

## 1. Try PECourtejoie message

This is PECourtejoie message ,

Go to **Layer>New>Background from layer**, or, in the layer panel, right-click to get **Flatten image**.

Now, double-clicking gets you the menu you want.

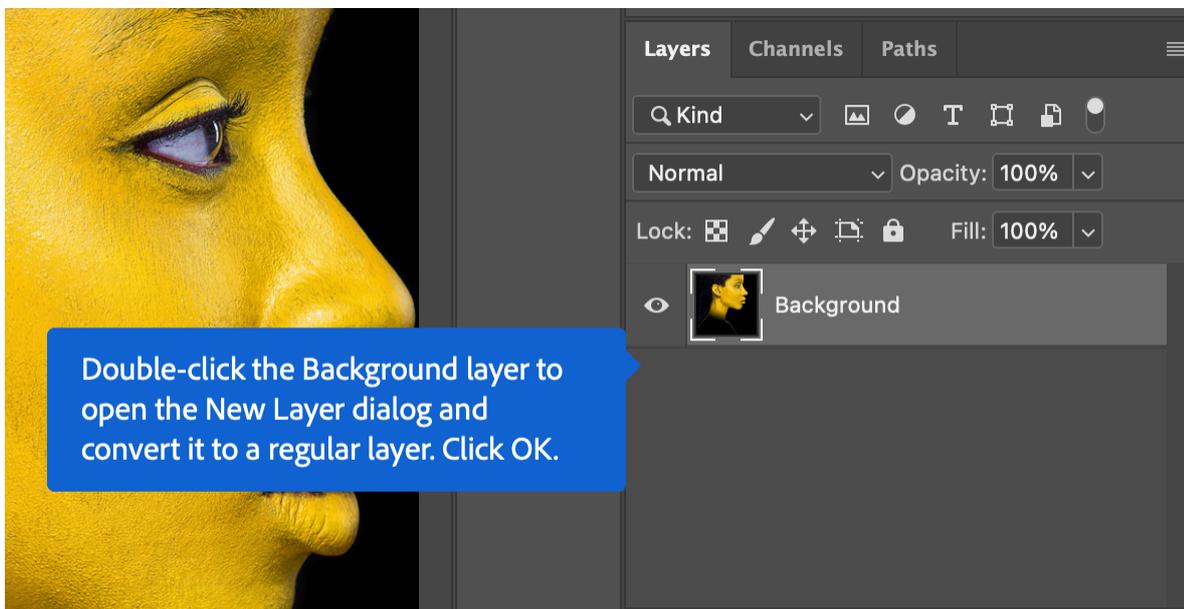

I try his two advice

Advice A. **Layer>New>Background from layer**, then double-clicking

Advice B. in the layer panel, right -click to get **Flatten image**

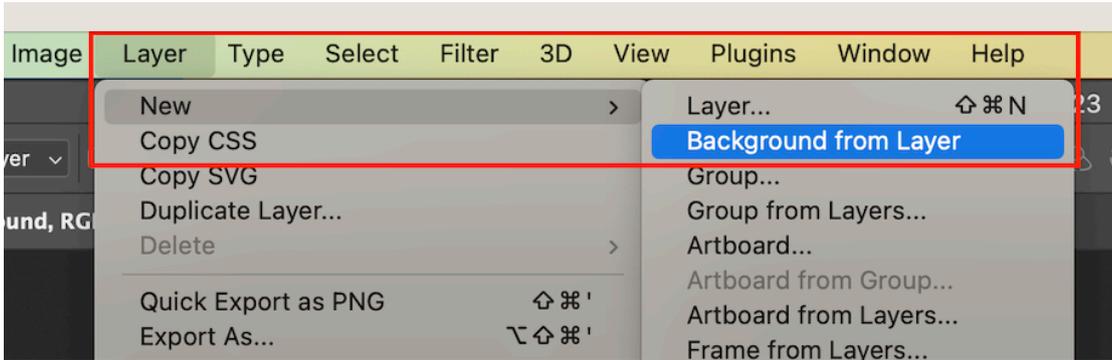

< Tutorial start, Instruction appeared to do “Double-click” to open “New Layer dialog” >

This is the screen image just after starting the tutorial "Create a symmetrical photo effect with a Blend mode". The layer is named "Background". But it is not Background layer but it's regular layer. Lock-icon cannot be seen.

