely states that the writer thinks the company *will* take the further step.

C. And **misdoubt*. See **misdoubt*.

***doubt if.** See **doubt (A)**.

***doubtlessly** is a NONWORD for *doubtless* (a mild expression of certainty), *no doubt* (a stronger expression of certainty), or *undoubtedly* (the strongest of these three expressions of certainty). The word *doubtlessly* is itself an adverb <the Framers doubtlessly feared the executive's assertion of an independent military authority unchecked by the people>. The form **doubtlessly* is therefore unnecessary—e.g.:

- “Lebed, who has made no secret of his longing to be Russia's defense minister, *doubtlessly will* [read *will doubtlessly*] take great personal satisfaction *from* [read *in*] being courted by Yeltsin.” James P. Gallagher, “Russians Lift Yeltsin into Runoff,” *Chicago Trib.*, 17 June 1996, at N1. (On the position of the adverb within the verb phrase, see ADVERBS (A).)
- “[Brett Favre's] protracted divorce from the Packers *doubtlessly* [read *undoubtedly*] has him determined to prove they should have welcomed him back.” Bob DiCesare,

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

“Favre Saga Has Parallels to Montana,” *Buffalo News*, 8 Aug. 2008, at B1.

- “The laws of supply and demand suggest that some people would pay for spots at jammed lots . . . Other riders are *doubtlessly* [read *no doubt*] at a tipping point on the cost of riding the train vs. driving to work.” Editorial, “Keep Parking Free,” *Dallas Morning News*, 19 Aug. 2008, at A12.

Cf. **clearly**. For other adverbs with a superfluous *-ly*, see ADVERBS (C).

LANGUAGE-CHANGE INDEX

**doubtlessly* for *doubtless*: Stage 1

Current ratio (*doubtless* vs. **doubtlessly*): 41:1

doubt that; doubt whether. See **doubt** (A).

doughnut; donut. The first spelling, which is more common, is preferred because it retains the name of the main ingredient (though on this rationale it might be aptly renamed *sugarnut* or *oilnut*). *Donut*—or, worse, *do-nut*—should be reserved for eatery names and advertising.

Current ratio: 1.5:1

dour, in the best speech, rhymes with *lure*. But many people say it as if it rhymed with *sour*.

douse; dowse. These words are best kept separate. To *douse* (/dows/) is to soak with liquid, as by immersing or drenching <she immediately doused the flame with water>. To *dowse* (/dowz/) is to try to find something underground by “divining” for it, as with a divining rod that is supposed to help in locating water, oil, or buried treasure <with nothing more than a twig, they went dowsing for gold>.

Douse is sometimes misused for *dowse*—e.g.: “She walks over to a tree that stands at the edge of one circle of stones, picks up a stick that lies nearby, holds it out toward the circle like a *dousing* [read *dowsing*] rod.” Rick Wilber, “Scotland’s Ancient Stones Teach Students,” *Tampa Trib.*, 17 Mar. 1996, Travel §, at 1.

But the opposite error, *dowse* for *douse*, is more common—e.g.:

- “[T]he next year quickly *dowsed* [read *doused*] his spirits.” John Harold Plumb, *Sir Robert Walpole* 131 (1956).
- “So firefighters use tankers to shuttle water to portable tanks, which are filled with water that firefighters draw on to *dowse* [read *douse*] fires.” John C. Keuhner, “Pond Solves Firefighting Problem,” *Plain Dealer* (Cleveland), 25 Oct. 1995, at B1.
- “Derry firefighters, assisted by departments from four towns, *dowsed* [read *doused*] five or six burning cars with foam last night at the same junkyard where more than 100 vehicles burned five months ago.” “Correction: Stacked Cars Burn,” *N.H. Sunday News*, 25 Nov. 2001, at A4.

LANGUAGE-CHANGE INDEX

1. *douse* misused for *dowse*: Stage 1

Current ratio (*dousing rod* vs. **dousing rod*): 13:1

2. *dowse* misused for *douse*: Stage 1

Current ratio (*dousing the fire* vs.

**dowsing the fire*): 14:1

dove. See **dive**.

dovecote (= a small house for pigeons) is the standard spelling. **Dovecot* is a variant. The word is pronounced /dɒv-koht/ when spelled *-cote* or /dɒv-kot/ when spelled *-cot*.

Current ratio: 2:1

dower; dowry. These waning terms are related etymologically (fr. L. *dot-*, *dos* “gift, marriage portion”) but are best kept distinct in modern usage. *Dower* = the widow’s legal share during her lifetime of the real estate owned by her deceased husband. E.g.: “Even though [a wife] wasn’t recorded as an owner, the fact that she was married to the owner would give her an interest in the property upon his death. It’s known as the ‘*dower*.’” Joe Blundo, “A Question (or Several) of Title,” *Columbus Dispatch*, 6 Nov. 1994, at J1.

Dowry is occasionally used as a synonym of *dower*, but doing so muddles the DIFFERENTIATION between the words. In the best usage, *dowry* denotes the money, goods, or real estate that a woman brings to her husband in marriage. E.g.:

- “The bishop would sneak into the nobleman’s home at night and leave little bags of gold for the girls’ *dowries*.” Nancy Marlowe, “Why Does Santa Claus Come Down the Chimney?” *Asheville Citizen-Times*, 24 Dec. 1995, at C3.
- “And these Catholic nuns provide *dowries* so these girls can have Hindu weddings to Hindu husbands.” Patrick Soran, “Kind Encounters,” *Denver Post*, 22 Dec. 1996, Travel §, at T1.
- “The *dowry* Raylyn brought to her marriage was her mom and dad, the best mother-in-law and father-in-law a guy could ever hope to have.” “Raylyn Lucille Stadler” (obit.), *Siskiyou Daily News* (Yreka, Cal.), 19 Aug. 2015, at 5.

Because the cultural practice of giving dowries is obsolescent in the West, the word itself took on an archaic flavor in the second half of the 20th century. For more on this term, see **brideprice**.

down payment. Two words, not one.

Current ratio: 18:1

downplay (= to de-emphasize), dating from the 1950s, became a VOGUE WORD after about 1985 and remains so. If a CASUALISM is desired, the PHRASAL VERB *play down* generally suffices—e.g.: “Theiss also *downplayed* [read *played down*] the importance of police groups altogether, saying many of them are ‘vintage labor unions’ that typically back Democrats.” Marc Lacey, “Sherman Endorsed by Police Groups,” *L.A. Times*, 21 Sept. 1996, at B2. Both expressions are casualisms.

downstairs, adj., as in *downstairs bathroom*, is sometimes wrongly made either **downstair* or **downstair’s*. Cf. **upstairs**.

Current ratio (*downstairs rooms* vs. **downstair rooms*): 51:1

Down syndrome, named after the British physician J.R.H. Down (1828–1896), has been predominantly so written in AmE since the late 1980s and in BrE

since the late 1990s. Before that, the usual form was *Down's syndrome* (the second word is never capitalized in any standard format). From 1900 to the early 1970s, *mongolism* was the standard term, but that term came increasingly to be seen as highly offensive because it named a chromosomal disorder after a race of Asian people thought to resemble those afflicted with the disease. In 1868, Down wrote the essay “The Ethnic Classification of Idiots,” in which he likened various congenital conditions to ethnicities. In the end, it would take more than a century to dislodge *mongoloid*, *mongolism*, and *Mongolian idiocy* from the vocabulary of intellectual disabilities. In 1961, four scientists wrote to the British medical journal *The Lancet* objecting to the *M*-terms and proposing four alternatives. The editor selected *Down syndrome* (well, the possessive form of it, originally), and the rest is history.

Current ratio (*Down syndrome* vs. *Down's syndrome*): 3:1

downward(s). See DIRECTIONAL WORDS (A).

dowry. See **dower**.

dowse. See **douse**.

doyen; doyenne. *Doyen* (/doi-yen/ or /doi-yən/) = (1) a knowledgeable person with vast experience; the senior member of a group; or (2) one of the oldest examples of something in a given category. Sense 1: “The prose style of John Kenneth Galbraith, *doyen* of the American left, is instantly recognisable both for its idiosyncratic construction, crying to be read aloud in its author’s basso profundo, and for its sweeping compression of facts and ideas.” Martin Vander Weyer, “The Apostle of Welfare,” *Sunday Telegraph*, 22 Sept. 1996, Books §, at 13. Sense 2 often looks as if it’s merely personification—e.g.: “Morgan Guaranty, the *doyen* of U.S. banks since J.P. Morgan Jr. wore short pants, remains a triple-A credit in the estimation of Standard & Poor’s Corp.” John W. Milligan, “How Moody’s and S&P Play the Bank Rating Game,” *U.S. Banker*, Aug. 1996, at 55.

Doyenne /doi-yen/, the feminine counterpart, occurs almost as frequently, but only in sense 1:

- “Maida Heatter—*doyenne* of desserts, queen of cookies, sultana of sweets—seems to feel that everyone, deep down, shares her passionate conviction.” Suzanne Hamlin, “A Passion for Baking and Recipes That Really Deliver,” *N.Y. Times*, 1 Nov. 1995, at C3.
- “Soon after the move to Twin Falls, Ben was put in touch with [Beverly] Hackney, one of the *doyennes* of Idaho’s small ballet community, who hired him to teach classes in her studio.” Jim Hopkins, “The Tragedy Ahead,” *Idaho Statesman*, 11 Aug. 1996, at A1.

See SEXISM (D).

dozen makes two plural forms: *dozens* and *dozen*. The first is used when the number is inexact or unspecified

<dozens of geese>, the second when the count is precise <three dozen doughnuts>.

draconian; draconic. *Draconian* (the usual form) is derived from the name *Draco*, a Greek legislator of the 7th century B.C. who drafted a code of severe laws that included the death penalty for anyone caught stealing a cabbage. As the *Century Dictionary* put it, “he prescribed the penalty of death for nearly all crimes—for lesser crimes because they merited it, and for greater crimes because he knew of no penalty more severe.” Today, *draconian* (sometimes but not usually capitalized) refers to any cruel or excessively severe rule or punishment, not only legislation.

Sometimes the word is the victim of SLIPSHOD EXTENSION, when applied to any rule or policy that is viewed as harsh though not really cruel—e.g.: “Phil Seelig, president of the Correction Officers Benevolent Association, said his organization would appeal the decision to the State Court of Appeals on the ground that random drug testing was unnecessarily *draconian* [read *harsh* or *burdensome*] and violated constitutional protection against unlawful searches.” “Court Upholds Drug Testing of Correction Officers,” *N.Y. Times*, 13 Oct. 1989, at 10.

In one of its senses, *draconic* is a NEEDLESS VARIANT of *draconian*—e.g.: “Knowing, as he must, of the unforgiving and *draconic* [read *draconian*] rules of Islamic law, he still sold this material for publication.” “Did Clinton Commit Faux Pas in Meeting with Rushdie?” *San Diego Union-Trib.*, 2 Dec. 1993, at B13. But in another sense, *draconic* means “of, relating to, or like a dragon” <the child protagonist is rescued by a friendly dragon and raised with its own draconic brood>.

LANGUAGE-CHANGE INDEX

1. *draconian* meaning “harsh” but without a sense of cruelty: Stage 3
 2. *draconic* misused for *draconian*: Stage 1
- Current ratio (*draconian measures* vs. **draconic measures*): 79:1

draft; draught. Since the late 19th century, *draft* has been standard AmE in all meanings of the word. In BrE, *draught* is the usual spelling in all but the following three senses: (1) “a bank’s payment order”; (2) “the compulsory enlistment of people into military service”; and (3) “an initial or preliminary version.” American writers who use *draught* are likely to seem pretentious or pedantic.

The BrE form is susceptible to a strange misspelling—e.g.: “Sharee took a quick *drought* [read *draught*] of the water, using it sparingly since we had no idea how long we would be making our way underground, or how long the water supplies we found along the way would hold out.” Peter David, *The Woad to Wuin* 112 (2002). (The error is not a typo—it appears repeatedly in the book.)

***draftsperson**. See SEXISM (C).

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

drag > **dragged** > **dragged**. The past-tense and past-participial *drug* is a dialectal form common in the southern United States—e.g.: “Mazur said his father lipped the fish and *drug* it well back up on the bank so it couldn’t get away.” Mike Leggett, “1 Fish, 2 Fish, Red Fish, Big Fish,” *Austin Am.-Statesman*, 16 Jan. 1994, at D12.

The linguistic authorities have had some negative things to say. W2 (1934), the last of the great prescriptive dictionaries, called *drug* “dialectal” and “illiterate.” More recent dictionaries, such as RH2, call it, more chastely, “nonstandard.” The OED calls it obsolete except in DIALECT.

A Southerner named Charles Allen Lloyd, the well-informed author of an interesting book called *We Who Speak English* (1938), might be expected to defend the expression. But he doesn’t:

Mistakes in the formation of the past tense of irregular verbs have already been discussed, but not mentioned at that time was the fairly common use of “drug” for “dragged,” for which I can find no shadow of an authority even in those dictionaries that record “dove” as a colloquial possibility for the past tense of “dive.” Yet I recall a young man who had been an instructor of English in a small college narrate his experiences in the World War and tell how he “drug” a wounded foot for a mile to the dressing-station. The foot, I am glad to say, had made an excellent recovery, but his English seemed to be still suffering.

Ibid. at 182.

A word now about the nature of this issue. The question, to a traditional grammarian, is whether *drag* is a regular or an irregular verb. (See IRREGULAR VERBS.) No existing grammars list *drag* among the irregular verbs.

Even the *Dictionary of American Regional English* (1991), in volume 2, lists the form *dragged* as “usual,” adding that *drug* is “also frequent.” One of the chief resources for that dictionary—*Dialect Notes*, a publication of the American Dialect Society—provides rich information on how the form is distributed. One writer listed *drug* as a “frequent” past tense in Nebraska, and also Massachusetts, Pennsylvania, North Carolina, Illinois, Kansas, and Tennessee. See Louise Pound, “Word-List from Nebraska (III),” 4 *Dialect Notes* 271, 274 (1913–1917). It was said to be “very common” in East Alabama and common in Kentucky, Louisiana, New Jersey, and—surprisingly—New Brunswick, Nova Scotia, and Newfoundland. Not so surprisingly, it was said to be “rare” in New York City. See B.S. Monroe & Clark S. Northup, “Some Lumber and Other Words,” 2 *Dialect Notes* 394, 396 (1900–1904).

