

Solutions Delivery for Dialysis Clinics

Space Saving • Surface Mounted • Streamlined

T Box Solution Delivery System

Provides many benefits:

- Advanced manifold and bumper railing design simplifies solutions connections, minimizing opportunities for leaks
- Modular system with surface-mounting capability eliminates the need for additional cabinets or casework
- Sleek and efficient design promotes space savings
- Organized loop line management facilitated by clip and bumper railing features enhances system efficiency and streamlines installation
- Isolated drain and fluid distribution manifold reduce cross-contamination and offers easy disinfection
- Durable and cleanable surfaces promotes system longevity and hygiene
- Suitable for new construction or renovation projects, saves time and installation costs
- Available in beige, grey and brown finishes
- RO System can be disinfected using hot water or chemical disinfection
- Patent and copyright protected

Dialysis Environment

The sleek modular system from T Box USA enhances the dialysis environment with its minimalistic design, which promotes safety by providing a spacious environment for both staff and patients, and facilitates effective infection prevention and disinfection processes.

Technology of the Future... Today

Fresh New Approach

This innovative solution provides a fresh and new approach to solutions delivery system used in dialysis clinics. The modular design offers the flexibility of surface-mounting of the devices. With the elimination of casework needed to accommodate the previous system design, the recaptured space can be repurposed to provide a more spacious and productive environment. The minimalist approach adopted using this patented option adds value to the overall space design, resulting in a reduction of the square footage required for patient treatment floor.

The T Box modular design is adaptable to both new construction and renovation projects, streamlining the process and expanding the dialysis station footprint.

New and More Efficient

T Box USA introduces an innovative and more efficient solution for managing solutions delivery in dialysis clinics. This modular system features an organized loop line management clip system and protective bumper rail cover. The system is designed with a separated drain fixture and solution manifold to prevent cross-contamination and enable proper disinfection of the drain fixture as well as the areas around them. Additionally, the isolated drain includes a removable cover that creates a clear separation between the clean and dirty drain areas. The dirty effluent drain water and splashing are contained in the dirty capture area below the cover, while the cover area serves as the clean drain area and catches any potential drips from the concentrate and RO connections from the distribution manifold above. This unique feature allows for easy surface area disinfection between the dirty and clean surfaces, enhancing the overall safety and efficiency of the system.

Minimize Space Requirements

This innovative space-saving solution eliminates the requirement for casework and optimizes the efficient and productive use of available space.

Durability

This patented modular design, featuring surface-mounting capability, enhances ease of installation and promotes the longevity of the system, extending its lifespan.