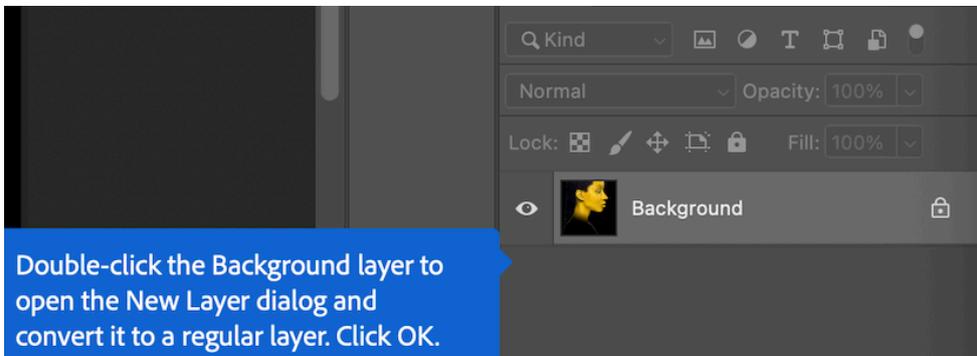

Now I try two advice.

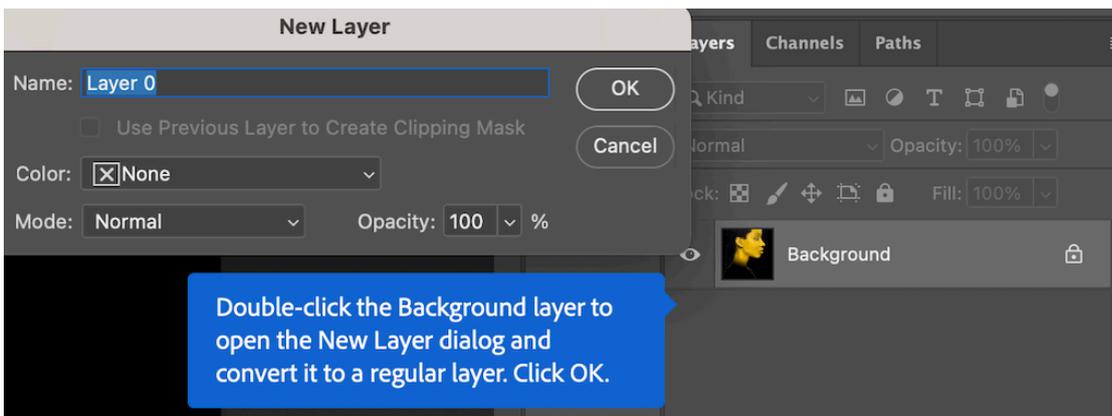

Advice A. **Layer>New>Background from layer**, then double-clicking  
A-1. Layer>New>Background from layer → click

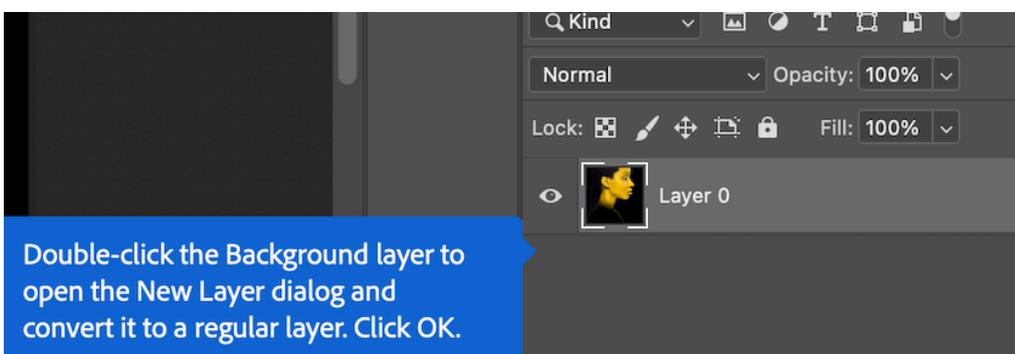

A-2. Changed to Background Layer, Lock-icon appeared > Double-click layer thumbnail