As a matter of distribution, perhaps the best summing-up is that of E. Bagby Atwood, the Texas linguist, in 1953: “*Dragged* . . . predominates among cultured informants everywhere, but it predominates among the other types only in N.Y., n. Pa., e. Va., S.C., and Ga. Elsewhere in these [noncultured] types it is more or less narrowly limited by the competing form *drug*.” *Survey of Verb Forms* 9 (1953) (as quoted in the *Dictionary of American Regional English*). Whether President Bill Clinton would rank as a “cultured informant” might be a disputable point, but when he was debating Bob Dole on 16 Oct. 1996, he said: “Then we took

comments as we always do. And there were tens of thousands of comments about how we ought to do it. That’s what *drug* [read *dragged*] it out.” “Transcript of Second Televised Debate Between Clinton and Dole,” *N.Y. Times*, 17 Oct. 1996, at B10.

LANGUAGE-CHANGE INDEX

drug as past tense and past participle of *drag*:

Stage 1

Current ratio (*dragged it out* vs. **drug it out*): 33:1

dragoman (= an interpreter or guide in the Near East or Middle East) has formed the standard plural *dragomans* since the mid-19th century—not **dragomen*.

Current ratio: 3:1

dramatic; drastic. Each word is sometimes misused for the other. *Dramatic* = (1) of or like a drama; or (2) filled with action or emotion. *Drastic* = extreme in effect; severe; harsh. Sense 2 of *dramatic*, of course, is allied with the sense of *drastic*, but the two words idiomatically work with different types of subjects. Measures that a person takes—or things that a person does to remedy a serious problem—are *drastic*. If those measures work, and especially if they work well, the results may be *dramatic*.

Dramatic sometimes displaces *drastic*, especially in reference to a person’s doing something dramatic to correct a bad situation—e.g.:

- “And have college administrators do one more smart thing. Let them do something *dramatic* [read *drastic*] to level the playing field so that all schools can cope with the emancipation, to wit: spread the windfalls and bonanzas around.” John Underwood, “Reading, Writing and Remuneration,” *N.Y. Times*, 11 Sept. 1994, § 8, at 13.
- “According to Ricardo Diaz, executive director of the city Housing Authority, something *dramatic* [read *drastic*] needed to be done.” Mike Nichols, “Hitting Home: Renovation Project Transforming Hillside,” *Milwaukee J. Sentinel*, 24 Aug. 1996, News §, at 1.
- “Embattled late night host Stephen Colbert went to much more *dramatic* [read *drastic*] measures to blow up the Twitter account that sparked last week’s #CancelColbert social media movement.” “Forget Simply Pressing Delete,” *Pitt. Post-Gaz.*, 2 Apr. 2014, at C7.

Drastic, likewise, displaces *dramatic* when the reference is to *drastic results*—e.g.:

- “Each of those scenarios has been played out in California, with sometimes *drastic* [read *dramatic*] results.” Douglas P. Shuit, “Federal Health Care Fight to Have Major Impact on State,” *L.A. Times*, 11 Dec. 1995, at A1.
- “Obviously many Democrats had feared more *drastic* [read *dramatic*] results and heaved a sigh of relief that no greater losses had occurred.” L. Douglas Wilder, “Politics in ’96 Will Be a Roller-Coaster Ride,” *Richmond Times-Dispatch*, 4 Feb. 1996, at F1.

dramaturge; dramaturg; *dramaturgist. *Dramaturge* (= [1] a playwright; or [2] a theatrical adviser) is the traditional term, the others being NEEDLESS VARIANTS. Although *dramaturge* is sometimes exactly the word needed, it's fustian when used merely as the name for an avid reader of plays. And even in sense 2, it's a EUPHEMISM that makes the position sound more grandiose—e.g.: “A *dramaturg* [read *dramaturge*] deals with the literary side of the theater by reading plays, researching their background and communicating their meaning to artists and audiences. Though the tradition developed in Europe, it has become increasingly fashionable for theaters in the United States to hire a staff *dramaturg* [read *dramaturge*].” Lawson Taitte, “What’s a *Dramaturg* [read *Dramaturge*]?” *Dallas Morning News*, 25 Apr. 1993, at C1.

The spelling is that of the French etymon: *dramaturge*. Since about 1980, the *e*-less spelling *dramaturg* (also, oddly, pronounced /drah-mə-tərj/) has been in the ascendant. Though for the time being its frequency is greatest, it can't be recommended as the preferable spelling.

draperies; drapes. Usage critics and etiquette mavens have long preferred *draperies* over *drapes*, but both have been stamped as a lowbrow usage. The term *curtains* is perhaps the best choice. Since 1980 or so, *drapes* has appeared more frequently in print sources than *draperies*. See CLASS DISTINCTIONS.

Current ratio (*curtains* vs. *drapes* vs. *draperies*): 8:1.4:1

drastic. See **dramatic**.

draught. See **draft**.

draw. For the use of this verb in diametrically opposed senses, see CONTRONYMS.

draw on. See PHRASAL VERBS.

dreadnought (= [1] a thick wool coat; or [2] a heavily armored battleship) is the standard spelling. **Dreadnaught* is a variant. See **naught**.

Current ratio: 5:1

dream has the past-tense and past-participial forms *dreamed* and *dreamt*. For both past forms, *dreamed* is more common in AmE and BrE alike.

Current ratio: 4:1

dreck (= worthless filth) is preferably so spelled. The form **drek*, though closer to the original Yiddish spelling, is a mere variant in AmE.

Current ratio: 4:1

drier; dryer. *Drier* is the adjective meaning “more dry.” *Dryer* is the appliance that dries things. The error works both ways—e.g.:

- “He also talks about killing mimes, clothes-drier [read *dryer*] lint and falling asleep in satellite dishes.” Warren

Rhodes, “Comic Wright Thinks Deeply of Tiny Things,” *Anchorage Daily News*, 4 Oct. 2002, at H5.

- “‘It wasn’t any *dryer* [read *drier*] for them,’ said Venia, who refused to use the weather as an excuse.” Rick Jakacki, “Second-Half Struggles Cost Vikings, Again,” *Times Herald* (Port Huron, Mich.), 5 Oct. 2002, at C1.

See **dry**.

2. *drier* misused for the noun *dryer*: Stage 3

Current ratio (*clothes-dryer* vs. **clothes-drier*): 4:1

drift. For the use of this word in opposite senses, see CONTRONYMS.

drink > drank > drunk. So inflected. The past participle surprises some people <have you drunk your milk?> because they associate *drunk* with “inebriated.” And for this reason, no doubt, *drank* has encroached on the past-participial *drunk*—e.g.:

- “Jabil Circuit offered free cab rides home to any of its employees who might have *drank* [read *drunk*] too many toasts.” Teresa Burney, “Spoils of the Holiday Season,” *St. Petersburg Times*, 21 Dec. 1997, at H1.
- “The rest of the beer was *drank* [read *drunk*] by construction workers the day after the crash-landing.” Yoji Cole & Judd Slivka, “Swayze Rescuers May Face Charges,” *Ariz. Republic*, 14 June 2000, at A1.
- “On Good Friday the popular nightclub’s image was scarred as Luther Casteel of Elgin, who had *drank* [read *drunk*] at the bar earlier wearing a suit, returned sporting a mohawk, wearing camouflage and toting four guns, according to the police.” Terri Tabor, “JB’s Owner Pledges to Reopen,” *Daily Herald* (Chicago), 21 Apr. 2001, at 9.

drink-driving. See **drunk driving**.

drive. A. Inflected Forms: drive > drove > driven. *Drived* (for *drove*) seems to have become standard in some sports terms. In baseball, PHRASAL VERBS made from nouns that are in turn derived from strong verbs are often weakened to *-ed* forms, as when *fly out* becomes *flied out*—the only instance in which *flied* (instead of *flew*) is correctly used as a past tense. And the same thing has happened with *line-drive* (which has invaded the lingo of other sports). For many writers and editors, some other phrasing is usually preferable—e.g.:

- “Skates crunched across the ThunderDome ice. Pucks *line-driven* [read *ricocheted*] off the fence.” Hubert Mizell, “Strike Looms but Passion to Play Burns,” *St. Petersburg Times*, 22 Sept. 1994, at C1.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “After three incompletions, Harmon *line-driven* his attempt [read *kicked a line drive*] wide left.” Elliot Tanenbaum, “Kutztown Avoids Tie on Missed Field Goal,” *Reading Eagle* (Pa.), 2 Oct. 1994, at D10.
- “A second remained when Zendejas *line-driven* it [read *kicked a line drive*] at Spellman, who came up the middle and didn’t even need to jump.” “Bits ‘n’ Pieces,” *Press-Enterprise* (Riverside, Cal.), 19 Dec. 1994, at D6.

Though uncommon, the word *drived* as an ordinary past-tense verb—a mistake for *drove*—is not unheard of: “Only Chaffin, who also *drived* [read *drove*] a 1995 Ford Thunderbird, and Buford, have won the Late Model events in the fifth week of running.” Charles Searcy, “Buford Wins in His Return,” *Tennessean*, 30 Apr. 1995, at C3.

More common is the erroneous **drived* as a past participle displacing *driven*—e.g.:

- “He threw away the baton and then jumped in a getaway car *drived* [read *driven*] by Smith.” John Painter & Bill MacKenzie, “Affidavit Says Stant Stalked Kerrigan,” *Oregonian* (Portland), 20 Jan. 1994, at A1.
- “At the Fallowfield Road intersection the van hit the vehicle *drived* [read *driven*] by Joshua’s grandmother, moments after it narrowly avoided colliding with another vehicle which was forced off the road.” Mark Richardson, “Teen Pleads Guilty in Boy’s Crash Death,” *Ottawa Citizen*, 5 Oct. 1994, at B1.
- “There are reports of a single-electrode microfluidic electrochemical sensor *drived* [read *driven*] by capillary force.” “Patent Application Titled ‘Integrated Type Microfluidic Electrochemical Biosensor System and Method for Rapid Biochemical Analysis’ Published Online,” *Biotech Week*, 24 June 2015, at 1249.

LANGUAGE-CHANGE INDEX

1. **drived* for the simple-past *drove*: Stage 1

Current ratio (*drove* a vs. **drived* a): 21,809:1

2. **drived* for the past-participial *driven*: Stage 1

Current ratio (*driven* by vs. **drived* by): 15,905:1

B. Dialectal Variants. There are two dialectal past-tense forms—**driv* (surviving in the southern U.S. and New England) and **druv* (occurring mostly in Kentucky). It would surely be no loss if they were driven into extinction.

drivel, vb., makes *driveled* and *driveling* in AmE, *drivelled* and *drivelling* in BrE. See SPELLING (B).

driver’s license. So written (or *driver’s licence* in BrE)—not **drivers license*, **drivers’ license*, or **driver license*, no matter what the card in your wallet may tell you. The predominant plural is *driver’s licenses*, not **drivers’ licenses*.

droll (= amusing; humorous; whimsical) is so spelled, even though the French word it comes from is *drôle*. That spelling better matched the word’s pronunciation (/drohl/, not to rhyme with *doll*), but the word has been spelled *droll* in English since the early 17th century. Today **drole* (in English) can be regarded only as a misspelling. E.g.: “Finally, Gail Collins’s *drole* [read *droll*] prediction about the same contest: ‘It looks now as if the race will be won by the candidate with the

largest immediate family.’” Richard Goldstein, “Primary Rib,” *Village Voice*, 20 Sept. 1994, at 9.

The word always means “funny” in one sense or another. Most commonly, it means “witty, esp. in an offbeat way”—e.g.: “A diminutive Southerner with *droll* wit and a childlike voice, Capote was the toast of the New York society party circuit in the 1960s even while becoming one of America’s most famous writers.” Eric Harrison, “‘Infamous,’ Indeed,” *Houston Chron.*, 15 Oct. 2006, Zest §, at 14.

Far less often, it’s used to mean unintentionally funny, even ludicrous—e.g.: “How *droll* and obtuse that conservatives think the Constitution should remain anchored against the tides of change while those currents bring with them torrents of newfangled iPods and ever-changing gusts of news; one day about Britney Spears, the next day Paris Hilton.” Jonah Goldberg, “Living Constitution’s Double Standard,” *Chicago Trib.*, 25 Aug. 2006, Commentary §, at 27.

Perhaps because the words look and sound a bit similar, *droll* is sometimes misused as a synonym for *dull*. The result is a startling MALAPROPISM—e.g.: “The local recruiting firm Accounting One created the stand-up comedy contest last year to try to show a lighter side to the profession saddled with a *droll* [read *dull*] image.” Mike Tierney, “Bottom Line: It’s OK to Laugh at Accountants,” *Atlanta J.-Const.*, 15 Oct. 2006, Bus. §, at C3.

LANGUAGE-CHANGE INDEX

droll misused for *dull*: Stage 1

drone; drudge. *Drone* = (1) a male bee; (2) an idler living off others’ work; (3) an unmanned aircraft or watercraft; or (4) a monotonous tone or buzzing. *Drudge* = (1) one whose work is menial or boring; or (2) drudgery. Surprisingly (since a drone bee does no work), *drone* is increasingly used as a synonym of *drudge*—e.g.: “The first act chronicles dystopian rebel Winston Smith’s witheringly dull life as a *drone* [read *drudge*] in a government records office, where the drudgery involves creating a historical reality based on the whims of the ruling party.” Peter Marks, “1984,” *Wash. Post*, 5 Sept. 2008, Weekend §, at WE41. This trend is worth resisting because it may create a CONTRONYM—that is, this use of *drone* is a near-antonym of the traditional sense 2.

LANGUAGE-CHANGE INDEX

drone in the sense “drudge”: Stage 2

drought; *drouth; *drouth. *Drought* has been the predominant, standard form of the word in all phases of Modern English. **Drouth* is archaic in BrE but still occasionally appears in AmE texts. Even so, *drought* (pronounced /drowt/, not /drowth/ or /drawt/) is the preferred form in both linguistic communities. The simplified spelling **drouth*, though toyed with in the mid-20th century, never took hold.

Misusing *drought* for *flood* is perhaps just an odd mental glitch triggered by *drown*—e.g.: “Spring is a time of heightened concern about *drought* [read *flooding*]. In a typical year, melting snowpacks can

conspire with increased rainfall to send rivers over their banks. Sometimes in northern areas, ice jams exacerbate the floods on swollen rivers. This year, spring flooding is less likely than normal." "Weather Report," *N.Y. Times*, 15 Mar. 1995, at A9. For another misuse—*drought* for the BrE *draught*—see **draft**.

LANGUAGE-CHANGE INDEX

drought misused for *flooding*: Stage 1
Current ratio (*drought* vs. **drouth* vs. **drou*): 7,423:112:1

drove, vb. See **drive**.

drown. A. **Drowned** and ***drowned**. The past-tense form is *drowned*, not **drowned*—the latter being dialectal. E.g.: "True, [the flooding] helped duck and geese populations, but it also *drowned* [read *drowned*] millions of other living creatures who weren't favored targets." "Hunters Are Not Really a Tool of Nature," *Buffalo News*, 14 Feb. 1993, at 8. (See IRREGULAR VERBS (D).) The dialectal form appears in the speech of uneducated characters in the works of Dickens, Kipling, and Twain.

