	Destination #1:	Destination #2:	Destination #3:	Return:
Depature Location				
Date Departing				
Arrival Location				
Date Arriving				
			Total Travel Days:	
			Total Non-Travel Days:	

Total Travel Days should = the sum of all Dates Departing and all Dates Arriving.

The Total Non-Travel Days should = the sum of all Dates Arriving and all Dates Departing.

I cannot seem to get a formula/script that will auto calculate the days. Ex. Destination #1, Date Departing and Date Arriving is the same. The return would be the same.
The Total Travel Days should = 2

The Total Non-Travel Days should reflect the sum of the days in between the total travel days.

If you travel on Mon and Thurs, you have 2 travel days.
Tues and Wed would be non-travel days and = 2 days