A-3, "New Layer dialog" appeared > Click OK

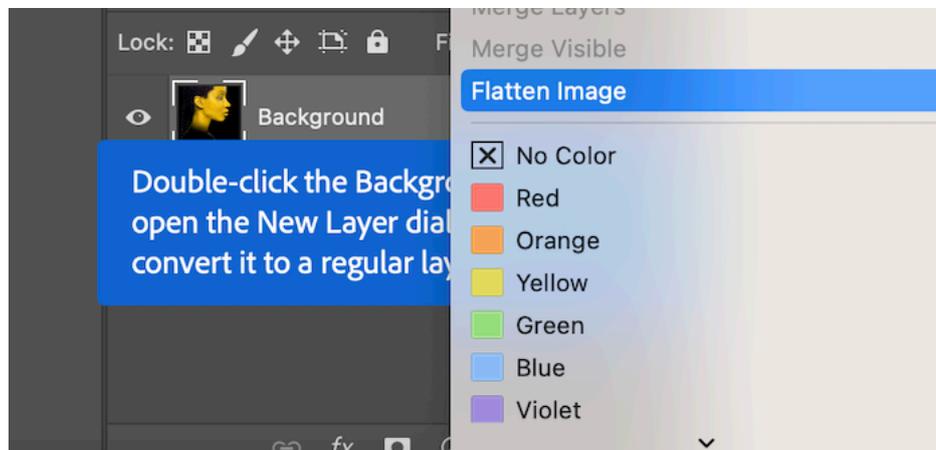

A-4. Layer changed to "regular Layer". Layer name is changed to "Layer 0".

But Tutorial instruction doesn't change. No further instruction.

Advice B. in the layer panel, right -click to get **Flatten image**

B-1. in layer panel, right-click ( two finger push touch-pad for Mac) > click “Flatten image”

B-2,B-3,B-4 are exactly same with A-2,A-3,A4

In both cases, tutorial has stopped because of “off script” action. Both actions A&B are “change Regular layer to Background Layer”. We did this to see “New Layer” dialog.

Instruction expects the action “Double-click the Background Layer”.

However the layer is named “Background”, but actually it’s “Regular layer”. I think this is the cause of problem.

< My System & Software Version >

Mac Book Pro

macOS Ventura 13.1

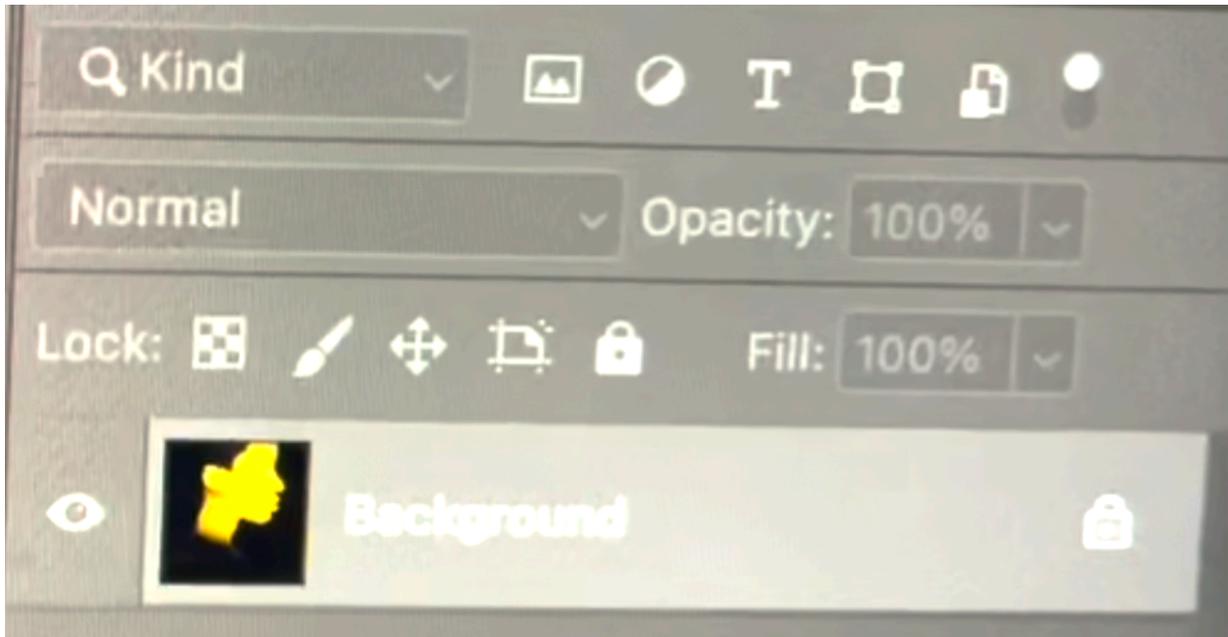

Adobe Photoshop 24.1.1

## 2. VIDEO from Tutorial start to initial instruction

As you can see below, Lock-icon of this layer has disappeared during “Tutorial start time”. Something has changed at this layer.

Maybe, “Background Layer” is changed to “Regular Layer” … ?!

2.1 [1s] “Background “ name layer has Lock-icon

2.2 [2s] “Background” name layer Lock-icon disappeared when Instruction “Double-click …” appeared.