Sometimes the correct form is made to establish a more severe, unsympathetic character, as here: "The Drowned Uncles, the children called them. 'Drowned,' Marion corrected. Marion was forever improving anyone who could be improved. 'The Drowned Uncles of Skipper Sid,' the kids would say anyway. 'The Drowned Brothers of Skipper Sid,' Marion would correct them again. Drowned, she meant, not drowned. They were mixing her up." Dawn Rae Downton, *Seldom: A Memoir* 132 (2002).

LANGUAGE-CHANGE INDEX

Current ratio (*drowned* vs. **drowned*): 106:1

B. **Drowned**; **was drowned**. In the best usage, if somebody *drowned* it was an accident, but if somebody *was drowned* foul play was involved.

drudge. See **drone**.

drug, vb. See **drag**.

drunk, adj.; **drunken**. Traditionally, *drunk* has been an adjective appearing in the predicate <they were drunk>, whereas *drunken* has preceded the noun <a drunken sailor>. Today, the words mostly bear distinct senses. *Drunk* = intoxicated, inebriated. *Drunken* = given to drink; morbidly alcoholic.

So *drunken* usually denotes a habitual state—e.g.: "Molly Ringwald stars as a waitress with a *drunken* buffoon of a father and a churchgoing mother she calls 'Ma.'" Ginia Bellafante, "New (and Not) for '96," *Time*, 23 Sept. 1996, at 70. This nuance is slightly counterintuitive, given that a *drunk* refers to someone who is habitually drunk. Although *drunken* sometimes means merely "exhibiting intoxication,"

the better term for this meaning is *drunk*—e.g.: "A confidential computer disk containing the names of 4,000 AIDS patients was mailed anonymously to a newspaper after a *drunken* [read *drunk*] public health worker showed it to friends and dropped it outside a bar." "Briefly," *Commercial Appeal* (Memphis), 20 Sept. 1996, at A2.

Drunken also frequently describes not a person or group of people, but their *brawl*, *orgy*, or *party*, through HYPALLAGE—e.g.: "She agreed not to speak ill of Astra, which has been embroiled in a scandal since tawdry tales of *drunken* company parties and fraternity-party behavior were made public earlier this year." Beth Healy, "Judge Deals Setback to Ex-Astra Worker," *Boston Herald*, 21 Sept. 1996, at 15.

drunk driving; ***drunken driving**; **drink-driving**.

The first is the predominant phrase in both AmE and BrE. The second was the usual phrase from the 1920s to about 1980; it fell out of use perhaps primarily because *drunken* connotes a greater level of intoxication than *drunk*, and by the 1980s methods were being developed to determine with greater precision a person's blood alcohol content. The standard term today—*drunk driving*—exemplifies HYPALLAGE because it is the driver, not the driving, that is drunk. To American eyes, though, the BrE variant, *drink-driving*, looks extremely odd—e.g.: "A London public health watchdog yesterday demanded a cut in the *drink-driving* limit as they revealed the £20bn a year cost of accidents in the capital." James Meikle, "Drink-Drive Limit 'Must Be Cut,'" *Guardian*, 11 Oct. 2002, at 14.

The phrase *driving drunk* is a convenient and universal equivalent, in which *drunk* functions as an adverb (in place of whatever adverbial phrase the local statutes use, e.g., *driving while intoxicated* or *driving under the influence*). When the verb *drive* becomes a gerund <he was arrested for driving drunk> and therefore requires an adjective rather than an adverb, *drunk driving* provides a neat shorthand.

Current ratio (in order of headwords): 7:2:1

drunken. See **drunk**.

dry, adj., makes *drier* and *driest*—not **dryer* and **dryest*. Oddly, however, *dryly* is preferred over **driely*. See **drier**.

Current ratio (*driest* vs. **dryest*): 12:1

Current ratio (*dryly* vs. **driely*): 3:1

dryer. See **drier**.

d.t.'s. See **delirium tremens**.

dual (= double; twofold) is sometimes misspelled *duel*—e.g.:

- "The refinements . . . include a modified cam and carburetor, higher compression ratio, larger valves and *duel*

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

[read *dual*] exhausts to trumpet the sound and strength.” Marshall Schuon, “About Cars: A New Model That Can Put the Fun Back in Driving,” *N.Y. Times*, 28 Dec. 1980, § 5, at 11.

- “Having satisfied the *duel* [read *dual*] purposes of his marriage, siring a legitimate heir and settling his debts, George announced to Caroline a formal separation.” Michael Farquhar, “Love Stinks: Some Matches Are Made in Heaven. Some, in Hell,” *Wash. Post*, 11 Feb. 1996, at F1.

Of course, *duel* is a noun that originally meant “a formal combat between two people, fought with weapons, under an accepted code of procedure, and in the presence of witnesses.” Today, however, because the practice that it denotes has fallen into disuse, the term *duel* has extended its sense to refer to any contest between two opponents.

LANGUAGE-CHANGE INDEX
duel misused for *dual*: Stage 1

Current ratio (*dual nature* vs. **duel nature*): 259:1

dubious = (1) causing uncertainty <his credentials were dubious>; or (2) doubting <we are dubious about whether we’ll be able to attend>. Although sense 2 has occasionally been criticized, it is now in good use.

dubious distinction has the dubious distinction of being one of our most overworked expressions.

Dubya. The quintessentially Texas pronunciation of the letter *W* took on national and international significance in 2001, when the son of the 41st U.S. president took the oath of office as the 43rd. The problem was that both men’s names are confusingly similar: George Herbert Walker Bush, the father, and George Walker Bush, the son. Since their names are not identical, they are not technically Sr. and Jr. (see NAMES (B).) *Elder* and *younger* has precedent (the two Plinys and the two U.S. Supreme Court Justices Harlan), but it’s awkward. Within their family, father and son have been known to go by 41 and 43. Popularly, and in the press, they came to be distinguished as George Bush and George W. Bush.

That convention had a historical antecedent: the country’s second president was John Adams and its sixth was Adams’s son, John Quincy Adams. The latter was always distinguished from the former by his middle name.

In the end, though, it was a nickname based on the son’s middle initial that served to distinguish the son. That was appropriate, since the affable George W. had a knack for giving other people nicknames. So he became *Dubya*. Both the idiosyncratic pronunciation and the spelling became standard quickly. Not only was it a convenient way to distinguish the two presidents, but it was also acceptable to Dubya’s friends and foes alike. To supporters it connoted Bush’s down-home personality; to opponents it ridiculed his Texas roots and (through its association with DIALECT) a perceived lack of intelligence.

The term has always been favored more by Bush’s opponents than by his supporters. For example, it

appears in the title of the left-wing British satire *The Madness of George Dubya* (2003), taking off, of course, on the title of the play *The Madness of George III*. And there was the unflattering 2008 movie *Dubya*.

Dictionaries vary greatly about what pronunciations of the letter *W* they sanction. *W2* and the *NOAD*, for example, give only one: /**dəb**-əl-yoo/ (like *double you*). *W3* also recognizes /**dəb**-lyə/ and, “in rapid speech,” /**də**-b[ə]yə/ or even /**də**-byeel/. *Dubya* is mostly Southern dialect and is especially common in Bush’s home state of Texas.

duct tape. So spelled—not **duck tape*, whether that was its original name or not.

On 10 February 2003, the U.S. Department of Homeland Security declared a “level-orange” terrorism alert and advised people to stock up on plastic sheeting and duct tape. Soon after, William Safire of *The New York Times* firmly declared that **duck tape* was the original form, dating from World War II when Johnson & Johnson developed the material for the U.S. Army to waterproof ammunition cases. He cited two wartime ads, one for Venetian blinds “in cream with cream tape or white with *duck tape*,” and another for surplus “cotton *duck tape*.”

Phooey! fired back Jan Freeman of *The Boston Globe* the following week. First, who uses duct tape on Venetian blinds? Second, cotton duck tape is more likely cotton duck fabric in tape form. Third, why hasn’t Paul Dickson, author of *War Slang*, ever heard soldiers mention **duck tape*? For that matter, why do Tim Nyberg and Jim Berg—who have written five books on the tape’s many uses and have been promoting the Army **duck tape* story for years—call themselves “the Duct Tape Guys”?

The fact is that *duct tape* is over 60 times as common in print as **duck tape*, and that is unquestionably the standard spelling.

One writer explains the origin of the misuse: “Duct tape is so seldom used on heating ducts that most people mispronounce it ‘duck tape’ as they use it to mend parkas and sheath short cables. I came close to using it on a duct once.” Ed Quillen, “It Even Works for Hanging Pipes,” *Denver Post*, 20 Feb. 1994, at E3. But the fact that people don’t really associate the tape with ducts does not explain the error (after all, who associates the tape with ducks, either?). Instead, it is the side-by-side *t* sounds that are to blame: it’s unnatural to separate them in speech, and it’s a natural error to spell the phrase as it sounds. And the misuse is common—e.g.:

- “Their tactic is then to put the metal back in place with *duck tape* [read *duct tape*], and disguise the cut with paint.” John Dillin, “Two U.S. Approaches to Mexico?” *Christian Science Monitor*, 18 Oct. 1993, at 4.
- “They brought insect repellent, wore head nets and, following the sage advice of yours truly, sealed their cuffs, leg bottoms and waist with *duck tape* [read *duct tape*].” Dick Nelson, “Oh, Those Pesky Black Flies,” *Times Union* (Albany), 19 June 1994, at D13.

- “With all the technology available these days in motor-sports, rubber hammers and *duck tape* [read *duct tape*] did as much as anything to piece Gordon’s car back together.” David Scott, “Jeff Gordon Suffers His Worst Day at Indy,” *Charlotte Observer*, 26 July 2015, at 347.

One company, Henkel Consumer Adhesives, owns the trademark on “Duck Tape,” and that brand name surely aggravates the confusion. As Safire pointed out, the *Times* article reporting the Homeland Security alert was accompanied by a picture of two rolls of “Duck Tape.” The difference is that *duct tape* is the generic name for the material—a common noun that is always lowercase. *Duck Tape* is a mildly fanciful brand name—a proper noun that is always capitalized and properly used only as an adjective, as in “Duck Tape brand duct tape” (or, more likely, “Duck Tape brand adhesive”). Keeping the terms distinct is vital to maintaining trademark protection, so even on the company’s website one will find the accepted generic spelling: “Tell us your duct tape Real Story!” <www.ducktapeclub.com>.

LANGUAGE-CHANGE INDEX

**duck tape* for *duct tape*: Stage 2

Current ratio (*duct tape* vs. **duck tape*): 66:1

dudgeon (= anger, resentment, indignation) is sometimes confused with *dungeon*—e.g.:

- “Lately the voyeurs and Phil Donohue viewers are in high *dungeon* [read *dudgeon*] about revelations about Bruce Benson’s personal life.” Letter of Brian Wareing, “Benson’s Personal Problems Pale in Comparison to Romer’s Impersonal Misdeeds,” *Rocky Mountain News* (Denver), 18 Oct. 1994, at A31.
- “Assaulting Clinton’s ‘character’ with the rhetoric of dishonesty and immorality is reminiscent of the high *dungeon* [read *dudgeon*] inspired among socially right people by the ‘treachery’ of Franklin D. Roosevelt and John F. Kennedy.” Scott Aiken, “Rhetoric Aside, Bob and Bill Are Alike,” *Cincinnati Bus. Courier*, 28 Oct. 1996.

Although the term appears most often after the adjective *high*, it does sometimes appear without it—e.g.:

- “Because they are nursing their *dudgeon* and savouring their victories rather than thinking with care, anti-smokers believe themselves to be upholding liberal social principles when in fact they are traducing them.” “Blowing Smoke,” *Economist*, 20 Dec. 1997, at 59.
- “From the media’s spluttering *dudgeon*, an innocent bystander would have thought Blumenthal was the reincarnation of William Allen White.” Jeff Jacoby, “Sid Blumenthal, the Reporter’s Friend?” *Boston Globe*, 3 Mar. 1998, at A11.

LANGUAGE-CHANGE INDEX

**high dungeon* for *high dudgeon*: Stage 1

Current ratio (*high dudgeon* vs. **high dungeon*): 81:1

duel, vb., makes *dueled* and *dueling* in AmE, *duelled* and *duelling* in BrE. Likewise *duelist* predominates in AmE, *duellist* in BrE. See SPELLING (B) & **dual**.

due to. The traditional view is that *due to* should be restricted to adjectival uses in the sense “attributable to,” usually following the verb *to be* (sometimes understood in context). But the stylist may wish to avoid even correct uses of the phrase, which one writer calls a “graceless phrase, even when used correctly,” adding, “Avoid it altogether.” Lucile V. Payne, *The Lively Art of Writing* 148 (1965). Under that view, *due to* is a SKUNKED TERM.

Despite the traditional view that the adjectival use is best (*due* being equivalent to *attributable*), the phrase is commonly used as a preposition or conjunctive adverb meaning *because of*, *owing to*, *caused by*, or *on grounds of*—e.g.:

- “*Due to* [read *Because of*] a mistake in Lincoln-Mercury’s press material, which we didn’t notice until we read Nissan’s press material, the maximum cargo room listed for the Villager in our 1992 review was incorrect.” Tom Incantalupo, “Road Test: Nissan Quest,” *Newsday* (N.Y.), 16 Sept. 1994, at A63.
- “Viewers were supposed to care about characters they knew little about and, *due to* [read *owing to*] expense and logistics, the adventures were limited to gimmicks and dialogue on the sub’s bridge.” Paul Lomartire, “‘Sequest’ Charts Course to Florida,” *Palm Beach Post*, 17 Sept. 1994, at D1. See **owing to**.
- “Color fading is when pigments degrade *due to* [read *because of*] ultraviolet ray exposure.” Rosie Romero, “Why Arizona Houses Aren’t Like Houses Anywhere Else,” *Ariz. Republic*, 22 Aug. 2015, at H1.

Two studies reported in 1962 found that as a matter of word frequency in edited text, *because of* appeared 62% of the time, *due to* 30%, and *owing to* 8%. See Margaret M. Bryant, *Current English Usage* 81 (1962).

Sometimes the examples of *due to* are somewhat comical—e.g.: “Only the likes of Trigger and C’Lock can expect to compete with the big boys *due to* superior graphical interfaces and good quality, unique content.” “Your Friendly Global Medium,” *New Media Age*, 19 Sept. 1996, at 6. We all know what babies are due to. But what are big boys due to? The reader might momentarily wonder. New media age indeed!

