

2. Click the Calculate tab.
3. To multiply the values entered into fields, click the Value Is The radio button.
4. Pick Product from the popup menu.
5. Click Pick to open a list of the field names in the dialog box.

Subtraction and division are a bit harder.

To subtract one field from another

1. Open the Properties for the result field.
2. Click the Calculate tab.
3. Now click the Simplified Field Notation radio button.
4. click Edit to open the JavaScript Editor.
5. Type the expression in the editor.
6. Click OK and you'll see the expression in the field.

To divide two fields

1. In the Calculate tab for the result field, click the Value Is The radio button.
2. In the JavaScript Editor, type Field1 / Field2.
3. Click Preview to toggle the Preview mode. You'll see the result of the calculation, but a division calculation will not work.

If you leave the default settings for the field, the Format tab and choose Number from the dropdown menu. The default operation is to use a JavaScript expression. If you use JavaScript, leave the field unformatted and the result will be a string.

So now your form not only looks great, it works.