In the following examples, the phrase is used in the traditionally preferred way. But as Payne notes, the sentences might be improved by eliminating it—e.g.:

- “Trend reports show that pants are expected to be at the core of women’s fall wardrobes. This shift is *due to* increasingly casual office dress codes.” “A Leg Up,” *Sunday Advocate* (Baton Rouge), 11 Sept. 1994, People §, at 4. (A possible revision: *This shift has resulted from increasingly casual office dress codes.* Or: *Why? Office dress codes have become increasingly casual.*)
- “The widening of the gap was *due largely to* the increase in black-female-headed families.” “Black Families Now Earn Even Less than Whites, Census Says,” *Virginian-Pilot* (Norfolk), 16 Sept. 1994, at A12. (A possible revision: *The gap has widened largely because of the increase in the number of families headed by black females.*)

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

- “One key reason that rigs are still running at all in the United States is *due to* the resilience of the service sector.” Don Briggs, “Current Downturn May Be New Normal,” *Alexandria Daily Town Talk* (La.), 22 Aug. 2015, at A4. (A possible revision: *The U.S. rigs’ continued operation is due in large part to the resilience of the service sector. Or: The service sector’s resilience is partly responsible for U.S. rigs’ continued operation.*)

Due followed by an infinitive is not a form of the phrase *due to*, although it looks deceptively similar. E.g.:

- “Polk commissioners are *due to reconvene* this morning to narrow the field of eight finalists who were interviewed Wednesday and Thursday.” Jerry Fallstrom, “Wahl Waits for Word from Polk,” *Orlando Sentinel*, 16 Sept. 1994, at 1.
- “A last-ditch round of the so-called ‘framework’ talks is *due to open* in Washington later today.” Jonathan Annells, “Hurd Rallies Japan to Free Trade Cause,” *Evening Standard*, 19 Sept. 1994, at 37.
- “The 49-year-old was *due to marry* his fiancée Hana Chochrunova on March 9 this year.” Joanne Sweeney, “The Co Antrim Man Walking 900 Miles in 30 Days in Memory of the Beloved Uncle He Lost to Cancer,” *Belfast Telegraph*, 22 Aug. 2015, at 17.

LANGUAGE-CHANGE INDEX

due to misused for *because of* or *owing to*: Stage 4

due to the fact that, common in speech, can almost always be boiled down to *because*—e.g.:

- “They don’t work, in no small part *due to the fact that* [read *because*] Sara appears to have abandoned acting and is content merely to look pretty.” John Scalzi, “Van Damme’s New Film Kicks,” *Fresno Bee*, 16 Sept. 1994, at F3.
- “Even if theory and data were perfect, there might be less than a perfect correlation *due to the fact that* [read *because*] exogenous variables can always intervene.” Llewellyn D. Howell & Brad Chaddick, “Models of Political Risk for Foreign Investment and Trade,” 29 *Columbia J. World Bus.* 70 (1994).
- “Some exhibitors are not increasing the size of their booths, *due partly to the fact that* [read *partly because*] several other regional and international travel markets are being held between next month and November.” Agnes Wee, “Interactive Kiosks for Asia Travel Market,” *Bus. Times*, 30 Aug. 1996, at 4.

For more about this phrase, see **because (D)**.

duffel, the preferred spelling for the bag, is an eponymous term deriving from the city of Duffel, Belgium. But because the *-el* spelling departs from analogous terms spelled *-le*—such as *muffle*, *scuffle*, *shuffle*, and also those such as *baffle*, *hassle*, *tussle*—the word is frequently misspelled **duffle*. (Mussels, the crustaceans, are exceptional.)

From the 1930s (when the bag first became popular) to the 1970s, the two spellings vied closely for predominance. Not until about 1980 was *duffel bag* unquestionably standard. The less usual spelling, which is about 20% as common as *duffel* in modern print sources, still occurs in some well-edited newspapers—e.g.:

- “Across the street from Gypsy Me is Cedar Key Canvas, with a large seaman’s *duffel* [read *duffel*] bag for \$57.” Dale Koppel, “Old-Timey Cedar Key: Easy Street,” *Sun-Sentinel* (Ft. Lauderdale), 22 Oct. 1995, at J6.
- “The drugs were found tightly bound and wrapped in 187 kilo-sized bundles, stuffed in six *duffle* [read *duffel*] bags.” “Troopers Stop Cars and Find *Duffel* [read *Duffel*] Bags Full of Cocaine,” *N.Y. Times*, 26 Oct. 1995, at B4.

LANGUAGE-CHANGE INDEX

duffel misspelled **duffle*: Stage 3

Current ratio: 3:1

du jour (= of the day) is a GALLICISM that has been used with menu items since the late 1960s <soup du jour>. Now it has become vogueish in the sense “vogueish.” It is the phrase *du jour*—e.g.:

- “Drugs will always be a problem, city vice squad boss John McCormick said in the 1970s, when smack was the scourge *du jour* [read *of the day*].” Bill Foley, “Drug War Proves to Be No Walkover,” *Fla. Times-Union*, 11 Nov. 1996, at A5.
- “Into this category fall the other *stories du jour* [read *trendy stories*] that command our attention and disdain simultaneously, and in equal measure: Paula Jones, Kelly Flynn, Whitewater, campaign finance and, as ever, anything about the Kennedys.” Asta Bowen, “As Consumers of Information, We’d Rather Be Titillated than Satisfied,” *Seattle Post-Intelligencer*, 17 July 1997, at A13.
- “Yesterday’s top news may disappear into a black hole as the media spotlight rushes to the next *topic du jour* [read *hot topic*].” “Loyalty and Realpolitik,” *Christian Science Monitor*, 30 Mar. 1998, at 12.

Even if those uses are borderline, there can be no doubt that coupling *du jour* with *today* is over the line—e.g.: “The issue *du jour today* [read *of the day*] was welfare, which meant that Mr. Alexander added a few paragraphs on the subject to his standard speech.” David E. Rosenbaum, “New England Finds G.O.P. Trying Out New Tactics,” *N.Y. Times*, 15 Feb. 1996, at B15. This redundant phrasing seems to have begun in American restaurants, where it is not uncommon to hear servers say, “Our soup *du jour today* [or even *our soup du jour of the day!*] is chicken noodle.” See REDUNDANCY.

The phrase is often mistakenly written **de jour*—e.g.:

- “But she passed it up, along with the soup *de jour* [read *du jour*] and other sandwich and salad selections.” Karen Hayes, “Catered Approach to Town Meetings,” *Boston Globe*, 22 Mar. 1998, South Weekly §, at 1.
- “The soup *de jour* [read *du jour*] features such varieties as collard green or garbanzo bean.” Carol Jeffares Hedman, “Easter Meals Served Up with a View,” *Tampa Trib.*, 20 Apr. 2000, Fla. §, at 8.
- “The Bengals are the team *de jour* [read *du jour*] in the NFL.” Mark Curnutte, “Rushing Defense a Concern,” *Cincinnati Enquirer*, 20 Sept. 2005, at C1.

**De jour* could become the great misspelling of our day.

In French, by the way, *du* is a sort of contraction for *de le* in the same way that *au* is for *à le*. *Du* and *au* are used only with masculine nouns such as *jour*. So although it’s possible that the mistaken **de jour* results from rusty knowledge of French grammar,

more likely it results from Americans' general ignorance of foreign tongues.

LANGUAGE-CHANGE INDEX
du jour misspelled **de jour*: Stage 2
 Current ratio: 6:1

dullness; *dulness. Although **dulness* predominated in print (both AmE and BrE) from the 18th century through the early 20th, *dullness* experienced an exciting surge in the first two decades of the 20th century and had established itself as the standard form by the 1920s.

Current ratio: 2:1

duly authorized. Because *authorize* denotes the giving of actual or official power, *duly* (i.e., “properly”) is usually unnecessary in the expression *duly authorized*. Likewise, *duly* is almost always redundant in phrases such as *duly signed*.

dumb = (1) unable to speak; or (2) stupid. Although sense 1, the traditional usage, has long been considered preferable <deaf and dumb>, sense 2 has predominated in such a way as to make the term a disparaging one. Today, *mute* is the generally preferred term for someone who cannot speak. The origin of using *dumb* to mean “stupid” is invidious. In law, a person who was mute (and usually deaf, too) was automatically deemed an idiot (not my word—it can be found in scholarly texts). The usage is centuries old.

dumbfounded is the standard spelling. **Dumfounded* is a variant that enjoyed some popularity in AmE about 1890 to 1910, but that has waned.

Current ratio: 8:1

duodenum is pronounced either /doo-oh-dee-nəm/ or /doo-wod-ə-nəm/.

duologue. See *dialogue*.

duplex (= a house divided into two parts so that it has two separate homes in it) forms the plural *duplexes*.

duplicate, adj.; duplicative; *duplicatory; duplicitous. *Duplicate* = (1) being identical to another <duplicate copies>; or (2) existing in identical or corresponding parts or versions <duplicate receipts>. *Duplicative* = unnecessarily doubled or repeated. (**Duplicatory* is a NEEDLESS VARIANT of *duplicative*.) *Duplicitous* (= marked by duplicity) is a late-19th-century coinage generally understood to denote the two-faced taking of inconsistent positions, and therefore carries the meaning “deceitful.”

American and British legal writers have latched onto the word *duplicitous* in the sense of doubleness, from the old legal meaning of *duplicity* (= double pleading). A nonlawyer might be confused by the following uses of the word—as suggested, in the last two examples, by quotation marks around *duplicitous* (mistranslated in the next-to-last example):

- “An information charging a conspiracy to commit burglary is not *duplicitous* because it alleges that the conspiracy was to commit two or more different burglaries.” *Hamilton v. People*, 51 P. 425, 425 syl. 4 (Colo. 1897). (The specimen just quoted antedates the earliest known use [1928] given in *W11*.)
- “The allegation in a single count of a conspiracy to commit several crimes is not *duplicitous*.” *Braverman v. U.S.*, 317 U.S. 49, 54 (1942).
- “The State Court of Appeals ruled that the indictment used to obtain his 1986 conviction was ‘*duplicitous*,’ or not specific enough.” “Prosecutor Won’t Seek New Abuse Charges,” *N.Y. Times*, 21 Sept. 1989, at B11.
- “Attorney Michael McDermott, who is representing Officer Gregory Haffensteiner, contends the official misconduct count in the indictment is ‘*duplicitous*’ because it lumps the charges against the men together instead of charging the officers individually.” Paul Nelson, “Schenectady Cops Seek Dismissal of Charges,” *Times Union* (Albany), 12 Nov. 2008, at D6.

Current ratio (*duplicative* vs. **duplicatory*): 162:1

during such time as is verbose for *while*. The phrase typifies LEGALESE.

during the course of is almost always verbose for *during*.

durst. See *dare* (E).

dust. For the use of this verb in opposite senses, see CONTRONYMS.

Dutch. See *Netherlands* (A).

dutiful; *duteous. The usual term is *dutiful*. Although formerly in good use, **duteous* is an archaic NEEDLESS VARIANT.

Current ratio: 31:1

DVD. When this advancement in optical-disc technology hit the market in 1997, the letters stood for *digital video disc* as surely as CD stood for *compact disc*. It was originally called that because the discs were primarily used for playing movies. But the medium soon proved to have so many other uses—such as games, computer software, and data storage—that the industry soon retrofitted the *DVD* abbreviation with a new name, *digital versatile disc*. That was so obviously contrived that today industry insiders agree that the letters stand for nothing. The public, on the other hand, still clings to the original name as well as its contorted offspring—e.g.:

- “Using DVDs for personal use is tricky because the powers-that-be are battling to make their versions of the *digital versatile disc* the universal standard.” Chris Seper, “Picking the Best: DVD Format,” *Plain Dealer* (Cleveland), 9 Dec. 2002, at E2.
- “Agents on Monday seized 35,000 compact discs, 10,000 digital video discs (DVDs) and 156 CD burners with the capacity to copy compact discs 40 times faster than the standard CD burners available on personal computers.”

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

William Glanz, "Seizure in Music Piracy Is Largest," *Wash. Times*, 12 Dec. 2002, at C7.

As in those two examples, the plural doesn't need an apostrophe. See PLURALS (1). See also **videodisc**.

The letters can easily stand alone because they are almost universally recognizable: the DVD boom has been the most successful consumer-electronics start-up in history. DVD is used far more often than either full phrase. But *digital video* now exists as a consumer-electronics field of its own, so the original term for the medium will probably persist.

DVD isn't the only well-known abbreviation that has been declared a mere assemblage of letters, and this isn't the first time the public has ignored the declaration and gone merrily on its way with the old usage. See SAT; see also **GOP**.

dwarf. Pl. *dwarfs*. The form **dwarves*, a variant form, occasionally appears—e.g.:

- "The sculptors of Benin long have made their finest objects—their regal heads and life-size *dwarves* [read *dwarfs*], their animals and birds and ceremonial swords—out of molten brass." Joseph McLellan et al., "Here & Now," *Wash. Post*, 25 Sept. 1994, at G3.
- "In this case, Alvio Renzini, of the European Southern Observatory, and a team of eight colleagues have investigated white *dwarves* [read *dwarfs*] (old stars in which nuclear fusion is at an end) in a globular cluster of stars." John Gribbin, "The Universe's Age Will Have Us Seeing Stars," *Guardian*, 1 Aug. 1996, at 8.

When he released his famous movie in 1938, Walt Disney got it right: *Snow White and the Seven Dwarfs*. See PLURALS (c). Cf. **wharf**.

LANGUAGE-CHANGE INDEX

**dwarves* for *dwarfs*: Stage 3

Current ratio (*dwarfs* vs. **dwarves*): 3:1

dwel has two past-tense forms, *dwelt* and *dwelled*. The former has always appeared more frequently in print sources from the 17th century on—e.g.:

- "Written in her childhood voice, it is a laugh-out-loud peek into the lives of those who *dwelt* there [Mooreland, Indiana] in the 1960s and '70s." Beverly Beyette, "World View, Direct from Rural Indiana," *Chicago Trib.*, 2 Oct. 2002, Tempo §, at 6.
- "At both funerals, their pastor, First Methodist's R.A. Nussel, *dwelt* upon that love." John Hamner, "Hand in Hand, Life Was Sweet," *Sarasota Herald-Trib.*, 13 Oct. 2002, at F2.

The two forms may be undergoing DIFFERENTIATION: *dwelled* tends to refer to the physical act, while *dwelt* (*upon*) takes as its object an idea or other abstract concept.

Current ratio (*dwelt upon* vs. *dwelled upon*): 21:1

dyarchy. See GOVERNMENTAL FORMS.

dybbuk (= a dead person's wandering soul that comes to inhabit the body of a living person) is the standard spelling. **Dibbuk* is a variant. The word is pronounced /**dīb**-ək/. Pl. *dybbuks* or (less good) **dybukkim*.

Current ratio (*dybbuk* vs. **dibbuk*): 16:1

dying; dyeing. *Dying* corresponds to the verb *die* (= to expire), *dyeing* to the verb *dye* (= to color with a dye).

Dyeing is often mistakenly written *dying*—e.g.:

- "From Fountain Valley, the water could be distributed by the Orange County Water District to golf courses, a *carpet-dying* [read *carpet-dyeing*] firm and other reclaimed-water users." Jonathan Volzke, "Another Plan for Treated Sewage?" *Orange County Register*, 14 July 1996, at B1.
- "One lead has resulted in a cooperative agreement with a *carpet-dying* [read *carpet-dyeing*] business." Mary Judice, "Fast Track to Success," *Times-Picayune* (New Orleans), 2 Feb. 1997, at F1.

See **die** (B).

LANGUAGE-CHANGE INDEX

dying misused for *dyeing*: Stage 1

dyke. See **dike**.

dynamic, as a noun, is a **VOGUE WORD** that sprang to currency in the latter half of the 20th century. E.g.: "In the first case, a mediation is stipulated. In the second, the *dynamic* leads almost inevitably in that direction." (A possible revision: *In the second, it is almost inevitable.*) But *dynamics* does have some good uses in expressions such as *group dynamics* and *interpersonal dynamics*.

dynamo (= [1] a power generator, or [2] an inexhaustibly energetic and forceful person) forms the plural *dynamos*—not **dynamo*s. The metaphorical extension from sense 1 to sense 2 occurred in the late 1940s. See PLURALS (D).

Current ratio (*dynamos* vs. **dynamo*s): 320:1

dysfunctional (= functioning abnormally) is occasionally misspelled **disfunctional*—e.g.:

- "Some of the conservative leaders who were demanding less government jumped all over the Illinois Department of Children and Family Services for not preventing the murder and abuse of babies born into *disfunctional* [read *dysfunctional*] families." John McCarron, "Doctor, I'm Confused," *Chicago Trib.*, 24 July 1995, at 9.
- "Have these intellectual irrationalists who have broken up yet another family come from *disfunctional* [read *dysfunctional*] homes where morality and discipline are unknowns?" "Applauding Responsible Parenting," *Virginian-Pilot* (Norfolk), 30 July 1996, at A14.
- "Part and parcel of the Marine Fisheries Commission was the *disfunctional* [read *dysfunctional*] law enforcement agency known as the Florida Marine Patrol." Zach Zacharias, "Red Snapper Open Season Is Too Short," *Sarasota Herald-Trib.* (Fla.), 7 May 2015, at C6.

LANGUAGE-CHANGE INDEX

dysfunctional misspelled **disfunctional*: Stage 1

Current ratio: 456:1

DYSPHEMISM (/dis-fə-miz-əm/) = (1) the substitution of a disagreeable word or phrase for a neutral or even positive one; or (2) a word or phrase so substituted. Dysphemism is the opposite of **EUPHEMISM**. Examples usually fall into the realm of **SLANG**—e.g.:

Ordinary Term	Dysphemism
accountant	bean-counter
athlete	(dumb) jock

baker	dough roller	newscaster	talking head
cadaver, corpse	stiff	newspaper editor	inkstained wretch
carpenter	termite	office worker	pencil-pusher
Christian	Bible-thumper, Bible-beater	pilot	flyboy
fundamentalist		plumber	turd herder
civil servant	paper-shuffler, paper-pusher	police officer	fuzz, pig
conservative	reactionary	printer	ink dauber
crawfish	mudbug	psychiatrist	shrink, spook, wig picker
detective	dick, gumshoe	referee	zebra
doctor	pill-pusher, quack	rural resident	bumpkin, hick, yokel, rube, redneck
environmentalist	tree-hugger	sorority member	sore whore, bowhead
executive	fatcat	surgeon	sawbones, cutter
fashion model	clothes-peg	urbanite	city slicker
fraternity member	frat rat, frat boy	urologist	plumber
intellectual	egghead, nerd, bookworm		
investigative journalist	snoop, scoop		
jailer	screw		
lawyer	mouthpiece, shyster, pettifogger		
liberal	bleeding heart, granola head, pinko		
Marine	jarhead, grunt		
mason	mud dauber		
mechanic	grease monkey		

Many dysphemisms, of course, are hardly printable, as when the word *man* or *woman* is reduced in reference to the low word for a sexual organ. Most racist terms likewise illustrate the phenomenon of dysphemism.

Although they frequently appear in dialogue, dysphemisms rarely find a place in well-edited prose that is not intended to be jocular or to replicate casual speech.

E

each. A. Number. The word *each* raises problems of number. Does it take a singular or plural verb, regardless of the construction? Must a pronoun referring to it be singular, or is *they* acceptable?

As for the first question, *each* traditionally takes a singular verb, and the best practice is to write *each . . . is* regardless of whether a plural noun intervenes (*each of the members is*)—e.g.:

- “*Each* of the main senses of the word *are* [read *is*] then further subdivided semantically.” Reinhard Hartmann, “Handy, if Slightly Heavy,” 10 *English Today* 53, 53 (1994).
- “Sapienza knows that *each* of the players *are* [read *is*] very gifted.” J. Mikel Elcessor, “One of the Guys,” *Pitt. Post-Gaz.*, 25 July 1997, at 16.
- “*Each* of the finalists *have* [read *has*] already been guaranteed \$5,000 for the nonprofit of their choice.” Linda Charlton, “There’s a Lot Going on at B B Brown’s Gardens,” *Daily Commercial* (Leesburg, Fla.), 27 Aug. 2015, at N23. (On the use of *their* in that sentence, see CONCORD (B).)

The exception occurs when *each* acts in apposition to a plural subject but does not constitute the subject itself <they each have a dollar>. When that is so, *each* functions adverbially and the verb should be plural—e.g.:

- “JR’s four Tokyo commuter lines *each has* its own color.” Peter McGill, *The American Express Pocket Guide to Tokyo* 13 (1988). (Two possible revisions: [1] *JR’s four Tokyo commuter lines each have their own color*. [2] *Each of JR’s four Tokyo commuter lines has its own color*.)
- “The athletes *each are* seeking more than \$50,000 in compensation and Carver and Miller are seeking reinstatement

and damages in excess of \$1 million.” Lisa Magenheimer, “Interim Coach Hopes to Overcome Instability,” *Tampa Trib.*, 7 Mar. 1996, Pasco §, at 6. See APPOSITIVES.

As for the second question, pronouns having *each* as an antecedent are traditionally (and most formally) singular. E.g.: “Each of them got into *their* [read *his* or *her*, depending on context] car and drove off.” But the word *they* has come to take on a singular sense in informal constructions of this type, as the generic masculine pronoun continues to decline in use. (See SEXISM (B).) The better practice, though, is to change the reference to a plural: “*Both of them* got into *their* cars.” Or: “*All of them* got into *their* cars.”

LANGUAGE-CHANGE INDEX

1. *each* with a plural verb <each have chores to do>: Stage 2
- Current ratio (*each of them is vs. *each of them are*): 12:1
2. *each* followed by a plural *their* or *they* <each did their share>: Stage 4
3. *they each have*: Stage 5

B. *Each . . . apiece. This construction is a REDUNDANCY—e.g.:

- “The 33 largest American plantations *each* receive more than \$1 million *apiece* [delete *apiece*] in higher sales prices.” Stephen Moore, “Corporate Welfare for Select Few Hurting Others,” *Houston Chron.*, 6 Apr. 1995, at A33.
- “Ben Tanner and Kirk Gammill *each* added a goal *apiece* [delete *apiece*].” Derek Samson, “Volleyball Tourney Pits Best of A-1, A-2,” *Idaho Statesman*, 4 Oct. 1996, at C2.

C. Between each. See **between (F)**.

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

each and every. This emphatic (and trite) phrase, like *each* or *every* alone, requires a singular verb—e.g.: “Each and every one of them *are* [read *is*] devoted.” Robert D. Signoracci, “Outgoing Mayor Thanks Cohoes,” *Times Union* (Albany), 26 Dec. 1999, at B4.

LANGUAGE-CHANGE INDEX
 **each and every one are* for
each and every one is: Stage 1
 Current ratio: 14:1

each other. A. And one another. Usage authorities have traditionally suggested that *each other* should refer to two people or entities <John and Bob helped each other>, *one another* to more than two <all of them loved one another>. Yet this 19th-century rule has often been undermined in the literature on usage—e.g.:

- “A distinction is set up in the schools between *each other* and *one another*, according as the reference is to two or to more than two persons; and yet scarcely a good author can be found who does not use the two forms interchangeably.” Adams Sherman Hill, *Our English* 33 (1888).
- “It has been maintained that *each other* should be used where only two are concerned, and *one another* where there are more than two; but the distinction is not necessary. The expressions are interchangeable.” John F. Genung, *Outlines of Rhetoric* 311–12 (1893).
- “Failure to observe the distinction [between *each other* and *one another*] may be a technical fault, but it is not a serious offence.” Edward N. Teall, *Putting Words to Work* 283 (1940).
- “Purists make a distinction between them, using *each other* for two things or persons only, and *one another* for more than two things or persons. In spite of Fowler’s rather perverse repudiation of it, this distinction is a convenient one, though so often ignored as not to have any real validity.” G.H. Vallins, *Better English* 48 (4th ed. 1957).

Careful writers and editors will doubtless continue to observe the distinction, but no one else will notice.

LANGUAGE-CHANGE INDEX
each other for *one another* (i.e., for more than two items): Stage 4

B. Possessive Forms: *each other’s* and *one another’s*. The possessive forms are *each other’s* and *one another’s*. The noun that follows is typically plural <each other’s cars> <they praised each other’s presentations>, but the more logical construction is singular <each other’s car> <they praised each other’s presentation>. Whether the phrase is *each other’s* or *one another’s*, it’s fairly common to see the apostrophe drift waywardly (and mistakenly) to the end of the phrase, perhaps because the idea of reciprocity gets overshadowed by the sense of plurality—e.g.:

- “They can look back in time to see the field being planted, view closeups of insect damage to the corn, or read *one another’s* [read *one another’s*] comments.” Laurent Belsie, “More Fun than Watching Paint Dry,” *Christian Science Monitor*, 26 July 2001, at 1.
- “We keep up on *each others*’ [read *each other’s*] lives [read *life*] in a casual sort of way.” Glenn Harlan Reynolds, “Community by the Book,” *Wall Street J.*, 28 Dec. 2001, at A16.

- “A 2-year-old program . . . trains space explorers how to stay on *each others*’ [read *each other’s*] good *sides* [read *side*].” Elisabeth A. Wright, “NASA Focusing on Personal Space Training,” *L.A. Times*, 30 Dec. 2001, at B5.

LANGUAGE-CHANGE INDEX

1. **each others*’ for *each other’s*: Stage 1
 Current ratio (*each others*’ vs. **each others*’): 15:1
2. **one anothers*’ for *one another’s*: Stage 1
 Current ratio (*one another’s* vs. **one anothers*’): 190:1

***early beginnings** is a REDUNDANCY that was especially common during the mid-20th century. By the 1990s it had fallen in frequency but still occurred—e.g.: “One of the nation’s most skilled neurosurgeons, Dr. Carson candidly recalls his *early beginnings* [read *beginnings* or *early days*] in poverty.” Joy Bennett Kinnon, “10 Who Beat Welfare,” *Ebony*, Nov. 1996, at 166.

early on (= at an early stage) is not the odious locution that some people think. Slightly informal, it has long been perfectly idiomatic in both AmE and BrE. E.g.: “A chemistry professor who later turned to computer science as a profession, he learned *early on* to love the pleasures of long, solitary treks.” Patrick Rogers & Ron Arias, “Kidnapped! Bird-Watcher John Heidma’s Vacation Trip to Ecuador Goes Terribly Wrong in the Rain Forest,” *People*, 7 Oct. 1996, at 121. For *later on*, see **later (B)**.

LANGUAGE-CHANGE INDEX

early on in the sense “at an early stage”: Stage 5

***earnesty**. This word, as a synonym of *earnestness*, is listed in the *OED* with only two citations—from 1572 and 1591. One might have thought it to be long obsolete, but it still sometimes appears. Since it doesn’t really fill any gap in the language, writers and editors would be wise to stick to the established *earnestness*—e.g.:

- “Born three years after the civil war, he carries an image of the new post-Franco generation, of youthful *earnesty* [read *earnestness*], of modernness tempered with mature moderation.” Ana Martinez-Soler, “Spain and Socialism,” *Christian Science Monitor*, 21 Oct. 1982, at 12.
- “She spoke often and extemporaneously about winning, losing, overcoming, focusing and so forth with a matter-of-fact *earnesty* [read *earnestness*] that suggested she believed it all fervently.” Sara Corbett, *Venus to the Hoop* 52 (1997).
- “If all Semisonic has going for it is *earnesty* [read *earnestness*] and poignancy, well, that’s a lot more than most other bands.” Malcolm Mayhew, “Semisonic Concert at Deep Ellum Strangely Irresistible,” *Ft. Worth Star-Telegram*, 31 Jan. 1999, at 14.

LANGUAGE-CHANGE INDEX

**earnesty* for *earnestness*: Stage 1

Current ratio (*earnestness* vs. **earnesty*): 6,412:1

earth. In reference to the planet we live on, *earth* is usually preceded by *the* and is not capitalized. *The sun* and *the moon* are treated the same way <a full moon occurs when the sun and moon are on opposite sides of the earth>. But the proper names of those celestial

bodies (*Sol* and *Luna*), though used rarely, are capitalized with no article preceding them. Likewise, when *Earth* is referred to as a proper noun, it is capitalized and usually stands alone—e.g.: “They’ve named it Quaoar, pronounced KWA-oh-war, after a California Indian creation deity. It’s about one-tenth the size of *Earth* and orbits *the sun* every 288 years.” Faye Flam, “Quaoar’s Discovery Puts Pluto on Edge of Demotion,” *Advocate* (Baton Rouge), 8 Oct. 2002, at A2.

In reference to the stuff that the planet is made of, Roy Copperud states that lowercase “*earth* without *the* means soil” <the excavation left a large pile of earth> (*American Usage and Style: The Consensus* 117 [1980]).

earthen; earthy; earthy. Although these terms have historically overlapped, some degree of DIFFERENTIATION has emerged. *Earthen* = made from earth (as soil or clay) <earthen pottery>. (The word can be pronounced /ɛr-thən/ or /ɛr-thən/.) *Earthy* = of, relating to, or involving the earth as opposed to the heavens; terrestrial <earthy delights>. The word distinguishes not only the temporal from the heavenly, but also the mortal <earthy remains> from an afterlife. *Earthy* = (1) simple; plain; practical <earthy farm folk>; or (2) coarse; gross; unrefined <earthy sense of humor>.

easier is the comparative form both of the adjective *easy* and of the adverb *easily*. In the latter use, it’s a CASUALISM equivalent to *more easily*—e.g.:

- “Although most people are still taking the postal route to employment, finding professional work is now being accomplished *much quicker and easier* [read, perhaps, *much more quickly and easily*] thanks to personal computers, modems and the Internet.” Dean Golemis, “Making Connections,” *Chicago Trib.*, 26 Jan. 1996, at C1.
- “They’ll cook faster and the middles will get done *easier* [or *more easily*].” “Hamburger Helper,” *Palm Beach Post*, 15 Aug. 1996, Food §, at 1.

In modern print sources, the collocation *done more easily* is much more common than *done easier*. See **easy**.

LANGUAGE-CHANGE INDEX

easier used adverbially for *more easily*: Stage 4

Current ratio (*done more easily* vs. *done easier*): 4:1

easily. See **easy**.

east; easterly; eastward(s). See DIRECTIONAL WORDS.

Easter Sunday. Though technically redundant, this phrase is unobjectionable. In fact, the REDUNDANCY is understandable: in many contexts, *Easter* refers to the holiday period beginning late Friday and ending Sunday—e.g.: “We’re going to New York for Easter weekend.” That example can be shortened, with no change in meaning, to “We’re going to New York for Easter.” So *Easter Sunday* is more specific than *Easter* as popularly used. Historically, in fact, *Easter* could apply to the whole week that begins with Easter

Sunday. The phrase *Easter Sunday* has been common in print sources since the 18th century.

eastwardly. See DIRECTIONAL WORDS (C).

eastward(s). See DIRECTIONAL WORDS.

easy; easily. The word *easy*, generally an adjective, functions arguably as an adverb in some SET PHRASES: *go easy (on me, etc.)*, *easy does it*, and *take it easy*. But because the verbs can be understood as elliptical linking verbs, the word *easy* can quite appropriately be considered an adjective. Wherever an adverb is needed, of course, *easily* is the right word. See **easier**.

eat > ate > eaten. The dialectal past-tense forms *et* and *eat* occur mostly in uneducated speech in New England and along the Atlantic Coast, as well as in the Midwest. The pronunciation /et/ for *ate* is traditional in BrE but fading.

eatable. See **edible**.

eat your cake and have it too. See **you can’t eat your cake and have it too**.

eaves. This noun, meaning “the overhanging lower edge of a roof,” is—despite its appearance—historically singular. But since the 19th century, *eaves* has been misinterpreted as a plural form, and so the misbegotten singular *eave* was born (as a BACK-FORMATION). Today it can hardly be criticized as nonstandard—e.g.:

- “Paper wasps . . . build those familiar, often large papery nests either suspended from a branch or *eave*, or fitted inside an abandoned animal burrow.” Allen M. Young, “In Praise of Wasps,” *Chicago Trib. (Mag.)*, 25 Aug. 1996, at 32.
- “Snow hangs ominously over the *eave* of her home in Lake View as Diana Szczutkowski clears a path.” “Weather Woes Deepen by a Foot or More,” *Buffalo News*, 13 Jan. 1997, at A1 (photo caption).
- “A row of rooms and a small office with a crisp US flag fluttering from an *eave* faced a narrow, too-steep beach.” John Connor, “Hidalgo of Cuba Then, Part I,” *Guns Mag.*, Sept. 2015, at 78.

ebullient (/i-buul-yənt/ or /-bəl-/) is frequently mispronounced /eb-yə-lənt/. See PRONUNCIATION (B). The corresponding noun is either *ebullience* (/i-buul-yənts/) or—more traditionally—*ebullition* (/eb-ə-līsh-ən/).

ebullit. See BACK-FORMATIONS.

echo. Pl. *echoes*—not **echos*. See PLURALS (D).

ecological; ecologic. See -IC.

ecology. When it originated in the late 19th century, this word referred to the biological study of living organisms and their environment <comparative ecology>. By natural extension during the mid-20th century, the word came to refer to the interaction itself, as opposed to its study <the ecology of Church Street>. By still

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

further extension—a SLIPSHOD EXTENSION—the word sometimes takes on the sense of the environment itself. When that is true, *environment* is a better word—e.g.:

- “Hundreds of Puerto Ricans demanded an end to bombing exercises that they say are harming the island’s *ecology* [read *environment*] and its residents’ health.” Andrew Jacobs, “Protests Intensify in Puerto Rico as Navy Resumes Bombing Drills,” *N.Y. Times*, 28 Apr. 2001, at A1.
- “Winning scant mention during Saturday’s ceremonies was the concern that foreign organisms that attached to the bottom of the new dry dock during its journey from China could damage Maine’s coastal *ecology* [read *environment*].” Ted Cohen, “BIW Unveils Its New, \$240 Million Dry Dock,” *Maine Sunday Telegram*, 6 May 2001, at B1.

Ecology was formerly spelled with a digraph: *æcology* (so listed in the first edition of the *OED*).

LANGUAGE-CHANGE INDEX
ecology misused for *environment*: Stage 1

economic. **A. And economical.** *Economical* means “thrifty” or, in the current JARGON, “cost-effective” <it’s not economical to have so many workers with duplicative responsibilities>. *Economic* should be used for every other meaning possible for the words, almost always in reference to the study of economics <economic growth>. Hence we have *economic studies* and *economic interest* but *economical shopping*. See -IC. Cf. **uneconomical**.

B. And financial. *Economic* is increasingly often misused for *financial*. When the reference is to pecuniary affairs of a household or business, the word should be *financial*, not *economic* (which refers to larger-scale finances). There is an irony in the usage, since *economic* comes from a Greek word meaning “management of the household.” E.g.: “The firm financed a string of big-budget movies that perpetually left it on the brink of *economic* [read *financial*] ruin but managed to come up with a big hit often enough to stay afloat.” Steve Pond, “Beating the Financial Terminator?” *Wash. Post*, 17 Oct. 1995, at C7.

But the phrase *economic ruin* is acceptable when the reference is to a geographic area (such as a town) or a country—e.g.:

- “The news these days is filled with dire predictions about the *economic ruin* awaiting our increasingly long-lived nation.” Vern Bengston, “Grandparenting Styles Differ,” *Charleston Daily Mail*, 10 Oct. 1995, at A8.
- “The American exit threatened his town with *economic ruin*, and his family, a long-standing local dynasty, with the loss of its power base.” “How to Convert a Military Power Base—Filipino Style,” *Sacramento Bee*, 15 Oct. 1995, at F3.

LANGUAGE-CHANGE INDEX
economic misused for *financial*: Stage 3

ecstasy. So spelled, not **ecstasy*—e.g.: “Sometime in late January or early February the Seahawks will provide something permanent. It will inspire either a euphoria approaching religious *ecstasy* [read *ecstasy*] or a groundswell of frustrated hopelessness.” Ted Miller, “Leap of Faith or Fall from Grace?” *Seattle Post-Intelligencer*, 9 Dec. 2006, Sports §, at D1.

When the word denotes the drug MDMA, the spelling remains the same but the term is usually capitalized—e.g.: “In Oklahoma, sad to say, studies show that while the use of drugs such as marijuana, cocaine and *ecstasy* [read *Ecstasy*] by young people has declined, the average percentage of kids in grades eight, 10 and 12 who say they’ve tried those substances is above the national average.” Editorial, “High Rise; Teen Drug Use Numbers Sobering,” *Oklahoman* (Oklahoma City), 6 Jan. 2007, at A10.

Occasionally the word is also misspelled with an -x- displacing the -c-. Here, the doubly mangled spelling got past the copy desk: “What begins with sitcom-style infighting turns to touchy-feely reconciliation when the family stoner drops a tab of *Extacy* [read *Ecstasy*] in patriarch Ira’s drink.” Peter Debruge, “When Do We Eat?” *Daily Variety*, 13 Apr. 2006, at 20. See SPELLING (A).

LANGUAGE-CHANGE INDEX
ecstasy misspelled **ecstasy* or **extacy*: Stage 1
Current ratio (*ecstasy* vs. **ecstasy* vs. **extacy*): 312:11:1

ecstatic (/ek-**stat**-ik/ or /-**stad**-/) is frequently mispronounced /e-**stad**-ik/. See PRONUNCIATION (B).

ecumenical /ek-yoo-men-i-keɪ/ (= supporting the idea of greater cooperation and unity between different branches of Christianity) has been predominantly so spelled since the 1920s in AmE and the 1950s in BrE—the earlier spelling having been **oecumenical* or **æcumenical*. The corresponding noun is *ecumenism* /e-**kyoo**-mi-niz-əm/—a variant being **ecumenicism*.

Curious thing about this word: some have tried to extend its reach beyond Christianity to promote better understanding among people of all religious faiths. That certainly reflects the spirit of the word, and yet it may well damage or at least dilute its central meaning.

Current ratio (*ecumenism* vs. **ecumenicism*): 25:1

-ED; -ʹD. Although R.W. Burchfield says that the BrE preference is for past-participial adjectives such as *cupolaed arch*, *mustachioed*, *shanghai’d sailor*, and *subpoenaed witness* (FMEU3 at 237), the strong preference in AmE is for *cupolaed arch*, *mustachioed*, *shanghaied sailor*, and *subpoenaed witness*—and even *stockinged feet* (although people tend to say *stocking feet*). The past-tense OK’d is an exception (though the spelled-out *okayed* eliminates the issue—see **okay**). The forms *ccid* and *bccid* are universally preferred.

edema /e-**deem**-ə/ (= a swelling in a body part caused by an abnormal accumulation of fluid in cells or in a body cavity) has been the predominant spelling in AmE since 1910 and in BrE since the late 1970s. The variant spelling **oedema* or **ædema* is universally falling into disuse.

Current ratio (*edema* vs. **oedema*): 5:1

edgewise; edgeways. Both words are mostly restricted to versions of the phrase *couldn’t get a word in*

edgewise. In AmE, it's always *edgewise*; in BrE, it's typically *edgeways*.

edible; eatable. These adjectives are broadly synonymous, but they can be differentiated. What is *edible* is capable of being eaten without danger, or fit for consumption <edible plants>. E.g.:

- “The autumn olive, which many conservationists viewed until recent years as ideal, is appealing because its berries are *edible* by deer and birds, and the plants grow quickly and hold back erosion.” Anne Paine, “Autumn Olive Deemed Too Invasive,” *Tennessean*, 1 Oct. 1996, at B1.
- “With any type of *edible* wild mushrooms, it is very important that you always cook them thoroughly.” Kathy Casey, “Wild Mushrooms,” *Seattle Times*, 2 Oct. 1996, at F1.

What is *eatable* is at least minimally enjoyable or palatable <the food at that restaurant isn't even eatable>. E.g.: “Along the way, they've maintained a live-and-let-live attitude with the gawkers who show up to watch as they paw through the garbage and recycle the *eatable* morsels.” George Snyder, “Dump Bears May Pose Menace,” *S.F. Chron.*, 29 July 1995, at A13.

Eatable is often used as an attributive noun, usually in the plural—e.g.:

- “These people produce *eatables* most of us enjoy.” Letter of Robert E. Smith Jr., “Hog Producers Get Bad Rap,” *Morning Star* (Wilmington, N.C.), 10 June 1996, at A6.
- “We can assume that such concentrations of rich *eatables* made them natural synonyms, as time went on, for something politically desirable.” George Hebert, “Real Pork in Real Barrels,” *Virginian-Pilot* (Norfolk), 15 July 1996, at A7.
- “One of those vehicles tows a trailer personally designed by the Duke of Edinburgh—full of drawers, recesses, cubby-holes and compartments from which in short order all *eatables*, dishes and utensils are retrieved.” John MacLeod, “A Picnic in Scotland?” *Scottish Daily Mail*, 18 June 2015, at 17.

edification. In the phrase *for your edification* (= for your moral or intellectual instruction), the word *edification* is sometimes misused (usually but not always for jocular effect) to mean “for your enjoyment” or the like—e.g.:

- “Dennis has come to the Tishomingo Lodge and Casino to perform daredevil dives for the *edification* [read *thrill*] of the casino guests.” Elmore Leonard, “The Best Kind of ‘Blues,’” *Rocky Mountain News* (Denver), 15 Feb. 2002, at D28.
- “Everyone says vaguely snotty things about each other and hidden cameras record, for our *edification* [read *titillation*], sundry couples' first kisses.” David Kronke, “Time to Break the Ice,” *Daily News* (L.A.), 2 June 2002, at U10.
- “They danced, they tossed their wild hair, they bounded athletically for the *edification* [read *entertainment*] of the assembled crowd along the street's edge.” Kage Baker, *The Anvil of the World* 173–74 (2003).
- “Does [NFL Commissioner Roger] Goodell plan to have owners, team presidents and head coaches sign an annual noncheating pledge at the league meeting every March? One suspects that the real purpose of even committing

such ideas to paper is simply theater for the *edification* [read *appeasement?*] of the public.” Bill Ordine, “Spy Reply,” *Baltimore Sun*, 8 Mar. 2008, Sports §, at 15.

LANGUAGE-CHANGE INDEX
edification misused in the sense
of “thrill, titillation”: Stage 1

Edinburgh (the capital of Scotland) is pronounced /**ed**-in-bər-ə/ in four syllables—not /**ed**-in-bərg/. The latter, though, is the correct pronunciation of Edinburg, Texas, the seat of Hidalgo County. In BrE, some speakers syncopate the pronunciation of the Scottish city to /**ed**-in-brə/.

-EDLY. With words ending in *-edly*, the classic adverbial formula *in an X manner* does not always work. Although *amazedly* means “in an amazed manner,” *allegedly* does not mean “in an alleged manner” and *purportedly* does not mean “in a purported manner.” Nor does *admittedly* mean “in an admitted manner.” Rather, the unorthodox formula for these words is *it is . . . -ed that*; i.e., *allegedly* means “it is alleged that,” and so on. Instead of bemoaning the unorthodoxy of these words ending in *-edly*, we should welcome the conciseness they promote and should continue to use the forms that have made their way into common usage. We have many of them:

admittedly	deservedly
advisedly	designedly
allegedly	markedly
assertedly	reportedly
assuredly	resignedly
avowedly	supposedly
concededly	unadvisedly
confessedly	undoubtedly

See **allegedly & confessedly**.

Even so, any new or unusual form ending in *-edly* ought to be avoided if a ready substitute exists, whether or not the *in an X manner* formula works—e.g.:

- “There is a certain appearance of arrogance in the readiness of men to stand up in front of others and preach a sermon or deliver an address, as though their thoughts were *recognizedly* superior to those of the audience.” Edward N. Teall, *Putting Words to Work* 11 (1940). (Here the thoughtful reader is likely to pause and wonder why the writer didn't use the more recognizable word: *recognizably*. If there's a real nuance here, it probably isn't worth achieving.)
- “I'm as awkward an interviewee as you're likely to get,” he says, laughing *embarrassedly*.” Clive Anderson, “Mr. Funny: Peculiar Interview,” *Sunday Telegraph*, 29 Sept. 1996, Features §, at 3. (Here the more natural wording would be to replace *embarrassedly* with the phrase *with embarrassment*.)

See **qualifiedly**.

educable. A. And educible. *Educable* = capable of being educated. *Educible* = capable of being elicited (i.e., educed). See **educational & educate**.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. Stage 2: Widely shunned. Stage 3: Widespread but . . . Stage 4: Ubiquitous but . . . Stage 5: Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

B. And *educatable. Although the shorter form is standard, the longer variant sometimes crops up—e.g.: “Sooner or later, we have to go back to the realization that the only education the *educatable* [read *educable*] can ever get that will keep them from going to prison has to come from their parents.” “Parental Responsibility,” *Phoenix Gaz.*, 23 Mar. 1995, at B8. See -ATABLE.

LANGUAGE-CHANGE INDEX

**educatable* for *educable*: Stage 1

Current ratio (*educable* vs. **educatable*): 66:1

educate the public, to. Typically, this phrase simply means “to seek to change public opinion.” Whether the means is through disseminating information or propaganda is often in the eye of the beholder. But the only desired result is typically to have masses of people think differently about some issue—e.g.:

- “Phillips said county history shows that land-acquisition measures require two or three elections to fully *educate the public*.” Susan Byrnes & David Schaefer, “Failed Park Measures Still Have a Chance, Bond Supporters Say,” *Seattle Times*, 19 Sept. 1996, at B5.
- “The AFL-CIO ads are intended to *educate the public* about Hoke’s congressional voting record on such issues as Medicare, education and pension rights, the AFL-CIO said.” Evelyn Theiss, “Labor Unions’ Money Targets Hoke-Kucinich Race,” *Plain Dealer* (Cleveland), 10 Oct. 1996, at A1.
- “An unprecedented coalition of record companies, artists, and music organizations led by the Recording Industry Assn. of America (RIAA) announced Sept. 26 the launch of an aggressive multimedia campaign designed to *educate the public* that unauthorized downloading of digital music is illegal.” Bill Holland, “Coalition Sets Anti-Piracy Ad Campaign,” *Billboard*, 5 Oct. 2002, Upfront §, at 4.

Of course, the “educators” almost always have a vested interest in all the free “education” they dispense. But that’s not always the connotation—e.g.:

- “Through nearly three decades of organized protests and attempts to *educate the public* and corporate-owned utilities to [read *about* or *on*] the virtues of alternative sources of energy and conservation, Crocker has generated an emotional electricity of his own.” Paul Levy, “Still Active After All These Years,” *Star Trib.* (Minneapolis), 27 Sept. 1994, at E1.
- “[Kevin] McGowan is one of only a handful of ornithologists studying crows, and his research in Ithaca has given scientists a vivid picture of how crow communities work. He tries to *educate the public*, too, with a Web site chock full of crow facts and trivia.” Nell Boyce, “Feathered Friends,” *U.S. News & World Rep.*, 14 Oct. 2002, at 68.

educational; educative; *educatory. *Educational* = (1) having to do with education <educational issues>; or (2) serving to further education <educational films>. (In sense 1, *education* is often used attributively, to prevent a MISCUE that sense 2 was intended <education issues>: an *educational issue* is not an issue that is educational.) *Educative* = tending to educate; instructive <educative lectures>. **Educatory* is a NEEDLESS VARIANT of *educative*.

For a related word, see **educable**.

Current ratio (*educational* vs. *educative* vs. **educatory*): 28,905:374:1

educator; educationist; *educationalist. *Educator*, a 17th-century coinage that didn’t become popular till the 19th century, is a FORMAL WORD for *teacher*; it dignifies the person described. E.g.: “Tomorrow, she will receive the Outstanding Teacher Award during Alumni Day at Lehigh University. Five other *educators* also will be honored.” Denise Reaman, “Freemansburg Teacher to Get Award for English Instruction,” *Morning Call* (Allentown, Pa.), 4 Oct. 1996, at B1.

Educationist, by contrast, is a DYSPHEMISM suggesting a puffed-up teacher who cloaks commonplace ideas in abstract, theoretical language or else turns common sense on its head—e.g.:

- “The educator John Keats noted a fundamental divide between the progressive *educationist*, for whom ‘the individual has only a functional significance in society,’ and the traditionalist, to whom ‘society is merely a function of individuals.’” John R. Dunlap, “Dumb and Dumber: Does Choice Matter?” *Am. Spectator*, Sept. 1996.
- “*Educationists* love the humane-sounding idea of self-esteem. It gives them cover for low standards and low effort both on their part and that of students.” Walter Williams, “Girl Who Received Top Marks in School Couldn’t Read Street Signs,” *Chattanooga Free Press*, 15 Sept. 1996, at B7. (At the end of the sentence, PARALLELISM could be maintained by changing *both on their part and that of students* to *both on their part and on the part of students*.)
- “Not surprisingly, *educationists* love a system where brand-new schools are built to their liking, while they retain control.” “The Business of Schooling,” *Richmond Times-Dispatch*, 27 Sept. 1996, at A16.

In World English, *educator* appears in print more frequently than *educationist* by a ratio of 34 to 1, and than **educationalist* by a ratio of 42 to 1.

In BrE, *educationist* is sometimes used in the sense that *educator* bears in AmE—e.g.: “The current project involving *educationists*, churchmen and others, in an effort to strengthen the teaching of morality in the national school curriculum, has now reached substantial agreement on the way forward—about everything except sex.” Clifford Longley, “Sacred and Profane,” *Daily Telegraph*, 30 Aug. 1996, at 23.

**Educationalist* is essentially a NEEDLESS VARIANT of *educationist*. And like that term, it is sometimes used in BrE without negative connotations—e.g.: “Peter Chambers, *educationalist* [read *educationist* or *educator*], born November 27, 1933; died September 19, 1996.” Martin Wainwright, “Peter Chambers” (obit.), *Guardian*, 5 Oct. 1996, at 18. **Educationalist* is somewhat more common in BrE than in AmE.

LANGUAGE-CHANGE INDEX

**educationalist* for *educationist*: Stage 4

Current ratio (*educationist* vs. **educationalist*): 1.2:1

***educatory.** See **educational**.

educe, vb. (= to elicit; evoke), should be distinguished from the verb *adduce* (= to bring forward for analysis) and from the noun *educt* (= something educed). The word is so rare—and its meaning so easily captured in more direct ways—that it is seldom serviceable. E.g.:

“The first few hearings have *educed* [read *elicited* or *brought out*] several interesting comments by several interested parties.” John Javetski, “House Takes a Broader View of Restructuring,” *Electrical World*, Dec. 1995, at 5.

Sometimes the word appears where *deduce* or *infer* or even *glean* would be better—e.g.: “Hitherto, how he fitted into the screwball reputation of that magazine has had to be *educed* [read *deduced* or *gleaned*] from his ‘The Years with Ross’ (1959),” John McAleer, “The Thurber Spirit,” *Chicago Trib.*, 17 Dec. 1995, at C1. See **adduce**.

LANGUAGE-CHANGE INDEX

1. *educue* misused for *elicit*: Stage 1

2. *educue* misused for *deduce*: Stage 1

educible. So spelled—not **educable*. See -ABLE (A) & **educable** (A).

-EE. A. General Principles. This suffix (from the French past-participial *-é*) originally denoted “some-one who is acted upon”; the sense is inherently passive. It’s an especially active suffix; that is, people are continually creating NEOLOGISMS with it. Some of these look fairly ridiculous (e.g., *civilizee*), but some readily become quite familiar (e.g., *honoree*, dating from the early 1950s). Although there are exceptions (e.g., *biographee*), words ending in *-ee* are almost always made from verbs in the PASSIVE VOICE—e.g.:

acquittee = one who is acquitted
arrestee = one who is arrested
conscriptee = one who is conscripted
detainee = one who is detained
educatee = one who is educated (by an educator)
expellee = one who is expelled
inauguree = one who is inaugurated
indictee = one who is indicted
invitee = one who is invited
liberee = one who is liberated
permittee = one who is permitted
returnee = one who is returned
selectee = one who is selected
separatee = one who is separated
shelteree = one who is sheltered
smugglee = one who is smuggled
telephonee = one who is telephoned

The suffix also has a dative sense, in which it acts as the passive agent noun for the indirect object. This is the sense in which the suffix is most commonly used in peculiarly legal terminology:

abandonee = one to whom property rights are relinquished
advanee = one to whom money is advanced
consignee = one to whom something is consigned
disclosee = one to whom something is disclosed
grantee = one to whom property is granted
lessee = one to whom property is leased
patentee = one to whom a patent is or has been issued
trustee = one to whom something is entrusted
vendee = one to whom something is sold

At least one word ending in *-ee* has both a normal passive sense and a dative sense. *Appointee* = (1) one who is appointed; or (2) one to whom an estate is appointed. Sense 2, of course, is primarily legal.

The suffix *-ee*, then, is correlative to *-or*, the active agent-noun suffix: some words ending in *-ee* are formed as passive analogues to *-or* agent nouns, and not from any verb stem: *indemnitee* (= one who is indemnified; analogue to *indemnitor*); *preceptee* (= student; analogue to *preceptor*).

These are the traditional uses of the suffix. There is a tendency today, however, to make *-ee* a general agent-noun suffix without regard to its passive sense or the limitations within which it may take on passive senses. Hence the suffix has been extended to PHRASAL VERBS, even though only the first word in the phrase appears in the *-ee* word. So *discriminatee* (= one who is discriminated against) and *tippee* (= one who is tipped off). Then other prepositional phrases have gradually come into the wide embrace of *-ee*: *abortee* (= a woman upon whom an abortion is performed); *confiscatee* (= one from whom goods have been confiscated).

Some *-ee* words contain implicit possessives: *amputee* (= one whose limb has been removed); *breachee* (= one whose contract is breached); *condemnee* (= one whose property has been condemned). In still other words, *-ee* does not even have its primary passive sense—e.g.:

arrivee = one who arrives
asylee = one who seeks asylum
**attendee* = one who attends
benefitee = one who benefits (or, possibly, “is benefited”)
escapee = one who escapes
signee = one who signs
**standee* = one who stands

Finally, the suffix is sometimes used to coin jocular words such as *cheatee* (= one who is cheated).

The upshot of this discussion is that *-ee* is subject to abuse and that writers must be careful about the forms they use. For active senses we have *-er*, *-or*, and *-ist* at our service; we should be wary of adopting any new active forms ending in *-ee* and do our best to see that **attendee* and **standee*—or *signee* in an active sense (see **signee**)—together with similar forms, come to an eternal rest. Otherwise, we risk wasting any sense to be found in this suffix. For example, “the unskilled workers used to ‘dilute’ skilled workers in time of war should have been called *diluters* instead of *dilutees*; the skilled were the *dilutees*” (*FMEU2* at 146).

B. Word Formation. The principles applying to words ending in -ATABLE apply also to agent nouns ending in *-ee*. Thus we have *inauguree*, not **inauguratee*; *subrogee*, not **subrogatee* (though the latter is infrequently used mistakenly for the former).

C. Stylistic Use of. Stylists know that *-ee* agent nouns are often inferior to more descriptive terms.

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

They sometimes objectify the people they describe, although the writer may intend no callousness—e.g.: “[Catherine] Ojok and another *abductee* [read *abducted woman*] ran away when [Gen. Raska] Lukwiya told them they would become ‘his wives’ as soon as they had their first menstrual period.” Ben de la Cruz, “Moving Past Life as a Rebel Slave,” *Wash. Post*, 29 July 2008, at A11.

E.E. Cummings. See **Cummings**.

erie (= fear-inducing; strange; weird) has always been the predominant spelling. The variant spelling **eery* appeared sometimes in BrE until the mid-19th century. Although it is becoming frightfully common again, **eery* is best considered a NEEDLESS VARIANT.

Current ratio: 61:1

effect, v.t. **A. Generally.** This verb—meaning “to bring about, make happen”—is increasingly rare in English. Besides sounding pretentious, it often spawns wordiness. The verb tends to occur alongside ZOMBIE NOUNS such as *improvement*—e.g.:

- “But just as some transactions were about to be *effected* [read to take effect or to be concluded], the settlement plans were delayed indefinitely following a meeting of bankers at the central bank.” Victor Mallet, “Kuwait Delays Interbank Plan,” *Fin. Times*, 4 July 1991, at I4.
- “It meditates instead on the despoliations and interferences *effected* [read wrought?] by science, technology and industry—or on nature’s response to these human disturbances.” Alice Thorson, “Canvases Writhe with Life in Organic Abstraction Exhibit,” *Kansas City Star*, 7 Oct. 1994, at H19.
- “For some schools in the state, the present system of oversight has not *effected improvement* [read improved things or improved anything or brought about improvement].” “School Reform Plan Deserves Passing Grade,” *News & Record* (Greensboro), 2 May 1995, at A6. (Another possible revision: *The present system of supervision has failed to improve many schools in this state.* [On the use of *oversight* in the original sentence, see **oversight** (A).])

B. And affect. *Effect* (= to bring about) is often misused for *affect* (= to influence, have an effect on). The blunder is widespread—e.g.:

- “Opponents say it would *effect* [read *affect*] only a small number of people—in New York an estimated 300 criminals a year—and would have little effect on the causes of crime.” Ian Fisher, “Why ‘3-Strike’ Sentencing Is a Solid Hit This Year,” *N.Y. Times*, 25 Jan. 1994, at A16.
- “It would also *effect* [read *affect*] pensions tied to the rate of inflation and union contracts with automatic adjustments based on inflation.” Adam Clymer, “As Parties Skirmish over Budget, Greenspan Offers a Painless Cure,” *N.Y. Times*, 11 Jan. 1995, at A1.
- “So far, 63 buildings in downtown Boston and the suburbs have been *effected* [read *affected*] this week by the strike.” Dina Gerdman, “Janitors’ Strike Spreads into Quincy,” *Patriot Ledger* (Quincy, Mass.), 3 Oct. 2002, News §, at 1.
- “The fallout has *effected* [read *affected*] young men already worried about keeping their college football dreams alive.” David Wharton, “Hitting the Books,” *L.A. Times*, 11 Oct. 2002, Sports §, pt. 4, at 16.

It could be that the widespread misuse of *impact* is partly an attempt to sidestep the problem of how to spell *affect*. See **affect & impact**.

LANGUAGE-CHANGE INDEX
effect misused for *affect*: Stage 2

C. And effectuate. Most dictionaries define these words identically, but their DIFFERENTIATION should be encouraged. Although both mean “to accomplish, bring about, or cause to happen,” stylists have generally considered *effect* the preferable word, *effectuate* a NEEDLESS VARIANT.

No longer need this be so. The growing distinction—common especially in law—is that *effect* means “to cause to happen, to bring about” <effect a coup>, while *effectuate* means “to give practical effect to (some underlying goal)” <effectuating the purpose of the statute>. As a matter of word frequency, *effect* (as a verb) is much more common than *effectuate*.

effective; efficacious; efficient; effectual. All these words mean generally “having effect,” but they have distinctive applications. *Effective* = (1) having a high degree of effect (used of a thing done or of the doer) <more effective study habits>; or (2) coming into effect <effective June 3, 1994>. *Efficacious* = certain to have the desired effect (used of things) <efficacious drugs>. *Efficient* = competent to perform a task; capable of bringing about a desired effect (used of agents or their actions or instruments) <an efficient organization>. *Efficient* increasingly has economic connotations.

Effectual, the rarest and perhaps the most troublesome of these words, means “achieving the complete effect aimed at”—e.g.:

- “The power over the purse may in fact be regarded as the most complete and *effectual* weapon with which any Constitution can arm the immediate representatives of the people.” Letter of William Hall, “Gingrich and Founding Fathers,” *Advocate* (Baton Rouge), 22 Jan. 1996, at B6 (paraphrasing *The Federalist* No. 58).
- “Not only is the rabies vaccine completely *effectual* for dogs and cats, but more states are requiring proof of a rabies vaccine to obtain a license for a dog.” Ann L. Huntington, “Vaccine Has Not Eliminated Rabies Threat,” *Hartford Courant*, 26 Mar. 1996, at E5. (In that sentence, *completely* is redundant with *effectual*. See **completely**.)
- “George Washington [remarked] in his first annual message to Congress in 1790 that to be prepared for war is one of the most *effectual* ways of preserving peace.” Merrick Carey & Loren Thompson, “Misplaced Priorities on Preserving the Peace,” *Wash. Times*, 29 May 1996, at A17.

Why the most troublesome? Because *effectual* is often stretched to describe a person instead of a person’s action or some other thing—e.g.:

- “Jenkins . . . became a not wholly *effectual* [read *effective*] President of the Commission.” “A Grand Old Chancer: Profile of Roy Jenkins,” *Sunday Telegraph*, 7 Jan. 1996, at 25.
- “They seem to shy away from any moves to render the society more responsive and council members more

effectual [read *effective*]. “An Open Letter to the Profession,” *Lawyer*, 13 Feb. 1996, at 14.

- “Staffing of the role with *effectual* [read *effective*] individuals is crucial for maximizing an asset’s effects.” Hugh McFadden, “Common Sense: Improving the Efficacy of Wide Area Surveillance,” *Air & Space Power J.*, Mar.–Apr. 2015, at 74.

This stretch is all the more understandable because the negative form—*ineffectual*—usually does describe a person <an ineffectual manager>. But the history of *effectual* has not been parallel: most often, it doesn’t refer to people.

On the use of *effectually* for *effectively*, see **effectively**.

LANGUAGE-CHANGE INDEX

effectual misused for *effective*: Stage 3

effectively; effectually. *Effectively* = (1) in an effective manner; well <to speak effectively>; (2) in effect, actually <she has effectively become his mother-surrogate>; or (3) completely; almost completely <that resource is now effectively gone>. All three senses are common.

Effectually (= completely achieving the desired result) often wrongly displaces *effectively* in senses 2 and 3—e.g.:

- “Schools [that] had once been mixed were now *effectually* [read *effectively*] segregated.” Nik Cohn, “Aftershock: The Bradford Riots Came as a Surprise to Outsiders,” *Guardian*, 15 July 1995, at T20.
- “And introduction of government assistance dictated secularization of the programs, he said, *effectually* [read *effectively*] cutting out the very heart that made it successful.” Maureen Boyce, “Group Says Religion Key to Helping Homeless,” *Sun-Sentinel* (Ft. Lauderdale), 10 July 1996, City Plus §, at 6.

Curiously, the adverb *effectually* was significantly more common than *effectively* until just after 1900, when the word-frequency poles were suddenly reversed. Why that is so remains a minor linguistic mystery. See **effective**.

LANGUAGE-CHANGE INDEX

effectually misused for *effectively*: Stage 2

effectual. See **effective**.

effectually. See **effectively**.

effectuate. See **effect (c)**.

effeminate. See **female**.

effete, now a SKUNKED TERM, has traditionally meant “worn out, barren, exhausted”—e.g.:

- “In contrast, many of the new album’s icily elegant, minor-chord-driven tunes sound uninspired, *effete*, even cynical—older indeed, but not necessarily in ways that one associates with creative growth.” Elysa Gardner, “Record Rack,” *L.A. Times*, 12 May 1996, Calendar §, at 69.

- “Since a population tends to be mirrored by its elected representatives, this has resulted in an *effete* city council generally devoid of original ideas.” Letter of Gene Bunting, “Move on Annexation,” *Houston Chron.*, 21 May 1996, at A23.

But today—owing in large measure to Vice President Spiro Agnew, who used the phrase *effete corps of impudent snobs*—writers have made it the victim of SLIPSHOD EXTENSION, often using it to mean “sophisticated and snobbish.” This development might show the influence of the rhyme with *elite*. In any event, the usage predates Agnew’s famous phrase by several decades, having arisen in the 1920s. It was quite common by the latter half of the 20th century—e.g.:

- “He was cooing to her like a turtle dove. After her money, of course. All the same, these *effete* [read *decadent*] aristocrats of the old country. Make a noise like a rich widow anywhere in England, and out come all the Dukes and Earls and Viscounts, howling like wolves.” P.G. Wodehouse, *The Return of Jeeves* 111 (1954).
- “True Chicagoans know that South Siders—salt-of-the-earth, blue-collar beer drinkers—are Sox fans, while *effete*, [read *stuffy* (no comma)] North Side yuppies are Cubs fans.” Sara Paretsky, “Baptism in the Bungalow Belt,” *Chicago Trib.*, 29 Aug. 1996, at N3.
- “Now, lest I be branded an *effete* [read *a sophisticated*] lunchroom snob, my second-favorite lunch was Campbell’s Chicken Gumbo soup in one of those smelly old-fashioned thermoses.” Maureen Clancy, “Lunch Box Memories,” *San Diego Union-Trib.*, 5 Sept. 1996, Food §, at 5.

Still others use it as a genteelism denoting weakness or (surely because the words look similar) effeminacy—e.g.:

- “I had already done what I could to protect him, insisting he be given a normal-sounding, non-French, regular-kind-of-guy name, and extracting a solemn promise from my wife that there would be no prissy haircuts or other *effete* [read *frilly* or *effeminate*] embellishments.” Joe Dirck, “Poodle?! He’s a Peruvian Pit Bull,” *Plain Dealer* (Cleveland), 28 Apr. 1996, at B1.
- “From the 1940s on, American film saw the rise of a snide, supercilious and vaguely gay villain, starting with the manipulative Clifton Webb in the detective noir film *Laura*. That tradition of the *effete* [read *effeminate*], aristocratic villain has lived on.” Ana Swanson, “The Love That Dare Not Speak?” *Toronto Star*, 2 Aug. 2015, Insight §, at 2.
- “But Buckley’s *effete* [read *refined* or *genteel*] mannerisms were also in Vidal’s cross hairs. ‘They’re both gay-baiting each other,’ Neville notes.” John Anderson, “The Birth of TV News Discourse,” *Wash. Post*, 6 Aug. 2015, at C1 (referring to William F. Buckley and Gore Vidal).

As with other skunked terms, the thing to do is simply to avoid using it.

LANGUAGE-CHANGE INDEX

1. *effete* to mean “sophisticated, snobbish”: Stage 4

2. *effete* to mean “effeminate”: Stage 3

LANGUAGE-CHANGE INDEX (For the full key, see front matter pp. xxxi, l–li.)

Stage 1: Rejected. **Stage 2:** Widely shunned. **Stage 3:** Widespread but . . . **Stage 4:** Ubiquitous but . . . **Stage 5:** Fully accepted. Invariably inferior forms marked by asterisk (*). • Ratios represent frequency of prevalent forms vs. variants in current books.

efficacious. See **effective**.

efficacy; efficiency. *Efficacy* = the capacity for producing a desired effect; effectiveness <the drugs had greater efficacy when administered at bedtime>. *Efficiency* = the ability to accomplish something with minimum time or effort <the managers worked on improving plant efficiency>. So *efficacy* exists when you can do something at all, while *efficiency* exists when you can do something quickly and well.

efficient. See **effective**.

effluence (= something that flows out) has come into use as a EUPHEMISM for various bodily excretions—e.g.:

- “To those who are sweating, hurting and knocking the *effluence* out of one another in the humidity-soaked, 90-plus heat, this amounts to a free ride.” Gene Seymour, “Haircut, Rookie Year Over for Sauerbrun,” *State J.-Register* (Springfield, Ill.), 20 July 1996, Sports §, at 9.
- “An ugly naked man does painful, bloody damage to himself (he pares his fingernails with a knife down to the bone, for example), eats his nose *effluence* and hammers his teeth.” Barbara Schulgasser, “Spike and Mike’s Animated Shorts Long to Be Tasteless,” *S.F. Examiner*, 20 Sept. 1996, at C5.
- “European travelers arriving in the Indian state of Goa in 1990 were met at the airport by animal *effluence* and epithets.” Crocker Snow Jr., “Tourism Destroys Tourism,” *WorldPaper*, Sept. 1996, at 3.

If this trend continues, the word will degenerate so that it will no longer be possible to write about *effluence* with positive connotations, as here: “The magic scent is not some romantic elixir but the aromatic *effluence* of our immune system.” F. Bryant Furlow, “The Smell of Love: How Women Rate the Sexiness and Pleasantness of a Man’s Body Odor Hinges on How Much of Their Genetic Profile Is Shared,” *Psychology Today*, Mar. 1996, at 38.

The word is pronounced /ef-loo-ən[t]s/. Cf. **affluence**.

effluvium. A. Plural Form. *Effluvium* (= [1] a smelly emanation or stench; or [2] industrial waste) forms the plurals *effluvia* and *effluvioms*. The former has long predominated and is established as standard. See PLURALS (B).

Current ratio (*effluvia* vs. *effluvioms*): 97:1

B. Singular Form. By noxious contamination, the plural form *effluvia* has invaded the territory of the singular. It ought to be rebuffed, usually not by changing to *effluvium* but by making the verb plural—e.g.: “What distinguishes this brisk and eminently readable book from the business-related *effluvia* that crosses [read *cross*] our desks is Adler’s almost canine attention to the real story.” Gil Schwartz, “This Hole Was the Pits,” *Fortune*, 14 June 1993, at 140. Why not *effluvium* crosses? Because the plural form *effluvia* has taken on figurative senses for which the singular is largely considered inappropriate or unavailable—as in that sentence. It appears likely that *effluvium* will go

the way of *datum*: the plural form is relatively common (and struggling to stay plural), while the singular form is disappearing. See **data**.

LANGUAGE-CHANGE INDEX
effluvia misused as a singular: Stage 1

effrontery. A. For affront. *Effrontery* (= shameless insolence), when misused for *affront* (= an open insult), is a MALAPROPISM. E.g.:

- “This is the ultimate *effrontery* [read *affront*] to the people who support the team—the fans.” “Don’t Tread on Me,” *St. Louis Post-Dispatch*, 15 Sept. 1989, at C2.
- “The novel carries with it the noble lesson that a premature verdict based on supposition is an *effrontery* [read *affront*] to justice if the dignity of even one person is abridged or disregarded.” Bruce Simon, “Mob Action Has Tragic Aftermath,” *Richmond Times-Dispatch*, 19 Nov. 1995, at G4.

LANGUAGE-CHANGE INDEX
effrontery misused for *affront*: Stage 1
Current ratio (*an affront* to vs. **an effrontery* to): 252:1

B. Misspelled **affrontery*. This MALAPROPISM has occurred with some frequency since the late 18th century. It remains fairly common today—e.g.:

- “His fiery Spanish nature refused to allow him to accept such *affrontery* [read *effrontery*].” Furman Bisher, “Alvarez Puts ‘W’ Back in Wisconsin,” *Atlanta J.-Const.*, 4 Mar. 1994, at E1.
- “Sweet the vista was, until a barman had the *affrontery* [read *effrontery*] to rattle through the aisle with a cart bearing cans of Dortmund Union.” Cal Fussman, “Tilting at Beer Kegs,” *Esquire*, Feb. 1998, at 96.
- “But beware, the august Augusta acres don’t take too kindly toward such *affrontery* [read *effrontery*]. This battleground of Richmond County is littered with the great expectations of players who have led the Masters after the first round.” Furman Bisher, “History Against DiMarco,” *Atlanta J.-Const.*, 6 Apr. 2001, at D10.

The correct form *effrontery* derives from the French *effronté* (lit., “shameless”). The erroneous form **affrontery* has no real pedigree because it isn’t a legitimate word: the *OED* calls it an obsolete mistake for *effrontery*, and the permissive W3 doesn’t even record it. In fact, the error results from confusion with *affront*, which derives from the French *affronter* (lit., “to confront” or “to strike on the head”). See NONWORDS.

effulge. See BACK-FORMATIONS.

-EFY. See -FY.

e.g. A. Generally. This abbreviation, short for *exempli gratia* (/ek-sem-plee grah-tee-ə/) [L. “for example”], introduces representative examples. In AmE, it is preferably followed by a comma (or, depending on the construction, a colon) and unitalicized. In BrE, curiously enough, the periods are sometimes omitted—e.g.: “The problem with seeking a legislative cure for the ethical disease is that most of the perceived

outrages are either already illegal (eg, Pentagon officials taking bribes) or beyond the reach of the law (politicians' sexual adventures)." "Washington on an Ethics Kick," *Economist*, 28 Jan.–3 Feb. 1989, at 19. To American eyes, *eg* looks like *egg* misspelled.
